- A Total Alkalinity and Bicarbonate Alkalinity results are to a pH endpoint of 4.5. Carbonate Alkalinity result is to a pH endpoint of 8.3.
  - A-LL The total low level alkalinity results are to a pH endpoint of 4.3-4.7 pH units per SM 2320 B.
  - B Analyte detected in the associated method blank.
  - C Sample(s) does not meet NELAP/ORELAP sample acceptance criteria. See Case Narrative.
  - C1 Sample(s) does not meet NELAP/ORELAP sample acceptance criteria for temperature.
  - CF Results confirmed by re-analysis.
  - CU Cleanup performed as specified by method.
  - E Estimated value.
  - ER Elevated reporting limit due to matrix. Report limits (MDLs, MRLs & PQLs) are adjusted based on variations in sample preparation amounts, analytical dilutions, and percent solids, where applicable.
  - FC Fecal Coliforms: Sample(s) received past 40 CFR Part 136 specified holding time. Results reported as estimated values.
  - HP Sample re-analysis performed outside of method specified holding time.
  - HR Sample received outside of method specified holding time.
  - HS Sample analyzed for volatile organics contained headspace.
  - HT At the client's request, the sample was analyzed outside of method specified holding time.
  - H Analysis performed outside of method specified holding time.
  - J Analyte detected below the Minimum Reporting Limit (MRL) and above the Method Detection Limit (MDL). The J flag result is an estimated value and the user should be aware that this data is of limited reliability.
  - L Dissolved metals were not filtered within 15 minutes of collection per 40 CFR Part 136.
  - MI Surrogate, Duplicate Sample (DUP) or Matrix Spikes recoveries are out of control limits due to matrix interference. Sample results may be biased.
  - N See Case Narrative on page 2 of report.
  - Q Initial calibration verification (ICV), continuing calibration verification (CCV) or laboratory control sample (LCS), and/or matrix spikes exceeded high recovery limits, but associated samples are non-detect and the sample results are not affected. Data meets EPA/NELAP requirements.
  - R Relative percent difference (RPD) is outside of the accepted recovery limits.
  - R1 The numerical difference between the parent sample and the duplicate (DUP) is outside of the accepted recovery limits. Greater than 5 degrees for Flashpoint, or greater than 0.1 pH units for pH.
  - R3 The relative percent difference (RPD) and/or percent recovery for the duplicate (DUP) or matrix spike (MS)/matrix spike duplicate (MSD) cannot be accurately calculated due to the concentration of analyte already present in the sample.
  - R4 The Relative percent difference (RPD) is not within control limits because the concentration of the sample result is too low to represent proper statistical error.
  - R5 The difference between the BOD/CBOD results for the highest and lowest dilution used for the calculation is >30% because the results are too low to represent proper statistical error. The BOD/CBOD sample result is an average of all qualified bottles for each dilution series. The sample results are not affected.
  - R6 The difference between the BOD/CBOD results for the highest and lowest dilution used for the calculation is >30%. This may indicate a possible matrix interference. The BOD/CBOD sample result is an average of all qualified bottles for each dilution series.
  - S Surrogate and/or matrix spike recovery is outside of the accepted recovery limits. Sample results may be biased.
  - S1 Surrogate or matrix spike recovery is outside of control limits due to dilution necessary for analysis.
  - SC Sub-contracted to another laboratory for analysis.
  - SP Sample(s) were not collected per EPA Method 5035A protocols. The results are considered minimum values.
  - \* Value exceeds Maximum Contaminant Level or is outside the acceptable range.<<>>
  - 1 Value exceeds one half of the Maximum Contaminant Level.
