Moonachie School District Science Curriculum: Grade 3

New Jersey Student Learning Standards for Science

Born On: August 23, 2022

Re-Adopted: August 26, 2025

Unit 1 Overview

Weather and Climate

Grade: 3

Content Area: Earth and Space Science

Pacing: 15 days

Essential Question

What is the typical weather near our home?

How can we protect people from weather-related hazards?

Student Learning Objectives (Performance Expectations)

3-ESS2-1: Represent data in tables and graphical displays to describe typical weather conditions expected during a particular season.

3-ESS2-2. Obtain and combine information to describe climates in different regions of the world.

3-ESS3-1: Make a claim about the merit of a design solution that reduces the impacts of climate change and/or a weather-related hazard.

Unit Summary

In this unit of study, students organize and use data to describe typical weather conditions expected during a particular season. By applying their understanding of weather-related hazards, students are able to make a claim about the merit of a design solution that reduces the impacts of such hazards. The crosscutting concepts of patterns, cause and effect, and the influence of engineering, technology, and science on society and the natural world are called out as organizing concepts for these disciplinary core ideas. Students demonstrate grade-appropriate proficiency in asking questions and defining problems, analyzing and interpreting data, engaging in argument from evidence, and obtaining, evaluating, and communicating information. Students are also expected to use these practices to demonstrate understanding of the core ideas.

Technical Terms

Temperature, Precipitation, Pictograph, Climate Range, Predictions, Weather Forecast, Weather Patterns, Cold Front, Warm Front, Absolute Zero, North Pole, South Pole, Radar, Air Quality, Satellite, Severe Weather, Hurricane, Typhoon, Surface Weather, Snow Cover, Fire Weather, Doppler Radar, Atmosphere, Meteorologists, Weather Vane, Anemometer, Hurricane, NASA, Tree Rings, Atmospheric Composition, Coral Bleaching, Rain Stick, El Niño, Greenhouse Effect, Horizon, Flood Barrier, Drought, Lightning Rod, Flash Flood, Thunderstorm

Formative Assessment Measures

Part A: Can we predict the kind of weather that we will see in the spring, summer, autumn, or winter?

Students who understand the concepts can:

- Make predictions using patterns of change
- Represent data in tables, bar graphs, and pictographs to reveal patterns that indicate relationships.
- Represent data in tables and graphical displays to describe typical weather conditions expected during a particular season. (Assessment of graphical displays is limited to pictographs and bar graphs. Assessment does not include climate change.) Examples of data could include: Average temperature Precipitation Wind direction

Part B: How can climates in different regions of the world be described?

Students who understand the concepts can:

- Make predictions using patterns of change.
- Obtain and combine information from books and other reliable media to explain phenomena.

Part C: How can we protect people from natural hazards such as flooding, fast wind, or lightning?

Students who understand the concepts can:

Identify and test cause-and-effect relationships to explain change

6.3.5.CivicsPD.2).

- Make a claim about the merit of a solution to a problem by citing relevant evidence about how it meets the criteria and constraints of the problem.
- Make a claim about the merit of a design solution that reduces the impacts of a weather-related hazard. Examples of design solutions to weather related hazards could include: Barriers to prevent flooding Wind-resistant roofs Lightning rods
- Define a simple design problem that can be solved through the development of an object, tool, process, or system and include several criteria for success and constraints on materials, time, or cost.
- Define a simple design problem reflecting a need or a want that includes specified criteria for success and constraints on materials, time, or cost.

| Student Learning Objectives (Performance Expectations) | |
| 3-PS2-1. Plan and conduct an investigation to provide evidence of the effects of balanced and unbalanced forces on the motion of an object. | |

Unit Summary

3.PS2-2.Make observations and/or measurements of an object's motion to provide evidence that a pattern can be used to predict future motion.

In this unit of study, students are able to determine the effects of balanced and unbalanced forces on the motion of an object. The crosscutting concepts of patterns and cause and effect are identified as organizing concepts for these disciplinary core ideas. In the third-grade performance expectations, students are expected to demonstrate grade-appropriate proficiency by planning and carrying out investigations. Students are expected to use these practices to demonstrate understanding of the core ideas.

