RE: Schematic Design Report Submission

Dear Veatriki:

Attached please find the Module 4 Schematic Design submission to the MSBA. The team has followed the guidelines set forth in Module 4 to develop this submission.

As Owner's Project Manager, we certify that we have reviewed and coordinated the materials, the submittal is complete and conforms to MSBA requirements and confirm that the District has approved the materials for submission to the MSBA.

We look forward to reviewing the information contained in this submission with you and your team.

Please contact me at 781.910.2793 if you have any questions, comments, or would like to schedule a meeting.

Sincerely,

Julie Leduc
Director of OPM Services

Wilmington Elementary School / SMMA No. 22127
RE: DESE Submission

Dear Mr. McGurl:

The District is pursuing execution of a Project Scope and Budget Agreement for the MSBA approved Schematic Design for the Wilmington Elementary School project in Wilmington, Massachusetts. The District's 2024/2025 enrollment is 2,817. The design enrollment for the proposed school project is 755 students plus PreK. The existing Wildwood Early Childhood Center currently serves grades PreK-K, Woburn Street School serves grades 1-3 and North Intermediate School serves grades 4-5 and is proposed to serve District grades PreK-5 for the North side of Wilmington.

In accordance with M.G.L. c.70B, MSBA staff assembled the documents required for the review of the special education program at Wilmington Elementary School. The following are attached per the "Submittal Requirements":

- A letter from Superintendent Dr. Glenn Brand of the Wilmington Public School District describing its special education program.
- Proposed space summary that includes the existing facility, proposed spaces, and MSBA guidelines based on the agreed upon design enrollment. The first page of this summary indicates a total of 19,010 square feet of space dedicated to the delivery of special education.
- The floor plans for the proposed 165,035 square foot Wilmington Elementary School.
- A complete Special Education Adjacency Table.

I have reviewed the attached documents and confirm that the District's School Building Committee has officially approved the attached submittal on April 15, 2025 and verify that the space summary matches the floor plan and is complete and conform to the MSBA requirements as described in Module 4 – Schematic Design Guidelines.

Sincerely,

Julie Leduc

Project: Wilmington PK-5 Elementary School
Subject: Schematic Design DESE Submission: Special Education Delivery Methodology

Dear Mr. Deninger,
The following documentation reflects the Special Education Delivery Methodology of the Wilmington Public Schools (WPS) including information regarding the current, proposed, and specialized programs for the proposed new consolidated elementary school in Wilmington. Also included are the following:

- Educational Space Summary
- Space Summary Deviations Narrative
- Proposed Floor Plans
- Special Education Adjacency Table

WPS has made the appropriate provisions for children with disabilities in congruence with Section 1 of Chapter 71B and adheres to the federal and state laws that guarantee the rights of all students' access to the general education curriculum. The WPS philosophy is to embrace the inclusion of students with disabilities in all aspects of school life by including them in the general education environment to the fullest extent possible. This approach has been actualized via significant investment over many years in the development of a broad spectrum of in-district programming.

Wilmington's robust and comprehensive range of Special Education programs and services ensure that 98.1%* of enrolled students can be educated within the district. The very small number (1.9% of the student population) of students who are educated in out-of-district placements is indicative of the success of this approach and reflects our commitment to creating an inclusive educational environment that, to the maximum extent feasible, educates students in their home community. Special education services are provided to eligible students and are designed to remediate deficit areas, support the development of new skills, and allow students to gain the skills to access the general education curriculum in the least restrictive environment possible. The services and staffing available across the District are allocated annually based on

Notice of Non-Discrimination
All educational and non-academic programs, activities and employment opportunities at Wilmington Public Schools are offered without regard to race, color, sex, religion, national origin, ethnicity, sexual orientation, gender identity, homelessness, age and/or disability, and any other class or characteristic protected by law.

the service delivery needs identified on the Individualized Education Plans (IEPs) of the special education population being served at each school. WPS offers programs and services for students ages ranging from 3 to 22.

WPS provides qualifying students with a variety of related services including speech and language, occupational therapy, physical therapy, counseling, and behavior support. These programs and services are designed to increase the opportunity for students to receive robust special education services within the district. The inclusive nature of the programs and services provide a collaboration to augment opportunities and enhance the support disabled children receive to maximize access to the general education setting.

The design of the new building will improve the District's ability to make curriculum accessible to all children, including those with disabilities. A new facility will provide specially designed spaces that are ADA compliant and employ Universal Design architectural features to be accessed by the students who most require these supports. Dedicated Special Education rooms will be positioned throughout the building and either embedded within or in proximity to grade level neighborhoods whenever possible to minimize travel distances and to keep students receiving services among their peers. The intentional placement of rooms and the provisions for universal room features will provide the flexibility needed to meet the ever-changing needs of students and the inclusion priorities of the District.

Thank you for your consideration of this application.

Sincerely,

Glenn Brand
Superintendent of Schools

** Based upon October 1, 2024 enrollment report with DESE.*

SPECIAL EDUCATION DELIVERY METHODOLOGY

Wilmington Public Schools adheres to federal and state laws that guarantee the rights of all students to access the general education curriculum. The philosophy of the Wilmington Public Schools is to embrace the inclusion of students with disabilities in all aspects of the community and school life, including the general education environment, to the fullest extent possible. Special education services are provided to eligible students. They are designed to remediate deficit areas, support the development of new skills, and allow students to gain the skills to access the general education curriculum in the least restrictive environment possible.

		Language-Based	Language-Based	Language-Based	Language-Based	Language-Based (4)	Language-Based (3)
		Stepping stones	STAGES	Stepping Stones	STAGES	Student Support (1) & Transitions (1)	Evolution (2)
	Strides (3)	Strides (2)		Strides		Strides	Strides
Drive in services	Drive In services						
						Lifeskills	Lifeskills
							Postgrad
Integrated Preschool	Integrated Preschool						

Related Services/Therapies:

- Occupational Therapy
- Physical therapy
- Speech and language Therapy
- Clinical Staff (School counselors, school psychologists, social workers, adjustment counselors and Social Emotional Learning and Family Engagement Specialists)
- Applied Behavioral Analyst (ABA) Therapy
- Board Certified Behavior Analysts
- Adaptive Physical Education
- Teacher of Visually Impaired
- Teacher of the Deaf
- Audiologist
- Orientation and Mobility Specialist

Deficiencies:

- All three schools identified in the potential project require significant improvement in the physical space to provide all related services. Currently, many related service providers do not have dedicated workspaces or shared spaces for servicing students, including our school psychologists, occupational therapists, physical therapists, and speech and language providers. While services are being provided in compliance with student IEPs in all settings, significant improvements in the amount and quality of space for staff offices, student services, and staff/parent consultation are needed.
- In all three buildings, there is limited space for facilitating in-person IEP meetings and virtual and phone conferences to meet with parents and caregivers. Currently, service providers at all three schools share one classroom for both their office and service delivery space. Making confidentiality of student services, collaboration, and case management an ongoing challenge.
- As the Wildwood Early Childhood Center is currently split among two schools, the special education teacher that supports these enrolled students is now providing inclusion and pull-out services in two schools.
- Given the age of all three elementary schools, there are no extended learning spaces, no small rooms or spaces to provide services near student classrooms, and in most cases, services are not provided in the same space every time due to demands on open spaces by multiple staff.
- While the Wildwood houses three specialized classrooms for students with Autism, there is no sensory room and no motor space for students who receive such services, causing OT and PT to occur in classrooms and hallways.
- There are currently no dedicated calming spaces for students who may be dysregulated.
- Lack of handicap accessible facilities which limits program placement

Other Program Needs:

- Expand preschool programming
- Safe outdoor spaces = handicap accessible, developmentally appropriate play structures, contained play spaces.

PROPOSED SPECIAL EDUCATION PROGRAMS

Programs that will continue:

- Pre-Kindergarten Early Learning Center (ELC)
- Inclusion
- Partial inclusion
- PLC, ILC (for students with autism and intellectual impairments)
- The therapeutic learning program (previously called "JEMS", currently located in Jenkins Elementary School, but will be incorporated into the project and relocated)

Programs Additions/Enhancement:

- Expand Pre-Kindergarten programming.
- Additional opportunities for therapies, related services, sensory breaks and calming spaces to be in close proximity to classrooms.
- Access to technology.
- Access to hands-on, multi-sensory, project-based learning that allows flexibility, collaboration, and student choice.
- Multiple spaces to allow for various meetings to take place simultaneously.
- Multiple spaces to allow for varied sized learning groups to meet at the same time.
- Opportunities for flexible scheduling.
- Opportunities for increased community engagement and collaboration.
- Opportunities for families to attend school functions
- Assisted listening technology in each classroom for hearing impaired accessibility, as well as general use throughout the educational spaces of the proposed project.

List programs and services that would be moved from within the District (from which school they are being moved) as a result of the proposed project

- Wildwood: Inclusion & Learning Center, Integrated Preschool
- Woburn Street: Inclusion & Learning Center, STAGES
- North: Inclusion & Learning Center, STAGES
- Shawsheen: STRIDES
- West: STRIDES
- Occupational Therapy
- Physical therapy
- Speech and language Therapy

- Clinical Staff (School counselors, school psychologists, social workers, adjustment counselors and Social Emotional Learning and Family Engagement Specialists)
- Applied Behavioral Analyst (ABA) Therapy
- Board Certified Behavior Analysts
- Adaptive Physical Education
- Teacher of Visually Impaired
- Teacher of the Deaf
- Audiologist
- Orientation and Mobility Specialist

Programs to be Discontinued:

The district is not discontinuing programming. Given a new building will have accessibility throughout the school, the STRIDES program at the Shawsheen and West will be consolidated and relocated to the new building. This will allow students to continue with their peers, negating the need to move the cohort across town after kindergarten.

Total Number of Special Education Students to be Served in the New Building:

- 185 projected students

Previous Coordinated Program Review:

Previously, every six (6) years, the District participated in a Coordinated Program Review (CPR) from the Massachusetts Department of Elementary and Secondary Education (MADESE). Currently, this audit process has been split into an every three-year Tiered Focus Monitoring (TFM) process. The last Coordinated Program Review (CPR) that included special education facilities was held in the 2017 - 2018 school year, and the findings under Special Education Indicator #55 “Facilities” were found to be partially implemented.

Deficiencies:

The DESE requires that District buildings meet the following regulatory requirements:

Special Education Facilities and Classrooms

The school district provides facilities and classrooms for eligible students that:

- Maximize the inclusion of such students into the life of the school;
- Provide accessibility in order to implement fully each student’s IEP;

- Are at least equal in all physical respects to the average standards of general education facilities and classrooms;
- Are given the same priority as general education programs in the allocation of instructional and other space in public schools in order to minimize the separation or stigmatization of eligible students and are not identified by signs or other means that stigmatize such students.

Wilmington Special Education CPR findings in 2018 included:

- SE 3 Special requirements for determination of specific learning disability- Partially Implemented
- SE 6 Determination of transition services -Partially Implemented
- SE 7 Transfer of parental rights at age of majority and student participation and consent at the age of majority- Partially Implemented
- SE 47 Procedural requirements applied to students not yet determined to be eligible for special education- Partially Implemented
- SE 54 Professional development- Partially Implemented
- SE 55 Special education facilities and classrooms- Partially Implemented
- SE 56 Special education programs and services are evaluated-Partially Implemented

During this review, SE 55 Special Education facilities and classrooms were identified for corrective action. Noted was that the Middle School STRIDES classroom needed to be relocated to be more in the life of the school environment. Additionally noted was, “At the Boutwell Early Childhood Center, observations indicated that two speech and language therapists, one school adjustment counselor, and one occupational therapist share an office. A review of schedules indicated that four to six students simultaneously receive services from three to four different staff, which creates auditory and visual distractions.” These were remedied during the corrective action stage of the process.

The District participated in the Tiered Focus Monitoring (TFM), and the onsite component of this process was completed on February 6, 2024. The District received the report on April 25, 2024 and the district was in full compliance with the ADA and other requirements of the law.

Remedy:

Ensure that special education students have equitable spaces based on their needs through a planned building design.

All specialized programs will continue. Currently, the district does not accept students through school choice or any type of outside tuition basis.

To accommodate the proposed programs and services, the preferred design alternative should provide:

- Dedicated space for Occupational and Physical Therapies

- Small group rooms and other environments for a range of therapies for individual and small group sessions
- Safe and private areas for counseling, including but not necessarily limited to Adjustment Counselor offices, small group rooms
- Sensory areas to provide opportunities for motor breaks
- Calming areas for de-escalating students
- Small group teaching areas
- Individual teaching and assessment areas
- Areas for teaching life skills including eating, toileting, cleaning, resting and recreation
- Areas to assess students for special education services
- Safe, clutter-free hallways to facilitate student and staff movement throughout the building, taking into consideration potential need for adaptive equipment (i.e. wheelchairs, walkers, etc.)
- Areas for having meetings with parents, teams and consultants
- Natural light
- Easy access to outdoor learning and play spaces
- Contained, safe outdoor learning and play spaces
- Various storage space to reduce visual clutter
- Access to technology to augment communication
- Sound-treated or sound-resistant spaces
- Environmental adaptation for noise reduction
- Range of student seating (therapy balls, “wobble” stools, standing desks, small group tables, individual desks)
- Air quality/air conditioning for students with medical needs.

The proposed substantially separate classrooms will be scheduled the same as the general education classrooms in order to encourage peer interactions arriving at school, eating lunch with peers in the cafeteria, participating in “specials” (like Art, Music, etc.) with their peers and dismissal at the same time. Students in the substantially separate programs will be included with peers in the general education classroom to the greatest extent, per their needs and their IEPs. There will be 5 to 8 students in the substantially separate classroom with a lead teacher who is certified in moderate or intensive special needs, along with multiple paraprofessionals. The student to staff ratio will be less than 2:1, with some programs having closer to a 1:1 ratio. If the group size exceeds 8, the district will ensure sufficient staffing to comply with DESE regulations. In addition to the special education teacher and paraprofessionals, related service providers such as OT, PT and SLP will provide students services either within the substantially separate classroom, general education setting, or the therapist’s office.

Local Review Process:

- The District met with the design team several times and in several different settings to review and discuss decisions related to the number, type, and location of special education spaces. Descriptions of those times and settings are provided below.

- Visioning – Visioning session #3 included an activity where special educators documented the type and features associated with self-contained classrooms, break-out spaces, therapy environments, and support service spaces. Participants included Special Education Teachers, Therapists, Student Support Service professionals, and the Director of Special Education.
- Programming Meetings – Departmental meetings to discuss room sizes, counts, features, and geographic locations occurred in both the PDP and PSR phases primarily at the Working Group, whose members included the Director of Special Education, the Assistant Superintendent of Curriculum and Instruction, three building principals, and the Superintendent. These meetings continued into the Schematic Design phase with updates on the location and features of special education spaces.
- Schematic Design – The Design Team facilitated several days of end user group meetings with the special educators and other professionals who will be occupying individual spaces or suites of spaces to discuss the final location of rooms and their detailed interior features (casework, furniture, technology, markerboards, tackboards, acoustics, connections to adjacent spaces, etc.).
- Presentations were made throughout the PDP, PSR, and Schematic Design phases to the Working Group, the School Building Committee, School Committee, and the general public communicating the location and features of spaces serving special education students.

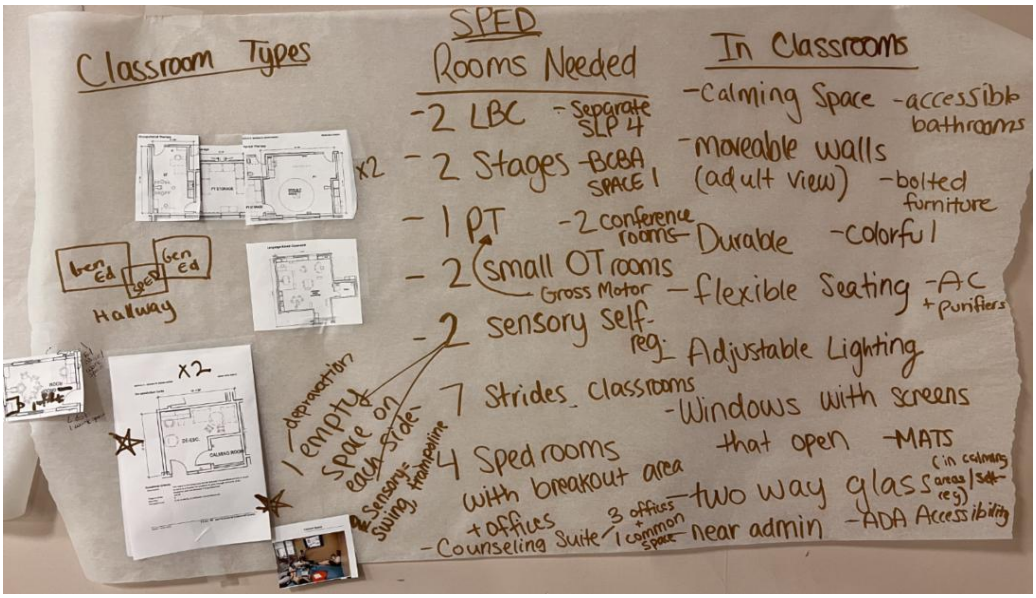

Figure 1 – Sample Work Product, Visioning

Rationale for Location of Special Education Facilities within the Proposed Building:

Several factors led to decisions about where to locate specific programs and specific spaces. All of these factors align with the District's overall goal of creating an inclusive facility that serves the needs of all students.

- Position self-contained classrooms with their grade level peers in their grade level learning community to the greatest extent possible.
- Position small group rooms between each pair of classrooms to reduce travel time and stigma associated with academic and social / emotional supports.
- Position extended learning areas adjacent to general education and special education classrooms to the greatest extent possible

Lower Elementary Wings:

- The Learning Centers are centrally located in the Kindergarten, 1st and 2nd grade level groupings adjacent to the Reading Specialists and with direct access to the extended learning area.
- Small Group Rooms are typically shared between two classrooms, with doorways directly off the classrooms, which will help them to function as an extension of the learning environment. Children receiving services will essentially not have to leave the learning environment to meet with a specialist or provider.
- The only differentiating factor in the design of the small group rooms are those located on the south end of the south academic wing. They are the only ones that are not shared between two classrooms, due to their position and given the odd number of classrooms within each wing. As a result, these small group rooms are designed with a door connecting directly to the corridor for shared use.
- Two of the four Speech and Language Rooms are located on the first level as they will be shared between the PreK and Kindergarten grade level groupings. Typically younger students receive more Speech and Language services than the older students.
- School Psychologist is centrally located in the PreK wing and adjacent to the Strides classrooms.
- Three Self-Contained SPED Rooms will house the Strides Program on the first level and are integrated within the PreK and Kindergarten grade level groupings, with children of a comparable age range to those in the program. Each has an ensuite Calming space and Toilet, with direct adjacency and access to an extended learning area directly outside its door.
- Three Self-Contained SPED Rooms will house the Strides, Stages and Language-based programs on the second level and are integrated within the 1st and 2nd grade level groupings, with children of a comparable age range to those in the program. Each has direct adjacency and access to an extended learning area directly outside its door. Strides and Stages classrooms also have ensuite Calming spaces and Toilets.
- BCBA (Board certified Behavioral Analysts) shared office #245 is centrally located between the three levels, as it will be shared between all grades over the three levels.
- The Occupational/Physical Therapy (OT/PT) Suite is centrally located to the whole school as it serves the entire age range population. It is located to favor the lower elementary side of the building, as typically younger students receive more OT/PT services than the older students. It is directly adjacent to the Gymnasium, as sometimes PT requires a larger movement space, or PT will collaborate closely with the PE teachers to coordinate service delivery. OT/PT is also adjacent to, to the courtyard, to take advantage of outdoor space and accessible play equipment in good weather.

Upper Elementary Wing:

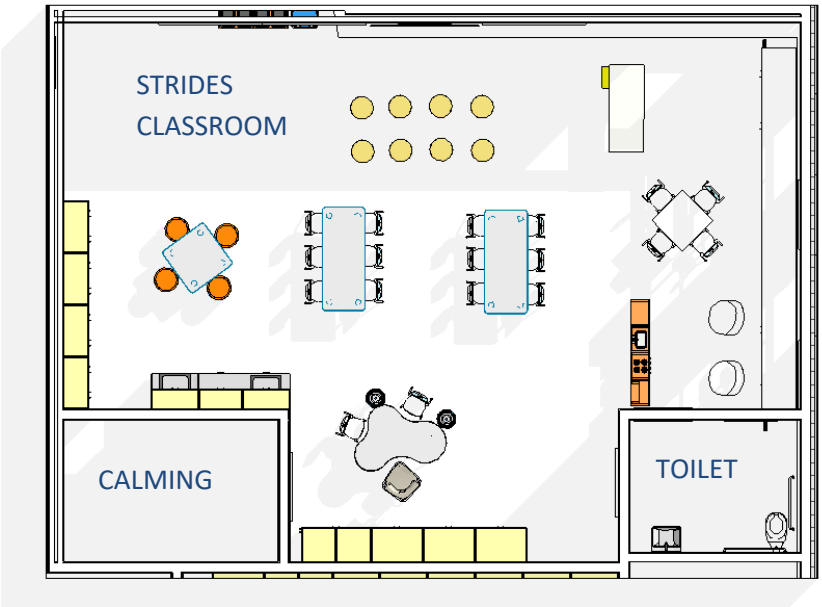
- Two Self-Contained SPED Rooms will house the Strides program on the third level and are integrated within the 3rd, 4th, and 5th grade level groupings, with children of a comparable age range to those in the program. Each has direct adjacency and access to an extended learning area directly outside its door. Strides classroom also has ensuite Calming space and Toilet.
- A Self-Contained SPED Room will house the Stages program on the third level and is integrated within the 3rd, 4th, and 5th grade level groupings, with children of a comparable age range to those in the program. It has direct adjacency and access to an extended learning area directly outside its door. Stages classroom also has ensuite Calming space and Toilet.
- A Self-Contained SPED Room will house the Language-based program on the third level and is integrated within the 3rd, 4th, and 5th grade level groupings, with children of a comparable age range to those in the program. It has direct adjacency and access to an extended learning area directly outside its door.
- Small Group Rooms are typically shared between two classrooms, with doorways directly off the classrooms, which will help them to function as an extension of the learning environment. Children receiving services will essentially not have to leave the learning environment to meet with a specialist or provider.
- The Learning Centers are centrally located with the grade level groupings with direct access to an extended learning area.
- Speech and Language Rooms are centrally located between grade level groupings and in close proximity to stairwells as they will be shared between the grade levels.

Design Response Overview

The current design responds to all the desires and educational intent described in the narrative above, many of which are relevant not only for students with special needs but for all students.

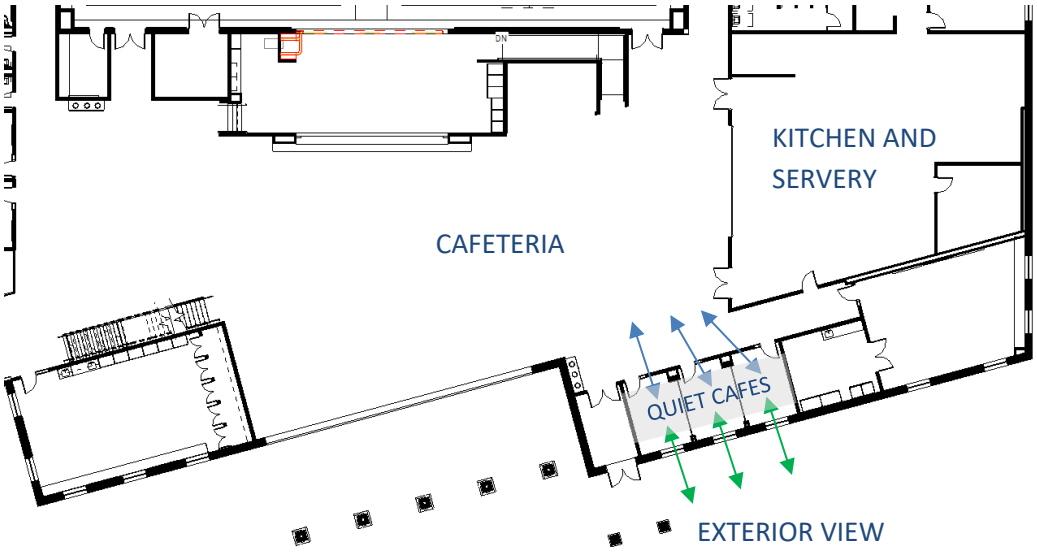
- Purpose-designed spaces for the Strides, Stages and Language-based programs are included in the project.
- These spaces are positioned within the academic areas and embedded with the general classrooms serving their grade level peers. Each of the self-contained classrooms are sized to be identical to general classrooms, will have the same views, access to extended learning spaces, and technology resources as general classrooms. These spaces will also have access to a small group room accessed from within the classroom just like their general classroom peer spaces. Strides and Stages classrooms also include a calming space. The illustration

below is a sample self-contained special education classroom and depicts some of the features that are possible in this suite.



Sample Self-contained Classroom – Conceptual Features and Layout

- In addition to classroom environments, the design includes dedicated OT/PT space.
- A wide variety of learning environments are included in design to reduce stigma for students needing supports. Small group rooms are located between each pair of classrooms to allow students to receive supports in an acoustically separate space and without the need to remove them from their classroom to travel to a distant office. Similarly, and depending on students' needs, extended learning spaces allow students visual and acoustical breaks from the general classroom environment.
- Extended learning areas in the design are positioned immediately outside general and special education classrooms but are intentionally not all identical. Some are larger and more suited to movement activities, large group instruction, and sensory stimulation. Others are smaller and expect to be outfitted for small group activities, student choices, counseling activities, and sensory deprivation.
- A key feature of the preferred alternative is the courtyard space. For all students, but particularly for students with special needs, access to a protected outdoor learning environment ensures a safe and fully accessible opportunity to interact with nature.
- Another key feature is the quiet cafes in the cafeteria. For all students, but particularly for students with special needs, opportunity to participate in the mid-day lunch experience within a quieter, calming space.



Partial Floor Plan, Quiet Cafes –Access to Cafeteria, Kitchen and Exterior Views

Grade and School Configuration Policies:

- As noted above, the school is divided into Lower Elementary Wings, Shared Core Spaces zone, and an Upper Elementary Wing.
- The Lower Elementary Wing houses PreK and K on level 1; and Grades 1 and 2 on Level 2
- The Upper Elementary wing houses Grade 3, 4 and 5 on Level 3
- This grade configuration is unlike the other elementary schools in the District as it consolidates six grade groupings under one roof intentionally to eliminate transitions at the elementary ages and allow students with special support needs to remain with their peers.

Grade Range Zoning Diagram of the Building

SPECIALIZED PROGRAM

List of Specialized Programs:

- Integrates Preschool classrooms
- STRIDES Classrooms
- Stages Classrooms
- Language-Based Classrooms

List of Collaboratives:

- Wilmington is a member of the SEEM Collaborative and also participates in other collaboratives as a non-member, including Valley and CREST. While the district is a member and participates in collaboratives, the District does not plan to house any collaborative programs nor provide dedicated space to collaboratives as part of the project for any of the agreed-upon enrollments.
- Wilmington does accept non-resident students from other districts on a tuition basis.

List of Alternative Education Programs:

- N/A

Narrative on Early Childhood Education Programs:

- The district provides an Early Childhood program for students who receive special education services at no cost to parents, as well as non- special education eligible students on a tuition basis if selected through a lottery system. The district currently has two Early Childhood Centers, Boutwell and Wildwood. Currently there are two integrated Pre-Kindergarten classrooms and three substantially separate Pre-Kindergartens at each location.
- The district has up to 8 students within each substantially separate classroom, and up to 90 preschool students within the integrated program. Each integrated classroom has a morning and an afternoon session with each session having a maximum of 15 students. The proposed plan is to relocate and expand the Pre-Kindergarten program within the new school by adding a third full-day integrated preschool classroom. This would increase the capacity by 15 students and reduce our wait list to enter the program.

Relationships with Other Private or Public Entities:

- CARES is a before and after school extended day program for students enrolled in the Wilmington Public Schools. The program does accept students formally identified as special education students.

The floor plans that follow are intended to illustrate the spatial relationships within the proposed building.

Educational Space Summary

The space summary on the following pages contains an itemization of the proposed spaces needed to deliver the District's educational program for grades PreK-5th using the MSBA's latest edition elementary school space summary template.

Room labels unique to the District and/or that vary from MSBA room names are identified with a yellow highlight. Total gross floor area, or gross square feet (GSF), are shown at the bottom of the table for the proposed conditions.

The District and the Design Team worked together to align proposed spaces with MSBA square footage guidelines for individual program areas and the total gross square footage to the greatest extent possible. However, some deviations do exist. All deviations were deemed necessary by the District to serve the educational program and are explained in detail on the pages following the space summary.

Some changes to the design have occurred since the submission of the Preferred Schematic Report. With further input from the District, some new spaces have been added to the project that subdivided larger program areas, and other program spaces have moved location within the plans to meet design and functional goals and requirements. The essence of the overall building planning and individual spatial relationships have remained intact.

Deviations From MSBA Guidelines – 755 Students + 100 PreK

The proposed space summary identifies a need of 165,035 GSF at a net to gross multiplier of 1.5 to serve the educational program, a deviation of 55,560* GSF from the MSBA guidelines for K-5th grade population of 755 students + approximately 100 PreK students. The narrative that follows offers evidence and support for these deviations.

