New York

1. All employees of the Provider who will have direct contact with students shall pass criminal background checks.
2. Student Data will be used by Provider exclusively to provide the Services identified in Exhibit A to the DPA.
3. Provider agrees to maintain the confidentiality and security of Student Data in accordance with LEA's Data Security and Privacy Policy. The LEA's Data Security Policy is attached hereto as Exhibit J. Each Subscribing LEA will provide its Data Security Policy to the Provider upon execution of Exhibit "E". Provider shall use industry standard security measures including encryption protocols that comply with New York law and regulations to preserve and protect Student Data and APPR Data. Provider must Encrypt Student Data and APPR Data at rest and in transit in accordance with applicable New York laws and regulations.
4. Provider represents that their Data Privacy and Security Plan can be found at the URL link listed in Exhibit K and is incorporated into this DPA. Provider warrants that its Data Security and Privacy Plan, at a minimum: (a) implements all applicable state, federal and local data privacy and security requirements; (b) has operational technical safeguards and controls in place to protect PII that it will receive under the service agreement; (c) complies with the LEA's parents bill of rights for data privacy and security; (d) requires training of all providers' employees, assignees and subprocessors who have Access to student data or APPR data; (e) ensures subprocessors are required to protect PII received under this service agreement; (f) specifies how data security and privacy incidents that implicate PII will be managed and ensuring prompt notification to the LEA, and (g) addresses Student Data return, deletion and destruction.
5. In addition to the requirements described in Paragraph 3 above, the Provider's Data Security and Privacy Plan shall be deemed to incorporate the LEA's Parents Bill of Rights for Data Security and Privacy, as found at the URL link identified in Exhibit J. The Subscribing LEA will provide its Parents Bill of Rights for Data Security and Privacy to the Provider upon execution of Exhibit "E".
6. All references in the DPA to "Student Data" shall be amended to include and state, "Student Data and APPR Data."
7. To amend Article II, Section 5 to add: Provider shall ensure that its subprocessors agree that they do not have any property, licensing or ownership rights or claims to Student Data or APPR data and that they will comply with the LEA's Data Privacy and Security Policy. Provider shall examine the data privacy and security measures of its Subprocessors. If at any point a Subprocessor fails to materially comply with the requirements of this DPA, Provider shall: (i) notify LEA, (ii) as applicable, remove such Subprocessor's Access to Student Data and APPR Data; and (iii) as applicable, retrieve all Student Data and APPR Data received or stored by such

Subprocessor and/or ensure that Student Data and APPR Data has been securely deleted or securely destroyed in accordance with this DPA. In the event there is an incident in which Student Data and APPR Data held, possessed, or stored by the Subprocessor is compromised, or unlawfully Accessed or disclosed, Provider shall follow the Data Breach reporting requirements set forth in the DPA.

8. In Article IV, Section 2, replace “otherwise authorized,” with “otherwise required” and delete “or stated in the Service Agreement.”
9. To amend Article IV, Section 3 to add: Provider shall ensure that all its employees and subprocessors who have Access to or will receive Student Data and APPR Data will be trained on the federal and state laws governing confidentiality of such Student Data and APPR Data prior to receipt. Access to or Disclosure of Student Data and APPR Data shall only be provided to Provider’s employees and subprocessors who need to know the Student Data and APPR Data to provide the services and such Access and/or Disclosure of Student Data and APPR Data shall be limited to the extent necessary to provide such services.
10. To replace Article IV, Section 6 (Disposition of Data) with the following: Upon written request from the LEA, Provider shall dispose of or provide a mechanism for the LEA to transfer Student Data obtained under the Service Agreement, within ninety (90) days of the date of said request and according to a schedule and procedure as the Parties may reasonably agree. Provider is prohibited from retaining disclosed Student Data, subject to Provider’s disaster recovery retention policies, or continuing to Access Student Data beyond the term of the Service Agreement unless such retention is expressly authorized for a prescribed period by the Service Agreement, necessary for purposes of facilitating the transfer of disclosed Student Data to the LEA, or expressly required by law regulation, court order, subpoena, or similar legal process. In the event of a disaster recovery system containing deleted Student Data is used to repopulate the Provider's databases following the recovery from a disaster, Provider will delete all such Student Data immediately.
 - (i) Provider ‘s database backups are retained according to the following schedule:
 - Hourly backups are retained for 25 hours.
 - Daily backups are retained for 31 days.
 - Monthly backups are retained for 12 months.
 - Yearly backups are retained for 2 years.