Technical Terms

Balanced Forces, Unbalanced Forces, Stability, Instability, Collide, Future Motion, Newton's Laws of Motion (1,2, and 3), Inertia, Acceleration, Deceleration, Friction, Magnetism, Vector of Force, Mass, Reaction, Gravity, Pendulum, Magnetic Pull, Magnetic Push, Static Cling, Velocity

Formative Assessment Measures

Part A: How do scientists play soccer?

Students who understand the concepts can:

- Identify cause-and-effect relationships.
- Plan and conduct investigations collaboratively to produce data to serve as the basis for evidence.
- Use fair tests in which variables are controlled and the number of trials considered.
- Plan and conduct an investigation to provide evidence of the effects of balanced and unbalanced forces on the motion of an object.

Part B: Can we use patterns that we observed to predict the future?

Students who understand the concepts can:

- Make predictions using patterns of change.
- Make observations and/or measurements to produce data to serve as the basis of evidence for an explanation of a phenomenon.
- Make observations and/or measurements of an object's motion to provide evidence that a pattern can be used to predict future motion.

Grade 3 Unit 2: Forces and Motion

3-PS2 Motion and Stability: Forces and Interactions

3-PS2-1. Plan and conduct an investigation to provide evidence of the effects of balanced and unbalanced forces on the motion of an object.

Clarification Statement: Examples could include an unbalanced force on one side of a ball can make it start moving; and, balanced forces pushing on a box from both sides will not produce any motion at all.

Assessment Boundary: Assessment is limited to one variable at a time: number, size, or direction of forces. Assessment does not include quantitative force size, only qualitative and relative. Assessment is limited to gravity being addressed as a force that pulls objects down.

Evidence Statements: 3-PS2-1

Unit 3 Overview

Electrical and Magnetic Forces

Grade: 3

Content Area: Physical Science

Pacing: 15 days

Essential Question

How can we use our understandings about magnets be used to solve problems?

Student Learning Objectives (Performance Expectations)

3-PS2-3. Ask questions to determine cause and effect relationships of electric or magnetic interactions between two objects not in contact with each other.

3-PS2-4. Define a simple design problem that can be solved by applying scientific ideas about magnets.*

Unit Summary

In this unit of study, students determine the effects of balanced and unbalanced forces on the motion of an object and the cause-and-effect relationships of electrical or magnetic interactions to define a simple design problem that can be solved with magnets. The crosscutting concept of cause and effect, and the interdependence of science, engineering, and technology, and the influence of engineering, technology, and science on society and the natural world are called out as organizing concepts for these disciplinary core ideas. Students are expected to demonstrate grade-appropriate proficiency in asking questions and defining problems. Students are also expected to use these practices to demonstrate understanding of the core ideas.

Technical Terms

Cause and Effect, Electric Interaction, Magnetic Interaction, Electromagnetic, Magnetism, Magnetic Field, Bar Magnetic, Electrical Charge

Formative Assessment Measures

Part A: What are the relationships between electrical and magnetic forces?

Students who understand the concepts can:

- Identify and test cause-and-effect relationships in order to explain change
- Ask questions that can be investigated based on patterns such as cause-and effect relationships.
- Ask questions to determine cause-and-effect relationships in electric or magnetic interactions between two objects not in contact with each other.
- Magnetic forces could include: The force between two permanent magnets; The force between an electromagnet and steel paperclips; The force exerted by one magnet versus the force exerted by two magnets.
- Cause-and-effect relationships could include: How the distance between objects affects the strength of the force How the orientation of magnets affects the direction of the magnetic force.

Part B: How can we use our understandings about magnets be used to solve problems?

Students who understand the concepts can:

- Define a simple problem that can be solved through the development of a new or improved object or tool.
- Define a simple design problem that can be solved by applying scientific ideas about magnets (e.g., constructing a latch to keep a door shut or creating a device to keep two moving objects from touching each other).
- Define a simple design problem that can be solved through the development of an object, tool, process, or system, and include several criteria for success and constraints on material, time, or cost.
- Define a simple design problem reflecting a need or a want that includes specified criteria for success and constraints on materials, time, or cost.

Grade 3 Unit 3: Electrical and Magnetic Forces

3-PS2 Motion and Stability: Forces and Interactions

3-PS2-3 Ask questions to determine cause and effect relationships of electric or magnetic interactions between two objects not in contact with each other.