Below is a summary of the initial proposed Space Summary as it has progressed through the MSBA process:

	Existing Wildwood, Woburn St and North Int. Schools Combined	PDP	Preferred Schematic Report	Schematic Design Report
Program Area	TOTAL NSF	TOTAL NSF	TOTAL NSF	TOTAL NSF
Core Academic	36,096	45,700	45,700	45,700
Special Education	11,300	19,010	19,010	19,010
Art & Music	6,315	4,040	4,040	5,082
Health & Physical Education	9,772	12,300	12,300	12,300
Media Center	2,265	4,068	4,068	4,068
Dining & Food Service	13,620	9,458	9,458	9,458
Medical	603	710	710	710
Administration & Guidance	5,582	5,308	5,308	5,548
Custodial & Maintenance	2,654	2,355	2,355	2,355
Other	2,764	6,100	6,100	5,800
TOTAL NSF	90,972	110,240	110,240	110,024
TOTAL GSF	138,614	163,573	163,573	165,035

* It is important to note that the MSBA Space Summary Template for this enrollment is based on a net to gross multiplier of only 1.46.

CORE ACADEMIC

The core academic program category totals 45,700 NSF, a deviation of +10,450 NSF from the MSBA guideline. The proposed space summary deviates from MSBA guidelines in four key ways: general classrooms, ELL classrooms, teacher collaboration spaces, and extended learning areas.

The first deviating factor relates to additional classrooms. Under a consolidated student population, the District requests thirty general classrooms for grades 1st – 5th, a deviation of three classrooms from the MSBA guidelines of twenty-seven general classrooms for grades 1st – 5th. The need for additional classrooms is a direct result of the District's local class size guidelines and current class models which are presented in detail in the educational program narrative.

The second factor leading to the deviation in Core Academic square footage is a demographic shift in Wilmington that has resulted in more students who qualify for English Language Learner services and programs. The proposed space summary deviates from MSBA guidelines by providing two half-sized classroom spaces to accommodate these services totaling 900 NSF.

The third factor leading to the deviation in Core Academic square footage is the additional space requested to support professional collaboration among faculty and staff. The district requests three 900 NSF Teacher Collaboration Spaces, one centrally located on each level. These spaces are to serve for common planning time, data meetings, and professional development spaces. They may also house a few hoteling desks for volunteers and itinerant staff if they don't have a professional home base elsewhere in the project. It is important to note that the district has tuned the space allocation since PSR to better meet its specific needs. After further review, the district realized the number of educators are more evenly distributed over three levels than originally anticipated. The number of Teacher Collaboration spaces was reduced from six to three while maintaining the same overall square footage of 2,700 NSF and evenly distributing on each level. The three teacher collaboration spaces are now centrally located between academic wings on each floor for greater access and flexibility of use.

The final factor in the deviation between the proposed space for Core Academics and the MSBA guidelines for this category is the additional space requested for Extended Learning. The needs and intent for this space are explained in the educational program narrative. The proposed Core Academic area includes thirty Extended Learning areas of varying sizes and locations totaling 5,744 NSF. This is a 456 SF decrease from PSR as some area from Kindergarten extended learning was allocated back to the Kindergarten classrooms and does not change the net square footage of the Core academic category.

The District is proposing three Pre-Kindergarten classrooms to support the current program and expand the program's offering with a full day class. At the PSR submittal, all of the net square footage associated with Pre-Kindergarten classrooms were recategorized into the "Other" category and remains there in the Schematic Design submittal.

The overall NSF of this category remains unchanged since the PSR submittal. It is important to note, however, that design progress has reallocated square foot area between individual spaces within this category as individual space geometries, and therefore their sizes, have shifted slightly since the PSR submittal.

SPECIAL EDUCATION

The Special Education program category totals 19,010 NSF, a deviation of +9,950 NSF from the MSBA guidelines. Several District-specific programs and services contribute to much of this deviation, including dedicated space to support programs like the substantially separate, self-contained Strides program and services such as Occupational Therapy and Physical Therapy all outlined in the Special Education sub-section of the Educational Program Narrative. PT Storage was removed based on MSBA PDP comments to "Non-programmed Spaces" category.

The remaining deviation in square footage is a result of the district's request for twenty-six (26) small group rooms and a request for a series of spaces associated with support service professionals: School Psychologists, Speech and Language Pathologists, and Board-Certified Behavioral Analysists all of which exclusively serve students with special needs. Small group rooms are located between pairs of classrooms to serve as supplemental instructional environments that are physically and visually connected directly to, but acoustically separate from, the general classroom. These spaces would primarily serve students who receive supports from professionals beyond the general classroom teacher but would also be a critical resource to general education teachers for small group activities and differentiated instruction consistent with Universal Design for Learning.

It should be noted that the toilet room for the Stages Program serving 3rd – 5th grades was not accounted for in the PSR submittal and has since been added to the program. However design progress has reallocated square foot area between individual toilet rooms within this category as individual space geometries, and therefore their sizes, have shifted slightly since the PSR submittal to accommodate the additional toilet room.

The overall NSF of this category remains unchanged since the PSR submittal.

ART & MUSIC

The art and music program category totals 5,075 NSF, indicating an increase of 1,035 NSF in this category from PSR, and alignment with the MSBA guidelines.

The increase in the category total since PSR is the result of on-going programming meetings with end users and further analysis of scheduling and operational use for a PK-5 configuration. The functional needs for art and music spaces vary significantly, warranting a second flex space and assigning a primary function to each flex space in the program, one for art on the second level and the other for

music on the first level. When not in use by these programs, flex rooms can serve as a multi-purpose space for other programs and a resource for the CARES program and community after-school.

It is important to note, however, that design progress has reallocated square foot area between individual spaces within this category as individual space geometries, and therefore their sizes, have shifted slightly since the PSR submittal.

HEALTH & PHYSICAL EDUCATION

The health & physical education program category totals 12,300 NSF, a deviation of +6,000 NSF from the MSBA guidelines. The overall NSF of this category remains unchanged since the PSR submittal.

MEDIA CENTER

The media center program category totals 4,068 NSF, which aligns with MSBA guidelines for this category. It is important to note, however, that design progress has reallocated square foot area within this category as the design was further developed to account for a workroom.

DINING & FOOD SERVICE

The dining and food services program category totals 9,458 NSF, which aligns with MSBA guidelines for this category. It is important to note, however, that design progress has reallocated square foot area between individual spaces within this category as the design was further developed. As articulated in PDP and PSR, the District directed the Design Team to size the dining room to accommodate all kindergarten through 5th grade students in three seatings. Given the plan to operate three seatings rather than two, the reduced square footage in the dining room will still be able to accommodate enrollment growth in the future.

The overall NSF of this category remains unchanged since the PSR submittal. It is important to note, however, that design progress has reallocated square foot area between individual spaces within this category as individual space geometries, and therefore their sizes, have shifted slightly since the PSR submittal.

MEDICAL

The medical program category totals 710 NSF, which aligns with MSBA guidelines. The overall NSF of this category remains unchanged since the PSR submittal.

ADMINISTRATION & GUIDANCE

The administration & guidance program category totals 5,548 NSF, a deviation of +2,658 NSF from the MSBA Guidelines and increase of +240 NSF since PSR. It is important to note that the district has increased the proposed NSF to tune this category for its specific local needs. The deviation is related to providing office and instructional spaces for student support service providers who serve both general and special education students. Since PSR, an audit of spaces recognized two professionals originally identified in the District's Educational Plan, a Literacy Coordinator and STEM Coordinator, and allocated space within administration, increasing this category by +240 NSF.

CUSTODIAL AND MAINTENANCE

The custodial and maintenance program category totals 2,355 NSF, which is equal to the MSBA Guidelines.

This category remains unchanged since the PSR submittal. It is important to note, however, that design progress has reallocated square foot area between individual spaces within this category.

OTHER

Items in the "other" category total 5,800 NSF, a decrease of -300 NSF since PSR. Much of this deviation from results from providing (3) Prekindergarten general education classrooms, PreK extended learning areas, CARES spaces associated with the after-school program including (1) 150 NSF program coordinator office and (1) 150 NSF site coordinator office and a dedicated Health classroom at 900 NSF. The final deviation is the result of providing (3) 100 NSF teacher wellness spaces which are meant to accompany teacher collaboration spaces and serve as places to conduct a private/confidential phone call and double as a lactation space. The reduction from six to three wellness rooms since PSR correlates directly to the reduction in teacher collaboration spaces discussed in the Core Academic category.

It is important to note, however, that design progress has reallocated square foot area between the PreK extended learning areas and the PreK classrooms as individual space geometries, and therefore their sizes, have shifted slightly since the PSR submittal. The reallocation results in a decrease of 210 NSF in the PreK extended learning area.

NON-PROGRAMMED SPACES

Items in the "Non-programmed Spaces" category were added based on previous comments from MSBA:

PT Storage 250 NSF

Cares Storage 500 NSF

This category remains unchanged since the PSR submittal.

SUMMARY

In summary, the District and the Design team are proposing 110,024 NSF and 165,035 GSF to satisfy the educational program. These square footages deviate from the MSBA guidelines by 34,859 NSF and 55,560 GSF.

Wilmington Elementary School / SMMA No. 22127
RE: DESE Submission

Dear Mr. McGurl:

The District is pursuing execution of a Project Scope and Budget Agreement for the MSBA approved Schematic Design for the Wilmington Elementary School project in Wilmington, Massachusetts. The District's 2024/2025 enrollment is 2,817. The design enrollment for the proposed school project is 755 students plus PreK. The existing Wildwood Early Childhood Center currently serves grades PreK-K, Woburn Street School serves grades 1-3 and North Intermediate School serves grades 4-5 and is proposed to serve District grades PreK-5 for the North side of Wilmington.

In accordance with M.G.L. c.70B, MSBA staff assembled the documents required for the review of the special education program at Wilmington Elementary School. The following are attached per the "Submittal Requirements":

- A letter from Superintendent Dr. Glenn Brand of the Wilmington Public School District describing its special education program.
- Proposed space summary that includes the existing facility, proposed spaces, and MSBA guidelines based on the agreed upon design enrollment. The first page of this summary indicates a total of 19,010 square feet of space dedicated to the delivery of special education.
- The floor plans for the proposed 165,035 square foot Wilmington Elementary School.
- A complete Special Education Adjacency Table.

I have reviewed the attached documents and confirm that the District's School Building Committee has officially approved the attached submittal on April 15, 2025 and verify that the space summary matches the floor plan and is complete and conform to the MSBA requirements as described in Module 4 – Schematic Design Guidelines.

Sincerely,

Julie Leduc

135 Santilli Highway
Everett, MA 02149

Project: Wilmington PK-5 Elementary School
Subject: Schematic Design DESE Submission: Special Education Delivery Methodology

Dear Mr. Deninger,
The following documentation reflects the Special Education Delivery Methodology of the Wilmington Public Schools (WPS) including information regarding the current, proposed, and specialized programs for the proposed new consolidated elementary school in Wilmington. Also included are the following:

- Educational Space Summary
- Space Summary Deviations Narrative
- Proposed Floor Plans
- Special Education Adjacency Table

WPS has made the appropriate provisions for children with disabilities in congruence with Section 1 of Chapter 71B and adheres to the federal and state laws that guarantee the rights of all students' access to the general education curriculum. The WPS philosophy is to embrace the inclusion of students with disabilities in all aspects of school life by including them in the general education environment to the fullest extent possible. This approach has been actualized via significant investment over many years in the development of a broad spectrum of in-district programming.

Wilmington's robust and comprehensive range of Special Education programs and services ensure that 98.1%* of enrolled students can be educated within the district. The very small number (1.9% of the student population) of students who are educated in out-of-district placements is indicative of the success of this approach and reflects our commitment to creating an inclusive educational environment that, to the maximum extent feasible, educates students in their home community. Special education services are provided to eligible students and are designed to remediate deficit areas, support the development of new skills, and allow students to gain the skills to access the general education curriculum in the least restrictive environment possible. The services and staffing available across the District are allocated annually based on

Notice of Non-Discrimination
All educational and non-academic programs, activities and employment opportunities at Wilmington Public Schools are offered without regard to race, color, sex, religion, national origin, ethnicity, sexual orientation, gender identity, homelessness, age and/or disability, and any other class or characteristic protected by law.

the service delivery needs identified on the Individualized Education Plans (IEPs) of the special education population being served at each school. WPS offers programs and services for students ages ranging from 3 to 22.

WPS provides qualifying students with a variety of related services including speech and language, occupational therapy, physical therapy, counseling, and behavior support. These programs and services are designed to increase the opportunity for students to receive robust special education services within the district. The inclusive nature of the programs and services provide a collaboration to augment opportunities and enhance the support disabled children receive to maximize access to the general education setting.

The design of the new building will improve the District's ability to make curriculum accessible to all children, including those with disabilities. A new facility will provide specially designed spaces that are ADA compliant and employ Universal Design architectural features to be accessed by the students who most require these supports. Dedicated Special Education rooms will be positioned throughout the building and either embedded within or in proximity to grade level neighborhoods whenever possible to minimize travel distances and to keep students receiving services among their peers. The intentional placement of rooms and the provisions for universal room features will provide the flexibility needed to meet the ever-changing needs of students and the inclusion priorities of the District.

Thank you for your consideration of this application.

Sincerely,

Glenn Brand
Superintendent of Schools

Christine Murray
Int. Director of Student Support Services

Diane Carreiro
Principal, North Intermediate School

** Based upon October 1, 2024 enrollment report with DESE.*

SPECIAL EDUCATION DELIVERY METHODOLOGY

Wilmington Public Schools adheres to federal and state laws that guarantee the rights of all students to access the general education curriculum. The philosophy of the Wilmington Public Schools is to embrace the inclusion of students with disabilities in all aspects of the community and school life, including the general education environment, to the fullest extent possible. Special education services are provided to eligible students. They are designed to remediate deficit areas, support the development of new skills, and allow students to gain the skills to access the general education curriculum in the least restrictive environment possible.

	Strides (3)	Strides (2)		Strides		Strides	Strides
Drive in services	Drive In services						
						Lifeskills	Lifeskills
							Postgrad
Integrated Preschool	Integrated Preschool						

Related Services/Therapies:

- Occupational Therapy
- Physical therapy
- Speech and language Therapy
- Clinical Staff (School counselors, school psychologists, social workers, adjustment counselors and Social Emotional Learning and Family Engagement Specialists)
- Applied Behavioral Analyst (ABA) Therapy
- Board Certified Behavior Analysts
- Adaptive Physical Education
- Teacher of Visually Impaired
- Teacher of the Deaf
- Audiologist
- Orientation and Mobility Specialist

Deficiencies:

- All three schools identified in the potential project require significant improvement in the physical space to provide all related services. Currently, many related service providers do not have dedicated workspaces or shared spaces for servicing students, including our school psychologists, occupational therapists, physical therapists, and speech and language providers. While services are being provided in compliance with student IEPs in all settings, significant improvements in the amount and quality of space for staff offices, student services, and staff/parent consultation are needed.
- In all three buildings, there is limited space for facilitating in-person IEP meetings and virtual and phone conferences to meet with parents and caregivers. Currently, service providers at all three schools share one classroom for both their office and service delivery space. Making confidentiality of student services, collaboration, and case management an ongoing challenge.
- As the Wildwood Early Childhood Center is currently split among two schools, the special education teacher that supports these enrolled students is now providing inclusion and pull-out services in two schools.
- Given the age of all three elementary schools, there are no extended learning spaces, no small rooms or spaces to provide services near student classrooms, and in most cases, services are not provided in the same space every time due to demands on open spaces by multiple staff.
- While the Wildwood houses three specialized classrooms for students with Autism, there is no sensory room and no motor space for students who receive such services, causing OT and PT to occur in classrooms and hallways.
- There are currently no dedicated calming spaces for students who may be dysregulated.
- Lack of handicap accessible facilities which limits program placement

Other Program Needs:

- Expand preschool programming
- Safe outdoor spaces = handicap accessible, developmentally appropriate play structures, contained play spaces.

PROPOSED SPECIAL EDUCATION PROGRAMS

Programs that will continue:

- Pre-Kindergarten Early Learning Center (ELC)
- Inclusion
- Partial inclusion
- PLC, ILC (for students with autism and intellectual impairments)
- The therapeutic learning program (previously called "JEMS", currently located in Jenkins Elementary School, but will be incorporated into the project and relocated)

Programs Additions/Enhancement:

- Expand Pre-Kindergarten programming.
- Additional opportunities for therapies, related services, sensory breaks and calming spaces to be in close proximity to classrooms.
- Access to technology.
- Access to hands-on, multi-sensory, project-based learning that allows flexibility, collaboration, and student choice.
- Multiple spaces to allow for various meetings to take place simultaneously.
- Multiple spaces to allow for varied sized learning groups to meet at the same time.
- Opportunities for flexible scheduling.
- Opportunities for increased community engagement and collaboration.
- Opportunities for families to attend school functions
- Assisted listening technology in each classroom for hearing impaired accessibility, as well as general use throughout the educational spaces of the proposed project.

List programs and services that would be moved from within the District (from which school they are being moved) as a result of the proposed project

- Wildwood: Inclusion & Learning Center, Integrated Preschool
- Woburn Street: Inclusion & Learning Center, STAGES
- North: Inclusion & Learning Center, STAGES
- Shawsheen: STRIDES
- West: STRIDES
- Occupational Therapy
- Physical therapy
- Speech and language Therapy

- Clinical Staff (School counselors, school psychologists, social workers, adjustment counselors and Social Emotional Learning and Family Engagement Specialists)
- Applied Behavioral Analyst (ABA) Therapy
- Board Certified Behavior Analysts
- Adaptive Physical Education
- Teacher of Visually Impaired
- Teacher of the Deaf
- Audiologist
- Orientation and Mobility Specialist

Programs to be Discontinued:

The district is not discontinuing programming. Given a new building will have accessibility throughout the school, the STRIDES program at the Shawsheen and West will be consolidated and relocated to the new building. This will allow students to continue with their peers, negating the need to move the cohort across town after kindergarten.

Total Number of Special Education Students to be Served in the New Building:

- 185 projected students

Previous Coordinated Program Review:

Previously, every six (6) years, the District participated in a Coordinated Program Review (CPR) from the Massachusetts Department of Elementary and Secondary Education (MADESE). Currently, this audit process has been split into an every three-year Tiered Focus Monitoring (TFM) process. The last Coordinated Program Review (CPR) that included special education facilities was held in the 2017 - 2018 school year, and the findings under Special Education Indicator #55 “Facilities” were found to be partially implemented.

Deficiencies:

The DESE requires that District buildings meet the following regulatory requirements:

Special Education Facilities and Classrooms

The school district provides facilities and classrooms for eligible students that:

- Maximize the inclusion of such students into the life of the school;
- Provide accessibility in order to implement fully each student’s IEP;

- Are at least equal in all physical respects to the average standards of general education facilities and classrooms;
- Are given the same priority as general education programs in the allocation of instructional and other space in public schools in order to minimize the separation or stigmatization of eligible students and are not identified by signs or other means that stigmatize such students.

Wilmington Special Education CPR findings in 2018 included:

- SE 3 Special requirements for determination of specific learning disability- Partially Implemented
- SE 6 Determination of transition services -Partially Implemented
- SE 7 Transfer of parental rights at age of majority and student participation and consent at the age of majority- Partially Implemented
- SE 47 Procedural requirements applied to students not yet determined to be eligible for special education- Partially Implemented
- SE 54 Professional development- Partially Implemented
- SE 55 Special education facilities and classrooms- Partially Implemented
- SE 56 Special education programs and services are evaluated-Partially Implemented

During this review, SE 55 Special Education facilities and classrooms were identified for corrective action. Noted was that the Middle School STRIDES classroom needed to be relocated to be more in the life of the school environment. Additionally noted was, “At the Boutwell Early Childhood Center, observations indicated that two speech and language therapists, one school adjustment counselor, and one occupational therapist share an office. A review of schedules indicated that four to six students simultaneously receive services from three to four different staff, which creates auditory and visual distractions.” These were remedied during the corrective action stage of the process.

The District participated in the Tiered Focus Monitoring (TFM), and the onsite component of this process was completed on February 6, 2024. The District received the report on April 25, 2024 and the district was in full compliance with the ADA and other requirements of the law.

Remedy:

Ensure that special education students have equitable spaces based on their needs through a planned building design.

All specialized programs will continue. Currently, the district does not accept students through school choice or any type of outside tuition basis.

To accommodate the proposed programs and services, the preferred design alternative should provide:

- Dedicated space for Occupational and Physical Therapies

- Small group rooms and other environments for a range of therapies for individual and small group sessions
- Safe and private areas for counseling, including but not necessarily limited to Adjustment Counselor offices, small group rooms
- Sensory areas to provide opportunities for motor breaks
- Calming areas for de-escalating students
- Small group teaching areas
- Individual teaching and assessment areas
- Areas for teaching life skills including eating, toileting, cleaning, resting and recreation
- Areas to assess students for special education services
- Safe, clutter-free hallways to facilitate student and staff movement throughout the building, taking into consideration potential need for adaptive equipment (i.e. wheelchairs, walkers, etc.)
- Areas for having meetings with parents, teams and consultants
- Natural light
- Easy access to outdoor learning and play spaces
- Contained, safe outdoor learning and play spaces
- Various storage space to reduce visual clutter
- Access to technology to augment communication
- Sound-treated or sound-resistant spaces
- Environmental adaptation for noise reduction
- Range of student seating (therapy balls, “wobble” stools, standing desks, small group tables, individual desks)
- Air quality/air conditioning for students with medical needs.

The proposed substantially separate classrooms will be scheduled the same as the general education classrooms in order to encourage peer interactions arriving at school, eating lunch with peers in the cafeteria, participating in “specials” (like Art, Music, etc.) with their peers and dismissal at the same time. Students in the substantially separate programs will be included with peers in the general education classroom to the greatest extent, per their needs and their IEPs. There will be 5 to 8 students in the substantially separate classroom with a lead teacher who is certified in moderate or intensive special needs, along with multiple paraprofessionals. The student to staff ratio will be less than 2:1, with some programs having closer to a 1:1 ratio. If the group size exceeds 8, the district will ensure sufficient staffing to comply with DESE regulations. In addition to the special education teacher and paraprofessionals, related service providers such as OT, PT and SLP will provide students services either within the substantially separate classroom, general education setting, or the therapist’s office.

Local Review Process:

- The District met with the design team several times and in several different settings to review and discuss decisions related to the number, type, and location of special education spaces. Descriptions of those times and settings are provided below.

- Visioning – Visioning session #3 included an activity where special educators documented the type and features associated with self-contained classrooms, break-out spaces, therapy environments, and support service spaces. Participants included Special Education Teachers, Therapists, Student Support Service professionals, and the Director of Special Education.
- Programming Meetings – Departmental meetings to discuss room sizes, counts, features, and geographic locations occurred in both the PDP and PSR phases primarily at the Working Group, whose members included the Director of Special Education, the Assistant Superintendent of Curriculum and Instruction, three building principals, and the Superintendent. These meetings continued into the Schematic Design phase with updates on the location and features of special education spaces.
- Schematic Design – The Design Team facilitated several days of end user group meetings with the special educators and other professionals who will be occupying individual spaces or suites of spaces to discuss the final location of rooms and their detailed interior features (casework, furniture, technology, markerboards, tackboards, acoustics, connections to adjacent spaces, etc.).
- Presentations were made throughout the PDP, PSR, and Schematic Design phases to the Working Group, the School Building Committee, School Committee, and the general public communicating the location and features of spaces serving special education students.

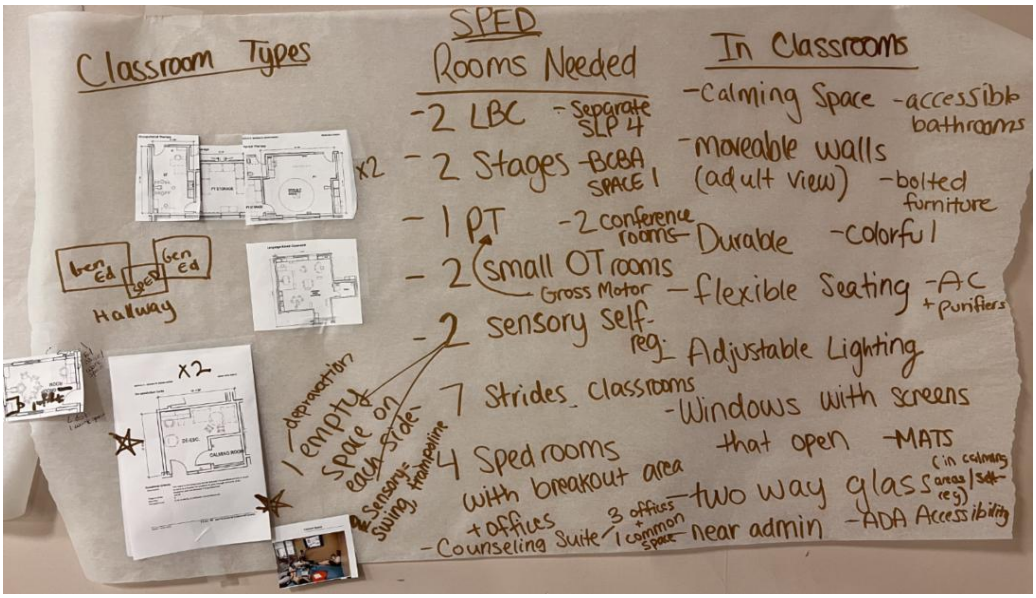

Figure 1 – Sample Work Product, Visioning

Rationale for Location of Special Education Facilities within the Proposed Building:

Several factors led to decisions about where to locate specific programs and specific spaces. All of these factors align with the District's overall goal of creating an inclusive facility that serves the needs of all students.

- Position self-contained classrooms with their grade level peers in their grade level learning community to the greatest extent possible.
- Position small group rooms between each pair of classrooms to reduce travel time and stigma associated with academic and social / emotional supports.
- Position extended learning areas adjacent to general education and special education classrooms to the greatest extent possible

Lower Elementary Wings:

- The Learning Centers are centrally located in the Kindergarten, 1st and 2nd grade level groupings adjacent to the Reading Specialists and with direct access to the extended learning area.
- Small Group Rooms are typically shared between two classrooms, with doorways directly off the classrooms, which will help them to function as an extension of the learning environment. Children receiving services will essentially not have to leave the learning environment to meet with a specialist or provider.
- The only differentiating factor in the design of the small group rooms are those located on the south end of the south academic wing. They are the only ones that are not shared between two classrooms, due to their position and given the odd number of classrooms within each wing. As a result, these small group rooms are designed with a door connecting directly to the corridor for shared use.
- Two of the four Speech and Language Rooms are located on the first level as they will be shared between the PreK and Kindergarten grade level groupings. Typically younger students receive more Speech and Language services than the older students.
- School Psychologist is centrally located in the PreK wing and adjacent to the Strides classrooms.
- Three Self-Contained SPED Rooms will house the Strides Program on the first level and are integrated within the PreK and Kindergarten grade level groupings, with children of a comparable age range to those in the program. Each has an ensuite Calming space and Toilet, with direct adjacency and access to an extended learning area directly outside its door.
- Three Self-Contained SPED Rooms will house the Strides, Stages and Language-based programs on the second level and are integrated within the 1st and 2nd grade level groupings, with children of a comparable age range to those in the program. Each has direct adjacency and access to an extended learning area directly outside its door. Strides and Stages classrooms also have ensuite Calming spaces and Toilets.
- BCBA (Board certified Behavioral Analysts) shared office #245 is centrally located between the three levels, as it will be shared between all grades over the three levels.
- The Occupational/Physical Therapy (OT/PT) Suite is centrally located to the whole school as it serves the entire age range population. It is located to favor the lower elementary side of the building, as typically younger students receive more OT/PT services than the older students. It is directly adjacent to the Gymnasium, as sometimes PT requires a larger movement space, or PT will collaborate closely with the PE teachers to coordinate service delivery. OT/PT is also adjacent to, to the courtyard, to take advantage of outdoor space and accessible play equipment in good weather.

