

Marietta City Schools
2025–2026 District Unit Planner

Grade 7 Honors Mathematics

Unit title	Unit 5: Investigating Probability	MYP year	2	Unit duration (hrs)	<i>MMS- (4.5 hours per week) 18- 22.5 hours</i>
-------------------	-----------------------------------	-----------------	---	----------------------------	---

Mastering Content and Skills through INQUIRY (Establishing the purpose of the Unit): *What will students learn?*

GA DoE Standards

Standards

7.PR.6 Using mathematical reasoning, investigate chance processes and develop, evaluate, and use probability models to find probabilities of simple events presented in authentic situations.

7.MP: Display perseverance and patience in problem-solving. Demonstrate skills and strategies needed to succeed in mathematics, including critical thinking, reasoning, and effective collaboration and expression. Seek help and apply feedback. Set and monitor goals.

Gifted Standards

Strand 2: Creative Thinking Skills

Students will develop and utilize creative thinking through a variety of products and problem solving.

Strand 3: Higher Order Thinking and Problem Solving Skills

Students will develop and utilize critical thinking, higher order thinking, logical thinking and problem solving skills in various situations.

Strand 4: Advanced Communication and Collaboration Skills

Students will develop advanced communication and collaboration skills in working toward a common goal with shared accountability for the final outcome.

Published: 3/2026 Resources, materials, assessments not linked to SGO or unit planner will be reviewed at the local school level.

Expectations		Evidence of Student Learning (not all inclusive; see Grade Level Overview for more details)	
7.PR.6.1	Represent the probability of a chance event as a number between 0 and 1 that expresses the likelihood of the outcome occurring in a simple random experiment.	Strategies and Methods	Terminology
		<ul style="list-style-type: none"> Students should be able to represent the probability as a fraction, decimal numbers 	<ul style="list-style-type: none"> Descriptions may include impossible, unlikely, equally likely, likely, and certain

7.PR.6.4	Develop a uniform probability model by assigning equal probability to all outcomes and use the model to determine probabilities of events.	<p>Example</p> <ul style="list-style-type: none"> If a student is selected at random from a class, find the probability a student with long hair will be selected. 		
7.PR.6.5	Develop a probability model (which may not be uniform) by observing frequencies in data generated from a chance process.	<p>Terminology</p> <ul style="list-style-type: none"> Uniform probability models are those where the likelihood of each outcome is equal. 	<p>Examples</p> <ul style="list-style-type: none"> Find the approximate probability of each outcome in a spinner with unequal sections. Find the approximate probability that a spinning penny will land heads up or that a tossed paper cup will land open-end down. Do the outcomes for the spinning penny appear to be equally likely based on the observed frequencies? 	
7.PR.6.6	Use appropriate graphical displays and numerical summaries from data distributions with categorical or quantitative (numerical) variables as probability models to draw	<p>Strategies and Methods</p> <ul style="list-style-type: none"> Students should use side by side bar graphs or segmented bar graphs to compare categorical data distributions 	<p>Age/Developmentally Appropriate</p> <ul style="list-style-type: none"> Limit category counts to be less than or equal to ten. 	<p>Example</p> <ul style="list-style-type: none"> Compare the heights of the basketball and the tennis teams.

	informal inferences about two samples or populations.	<p>of samples from two populations.</p> <ul style="list-style-type: none"> Students should compare data of two samples or populations displayed in box plots and dot plots to make inferences using probabilistic reasoning. Students should be able to draw inferences using measures of central tendency (mean, median, mode) and/or variability (range, mean absolute deviation and interquartile range) from random samples. Conclusions should be made related to a population, using a random sample, by describing a distribution using measures of central tendency (mean, median, mode) and/or variability (range, mean absolute deviation, and interquartile range). Students should be given multiple opportunities to compare quantitative data distributions of samples from two populations. 	<ul style="list-style-type: none"> Limit quantitative variables to less than or equal to 20. 	<p>Basketball team's heights (in inches): 72, 75, 76, 76, 79, 79, 80, 80, 81, 81, 81</p> <p>Tennis team's height (in inches): 67, 67, 68, 70, 70, 71, 72, 75, 76, 76, 77</p> <ol style="list-style-type: none"> How much taller is the basketball team than the tennis team? Two students are trying out for the basketball team. What is the probability their height will be greater than 79 inches?
--	---	--	---	--

