

BYOD Enrollment - MacOS

BYOD Setup Steps

Minimum requirement is macOS 11, with a 5GHz network adapter.

Your PSJA account gives you access to enroll your personal device to use the PSJA-BYOD network. Follow the steps below to complete the BYOD Enrollment process.

Please **forget the PSJA-BYOD network** on your device if it had previously connected before this year as the process has changed.

For non-cellular devices these steps would need to be performed offsite, as these steps can be done from home or any other location with internet access.

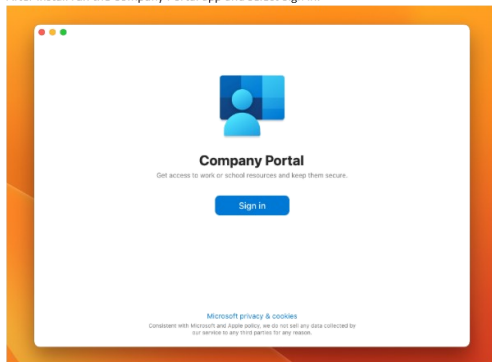

1. Download and Install the Company Portal App

You will need to download the Company Portal installer pkg file. Use this [link](#) or click image below. Once downloaded the install should begin.

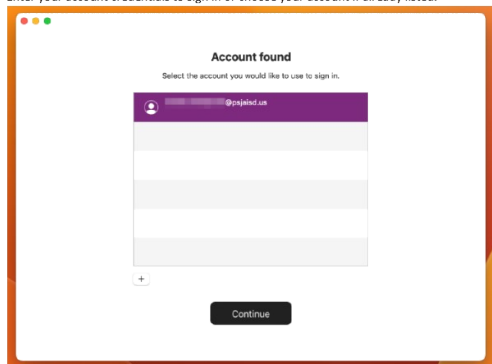

2. Run the Company Portal App

After install run the Company Portal app and select Sign in.

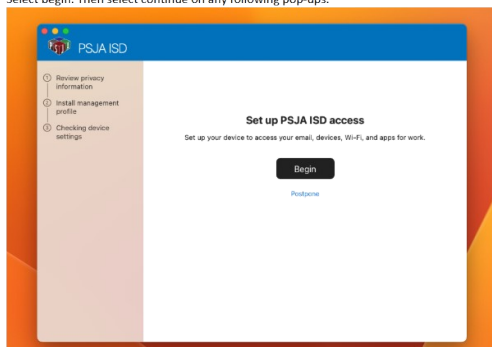

3. Enter Your Account Information

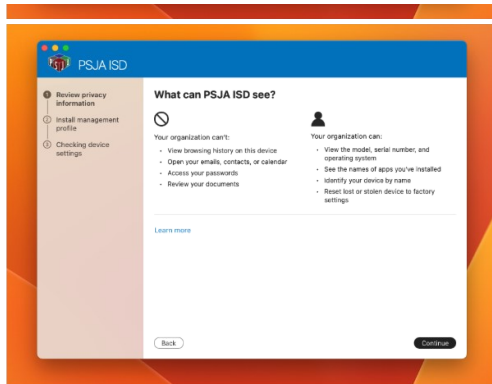

Enter your account credentials to sign in or choose your account if already listed.

4. Begin the Enrollment Process

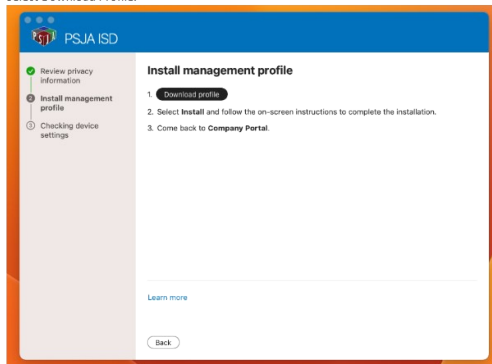

Select begin. Then select continue on any following pop-ups.

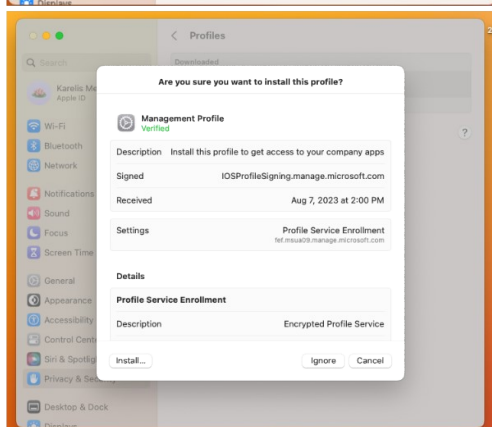

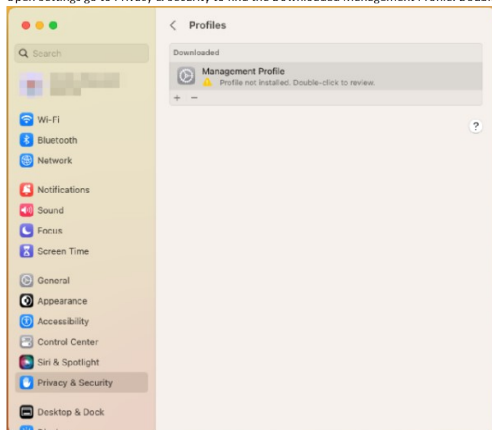

5. Download the configuration profile

Select Download Profile.

