Overall Reading Achievement (Fall 2025)

Achievement Overview

Cass School District #63 | Reading

Achievement represents student performance at a single moment in time. Achievement percentiles can be used to understand how student scores compare to other same-grade student scores across the US. This presentation is an overview of current achievement.

Growth is an inference about how student performance changes across two moments in time. Growth percentiles help understand how changes in student scores compare to changes in other US student scores. A future presentation will summarize student growth.

Quintiles are five percentile levels based on NWEA normative data: 1st–20th (red), 21st–40th (orange), 41st–60th (yellow), 61st–80th (green), and greater than 80th (blue).

RIT Scores measure a student’s academic achievement level and growth over time on a stable, equal-interval scale, regardless of grade level. Ranging from 140 to 300, a RIT score indicates the difficulty level where a student has a 50 percent chance of answering correctly. The difference between scores is the same regardless of whether a student is at the top, bottom, or middle of the RIT scale. A RIT score also has the same meaning regardless of the grade or age of the student.
