

Skin Smart

Audio	Video
[Marie] The National Council on Skin Cancer Prevention has awarded LSUHS	Graphic: White background with National Council on Skin Cancer prevention in blue centered above circular blue and yellow logo stating indoor tan-free Skin Smart Campus. Blue font below: Indoor Tan Free Skin Smart Campus
with a platinum level Skin Smart Campus Award.	Yellow sunscreen dispenser with skin smart logo located in the sun outside a building's entrance
This award provides us these sunscreen dispensers for us to have on campus. This is very vital because skin cancer continues to be a big problem in the United States. And melanoma causing death in a younger population like our student population. Hannah Meyer, one of our School of Medicine students, alerted me to this possibility and wanted to see if the Office of	Young woman with long dark hair, wearing purple scrubs exits a building, sees the yellow dispenser, walks over puts her hand under the dispense to receive some sunscreen then rubs it on to her arms as she walks away.
Institutional Wellness would be able to collaborate to bring some of these dispensers here. And we're very happy that we have them here.	Marie on camera in same location
[Hannah] In Louisiana, the UV index regularly gets above ten. Dermatologists typically recommend sunscreen regularly above three.	Woman in purple scrubs from earlier stands beside a skin smart dispenser outside a glass building. Text: Hannah Meyer Third Year Medical Student
So I thought it was important for us to have on campus sunscreen dispensers that will give free sunscreen to students,	Montage of dispensers outside various buildings around campus
especially in the summertime and springtime when the UV starts to go up. That would be a great addition to our new wellness building, because sun safety is definitely something we should keep in mind in terms of wellness.	Hannah on camera in same location