Upper Elementary Wing:

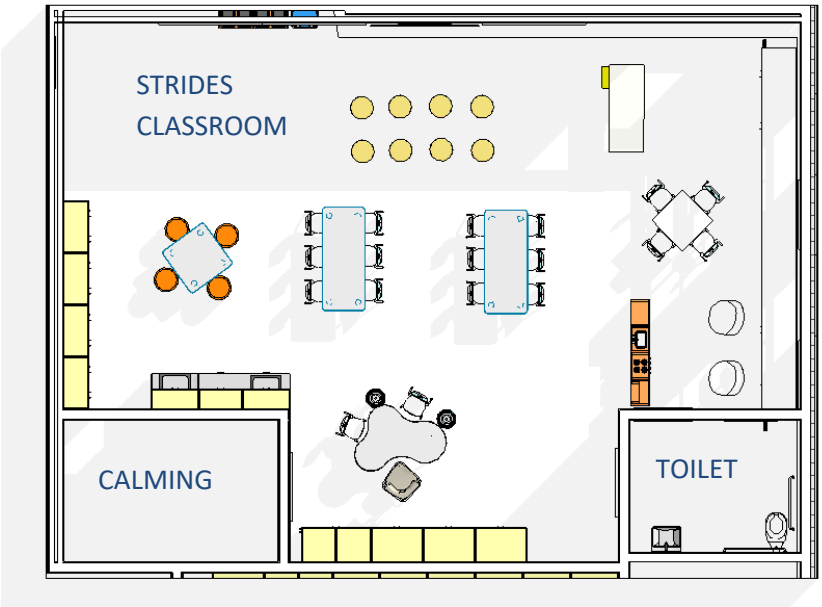
- Two Self-Contained SPED Rooms will house the Strides program on the third level and are integrated within the 3rd, 4th, and 5th grade level groupings, with children of a comparable age range to those in the program. Each has direct adjacency and access to an extended learning area directly outside its door. Strides classroom also has ensuite Calming space and Toilet.
- A Self-Contained SPED Room will house the Stages program on the third level and is integrated within the 3rd, 4th, and 5th grade level groupings, with children of a comparable age range to those in the program. It has direct adjacency and access to an extended learning area directly outside its door. Stages classroom also has ensuite Calming space and Toilet.
- A Self-Contained SPED Room will house the Language-based program on the third level and is integrated within the 3rd, 4th, and 5th grade level groupings, with children of a comparable age range to those in the program. It has direct adjacency and access to an extended learning area directly outside its door.
- Small Group Rooms are typically shared between two classrooms, with doorways directly off the classrooms, which will help them to function as an extension of the learning environment. Children receiving services will essentially not have to leave the learning environment to meet with a specialist or provider.
- The Learning Centers are centrally located with the grade level groupings with direct access to an extended learning area.
- Speech and Language Rooms are centrally located between grade level groupings and in close proximity to stairwells as they will be shared between the grade levels.

Design Response Overview

The current design responds to all the desires and educational intent described in the narrative above, many of which are relevant not only for students with special needs but for all students.

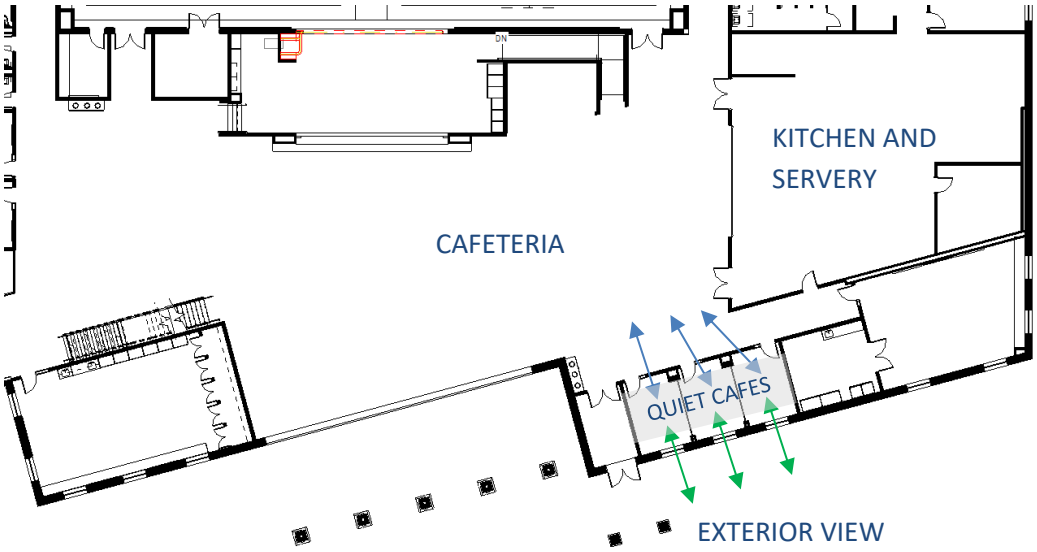
- Purpose-designed spaces for the Strides, Stages and Language-based programs are included in the project.
- These spaces are positioned within the academic areas and embedded with the general classrooms serving their grade level peers. Each of the self-contained classrooms are sized to be identical to general classrooms, will have the same views, access to extended learning spaces, and technology resources as general classrooms. These spaces will also have access to a small group room accessed from within the classroom just like their general classroom peer spaces. Strides and Stages classrooms also include a calming space. The illustration

below is a sample self-contained special education classroom and depicts some of the features that are possible in this suite.



Sample Self-contained Classroom – Conceptual Features and Layout

- In addition to classroom environments, the design includes dedicated OT/PT space.
- A wide variety of learning environments are included in design to reduce stigma for students needing supports. Small group rooms are located between each pair of classrooms to allow students to receive supports in an acoustically separate space and without the need to remove them from their classroom to travel to a distant office. Similarly, and depending on students' needs, extended learning spaces allow students visual and acoustical breaks from the general classroom environment.
- Extended learning areas in the design are positioned immediately outside general and special education classrooms but are intentionally not all identical. Some are larger and more suited to movement activities, large group instruction, and sensory stimulation. Others are smaller and expect to be outfitted for small group activities, student choices, counseling activities, and sensory deprivation.
- A key feature of the preferred alternative is the courtyard space. For all students, but particularly for students with special needs, access to a protected outdoor learning environment ensures a safe and fully accessible opportunity to interact with nature.
- Another key feature is the quiet cafes in the cafeteria. For all students, but particularly for students with special needs, opportunity to participate in the mid-day lunch experience within a quieter, calming space.



Partial Floor Plan, Quiet Cafes –Access to Cafeteria, Kitchen and Exterior Views

Grade and School Configuration Policies:

- As noted above, the school is divided into Lower Elementary Wings, Shared Core Spaces zone, and an Upper Elementary Wing.
- The Lower Elementary Wing houses PreK and K on level 1; and Grades 1 and 2 on Level 2
- The Upper Elementary wing houses Grade 3, 4 and 5 on Level 3
- This grade configuration is unlike the other elementary schools in the District as it consolidates six grade groupings under one roof intentionally to eliminate transitions at the elementary ages and allow students with special support needs to remain with their peers.

Grade Range Zoning Diagram of the Building

SPECIALIZED PROGRAM

List of Specialized Programs:

- Integrates Preschool classrooms
- STRIDES Classrooms
- Stages Classrooms
- Language-Based Classrooms

List of Collaboratives:

- Wilmington is a member of the SEEM Collaborative and also participates in other collaboratives as a non-member, including Valley and CREST. While the district is a member and participates in collaboratives, the District does not plan to house any collaborative programs nor provide dedicated space to collaboratives as part of the project for any of the agreed-upon enrollments.
- Wilmington does accept non-resident students from other districts on a tuition basis.

List of Alternative Education Programs:

- N/A

Narrative on Early Childhood Education Programs:

- The district provides an Early Childhood program for students who receive special education services at no cost to parents, as well as non- special education eligible students on a tuition basis if selected through a lottery system. The district currently has two Early Childhood Centers, Boutwell and Wildwood. Currently there are two integrated Pre-Kindergarten classrooms and three substantially separate Pre-Kindergartens at each location.
- The district has up to 8 students within each substantially separate classroom, and up to 90 preschool students within the integrated program. Each integrated classroom has a morning and an afternoon session with each session having a maximum of 15 students. The proposed plan is to relocate and expand the Pre-Kindergarten program within the new school by adding a third full-day integrated preschool classroom. This would increase the capacity by 15 students and reduce our wait list to enter the program.

Relationships with Other Private or Public Entities:

- CARES is a before and after school extended day program for students enrolled in the Wilmington Public Schools. The program does accept students formally identified as special education students.

The floor plans that follow are intended to illustrate the spatial relationships within the proposed building.

Educational Space Summary

The space summary on the following pages contains an itemization of the proposed spaces needed to deliver the District's educational program for grades PreK-5th using the MSBA's latest edition elementary school space summary template.

Room labels unique to the District and/or that vary from MSBA room names are identified with a yellow highlight. Total gross floor area, or gross square feet (GSF), are shown at the bottom of the table for the proposed conditions.

The District and the Design Team worked together to align proposed spaces with MSBA square footage guidelines for individual program areas and the total gross square footage to the greatest extent possible. However, some deviations do exist. All deviations were deemed necessary by the District to serve the educational program and are explained in detail on the pages following the space summary.

Some changes to the design have occurred since the submission of the Preferred Schematic Report. With further input from the District, some new spaces have been added to the project that subdivided larger program areas, and other program spaces have moved location within the plans to meet design and functional goals and requirements. The essence of the overall building planning and individual spatial relationships have remained intact.

Deviations From MSBA Guidelines – 755 Students + 100 PreK

The proposed space summary identifies a need of 165,035 GSF at a net to gross multiplier of 1.5 to serve the educational program, a deviation of 55,560* GSF from the MSBA guidelines for K-5th grade population of 755 students + approximately 100 PreK students. The narrative that follows offers evidence and support for these deviations.

Below is a summary of the initial proposed Space Summary as it has progressed through the MSBA process:

	Existing Wildwood, Woburn St and North Int. Schools Combined	PDP	Preferred Schematic Report	Schematic Design Report
Program Area	TOTAL NSF	TOTAL NSF	TOTAL NSF	TOTAL NSF
Core Academic	36,096	45,700	45,700	45,700
Special Education	11,300	19,010	19,010	19,010
Art & Music	6,315	4,040	4,040	5,082
Health & Physical Education	9,772	12,300	12,300	12,300
Media Center	2,265	4,068	4,068	4,068
Dining & Food Service	13,620	9,458	9,458	9,458
Medical	603	710	710	710
Administration & Guidance	5,582	5,308	5,308	5,548
Custodial & Maintenance	2,654	2,355	2,355	2,355
Other	2,764	6,100	6,100	5,800
TOTAL NSF	90,972	110,240	110,240	110,024
TOTAL GSF	138,614	163,573	163,573	165,035

* It is important to note that the MSBA Space Summary Template for this enrollment is based on a net to gross multiplier of only 1.46.

CORE ACADEMIC

The core academic program category totals 45,700 NSF, a deviation of +10,450 NSF from the MSBA guideline. The proposed space summary deviates from MSBA guidelines in four key ways: general classrooms, ELL classrooms, teacher collaboration spaces, and extended learning areas.

The first deviating factor relates to additional classrooms. Under a consolidated student population, the District requests thirty general classrooms for grades 1st – 5th, a deviation of three classrooms from the MSBA guidelines of twenty-seven general classrooms for grades 1st – 5th. The need for additional classrooms is a direct result of the District's local class size guidelines and current class models which are presented in detail in the educational program narrative.

The second factor leading to the deviation in Core Academic square footage is a demographic shift in Wilmington that has resulted in more students who qualify for English Language Learner services and programs. The proposed space summary deviates from MSBA guidelines by providing two half-sized classroom spaces to accommodate these services totaling 900 NSF.

The third factor leading to the deviation in Core Academic square footage is the additional space requested to support professional collaboration among faculty and staff. The district requests three 900 NSF Teacher Collaboration Spaces, one centrally located on each level. These spaces are to serve for common planning time, data meetings, and professional development spaces. They may also house a few hoteling desks for volunteers and itinerant staff if they don't have a professional home base elsewhere in the project. It is important to note that the district has tuned the space allocation since PSR to better meet its specific needs. After further review, the district realized the number of educators are more evenly distributed over three levels than originally anticipated. The number of Teacher Collaboration spaces was reduced from six to three while maintaining the same overall square footage of 2,700 NSF and evenly distributing on each level. The three teacher collaboration spaces are now centrally located between academic wings on each floor for greater access and flexibility of use.

The final factor in the deviation between the proposed space for Core Academics and the MSBA guidelines for this category is the additional space requested for Extended Learning. The needs and intent for this space are explained in the educational program narrative. The proposed Core Academic area includes thirty Extended Learning areas of varying sizes and locations totaling 5,744 NSF. This is a 456 SF decrease from PSR as some area from Kindergarten extended learning was allocated back to the Kindergarten classrooms and does not change the net square footage of the Core academic category.

The District is proposing three Pre-Kindergarten classrooms to support the current program and expand the program's offering with a full day class. At the PSR submittal, all of the net square footage associated with Pre-Kindergarten classrooms were recategorized into the "Other" category and remains there in the Schematic Design submittal.

The overall NSF of this category remains unchanged since the PSR submittal. It is important to note, however, that design progress has reallocated square foot area between individual spaces within this category as individual space geometries, and therefore their sizes, have shifted slightly since the PSR submittal.

SPECIAL EDUCATION

The Special Education program category totals 19,010 NSF, a deviation of +9,950 NSF from the MSBA guidelines. Several District-specific programs and services contribute to much of this deviation, including dedicated space to support programs like the substantially separate, self-contained Strides program and services such as Occupational Therapy and Physical Therapy all outlined in the Special Education sub-section of the Educational Program Narrative. PT Storage was removed based on MSBA PDP comments to "Non-programmed Spaces" category.

The remaining deviation in square footage is a result of the district's request for twenty-six (26) small group rooms and a request for a series of spaces associated with support service professionals: School Psychologists, Speech and Language Pathologists, and Board-Certified Behavioral Analysists all of which exclusively serve students with special needs. Small group rooms are located between pairs of classrooms to serve as supplemental instructional environments that are physically and visually connected directly to, but acoustically separate from, the general classroom. These spaces would primarily serve students who receive supports from professionals beyond the general classroom teacher but would also be a critical resource to general education teachers for small group activities and differentiated instruction consistent with Universal Design for Learning.

It should be noted that the toilet room for the Stages Program serving 3rd – 5th grades was not accounted for in the PSR submittal and has since been added to the program. However design progress has reallocated square foot area between individual toilet rooms within this category as individual space geometries, and therefore their sizes, have shifted slightly since the PSR submittal to accommodate the additional toilet room.

The overall NSF of this category remains unchanged since the PSR submittal.

ART & MUSIC

The art and music program category totals 5,075 NSF, indicating an increase of 1,035 NSF in this category from PSR, and alignment with the MSBA guidelines.

The increase in the category total since PSR is the result of on-going programming meetings with end users and further analysis of scheduling and operational use for a PK-5 configuration. The functional needs for art and music spaces vary significantly, warranting a second flex space and assigning a primary function to each flex space in the program, one for art on the second level and the other for

music on the first level. When not in use by these programs, flex rooms can serve as a multi-purpose space for other programs and a resource for the CARES program and community after-school.

It is important to note, however, that design progress has reallocated square foot area between individual spaces within this category as individual space geometries, and therefore their sizes, have shifted slightly since the PSR submittal.

HEALTH & PHYSICAL EDUCATION

The health & physical education program category totals 12,300 NSF, a deviation of +6,000 NSF from the MSBA guidelines. The overall NSF of this category remains unchanged since the PSR submittal.

MEDIA CENTER

The media center program category totals 4,068 NSF, which aligns with MSBA guidelines for this category. It is important to note, however, that design progress has reallocated square foot area within this category as the design was further developed to account for a workroom.

DINING & FOOD SERVICE

The dining and food services program category totals 9,458 NSF, which aligns with MSBA guidelines for this category. It is important to note, however, that design progress has reallocated square foot area between individual spaces within this category as the design was further developed. As articulated in PDP and PSR, the District directed the Design Team to size the dining room to accommodate all kindergarten through 5th grade students in three seatings. Given the plan to operate three seatings rather than two, the reduced square footage in the dining room will still be able to accommodate enrollment growth in the future.

The overall NSF of this category remains unchanged since the PSR submittal. It is important to note, however, that design progress has reallocated square foot area between individual spaces within this category as individual space geometries, and therefore their sizes, have shifted slightly since the PSR submittal.

MEDICAL

The medical program category totals 710 NSF, which aligns with MSBA guidelines. The overall NSF of this category remains unchanged since the PSR submittal.

ADMINISTRATION & GUIDANCE

The administration & guidance program category totals 5,548 NSF, a deviation of +2,658 NSF from the MSBA Guidelines and increase of +240 NSF since PSR. It is important to note that the district has increased the proposed NSF to tune this category for its specific local needs. The deviation is related to providing office and instructional spaces for student support service providers who serve both general and special education students. Since PSR, an audit of spaces recognized two professionals originally identified in the District's Educational Plan, a Literacy Coordinator and STEM Coordinator, and allocated space within administration, increasing this category by +240 NSF.

CUSTODIAL AND MAINTENANCE

The custodial and maintenance program category totals 2,355 NSF, which is equal to the MSBA Guidelines.

This category remains unchanged since the PSR submittal. It is important to note, however, that design progress has reallocated square foot area between individual spaces within this category.

OTHER

Items in the "other" category total 5,800 NSF, a decrease of -300 NSF since PSR. Much of this deviation from results from providing (3) Prekindergarten general education classrooms, PreK extended learning areas, CARES spaces associated with the after-school program including (1) 150 NSF program coordinator office and (1) 150 NSF site coordinator office and a dedicated Health classroom at 900 NSF. The final deviation is the result of providing (3) 100 NSF teacher wellness spaces which are meant to accompany teacher collaboration spaces and serve as places to conduct a private/confidential phone call and double as a lactation space. The reduction from six to three wellness rooms since PSR correlates directly to the reduction in teacher collaboration spaces discussed in the Core Academic category.

It is important to note, however, that design progress has reallocated square foot area between the PreK extended learning areas and the PreK classrooms as individual space geometries, and therefore their sizes, have shifted slightly since the PSR submittal. The reallocation results in a decrease of 210 NSF in the PreK extended learning area.

NON-PROGRAMMED SPACES

Items in the "Non-programmed Spaces" category were added based on previous comments from MSBA:

PT Storage 250 NSF

Cares Storage 500 NSF

This category remains unchanged since the PSR submittal.

SUMMARY

In summary, the District and the Design team are proposing 110,024 NSF and 165,035 GSF to satisfy the educational program. These square footages deviate from the MSBA guidelines by 34,859 NSF and 55,560 GSF.

Square Footage Summary:

The proposed overall gross square footage of the new building is 165,035; Average square feet of General Classrooms is 900.

MSBA guidelines include 9,060 net square feet of dedicated special education space. The proposed program is +9,950 nsf in excess of the guidelines.

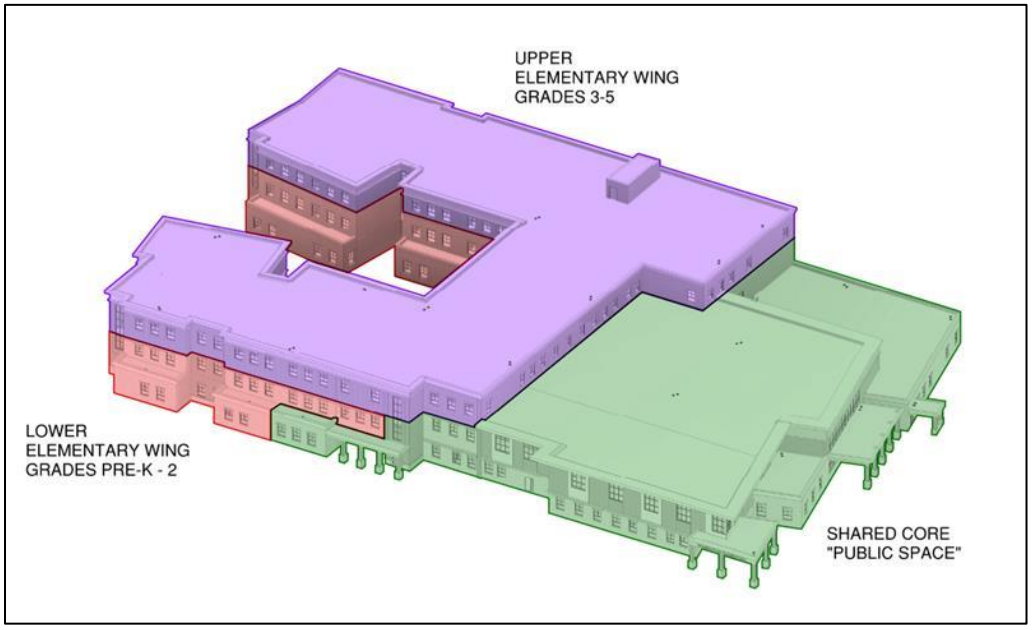
***Indicates that space is unique to District's program and does not appear in MSBA space guidelines.**

INTRODUCTION

Summary of Preferred Solution

On December 13, 2024 the Massachusetts School Board Authority (MSBA) voted to approve the Town of Wilmington Preferred Schematic Report (PSR) for the Wildwood Elementary School project. This approval was based on the preferred option for a new school with a Design Enrollment of 755 students in grades K-5, plus 100 Pre-K students. The preferred solution presented in the PSR located the new school on the existing playfield northwest of the existing North Intermediate School and proposed the demolition of the existing school and creation of new parking and drives to improve site circulation, increase on-site parking, and establish new outdoor areas for student gathering and play. The existing site plan is included in Section 4.1.4, Attached Drawings, as part of this report.

The approved building plan is configured with a three-story academic wing to the west and a shared core to the east. The shared core is designed as the “public” area of the building, with security/fire barriers sectioning off the “private” classroom wings.



The main entry Lobby serves as a welcoming gateway that sets the tone for a positive and inclusive environment. A separate Pre-K entry creates a safe, organized and accessible transition between home and school for the youngest learners. The main lobby opens to the communal hub, the cafeteria, with programs like Administration, Flex Music, Nurse, OT/PT and Physical Education spaces nearby. The Library is located on the second level just above the main entry and administration with a connecting stair nearby. The Gymnasium and Cafeteria are linked by a raised stage platform with openings to both sides, giving the public space a great level of flexibility for multiple uses.

The classroom wings are arranged on either side of an open courtyard. Each level of each wing includes:

- Classrooms
- Small Group Learning rooms
- Extended Learning Areas and Support spaces
- Circulation
- Views to building exterior spaces and Courtyard

One grade level team occupies one level in each wing, with shared spaces arranged more-or-less equidistant between the two sides. The lower elementary students (PreK-Grade 2) occupy the first two levels. Grades 3-5 occupy the third level. Generally, classroom spaces are located along the exterior walls with views to exterior spaces. Playgrounds for lower elementary grades PK-2 are located closer to the academic wings to allow its use throughout the day for exercise, movement, play and outdoor learning. Upper elementary playground and basketball courts are located closer to the cafeteria and main entry.

Administrative offices are generally located adjacent to and monitoring the main entrance, with offices for assistant principals, adjustment counselors, reading specialists and math tutors decentralized in the classroom wings close to the students.

Overview of the Process and Community Outreach

After the completion and delivery of the PSR to the MSBA on October 24, 2024, the project team held several User Group Meetings and Working Group meetings that included teachers, administrators, special educators, and staff, as well as department heads including special education and the Director of Facilities. The results of each of the meetings were presented to the School Building Committee (SBC) and incorporated into the Schematic Design documents.

The District is maintaining a project website where members of the community can access updated project information, presentations, FAQs, and view recordings of SBC meetings: (**https://www.wpsk12.com/our_district/facilities/school_building_projects/wildwood_building_project**)

The following is a list of major meetings between the Design Team and the Owner since the delivery of the PSR in October 20024. Items marked in **Bold** print indicate meetings that were open to the public:

DATE	MEETING	MAIN AGENDA ITEM(S)
10/29/2024	User Group Meetings	Nursing, Admin, Guid., PK-K, Kitchen, Bldg Ops
10/29/2024	Leadership Working Group Meeting	
11/1/2024	PR Working Group	
11/4/2024	User Group Meetings	SPED, OT/PT/SLP, Admin Assists, Gr. 1-2, 3-5
11/5/2024	Leadership Working Group Meeting	
11/6/2024	User Group Meetings	Reading, Math, Specials, Library/STEM, ELL

11/8/2024	PR Working Group	
11/12/2024	Leadership Working Group Meeting	
11/13/2024	Facilities Assessment Subcommittee Meeting	
11/19/2024	Site/Landscape Working Group	
11/19/2024	Leadership Working Group Meeting	
11/19/2024	**School Building Committee**	**FAS, SD schedule, CM vs DBB, Gym location study**
11/20/2024	User Group Meetings	Music/Theater
11/26/2024	Leadership Working Group Meeting	
12/3/2024	Leadership Working Group Meeting	
12/3/2024	**School Building Committee**	**PSR comments, SF status, Ext. visioning, CM/DBB**
12/10/2024	Leadership Working Group Meeting	
12/11/2024	Sustainability Working Group	
12/13/2024	MSBA Board Meeting	
12/17/2024	Leadership Working Group Meeting	
12/17/2024	**School Building Committee**	**Ext. visioning results, Interior visioning, Site investigation outcomes, Bldg. systems overview**
1/7/2025	User Group Meeting	
1/7/2025	Leadership Working Group Meeting	
1/8/2025	Site/Landscape Working Group	
1/8/2025	PR Working Group	
1/14/2025	Leadership Working Group Meeting	
1/14/2025	**School Building Committee**	**Plan updates, Interior visioning results, Project inspiration, Exterior Aesthetics**
1/15/2025	Sustainability Working Group	
1/15/2025	PR Working Group	
1/17/2025	User Group Meeting	District Leadership Team
1/21/2025	Leadership Working Group Meeting	
1/22/2025	Site/Landscape Working Group	
1/22/2025	PR Working Group

1/28/2025	Leadership Working Group Meeting	
1/29/2025	Sustainability Working Group	
1/29/2025	PR Working Group	
1/29/2025	Wilmington Abutters Meeting	
1/29/2025	**School Building Committee**	**Plan updates, Aesthetics, Bldg. systems, CM@R**
1/30/2025	User Group Meeting	Food Service
2/4/2025	User Group Meeting	Athletic Department and Recreation Department
2/4/2025	Leadership Working Group Meeting	
2/5/2025	PR Working Group	
2/5/2025	Sustainability Working Group	
2/5/2025	**School Building Committee**	**Plan updates, Aesthetics, Selection of Building System, CM@R**
2/7/2025	Site/Landscape Working Group	
2/11/2025	Public Safety Meeting	
2/12/2025	PR Working Group	

2/13/2025	User Group Meeting	Music/Stage/Library
2/13/2025	**School Building Committee**	**Approval of Construction manager**
2/14/2025	Building Security Meeting	
2/19/2025	PR Working Group	
2/20/2025	Meeting with DPW/Town Engineer	Traffic Study Review
2/26/2025	PR Working Group	
3/5/2025	**School Building Committee**	
3/6/2025	Meeting with CISA	Review building security with District's Homeland security consultant
3/11/2025	Leadership Working Group Meeting	
3/12/2025	PR Working Group	
3/18/2025	Cost Estimate Reconciliation	
3/19/2025	Sustainability Working Group	
3/19/2025	PR Working Group	
3/25/2025	Leadership Working Group Meeting	
3/25/2025	**School Building Committee**	**Review Construction Cost Estimate**
3/26/2025	PR Working Group	
3/31/2025	**Community Forum #6**	
3/31/2025	**School Building Committee**	**Approve Project Scope and Budget**
4/1/2025	PR Working Group	
4/8/2025	Leadership Working Group Meeting	
4/15/2025	Leadership Working Group Meeting	
4/15/2025	**School Building Committee**	**Vote to submit SD Package**

The Design Team met with administration and facility operations as well as Public Safety first responders and the DPW, to review safety and security. Access to the site and building were reviewed, security protocol was discussed as well as the location and preferred options for security glazing, roof access, cameras, mass notification and other building safety features.

District's Total Project Budget & Steps to Secure Local Funding

The project funding was reviewed with the Town of Wilmington. The Town anticipates a total project budget of **$173.3 million** (rounded). The Town's current intent is to authorize bonds to fund this amount outside the Town's budget through debt exclusion; bonds garnered by debt exclusion require a two-thirds vote in favor by the Town's registered Voters.

In addition to the school building project, the Town has projects ongoing and capital improvements projects on the horizon. The Town has recently finished a new Senior Center, which opened it's doors in February, and is in the middle of a new Town Hall/School Administration building construction project. That project is on schedule to be finished by the end of 2025 or early 2026. Additionally, the Town is in the feasibility stage of a Fire Substation in North Wilmington. All of these projects are being financed within the levy without the need for an override or debt exclusion.

The current vote schedule is for a Special Town Meeting Election to vote the approval of the project on Saturday September 13, 2025, followed by a Debt Exclusion Vote on Tuesday September 16, 2025.

Total Project Budget Narrative

The estimated Building Construction and Site Cost is **$137.7 million** (rounded) which includes Base Construction, General Conditions and General Requirements, Bonds and Insurance, Overhead of the Contractor Manager, Fee Escalation and Design and Pricing Contingency. The estimated Total Project Cost is **$173.3 Million** (rounded) and includes the Building Construction, Site Costs, abatement and demolition of the existing North Intermediate School building, as well as: Architecture and Engineering Fees, Owner's Project Management Costs, Reimbursable Services, Miscellaneous Project Costs, Owner's Costs and Contingencies, and budgeted Furniture, Fixtures and Equipment, and Technology Costs. The overall MSBA project budget is shown in the MSBA Form 3011 format and is included in Section 4.1.2.Q.

This cost estimate and budget is based on the delivery method of Mass General Law (MGL) chapter 149A; Construction Manager at Risk (CMR). The decision to pursue the project delivery method of MGL chapter 149A over MGL chapter 149, Design-Bid-Build (DBB), was made by the School Building Committee based on prior favorable experience with this delivery method in the District and the Town as a whole, and the belief that this project delivery method provides financial advantages over Chapter 149. The delivery method advantages and disadvantages were discussed at School Building Committee meetings from the end of PSR phase up to a vote of 20-1 in favor of Ch 149A at the 11/19/24 SBC meeting.

Two independent cost estimates were prepared for the project, one by the Architect's cost estimator, PM&C, and one by the Construction Manager, Fontaine Brothers Inc. The cost estimates have been reconciled, and both include necessary Value Engineering items for consideration in future phases. They are provided in Section 4.1.2R & 4.1.2S respectively.