Clarification Statement: Examples of an electric force could include the force on hair from an electrically charged balloon and the electrical forces between a charged rod and pieces of paper; examples of a magnetic force could include the force between two permanent magnets, the force between an electromagnet and steel paperclips, and the force exerted by one magnet versus the force exerted by two magnets. Examples of cause and effect relationships could include how the distance between objects affects strength of the force and how the orientation of magnets affects the direction of the magnetic force.

Assessment Boundary: Assessment is limited to forces produced by objects that can be manipulated by students, and electrical interactions are limited to static electricity.

Evidence Statement: 3-PS2-3

Unit 4 Overview

Heredity: Inheritance and Variation of Traits

Grade: 3

Content Area: Life Science

Pacing: 15 days

Essential Question

What kinds of traits are passed on from parent to offspring? What environmental factors might influence the traits of a specific organism?

What environmental factors might influence the traits of a specific organism?

Student Learning Objectives (Performance Expectations)

3-LS3-1. Analyze and interpret data to provide evidence that plants and animals have traits inherited from parents and that variation of these traits exists in a group of similar organisms.

3-LS3-2. Use evidence to support the explanation that traits can be influenced by the environment.

Unit Summary

In this unit of study, students acquire an understanding that organisms have different inherited traits and that the environment can also affect the traits that an organism develops. The crosscutting concepts of patterns and cause and effect are called out as organizing concepts for these disciplinary core ideas. Students are expected to demonstrate grade-appropriate proficiency in analyzing and interpreting data, constructing explanations, and designing solutions. Students are also expected to use these practices to demonstrate understanding of the core ideas.

Technical Terms

Trait, Organism, Offspring, Sibling, Inherited Traits, Non-inherited Traits, Adapted Traits, Genetics, DNA, Vertebrate Systems, Invertebrate Systems, Genetic Variation, Mutation, Observable Trait, Heredity, Types of Biomes (6), Ecosystems, Adaptation, Predator, Prey, Growth Rate, Natural Selection, Tropisms, Pollination, Germination, Seedling, Photosynthesis, Chromatophores

Formative Assessment Measures

Part A: What kinds of traits are passed on from parent to offspring?

Students who understand the concepts can:

- Sort and classify natural phenomena using similarities and differences. (Clarification: Patterns are the similarities and differences in traits shared between offspring and their parents or among siblings, with an emphasis on organisms other than humans).
- Analyze and interpret data to make sense of phenomena using logical reasoning.
- Analyze and interpret data to provide evidence that plants and animals have traits inherited from parents and that variation of these traits exists in a group of similar organisms. (Assessment does not include genetic mechanisms of inheritance and prediction of traits, and is limited to non humans.)

Part B: What environmental factors might influence the traits of a specific organism?

Students who understand the concepts can:

- Identify cause-and-effect relationships in order to explain change.
- Use evidence (e.g., observations, patterns) to support an explanation.
- Use evidence to support the explanation that traits can be influenced by the environment. Examples of the environment's effect on traits could include: Normally tall plants that grow with insufficient water are stunted. A pet dog that is given too much food and little exercise may become overweight.

An Inventory of My Traits

Students take an inventory of their own easily observable genetic traits. Working in small groups, they observe how their trait inventories differ from those of others. Students record their observations in a data table and make a bar graph to show the most and least common traits in the group.

Unit 5 Overview

Continuing the Cycle

Grade: 3

Content Area: Life Science

Pacing: 10 days

Essential Question

Do all living things have the same life cycle?

Are there advantages to being different?

Student Learning Objectives (Performance Expectations)

3-LS1-1. Develop models to describe that organisms have unique and diverse life cycles but all have in common birth, growth, reproduction, and death.

3-LS4-2. Use evidence to construct an explanation for how the variations in characteristics among individuals of the same species may provide advantages in surviving, finding mates, and reproducing.

Unit Summary

In this unit of study, students develop an understanding of the similarities and differences in organisms' life cycles. In addition, students use evidence to construct an explanation for how the variations in characteristics among individuals of the same species may provide advantages in surviving, finding mates, and reproducing. The crosscutting concepts of patterns and cause and effect are called out as organizing concepts for these disciplinary core ideas. Students demonstrate grade appropriate proficiency in developing and using models and constructing explanations and designing solutions. Students are also expected to use these practices to demonstrate understanding of the core ideas.

