

## EDUCATIONAL PHILOSOPHY

- I. The Board of Education (the Board) affirms that the goal of education is the integrated progressive development of each student.
- II. In cooperation with the home and community, the role of our schools is to assist the students with their intellectual, cultural, emotional, physical, moral and social growth. The Waterville Central School District (the District) shall provide enriched instruction and valuable training in accordance with the New York State Board of Regents. The District shall encourage and motivate the students to become well-developed and self-disciplined people capable of assuming vital roles in an ever-evolving society.
- III. The Board acknowledges the individual differences of learning capabilities, personal motivations and ambitions as well as emotional and physical conditions. In the process of educating the students, the curriculum shall reflect a concern for individual needs, encourage individual accomplishments, and present challenges for all students to be well prepared for their adult years.