List of Add-Alternates:

A list of add-alternates or deduct-alternates was not included in the cost estimates. Alternates will be considered at a later time, prior to bidding if required.

Updated Project Description

The proposed new consolidated elementary school will serve 755 students in grades K- 5, plus 100 Pre-K students, for a total of 855 students. The proposed 165,035 GSF school will be located on the North Intermediate School site, a 12.145-acre parcel, at the playfield to the northwest of the existing school building. The new school design along with the demolition of the existing North Intermediate School building will:

- allow completely revised and greatly improved site circulation and parking
- provide direct access from the school to play and outdoor learning areas without crossing site drives
- include greatly improved site stormwater management

The new building is set back on the site, which will minimize its apparent scale from the public roads. Parking is located closer to the roadways at the existing building location. The building will be screened from neighboring abutters by added screening with berms and vegetation.

The proposed site design (see attached) provides separated onsite bus, parent, and Pre-K drop off zones and parking for 193+ cars. One hundred forty (140) parking spaces will be dedicated to the school staff with 20 spaces for the dual-use Pre-K park-and-drop off/ minibus spaces. Remaining spaces are for visitor parking. Overflow parking for events at the school can be accomplished using parallel-parking spaces on the outer lane of service drives for the potential of an additional 30+ spaces if required. The section of driveway west of Pre-K parking spaces and the vehicle turnaround would be marked and signed as a fire lane for emergency access only and reinforced with gates to prevent vehicles from accessing. An additional gate is proposed just west of the delivery loading zone on the north access road to prevent vehicles from traveling beyond that point during school hours.

One of the main neighborhood concerns is the increased traffic and traffic backing up onto Ballardvale and Salem Streets during peak morning and afternoon drop-off/pickup times, leading to delays and unsafe situations on the roads. The proposed site plan offers flexibility for buses and vehicles to utilize either of the driveways. Operationally the district indicated a preference for greater onsite queue of vehicles with the Ballardvale driveway. The site will have space for 80+ vehicles to queue on-site and off the streets. Although this does not account for the total vehicles estimated for queue, the peak load is only realized three days when the afterschool CARES program is not offered. It may also be mitigated by slightly offsetting dismissal times by grade (current practice by the district) to spread out the peak over a period of time, greatly reducing congestion. Offsite mitigation at nearby intersections with existing issues was discussed in the traffic study and under review by the Town Engineer and DPW.

The project's outdoor spaces consist of an open exterior courtyard with outdoor learning, and recreation spaces adjacent to the building. The Courtyard has been designed to allow protected access for play, outdoor learning and gardening. Exterior spaces consist of a large playground south of the building with poured-in-place rubber surfaces, play equipment, basketball court and U-8 soccer field for grades 3-5. There are two additional playgrounds west of the building with hardscape surface for foursquare and pavement games and a rubber play surface with Pre-K and grades K-2 age-appropriate equipment. Additional outdoor learning and open areas are located northeast of the building adjacent to the turnaround which can double as a hardscape play area during school hours, a sensory garden to the south at the Pre-K entry, an informal gathering space at the plaza to the east, an additional basketball court to the east and youth-sized soccer-sized fields running along the west side of the access road from Salem Street. As noted above, all primary exterior spaces are directly accessed from the building without crossing any traffic lanes.

The building and site are designed to provide spaces that can be shared with the community when not in use by the school. These spaces include the outdoor basketball courts, playgrounds and fields, as well as the indoor gymnasium, cafeteria, performance space, media center, and potentially flex art and flex music rooms.

As part of the design of a building and site with intended shared use, the security requirements of "public" access areas in the school as well as "private" areas where access needs to be limited or controlled were considered and discussed. Supervision of the exterior both during and after school hours was also considered and incorporated into the design. During school hours the main parking lot and drives are visible from the main office area and cameras are located at all doors and allow for multiple views of the adjacent building area. All exterior doors will be connected to the alarm system which will notify the main office when doors are left in the hold open position. Entry into the building during school hours will be limited to the main entrance and require a two or three-step check-in system through a vestibule: communication to the front office from outside the vestibule; communication and visual identification once inside the vestibule; and final credential verification at the transaction window withing the vestibule or once admitted inside the main office.

The security system will include lockdown technology for the lower and upper elementary classroom wings at two basic double-door points on Level 1 with "stacking" locations on Level 2 for ease of wayfinding. Level 3 is private in its entirety as it houses three grade groupings with no public spaces. Access to public spaces after school hours will be controlled by locking down the academic wings.

The new school has been designed to provide learning spaces and to meet the educational program documented in the Educational Program Narrative and MSBA Space Summary. As a general planning concept, all classrooms and regularly occupied support spaces have exterior views to the open-site areas, green-space areas, play spaces or the courtyard and elementary wings. These spaces are generally flooded with natural light from sizable windows and glazed curtain wall elements. The building materials have been chosen for their durability, feasibility and economy.

The placement of major educational and support spaces near the front entrance: the Cafeteria, Stage, Gymnasium, Library, Flex Music Room, support the idea of a school building as a community to create a sense of belonging for all students. The dining area greets students and visitors as they progress further into the public core of the building and serves as the central hub, small performance space, gathering area for students, and a connection point to the second floor.

FINAL DESIGN PROGRAM

Architectural Characteristics Narrative

The architecture of the elementary school building draws its inspiration from the character of the Town and the architectural language of the School Building Committee members and community input, creating a thoughtful balance between tradition and youthful energy.

The design approach includes a timeless palette of materials - warm red brick and soft-toned masonry - anchors the design in the rich historical context of the community with the use of durable, cost-effective materials. An energy-efficient design with compact, functional layout results in traditional forms that blend with the local community.

The building's massing was carefully designed to minimize the visual impact of the three-story academic wing by positioning it behind the two-story public core. This approach strategically reduces the perceived height of the structure, creating a more approachable and human-scaled presence for those arriving from either Salem or Ballardvale Streets. By layering the volumes in this way, the building maintains a civic identity while remaining sensitive to its surrounding context and the scale of its users.

At the same time, the design embraces the joyful spirit of an elementary school. Playful elements woven throughout the building provide bursts of color and at entryways and gathering spaces. Natural wood elements bring nature in as daylight pours through windows, activating vibrant learning environments that feel open, safe, and inspiring. The result is a school that honors its place in the town's fabric while inviting curiosity, imagination, and a love for learning.

Signed Copies of the Educational Space Summary

The space summary on the following pages contains an itemization of the proposed spaces needed to deliver the District's educational program for grades PreK-5th using the MSBA's latest edition elementary school space summary template.

Room labels unique to the District and/or that vary from MSBA room names are identified with a yellow highlight. Total gross floor area, or gross square feet (GSF), are shown at the bottom of the table for the proposed conditions.

The District and the Design Team worked together to align proposed spaces with MSBA square footage guidelines for individual program areas and the total gross square footage to the greatest extent possible. However, some deviations do exist. All deviations were deemed necessary by the District to serve the educational program and are explained in detail on the pages following the space summary.

Some changes to the design have occurred since the submission of the Preferred Schematic Report. With further input from the District, some new spaces have been added to the project that subdivided larger program areas, and other program spaces have moved location within the plans to meet design and functional goals and requirements. The essence of the overall building planning and individual spatial relationships have remained intact.

Deviations From MSBA Guidelines – 755 Students + 100 PreK

The proposed space summary identifies a need of 165,035 GSF at a net to gross multiplier of 1.5 to serve the educational program, a deviation of 55,560* GSF from the MSBA guidelines for K-5th grade population of 755 students + approximately 100 PreK students. The narrative that follows offers evidence and support for these deviations.

Below is a summary of the initial proposed Space Summary as it has progressed through the MSBA process:

	Existing Wildwood, Woburn St and North Int. Schools Combined	PDP	Preferred Schematic Report	Schematic Design Report
Program Area	TOTAL NSF	TOTAL NSF	TOTAL NSF	TOTAL NSF
Core Academic	36,096	45,700	45,700	45,700
Special Education	11,300	19,010	19,010	19,010
Art & Music	6,315	4,040	4,040	5,082
Health & Physical Education	9,772	12,300	12,300	12,300
Media Center	2,265	4,068	4,068	4,068
Dining & Food Service	13,620	9,458	9,458	9,458
Medical	603	710	710	710
Administration & Guidance	5,582	5,308	5,308	5,548
Custodial & Maintenance	2,654	2,355	2,355	2,355
Other	2,764	6,100	6,100	5,800
TOTAL NSF	90,972	110,240	110,240	110,024
TOTAL GSF	138,614	163,573	163,573	165,035

* It is important to note that the MSBA Space Summary Template for this enrollment is based on a net to gross multiplier of only 1.46.

CORE ACADEMIC

The core academic program category totals 45,700 NSF, a deviation of +10,450 NSF from the MSBA guideline. The proposed space summary deviates from MSBA guidelines in four key ways: general classrooms, ELL classrooms, teacher collaboration spaces, and extended learning areas.

The first deviating factor relates to additional classrooms. Under a consolidated student population, the District requests thirty general classrooms for grades 1st – 5th, a deviation of three classrooms from the MSBA guidelines of twenty-seven general classrooms for grades 1st – 5th. The need for additional classrooms is a direct result of the District's local class size guidelines and current class models which are presented in detail in the educational program narrative.

The second factor leading to the deviation in Core Academic square footage is a demographic shift in Wilmington that has resulted in more students who qualify for English Language Learner services and programs. The proposed space summary deviates from MSBA guidelines by providing two half-sized classroom spaces to accommodate these services totaling 900 NSF.

The third factor leading to the deviation in Core Academic square footage is the additional space requested to support professional collaboration among faculty and staff. The district requests three 900 NSF Teacher Collaboration Spaces, one centrally located on each level. These spaces are to serve for common planning time, data meetings, and professional development spaces. They may also house a few hoteling desks for volunteers and itinerant staff if they don't have a professional home base elsewhere in the project. It is important to note that the district has tuned the space allocation since PSR to better meet its specific needs. After further review, the district realized the number of educators are more evenly distributed over three levels than originally anticipated. The number of Teacher Collaboration spaces was reduced from six to three while maintaining the same overall square footage of 2,700 NSF and evenly distributing on each level. The three teacher collaboration spaces are now centrally located between academic wings on each floor for greater access and flexibility of use.

The final factor in the deviation between the proposed space for Core Academics and the MSBA guidelines for this category is the additional space requested for Extended Learning. The needs and intent for this space are explained in the educational program narrative. The proposed Core Academic area includes thirty Extended Learning areas of varying sizes and locations totaling 5,744 NSF. This is a 456 SF decrease from PSR as some area from Kindergarten extended learning was allocated back to the Kindergarten classrooms and does not change the net square footage of the Core academic category.

The District is proposing three Pre-Kindergarten classrooms to support the current program and expand the program's offering with a full day class. At the PSR submittal, all of the net square footage associated with Pre-Kindergarten classrooms were recategorized into the "Other" category and remains there in the Schematic Design submittal.

The overall NSF of this category remains unchanged since the PSR submittal. It is important to note, however, that design progress has reallocated square foot area between individual spaces within this category as individual space geometries, and therefore their sizes, have shifted slightly since the PSR submittal.

SPECIAL EDUCATION

The Special Education program category totals 19,010 NSF, a deviation of +9,950 NSF from the MSBA guidelines. Several District-specific programs and services contribute to much of this deviation, including dedicated space to support programs like the substantially separate, self-contained Strides program and services such as Occupational Therapy and Physical Therapy all outlined in the Special Education sub-section of the Educational Program Narrative. PT Storage was removed based on MSBA PDP comments to "Non-programmed Spaces" category.

The remaining deviation in square footage is a result of the district's request for twenty-six (26) small group rooms and a request for a series of spaces associated with support service professionals: School Psychologists, Speech and Language Pathologists, and Board-Certified Behavioral Analysists all of which exclusively serve students with special needs. Small group rooms are located between pairs of classrooms to serve as supplemental instructional environments that are physically and visually connected directly to, but acoustically separate from, the general classroom. These spaces would primarily serve students who receive supports from professionals beyond the general classroom teacher but would also be a critical resource to general education teachers for small group activities and differentiated instruction consistent with Universal Design for Learning.

It should be noted that the toilet room for the Stages Program serving 3rd – 5th grades was not accounted for in the PSR submittal and has since been added to the program. However design progress has reallocated square foot area between individual toilet rooms within this category as individual space geometries, and therefore their sizes, have shifted slightly since the PSR submittal to accommodate the additional toilet room.

The overall NSF of this category remains unchanged since the PSR submittal.

ART & MUSIC

The art and music program category totals 5,075 NSF, indicating an increase of 1,035 NSF in this category from PSR, and alignment with the MSBA guidelines.

The increase in the category total since PSR is the result of on-going programming meetings with end users and further analysis of scheduling and operational use for a PK-5 configuration. The functional needs for art and music spaces vary significantly, warranting a second flex space and assigning a primary function to each flex space in the program, one for art on the second level and the other for

music on the first level. When not in use by these programs, flex rooms can serve as a multi-purpose space for other programs and a resource for the CARES program and community after-school.

It is important to note, however, that design progress has reallocated square foot area between individual spaces within this category as individual space geometries, and therefore their sizes, have shifted slightly since the PSR submittal.

HEALTH & PHYSICAL EDUCATION

The health & physical education program category totals 12,300 NSF, a deviation of +6,000 NSF from the MSBA guidelines.

The overall NSF of this category remains unchanged since the PSR submittal.

MEDIA CENTER

The media center program category totals 4,068 NSF, which aligns with MSBA guidelines for this category. It is important to note, however, that design progress has reallocated square foot area within this category as the design was further developed to account for a workroom.

DINING & FOOD SERVICE

The dining and food services program category totals 9,458 NSF, which aligns with MSBA guidelines for this category. It is important to note, however, that design progress has reallocated square foot area between individual spaces within this category as the design was further developed. As articulated in PDP and PSR, the District directed the Design Team to size the dining room to accommodate all kindergarten through 5th grade students in three seatings. Given the plan to operate three seatings rather than two, the reduced square footage in the dining room will still be able to accommodate enrollment growth in the future.

The overall NSF of this category remains unchanged since the PSR submittal. It is important to note, however, that design progress has reallocated square foot area between individual spaces within this category as individual space geometries, and therefore their sizes, have shifted slightly since the PSR submittal.

MEDICAL

The medical program category totals 710 NSF, which aligns with MSBA guidelines. The overall NSF of this category remains unchanged since the PSR submittal.

ADMINISTRATION & GUIDANCE

The administration & guidance program category totals 5,548 NSF, a deviation of +2,658 NSF from the MSBA Guidelines and increase of +240 NSF since PSR. It is important to note that the district has increased the proposed NSF to tune this category for its specific local needs. The deviation is related to providing office and instructional spaces for student support service providers who serve both general and special education students. Since PSR, an audit of spaces recognized two professionals originally identified in the District's Educational Plan, a Literacy Coordinator and STEM Coordinator, and allocated space within administration, increasing this category by +240 NSF.

CUSTODIAL AND MAINTENANCE

The custodial and maintenance program category totals 2,355 NSF, which is equal to the MSBA Guidelines.

This category remains unchanged since the PSR submittal. It is important to note, however, that design progress has reallocated square foot area between individual spaces within this category.

OTHER

Items in the "other" category total 5,800 NSF, a decrease of -300 NSF since PSR. Much of this deviation from results from providing (3) Prekindergarten general education classrooms, PreK extended learning areas, CARES spaces associated with the after-school program including (1) 150 NSF program coordinator office and (1) 150 NSF site coordinator office and a dedicated Health classroom at 900 NSF. The final deviation is the result of providing (3) 100 NSF teacher wellness spaces which are meant to accompany teacher collaboration spaces and serve as places to conduct a private/confidential phone call and double as a lactation space. The reduction from six to three wellness rooms since PSR correlates directly to the reduction in teacher collaboration spaces discussed in the Core Academic category.

It is important to note, however, that design progress has reallocated square foot area between the PreK extended learning areas and the PreK classrooms as individual space geometries, and therefore their sizes, have shifted slightly since the PSR submittal. The reallocation results in a decrease of 210 NSF in the PreK extended learning area.

NON-PROGRAMMED SPACES

Items in the "Non-programmed Spaces" category were added based on previous comments from MSBA:

PT Storage 250 NSF

Cares Storage 500 NSF

This category remains unchanged since the PSR submittal.

SUMMARY

In summary, the District and the Design team are proposing 110,024 NSF and 165,035 GSF to satisfy the educational program. These square footages deviate from the MSBA guidelines by 34,859 NSF and 55,560 GSF.

Space Measurement Analysis

Dore & Whittier uses Building Information Modelling (BIM) technology beginning with the feasibility study phase. This technology measures net square feet to the inside face of interior walls, to the exterior face of exterior walls for gross square feet and rounded to the nearest square foot. This data is then exported and translated into the Space Summary Template.

Our in-house methodology measures exterior square feet according to instructions provided by the MSBA. Everything from the exterior face of exterior walls is included in the calculation for gross square feet including all wall thicknesses, mechanical and plumbing chases, the elevator shaft on every floor, boiler rooms, and all MEP closets. Our methodology includes the entire stair on the first floor but only to the edge of floor level landings at any other levels. Additionally, areas open to below of occupied spaces are excluded from the GSF calculation.

What follows are colored confirmation drawings similar to those provided in the DESE submission. These drawings communicate room usage and current square foot area. These square foot measurements align with the MSBA space summary provided above.

Dore & Whittier certifies that all programmed areas plus all other areas as described in the preceding methodology equals the total gross square foot area of the project.

Summary of Key Components of the Educational Program

The following narrative describes how the proposed project supports each component of the District's educational program. While the number and size of individual spaces in a few locations has evolved since the PSR submission as a result of continued design efforts, the proposed project continues to satisfy all the guiding principles identified by the District. The bulleted list below represents the Guiding Principles for Design established during the visioning sessions and documented both in the Preliminary Design Program and the Preferred Schematic Report.

The design patterns and responses delineated in the PSR for educational design features have not changed significantly in this SD submission, because the design did not significantly change. Descriptions below were lightly edited to bring them up to date with design refinements.

Guiding Principles	Design Patterns
Flexibility ***"As a result of the fact that education methodologies will change over the life span of the new school, we believe that the facility should be flexible to accommodate the evolution of programming that is necessary to meet student needs."***	Flexible and Varied Environments for Different Activities • The project includes general and special education classrooms, small group rooms, extended learning spaces, outdoor learning areas, and specialized instructional spaces. Extended Learning Spaces • The project includes extended learning spaces directly adjacent to classrooms in direct response to the Universal Design for Learning philosophy. These spaces are intentionally not all the same to support a wide variety of age-appropriate instructional and support activities as well as student choice in their learning environment. Media Center • The Media Center is centrally located for students and positioned in a highly visible and easily accessible location near to the main entry. With a high degree of visibility from within and from the outside of the school, it will serve to connect students and the wider community to learning. Maximize Storage to Extent Possible • The project includes specialized and dedicated storage for Art, Music, PE, the main administrative suite, student dining and food services, OT/PT, and custodial/maintenance. The design has also maximized storage in the form of furnishings and casework within program spaces.

Grade Level Communities ***"We intentionally seek to create grade-level learning communities for students and staff."***	Organize the academic/private zone into smaller communities • Each grade level can occupy a full level of an academic wing with its own identity and a shared connection with grade groupings. The first level houses the youngest PreK and Kindergarten students. The second level connects Grades 1 and 2. The upper elementary students in Grades 3, 4 and 5 occupy the top floor. • Each wing includes general and special education classrooms, small group rooms, extended learning spaces, outdoor learning areas, and specialized instructional spaces. • Wings are connected by a central corridor with additional support functions serving grades on that level, including teacher collaboration areas. Building zoned into public and private sections • Allow for public use of the building outside school hours without the need to provide access to the entire building interior. The design positions public elements of the project in the two-story, eastern half of the building. Academic elements are positioned in the three-story academic part of the building. Carefully planned egress paths and security doors allow different areas of the project to be secured from one another for after-hours events or in an emergency. Sufficient professional space for adult planning, collaboration, and professional development • The project includes three separate teacher collaboration spaces, one at each level, capable of supporting these functions. The rooms can be subdivided for multiple functions simultaneously. Each of these spaces also includes a small, acoustically separate wellness space for lactation/medical needs or private phone calls. Age-Appropriate, Engaging, Varied Experiences for Outdoor Play & Exploration • The playgrounds in the design are positioned to serve a specific grade grouping. The western playgrounds are specific for PreK-2nd grade groupings. The playground southwest of the courtyard is specialized for Prekindergarten and located adjacent to the PreK wing. Kindergarten to 2nd grade share the playground northwest of the courtyard and in close proximity to the academic wings. A third playground is located centrally on the site, close to the cafeteria and main entry for the oldest students in 3rd – 5th grades. These locations allow the exterior environments to be tuned for the developmental needs of those ages.

	• A variety of hardscape and outdoor learning areas are shared.

Universal Design for Learning
"We want to shape the educational program that intentionally integrates special education services throughout the school to ensure that we can support the integration of all children into the learning environment."
	Visible Learning that Includes and Serves all Learners
	• The building design creates a series of opportunities to put learning on display through the use of interior and exterior glazing and other design moves. Extended learning spaces, for example, are positioned outside classrooms with strong visual and physical connections between them to ensure their effectiveness and ease of use.
	
	Quiet Spaces
	• The project includes acoustically separate small group rooms, smaller extended learning spaces, and areas in the Cafeteria that can provide quieter environments.
	
	Learning Places to Allow for Whole-Body Learning
	• The project includes several multi-purpose spaces that allow for whole-body learning, including the Gymnasium, Cafeteria, OT/PT space, larger extended learning spaces, and outdoor learning and play areas.
	
	Shared Spaces between Classrooms
	• Each pair of classrooms share a small group room with access directly from the classrooms.
	• General and special education classrooms share access to extended learning areas and outdoor learning areas, particularly in the courtyard.
	
	Breakout and Collaborative Spaces
	• See narratives above regarding small group rooms and extended learning spaces. In addition to these, there are:
	  ○ teacher collaboration spaces designed for common planning and professional development
	  ○ administrative suite conference rooms
	All of these spaces can serve as collaborative environments.
	
	Inclusive Learning Spaces
	• The wide variety of spaces above and beyond the general and special education classrooms support the concept of integration – locating Special Educators and other professionals to where students are rather than send children to a remote classroom or office for supports. These environments are also effective at reducing stigma because they can and should be used by all students.
	• All learning spaces possess a wide variety of features to support the philosophy of Universal Learning for Design

	including access to technology, varied and mobile furnishings, direct access to daylight and views to nature, and opportunities for students to choose a learning environment to meet their specific needs. Dedicated collaboration space for adults • The project includes three shared Teacher Collaboration spaces meant to support common planning, data review, and professional development.

Additional Guiding Principles for Design

- Safety and Security – Design elements to provide safety and security of building and site.
  Site features protect pedestrians, the building and adjacent properties from vehicles. Site features limit access points, unwanted entry, and passive and active surveillance technologies. The site plan effectively separates parent vehicles and busses with dedicated areas for load/unloading and provides extensive queuing space for parent vehicles—80+ active vehicles in a wait queue. It features a dedicated parking area and entry for Pre-Kindergarten parent vehicles and specialized transportation, and protected, accessible walking paths to and from the building.

- Cost - Minimize both the overall project cost and the Town's share of the cost to the greatest extent feasible.
  The District and the Design Team have made revisions to the design since the project's inception to maximize the use of space and reduce the project's overall size without compromising the educational intent. Some spaces that may be considered ineligible have been removed from the project. The design also employs stacked program elements to simplify the project's geometries, massing, and structural system. Choices about materials, site features, and construction sequencing have been made to minimize project cost without sacrificing durability or maintenance.

- Construction Logistics - Minimize the complexity, construction duration, and impact to the use of the site for educational and community uses during construction.
  The proposed project is sited on the existing play fields northwest of the existing building. This location allows the entire proposed building to be constructed in one phase while the existing building remains in operation. This location also limits the disruption to the existing parking lot and site circulation patterns during construction.
  The decision to pursue Construction Manager at Risk supports this principle as well. Advantages with this methodology include early release packages to limit construction duration and the ability to procure long lead items or materials expected to increase in cost earlier in the project.

- Student, Faculty, and Staff Impact During Construction - Minimize the duration and scale of disruption to the learning experience.
  No construction will occur within the existing building which will limit the disruption to the learning experience during construction.

- Enrollment - Maximize the number of students positively impacted by the project within the financial objectives of the Town
  The proposed project supports the 755+ 100 PK student enrollment which will maximize the number of students positively impacted.

- Materials & Systems Selection - Prioritize durability, cleanability, simplicity of operation, and ease of maintenance.
  The Schematic Design estimate includes material choices that align with these goals. In some instances, more expensive materials were discussed and included in the design because they better aligned with these goals than less expensive options.

- Energy Efficiency - Maximize the energy efficiency of the building, site, and systems to the greatest extent feasible within the financial constraints of the project.
  The building and site have been designed to be LEED Gold, with Platinum as a stretch goal.

Instructional Technology Narrative

Vision

Wilmington Public Schools is committed to providing access to a digital learning environment so all students can achieve their full potential. To that end, WPS has following vision of technology and digital learning:

- Curriculum, Instruction, and Assessment: leverage technology in order to provide the most engaging, effective, and personalized learning environment.
- Technology, Networks, and Hardware: WPS will provide technology, network, and hardware to enable safe, but open access to digital resources throughout the building.
- Data and Privacy: WPS will provide a digital environment that ensures privacy, security of data, as well as the protection of students' identities while encouraging staff to use data to inform instruction, curriculum, and assessment.
- Professional Learning: WPS educators will engage in professional learning that builds competencies necessary to support 21st Century learning.
- Leadership: Administration and staff will support 21st Century learning initiatives that utilize technology to communicate, collaborate, engage, problem-solve, and create.

Establish a new 5-year Technology Plan to ensure that infrastructure, hardware, and software meet the needs of students and staff.

Practice

The four fundamental areas a new building needs to address are:

- Adequacy of Devices; Quality and Availability
    - Chromebooks supplied to each elementary classroom.
    - Additional access to PC's, Chromebooks, and other technologies that serve specific purposes, i.e. STEM labs, Library/Media Center, and non-classroom environments.
- 21st century classrooms
    - Both wired and wireless high-speed access to the internet
    - Digital displays, integrated sound systems, hearing impaired systems and separate notification and alert systems.
    - Spaces to collaborate, build and share with technology. These spaces should have wired and wireless access, power for charging devices and peripherals, and screens for projection of shared content.
- Staffing
    - Dedicated Instructional Technology Specialist to support the six elementary schools and collaborate with teachers to support technology integration through co-teaching, model teaching, and lesson planning support.
    - Instructional Technology Specialist to bring coding, robotics, STEM, and Internet safety lessons into the classroom through the classroom teacher.

    - Technical support handled by shared district staff with Desktop Technicians (3), a System Administrator, a Network Administrator, and a Director of Technology & Digital Learning managing the needs.
- Robust Network Infrastructure
    - Modern networking protocols
    - Fiber linking the building to the Town Fiber Optic network
    - Systems that are future-proofed to allow for addition to and upgrades over time
    - Appropriate facilities to maintain the network and building equipment

The design of the new building should provide for the following additional features:

- One cart of Chromebooks per classroom at all grades K-5 with a designed location for the cart with electrical power
- Additional Chromebooks and iPads for special education classrooms and programs with dedicated charging/storage stations
- Built-in classroom amplification systems and sound field systems with wireless teacher microphones
- Each classroom and learning space should have an interactive display panel like ClearTouch Panels. The district would like to explore mobile display options and maximize vertical display options to allow for flexible learning environments
- Sufficient space and equipment for STEM learning
- Large spaces such as the extended learning areas, cafe, and gymnasium should have built-in sound systems with support for hearing impairment and available connection to technology and projectors
- The district would like to explore emerging technologies to incorporate into the classroom environment such as interactive/immersive learning experiences
- The district is currently in the process of creating a new 5-year technology plan. We have surveyed staff, students, and families and will use this information and the new technology plan to help guide us in technology planning for a new building

Functional Relationships and Adjacencies

Functional and spatial relationships, adjacencies, and the relationship of interior and exterior program elements all impact the overall educational experience. During predesign, successfully defining these relationships ensured the efficiency and effectiveness of spaces and fully vetted the overall impact and/or support one space provides another in terms of how it benefits curriculum, instruction, the student/staff experience, safety, security, and community use.

Overall, the District desires to organize the building into two major zones. One zone is the “public” zone, which accommodates spaces that may be accessed by students, staff, and/or the community during and/or after school hours. These spaces include the cafeteria, gymnasium, music rooms, art rooms, library, nurse, and administrative offices. The second "private" zone includes all the remaining spaces.

Within the public zone, any design alternative should express the following:

- Administrative suite immediately adjacent to the main entry of the facility with direct visual access to the building approach and the main entry
- Medical Suite in proximity to the main office administrative suite
- Cafeteria/ stage near music such that the equipment from the music room can be easily moved into the cafeteria for performances
- Kitchen located immediately adjacent to the cafeteria and in close proximity to site service entry
- Programmed custodial/maintenance spaces located near kitchen and service entry
- Possess the ability to be secured from the remainder of the building during off-school hours, special events, or lockdown.

