Dear Ewing School Community,

As a follow-up to my previous communication regarding roof repairs and environmental monitoring, I want to inform you that the independent indoor air quality testing results are now available and have been posted on the district website for public review.

Please 'click' on the link below for the indoor air quality testing results posted to the district website under the Superintendent's page:

<https://ewingk12njus.finalsite.com/board-of-education/superintendents-office>

The comprehensive assessment conducted by our environmental consultant confirmed that air quality levels throughout the tested areas are within normal and safe ranges. The results support what has been communicated previously: the health and safety of our students and staff have not been compromised. Environmental experts evaluate indoor air quality by comparing air samples collected inside a building to those taken outdoors. Because mold spores and similar particles naturally exist in the environment, outdoor air serves as the baseline. When indoor sample levels are equal to or lower than outdoor levels, the air quality is considered normal, safe, and acceptable. The district will continue to work closely with our environmental professionals and roofing experts to ensure all repairs are completed, and we will implement any recommendations they provide.

We remain committed to transparency and will continue to keep our school community informed as work progresses. Thank you for your continued support and partnership in maintaining a safe learning environment for all students and staff.

Respectfully,

Dr. David Gentile
Superintendent
