

SOAR Syllabus - IPC

Course Description/Goals:

This course introduces students to basic concepts of physical and chemical changes in matter through hands-on, functional activities. In Semester I, students explore simple physics topics such as motion, force, and energy using real-life examples and adapted materials. In Semester II, students are introduced to beginning chemistry concepts like states of matter, mixtures, and chemical reactions in a way that connects to daily living and functional skills. This course focuses on building foundational science understanding and developing prerequisite skills needed for independent or supported living. Instruction is highly structured, uses visual supports, and is tailored to meet the needs of students.

Course TEKS/Objectives:

The course is designed for students who are working on prerequisite academic skills aligned with the TEKS (Texas Essential Knowledge and Skills). Through the use of structured teaching strategies—including discrete trial training, pivotal response training, and functional routines—the program supports the development of academic, communication, social, and functional skills. Instruction is individualized, highly structured, and supported with visual aids and hands-on learning opportunities to promote understanding and engagement.

Course objectives include:

Standards-Based Instruction: Deliver instruction grounded in TEKS to ensure students have access to grade-level academic expectations tailored to their developmental level.

Individualized Learning: Address the unique strengths, needs, and learning styles of each student through personalized instructional plans and data-driven progress monitoring.

Skill Development: Promote measurable growth in communication, social interaction, independence, and daily living skills using research-based behavioral strategies.

Generalization of Skills: Support the application of learned skills across settings, people, and materials to foster real-world success and increased independence.

Collaboration: Foster collaboration among educators, families, and related service providers to ensure alignment of goals and meaningful mainstream opportunities, when appropriate.

This curriculum is implemented with fidelity to meet the diverse needs of students with communication needs and ensures equitable access to high-quality instruction.