The confidentiality and data security obligations of Provider under this DPA shall survive any termination of this contract to which this DPA is attached but shall terminate upon Provider’s certifying that it and it’s subprocessors, as applicable: (a) no longer have the ability to Access any Student Data provided to Provider pursuant to the Service Agreement and/or (b) have destroyed all Student Data and APPR Data provided to Provider pursuant to this DPA. The Provider agrees that the timelines for disposition of data will be modified by any Assurance of Discontinuation, which will control in the case

of a conflict.

Upon termination of this DPA, if no written request from the LEA is received, Provider shall dispose of all student data in accordance with Provider's standard records retention schedule as outlined in the Provider's Privacy Notice (available here: <https://impacttest.com/privacy-notice/>). When student data collected by cognitive testing application reaches 7 years since the date of creation, it will be deidentified and permanently removed from the Provider's production database.

The duty to dispose of student data shall not extend to Student Data that had been de-identified or placed in a separate student account pursuant to section II 3. The LEA may employ a "**Directive for Disposition of Data**" form, a copy of which is attached hereto as **Exhibit "D"**, or, with reasonable notice to the Provider, other form of its choosing. No further written request or notice is required on the part of either party prior to the disposition of Student Data described in "**Exhibit D**".

11. To amend Article IV, Section 7 to add: 'Notwithstanding the foregoing, Provider is prohibited from using Student Data or APPR data for any Commercial or Marketing Purpose as defined herein. And add after (iii) account holder, "which term shall not include students."
12. To replace Article V, Section 1 (Data Storage) to state: Student Data and APPR Data shall be stored within the United States and Canada only. Upon request of the LEA, Provider will provide a list of the locations where Student Data is stored.
13. To replace Article V, Section 2 (Audits) to state: No more than once a year or following an unauthorized Access, upon receipt of a written request from the LEA with at least ten (10) business days' notice and upon the execution of an appropriate confidentiality agreement, the Provider will allow the LEA or its designee(s) to audit the security and privacy measures that are in place to ensure protection of Student Data or any portion thereof as it pertains to the delivery of services to the LEA . The Provider will cooperate reasonably with the LEA or its designee(s) and any local, state, or federal agency with oversight authority or jurisdiction in connection with any audit or investigation of the Provider and/or delivery of Services to students and/or LEA, and shall provide reasonable Access to the Provider's facilities, staff, agents and LEA's Student Data and all records pertaining to the Provider, LEA and delivery of Services to the LEA.

Upon request by the New York State Education Department's Chief Privacy Officer (NYSED CPO), Provider shall provide the NYSED CPO with copies of its policies and related procedures that pertain to the protection of information. In addition, the NYSED CPO may require Contractor to undergo an audit of its privacy and security safeguards, measures, and controls as they pertain to alignment with the requirements of New York State laws and regulations, and alignment with the NIST Cybersecurity Framework. Any audit required by the NYSED CPO must be performed by an independent third party at Provider's expense and the audit report must be provided to the NYSED CPO. In lieu of being subject to a required audit, Provider may provide the NYSED CPO with an industry standard independent audit report of Provider's privacy and security practices

that was issued no more than twelve months before the date that the NYSED CPO informed Provider that it required Provider to undergo an audit. Failure to reasonably cooperate with any of the requirements in this provision shall be deemed a material breach of the DPA.

To amend the third sentence of Article V. Section 3 (Data Security) to read: The Provider shall implement security practices that are in alignment with the NIST Cybersecurity Framework v1.1 or any update to this Framework that is adopted by the New York State Department of Education.

