BASIC SOFTBALL GEAR

Gloves separate your fingers from each other for greater dexterity. Mitts omit this feature due to their heavy padding; even if they did separate your fingers, the thicker padding would make it harder for your fingers to move independently of each other. Buy a glove or mitt made from synthetic materials for younger players who expect to grow out of their current size, since these tend to be cheaper. For more durability over longer use, invest in a leather glove or mitt. To break your glove or mitt in more quickly after purchase, opt for treated leather that has been pre-conditioned for this purpose. Browse mitts that are specifically designed for either catcher or first baseman. Catcher's mitts are the biggest; their circumference typically exceeds 30 inches. First baseman's mitts resemble gloves, with less padding and more length than a catcher's mitt.

Softball cleats are typically made of a plastic material. This type of cleat is ideal for novice and beginning players as it's lighter, more versatile and more comfortable than metal cleats. Metal softball cleats offer exceptional traction. Cleats or studs are protrusions on the sole of a shoe, or on an external attachment to a shoe, that provide additional traction on a soft or slippery surface.

In American English the term cleats is used synecdochically to refer to shoes featuring such protrusions. Similarly, in British English the term 'studs' can be used to refer to 'football boots' or 'rugby boots', for instance, in a similar manner to the way 'spikes' is often used to refer to athletics shoes. Athletes have worn cleats since at least the 1500s. Although there are no images or surviving

Ball: Softballs used for youth and high school levels are usually bright yellow, around 12 inches in circumference and weigh around 180-200 grams. They are not "soft," as the name

of the sport implies; rather, they are made

of hard leather filled with cork, rubber and synthetic material. Glove Mitt: Softball gloves are often larger than those used in baseball because the ball is bigger. Most players choose to wear gloves, which differ from mitts in that they have individual fingers and less padding. First basemen and catchers usually wear mitts with extra padding to catch balls thrown at higher speeds. Bat: Youth softball bats are generally the same as youth baseball bats. They are made out of wood, aluminum or composite materials. Adult softball bats, however, are generally longer with a smaller diameter, and the barrels are less stiff than their baseball counterparts.

"WHO WOULDN'T WANT TO PLAY!"

HISTORY OF SOFTBALL

Although many people assume that softball was derived from baseball, the sport's first game actually came about because of a football game. The history of softball dates back to Thanksgiving Day of 1887, when several alumni sat in the Chicago, Illinois Farragut Boat Club, anxiously awaiting the outcome of the Yale versus Harvard football game. When Yale was announced as winner, a Yale alumnus playfully threw a boxing glove at a Harvard supporter. The Harvard fan swung at the balled-up glove with a stick, and the rest of the group looked on with interest. George Hancock, a reporter for the Chicago Board of Trade, jokingly called out, "Play ball!" and the first softball game com-

menced with the football fans using the boxing glove as a ball and a broom handle in place of a bat. Due to the initial excitement surrounding the game, the Farragut Boat Club decided to officially devise their own set of rules, and the game quickly leaked to outsiders in Chicago and, eventually, throughout the rest of the Midwestern U.S. As the history of softball shaped itself over the next decade, the game went under the guise of "indoor baseball," "kitten baseball," "diamond ball," "mush ball," and "pumpkin ball." In 1926, Walter Hakanson coined the term "softball" while representing the YMCA at a National Recreation Congress meeting, and by 1930, the term stuck as the sport's official name. In 1934, the

Joint Rules Committee on Softball collaborated to create a set of standardized rules. Up until this point, the game was being played with varied rules, player positions, and ball sizes. The original softball used by the Farragut Boat Club was 16 inches in circumference. However, Lewis Rober Sr., the man responsible for organizing softball games for firefighters in Minneapolis, used a 12-inch ball. Rober's ball won out as the preferred softball size.

from scoring. Second baseman: You will find the second baseman at the second base, which is positioned opposite the home base across the field.

"PUT YOUR GLOVE OUT"

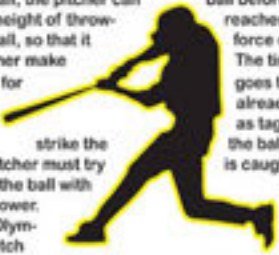

infield, backing up their teammates at the bases. Because of their distance from the rest of the game, outfielders are usually strong throwers.

HOW TO PLAY

There are so many techniques involved in softball to win a match. Batting and bowling in every form of this game has got tricks to win the match. The match starts when all hear play ball from the umpire. When all the fielders are in fair territory and the batsman is ready, the pitcher stands at the pitching plate to throw the ball. The main aim of the pitcher should be to throw the ball in such a way that it must pass the batsman to the gloves of catcher who is standing behind the home plate. The throw and pitch is done with an underarm motion. Starting

A count of 3 and 2 is a full count. In top level matches, pitchers try to throw the ball at great speed at the inner and outer corners of the plate. While throwing the ball, the pitcher can vary the height of throwing the ball, so that it may further make it harder for the batsman to strike the ball. A pitcher must try to throw the ball with utmost power. In 1996 Olympics, a pitch has reached up to 118 kilometres per hour in women's matches. In men's matches highest recorded speed is 140 kmph. The offensive team or the batting team sends one batsman at a time into the field for batting or hitting the ball and the order in which a player goes to bat is called the batting order. Once the batsman hits the ball into a fair territory, he/she must run with full speed. While running to first base, the batter is called a batter-runner. She becomes a base runner or runner when she safely reaches first base. Fielding The fielding side must try to get the batsman out and it can be done in three ways are Force

out, Tagged out fly out, If a fielder, while holding the ball, touches a base which is the only base towards which the batter may run and she does it before the batter arrives there is called force out. ball before the batsman reaches it, it is called force out. Softball Force The time a batsman goes to a base that is already tagged is called as tagged out. When the ball hit by the batter is caught by a fielder it is called fly out. Like catch out in cricket, fly out is the common in ball. The gloves of the catcher and the first baseman is called a mitt in which the pocket is larger than any other glove. There is much extra padding in the catcher's glove. The difference between a catcher's glove and first baseman's glove is that in the catcher's glove, there are no finger holes to put the fingers in but in first baseman's glove, there are holes to put the fingers in. An outfielder's gloves are of medium size. It is smaller than the catcher's gloves. The size of a normal outfielder's gloves ranges from 12 to 13 inches. As the size of the glove is large, this gives an extra advantage to the players to reach to a greater level take the ball.

Britney Anderson
Assitant manager at Foot Locker
200 Cambridgeside Place
Cambridge, MA, 02141

Dear Britney Anderson,

I am interested in applying for your sales associate at Foot Locker in the CambridgeSide Galleria Mall. I am interested in working at Foot Locker because I'm excited to share my love of shoes with the world, through my energetic self. Currently I have worked for a year and a half working retail at Tj maxx. I think my skills would be transferable working at Foot Locker.

For the past year and a half I've been working in retail at a clothing store. While working there I got to know what I really want to do for a job. Working with customers made me want to continue working with them much more. Clothes and shoes are my passion and my Tj Maxx knowledge for the both of them is great. For example working at Tj Maxx has made me more open to others and wanting to make their shopping experience the main priority.

I am open-minded, kind, positive, can handle many things that are asked to be done, and will do everything to the best of my ability. I have a lot of experience with working with people and feel this job opportunity is a good fit for me. Thank you for your consideration. I look forward to metting you.

Sincerely

Nimajah Y. Greene