Within the private zone, any design alternatives should express the following:

- Academic areas organized into seven grade-level neighborhoods, each with:
    - Extended learning space
    - Small Group Rooms located between pairs of classrooms
    - Special education-related rooms as required by District Program
    - Pre-Kindergarten and Kindergarten located on the ground floor in proximity to outdoor learning environments
- Special education spaces distributed throughout all grade level teams to maximize inclusive practices, allow for effective delivery of related services
- Possess the ability to be secured from the remainder of the building during off-school hours, special events, or lockdown.
- Provide a wide variety of instructional spaces, including traditional classrooms, small group rooms, and extended learning spaces (XLAs) with strong visual and physical connections between these experiences to facilitate a wide variety of instructional practices, varying group sizes, and opportunities for inclusionary practices for student support services.
- Provide lower grades with access to calming areas with sensory options; upper grades access XLAs/outside classroom areas

- Create teacher collaboration spaces capable of supporting day-to-day planning activities, diagnostic student data meetings, and professional development experiences
- Create an environment that positions office and service-delivery spaces for student support services near and distributed amongst grade level classrooms
- Organize building into lower elementary and upper elementary grade level groupings with shared core spaces in between
- Organize building into grade level learning communities, but in such a way that limits isolation of any one grade-level and allows grade-level learning communities to expand in bubble years
- Reduce travel distances between classrooms and shared core space to the greatest extent possible

Site Features and Adjacencies

Dedicated site circulation for each of the following:

  - Parent vehicles
  - Buses/Vans
  - Pedestrians
  - Specialized transportation (requires a dedicated and separate loading/unloading zone, but may not require complete separation from bus circulation)
- Any proposed project should include the installation of age-appropriate fully accessible playgrounds located near the cafeteria to best facilitate the daily recess/lunch sequence. Additionally, the district would like to provide the following types of outdoor educational-based activities in either enrollment option:
  - Collection, examination, and analysis of soil, water, and plant samples
  - Offering of artistic and/or informational presentations in an amphitheater setting
  - Planting, maintenance, and harvesting of vegetable gardens

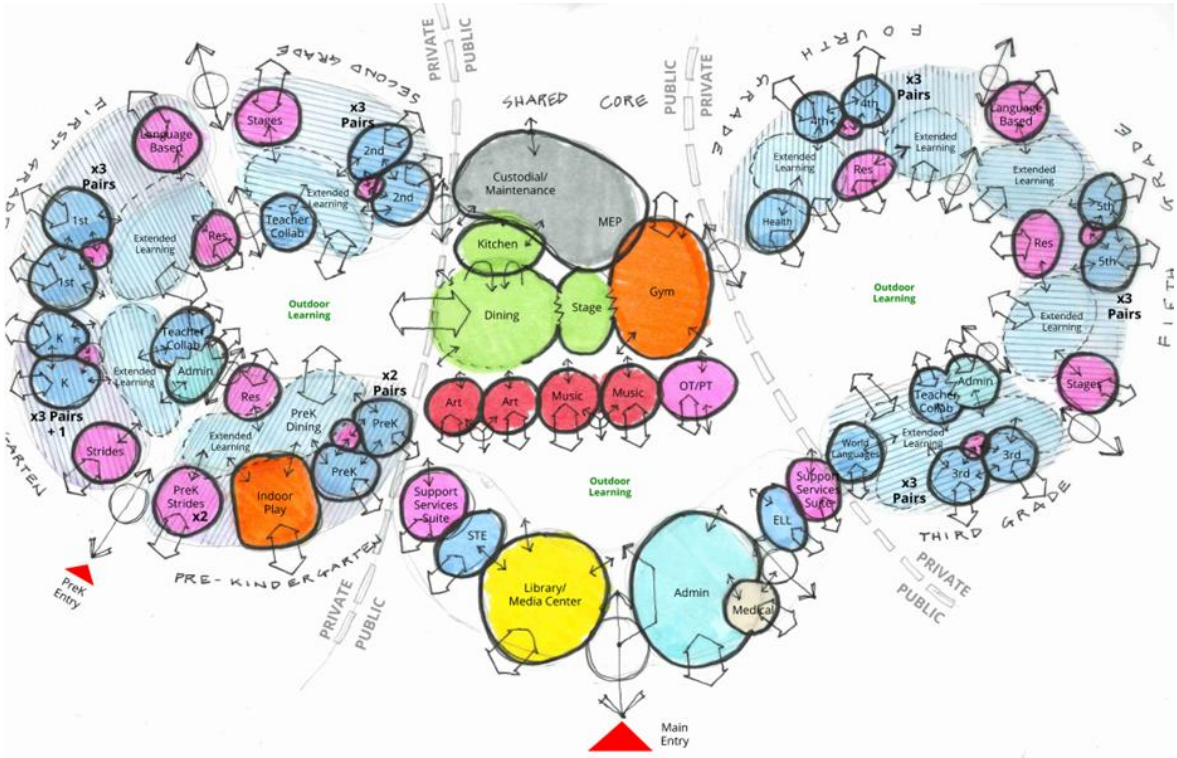
Design alternatives should express the following:

- All playgrounds in proximity to grade level classrooms and the cafeteria. This close geographic relationship will help to easily manage the transition from classroom to recess, from recess to the cafeteria, and from the cafeteria back to the classroom. Additionally, this relationship will support the capability of outdoor learning opportunities.
- A hardscape play area adjacent to playgrounds
- Emergency vehicle access to be coordinated with public safety requirements and positioned at the outermost edge of site planning to allow access to playgrounds and outdoor learning areas without the need to crossover the emergency vehicle pavement
- A paved service yard capable of supporting deliveries in a wide variety of vehicles
- Appropriate number of faculty and staff parking near the academic areas of the building and capable of doubling as event parking near public areas of the building (gym & cafeteria).
  - 140 spaces minimum (180 spaces preferred) for PreK-5th enrollment
  - 120 spaces minimum (150 spaces preferred) for PreK-3rd enrollment
  - 60 spaces minimum (100 spaces preferred) for PreK-K enrollment
- Physical education exercise, games, dance, and general movement activities

- Exploration of the wetlands on the property via paths and boardwalks

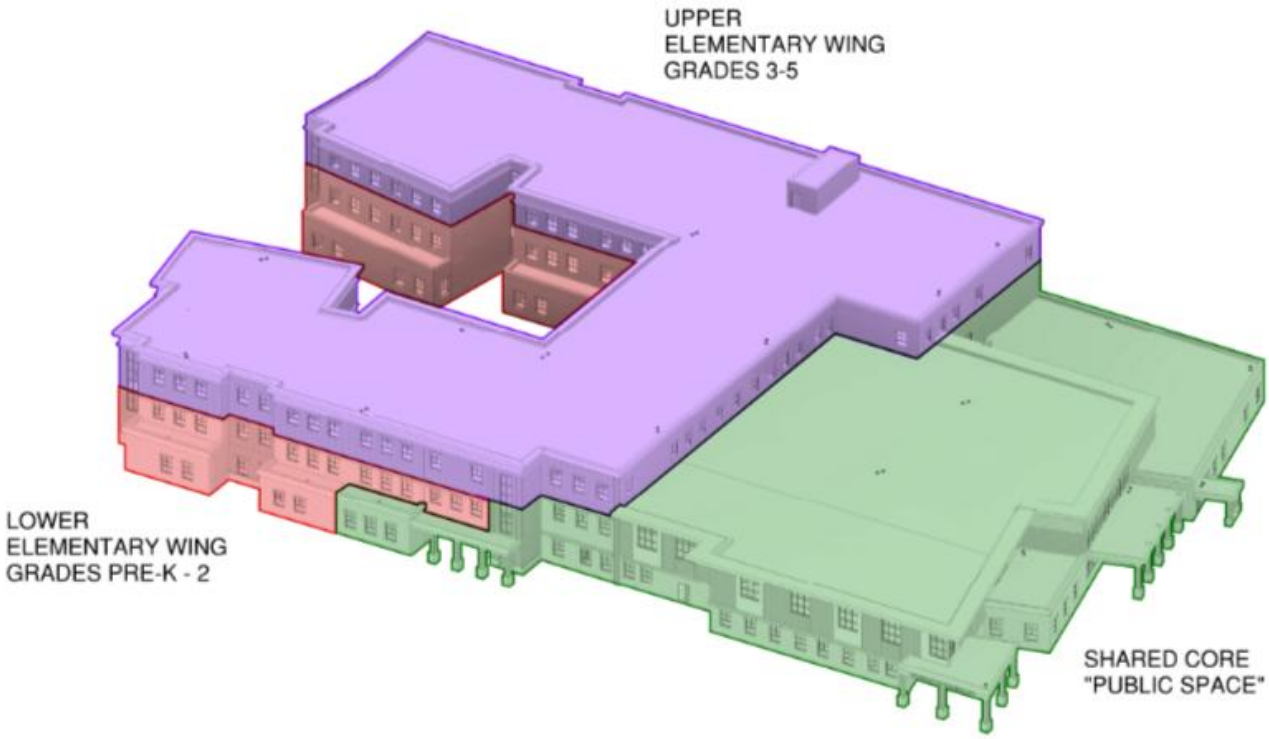
Conceptual Building Diagram

The overall building diagrams below express the District's idealized building layout and programmatic adjacencies. Although expressed as a single story in the diagram, an understanding exists that site characteristics and constraints may dictate a multi-story building design. Also expressed in the diagram is a need to separate parent vehicles and buses in the site circulation pattern, to allow access to playing fields and playgrounds without the need to cross parking or roadways, and an overall orientation of the building along a general East/West axis to maximize opportunities for natural daylight and other sustainability strategies.



Conceptual Planning Diagram

As noted above, the building as designed is divided between a "Public" core, and "private" academic wings—Lower and Upper Elementary. This design resolution is in keeping with the initial planning diagram as initially conceived. This building organization is important academically, organizationally for administration, as well as for safety and security and building code-driven features of the design.



Conceptual Building Organization Diagram

Security And Visual Access Requirements

The design of the new PK-5 elementary school project aims to Students who feel safe and secure in their environment will be better prepared and more successful within their education. For students to excel in school, they must feel safe, secure, and confident.

Access Control System

All exterior doors will be electronically monitored and be unlocked by a card-based access control system or by a push button intercom/camera system. The exterior doors that provide access to playgrounds and the fields will remain secured at all times with staff access via swipe/proximity card entry. The inner set of doors in the main entry vestibule will be locked at all times, except as specifically designated by school administration. Panic buttons that send a silent signal communication directly to 911 dispatch will be located in Administration. Doors at the security threshold between the “public” core and the “private” academic wings will be controlled by magnetic holders and programmed locked by access control, securing those wing areas during after-hours events. Interior doors will be equipped with locking systems that allow doors to be secured from the inside of the room. Any communicating doors will lock from both sides.

Security

The Design team has met with and will continue to be advised by the District and public safety officials. These initial meetings have reviewed topics such as:

- a detailed site-specific assessment identifying specific vulnerabilities including physical security review, human factors and emerging technologies which can be implemented in the design/build
- access to the site, and vehicular site circulation
- entry points to the building
- the security concept of dividing the building into two compartments with security thresholds between
- glazing: "bullet resistant", intrusion resistant, safety glazing, tempered, high strength vs the need for entry by emergency personnel
- card readers at exterior entrances
    - Master key control and access control

The District has outlined emergency procedures for each school, which will be re-written and customized for the opening of the new school.

Security and visual access for the new school facility will require a multi-layered systems approach. Technology such as cameras, intercoms, and automatic locking devices will be incorporated into the design as well as passive design elements where the building design is a tool for improved security. These design features include:

- Site design elements and signage that reinforce territoriality of the school property, and the reminder of heightened surveillance on campus.
- Visual access from the main administrative area to the main entry drive, parking area and building entrance.
- A secured main entry sequence consisting of a controlled vestibule with check-in window and intercom for visitor verification prior to entry into the building.
- Exterior doors with automatic locking hardware and card reader access.
- Separation of the public-use spaces such as gymnasium and cafeteria from the more private academic classroom spaces.
- Spatial relationship strategies that allow portions of the building to be secured independently and automatically in a lock-down or crisis situation and provides communication and administrators on both sides of the lock-down areas.
- Egress planning that both meets the building code requirements and permits effective evacuation protocols including connected rooms and dedicated stairwells on the academic side of the building.
- Classroom lockset hardware that allows doors to be locked from the inside quickly.
- Strategically placed interior glazing to foster a welcoming educational experience while still permitting effective shelter-in-place protocols. Such a strategy will include shading devices to limit visual intrusion in a crisis events.

- Vehicular access to the perimeter of the facility that provides multiple locations for safety or first responders to access the building.
- Landscaping strategies to prevent vehicular access to the building and pedestrians.
- Site circulation strategies and strategically located vehicular gates to prevent unwanted vehicles from entering certain areas of the site at certain times.
- Intrusion resistant glazing in strategic locations.
- Knox boxes located in strategic locations.
- Fire alarm control panel located in the vestibule of the main entrance.
- Security cameras throughout the facility and exterior with web-based monitoring capabilities for remote access. Security Cameras will be placed cameras to maintain operational views of the building, playgrounds, interior hallways, bathroom entrances, and public spaces such as the library, gymnasium, and cafeteria.

The proposed facility will be a secure building, while at the same time have a welcoming, community-oriented feel that is not compromised but rather enhanced by the additional security features.

Site Development Requirements

Parking

The proposed site design provides separate onsite bus, parent, and Pre-K drop off zones and parking for 193 cars. One hundred forty (140) parking spaces will be dedicated to the school staff with 20 spaces for the dual-use Pre-K park-and-drop off/ mini-buses. Additional spaces are for event parking. Overflow parking for events at the school can be accomplished using marked parallel-parking spaces on the outer lane of service drives for an additional 30+ spaces minimum, making a site total of 223+ spaces. Overflow parking will continue to be explored with the Town based on requirements in the By-laws as events would not be held on site when school is in operation.

Parking numbers were developed based upon expected teacher staffing, transient parking needs for professionals who travel between school buildings, and support staff counts. Parking is concentrated closer to Salem and Ballardvale Streets and in proximity to the main entry. The PreK parking is near the PreK entrance.

Bus Access

Buses will enter the site from Salem Street at the south entrance, travel towards the south side of the school for student pick-up and drop-off. Buses will exit the site at the south entrance to Salem Street.

Facility Service and Delivery

Service access to the site is from the entrance on Ballardvale Street. Delivery vehicles will follow the same entrance path as the Vehicle loop but will terminate at the delivery area and exit the site at the same location as they entered. The delivery and service area is located at the north end of the building.

Further discussion of Parking and Site Circulation, including illustrative existing and proposed circulation diagrams, is included in Section 4.1.2C – Traffic Analysis.

Aesthetic Focal Points

The building is designed to fit within the context of the overall Town aesthetic. The design team also took specific measures to try and help what will be one of the larger educational buildings in the town fit into a residential neighborhood by nestling the building into the site and away from the street.

Aerial view of the site

Once the viewer has arrived on the site, the two-story portion of the building is visible, before its totality is revealed as one approaches closer to the building. At that moment, the canopies marking the main entries become the focal point of the design, set against the more plain backdrop of the façade.

Main entries viewed from the east

The focal point in the school is the multi-functional dining area which greets students and visitors upon entering the school and serves as the central hub of the school connecting students to the media center and second floor connector via an open stair. This space is accented by large windows which provide a visual connection to the welcoming outdoor plaza. The dining area also serves as the smaller performance viewing area. The double-sided performance stage opens to the gymnasium for larger performance/event viewing.

Cafeteria

TRAFFIC ANALYSIS

Summary

Dore + Whittier, with the consultation of CDW Engineering and Nitsch Engineering Traffic division, conducted an existing conditions assessment in PDP and Traffic Impact Study of the site circulation as part of the proposed site design at the North Intermediate Site in SD. The traffic Analysis is located in Appendix X.04.

The design attempts to separate the streams of traffic from one another as quickly as possible once on-site. Other design improvements include:

- increased dedicated parking for faculty and staff
- addition of a Pre-K drop off parking area adjacent to a separate entrance into the building
- Separated, improved bus load/unload zone
- Safer, clearly defined sidewalks and crosswalks for bike and pedestrian users
- Greatly increased parent vehicle queue off Ballardvale Street, approximately 80+ vehicles
- Separation between the student outdoor activity area and the access roads
- Clear, adequately sized routes and setup locations for first responder emergency vehicles

The following narrative and plans outline the existing conditions and the proposed solution. Although some initial desktop study has been done, final turning radius and patterns for all vehicle types (delivery, bus, and emergency) will be further studied and included in the Design Development phase of this project.

Evaluation of Existing Traffic Patterns

Nitsch Engineering conducted a site visit to the proposed site on October 23, 2024, to observe adjacent roadway conditions and vehicle flow and operations. The North Intermediate site currently holds the North Intermediate School and a playground, baseball fields, soccer fields, tennis courts, and a basketball court. The existing school is one of two intermediate schools in the Wilmington Public School system and serves the north region of the Town. The existing North Intermediate School consists of a building with two stories for a total of 52,569 square feet. A paved play area and a parking lot are also present on the site. The North Intermediate School serves approximately 250 students in grades four and five.

Primary access to the North Intermediate School is provided by a loop on Salem Street, providing access to the main entrance at the south of the building. The loop accommodates one-way traffic, with an ingress driveway at the southeast corner of the building and an egress driveway at the southwest corner of the building. Bus drop-off and pick-up occurs at this loop. Additional access is located to the east of the building and is served by another pair of one-way driveways off Ballardvale Street. Parent drop-off and pick-up occurs in this area, which also provides approximately 52 parking spaces for school staff. Evening and weekend events are often a difficult situation for the school, as

some events require teachers' attendance as well as parents. With utilization already at full capacity, parents are left to park on neighboring streets.

Another major concern of the existing condition is the car queues and additional traffic extending onto Salem Street and Ballardvale Street with a proposed PK-5 population. The design team heard this feedback from neighbors at an abutters meeting held in January.

Buses

Buses are shared in the district and pick-up and drop off times are staggered based on the route.

North Intermediate School: Aerial Site Photos with Existing Conditions Circulation Diagrams

Proposed Traffic and Site Circulation

The proposed PreK-5 Elementary School will serve 755 students in grades K- 5, plus up to 100 Pre-K students, for a total of 855 students. The school will be located on the playfield to the northwest of the existing Norh Intermediate School. The new site design along with the demolition of the existing school building will allow a re-envisioning of the site circulation.

Vehicle Circulation On-Site

The design separates the streams of traffic from one another with separate entry/exit points. The design team heard feedback from neighbors at an abutters meeting held in January regarding traffic back up on Salem and Ballardvale Street. After further review with School administration and Municipal Departments, the design team is shifting the original intent for circulation.

The proposed site plan will have space for approximately 80 vehicles to queue on-site and off Ballardvale Street, with the first 10+ vehicles in that queue being in the active load/unload zone of the vehicle loop. The post-loading space on the exit roadway is an additional 8+ vehicles, making the total onsite stacking space at any one moment approximately 88 cars. The peak load factoring in household with multiple students, but without consideration of afterschool programs, is estimated conservatively at 165 vehicles by the district. This may be mitigated by slightly offsetting dismissal times by grade to spread out the peak time and greatly reduce congestion.

The project includes vehicle gates to control access during and after the school day. When closed, the gates will prevent vehicles from driving around the school building.

CARES Impact

Based on data provided by the school, over 200 families participate in the CARES before and after school program. The CARES program is offered all but 3 days of the school year. The design team in conjunction with the traffic consultant and district will review available data to understand the impact of this program and its likely significant reduction to the pick-up and drop-off needs for the proposed project in Design Development.

Buses

The number of buses under a consolidated school is anticipated at 12, depending on ridership and final routing.

Pedestrians and Bike Riders

Bike riders and pedestrians will use the brand-new bituminous sidewalks along the south edge at Salem Street and east edge at Ballardvale Street, that connect to existing sidewalk networks in nearby neighborhoods. Once on-site they will follow sidewalks to the main entry plaza with limited crossing points of vehicular lanes. Cyclists can lock their bikes at the bike parking area on the entry plaza.

Service access to the site is from the entrance on Ballardvale Street. Delivery vehicles will follow the same entrance path as the vehicle loop, stopping to deliver goods at the service area on the north

side of the building and exit the site at the same location as they entered. Small package deliveries such as USPS, FedEx or UPS can occur at the main entrance during the day without interfering with operations or safety.

Parking

The proposed site design provides separated onsite bus, parent, and Pre-K drop off zones and parking for 193 cars. One hundred five (140) parking spaces will be dedicated to the school staff with 20 spaces for the dual-use Pre-K park-and-drop off/ visitors lot. Remaining spaces are intended for event parking.

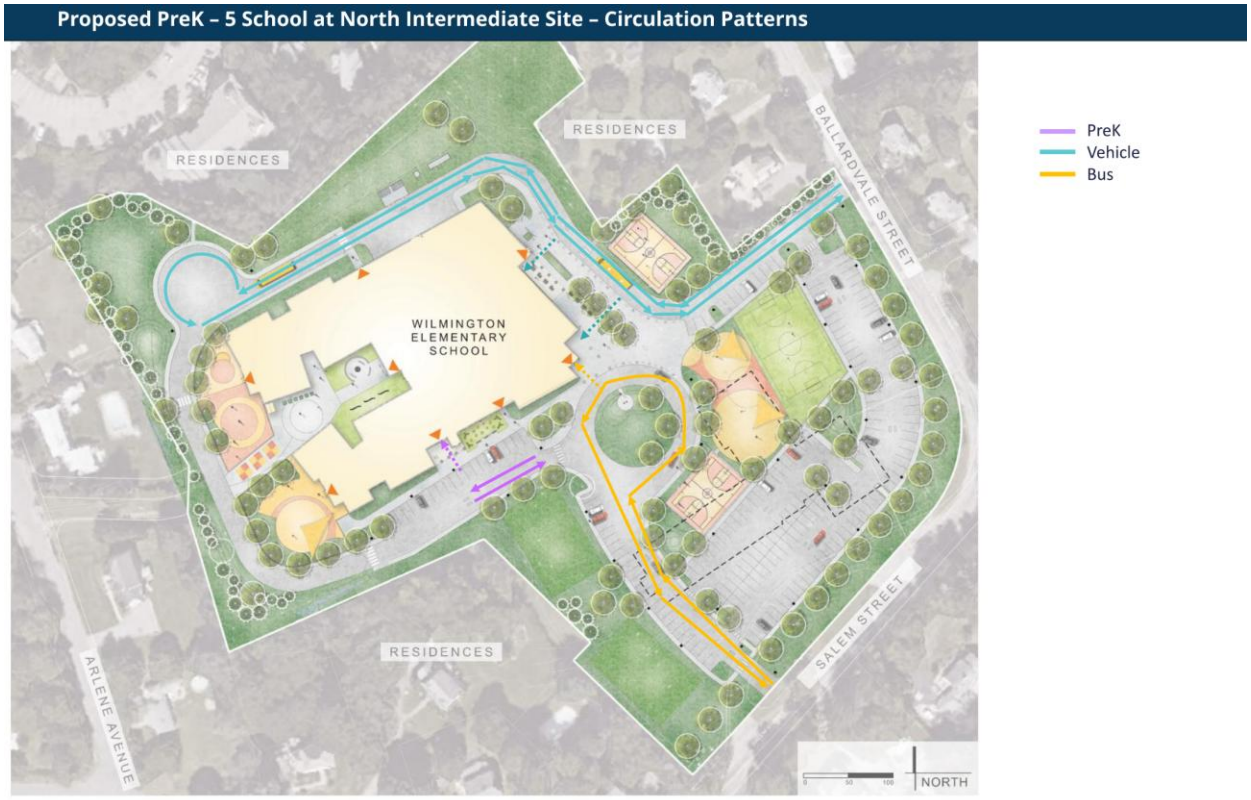
Wilmington Zoning has a requirement for "Educational" parking spaces: 1 space for each staff position, plus 1 space for each five persons of rated capacity of the largest auditorium, and 1 space for each student vehicle which can be expected at only one time on the premises.

The proposed gym is sized for 1,115 people, which equates to 223 parking spaces. An additional 140 staff parking spaces totals 363. Ideally the gymnasium would be used after hours for events. That may reduce the requirements for event parking to just the 223 spaces. Currently the site design includes 193 proposed spaces.

Additional overflow parking for events at the school can be accomplished using marked parallel-parking spaces on the outer lane of straight sections of vehicle drives behind the school for an additional 30+ spaces, making a site total of 223 spaces. The inner lane and curved corner sections of driveways would be marked and signed as a fire lane for emergency access all around the building, with no parking allowed. Overflow parking will be further reviewed during design development.

The number of 363 parking spaces would be burdensome and the design team will aim to seek relief from the zoning requirement recognizing several points of view:

- Building that much parking would preclude the inclusion of play areas on the site
- This amount of impervious area would be very difficult to permit on this site
- It would be a burdensome cost just to build these spaces, only to have more than half of them empty most of the time.



Effects on Off-Site Traffic

After adding the expected new traffic to the existing traffic on the adjacent intersections, the proposed school is expected to worsen operations at the intersection of Salem Street at Middlesex Avenue and Route 62 at Middlesex Avenue/High Street. Our analysis shows that the expected operational issues can be mitigated through signal retiming at the intersection of Route 62 at Middlesex Avenue/High Street. It is recommended that further study be conducted by the Town of Wilmington to address the existing operational deficiencies at the intersection of Salem Street and Middlesex Avenue in a manner that also provides excess capacity for the projected new trips from the proposed school. No significant impact is expected at the other study intersections.

The design team has met with the Town Engineer and DPW to review the results of the traffic study. The town intends to explore potential off-site improvements at the intersections noted in the traffic study in conjunction with the proposed project.

