The Impact of Social Values on Individual Violent Crime Pursuits

Research Question - How are cultural values related to a country's likelihood of experiencing different types of violent crime?

Violent crime has been a major problem facing society since ancient times. It cannot be ignored that culture and social values also play a significant role in causing violence.

Previous research has often isolated the impact of a particular value on a particular crime type, such as masculinity and sexual assault. This project will examine the impact of social values from a broader perspective.

Date type - Quantitative (Crime rate / Specific indices of different social values)

Murder rates across the world visualised
Homicide rates per 100,000 people by country or territory (2012 or latest year)

0.00 - 2.99
3.00 - 4.99
5.00 - 9.99
10.00 - 19.99
20.00 - 29.99