14. To replace Article V. Section 4 (Data Breach) to state: In the event of a Breach as defined in 8 NYCRR Part 121.1 Provider shall provide notification to LEA within seventy-two (72) hours of confirmation of the incident, unless notification within this time limit would disrupt investigation of the incident by law enforcement. In such an event, notification shall be made within a reasonable time after the incident. Provider shall follow the following process:
 - (1) The security breach notification described above shall include, at a minimum, the following information to the extent known by the Provider and as it becomes available:
 - i. The name and contact information of the reporting LEA subject to this section.
 - ii. A list of the types of personal information that were or are reasonably believed to have been the subject of a breach.
 - iii. If the information is possible to determine at the time the notice is provided, then either (1) the date of the breach, (2) the estimated date of the breach, or (3) the date range within which the breach occurred. The notification shall also include the date of the notice.
 - iv. Whether the notification was delayed as a result of a law enforcement investigation, if that information is possible to determine at the time the notice is provided; and
 - v. A general description of the breach incident, if that information is possible to determine at the time the notice is provided; and
 - vi. The number of records affected, if known; and
 - vii. A description of the investigation undertaken so far; and
 - viii. The name of a point of contact for Provider.
 - (2) Provider agrees to adhere to all federal and state requirements with respect to a data breach related to the Student Data, including, when appropriate or required, the required responsibilities and procedures for notification and mitigation of any such data breach.
 - (3) Provider further acknowledges and agrees to have a written incident response plan that reflects best practices and is consistent with industry standards and federal and state law for responding to a data breach, breach of security, privacy incident or unauthorized acquisition or use of Student Data or any portion thereof, including personally identifiable information and agrees to provide LEA, upon request, with a summary of said written incident response plan.
 - (4) LEA shall provide notice and facts surrounding the breach to the affected students, parents or guardians. Where a Breach of Student Data and/or APPR Data occurs that is attributable to Provider and/or its Subprocessors, Provider shall pay for or promptly reimburse LEA for the full cost of notification to Parents, Eligible Students, teachers, and/or principals.

(5) In the event of a breach originating from LEA's use of the Service, Provider shall cooperate with LEA to the extent necessary to expeditiously secure Student Data.

(6) Provider and its subprocessors will cooperate with the LEA, the NYSED Chief Privacy Officer and law enforcement where necessary, in any investigations into a Breach. Any costs incidental to the required cooperation or participation of the Provider will be the sole responsibility of the Provider if such Breach is attributable to Provider or its subprocessors.

15. To amend the definitions in Exhibit "C" as follows:

- "Subprocessor" is equivalent to subcontractor. It is a third party who the provider uses for data collection, analytics, storage, or other service to allow Provider to operate and/or improve its service, and who has access to Student Data.

- "Provider" is also known as third party contractor. It any person or entity, other than an educational agency, that receives student data or teacher or principal data from an educational agency pursuant to a contract or other written agreement for purposes of providing services to such educational agency, including but not limited to data management or storage services, conducting studies for or on behalf of such educational agency, or audit or evaluation of publicly funded programs. Such term shall include an educational partnership organization that receives student and/or teacher or principal data from a school district to carry out its responsibilities and is not an educational agency and a not-for-profit corporation or other non-profit organization, other than an educational agency.

16. To add to Exhibit "C" the following definitions:

- **Disclose or Disclosure:** The intentional or unintentional communication, release, or transfer of Student Data and/or APPR Data by any means, including oral, written, or electronic.
- **Encrypt or Encryption:** As defined in the Health Insurance Portability and Accountability Act of 1996 Security Rule at 45 CFR § 164.304, encrypt means the use

of an algorithmic process to transform Personally Identifiable Information into an unusable, unreadable, or indecipherable form in which there is a low probability of assigning meaning without use of a confidential process or key.

- **Release:** Shall have the same meaning as Disclose
- **LEA:** As used in this DPA and all Exhibits, the term LEA shall mean the educational agency, as defined in Education Law Section 2-d, that has executed the DPA; if the LEA is a board of cooperative educational services, then the term LEA shall also include Participating School Districts for purposes of the following provisions of the DPA: Article I, Section 2; Article II, Sections 1 and 3; and Sections 1, 2, and 3 of Article III.

ImPACT Applications Security

ImPACT Applications has implemented many policies and procedures as it relates to the security, privacy and availability of our application environments. We undergo annual SOC 2 Type II audits by an independent third-party auditor covering the domains of security, privacy and availability. ImPACT Applications has also achieved ISO 13485 certification for our quality management system. Below are the highlights of many of our policies, outlining the steps we take to make sure our environments are safe and secure.

Datacenter Information

Security

ImPACT Applications uses a colocation datacenter facility to house our equipment. The facility has completed an SOC 2 Type II audit. It employs state of the art access control systems. Entry to the building and to various other sections of the facility including the computer room are controlled by a multi-factor access system, requiring a key card, a pin code, and a fingerprint scan for entry. All external doors, as well as the computer room floors are under 24x7x365 video surveillance. Motion detection and alarms are used during off-hours. Guest access is logged, and guests are escorted throughout the facility by datacenter staff.

