

Preschool E-Learning Choice Board

Have fun!

Caregivers, choose one activity from each area to complete with your student.

Social Emotional	Mathematics	Motor	Language / Literacy
Student will draw a picture of themselves, showing how they feel. Student can tell the caregiver why they feel that way.	Caregiver will mix up a pile of socks, then have the student match the pairs.	Student will crunch up sheets of paper or newspaper in one hand. Then play catch with them, count them, put them on a blanket or towel, and make a parachute.	Caregiver begins a story such as "once upon a time" ... then stops. Student adds to the story... then stops. Take turns going back and forth until it is complete!
Caregiver and student will play a board game or a card game.	Caregiver and student will work together to collect several objects from around the home. Student will line them up in order from shortest to longest. (You could use stuffed animals, toys, shoes, etc.)	Caregiver will help create an obstacle course indoors or outside- you could use chairs to run around, laundry baskets to throw something into, a broom to jump over, line up shoes and run in between them, etc.	The caregiver will write the letters of students' first and last names on small pieces of paper; each letter written on a separate piece of paper. Student will then practice putting them in order to spell their first and last name.
