## NOTICE OF ABATEMENT WORK

Dear Parents, Staff, Building Occupants, and all Users of Joliet Central High School

During the past years, School District No. 204 has made a conscientious effort to identify and remove asbestos containing materials from its school buildings. To that end, we have made considerable strides. These removal projects are consistently tied to renovation projects or will surface as a specific project when unknown material is found within concealed areas during an ongoing project.

Joliet Central High School will be removing asbestos containing caulk/sealants materials associated with the windows and exterior building panels on the T&I Building to facilitate the ongoing renovation project. The abatement project is scheduled for March 23, 2026, through March 25, 2026. Asbestos containing materials are documented in the in these areas. These materials will need to be removed prior to any other work proceeding, following all regulatory laws pertaining to A.H.E.R.A. (Asbestos Hazard Emergency Response Act), IDPH and EPA's NESHAP regulations.

The work areas will remain closed to all parents, students, and staff during the duration of this removal project.

Please feel free to contact Brian Paczesny, Director of Buildings and Grounds, 815/325-3168 with any questions related to this work.

Thank you,

Brian Paczesny

Director of Buildings and Grounds

Joliet High School District #204