Physical

The datacenter, a tier 3 facility, uses fully diverse electrical paths for power from the outside utility through to the customer cabinets. Redundant UPS units provide short term power protection to all systems in the datacenter, while redundant diesel generators provide long term power protection, with enough fuel for 36 hours of constant running at 100% load. A fueling contract is in place as well, to ensure uninterrupted power in the event of a major long-term outage.

The facility provides redundant network paths using 7+ ISPs and BGP routing to ensure maximum network availability. We also have redundant firewalls, switches, and bonded network interfaces in our servers to ensure that there is no single point of failure in the network path.

The HVAC system at the datacenter is an N+1 configuration, with a spare unit rotating into service monthly. A maintenance contract is in place, providing routine checks and cleaning to ensure the equipment is functioning to its fullest potential, and prevent any unexpected problems.

Fire suppression is accomplished through a conventional smoke and heat detection system and a pre-action dry pipe sprinkler system. Clean agent fire extinguishers are also located throughout the facility.

Application Security

Field validation

Input fields throughout the application are checked and validated for appropriate format to ensure that correct information is provided by the end user. This helps to ensure that proper information is received, stored and reported upon. Also, this ensures that only expected data is transmitted, helping to thwart any attack attempts made through input fields.

Database encryption

All fields in the database that store personally identifiable information are encrypted using AES-128 bit encryption.

Data in-transit encryption

All data transmitted between the end user's computer and the ImPACT Applications systems is encrypted using the highest supported encryption method of the end-user's web browser. A minimum of 128-bit encryption is required. Any request made over an unencrypted channel (HTTP) is automatically redirected to an encrypted channel (HTTPS) before it is allowed to complete.

Access logging

All access to protected health information is logged by our application. This includes reports that are generated, modifications or corrections to PII that are performed by the user, and any data that is requested to be exported from the system. Access logs are written in a date/time stamped format identifying the user that performed the action, and the details of the action that they had performed.

Session timeout

The ImPACT Applications Customer Center utilizes a 20-minute idle timeout to prevent unauthorized access. Additionally, if a user administers a test through one of the links inside of the Customer Center, their session is immediately logged out upon the start of that test to prevent the test taker from being able to exploit the open session.

Account information

Access to the ImPACT Applications Customer Center is accomplished through unique username/password authentication. Each user of the system receives their own account, and we do not limit or restrict the number of accounts allowed per customer. The application uses the following role structure to allow customers to allocate permissions in a least-access manner.

- System Management Only
- Baseline test administration only
- Baseline and Post-Injury test administration
- Baseline test administration and access to baseline results
- Baseline and Post-Injury test administration and access only to baseline results
- Baseline and Post-Injury test administration and access to all results
 - System Management permission is able to be granted in conjunction with any of the above permission levels.

Users are associated with one or many organizations inside of the system. Users are only allowed to view or retrieve data from those organizations that they are associated with and have valid permissions to.

Operational Security

Database backup and encryption

The database behind the ImPACT Applications system is backed up hourly. The backup files are encrypted using AES-256 encryption prior to being transferred from the database server to any other storage location. The backup files are stored in three locations, two are geographically separate from the production infrastructure. Each backup is logged, and system administrators are notified when a job has occurred along with the detailed result of the backup job.

Server installation guidelines

Our systems are installed with a CentOS “minimal” install. We have a base install build sheet that all of our servers are configured to, which sets up our initial user accounts, basic software and services common to all systems, and the like. From there, we have specific build sheets based on the type of server that are followed. For example, one for database servers, one for a particular type of web server, etc. This ensures uniform configuration for all systems in our environment and serves as a checklist so that we are sure they are all built to the same specification.

Network vulnerability assessment

We perform quarterly network vulnerability scans against our environment. Any vulnerabilities discovered as part of these scans would be assessed for validity and severity. Items requiring correction would be addressed as part of a corrective action item.

System patch management

ImPACT Applications system administrators monitor several notification lists from our software vendors to remain informed of critical issues. Any

remotely exploitable critical bug or security issue is patched as soon as possible, usually within 2 days of receiving notification, to eliminate the potential risk presented by the issue. Patches that are non-critical, or not remotely exploitable are applied on a quarterly basis, starting with our development environment, then QA, and finally after the patches have proven effective and not harmful to the function of the application, they are applied in production.

Production system access review

Annually, and also if/when any modifications to the user lists are made, we review the active accounts and access levels of our production systems. We will gather together the list of active users on the servers and VPN devices, along with a list of accounts with elevated privileges, ensure that all are valid, and make any adjustments necessary to ensure no invalid accounts are active, and all accounts have the appropriate levels of access. This is supplemented by policies that are followed when employees join or leave the company to ensure that access is approved when granted and revoked when no longer needed.