Technical Terms

Life Cycle, Molecules, "Survival of the Fittest", Charles Darwin, Natural Selection, Animal Defenses, Embryo, Metamorphosis

Formative Assessment Measures

Part A: Do all living things have the same life cycle?

Students who understand the concepts can:

- Sort and organism's (inherited traits) using similarities and differences in patterns.
- Make predictions using patterns of change
- Develop models to describe phenomena
- Develop models to describe that organisms have unique and diverse life cycles but all have in common birth, growth, reproduction, and death. (I.e., Changes organisms go through during their life form a pattern.)

Part B: Are there advantages to being different?

Students who understand the concepts can:

- Identify cause-and-effect relationships in order to explain change.
- Use evidence (e.g., observations, patterns) to construct an explanation.

Use evidence to construct an explanation for how the variations in characteristics among individuals of the same species may provide advantages in surviving,

finding mates, and reproducing. Examples of cause and-effect relationships could include: Plants that have larger thorns than other plants may be less likely to be eaten by predators. Animals that have better camouflage coloration than other animals may be more likely to survive and therefore more likely to leave offspring.

| ny don't we see alligators in the arctic? | | |
| Student Learning Objectives (Performance Expectations) | | |
| \$2.1. Construct an argument that some animals form groups that help members survive | | |

3-LS2-1. Construct an argument that some animals form groups that help members survive.

3-LS4-3. Construct an argument with evidence that in a particular habitat some organisms can survive well, some survive less well, and some cannot survive at all.

Unit Summary

In this unit of study, students develop an understanding of the idea that when the environment changes, some organisms survive and reproduce, some move to new locations, some move into the transformed environment, and some die. The crosscutting concepts of cause and effect and the interdependence of science, engineering, and technology are called out as organizing concepts for these disciplinary core ideas. Students demonstrate grade-appropriate proficiency in engaging in argument from evidence. Students are also expected to use this practice to demonstrate understanding of the core ideas.

Technical Terms

Ecosystems, Survival, Mammals, Reptiles, Amphibians, Species, Colonies, Pods, Herds, Survival Needs (4)

Formative Assessment Measures

Part A: In a particular habitat, why do some organisms survive well, some survive less well, and some not survive at all?

Students who understand the concepts can:

- Identify cause-and-effect relationships in order to explain change.
- Construct an argument with evidence
- Construct an argument with evidence (e.g., needs and characteristics of the organisms and habitats involved) that in a particular habitat, some organisms can survive well, some can survive less well, and some cannot survive at all.

| Unit 7 Overview |
|--|
| Unit 7: Using Evidence to Understand Change in Environments |
| Grade: 3 |
| Content Area: Life Science |
| Pacing: 15 Instructional Days |
| Essential Question |
| What do fossils tell us about the organisms and the environments in which they lived? |
| Student Learning Objectives (Performance Expectations) |
| 3-LS4-1. Analyze and interpret data from fossils to provide evidence of the organisms and the environments in which they lived long ago. |

3-LS4-4. Make a claim about the merit of a solution to a problem caused when the environment changes and the types of plants and animals that live there may change.*

Unit Summary

In this unit of study, students develop an understanding of the types of organisms that lived long ago and also about the nature of their environments. Students develop an understanding of the idea that when the environment changes, some organisms survive and reproduce, some move to new locations, some move into the transformed environment, and some die. The crosscutting concepts of systems and system models; scale, proportion, and quantity; and the influence of engineering, technology, and science on society and the natural world are called out as organizing concepts for these disciplinary core ideas. Students are expected to demonstrate grade-appropriate proficiency in asking questions and defining problems, analyzing and interpreting data, and engaging in argument from evidence. Students are also expected to use these practices to demonstrate understanding of the core ideas.

Technical Terms

Biological Evolution, Unity vs. Diversity, Body Fossils, Trace Fossils, Sediment, Paleontology, Evolve, Endangered, Critically Endangered, Extinct in the Wild, Extinct, Environmental Changes, Bycatch, Deforestation, Illegal Wildlife Trade, Overfishing, Soil Erosion, Soil Degradation, Ecological Footprint

Formative Assessment Measures

Part A: What do fossils tell us about the organisms and the environments in which they lived?

Students who understand the concepts are able to:

Observe that phenomena exist from very short to very long periods of time.

Analyze and interpret data to make sense of phenomena using logical reasoning.