Provided that the Project is undertaken by an Agency, New water service to a municipality or water district across a municipal boundary through New or existing	☐ ☐ ☐ ☐ ☐	1. New withdrawal or Expansion in withdrawal of 100,000 or more gpd from a water source that requires New construction for the withdrawal. 2. New withdrawal or Expansion in withdrawal of 500,000 or more gpd from a water supply system above the lesser of current system-wide authorized withdrawal volume or three- 3. Construction of one or more New water mains five or more miles in length. 4. Construction of a New drinking water treatment plant with a Capacity of 1,000,000 or more gpd. 5. Expansion of an existing drinking water treatment plant by the greater of 1,000,000 gpd or 10% of existing Capacity. 6. Alteration requiring a variance in accordance with the Watershed Protection Act, unless the Project consists solely of one single family dwelling. 7. Non-bridged stream crossing 1,000 or less feet upstream of a public surface drinking water supply for purpose of forest harvesting activities.	☐ ☐ ☐ ☐ ☐ ☐ ☐
WASTEWATER	1. Construction of a New wastewater treatment and/or disposal facility with a Capacity of 2,500,000 or more gpd. 2. New interbasin transfer of wastewater of 1,000,000 or more gpd or any amount determined significant by the Water Resource Commission. 3. Construction of one or more New sewer mains ten or more miles in length. 4. Provided that the Project is undertaken by an Agency, New sewer service to a municipality or sewer district across a municipal boundary through New or existing 5. New discharge or Expansion in discharge of any amount of sewage, industrial waste water or untreated stormwater directly to an outstanding resource water. 6. New Capacity or Expansion in Capacity for storage, treatment, processing, combustion or disposal of 150 or more wet tpd of sewage sludge, sludge ash, grit, screenings, or other	☐ ☐ ☐ ☐ ☐ ☐	1. Construction of a New wastewater treatment and/or disposal facility with a Capacity of 100,000 or more gpd. 2. Expansion of an existing wastewater treatment and/or disposal facility by the greater of 100,000 gpd or 10% of existing Capacity. 3. Construction of one or more New sewer mains: (a) that will result in an Expansion in the flow to a wastewater treatment and/or disposal facility by 10% of existing Capacity; or (b) five or more miles in length. 4. New discharge or Expansion in discharge: (a) to a sewer system of 100,000 or more gpd of sewage, industrial waste water or untreated stormwater; (b) to a surface water of: i. 100,000 or more gpd of sewage; ii. 20,000 or more gpd of industrial waste water; or iii. any amount of sewage, industrial waste water or untreated stormwater requiring a variance from applicable water quality regulations; or (c) to groundwater of: i. 10,000 or more gpd of sewage within an area, zone or district established, delineated or identified as necessary or appropriate to protect a public drinking water supply, an ii. 50,000 or more gpd of sewage within any other area; iii. 20,000 or more gpd of industrial waste water; or iv. any amount of sewage, industrial waste water or untreated stormwater requiring approval by the Department of Environmental Protection of a variance from Title 5 of 5. New Capacity or Expansion in Capacity for: (a) combustion or disposal of any amount of sewage sludge, sludge ash, grit, screenings, or other sewage sludge residual materials; or (b) storage, treatment, or processing of 50 or more wet tpd of sewage sludge or sewage	☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐
TRANSPORTATION.	1. Unless the Project consists solely of an internal or on-site roadway or is located entirely on the site of a non-roadway Project: (a) construction of a New roadway two or more miles in length; or (b) widening of an existing roadway by one or more travel lanes for two or more miles. 2. New interchange on a completed limited access highway. 3. Construction of a New airport. 4. Construction of a New runway or terminal at an existing airport. 5. Construction of a New rail or rapid transit line along a New, unused or abandoned right-of-way for transportation of passengers or freight (not including sidings, spurs or other lines	☐ ☐ ☐ ☐ ☐	1. Unless the Project consists solely of an internal or on-site roadway or is located entirely on the site of a non-roadway Project: (a) construction of a New roadway one-quarter or more miles in length; or (b) widening of an existing roadway by four or more feet for one-half or more miles, excluding widening to add bicycle or pedestrian accomodations. 2. Construction, widening or maintenance of a roadway or its right-of-way that will: (a) alter the bank or terrain located ten more feet from the existing roadway for one- half or more miles, unless necessary to install a structure or equipment; (b) cut five or more living public shade trees of 14 or more inches in diameter at breast height; or (c) eliminate 300 or more feet of stone wall.	☐ ☐ ☐ ☐ ☐

	6. Generation of 3,000 or more New adt on roadways providing access to a single location. 7. Construction of 1,000 or more New parking spaces at a single location.	☐ ☐	3. Expansion of an existing runway at an airport. 4. Construction of a New taxiway at an airport. 5. Expansion of an existing taxiway at Logan Airport. 6. Expansion of an existing terminal at Logan Airport by 100,000 or more sf. 7. Expansion of an existing terminal at any other airport by 25,000 or more sf. 8. Construction of New or Expansion of existing air cargo buildings at an airport by 100,000 or more sf. 9. Conversion of a military airport to a non-military airport. 10. Construction of a New rail or rapid transit line for transportation of passengers or freight. 11. Discontinuation of passenger or freight service along a rail or rapid transit line. 12. Abandonment of a substantially intact rail or rapid transit right-of-way. 13. Generation of 2,000 or more New adt on roadways providing access to a single location. 14. Generation of 1,000 or more New adt on roadways providing access to a single location and construction of 150 or more New parking spaces at a single location. 15. Construction of 300 or more New parking spaces at a single location.	☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐
ENERGY.	1. Construction of a New electric generating facility with a Capacity of 100 or more MW. 2. Expansion of an existing electric generating facility by 100 or more MW. 3. Construction of a New fuel pipeline ten or more miles in length. 4. Construction of electric transmission lines with a Capacity of 230 or more kv, provided the transmission lines are five or more miles in length along New, unused or abandoned right of way.	☐ ☐ ☐ ☐	1. Construction of a New electric generating facility with a Capacity of 25 or more MW. 2. Expansion of an existing electric generating facility by 25 or more MW. 3. Construction of a New fuel pipeline five or more miles in length. 4. Construction of electric transmission lines with a Capacity of 69 or more kv, provided the transmission lines are one or more miles in length along New, unused or abandoned right of way.	☐ ☐ ☐ ☐
AIR.	1. Construction of a New Stationary Source with federal potential emissions, after construction and the imposition of required controls, of: 250 tpy of any criteria air pollutant; 40 tpy of any HAP; 100 tpy of any combination of HAPs; or 100,000 tpy of GHGs based on CO2 Equivalent. 2. Modification of an existing Stationary Source with federal potential emissions that collectively will result, after construction and the imposition of required controls, of 75,000 tpy of GHGs based on CO2 Equivalent.	☐ ☐	1. Construction of a New Stationary Source with federal potential emissions, after construction and the imposition of required controls, of: 100 tpy of PM10, PM 2.5, CO, lead or SO2; 50 tpy of VOC or NOx; 10 tpy of any HAP; or 25 tpy of any combination of HAPs. 2. Modification of an existing Stationary Source resulting in a "significant net increase" in actual emissions, provided that the stationary source or facility is major for the pollutant. For purposes of this threshold, a "significant net increase" in actual emissions shall mean an increase in emissions of: 15 tpy of PM10; 10 tpy of PM 2.5; 100 tpy of CO; 40 tpy of SO2; 25 tpy of VOC or NOx; 0.6 tpy of lead.	☐ ☐
SOLID AND HAZARDOUS WASTE.	1. New Capacity or Expansion in Capacity of 150 or more tpd for storage, treatment, processing, combustion or disposal of solid waste, unless the Project is a transfer station, is an Expansion of an existing facility within a validly site assigned area for the proposed use, or is exempt from site assignment requirements.	☐	1. New Capacity or Expansion in Capacity for combustion or disposal of any quantity of solid waste, or storage, treatment or processing of 50 or more tpd of solid waste, unless the Project is exempt from site assignment requirements. 2. Provided that a Permit is required in accordance with M.G.L. c. 21D, New Capacity or Expansion in Capacity for the storage, recycling, treatment or disposal of hazardous waste.	☐ ☐
HISTORICAL AND ARCHAEOLOGICAL RESOURCES.	None		1. demolition of all or any exterior part of any Historic Structure listed in or located in any Historic District listed in the State Register of Historic Places or the Inventory of Historic and 2. destruction of all or any part of any Archaeological Site listed in the State Register of Historic Places or the Inventory of Historic and Archaeological Assets of the	☐ ☐
AREAS OF CRITICAL ENVIRONMENTAL CONCERN.	None		1. Any Project of ½ or more acres within a designated ACEC, unless the Project consists solely of one single family dwelling.	☐
REGULATIONS.	None		Promulgation of New or revised regulations, of which a primary purpose is protecting against Damage to the Environment, that significantly reduce: 1. standards for environmental protection; .	☐

			2.opportunities for public participation in permitting or other review processes; or 3. public access to information generated or provided in accordance with the regulations.	☐ ☐

Architect and Engineer Certification

By signing this certification, I hereby certify that all of the information provided in this "MEPA Trigger Checklist" is true, complete and accurate to the best of my knowledge and belief.

District:	Wilmington School District
Project Name:	Wildwood Early Childhood Center
MSBA Project ID:	

SITE PERMIT	REQUIREMENTS	FILING DATE	EXPECTED RESPONSE DATE	TRIGGER - YES/NO	AGENCY COMMENTS/SUGGESTED ACTIONS	DESIGNER RESPONSES
CONCOM	NOI	MM/DD/YYYY	MM/DD/YYYY			On-site wetlands were flagged and identified as non-jurisdictional. A meeting with the local Conservation agent to confrim the non-juristional status should be held during the permitting process.
MHC	PNF	MM/DD/YYYY	MM/DD/YYYY			The exisitng building does not fall on any historic register and therefore does not require any MHC permitting.
MA-DOT	PNF with MHC	MM/DD/YYYY	MM/DD/YYYY			This project will provide work on local Town managed roadways.
MA-DEP	NOI	MM/DD/YYYY	MM/DD/YYYY			On-site wetlands were flagged identified as non-jurisdictional. A meeting with the local Conservation agent to confrim the non-juristional status should be held during the permitting process.
NHESP	NOI	MM/DD/YYYY	MM/DD/YYYY			This project does not require a NHESP permit.
MEPA	PNF with MHC	MM/DD/YYYY	MM/DD/YYYY			This project does not trigger any MEPA thresholds and does not require a MEPA permit.

Instructions to complete the permit tracking table:

1. Enter the date the PNF/NOI was filed.
2. Enter the date when the response is expected.
3. If a response is received from CONCOM/MHC/MA-DOT/MA-DEP/NHESP/MEPA, mention 'YES' in the 'trigger' column. Summarize the proposed/requested/mandated action by the agencies in a few words and corresponding Designer responses in the appropriate column. Please include the full response as an attachment with this submittal for MSBA's reference.
4. If there is no response by the expected response date, mention 'NO' in the 'trigger' column.
5. Indicate “Not Applicable” (where appropriate) in the "trigger" column and describe why each item is not applicable.
6. Describe the status of the following approvals. Any status updates/concerns/notes can be mentioned in the 'Designer Responses' column.
7. Make sure to attach the sheet with every submittal for the project to track any changes.
8. Provide the status of any other state or federal approval not listed above (the following list is not a comprehensive itemization of required state approvals; other requirements may apply, and some items listed below may not be applicable to this project).
9. Provide a copy of the PNF, NOI, appropriate application forms and/or approval letters where applicable.

SITE RISK ASSESSMENT & EVALUATION FOR ENVIRONMENTAL HAZARDS

Summary of Site Risk Assessment & Evaluation of Environmental Hazards

A Site Risk Assessment & Evaluation of Environmental Hazards was completed for the proposed site as part of the Preferred Schematic Report (see attachments). The Assessment relied on various sources to evaluate the potential for environmental events that could cause damage, degradation and/or occupant injury.

The selected site is at high risk from Extreme Precipitation – Urban Flooding due an increase in impervious surfaces and the potential for tree removal. However, the relatively large site offers ample opportunity for on-site treatment and management of stormwater. The site was determined to be at *low risk* from Extreme Precipitation – Riverine Flooding. The site is generally well suited to development.

Early in PSR, the design team met with Wilmington Public Safety officials to introduce the project and review alternatives. The group will not identify the potential school project as a designated emergency shelter.

SITE RISK ASSESSMENT & EVALUATION OF ENVIRONMENTAL HAZARDS

DORE + WHITTIER

Project: Wilmington Elementary School

Subject Site: North Intermediate School
320 Salem St. Wilmington, MA 01887

Preferred Option: PreK-5 N.1

Summary

This Site Risk Assessment & Evaluation of Environmental Hazards (the Assessment) was performed on the Project site to provide the District with information related to specific risks and/or hazards that may influence the suitability of the site or developmental considerations should the subject site be selected. This Assessment is specific to the selected project site and selected option (New Pre-K – 5). A summary of Assessments for all sites under consideration was incorporated into the MSBA Preferred Schematic Report.

Vulnerabilities Assessments

Flooding & Storm Surges

Floodplain Information was obtained from the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRM), see Appendix X.10. All proposed sites are within a Zone X, which is identified as an area outside of the 0.2% chance (500-year) annual floodplain. Therefore, any redevelopment or new construction would not trigger a permit with respect to floodplain. Wilmington's annual average rainfall is 44.4 inches per year.

Using the Resilient Mass Action Team (RMAT) Climate Resilience Design Standards Tool (refer to attached report), the site is at *low risk* from flooding due to Sea Level Rise/Storm Surge and Extreme Precipitation – Riverine Flooding as it is not in an exposed location. The site was found to be at *high risk* for Extreme Precipitation – Urban Flooding if the selected option increases the site impervious area.

High Winds

The basic wind speed (*V*) for Risk Category III Buildings (Educational Group with more than 250 occupants) is 126 mph in accordance with Table 1604.11 of the 10th Edition of the Massachusetts State Building Code 780 CMR. A Surface Roughness Category B prevails in all directions surrounding the site for more than 2600 feet establishing the site as Exposure B. The building is not situated in a Hurricane Prone Region or a Wind-Borne Debris Region as defined by the Code.

The FEMA National Risk Index tool (refer to attached report) assesses risks associated with three types of wind events: hurricanes, tornadoes, and strong winds. These risks are aggregated for all of

Middlesex County and are not specific to the Town of Wilmington or the subject site. The Risk Index tool is focused primarily on assessing the potential for financial loss across a region and has limited use for a site-specific risk assessment. Still, some useful contextual data can be gleaned from the Risk Index report.

Middlesex county has experienced 30 hurricane events over the 171-year record-keeping period, resulting in an average annual frequency of 0.175 hurricanes per year, or about one hurricane event every 5.7 years. Because of Wilmington's relative inland location, it is at lower risk of the most severe hurricane impacts, which is reflected in the Building Code wind speed determination above. The County has also experienced 10 tornados since 1950 for an average of one tornado every 7.4 years. Most of the tornadoes have been relatively mild (EF2 or lower) and none of these tornadoes passed through Wilmington. However, the most severe tornado on record, a category EF3 event, crossed Tewksbury in 1974. The FEMA tool also documents 32 Strong Wind Events (classified as wind speeds over 58 mph) since 1986, or approximately one per year. While this data is not predictive, it is useful to the extent that it indicates the potential for experiencing high-wind storms or events with some regularity during the building's functional life span.

Extreme Temperatures

A cold wave is defined as a rapid drop in temperature over 24 hours and extreme cold temperatures for an extended period, typically affecting a large area. To determine the potential for cold waves, we can rely on the FEMA Risk Tool report for Middlesex County which indicates that the region experiences a cold wave approximately every 4 years and assigned a Risk Index Rating of Relatively Moderate for the region. The RMAT tool did not indicate any site-specific risk associated with extreme cold conditions.

Similarly, heat waves are periods of abnormally and uncomfortably hot and humid weather for a region. The FEMA Risk Tool reports a frequency of one heat wave every 1.33 years – or three times the frequency of cold waves noted above. The resulting Risk Index Rating associated with heat waves for the county is also Relatively Moderate. However, the RMAT tool determined that the subject site was at High Risk for extreme heat related events. The RMAT results cite increased impervious area and the removal of trees resulting in potentially less than 10% of the site under canopy cover as site-specific factors associated with this determination.

Winter Weather

The winter weather annualized frequency as determined by the FEMA Risk Tool represents the average number of Winter Weather Hazard events for the region. Winter Weather Hazards are storms where the main types of precipitation are freezing rain, sleet, and/or snow. The Risk Tool reports an average of 6.7 winter storm events per year, making it one of the most frequent climate events affecting the site. Because the events are relatively common and the community is well positioned to manage such events, the FEMA Risk Tool reported a Risk Index Rating associated with Winter Storms as Relatively Low.

Wilmington's annual average snow fall is 53.9 inches per year. The North School provides ample potential for effective on-site snow storage and management in the event of high snow accumulation storm events.

Ice storms are freezing rain events (rain that freezes on contact) with significant ice accumulations of 0.25 inches or greater. The FEMA Risk Tool reports an average of 2.7 freezing rain events per year, resulting in a Risk Index Rating of Relatively High. Ice storms often have increased potential to damage buildings, property, and agriculture as well as regional power distribution.

Power Outages

80% of power outages are attributable to weather events. In particular, high wind events, ice storms, heavy snow, and combination events such as blizzards all contribute to the majority of outages. Given the regional risk factors for winter storm events noted above, the subject site will experience power outages from time to time. Massachusetts electrical utility customers experience on average 8.7 hours of power outage per year. However, the Project location in Wilmington will utilize Reading Municipal Lighting & Power as the regional utility company. RMLP has an excellent record of system reliability throughout the year with an annual average interruption duration of just over 3 minutes and a peak monthly average outage duration of only 14 minutes (average for December, 2023). Similarly, the annual system interruption frequency is just over 0.03 interruptions per year, with a peak monthly average interruption frequency of 0.12 interruptions in July of 2023. RMLDs system reliability offers significant protection from power interruptions in general and in particular long-duration interruptions over the anticipated project life span.

Developmental Considerations

General Site Suitability

With respect to climate hazards and site resiliency assets, the site is generally well suited for development. Within the context of sites available for development in the Town of Wilmington, the subject site does not assume additional risk or vulnerability due to its specific location, exposure, or any immediate adjacencies.

Building Massing & Orientation

The building mass should leverage a relatively compact form with a low surface area to volume ratio in order to reduce shedding heat through the thermal envelope during cold weather events when power outages are more likely. In particular, minimizing roof exposure with multi-story configurations where possible will maximize the building volume for a given surface area exposure. A more compact building mass will also reduce the site impervious area, which is an important consideration for a site at elevated risk due to Extreme Precipitation – Urban Flooding.

Building orientation will have relatively little impact on resiliency strategies for the site. While specific fenestration orientation will have advantages with respect to day lighting, glare control, and passive heat gain, these considerations are not specific to site resiliency.

Floor Elevations of Occupied Areas and Critical Equipment

The subject site is not at risk for coastal flooding, storm surges, or riverine flooding. Therefore, there is no critical elevation to maintain for occupied floors or critical equipment. Given the sites risk associated with urban flooding, the lowest floor elevation should be situated above finish grade with the surrounding grade sloping away from the building as a passive flood mitigation strategy.

Stormwater Management

As was noted in the Vulnerability Assessment section, the subject site was found to be at *high risk* for Extreme Precipitation – Urban Flooding, particularly since the options proposed for this site will likely increase the impervious area. The ResilientMass Map & Data center project a 10.8% increase in total precipitation and a 14.8% increase in the 99th percentile storm rainfall for the target year 2070. Site-specific stormwater management design should consider both current and projected increases in rainfall event volume.

Building Materials

Site-specific consideration of building materials can generally be addressed in three categories.

- Superstructure: Because of the site's inland location well away from coastal brackish waters or salt spray, protection from corrosion is not a particular concern for the site. Exterior exposed structural steel members can be protected with conventional hot-dipped galvanized finish. Building foundations should be designed assuming freeze-thaw exposure category F2.
- Exterior Materials: High resilience to freeze-thaw cycling and UV degradation are the primary considerations for the selection of exterior building materials. Materials close to the ground should be highly durable with few or no open ventilation joints that would allow snow or ice to accumulate within wall cavities. Exterior concrete paving of pedestrian walks and near building entries should assume freeze-thaw exposure category F-3.
- Interior Materials: Finish floor surfaces in building entries, adjacent primary corridors, and high-traffic assembly areas should be selected to be highly durable when exposed to water, ice, snow, and de-icing chemicals.

Building Systems Selection

Mechanical (HVAC) systems that are all-electric will eliminate dependence on fossil fuel burning equipment for facility. However, all-electric systems are also dependent on a reliable and durable power grid for long-term viability. The resiliency and continued development of the regional power grid is outside of the control of the building owners. However, the FEMA Risk Tool indicates that Middlesex County has a Social Vulnerability rating of *Relatively Low* and a Community Resilience rating of *Relatively High*. These social categorizations suggest that the region is well suited to

continue to prioritize and invest in socially beneficial environmental improvements, such as maintenance and improvement of the regional power grid. It would be reasonable to expect that, in this region all-electric building systems will be highly resilient over the anticipated building life span. Where feasible, simplicity of operations and maintenance of the mechanical and electrical systems will improve the overall resilience of the system design.

Emergency Back-Up Systems

The building will be required to be designed with a generator to power emergency back-up systems. Diesel generators functional time is limited by the fuel tank size. However, given that the average electrical customer experiences less than one hour of power outage per year, conventional fuel tank sizes that anticipate 48 to 72 hours of operation should be more than adequate to deal with occasional intermittent outages. Natural gas generators are connected to the local gas utility and will not be subject to the same fuel tank size time limitations; in this regard, a natural gas generator is better suited for extreme long-term power outages (more than 48 hours).

The school building will be rooftop PV ready as required by Code. However, the installation of a PV array is not currently contemplated as part of the Project. If the Owner eventually intends to incorporate on-site renewable energy systems (electrical PV array – either roof-top or on-site), then energy storage systems should be considered to provide alternative back-up power. Alternative power sources will improve the overall facility resilience.

Emergency Event Design Considerations

The facility will not be designed or designated as an emergency shelter. Emergency event planning will be developed by the Owner considering primarily maintaining operations as a school facility.

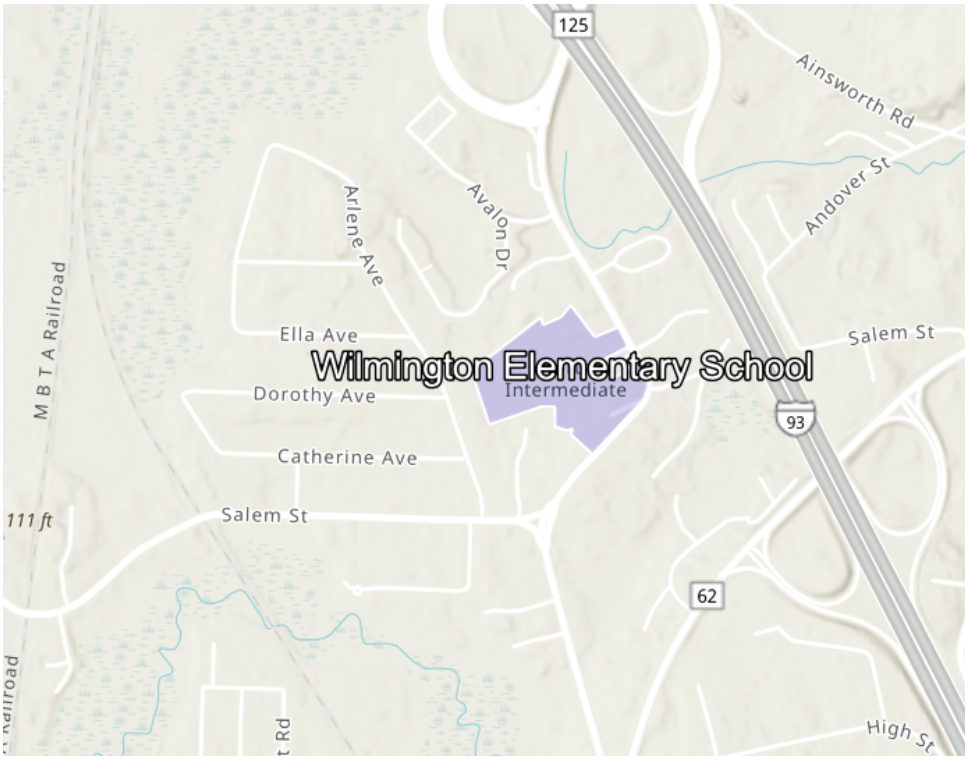
Project Summary

Link to Project

Estimated Capital Cost: $183999998.00
End of Useful Life Year: 2076
Project within mapped Environmental Justice neighborhood: No

Ecosystem Service Benefits	Scores
Project Score	Moderate
Exposure	**Scores**
Sea Level Rise/Storm Surge	Not Exposed
Extreme Precipitation - Urban Flooding	High Exposure
Extreme Precipitation - Riverine Flooding	Not Exposed
Extreme Heat	High Exposure



Asset Preliminary Climate Risk Rating Summary

Number of Assets: 1

Asset Risk	Sea Level Rise/Storm Surge	Extreme Precipitation - Urban Flooding	Extreme Precipitation - Riverine Flooding	Extreme Heat
Elementary School	Low Risk	High Risk	Low Risk	High Risk

Climate Resilience Design Standards Summary

	Target Planning Horizon	Intermediate Planning Horizon	Percentile	Return Period	Tier
Sea Level Rise/Storm Surge					
Elementary School					
Extreme Precipitation					
Elementary School	2070			50-yr (2%)	Tier 3
Extreme Heat					
Elementary School	2070		90th		Tier 3

Scoring Rationale - Project Exposure Score

The purpose of the Exposure Score output is to provide a preliminary assessment of whether the overall project site and subsequent assets are exposed to impacts of natural hazard events and/or future impacts of climate change. For each climate parameter, the Tool will calculate one of the following exposure ratings: Not Exposed, Low Exposure, Moderate Exposure, or High Exposure. The rationale behind the exposure rating is provided below.

Sea Level Rise/Storm Surge

This project received a "Not Exposed" because of the following:

- Not located within the predicted mean high water shoreline by 2030
- No historic coastal flooding at project site
- Not located within the Massachusetts Coast Flood Risk Model (MC-FRM)

Extreme Precipitation - Urban Flooding

This project received a "High Exposure" because of the following:

- Increased impervious area
- Maximum annual daily rainfall exceeds 10 inches within the overall project's useful life
- No historic flooding at project site
- Existing impervious area of the project site is between 10% and 50%

Extreme Precipitation - Riverine Flooding

This project received a "Not Exposed" because of the following:

- No historic riverine flooding at project site
- The project is not within a mapped FEMA floodplain [outside of the Massachusetts Coast Flood Risk Model (MC-FRM)]
- Project is more than 500ft from a waterbody
- Project is not likely susceptible to riverine erosion

Extreme Heat

This project received a "High Exposure" because of the following:

- 30+ days increase in days over 90 deg. F within project's useful life
- Increased impervious area
- Existing trees are being removed as part of the proposed project
- Less than 10% of the existing project site has canopy cover
- Located within 100 ft of existing water body

Scoring Rationale - Asset Preliminary Climate Risk Rating

A Preliminary Climate Risk Rating is determined for each infrastructure and building asset by considering the overall project Exposure Score and responses to Step 4 questions provided by the user in the Tool. Natural Resource assets do not receive a risk rating. The following factors are what influenced the risk ratings for each asset.

Asset - Elementary School
Primary asset criticality factors influencing risk ratings for this asset:

- Asset may inaccessible/inoperable for more than a day but less than a week after natural hazard event
- Less than 10,000 people would be directly affected by the loss/inoperability of the asset
- Few alternative programs and/or services are available to support the community
- Cost to replace is greater than $100 million
- There are no hazardous materials in the asset

Project Climate Resilience Design Standards Output

Climate Resilience Design Standards and Guidance are recommended for each asset and climate parameter. The Design Standards for each climate parameter include the following: recommended planning horizon (target and/or intermediate), recommended return period (Sea Level Rise/Storm Surge and Precipitation) or percentile (Heat), and a list of applicable design criteria that are likely to be affected by climate change. Some design criteria have numerical values associated with the recommended return period and planning horizon, while others have tiered methodologies with step-by-step instructions on how to estimate design values given the other recommended design standards.

Asset: Elementary School — Building/Facility

Sea Level Rise/Storm Surge — Low Risk

Applicable Design Criteria

Projected Tidal Datums: NOT APPLICABLE

Projected Water Surface Elevation: NOT APPLICABLE

Projected Wave Action Water Elevation: NOT APPLICABLE

Projected Wave Heights: NOT APPLICABLE

Projected Duration of Flooding: NOT APPLICABLE

Projected Design Flood Velocity: NOT APPLICABLE

Projected Scour & Erosion: NOT APPLICABLE

Extreme Precipitation — High Risk

Target Planning Horizon: 2070
Return Period: 50-yr (2%)

LIMITATIONS: The recommended Standards for Total Precipitation Depth & Peak Intensity are determined by the user drawn polygon and relationships as defined in the Supporting Documents. The projected Total Precipitation Depth values provided through the Tool are based on the climate projections developed by Cornell University as part of EEA's Massachusetts Climate and Hydrologic Risk Project, GIS-based data as of 10/15/21. For additional information on the methodology of these precipitation outputs, see Supporting Documents.

While Total Precipitation Depth & Peak Intensity for 24-hour Design Storms are useful to inform planning and design, it is recommended to also consider additional longer- and shorter-duration precipitation events and intensities in accordance with best practices. Longer-duration, lower-intensity storms allow time for infiltration and reduce the load on infrastructure over the duration of the storm. Shorter-duration, higher-intensity storms often have higher runoff volumes because the water does not have enough time to infiltrate infrastructure systems (e.g., catch basins) and may overflow or back up during such storms, resulting in flooding. In the Northeast, short-duration high intensity rain events are becoming more frequent, and there is often little early warning for these events, making it difficult to plan operationally. While the Tool does not provide recommended design standards for these scenarios, users should still consider both short- and long-duration precipitation events and how they may impact the asset.

The projected values, standards, and guidance provided within this Tool may be used to inform plans and designs, but they do not provide guarantees for future conditions or resilience. The projected values are not to be considered final or appropriate for construction documents without supporting engineering analyses. The guidance provided within this Tool is intended to be general and users are encouraged to do their own due diligence

Project Inputs

Core Project Information

Name:	Wilmington Elementary School
Given the expected useful life of the project, through what year do you estimate the project to last (i.e. before a major reconstruction/renovation)?	2076
Location of Project:	Wilmington
Estimated Capital Cost:	$183,999,998
Who is the Submitting Entity?	Private Other Dore + Whittier Archtiects David Mentzer (dmentzer@doreandwhittier.com)
Is this project being submitted as part of a state grant application?	Yes
What stage are you in your project lifecycle?	Design
Is climate resiliency a core objective of this project?	Yes
Is this project being submitted as part of the state capital planning process?	No
Is this project being submitted as part of a regulatory review process or permitting?	Yes
Brief Project Description:	Construction of new PK-5 school.
Project Submission Comments:	

Project Ecosystem Service Benefits

Factors Influencing Output

- ✓ Project protects public water supply
- ✓ Project promotes decarbonization
- ✓ Project recharges groundwater
- ✓ Project filters stormwater using green infrastructure
- ✓ Project remediates existing sources of pollution
- ✓ Project provides recreation
- ✓ Project improves air quality
- ✓ Project prevents pollution
- ✓ Project provides cultural resources/education

Factors to Improve Output

- ✓ Incorporate nature-based solutions that may provide flood protection
- ✓ Incorporate nature-based solutions that may reduce storm damage
- ✓ Incorporate nature-based solutions that improve water quality
- ✓ Incorporate nature-based solutions that sequester carbon carbon
- ✓ Increase biodiversity, protect critical habitat for species, manage invasive populations, and/or provide connectivity to other habitats
- ✓ Preserve, enhance, and/or restore coastal shellfish habitats
- ✓ Incorporate vegetation that provides pollinator habitat
- ✓ Increase plants, trees, and/or other vegetation to provide oxygen production

Is the primary purpose of this project ecological restoration?

No

Project Benefits

Provides flood protection through nature-based solutions	No
Reduces storm damage	No
Recharges groundwater	Yes
Protects public water supply	Yes
Filters stormwater using green infrastructure	Yes
Improves water quality	No
Promotes decarbonization	Yes
Enables carbon sequestration	No
Provides oxygen production	No
Improves air quality	Yes
Prevents pollution	Yes
Remediates existing sources of pollution	Yes
Protects fisheries, wildlife, and plant habitat	No
Protects land containing shellfish	No
Provides pollinator habitat	No
Provides recreation	Yes
Provides cultural resources/education	Yes

Project Climate Exposure

Is the primary purpose of this project ecological restoration?	No
Does the project site have a history of coastal flooding?	No
Does the project site have a history of flooding during extreme precipitation events (unrelated to water/sewer damages)?	No
Does the project site have a history of riverine flooding?	No

Does the project result in a net increase in impervious area of the site?	Yes
Are existing trees being removed as part of the proposed project?	Yes

Project Assets

Asset: Elementary School
Asset Type: Typically Occupied
Asset Sub-Type: School (primary, secondary, high, vocational, etc.)
Construction Type: New Construction
Construction Year: 2026
Useful Life: 50

Identify the length of time the asset can be inaccessible/inoperable without significant consequences.
Building may be inaccessible/inoperable for more than a day, but less than a week after natural hazards events without consequences

Identify the geographic area directly affected by permanent loss or significant inoperability of the building/facility.
Impacts would be limited to local area and/or municipality

Identify the population directly served that would be affected by the permanent loss of use or inoperability of the building/facility.
Less than 10,000 people

Identify if the building/facility provides services to populations that reside within Environmental Justice neighborhoods or climate vulnerable populations.
The building/facility does not provide services to populations that reside within Environmental Justice neighborhoods or climate vulnerable populations.

