(RED OAK, TX) --- Red Oak Independent School District is excited to announce the addition of smart panel technology at Red Oak Middle School. This equipment, valued at \$187,000, was provided by Google, which operates a data center in Red Oak, to help strengthen the district's efforts in technology-driven learning.

The new panels will enhance student engagement, collaboration, and digital learning opportunities for teachers and students throughout the district.

"We are grateful for Google's support and the difference these tools will make for students and staff at Red Oak Middle School," said Brenda Sanford. "By providing resources that encourage engagement and creativity across diverse learning styles, Google is helping our efforts to ensure every student can thrive."

"We're excited for the opportunity to support Red Oak Independent School District to help students gain the skills and experiences useful for success in an increasingly digital world," said Andrew Hart, Public Affairs Manager at Google. "We're proud to contribute technology that helps empower teachers and inspire students."

Across Texas, Google has dedicated resources to data center infrastructure, workforce development, and community partnerships. Through these efforts, Google works alongside community leaders to support local economies and expand access to technology and digital skills across the state.
