Managing exam stress and wellbeing

A mindful and calm approach to studying can help ease
the stress that comes with taking exams.
Here are some tips to help create a calm space around you
during the exam period...

1 Cultivate positive relationships

Research has shown that young people who are not in conflict with their teachers and peers have higher test scores and academic performance.

2 Think about having a 'digital detox'

It's a good idea to introduce a 'digital detox' when preparing for exams. Switching off your phone during your exam prep sessions will help remove the temptation of distraction and focus your mind.

3 Get up and move around

Robust research shows that there is a link between physical activity and wellbeing. After you have finished a study session, why not go for a brisk walk or short run?

4 Relax your mind

Practising relaxation techniques such as mindfulness helps to calm your mind and create a sense of positive wellbeing. You will feel ready to face any challenges!

5 Be part of a team

Research has shown that cooperative learning is very important for student wellbeing. Your wellbeing will benefit from seeing yourself as part of a team.

6 Enjoy yourself

Remember that it's important to continue doing the things you love during the exam period to help you feel good physically and mentally. Stay positive and believe in yourself.

6 tips for a better exam preparation experience

As the exam period draws closer, here are six handy tips to help you prepare and use your study time efficiently.

1 Create a realistic schedule

A planned schedule will help you to structure your exam preparation effectively and help you cover the topics you need to know. Remember to include extra-curricular activities, commitments and other important tasks to help manage and organize your time.

2 Take breaks

Short, regular sessions are far more effective than spending hours trying to cram before an exam. Allocating 15-minute blocks to particular topic areas or subjects with breaks, will help you to stay engaged and motivated.

3 Try different techniques

Mix things up with tried and tested memory tricks such as mnemonics. Visual prompts, like concept maps, timelines and flashcards are also helpful study tools.

4 Get enough sleep

Essential for learning and memory, a good night's sleep helps you retain key information you have studied, and you will have enough energy to help you through the exam period.

5 Reflect on your progress

Think about your exam prep sessions at the end of the day. List five things you have learnt, three things you will confidently remember and three things that you're still unsure about. When you return to your notes, you can focus on filling in the knowledge gaps.

6 Think about the big picture

While exams and qualifications are steps to a bright and successful future, they are not the only measure of success. They do not define the total of what a good education should provide.
