

# Reason abstractly and quantitatively.

MP. 2

I can think about math problems using numbers and words.

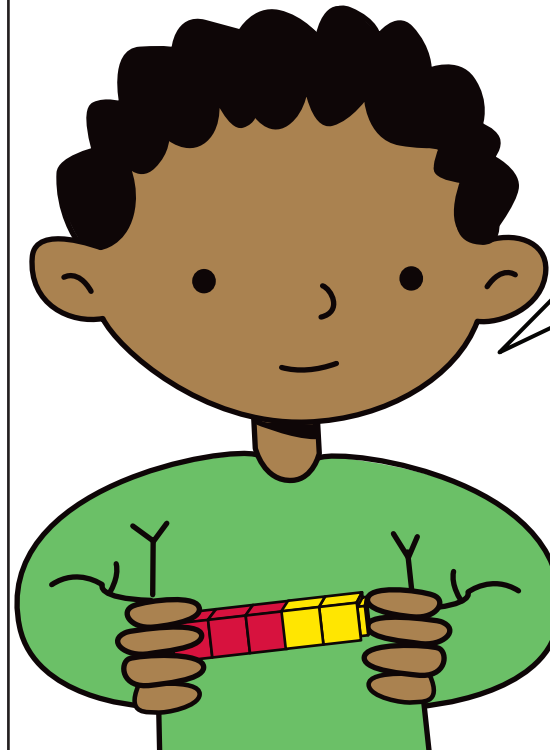

There are 5 pencils in a box. Two were just sharpened. How many are left to sharpen?

$$5 = 2 + 3$$

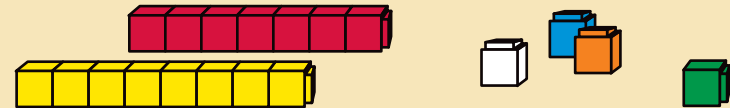

I use numbers, pictures, and symbols to show problems given in words.

Two yellow cubes plus 3 red cubes equals 5 cubes.

$$2 + 3 = 5$$

I use words to describe a problem given in numbers.
