

Workforce Learning: Career and Technical Education (CTE)

At Bellview Middle School, students have the opportunity to explore the fast-growing world of technology through the Cyber-IT Academy. This program introduces students to cybersecurity, information technology, and digital communication while helping them build real-world skills needed for future careers.

Cyber-IT Academy

The Cyber-IT Academy introduces students to the fundamentals of cybersecurity and information technology while helping them build digital literacy and career-ready skills. Students learn how technology systems work, how to protect information online, and how digital tools are used in business and everyday life.

What makes it unique?

- Real-world technology and cybersecurity skills
- Career exploration in IT and digital business
- Collaborative learning and problem-solving
- Opportunities to earn industry certifications and high school credit

What do students do?

Students learn cybersecurity essentials, digital communication tools, and spreadsheet skills while exploring how technology supports real businesses and organizations. They participate in collaborative projects, technology challenges, and leadership opportunities through Future Business Leaders of America (FBLA).

Students can earn ICT Digital Literacy certifications and the CIW Social Media Strategist certification, helping prepare them for high school technology programs and future careers in cybersecurity, IT, and digital media.
