The Interactive District Viewer has been provided to help you explore the population of the school district and view the current trustee areas. Using this map, you will also be able to see the current trustee areas that are being redrawn, Community of Interest (COI) testimony that has been submitted by members of the public, and street-level detail of draft maps of the Trustee Areas.

How to Use the Interactive District Viewer:

• Navigate to the map's site: http://nvusd.s3-website-us-east-1.amazonaws.com/

• When the map opens, you will see satellite imagery of the Napa County area and a list of available layers to the right-hand side of the map. Click the box next to "Current Trustee Areas" to view the trustee areas as they are now. Notice the box labeled "NVUSD Trustee Areas" above the list of map layers. You can find out more information about the current trustee areas by hovering the pointer over a trustee area on the map. The "NVUSD Trustee Areas" box will update with information about that area.

• You can also see how population is distributed throughout the school district by viewing the census geography layers provided in this map. Click the box next to the "Census Tracts with Population" layer to see the tracts in the school district and the population of each tract. You may also view the census blocks and the population of each block in the district by clicking the boxes next to those layers, as well.

• To turn any layer off, click the name of that layer. The check mark should disappear along with the map boundaries of the layer.

• You can also search by location to zoom the map into your area of interest by entering an address into the "Search by Address or Location" tool on the upper right-hand corner of the map and clicking the icon of the magnifying glass.
