# Customizing Campus

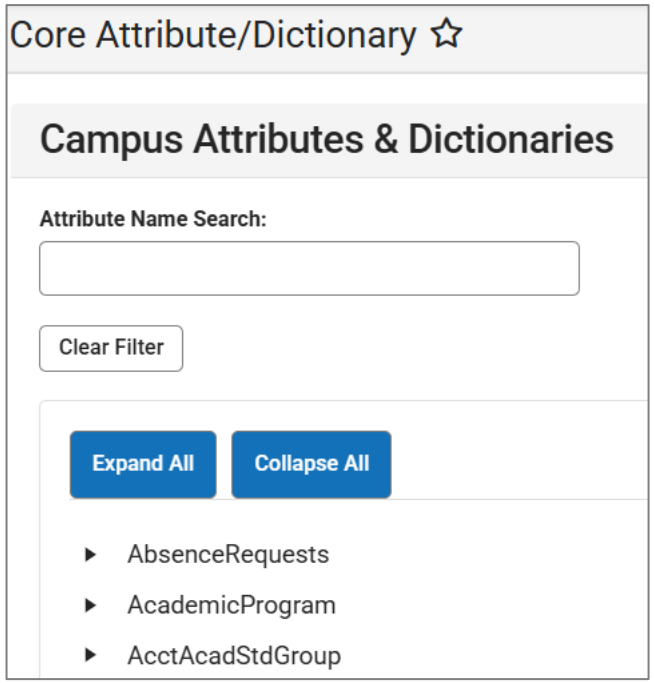

Stephen Hallman

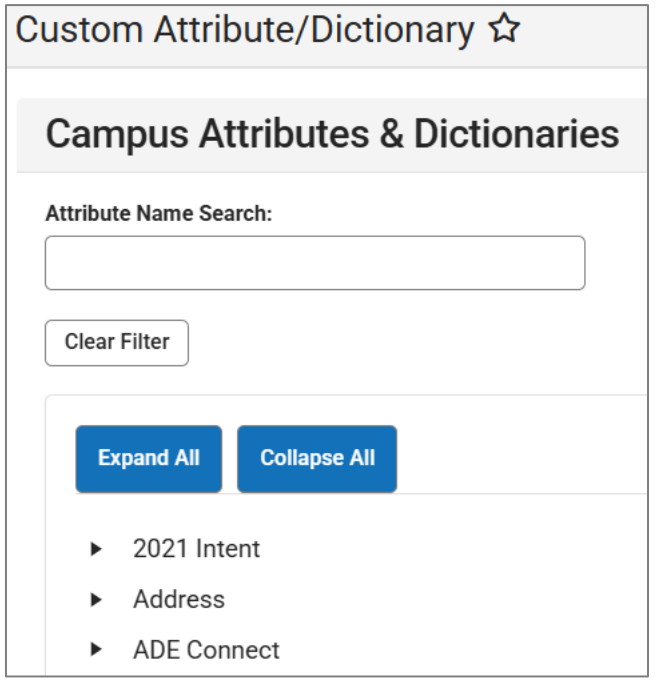

Infinite Campus

# Core and Custom Attribute Dictionaries

- Core attributes
  - Changes in display names and whether the field is visible
  - Changes to unlocked dictionaries
- Custom attributes
  - Can be added to core tools or custom tools
  - No security when added to core tools
  - Security is available when added to custom tools

# Upcoming UI Changes

# The “New” Navigation Explained

- Three-tier navigation
  - Menu Items
    - Can **create new menu items** but cannot rearrange existing items via the **Custom Tool Placement Editor**
  - Categories
    - Can **create new categories** but cannot rearrange existing categories via the **Custom Tool Placement Editor**
  - Tools
    - Can **create new tools** for existing or newly created menu items and categories via **Custom Tools**

# Custom Tools

- Single Screen Editor
  - A user-friendly way to add a single record of data without the ability to preserve historical changes
- Table Editor
  - Used when the ability to support multiple records with a unique date/timestamp
- List Element Editor
  - Used when multiple sets of data are available for selection but only one data can be entered at a time
- URL Link
  - Directs the user to a webpage regardless of the context of the page

# Creative Uses for URL Links

- Embedding an Ad Hoc Filter into a Campus Tool
  - Filter must be saved in a shared user group
  - User must be a member of the shared user group
  - User must have access to the tool
  - User does not need access to Ad Hoc Reporting
  - Adheres to Ad Hoc run-time security practices
- Embedding a Pivot into a Campus Tool
  - Filter must be saved in a shared user group
  - User must be a member of the shared user group
  - User must have access to the tool
  - User must have read-only access to Pivot Designer
  - Adheres to Ad Hoc run-time security practices

# Creative Uses for URL Links Contd.

- Happy birthday to you!
  - Create a pass-through query for students that have a birthday today
  - Run the query through Pivot Designer for a cleaner report

**Box B**

AND DATEPART(month, student.birthDate) = DATEPART(month, getDate())

AND DATEPART(day, student.birthDate) = DATEPART(day,  getDate())

# Creative Uses for URL Links Contd.

- Targeted messages to students and staff via Messenger 2.0
  - Staff messages can include links to real-time Ad Hoc reports
  - Messages only need to be sent one time since the data in the reports dynamically update
  - Examples of Happy Birthday message to students and Currently Suspended students to administrators

# District-Defined End User Help

- Custom help articles
  - Adding district-defined workflows and process to the district's Campus Help screens
  - Embedding a PowerPoint presentation

# Session Surveys

## We want your feedback!

Submit session surveys for a chance to win a **Yeti FLIP 8** Cooler

# Thank You!
