

## DISTRICT SECURITY RELATING TO TECHNOLOGY

Protecting sensitive data and technology is essential to fostering a positive learning environment by ensuring access to educational resources, information, activities, communication tools, research, training, collaboration, curriculum, and materials.

The School Committee recognizes that data and information are valuable resources that must be safeguarded from unauthorized access or misuse. It supports a balance between security and access to ensure that district staff, students, and family data are adequately protected in accordance with its sensitivity.

The Committee directs the Superintendent to establish and maintain a comprehensive data protection system. This system will include procedures that ensure the confidentiality, availability, and integrity of all district information.
