Chromebook WiFi login and Content Filter Instructions

First, you will need to connect to your WiFi network by clicking on the indicator in the bottom right corner.

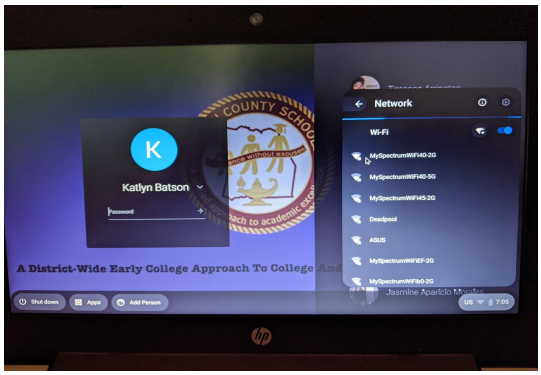

→

This will pull up a new menu box. Click on the network icon here.

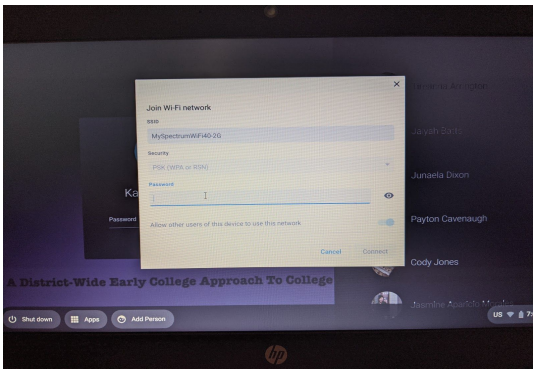

Now you will select the internet network you want to use.

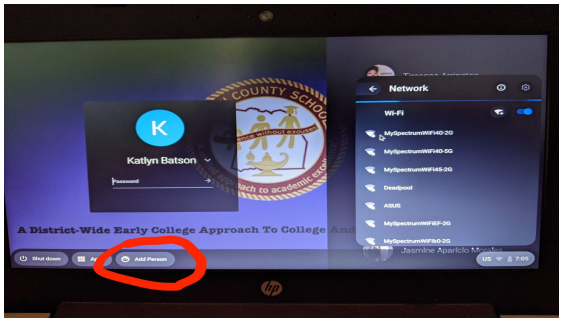

→

A screen will appear to enter a password for the network if it is required.

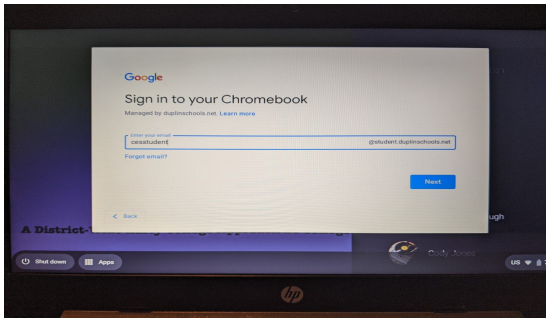

Then you will need to sign in with your student email address. You will select **Add Person** in the bottom left part of the screen.

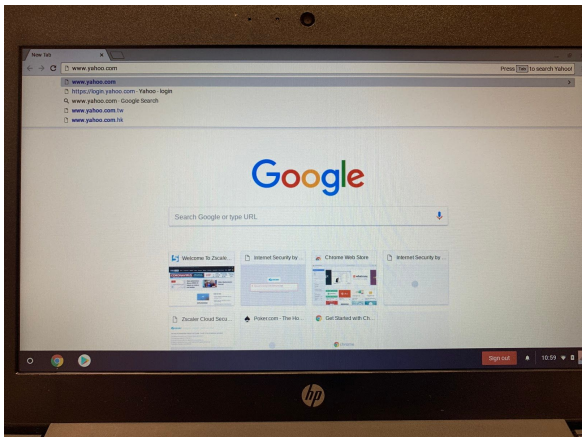

→

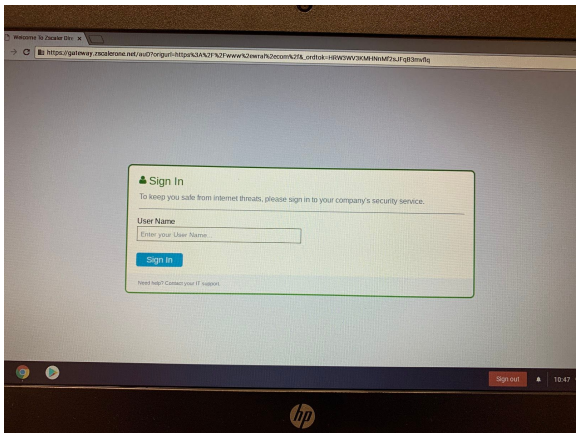

When the login screen appears, enter your email address and click **Next**. Then enter your password and click **Next**. You should now be logged in.

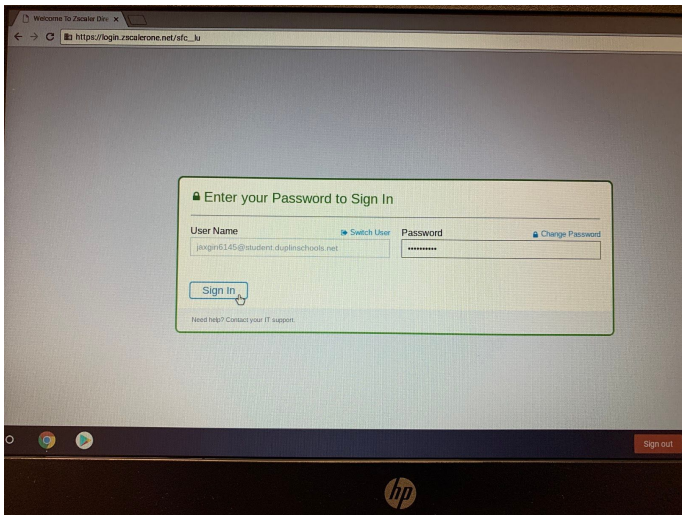

After signing in to your Chromebook you will need to click on Chrome and go to a website. www.yahoo.com for example.

You will then be prompted to sign in to Zscaler Content Filter with your student email address.

After entering your email address, click sign in where you will then enter your password.

After signing in you will be able to access the internet on your Chromebook.
