

How do early childhood developmental problems correlate with impulsive vs. premeditated crimes?

Significance:

- Address real world issues like crime and rehabilitation
- Can help guide targeted intervention to reduce future offenders
- Aid in implementing support for at-youth risk

How will my research be different:

- Previous studies shows
 - ACEs link to crime
- My study shows
 - Deeper research on trauma type and offense style

Qualitative data:

- I will use case studies, psychological assessments and interviews
- This will better show personal experiences, thought processes, and emotions
