

WHY AI IS BLOCKED AT GU (OUR BEST GUESS)

Recently, ChatGPT was blocked on our Chromebooks. This immediately caused students to ask the most serious academic question of our generation:

Why???

We would like to clarify that we are high school students, not IT professionals, computer scientists, or people who know what “the cloud” actually is. Therefore, everything below is based on confidence, vibes, and absolutely no credentials.

What We Think Is Happening

1. AI Knows Too Much

At some point, ChatGPT probably crossed a line. It started suggesting strong thesis statements, logical arguments, and properly formatted conclusions. This was clearly unacceptable.

2. AI Is Suspiciously Good at Writing

When writing suddenly sounds calm, organized, and emotionally stable... red flags go up. We are not saying this is bad. We are simply saying it is unnatural for teenagers.

3. Cheating Concerns (Highly Unlikely)

Some people believe AI was blocked to prevent cheating. However, this does not apply to Grant Union students, who would never cheat. Ever. On anything. In any class. Under any circumstances. Please stop laughing.

Faculty Commentary (Definitely Real, Totally Not Made Up 🤖🙄)
According to Mr. Lusco,

“I don’t mind students using tools to help them think. I just don’t want to see essays that sound like they were written by a robot who drank three energy drinks and a Red Bull.”

Wise. Grounded. Inspirational.

About This Blog Post

We would like to officially confirm that this article was NOT written by ChatGPT.

It was written by students. Human students. With fingers. On keyboards.

Pressing keys. One at a time.

Any clarity, structure, or smooth flow you may notice is purely the result of:

Hard work. Teamwork. Caffeine

And an unusually productive day that we may never experience again

In Conclusion (Trust Us, Please)

While we may not fully understand why AI is blocked, we respect the decision. Until further notice, we will continue learning, writing, and being extremely honest students. Especially about this blog post.

(Written by humans. Real ones. Definitely no robots. Not even a little.)