If the building/facility became inoperable for longer than acceptable in Question 1, how, if at all, would it be expected to impact people's health and safety?
Inoperability of the building/facility would not be expected to result in injuries

If there are hazardous materials in your building/facility, what are the extent of impacts related to spills/releases of these materials?
There are no hazardous materials in the building/facility

If the building/facility became inoperable for longer than acceptable in Question 1, what are the impacts on other facilities, assets, and/or infrastructure?
Moderate – Inoperability may impact other facilities, assets, or buildings, but is not expected to affect their ability to operate

If this building/facility was damaged beyond repair, how much would it approximately cost to replace?
Greater than or equal to $100 million

Is this a recreational facility which can be vacated during a natural hazard event?
No

If the building/facility became inoperable for longer than acceptable in Question 1, what are the public and/or social services impacts?
Few alternative programs and/or services are available to support the community

If the building/facility became inoperable for longer than acceptable in Question 1, what are the environmental impacts related to natural resources?
No impact on surrounding natural resources is expected

If the building/facility became inoperable for longer than acceptable in Question 1, what are the impacts to government services (i.e. the building is not able to serve or operate its intended users or function)?
Loss of building is not expected to reduce the ability to maintain government services.

If the building/facility became inoperable for longer than acceptable in Question 1, what are the impacts to loss of confidence in government (i.e. the building is not able to serve or operate its intended users or function)?
Loss of confidence in government agency

Report Comments

N/A

ENVIRONMENTAL AND EXISTING BUILDING ASSSESSMENT

There has been no new site or building assessments quantifying the presence of hazardous materials, other than the original Hazardous Materials Survey included in Section 3.1.4 G 12 of the Preliminary Design Report for this project.

THIS PAGE INTENTIONALLY LEFT BLANK

GEOTECHNICAL AND GEO-ENVIRONMENTAL ANALYSIS

Summary

The existing North Intermediate site survey is included in Appendix Section X.05. The Schematic Design documents have been developed within the context of this survey and the current cost estimates reflect coordination with the existing site conditions.

Lahlaf Geotechnical Consulting, Inc. has performed a preliminary geotechnical investigation of the North Intermediate site which incorporated test borings, test pits, and laboratory testing of soil samples determine the general characteristics of the on-site soils, season water groundwater depth(s) and make recommendations with respect to the building foundation systems and site development considerations. More in depth analysis will occur on the site to confirm or modify preliminary findings, and to test soils permeability for stormwater management design. The complete geotechnical report and test borings maps are included in Appendix Section X.06. The current cost estimates reflect the findings and incorporate the recommendations of this investigation.

In addition to the Geotechnical investigation, PEER Consultants performed limited subsurface soil investigations; the resulting memorandum of their findings is included in Appendix X.07. Nine soil samples were visually characterized and screened. No VOCs, SVOCs, MCPs, PCBs, TPH, pesticides, or herbicides were reported at concentrations exceeding reportable levels that would require notification to the MassDEP. Elevated presumed “natural arsenic” levels were noted in the soil encountered within excavation limits of the proposed building footprint. PEER subsequently completed a Soil Quantity Estimates Memorandum, included in Appendix Section X.08 which sought to quantify the soil volume characterized as exhibiting elevated levels of presumed “natural arsenic” that may need to be removed and disposed of off-site. The cost estimates reflect the findings of these memorandums.

Next Steps

Early in Design Development phase, the project will undertake additional geotechnical exploration of the site as recommended in Section 3.1.3 of the Lahlaf report. This investigation will confirm soil conditions, foundation design, and water table elevations in an effort to further refine developmental costs for the project. Similarly, PEER Consultants will be engaged as the project LSP to continue exploration of the site geo-environmental considerations. Consideration of site cut & fill analysis as well as the anticipated quantity of presumed “natural arsenic” containing soil will be evaluated to determine if and how such soils can be re-used on site and how much can be removed and disposed of off-site.

The current cost estimates have taken a conservative approach to anticipating the costs for remediation and development of the site.

CODE ANALYSIS

Project Summary & Applicable Codes

The Wilmington Elementary School (the Project) includes construction of a new elementary school serving grades Pre-Kindergarten through grade 5. This summary is intended to convey compliance of the completed school building project with the 10th Edition of the Massachusetts State Building Code (CMR 780) which is anticipated to be effective when the project is eligible for construction permitting.

Applicable Codes:

1. Massachusetts State Building Code (780 CMR), 10th Edition (2021 IBC with amendments)
2. Uniform Sate Plumbing Code (248 CMR 10.00)
3. Massachusetts Architectural Access Board (MAAB) Regulations (521 CMR)
4. 2010 Americans with Disabilities Act Standards for Accessible Design (where more stringent than MAAB)
5. Massachusetts Base Energy Code (780 CMR, Chapter 13), 10th Edition (2021 IECC with amendments)
6. Massachusetts Fire Code (537 CMR 1.00) 2021 NFPA 1 with MA Amendments
7. Massachusetts Electrical Code (527 CMR 12.00) 2023 NFPA 70 with MA Amendments
8. Massachusetts Board of Elevator Regulations (524 CMR)

Occupancy Characteristics

The completed project will contain classrooms for grades Pre-K through 5, administrative offices, a cafeteria (including a performance platform) and associated kitchen, a gymnasium, and associated support spaces (mechanical, electrical, and storage spaces).

The occupancy of the complex will be generally classified as Use Group E (Educational) as defined in Section 305 with specific functions and occupancies defined as follows:

Level	Function	Use Group
1	Classrooms	E
	Offices	B (2)

	Gymnasium	E (1)
	Media Center (Library)	E (1)
	Cafeteria & Kitchen	E (1)
	Storage	S-2 (2)
	Utility & Miscellaneous	U (2)(3)
2	Classrooms	E
	Offices	B(2)
	Storage	S-2 (2)
	Utility & Miscellaneous	U (2)
3	Classrooms	E
	Offices	B(2)
	Storage	S-2 (2)
	Utility & Miscellaneous	U (2)

Note 1: Assembly areas that are accessory to Group E occupancies are not considered separate occupancies (§303.1.3).

Note 2: Accessory occupancies are not required to be separated from the main occupancy (§508.2.4).

Note 3: Incidental Accessory Occupancies shall be separated from the main occupancy as described in Table 509.

Physical Characteristics

The project is organized into a three-story classroom wing to the west and a one and two-story public spaces building to the east. The classroom wing contains primarily educational spaces while the public wing incorporates large volume assembly spaces, additional educational spaces, and administrative areas.

The total facility area of the project identified in the Code Plan Diagrams is described as follows:

Level	**Building Area (SF)**
1	76,560
2	42,479
3	41,692
Total:	**160,731**

The building heights from the average grade plane to highest portion of the flat roof can be characterized as follows:

Stories	Building Height (Area)
Three-Story	44 feet (Classrooms)
Two-Story	29 feet (Media Center, Gymnasium

Construction Type, Allowable Height, Allowable Area

Occupancy Separations & Mixed Use

The building is classified as **Type IIA** construction.

Allowable Height

The allowable tabular building height in feet as described in table 504.3 for Type II A, Group E in a building equipped with an automatic sprinkler system is **85 feet.** The maximum roof height, above the average grade is **44 feet,** at the three-story classroom wing.

The allowable tabular building height in stories as described in table 504.4 for Type II A, Group E in a building equipped with an automatic sprinkler system is **4 stories.** The maximum number of stories at the classroom wings is **3 stories.**

Allowable Area

The allowable tabular area in square feet as described in Table 506.2 for Type II B, Group E in a multistory building equipped with an automatic sprinkler system is **79,500 square feet**.

The project includes a fire access road providing 30-plus foot wide access to 100% of the perimeter of the building. The amount of Area Increase determined in accordance with Table 506.3.3 is **0.75.**

The Project is considered Mixed-Occupancy, Multistory building, and the allowable area for each story is determined in accordance with Section 506.2.2. Because the building is less than four stories, each story will comply individually with Section 508.1 for Mixed Use and Occupancy.

Allowable Area (Aa) = $[A_t + (NS \times I_f)]$

Aa = [79,500 + (26,500 x 0.75)] = **99,375 SF**

Levels 2, 3 includes unseparated accessory occupancies that do not occupy more than 10 percent of the floor area of the story and complies with Section 508.2 for Accessory Occupancies.

Level 1 includes accessory occupancies that do occupy more than 10 percent of the floor area of the story and will comply with with Section 508.4 for Separated Occupancies.

In order to comply with Section 508.4, portions of the B group occupancy (at the Administration Area), U group occupancies, and S-2 occupancies will be separated from the other occupancies in accordance with Table 508.4 as follows:

- Group B occupancies require a 1-hour fire-resistance rated separation with an automatic sprinkler system.
- Group U and S occupancies have no fire-resistance rated separation requirement with automatic sprinkler system.

Allowable areas for each occupancy group have been calculated assuming Single-Occupancy, Multistory Buildings for a three-story Construction Type IIA building in accordance with section 506.2.2. The allowable areas for each occupancy group are as follows:

Allowable Area-Educational (Aae) = [79,500 + (26,500 x 0.75)] = **99,375 SF**

Allowable Area-Business (Aab) = [112,500 + (37,500 x 0.75)] = **140,625 SF**

Allowable Area-Utility (Aau) = [57,000 + (19,000 x 0.75)] = **71,250 SF**

Allowable Area-Storage S-2 (Aas) = [237,000 + (79,000 x 0.75)] = **296,250 SF**

Level 1 - Allowable Building Area Sum of the Ratios Calculation

Separated Occupancy	Allowable Building Area	Actual Separated Occupancy Area	Ratio (Actual:Allowable)
E	99,375	67,547	0.680
B	140,625	3,590	0.026
U	71,250	3,802	0.053
S	296,250	1,620	0.005
		Sum of the Ratios:	**0.764**

Level 1 complies with Section 508.4 for separated mixed use.

The following Incidental Uses will be provided with the required separation and/or protection in accordance with Table 509:

Incidental Use per Table 509	Separation and/or Protection
Electrical rooms containing transformers over 112 1/2 Kva	1 hour separation [1]
Emergency Electrical rooms & closets	2 hour separation [1]

Note 1: Separation based on NEC requirement, included for convenience

Fire Resistance Rating of Building Elements:

Fire resistance rating of building elements for **Type IIA** construction are based on the requirements of Table 601 or by other code provisions as described below. Refer to Means of Egress section of this Summary for rating of egress components.

Primary Structural Elements

1 hour fire-resistance rating

- Fire protection of structural member in roof construction shall not be required, including protection of primary structural frame members, roof framing and decking where every part of the roof construction is 20 feet or more above any floor immediately below.

- Heavy Timber complying with section 2304.11 shall be allowed for roof construction, including primary structural frame members, where a 1-hour or less fire-resistance rating is required.

The Project will utilize Heavy Timber framing in accordance with section 2304.11. Heavy Timber portions will support the roof construction over the Cafeteria.

Bearing Walls

Exterior: **1-hour** fire-resistance rating

Interior: **1-hour** fire-resistance rating

Other Exterior Walls

The building is significantly separated from any other building and therefore exterior walls are not subject to the fire resistive rating requirements based on separation distance in Table 602.

Exterior walls may be required to be rated in close proximity to exit enclosures in accordance with Section 1023.7.

Portions of exterior walls within 4 feet of the intersection with the fire wall between Code Buildings AB and C will be rated for 1-hour in accordance with section 706.5.1.2.

Interior Walls & Partitions

No requirement based on construction type per Table 601. Interior walls and partitions shall be rated based on the specific conditions outlined in the Occupancy Separations and Mixed Use, Building Separations, or Special Use & Occupancy Considerations sections of this Code Summary. Additional interior wall & partition ratings may also be required by other sections of the code and are described elsewhere in this Summary.

Floor Construction and Secondary Members:

1-hour fire-resistance rating

No requirement based on construction type per Table 601. Horizontal assemblies in compliance with Section 711.2 will be required to separate occupancies as outlined in the Occupancy Separations and Mixed Use, Building Separations, or Special Use & Occupancy Considerations sections of this Code Summary.

Roof Construction and Secondary Members:

1 hour fire-resistance rating

- Fire protection of structural member in roof construction shall not be required, including protection of primary structural frame members, roof framing and decking where every part of the roof construction is 20 feet or more above any floor immediately below.

- Heavy Timber complying with section 2304.11 shall be allowed for roof construction, including primary structural frame members, where a 1-hour or less fire-resistance rating is required.

The Project will utilize Heavy Timber framing in accordance with section 2304.11. Heavy Timber portions will support the roof construction over the Cafeteria.

Means of Egress

Occupant Loads will be calculated based on Table 1004.1.2 for Assembly Spaces without fixed seating, by actual seat count for spaces with fixed seating (1004.4), or by the design occupant load where this value exceeds the tabular values in accordance with Section 1004.2. Occupant loads for individual spaces can be found on the Code Plan Diagrams.

For the sake of these calculations, General Classrooms and other instructional spaces intended to contain only loose furniture are calculated as “Classroom area” (20 net square feet per occupant). Art Studios, Music Classrooms, and other vocational or specialty instruction spaces intended to contain large amounts of fixed casework and/or equipment are calculated as “Shops and other vocational areas” (50 net square feet per occupant).

The number of required exits per story (per section 1006.3) and the total egress capacity required and provided are summarized on the Code Plan Diagrams.

Two exits or exit access doorways shall be provided from all spaces with a maximum occupant load larger than 49 per Table 1006.2.1; this requirement is applicable to all general classrooms with a net square footage over 1000 SF unless an alternative means of calculating the occupant load is reviewed and accepted by the Authority Having Jurisdiction.

Kindergarten and Pre-K classrooms will have a maximum occupancy of 49 posted at the door to the classrooms in lieu of the calculation at 20 SF / occupant. As such, the space is not required to have two means of egress, exit signs, or doors with exit devices.

Three exits shall be provided from spaces with an occupant load of 501 to 1,000 occupants, and four exits shall be provided from spaces with an occupant load greater than 1,000 occupants (1006.2.1.1). Exits shall be arranged in accordance with section 1007.1.1.

The maximum length of exit access travel distance shall not exceed 250 feet in accordance with Table 1017.2.

Corridors are not required to be rated per Table 1020.1.

Corridors with a required Educational occupancy of 100 or more shall not be less than 72" wide in accordance with Table 1020.2, or not less than 44" for all other portions of the building.

Dead end corridors shall not be greater than 50' in length (1020.4 Ex. 2)

Interior exit stairways, which provide a protected path of egress travel to the exit discharge, shall be enclosed with fire barriers and / or horizontal assemblies with a rating of not less than 1 hour (1023.2).

Exit access stairways, which serve only two stories, are not required to be enclosed with a rated shaft enclosure (1019.3.1).

Special Occupancy & Use Considerations

Cafeteria with Performance Platform

Total occupant loads for the Cafeteria where calculated assuming concentrated seating segregated into seating "zones". The total occupant load for the Cafeteria is greater than 50 and less than 500, requiring two means of egress per Section 1006.2.

The area identified on the plans as the Platform specifically meets the code definition of a Platform defined in section 202. Portions of section 410 related to stages, proscenium ratings, roof vents, egress from stairs, and

rated separations are not applicable to the platform. The construction of the platform will comply with section 410.4.

Gymnasium

The occupant load of the gymnasium has been calculated using a conservative approach that assumes an event such as a town meeting where loose chairs are organized on the gymnasium floor. Refer to the Code Plan for total occupant load. Using this assumption, the total occupancy of the gymnasium and platform exceeds 500 occupants, and three exits are required. All three of these exits pass into corridors.

Media Center

The occupant load for the Media Center has assumed portions of the space containing shelving will be classified as Stacks and the other portions will be classified as Reading Areas in accordance with table 1004.1.2.

Special Egress Considerations

Stairways:

Exit access stairways connecting only two stories not open to other stories are not required to be enclosed (1019.3, Ex. 1). The exit access stairway from the upper level adjacent to the Media Center that descends to the Cafeteria will not be enclosed.

Where the exterior stair enclosure walls are not rated, the exterior walls that are less than 180 degrees from the unrated exterior wall of a stairway enclosure shall have a fire resistance rating of not less than 1 hour for a distance of 10 feet from the stair enclosure per section 1023.7. Openings within these walls will have a fire protection rating of ¾ hour.

Fire Protection Systems

Sprinkler systems will be provided in accordance with 903.3.2(1)(a). Such systems will be NFPA 13 systems as required by Section 903.3.1.1

Sprinklers will not be provided in the elevator machine room per Section 903.2 Exception 2. Specific areas exempted from fire protection under section 903.3.1.1.1 require the approval of the fire code official.

Alternative fire-extinguishing systems shall be provided for all Type I hoods in commercial kitchens per section 904.2.2.

Because no floor level is more than 30 feet above the lowest level of fire department vehicle access, no Class III standpipes are required due to building height per section 905.3.1. However, a standpipe will be provided in the enclosed stair as directed by the local Fire Department.

Per section 905.4, Class I standpipe hose connections will be provided to improve the firefighting operations in the following locations:

- At floor level landings of enclosed egress stairs.

The new school will be provided with portable fire extinguishers in accordance with Section 906.1. In addition to general portable fire distribution, additional portable fire extinguishers will be provided in the following locations:

- Within 30 feet of commercial cooking equipment.
- In the elevator machine room.
- On each floor of structure *while under construction* (to be provided by the General Contractor).
- Where required by the International Fire Code sections on Table 906.1. (No such areas have been identified in the project).
- Special hazard areas such as Science Classrooms, Tech classrooms, or other locations required by the fire code official. (No such areas have been identified in the project).

Fire alarm and detection systems will be installed in accordance with Section 907. Refer to Fire Alarm drawings for additional information and requirements.

Emergency Power & Lighting

Emergency Power shall be provided by an on-site generator and in accordance with Chapter 27 to provide the illumination levels set forth in Section 1008. Refer to Electrical drawings for additional information related to generator and egress lighting.

Plumbing Fixtures

The required plumbing fixture types and counts have been calculated based on 248 CMR 10.00: Uniform State Plumbing Code, Table 1.

Toilet fixtures, including toilets and lavatories, are provided for Kindergarten and Pre-kindergarten students in dedicated classrooms, as permitted by 248 CMR section 10.10 (15)(c)12.d

Pre-Kindergarten
Classrooms with Unisex / Gender-neutral toilet rooms pet 10.10 (15)(c)12.d

	Students Only	Toilets	Lavs				Jan. Sink	DF
Required Student Fixtures[9]:	**90**	**5**	**9**				**1 per Flr**	
Provided:							YES	
Gen Neut Allocation[9]	1 Tlt Rm per Classroom	5	5					
Lavs Provide in Classrooms[10]	2 per Classroom		10					
Total Fixtures Provided:		**5**	**15**				**0**	**0**

Kindergarten
Classrooms with Unisex / Gender-neutral toilet rooms pet 10.10 (15)(c)12.d

	Students Only	Toilets	Lavs				Jan. Sink	DF
Required Student Fixtures[9]:	**144**	**6**	**6**				**1 per Flr**	
Provided:							YES	
Gen Neut Allocation[9]	1 Tlt Rm per Classroom	8	8					
Lavs Provide in Classrooms[10]	2 per Classroom		16					
Total Fixtures Provided:		**8**	**24**				**0**	**0**

Educational Occupancy Scenario - Whole Building (Excluding Pre-Kindergarten & Kindergarten)

	Total Occupants	F Toilets	F Lavs	M Toilet	M Lav	M Urinal	Jan. Sink	DF
Required Student Fixtures[1]:	**890**	**11**	**18**	**11**	**18**	**up to 50%**	**1 per Flr**	**7**
Provided:							4	7

Provided:					
Gen Neut Allocation[4]	13 GN = 7F / 6M	7	7	6	6
Total Fixtures Provided:		**7**	**7**	**6**	**6**

Assembly Occupancy Scenario - Code Building B

	Total Occupants	F Toilets	F Lavs	M Toilet	M Lav	M Urinal
Required Fixtures[3]:	**1115**	**16**	**12**	**8**	**12**	**up to 67%**
Provided[5]:						
Group Toilet Rooms		20	14	20	14	6
Gen Neut Allocation[4]	5 GN = 2F / 3M	1	1	1	1	0
Total Fixtures Provided:		**21**	**15**	**21**	**15**	**6**

1. Student Fixture Counts based on 248 CMR 10.10(15) Table 1 for "Public & Private Schools, Kindergarten, Middle & High School"
2. Faculty Fixture Counts based on 248 CMR 10.10(15) Table 1 for "Public & Private Schools, Kindergarten, Middle & High School Staff"
3. Student Fixture Counts based on 248 CMR 10.10(15) Table 1 for "Assembly - Indoor Recreational Facilities, Rinks, Swimming Pools, Gymnasiums and Other with Spectator Seating (Patrons & Staff)"
4. Gender Neutral Allocation accounts for how designated single user gender neutral toilet rooms have been allocated to male or female fixture requirements to satisfy minimum fixture requiremetn of Table1.
5. Only "open to public" gang and single user toilet rooms on Level 1 have been included in the provided fixtures for Assembly use tabulation.
6. Gender Neutral toilet rooms are used to satisfy the minimum fixture requirements using one of the two options provided in 10.10(15)(g) for each occupancy group.
7. Where option (r) 2. is utilized, the balance of requried fixutres are provided in gender-designated gang toilet rooms
8. Where option (r) 1. is utilized, all required plumbing fixtures are provided in gender neutural single user toilet rooms
9. Fixture Counts based on 248 CMR 10.10(15) Table 1 for "Public & Private Pre-Schools and Daycare" one single user rest toom is allowed for up to 20 children and staff combined. The district has committed to a Pre-Kinderegarten target class size of 15 students per classroom.
10. Per 248 CMR 10.10(15)(c)(12)(d)(ii) for Students younger than six years old, lavatories may be installed in classroom areas.
11. Per 248 CMR 10.10(15)(c)(12)(d)(i) for Students younger than six years old, unisex/gender neutral toilet facilities may be installed.

The minimum fixture counts for students in Special Education classrooms and in Kindergarten through 2nd grade classrooms are provided as unisex/gender-neutral toilet rooms as permitted in section 10:10(15)(g)(2) of 248 CMR. Gang toilet rooms are provided to meet the required fixture counts for students in grades 3 through 5.

Energy Efficiency

Although the Town of Wilmington is not a Strech Code or Opt-In Code community, the new school building will be designed in accordance with the Massachusetts Municipal Opt-In Specialized Code (225 CMR 23.00: 2021 International Energy Code with Massachusetts Amendments, including Appendix CC.)

The Project will seek compliance through the Targeted Performance Compliance requirements of Section C401.2.1(2).

The building envelope will demonstrate compliance with the Component Performance Alternative method for Low Glazed Wall System Buildings described in section C402.1.5.1.

A solar ready zone will be indicated on the drawings in accordance with the requirements of section C402.3 and Appendix CB. The required reserved electrical requirements stipulated in Appendix CB will be provided.

Section C402.5 - Air Leakage Thermal Envelope

A continuous air barrier complying with Section C402.5.1 will be provided for the building envelope.

The air leakage of all fenestrations will be specified in accordance with the limitations described in Table C402.5.3.

Building entrances shall be designed with Vestibules in accordance with Section C402.5.5. Exterior doors exempt from this requirement include:

- The Shipping / Receiving door and Mechanical Room door. (Section 402.5.8, Ex. 2).

UTILITY AND PERMITTING ANALYSIS

Executive Summary

Civil Engineering consultant CDW Engineering performed research of the existing site conditions and anticipated site permitting requirements for the proposed PK-5 elementary School located at 320 Salem Street, Wilmington, Massachusetts. CDW Engineering's research included an initial site visit and walk, as well as a review of available record plans. CDW recommends video inspections of the existing storm drainage system that connects Ballardvale and Salem Streets to determine the condition of the drainage pipes.

An existing conditions site survey by Nitsch Engineering with utility research was completed to verify assumptions made from the review of record plans and ground assumptions.

Existing utility routes will need to be maintained during construction since the existing North Intermediate school is anticipated to remain occupied throughout construction phases. Independent utility routes to a new mechanical / electrical / water entry location will be established to permit the installation of new utilities without disrupting school operations.

General Site Description

The North Intermediate School is located off Salem and Ballardvale Streets in a mainly residential area. The existing school building is the primary structure on the 12+ acre site, occupying the south-east portion. It has associated vehicular loop, parking and pedestrian sidewalks to the south, ball fields and sport courts to the north, and a playground just north of a parking area to the east. Subtle grade changes make the site mostly accessible.

Diverse trees serve as a buffer to the north, west, and south sides of the school, creating an inviting environment for students. Within the woodlands that grace the southern perimeter of the school, a small wooded deciduous wetland area is noted. Residential properties abut the project site to the northeast, north, west, and southwest. There are non-jurisdictional wetlands adjacent to the west and southwest property line of the site. The portion of the site west of the existing school building generally slopes downhill from south to north.

Existing vehicular access to the site includes 2 curb cuts along the 385 feet of frontage on Ballardvale Street to access a parking lot, playground, sports courts and fields. An additional 2 curb cuts along the 530 feet of frontage on Salem Street leads to a loop road servicing the main entrance. Situated adjacent to the Ballardvale Street entrance, the primary parking lot offers ample space for approximately 60 vehicles, accommodating both visitors and school personnel. Despite the asphalt surface of this parking lot being well-maintained, it's worth noting the absence of ADA-compliant parking spaces and proper signage.

There is a playground to the north of the parking lot, a large natural recreation area north and west of the existing building.

Existing Site Utilities

Currently, domestic water, electrical, and telecommunications utilities are all routed from the curb cuts under, alongside or overhead and entering the school at various points on the east elevation and into the boiler room.

Water

Water service to the building is provided by a 4-inch copper domestic waterline to the northwest side of the school connected to Wilmington's water system. The building does not have fire protection service. There is an existing fire hydrant on the corner of Salem Street and Ballardvale Street.

A fire hydrant flow test will be provided in the next phase to confirm adequate volume to serve the proposed sprinkler system for the project. A fire pump is included in the SD cost estimate and space for a fire pump room can be accommodated in the current plan if required. Hydrant locations will need to be reviewed by the Fire Chief.

Storm Drainage

There is limited storm drainage infrastructure onsite. The parking lot has two catch basins that, according to the Wilmington's Drainage online map, connect to a drainage system comprised of both asphalt-coated corrugated metal pipe (ACCMP) and reinforced concrete pipe (RCP) that runs in between the grass and the baseball fields and discharges near a wetland to the west of the site. Catch basins were also observed on Ballardvale Street, which connects to a 12" Corrugated Metal Pipe (CMP) system that runs along Ballardvale and Salem Street and seems to discharge near wetlands to the east of the school property.

Sewer

An existing conditions site survey by Nitsch Engineering with utility research was completed to verify assumptions made from the review of record plans and ground assumptions for municipal sewer service.

Based on the existing conditions survey, a 6" sewer pipe connects to the 8" sewer main in the street. It is estimated that the 8" pipe carries approximately 650,000 gallons per day.

> The existing North Intermediate School (grades 4-5) generates approx. 2,900 gallons per day (based on 250 students + 40 staff = 290 persons * 10 gallons/day).
>
> A proposed PK-5 school generates approx. 9750 gallons per day (based on 855 students +120 staff = 975 persons * 10 gallons/day).

The increase in sewage is estimated at 6,850 gallons/day, well under 650,000 gallons per day.

Natural gas

The natural gas service and meter are located on exterior of building adjacent to the Mechanical Room. Gas piping is black steel with threaded and welded joints depending on the pipe size.

Gas service is not required for the proposed project.

Electric/Telecommunications

Electric service to the building is provided via underground lines to a building mounted meter. Telephone, CATV, and fiber run underground from a utility pole to the electric room.

Reading Municipal Light District (RMLD) is the utility provider and participates in the Site/Landscape Working Group meetings to stay abreast on project needs and updates. RMLD was consulted regarding the existing infrastructure and its ability the handle the a new 4,000A service load for the proposed new building. RMLD confirmed they anticipate the ability to feed the proposed building in correspondence received on February 13, 2025.

The Electrical Engineer will continue to coordinate electrical services with RMLD for new services to the site in support of the new school.

Preliminary Permitting Considerations

Wetlands Protection Act (310 CMR 10.00)

The Wetlands Protection Act ensures the protection of Massachusetts' inland and coastal wetlands, tidelands, great ponds, rivers, and floodplains. It regulates activities in coastal and wetlands areas and contributes to the protection of ground and surface water quality, the prevention of flooding and storm damage, and the protection of wildlife and aquatic habitat.

