

What does the Chrome end-user see?

User context

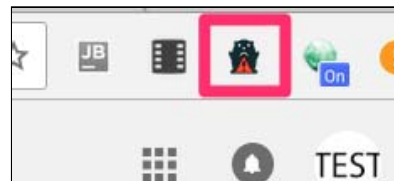

All users in OUs that have the extension force-installed will see the extension icon.

If they are on a **managed device** that is **one** or more versions behind, and you have enabled Chrome OS update reminders (configured in setup) the Gopher icon will include a red warning as shown. When clicked, it will guide the user through the Chrome update process.

What they see

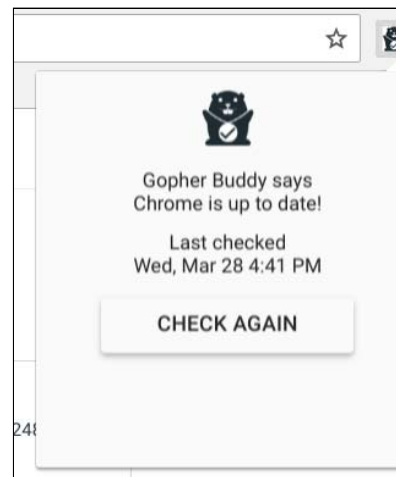

- or -

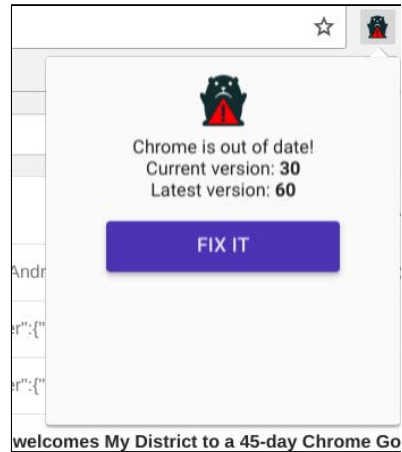

If the user is on a managed Chrome device, but they do not have access to device info (configured in setup), clicking the extension will show...

Clicking "Fix it" will guide the user through the Chrome update process. [Learn more.](#)

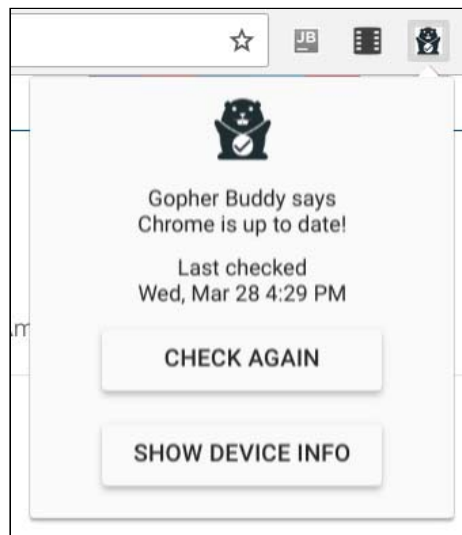

- or -

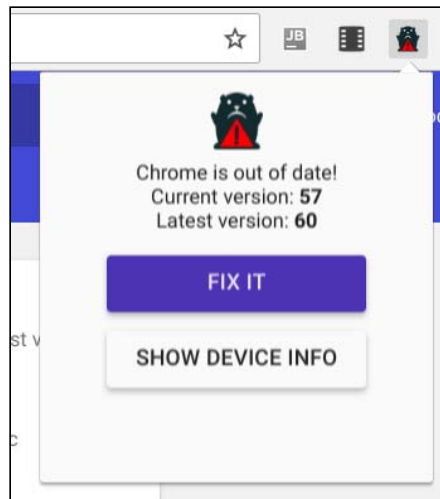

If the user is on a managed Chrome device, and they have BASIC or FULL access to device info (configured in setup), clicking the extension will show...

Clicking "Show Device Info" will load a display of Chrome Device details and recent user sessions, depending on the current user's access level. [Learn more.](#)

- or -

"Fix It" popup

Clicking "Fix It" from the extension will automatically open the **chrome://settings/help** tab and display a popup with instructions to the end user on what steps may be needed, depending on the state of the device.