Service outage and security events

In the event of a service outage or security event, ImPACT Applications has a defined policy to ensure that a root cause is determined, documented and remediated by whomever the responsible party is. These documents are filed when an issue is detected and amended throughout the discovery and remediation process. Notification in the event of a data breach is also part of this process, and the proper notification processes will be followed according to applicable law. After all steps have been completed, and any remediation steps have been completed and verified, the document will be closed and filed.

Network layout

ImPACT Applications uses a web application firewall (WAF) to protect the application from malicious attack attempts. The WAF in place defends against OWASP Top 10 threats, including SQL injection, cross-site scripting,

illegal resource access and remote file inclusion. Using advanced client classification technologies, the WAF is able to distinguish between “good” and “bad” bot traffic, allowing us to block scrapers, vulnerability scanners and others, while allowing other legitimate services to access the site. The WAF also monitors website traffic to prevent backdoor install attempts and to quarantine backdoors that are already installed, rendering them useless. The WAF also allows us granular control to be able to block whole countries, specific bots, IP addresses, or URLs. DDoS protection is also provided by the WAF.

The server network is arranged in layers, each layer a DMZ to itself with only necessary access between them. The systems are protected by a redundant pair of firewalls. Traffic is then passed through to a redundant pair of load balancers, then allocated to one of many web servers to handle the request. The web server will request information from the database layer, and then formulate a response back to the end user. Only appropriate ports are open between the DMZ to reduce risk and limit lateral movement in the event of a system compromise.

Access is permitted to our production environment for ImPACT Applications system administrators only. No developers or testing personnel have access to the production systems. Our infrastructure is structured such that access can be allocated to a particular set of servers in any of our environment to a defined user class.

ImPACT Applications uses an OpenVPN device to provide remote access to the datacenter environment for users that require access. The OpenVPN is configured with role-based access rules to allow users access to only the systems that they require access to in order to perform their duties. Developers only have access to development systems and QA personnel only to QA systems, while system administrators can access all servers.

ImPACT Applications employees are required to use a two-factor authentication system to log into the OpenVPN. In addition to a username and certificate, remote users must provide a second authentication token,

either a passcode or acknowledgement of a notification to a pre-registered device (smartphone or hardware token).

Monitoring

ImPACT Applications uses Nagios primarily to monitor our systems. We monitor as many available data points as possible, as appropriate for the type of system being monitored. Standard monitors include CPU usage, Memory usage, Load, Disk usage, NTP status, and several others. System specific monitors include HTTP connection counts for web servers, web server status, database performance items, etc. Each monitor has a defined range. If a monitor detects that a check is out of range (high CPU usage, for example) ImPACT Applications system administrators are notified of the condition. Each of our sites has its own Nagios instance, and because of this we are able to also monitor the sites availability, as well as other items like SSL Certificate expiration.

ImPACT Applications uses a package called pnp4nagios to store and provide trending data from Nagios. We use this information to evaluate server performance, identify peak load times, and plan for future infrastructure expansion. We gather snapshots of the production infrastructure's performance monthly and evaluate for any increased loads or other items that would require additional resource allocation.

ImPACT Applications also makes use of NodePing, a monitoring service that checks our various websites from locations around the globe to ensure uniform availability from a vast set of locations. We have NodePing check a particular test page that exercises the full application stack, ensuring that all layers are checked as part of the test. In the event of an error, NodePing will send e-mail and text messages to ImPACT Applications system administrators.

ImPACT Applications has installed a host-based intrusion detection system (HIDS) on all of our servers. The HIDS monitors log files to watch for errors, keeps checksums of critical system files and evaluates for unexpected

changes regularly, and also monitors for new or updated software packages on the servers. If any anomalies are found, ImPACT Applications system administrators are notified of the condition.

Disaster recovery

ImPACT Applications has a hot standby disaster recovery environment. All systems at the DR facility are online, running the current production version of application code, are fully monitored, and ready to assume the production load. A disaster recovery plan is documented and tested annually. Database backups are automatically copied from our production facility to the DR facility hourly.

Testing our DR environment requires simply restoring a backup copy of our production database to the systems in DR, accessing the site through an alternate URL, and running through a scripted set of actions to verify that the site is fully functional.
