

SACRED HEART FIELD RENOVATION 2023 SCHOOL AUCTION FUND-A- NEED - UPDATE 8/19/2025

Highlights:

In 2023, Sacred Heart School raised funds to renovate our aging natural turf field. The main goals were to fix poor drainage, which often left the field unusable after rain, and to expand the space for more athletic and community events. We looked into installing synthetic turf but found the costs and permitting requirements—including a large stormwater retention system—were too high. Instead, we chose to improve the natural field to benefit students and the community. Construction commenced in spring 2025, with completion expected by late October. Hydroseeding is scheduled for mid-September, and the concrete work—which includes an ADA ramp system and amphitheater-style seat walls—is set to begin in the coming weeks.

Construction Progress:

- Temporary erosion and sediment control and site set up
- Till all existing Sod.
- Developed the site layout.
- Performed rough grading of the site (this involved a small area with a significant amount of work).
- Installed all storm drainage systems, including basins and inline drains, as well as field drainage.
- Installed approximately 60% of the new irrigation system.
- Imported around 1,500 tons of sand for the field.
- Imported compost for soil amendments.
- Completed rough grading of the ramp area.
