

THE ABCs OF FBAs & BIPs

The principle behind this training resides with the idea that students that exhibit consistent minor problem behaviors benefit from basic and less intrusive FBA procedures that can be conducted by school personnel. The goal is to build capacity for individualized behavior support in your school by training staff in the skills to provide effective behavior support as well as to create a school-wide culture of support for students with challenging behavior by providing staff a common language for understanding behavior and intervention. Participants will receive a complete resource binder as well as electronic copies of all the forms used in the training.

Join us for an in-depth training on the tools and methods used in conducting Functional Behavior Assessments and creating **EFFECTIVE** Behavior Intervention Plans!

SEPT 9,