Analyze and interpret data from fossils (e.g., type, size, distributions of fossil organisms) to provide evidence of the organisms and the environments in which they lived long ago. (Assessment does not include identification of specific fossils or present plants and animals. Assessment is limited to major fossil types and relative ages.) Examples of fossils and environments could include: Marine fossils found on dry land; Tropical plant fossils found in Arctic areas; or Fossils of extinct organisms.

Part B: What happens to the plants and animals when the environment changes?

Students who understand the concepts are able to:

Describe a system in terms of its components and interactions.

Make a claim about the merit of a solution to a problem by citing relevant evidence about how it meets the criteria and constraints of a problem.

Make a claim about the merit of a solution to a problem caused when the environment changes and the types of plants and animals that live there may change. (Assessment is limited to a single environmental change and does not include the greenhouse effect or climate change.) Examples of environmental changes could include changes in Land characteristics, Water distribution, Temperature, Food, or Other organisms.

Define a simple design problem that can be solved through the development of an object, tool, process, or system and that includes several criteria for success and constraints on materials, time, or cost.

Define a simple design problem reflecting a need or want that includes specified criteria for success and constraints on materials, time, or cost.

| Working in collaborative groups, student engage in an interactive research about fossils. | | | |
| | http://betterlesson.com/le | esson/638575/fossil-webquest | |
| Exploration | How Fossil Records Add to | Our Understanding | |
| Student Inquiry | | | has |
| | In this two day lesson, student identify and illustrate how fossil records are used. http://betterlesson.com/lesson/638809/how-fossil-records-add-to-our-understanding-day-1 | | |
| | | esson/638823/how-fossil-records-add-to-our-unde | |
| | | | 8 |
| | Fossils and Dinosaurs | | |
| | | | ealize the difference between fact and theory (idea). They |
| | will also gain a general un | derstanding of how fossils are formed. | |

| | http://sciencenetlinks.com/lessons/fossils-1-fossils-and-dinosaurs/ |
|------------------------|---|
| | |
| | Uncovering the Facts |
| | Students will recognize the kind of information that can be accumulated by studying dinosaur fossils, as well as understand that some |
| | fossil facts are made based on comparisons with living organisms. |
| | http://sciencenetlinks.com/lessons/fossils-2-uncovering-the-facts/ |
| | In these lessons: |
| | Teachers should: Introduce formal labels, definitions, and explanations for concepts, practices, skills or abilities. |
| Explanation | Students should: Verbalize conceptual understandings and demonstrate scientific and engineering practices. |
| Concepts and Practices | Topics to Be Discussed in Teacher Directed Lessons (Disciplinary Core Ideas): |
| | LS4.A: Evidence of Common Ancestry and Diversity |
| | Some kinds of plants and animals that once lived on Earth are no longer found anywhere.(Note: moved from K-2) |
| | Fossils provide evidence about the types of organisms that lived long ago and also about the nature of their environments. |
| | Fossil Formation |
| | Students will learn about how fossils are formed and why they are important. |

Grade 3 Unit 6: Organisms and Environment

3-LS4 Biological Evolution: Unity and Diversity

3-LS4-4. Make a claim about the merit of a solution to a problem caused when the environment changes and the types of plants and animals that live there may change.*

Clarification Statement: Examples of environmental changes could include changes in land characteristics, water distribution, temperature, food, and other organisms.

Assessment Boundary: Assessment is limited to a single environmental change. Assessment does not include the greenhouse effect or climate change.

Evidence Statement: 3-LS4-4

Disciplinary Core Ideas

Cross-Cutting Concepts

Science & Engineering Practices

Grade 3 Unit 1: Weather and Climate

Asking Questions and Defining Problems on grades K-2 experiences and progresses to specifying qualitative relationships.

Define a simple design problem that can be solved through the development of an object, tool, process, or system and includes several criteria for success and constraints on materials, time, or cost.

ETS1.A: Defining and Delimiting Engineering Problems Asking questions and defining problems in 3-5 builds Possible solutions to a problem are limited by available materials and resources (constraints). The success of a designed solution is determined by considering the desired features of a solution (criteria). Different proposals can be compared on the basis of how well each one meets the specified criteria for success of how well each takes the constraints into account.

Influence of Science, Engineering, and Technology on Society and the Natural World

People's needs and wants change over time, as do their demands for new and improved technologies.
