
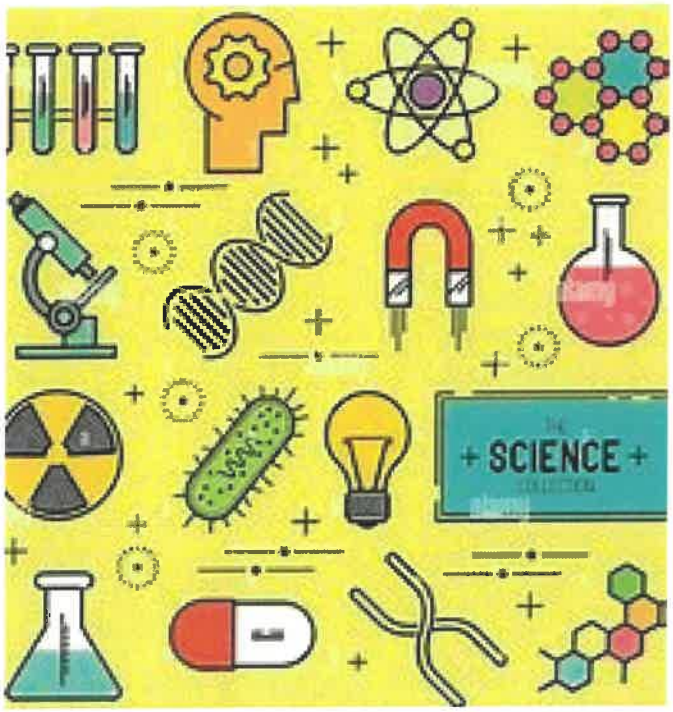
Science Vision Statement

At Stockton Primary we aim to foster curiosity and a desire to explore the world around us in order to enjoy the environment and develop a deep understanding of scientific phenomenon. We aim to develop investigative skills through a practical approach which is geared towards giving children opportunities to hypothesise, observe, question and problem solve.


We also plan to deliver a body of knowledge which is directly linked to the POS in the National Curriculum. This is done through a range of engaging themes which also allow for cross curricular links. We want our children to see science in action and we achieve this through a range of educational visits, assemblies and visitors.
