## Mission

Prepare the next generation of students to be accountable and responsible for their education. Students and staff will grow together in a safe and nurturing learning environment. Kearns Academy will provide the tools necessary to empower students for lifelong learning. Our students will graduate equipped to achieve optimal success and compete in the global community.

## Vision

Be the leading academy in the state of North Carolina in preparing students for college and/or career by providing a relationship focused faculty, access to rigorous high school and college courses, along with career certification and training in the areas of Cyber Security and Artificial Intelligence.

The Kearns Academy offers a rigorous curriculum that stresses traditional academic courses and Career Technical Education courses in the areas of computer and information sciences. Students work towards meeting graduation requirements while working towards an industry certification in Computer and Information Science. Our program with Guilford Technical Community College (GTCC) allows students to enroll in college courses for dual credit. Our program is a non-traditional high school experience, but our focus on academics and relationship building help students be successful. The Kearns Academy is truly a "small school, where big dreams happen!"
