Behind the Support

School Counselors provide comprehensive support for academics, skills for success, and post-secondary planning. They guide course selection, address academic concerns, and connect students with supports. Counselors also help students develop post-secondary plans and make informed decisions about their future, while fostering academic and personal growth.

School Social Workers are dual licensed professionals who address students' social, emotional, behavioral, and mental health needs. They connect families with resources and support both individual needs and school-wide initiatives.

College & Career Advisors complement counselors by guiding students and families through post-high school planning. They help students explore interests, majors, and careers, and provide resources for the college search, applications, and financial aid. Advisors also offer programming, workshops, and individual support.

Collaborative Team Approach brings together counselors, social workers, advisors, and staff to provide a network of care for students' academic, personal, and post-secondary needs. Through communication and collaboration, students are supported by caring adults dedicated to their success.
