***Crestview Local Schools Community Construction Update***

**(Columbiana, Ohio)-** *Jan 16, 2026*

The Crestview PK-12 building project continues to make great progress on the future 167,035 square foot school campus. The construction work has been sequenced to move from the south end of the site (Crestview Rd) and progressing to the north end of the site (football stadium).

The southern half of the building includes the student dining area, kitchen, kindergarten wing, and two-story elementary and middle school wings. These areas are fully enclosed with roofing, windows and exterior façade work at 90% complete. The interior walls in this portion of the building are complete, with ongoing work to finish drywall installation, paint and Mechanical/Electrical/Plumbing or “MEP” rough-ins.

The northern half of the school features a two-story high school wing, competition gymnasium, athletic support areas and the band and choir classrooms. In the two-story high school wing, roofing is installed and the exterior façade work is nearing completion. Contractors are currently working on the interior framing, drywall and MEP rough-ins in this area. The competition gym at the northernmost end of the site, easily identified by its curved roof, was the last area of the building to be constructed. In this area, the roof installation is substantially complete, and exterior walls are 80% complete. Exterior façade work and window installation will follow. The gym floor is currently being stoned and prepped for a concrete pour in the coming weeks.

There are approximately 120 construction workers on site every day, and their work will be focused on reaching full enclosure and completing interior finishes through 2026. The project continues to track on schedule, with an expected opening during the 2026-2027 school year.
