LUCY

Lucy, consisting of a skeleton forty percent complete, was discovered in Ethiopia by Donald Johanson in 1974, and was dated at 3.2 million years of age. He calculated her to have stood about 3'6" tall, and to have weighed about 50 pounds. Certain features suggested to Johanson that it may have walked erect, and was therefore evolving into a human. In a recent interview, Johanson recalls, "I happened to glance over my right shoulder . . . and there on the surface of the ground was a little bit of an elbow, I recognized it immediately as belonging to a human ancestor."

Lest one get the impression that Johanson is blessed with an unusual gift of discernment, let me point out that many in the anthropological community have yet to be so convinced. Indeed, it is impossible to make snap judgments like this, while a number of sophisticated studies have shown that the australopithecines, in general, and "Lucy," in particular, were not ape-human intermediates, but rather, an extinct species of ape which probably spent most of its time in the trees.

From the neck down, nearly every feature was likewise non-human. Australopithecus fossils, including those which are thought to be much more recent and therefore should be more human-like, have long, curved fingers and long, curved toes—well adapted to swinging from tree limb to tree limb.

WHAT THEY BELIEVE LUCY LOOKS LIKE

The features which suggest upright posture to Johanson are primarily the hip and knee joints, but numerous studies on the hip have shown otherwise. Oxnard, in his 1987 book, Fossils, Teeth and Sex (which contains an excellent summary of these various studies), claims that, "These fossils clearly differ more from both humans and African apes than do these living groups from each other. The australopithecines are unique" (p. 227). Evidently they could walk somewhat upright, as pygmy chimps do today, but not in the human manner at all. Furthermore, Johanson seldom reminds us that he found the knee joint—the strongest evidence for upright stance—in a location some two to three kilometers away, and in a layer of rock some 200 feet lower. Clearly, the knee does not belong with the rests, but even if they do go together, the knee is not diagnostically upright, and; points more specifically to tree-climbing abilities, according to Oxnard and other authorities.

Later in the night of November 24, there was much celebration and excitement over the discovery of what looked like a fairly complete hominid skeleton.

ARDI

The world's oldest skeleton and most complete skeleton of a potential human ancestor -- named "Ardi," short for Ardipithecus ramidus -- has been unveiled by an international team of 47 researchers.

Their unprecedented, 17-year investigation of Ardi is detailed in a special issue of the journal Science.

The ape around 4.4 million-year-old hominid opens up a new chapter on human evolution because "it is as close as we have ever come to finding the last common ancestor of chimpanzees and humans," project co-director Tim White

"This is not an ordinary fossil," added White, a paleontologist in the University of California at Berkeley's Human Evolution Research Center. "It's not a chimp. It's not a human."

"HERC evolved from the Laboratory for Human Evolutionary Studies founded in 1970."

Ardi, who was a female, may or may not have had any direct descendants. Her species may have given rise to Lucy's species, Australopithecus.

Ardi is the most complete

skeleton includes her skull, teeth, arms, hands, pelvis, legs and feet. Based on these findings, the researchers know that she and others in her species were both tree- and land-dwelling omnivores. They had a relatively small, chimp-sized brain, long arms and short legs.

The actual last and most common ancestor of chimps and humans probably lived between five and 10 million years ago, based on genetic and other estimates, so Ardi falls somewhere between this still unknown species and "Lucy," the famous 3.2 million-year-old "ape-man" hominid, also found in Ethiopia, belonging to

DISCOVERED

In 1974 and she is around 3.2 million years old. Ardi was discovered in 1994 and she is around 4.4 million years old. Naledi was discovered in 2013 and she is around 3 million years old or younger. Ardi is the oldest that was founded before Lucy.

PHOTO OF A PERFECT CLIMBING TREE

NALEDI

Rising Star Cave, South Africa (CNN)When an amateur caver and university geologist arrived at Lee Berger's house one night in late 2013 with a fragment of a fossil jawbone in hand, they broke out the beers and called National Geographic.

Berger, a professor at the University of the Witwatersrand in Johannesburg, South Africa, had unearthed some major finds before. But he knew he had something big on his hands.

What he didn't know at the time is that it would shake up our understanding of the progress of human evolution and even pose new questions

Berger's team came up with the startling theory just days after reaching the place where the fossils -- consisting of infants, children, adults and elderly individuals -- were found, in a previously isolated chamber within the cave.

Naledi's brain was no bigger than an orange, scientists say. Its hands are superficially human-like, but the finger bones are locked into a curve -- a trait that suggests climbing and tool-using capabilities.

Homo naledi was relatively big: it stood about 5 feet tall, had long legs, and its feet are almost identical to ours, suggesting it had the ability to

no naledi looks like one of the most members of our genus, but it also has ngly human-like features, enough to ng it in the genus Homo," says John University of Wisconsin-Madison, or on the papers describing the new ere published Thursday.

MANY HELPING HANDS

MLK

DAY *of* SERVICE

A day of service for
the entire community.

Esmeralda Asprilla, Cambridge Ridge & Latin, Creative Design Program/Photography: Randy H. Goodman

All ages welcome! We need
everyone's helping hands for
an afternoon of service making
fleece scarves, blankets,
valentines and more!

Don't come empty handed!
Bring a can of food, gently used
winter clothing or a children's
book for those in need.

MONDAY,
JANUARY 18
2-5PM

CAMBRIDGE CITY HALL

Email: info@manyhelpinghandsmkday.org
Register early @ www.manyhelpinghands365.org

SECOND PLACE

BE ALL RIGHT POSTER CONTEST:

**THURSDAY,
NOV. 19TH
1:10 - 3:45PM**

**LOCATED IN
CRLS AUDITORIUM**
**OPEN TO
ALL STUDENTS**

STUDENTS CAN:

- Win Prizes!
- Earn Community Service Hours!
- Win a Fancy Breakfast for your Homeroom!

**Be
All
Right²**

**Building a Culture
of Health at CRLS**

ACTIVITIES INCLUDE:

- Interactive Presentation
- Health Fair
- Chef Vin's Apple Crisp
- Bike Demo/Fixing Station

Guest Student Groups:
Leaders in Action; Conflict Mediators; STARs; Club One;
Cambridge Youth Council; Kid's Council; Cambridge
Youth Programs; Youth Action Corps.