Concepts/Skills to support mastery of standards

- Represent the probability of a chance event between 0 and 1. (PR. 6.1)
- Approximate the probability by observing its long-run relative frequency. (PR.6.2)
- Compare experimental and theoretical probabilities of events.(PR.6.3)
- Develop a uniform probability and determine probabilities of events(PR.6.4)
- Develop a probability model by observing frequencies.(PR.6.5)
- Draw inferences about two samples or populations from different graphical displays.(PR.6.6)

Vocabulary

Probability	Theoretical probability	Simple Event	Relative Frequency	Experimental Probability
Sample	Population	Uniform Probability		

Notation

Key concept	Related concept(s)	Global context
Logic	Justification, Model, Generalization	Fairness and Development
Statement of inquiry		
Decisions reached through logic may not always reflect beliefs about fairness.		
Inquiry questions		
<p>Factual— What is probability? What is a sample space?</p> <p>Conceptual—How do we calculate the probability of an event? What are the different ways to show possible outcomes? Why must the sample space always have a sum of 1?</p> <p>Debatable—Should experimental and theoretical have the same outcome?</p>		
MYP Objectives	Assessment Tasks	
<i>What specific MYP objectives will be addressed during this unit?</i>	<i>Relationship between summative assessment task(s) and statement of inquiry:</i>	<i>List of common formative and summative assessments.</i>
Criteria A :Knowing and Understanding Criteria B: Investigating Patterns Criteria D :Applying Math to real-world context	Students will investigate chance processes and develop, use, and evaluate probability models.	<u>Formative Assessment(s):</u> Unit 5 CFA <u>Summative Assessment(s):</u> MYP - Topic 6 Performance Task Form B Unit 5 Summative
Approaches to learning (ATL)		
Category: Social Cluster: Collaboration Skills Skill Indicator: Give and receive meaningful feedback.		

<p>Category: Self Management Cluster: Organization, Affective, & Reflection Skills Skill Indicator: Keep an organized and logical system of information files/notebooks</p>

<p><u>Learning Experiences</u> Add additional rows below as needed.</p>

Objective or Content	Learning Experiences	Personalized Learning and Differentiation
<p>7.PR.6.1: Represent the probability of a chance event as a number between 0 and 1 that expresses the likelihood of the event occurring. Describe that a probability near 0 indicates an unlikely event, a probability around 1/2 indicates an event that is neither unlikely nor likely, and a probability near 1 indicates a likely event. •</p> <p>7.PR.6.2 Approximate the probability of a chance event by collecting data on an event and observing its long-run relative frequency will approach the theoretical probability. •</p> <p>7.PR.6.3: Develop a probability model and use it to find probabilities of simple events. Compare experimental and theoretical probabilities of events. If the probabilities are not close, explain possible sources of the discrepancy.</p> <p>7.PR.6.5: Develop a probability model (which may not be uniform) by observing frequencies in data generated from a chance process.</p>	<p>CLE - Theoretical vs Experimental Probability</p> <p>In this learning plan students will explore the probability of outcomes of various events to make conjectures about theoretical and experimental probability and how each are used to make predictions about outcomes.</p>	<p>Make instructions and expectations clear for the activities. Use the teacher guidance to support discussions about the tasks' expectations. As students share whether each result is surprising or not, write down the words and phrases students use to explain their reasoning. Listen for students who state that the actual results from repeating an experiment should be close to the expected probability</p>
<p>7.PR.6.6 Use appropriate graphical displays and numerical summaries from data distributions with categorical or quantitative</p>	<p>CLE - Making Inferences</p> <p>In this learning plan, students learn how to use "variability" to compare and describe sets of data. Students will create those sets of data themselves by completing estimation tasks as a</p>	<p>Chunk this task into more manageable parts (e.g., presenting one question at a time), which will aid students who benefit from</p>

(numerical) variables as probability models to draw informal inferences about two samples or populations.	class.	support with organizational skills in problem solving. Consider having students record how to find the mean absolute deviation in their notebooks for future reference.