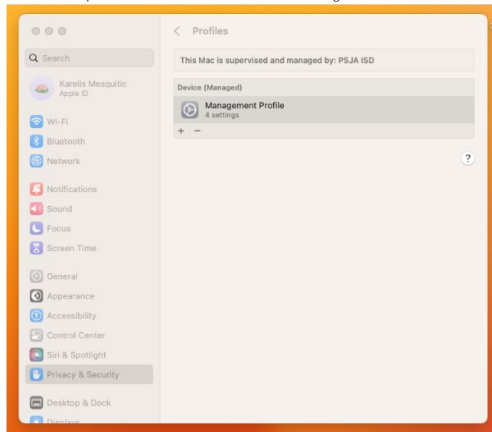

6. Install the configuration profile

Open Settings go to Privacy & Security to find the Downloaded Management Profile. Double click this and select install.

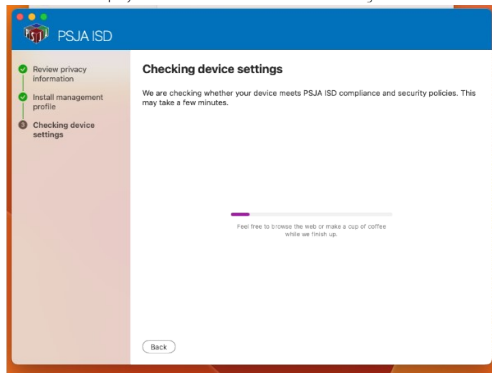

7. Ensure the configuration profile has been installed

Make sure the profile shows installed and the Device is Managed.

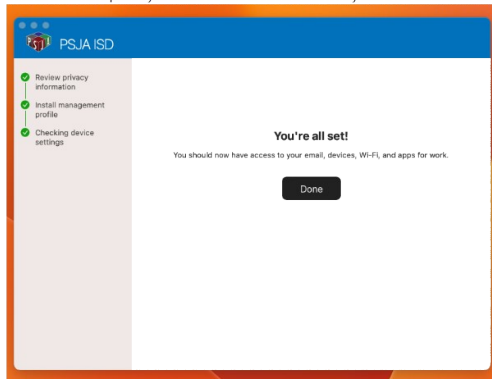

8. Return to Company Portal and Continue

Go back to the Company Portal and select continue now that the Management Profile has been installed.

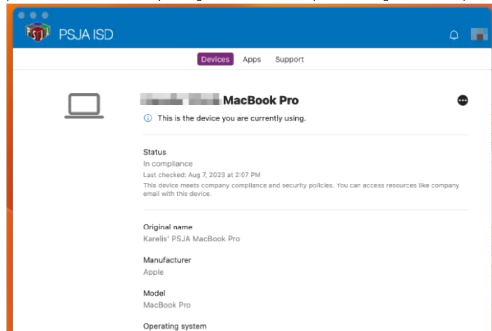

9. Select Done

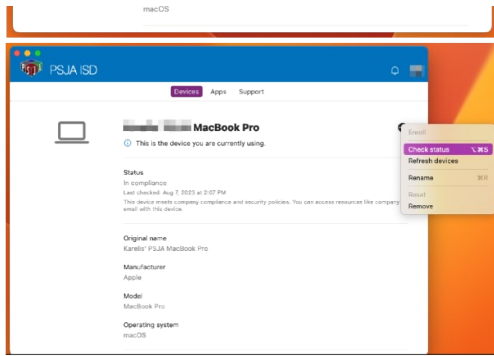

Once all checks have passed you should be able to select Done. It may take a few minutes for compliance policies to apply so you can select retry if needed until you are able to select Done.

10. Check Device Compliance

In Company Portal you can select your device name and Check access. This will verify your device is in compliance with our security requirements of having updated OS, a up-to-date Antivirus running with real time protection and other security settings. The device should pull the configuration shortly after it has confirmed to have access to company resources.

11. Wi-Fi will auto connect to PSJA-BYOD

Now with the device enrolled to our BYOD it should auto connect to the PSJA-BYOD network when on campus or at any district location.
