| <b>Grade &amp; Course:</b> Physical Science  | <b>Topic:</b> Electricity and Magnetism  | <b>Duration:</b> 6 weeks  |
| <b>Teachers:</b> Physical Science PLC  | K. Lowd  | D. Holihan  |
| <p><b>Georgia Standards and Content:</b></p> <p><b>SPS10. Obtain, evaluate, and communicate information to explain the properties of and relationships between electricity and magnetism.</b></p> <ul style="list-style-type: none"> <li>a. Use mathematical and computational thinking to support a claim regarding relationships among voltage, current, and resistance.</li> <li>b. Develop and use models to illustrate and explain the conventional flow (direct and alternating) of current and the flow of electrons in simple series and parallel circuits. (<i>Clarification statement:</i> Advantages and disadvantages of series and parallel circuits should be addressed.)</li> <li>c. Plan and carry out investigations to determine the relationship between magnetism and the movement of electrical charge. (<i>Clarification statement:</i> Investigations could include electromagnets, simple motors, and generators.)</li> </ul> <p><b>Topics to Cover:</b> Electricity, voltage, current (alternating and direct), resistance, and circuits (series and parallel)<br/>Magnetism</p> <p><b>Lesson Content:</b></p> <ol style="list-style-type: none"> <li>1. Electricity - voltage, current (AC/DC), resistance - conductor/insulator</li> <li>2. Circuits (Parallel vs Series)</li> <li>3. Magnetism - magnetic field, permanent magnets, motors and generators</li> </ol> |  |   |
| <b>Narrative / Background Information</b>  |  |   |
| <p><b>Prior Student Knowledge: (REFLECTION – PRIOR TO TEACHING THE UNIT)</b></p> <p><b>Units 1-5 - electrons, energy, and power</b></p> <p><b>SPS7a</b></p> <p>GSE 8th grade standards<br/> <a href="#">Link to GSE 8th Grade Science</a></p> <p>Teacher Background Info:<br/> <a href="https://www.physicsclassroom.com/class/circuits">https://www.physicsclassroom.com/class/circuits</a><br/> <a href="http://www.nap.edu/openbook.php?record_id=13165&amp;page=87">http://www.nap.edu/openbook.php?record_id=13165&amp;page=87</a></p>  |  |   |
| <p><b>Unit Phenomena (LEARNING PROCESS)</b> Gravity, magnetism, electricity, and electromagnetism are used in designed systems</p>   |  |   |
| <p><b>Inquiry Statement:</b> Advances in science and technology have allowed humans to design systems that harness the energy and identify the relationship between electricity and magnetism.</p>   |  |   |
| <p><b>Global Context/Exploration:</b><br/>         Globalization and Sustainability Consumption, conservation, natural resources and public goods</p>  |  |   |
| <p><b>Science &amp; Engineering Practices:</b></p> <ul style="list-style-type: none"> <li>• Construct explanations</li> <li>• Use mathematical and computational thinking</li> <li>• Develop and use models</li> <li>• Plan and carry out investigations</li> </ul>  | <p><b>Disciplinary Core Ideas: (KNOWLEDGE &amp; SKILLS)</b></p> <p><b>PS2.B: Types of Interactions</b><br/>         Electric, and magnetic forces between a pair of objects do not require that the objects be in contact. The sizes of the forces in each situation depend on the</p> | <p><b>Crosscutting Concepts: (KNOWLEDGE &amp; SKILLS)</b><br/>         Energy (MYP/CC)</p> <hr/> <p><b>Key and Related Concepts:</b><br/>         Systems (CC)<br/>         Relationships (MYP)</p> |

|  |  |  |
|--|--|--|
|  | <p>properties of the objects and their distances apart and, for forces between two magnets, on their orientation relative to each other.</p> | <p><b>Approaches to Learning (ATLs):</b></p> <ul style="list-style-type: none"> <li>Thinking Skills: Use models and simulations to explore complex systems and issues</li> <li>Thinking Skills: Analyze complex concepts and synthesize to create new understanding</li> </ul> |
|--|--|--|

**Possible Preconceptions/Misconceptions: (REFLECTION – PRIOR TO TEACHING THE UNIT)**

**Some of the common ones that you will find include:**

- Students may believe that an electrochemical cell (battery) is the source of charge in an electric circuit.
- Students may use the terms current, energy, and potential difference interchangeably with one another, when they are, in fact, different concepts.
- Students may believe that circuit components consume current.
- Students may believe that current comes out of both poles of the battery and meets at a light bulb, causing it to light.
- Students may believe that current is divided equally amongst each line of a parallel circuit.
- Students may believe that a change before a bulb in a series circuit will affect the bulb's brightness, but the same bulb will not be affected by a change in the circuit after the bulb.
- Students may believe that batteries are constant sources of current.

**These questions are related directly to the key concepts, related concepts, and global context and statement of inquiry. These are taking a step further from the content questions.**

**Inquiry Questions:**

**Factual**

- What is electric potential?
- What are the requirements of an electric circuit?
- What is the difference between direct current and alternating current?
- What is the difference between series and parallel circuits? Pros and cons of each?
- What are current, voltage, and resistance and what are the relationships between them?
- What types of systems take advantage of the relationship between electricity and magnetism?

**Conceptual**

- How can I illustrate the flow of current/electrons in series and parallel circuits?
- How can I use certain components to design a complete circuit and explain the flow of electrons?
- How can I use a circuit diagram to predict the flow of current through a circuit?
- How can I use Ohm’s Law to determine current, voltage, and resistance in a given circuit?
- How can I demonstrate the relationship between magnetism and electrical charge?

**Debatable**

- What are some potential applications of electromagnets that have yet to be discovered?

| <p><b>MYP Criterion</b></p> <p><b>MYP Criterion C</b><br/>iii. evaluate the validity of a hypothesis based on the outcome of the scientific investigation</p> <p><b>MYP Criterion A</b><br/>ii. apply scientific knowledge and understanding to solve problems set in familiar and unfamiliar situations</p> | <p><b>Summative assessment</b></p> <p><b>CSA over both Electricity and Magnetism</b></p> <p><b>Relationship between summative assessment task(s) and statement of inquiry:</b></p> <p>Humans consistently rely upon electricity, magnetism, and the relationship between them in their everyday lives. In this unit, students will be tasked with building various circuits in order to demonstrate the movement of charge. Given appropriate materials, they will be tasked with designing circuits, explaining the necessary components of a circuit, articulating their conceptual understanding of the movement of electrical charge in simple series and parallel circuits, as well as using Ohm’s law to calculate current, voltage, and resistance. The unit assessment will require students to determine and/or predict what will occur, given various circuitry scenarios, while also calculating current, voltage and resistance. Students will apply their understanding of simple circuitry to discuss and describe the use and applications of electricity and</p> |
