

Suffolk RIC Service Offering

Technology Asset Inventory and Cybersecurity Service

Powered by Armis

2026/2027 School Year

The Suffolk RIC is very pleased to offer a new service to Suffolk County Districts that will help them maintain a real time, IT asset inventory powered by the use of the Armis Unified Visibility platform.

The Service will include a hardware and software solution along with daily monitoring of the Armis Unified Solution in your environment by RIC Technical Staff to ensure that the system is operational and so that any detected issues can be addressed by the district in a timely fashion

Armis provides an affordable cyber security solution to K-12 customers that provides them with the controls needed to adhere to NIST CSF compliance standards and reduce their chance of potential cyber-attacks. Specifically, the Armis solution aims to address the following challenges faced in K-12:

1. Lack of visibility to all assets touching the network (particularly unmanaged/IoT assets - ie. HVAC systems, cameras, IP phones, electronic door locks, interactive boards, etc.)
2. Speed to resolution of cyber incidents
3. Having proper security controls in place to qualify for (or reduce the cost of) cyber insurance.

Armis can help solve these challenges through their Armis Unified Asset Visibility solution. This solution is scalable, easy to deploy, and requires minimal effort from internal staff to manage. This offering includes the following: Asset and Network-based Data Collection & Aggregation, Cloud-based Behavioral Device Knowledgebase, Risk Assessment, Scoring & Management, Threat Detection & Response, Automated Security Policy enforcement, Unlimited Virtual Collectors, up to 2 Hardware Collectors (included in cost), Dedicated Customer Success Manager and Premium 24/7 Support

District investment for this service is annual and will be based on student counts as follows:

0-2499 Students: \$5570

2500-4999 Students: \$11,605

5000+ Students: \$17,407
