

# What is the difference in effectiveness/reactions between oral Spironolactone and Winlevi on acne in female patients?

## Importance

- ★ Acne affects ~80% of teens/young adults and can harm mental health
- ★ Personalized treatment is crucial—acne varies by type and severity
- ★ Understanding effectiveness and side effects improves care quality

## Uniqueness

- ★ Builds on past studies by comparing Spironolactone (existing) vs. Winlevi (new)
- ★ Looks at mild vs. severe acne and side effects like redness, irritation, and sun sensitivity
- ★ Focuses on both effectiveness and patient comfort

## Data

- ★ Meta-analysis using existing research
- ★ Collecting quantitative data on acne outcomes and side effect rates
