**SHORT-TERM INITIAL RADON TESTING REPORT
EASTWOOD LOCAL SCHOOL DISTRICT - PEMBERVILLE, OH
NOVEMBER 2025**

TESTING SUMMARY

Follow-up testing for Radon gas was conducted from November 26-28, 2025 in the Eastwood Local School District in Pemberville, OH. This follow-up testing was a follow-up to the May 2025 testing in the district to confirm that the initial levels were consistent with the levels in the Winter months in the buildings. The testing was conducted in accordance with the U.S. Environmental Protection Agency (EPA) guidance document “Radon Measurement in Schools” (Revised Edition EPA 520/1-89-010) and the Ohio Department of Health radon regulations.

The school buildings tested included:

1. Eastwood Elementary School
2. Eastwood Middle School
3. Eastwood High School

The testing was conducted by Ohio Dept. of Health licensed Radon Testers (Matthew Brumbaugh and Brett Brumbaugh) who are also Radon Measurement Professionals accredited by the National Radon Proficiency Program (NRPP).

A total of 169 short-term Radon detectors were deployed in the 3 school buildings in all rooms that are frequently occupied (>4 hours/day). The tests were placed in all ground floor district rooms and 10% of the second-floor classrooms. These rooms include classrooms, offices, locker rooms, gyms, cafeterias, common areas, etc.

The testing included 10% duplicate samples and 5% blanks, collected in accordance with EPA, ODH, and AARST protocols.

TESTING DEVICES

The test kit type was a passive device called an Activated Charcoal Kit. The kits were submitted to AirChek, Inc. in Mills River, NC for analysis. AirChek is an accredited laboratory in the State of Ohio and through the National Environmental Laboratory Accreditation Program (NELAP).

TESTING RESULTS

Based on this testing project, the sample results showed that there were all tests in the district were below the EPA Action Level of 4.0 pCi/L with the highest level measured in the district at 3.5 pCi/L. The previous testing in May of 2025 had similar results with the highest level measured at 1.4 pCi/L. The summary of the Winter Radon testing is as follows:

BUILDING	# OF RADON TESTS	NOVEMBER 2025 HIGHEST RADON READING (pCi/L)	MAY 2025 HIGHEST RADON READING (pCi/L)
Eastwood High School	60	3.5	1.4
Eastwood Middle School	46	1.0	1.0
Eastwood Elementary School	63	2.7	0.8

SHORT-TERM WINTER FOLLOW-UP RADON TESTING REPORT
EASTWOOD LOCAL SCHOOL DISTRICT - PEMBERVILLE, OH
NOVEMBER 2025

RECOMMENDATIONS

The EPA's recommendation for readings below 4.0 pCi/L is that no immediate follow up measurements are required and that there is a relatively low probability that mitigation is warranted. They do recommend that since Radon levels change over time, future testing should be conducted at least every 5 years or more frequently if renovations are conducted.

RADON HEALTH RISK INFORMATION

Radon is the second leading cause of lung cancer after smoking. The U.S. Environmental Protection Agency (EPA) and the Surgeon General strongly recommend taking further action when the building's radon test results are 4.0 pCi/L or greater. The concentration of radon in the building is measured in picocuries per liter of air (pCi/L). The national average indoor radon level is about 1.3 pCi/L. The higher a building's radon level, the greater the health risk to you and your family. Smokers are at especially high risk. There are straightforward ways to fix a building's radon problem that are cost efficient. Even buildings with high levels can be reduced to below 4.0 pCi/L. EPA recommends that you use an EPA or State-approved contractor trained to mitigate radon problems.