LEC Environmental Consultants. Inc delineated wetlands at the project site which were located on the survey provided by Nitsch Engineering. There are two wetland areas, one along the western side of the site and the other along the southwestern property line. Both areas were identified as non-jurisdictional. A meeting with the local conservation agent will be held during the permitting process to confirm the non-jurisdictional status.

Bylaw and Regulations

The Town of Wilmington Zoning Bylaw indicates site plan application requirements in section 6.5.2 and will consult the Town Engineer, Fire and Police Departments, Building Inspector, Board of Water & Sewer Commissioners, Department of Public Works, Board of Health, and the Conservation Commission in the process.

In addition to the Town Regulations, new work proposed on-site will be required to meet the MassDEP Stormwater Standards. The project expects to meet all these requirements.

Wellhead Protection Area

The North Intermediate is located within the Zone II Groundwater Protection District (entire site). There are additional stormwater water quality requirements for groundwater infiltration that can be accommodated, and are not generally a constraint issue. Main impacts from a Wellhead area would affect an on-site septic system, but the site is connected to sewer, so a non-issue for septic/sewer. Requirements will be reviewed as part of the site plan permitting.

Wellhead Protection Area

The North Intermediate is located within the Zone II Groundwater Protection District (entire site). There are additional stormwater water quality requirements for groundwater infiltration that can be accommodated, and are not generally a constraint issue. Main impacts from a Wellhead area would affect an on-site septic system, but the site is connected to sewer, so a non-issue for septic/sewer. Requirements will be reviewed as part of the site plan permitting.

Natural Heritage & Endangered Species Program

A review of the 15th Edition of the Massachusetts Natural Heritage Atlas prepared by the Natural Heritage and Endangered Species Program (NHESP), updated August 2021, indicates that the North Intermediate School site is NOT located within a Priority Habitat of Rare Species or an Estimated Habitat of Rare Wildlife.

Massachusetts Environmental Protection Act (MEPA)

The proposed development of this site as shown on the current design plans does not appear to trigger any MEPA thresholds associated with CDW Engineering's design elements and will likely not require an ENF or EIR to be filed with MEPA.

Floodplain

Based on the FEMA Flood Insurance Rate Maps for Wilmington (Community Panel No. 25017C0283F), the Site does not fall into a regulated Flood Zone.

USEPA NPDES

Construction activities that disturb one acre or more are regulated under the United States Environmental Protection Agency's (USEPA) National Pollution Discharge Elimination System (NPDES) Program. In Massachusetts, the USEPA issues NPDES permits to operators of regulated construction sites. Regulated projects are required to develop and implement stormwater pollution prevention plans in order to obtain permit coverage.

Because the land disturbance for the Project is anticipated to be greater than one acre, it is anticipated that a Notice of Intent will need to be filed with the EPA.

Historical Resources

The existing North Intermediate School was built in 1962 and is of no special historical, architectural, or aesthetic value. The PNF is not expected to raise any issues of historical preservation for the existing building. It is understood that MHC approval is required prior to tendering bids for the project.

Zoning Analysis

The lot is located within the Residential-20 (R-20) zoning district. The Town of Wilmington dimensional requirements for R-20 district are as follows:

Minimum Lot Area: 20,000 square feet
Minimum Lot Frontage: 120 feet
Minimum Front setback: 40 feet
Minimum Side Setback: 20 feet
Minimum Rear Setback: 20 feet
Minimum Lot Width: 125 feet
Maximum Height: 35 feet or 2-1/2 stories

The academic wings of the proposed building are 3 stories and will require approval from zoning.

Wilmington Zoning also has a requirement for "Educational" parking spaces: 1 space for each staff position, plus 1 space for each five persons of rated capacity of the largest auditorium, and 1 space for each student vehicle which can be expected at only one time on the premises.

The proposed gym is sized for 1,115 people, which equates to 223 parking spaces. An additional 140 staff parking spaces totals 363. Ideally the gymnasium would be used after hours for events. That may reduce the requirements for event parking to just the 223 spaces. Currently the site design includes 193 proposed spaces.

The actual number of parking spaces needed is a minimum of 140, based upon a staffing analysis of teachers, staff, volunteers and visitors. The number of 363 parking spaces would be burdensome from several points of view:

- Building that much parking would preclude the inclusion of play areas on the site
- This amount of impervious area would be very difficult to permit on this site
- It would be a burdensome cost just to build these spaces, only to have more than half of them empty most of the time.

The design team will present this evidence at the site planning process with the aim of seeking relief from this zoning requirement for height and parking.

Municipal Open Space Status

The existing North Intermediate School site has a Municipal Open Space designation with "Limited Protection". The Town of Wilmington's Open Space and Recreation Plan (2021) explains the following regarding Open Space protected through Town Ownership (Page 51, Page 54):

"The next level of open space protection is through ownership by the Town of Wilmington… Land under the general control of the Town provides some level of protection. Development by the Town of parcels under its control will, in most instances, require the expenditure of Town funds and be subject to a majority vote of Town Meeting."

The site use will not change with the project and continue as a town property used for educational purposes. Town votes planned in September 2025 related to this project are for the expenditure of Town funds and for a majority vote by the Town for the project to move forward.

Permitting table timeline

Permit	Permitting Preparer	Permitting Authority	Filing Date	Hearing Date	Anticipated Review (Approval Date)
Site Plan Review	CDW	Town of Wilmington Planning Board	After 75% DD	TBD	8- to 10- weeks after submittal
Notice of Intent	CDW	Town of Wilmington Conservation Commission	After 75% DD	TBD	8- to 10- weeks after submittal
Scituate DPW (Roadway, driveway, and general utility layout)	CDW	Wilmington DPW	After 75% DD until 100% CD	On-going Review after 100% DD	8- to 10- weeks after submittal
National Pollutant Discharge Elimination System (NPDES) with EPA Notice of Intent (NOI)	Contractor	Environmental Protection Agency (EPA)	Two weeks before construction starts	No hearing required	Once Submitted to EPA; Close NOI at end of Construction.

MASSING STUDY

Design Proposal

The new PK-5 elementary school is intentionally designed to provide clear lines of sight to the site's primary vehicular access points, enhancing visibility and safety. Oriented along an east–west axis, the building takes full advantage of passive solar energy and natural daylighting, enriching the learning environment with abundant sunlight. While the new facility stands one story taller than the existing school, careful design and massing techniques mitigate its presence within the context of the site.

Set approximately 410 feet from Ballardvale Street and 440 feet from Salem Street, the school's design transitions gracefully in scale from the two-story public wing to the three-story academic wing. The building's mass is thoughtfully broken down by single-story canopies, vestibules, and program spaces, contributing to a pedestrian-friendly, approachable facade. The academic wing is organized vertically by grade level, with durable, light-toned masonry and cast stone banding at the first two levels offering a robust and visually grounded base. Above, a darker red masonry brick provides a rich material contrast while symbolizing the developmental progression of students through the upper grades. Glazed stair towers, large-format windows, and transparent extended learning areas bring light into the core of the building while adding vertical articulation to the facade. Mirroring the public wing, one-story classroom projections and canopies further soften the building's overall scale and integrate it harmoniously into its context.

Proposed South Elevation Street View from Salem Street approach

Architecturally, the new school is organized into two clearly defined wings to distinguish between "public" and "private" functions. The public wing—designed to welcome students, staff, and community members during and beyond school hours—includes the gymnasium, cafeteria, performance space, art and music rooms, and media center.

In contrast, the private wing houses the academic core of the school and is designed with security in mind, allowing it to be fully secured during after-hours events or in emergency situations.

The academic layout is both age-appropriate and flexible, with two lower wings dedicated to PreK–K and grades 1–2, and a third, upper-level wing accommodating grades 3–5. Each of the seven grade-level “neighborhoods” includes clusters of classrooms anchored by shared extended learning spaces and small group rooms. Special education spaces are seamlessly integrated throughout, promoting inclusion and accessibility across all grade levels.

THIS PAGE INTENTIONALLY IS BLANK.

BUILDING SYSTEM NARRATIVES

The following sections from our consultant engineers describe the proposed building systems.

Sustainable Design Elements	4.1.2.K-3
Building Structure	4.1.2.K-3
HVAC Life Cycle Cost Analysis	4.1.2.K-5
Electrical	4.1.2.K -11
Plumbing	4.1.2.K -18
Fire Protection	4.1.2.K -20
Information Technology	4.1.2.K -22

THIS PAGE INTENTIONALLY LEFT BLANK

SUSTAINABLE DESIGN ELEMENTS

The new elementary school will feature many sustainable design elements including:

- site stormwater management
- water use reduction through low-flow plumbing fixtures
- many energy-efficient building systems such as mechanical, electrical, and interior lighting and controls
- Sustainable material choices through heightened durability, higher indoor air quality, healthier component materials and regionally sourced products

A full report and LEED scorecard can be found in Section 4.1.2 L Sustainable Building Design Guide.

STRUCTURE

Substructure

Foundations

Based on the foundations of the existing structures at the columns of the proposed structure would bear on reinforced concrete spread footings and the perimeter foundation walls would bear on continuous reinforced concrete strip footings extending at least 4 ft.- 0 in. below grade. With the assumed bearing capacity of the soil of 2 tons/sf, a typical interior footing would be 11 ft.- 0 in. x 11 ft.- 0 in. x 24 in. deep and the typical exterior footings would be 10 ft.- 0 in. x 10 ft.- 0 in. x 24 in. deep in the three-story areas. In the two-story areas a typical interior footing would be 9 ft.- 0 in. x 9 ft.- 0 in. x 24 in. deep and the typical exterior footings would be 8 ft.- 0 in. x 8 ft.- 0 in. x 24 in. deep. In single-story areas a typical interior footing would be 7 ft.- 0 in. x 7 ft.- 0 in. x 24 in. deep and the typical exterior footings would be 6 ft.- 0 in. x ft.- 0 in. x 24 in. deep. Typical interior and exterior footings at the Cafetorium and Gymnasium would be 8 ft.- 0 in. x 8 ft.- 0 in. x 24 in. deep. The exterior foundation walls would be 14 to 16 in. thick, reinforced cast-in-place concrete walls on 24 to 36 in. wide continuous reinforced concrete strip footings around the perimeter of the building extending a minimum of 4 ft.- 0 in. below finished grade.

Slabs-on-Grade

Based on the existing school construction, the lowest level of the proposed structure would be a 5 in. thick concrete slab-on-grade reinforced with welded wire reinforcing over a vapor barrier on 2 in. thick rigid insulation on 8 in. of compacted granular structural fill and a base course of 8 in. of compacted gravel.

Superstructure

Typical Floor Construction

A 5 ¼ in. light weight concrete composite metal deck slab reinforced with welded wire fabric on wide flange steel beams spanning between steel girders and columns. The weight of the structural steel is estimated to be 14 psf for the typical framing. Allow for 25 psf of weight of structural steel for the classrooms above the Gymnasium, the floor may be framed with steel beams or trusses spanning across width of the gymnasium.

Typical Roof Construction

The roof construction would be galvanized, corrugated 3 in. deep, Type 'N' metal roof deck spanning between wide flange steel beams and girders. At locations of roof supported mechanical equipment, a concrete slab will be provided similar to the typical supported slab. The weight of the structural steel is estimated to be 14 psf.

Cafeteria Roof Framing

The roof construction would be acoustic, galvanized, corrugated 3 in. deep, Type 'NA' metal roof deck at the Cafeteria, spanning between structural glue-laminated timber beams and girders, supported by steel and/or glue-laminated wood columns.

Gymnasium Roof Framing

The roof construction adjacent to the classrooms would be acoustic, galvanized, corrugated 3 in. deep, Type 'NA' metal roof deck at the Gymnasium, spanning between long span steel beams or trusses. The weight of the steel joists and structural steel framing is estimated to be 25 psf.

Vertical Framing Elements

Columns

Columns will be hollow structural steel columns. Typical columns would be HSS 8 x 8 columns. Typical columns would be HSS 12 x 12 steel columns at the Gymnasium. Typical columns would be 16 in. x 16 in. glue-laminated wood columns at the Cafeteria.

Lateral Load-Resisting System

The typical lateral load resisting system would be concentric braced frames of structural steel members. The lateral load resisting system of the Gymnasium structure may be reinforced masonry shear walls or ordinary concentric braced frames comprised of HSS structural steel members.

HVAC

LIFE CYCLE COST ASSESSMENT

A lifecycle cost analysis (LCCA) has been performed to quantify anticipated upfront costs, operating costs, and avoided energy costs for several mechanical system options to serve the HVAC needs of the Wilmington Wildwood Elementary School. The Elementary School is a new three-story school with an approximate gross area of 167,000 s.f. The building has been simulated with the school's anticipated hours of operation provided by the owner as follows:

It is anticipated that the typical student hours will occur from 6:30 am – 6:00 pm (Mon-Fri) while the building will be occupied between 6 pm – 9 pm (Mon-Fri) for limited community use, sports, and recreation programs. Limited summer programming shall occur throughout the building from 7:00 am – 3:30 pm (Mon-Fri) for special needs, summer camps, recreation, and sports practices. The Gym will also have limited community use on the weekends from 9:00 am – 9:00 pm.

The goal of the mechanical system lifecycle engineering economic analysis is to assess the performance of various mechanical systems in comparison to a baseline mechanical system.

Each option is compared to the baseline system to determine the greatest combined savings over a 50 year cycle to determine the most advantageous system considering anticipated hours of operation, electrical costs, maintenance costs, initial construction costs, and replacement costs.

By comparison of each option to the baseline system, the option with the greatest total life-cycle savings has been recommended.

The results of the LCCA have been presented to the Town's building committee who subsequently voted to proceed with the option that is outlined in the following the HVAC system narrative, which defines the scope of work and capacities of the HVAC system as well as the Basis of Design. The HVAC systems shall be designed and constructed for LEED for Schools v4 where indicated on this narrative.

DESIGN INTENT

The work of Division 230000 is described within the narrative report. The HVAC project scope of work shall consist of providing new HVAC equipment and systems as described here within. All new work shall consist of furnishing all materials, equipment, labor, transportation, facilities, and all operations and adjustments required for the complete and operating installation of the Heating, Ventilating and Air Conditioning work and all items incidental thereto, including commissioning and testing.

The HVAC narrative below provides a summary of new HVAC systems which shall be designated for the building.

BASIS OF DESIGN: (MASS CODE)
Project weather and Code temperature values are listed herein based on weather data values as determined from ASHRAE weather data tables and the International Energy Conservation Code. Weather data is based on Laurence G Hanscomb Air Force Base.

Outside: Winter 2.3 degrees F, Summer 91 degrees F DB 74 degrees F WB

Inside: 70 deg. F +/- 2 degrees F for Heating, 75 degrees F +/- 2 degrees F (55 percent RH) for all Air-conditioned areas (Administration, Nurses Office, Guidance, Cafeteria, Classrooms, Teacher Support, Gym).

Unoccupied temperature setback will be provided (60 degrees F heating (adj.), 85 degrees F cooling (adj.).

Outside air shall be provided at the rate in accordance with ASHRAE Standard 62.1 and the International Mechanical Code (latest adopted editions) as a minimum. All occupied areas will be designed to maintain 800 PPM carbon dioxide maximum.

SYSTEM DESCRIPTION – Air Source Heat Pump Chiller/Heater with Classroom Displacement Ventilation

Central Heating and Cooling Plant:

Heating and cooling for building areas shall be provided by a high-efficiency air source heat recovery heat pump chiller/heater plant that include the following quantities of chiller modules:

15 modular air source to water heat pump chillers with simultaneous heating and cooling and a capacity of 30 tons each. An additional heat pump chiller/heater or a supplemental 1000 kw backup electric boiler shall be included to inject heat into the hot water heating loop when ambient conditions limit the output capacity of the air-source heat pump chiller.

One of the modules will be redundant for heating/cooling backup purposes. The air-cooled heat pump chiller units will be mounted on the roof and shall be capable of providing 130 degrees F heating hot water supply at a 5 degrees F ambient temperature condition.

A mechanical room shall be provided for the associated hot water and chilled water pumps and hydronic accessories. The heat pump chiller plant will supply heating hot water and chilled water to heating and cooling equipment and air handling equipment throughout the building via a four-pipe fiberglass insulated schedule 40 black steel and copper piping system.

Primary hot water pumps (Quantity of two in a primary/standby arrangement) with variable frequency drives will be provided and will modulate speed to maintain a minimum flow to the heat pump chiller. Secondary hot water pumps (Quantity of two in a primary/standby arrangement) with variable frequency drives will be provided for meeting the variable flow needs of the hot water system distribution throughout the building. A plate & frame heat exchanger installed within the mechanical room shall be provided to separate the primary and secondary piping loops. In addition to pumps,

new hot water accessories including air separators, expansion tanks, and buffer tanks shall be provided.

Primary chilled water pumps (Quantity of two in a primary/standby arrangement) with variable frequency drives will be provided and will modulate speed to maintain a minimum flow to the heat pump chiller. Secondary chilled water pumps (Quantity of two in a primary/standby arrangement) with variable frequency drives will be provided for meeting the variable flow needs of the chilled water system distribution throughout the building. A plate & frame heat exchanger installed within the mechanical room shall be provided to separate the primary and secondary piping loops. In addition to pumps, new hot water accessories including air separators, expansion tanks, and buffer tanks shall be provided.

1. The heat pump chiller plant will distribute between 45 degrees F and 55 degrees F chilled water to the roof mounted air handling units located throughout the building and will distribute between 58 degrees F and 62 degrees F chilled water to the terminal radiant cooling panels units in the fully-air conditioned building. The chilled water distribution piping will be of the fiberglass insulated schedule 40 type and will be separate from the hot water distribution piping system. Compensated chilled water pumps with variable frequency drives will be provided for variable flow chilled water system distribution.

Ventilation air handling equipment: It is proposed that a new air-conditioning displacement ventilation system be installed to provide air-conditioning and ventilation to the occupied areas of the building.

1. New recirculating rooftop air handling units with supply and return air fans, VFDs, dual core energy recovery sections, hot water heating (and reheat) coils with modulating valve, chilled water cooling coil, economizer capability, and MERV 14 filtration will be provided to serve a new full air conditioning displacement ventilation system. Different building rooms and zones shall be provided with a variable volume (VAV) terminal box with combination temperature, humidity, and CO2 sensor controls. The controls will reduce outside air as allowed maintaining a maximum of 800 PPM while providing sufficient ventilation to meet the required heating or cooling load of the spaces served. As VAV boxes modulate, the supply and return air fans associated Variable Frequency Drives (VFD) of the rooftop units will adjust the fan speed based on system static pressure, reducing the energy consumed by the fans. Each room (or zone) shall be provided with low wall or floor mounted supply air displacement diffusers. Classrooms will typically be provided with two individual wall mounted displacement diffusing units between 250 and 400 CFM each (depending on room size). Return air will be drawn back to the units by ceiling return air registers located within the rooms and will be routed back to the rooftop unit by a galvanized sheet metal return air ductwork distribution system. Supplemental ceiling mounted chilled/hot water radiant panels will be provided along exterior walls that shall be interlocked with space enthalpy sensors that shall modulate the control valve of the terminal cooling coil closed when the space enthalpy is above dewpoint conditions.

2. Preliminary RTU Quantities, zones and airflow capacities are as follows:

RTU-A: (Classroom Wing) – 17,000 CFM Total, 75 Tons cooling, 475 MBH heating
RTU-B: (Classroom Wing) – 20,000 CFM Total, 75 Tons cooling, 475 MBH heating
RTU-C: (Classroom Wing) – 17;000 CFM Total, 75 Tons cooling, 475 MBH heating
RTU-D: (Gym) – 10,000 CFM Total, 40 Ton ASHP Packaged Unit
RTU-E: (Media Ctr) – 3,255 CFM Total, 12 Tons cooling, 88 MBH heating
RTU-F: (Cafetorium) – 10,000 CMF Total, 40 Tons Cooling, 260 MBH heating
RTU-G: (Kitchen/Custodial) – 3,000 CFM Total, 16 Tons cooling, 90 MBH heating
RTU-H: (Admin) – 4,000 CFM Total, 16 Tons cooling, 115 MBH heating
MAU: (Kitchen Hood Makeup) – 4500 CFM Total, 24 Tons cooling, 390 MBH heating

Air Distribution Systems:
The building areas are to be served by a fully air-conditioned variable volume displacement ventilation air distribution system with supplemental chilled water radiant cooling and heating panel system.

New ductwork shall be constructed and installed in accordance with SMACNA and IMC requirements. All new supply and return air ductwork shall be insulated per IMC code requirements (R-8). All new Kitchen exhaust fans shall be provided with new Fire-wrapped carbon steel or insulated stainless steel grease ductwork.

Exhaust Air Fan Systems:
Code required exhaust for the majority of building areas, including toilet rooms, shall be provided through the localized energy recovery ventilation (ERV) systems.

Dedicated exhaust air fan systems shall be provided for Kitchen exhaust air (if provided) and Janitor's closet areas.

Terminal Heating & Cooling Equipment:
Provide new hot and chilled water radiant heating and cooling panels for the perimeter heating and cooling for all fully air conditioned areas (eg. Admin Offices, Guidance, Nurse's suite, cafeteria) of the building. Classrooms shall be provided with hot water radiant heating panels. New hot water radiant heating panels or fin tube radiation shall be provided for perimeter heating of all restrooms with exterior exposure heating loads. Hot water radiation heating equipment shall be provided for all corridors, entryways. Hot water unit heaters shall be provided for all utility rooms.

Split system AC heat pump units:
New ductless split system high efficiency heat pump AC units will be installed to serve Elevator machine rooms, and IT and MDF Server rooms.

Lobby, Corridor, and Entry Way Heating:

New hot water convectors, cabinet unit heaters, and fin tube radiation heating equipment shall be installed to provide heating to building entry way and stairwell areas. Corridors shall be

ventilated from adjacent air handling unit systems. Main Corridor and Lobby areas shall be heated and dehumidified by the displacement ventilation systems.

Utility Areas:
Utility areas will be provided with exhaust air fan systems for ventilation and will typically be heated with horizontal type ceiling suspended hot water or electric unit heaters.

The Main Electric Rooms and IDF rooms will be air conditioned by high efficiency ductless air source heat pumps.

Testing, Adjusting, Balancing & Commissioning:
All new HVAC systems shall be tested, adjusted, balanced and commissioned as art of the project scope.

Automatic Temperature Controls – Building Energy Management System:
A new DDC (direct digital control) Automatic Temperature Control and Building Energy Management System shall be installed to control and monitor building HVAC systems. Energy metering shall be installed to monitor the energy usage of building HVAC systems and utilities (electric, water). The new DDC/ATC system shall be a BACNet open protocol system that is capable of being integrated into the Town Wide Central energy management system.

LEED Energy Savings Summary
To estimate the LEED V4 EAc2 – Optimize Energy Performance savings, energy model simulations have been performed comparing the design building to a baseline ASHRAE Standard 90.1-2010 building.

The ASHRAE Standard 90.1-2010 baseline building is as follows:

- Envelope:
  - Wall: U-0.064
  - Roof: U-0.048
  - Windows: 0.55 U-Value, 0.40 SHGC
  - Curtainwall/Storefront: 0.45 U-Value, 0.40 SHGC
- Mechanical System:
  - System 8 - Electric heating/chilled water cooling air handling units with energy recovery wheels and terminal fan-powered VAV boxes with electric reheat coils (one per floor)
  - System 4 – Packaged electric heat pump cooling/heating constant volume single zone air handling units (serving spaces with loads varying by 10 Btuh/s.f. of the average space load)
  - (2) high-efficiency water-cooled chillers with associated cooling tower
- Domestic Hot Water System:
  - Instantaneous electric domestic hot water system
- Lighting System:
  - 0.99 w/s.f.

The design building is as follows:

- Envelope:
  - Roof: U-0.018
  - Brick Veneer Walls: U-0.028
  - MCM Panel Walls: U-0.025
  - Windows: U-0.25, 0.30 SHGC
  - Curtainwall: U-0.25, 0.30 SHGC
- Mechanical System:
  - (Refer to System description)
- Domestic Hot Water System:
  - Instantaneous electric domestic hot water system
- Lighting System:
  - 0.5 w/s.f.

LEED Energy Savings Summary

A comparison of the Design Building against the ASHRAE Standard 90.1-2010 Baseline Building results in an energy cost savings of 42.8% for 16 total points relating to LEED V4 EAc2 – Optimize Energy Performance.

Note:

The values indicated above are based on energy modelling performed for system comparison purposes only. Our office strongly recommends adding a 30% safety factor to the calculated values of this report for budgeting purposes to account for potential variances to the actual operation of the building. Per ASHRAE Standard 90.1:

Neither the proposed building performance nor the baseline building performance are predictions of actual energy consumption or costs for the proposed design after construction. Actual experience will differ from these calculations due to variations such as occupancy, building operation and maintenance, weather, energy use not covered by this procedure, changes in energy rates between design of the building and occupancy, and the precision of the calculation tool.

ELECTRICAL

The following is the Electrical Systems narrative, which defines the scope of work and capacities of the Power and Lighting System, as well as the Basis of Design. The Electrical Systems shall be designed and constructed for **LEED for Schools** where indicated on this narrative.

Codes

All work installed under Section 260000 shall comply with the Massachusetts State Building Code and all local, county, and federal codes, laws, statutes, and authorities having jurisdiction.

Design Intent

The work of Section 260000 is as described in this Narrative. All work is new and consists of furnishing all materials, equipment, labor, transportation, facilities, and all operations and adjustments required for the complete and operating installation of the Electrical work and all items incidental thereto, including commissioning and testing.

Sequence of operations and interactions

Classroom and Corridor lighting will be controlled via "addressable relays", which is achieved through programming networked controls. The control of the relays will be by automatic means, such as an occupancy sensor in each classroom. The system will have a BacNet gateway and will be interfaced with the DDC control system for scheduled functions. The controllability shall be in conformance with credit ***LEED credit IEQC 6.1.***

Automatic control of receptacles based on occupancy will be provided for at least 50% of the receptacles installed in private offices, open offices, conference rooms, rooms used primarily for printing and/or copying functions, break rooms, individual workstations, and classrooms. Controlled receptacles will be marked per NEC 406.3 (E).

Exterior lighting will be controlled by photocell "ON" and "scheduled" for "OFF" operation. The parking area lighting will be controlled by "zones" with dimmable capability. Exterior lights will be addressable and dimmable. Fixtures will be designed and programmed to turn on at dusk utilizing photo sensor input. Fixture shall be turned off based on scheduled preference typically 5AM-6AM. Fixture output shall be scheduled to be reduced by 50% after 12AM. Additional schedule functionality shall be provided based on end user input.

Emergency and Exit lighting will be run through life safety panels and will be "ON" during normal power conditions, as well as power outage conditions. The emergency lighting system will have time control so that lights are "ON" only when the building is occupied.

Description of the Systems

Utilities:

The new building will be supplied with utility power from the utility company Reading Municipal Light

Department (RMLD). The new service will be fed via underground primary duct bank to a pad mounted utility company owned liquid filled transformer.

The service electrical transformer will be furnished, installed, owned and maintained by RMLD, and it will be located adjacent to the building as shown on the civil drawings. The transformer will be of the pad- mounted type with a primary voltage of 13.8 kV and a secondary voltage of 480Y/277 volts. The transformer will be sized by the utility company based on the load data provided by The Design team.

Concrete pad and grounding grid for the pad-mounted transformer is provided by the Contractor per the RMLD standards.

Concrete encased duct bank of the two 4" PVC conduits will be provided by the Electrical Contractor for the primary feeder installation from a utility pole to the pad-mounted transformer. Pre-cast concrete manholes 5' x 5' will be provided by the Contractor to facilitate the primary cables field installation. The duct bank routing is shown on the civil drawings.

Utility company will provide a primary feeder cable from the utility manhole to the pad-mounted transformer via the new manhole and terminate the feeder cable on both ends.

Transformer secondary feeder of the copper conductors will be installed underground in the duct bank of four 4" PVC conduits from the pad-mounted transformer to the main electrical switchboard located in the main electrical room. The secondary feeder and terminations at the switchboard side will be provided by the Electrical Contractor and terminated at the transformer side by RMLD. The new service will be metered at the transformer secondary voltage.

RMLD metering CTs will be installed in a CT section of the switch board, the meter will be located at the direction of the utility company.

Telephone, Cable TV, and City Fiber will be fed underground into the building's Main Distribution Frame/Head End Room.

Copper conductors shall be utilized for all branch circuit and feeder wiring. Aluminum conductors will be allowed for feeders 100 amperes or over.

The building connected electrical load estimate is based on the preliminary building systems design:

Load Type	**KVA**
HVAC Loads (including AHU, Destratification Fans, DCU, Chiller, UH, VRF, Boilers, FCs, Pumps, RTUs, Exhaust Fans, DCU)	1440 KVA
Elevator	31.7 KVA
Exterior Lighting	2.0 KVA
Interior Lighting	90 KVA
General Power	360 KVA
Kitchen	112.5 KVA
EV Charging	144 KVA
Plumbing/Fire Protection (Pumps, etc.)	210 KVA
Total Connected Load	**2,390.2 KVA**

Electrical Distribution System:

Service ratings for the building are designed for a connected load of 15 watts/S.F. The service capacity will be sized for 3,000 Amperes with an 80% rated main breaker. The main bus will be sized at 4,000 Amperes and will have an available breaker space provision at the end of the switchboard to accommodate a future grid connected photovoltaic array. The switchboard will be furnished with a service entrance surge protection device (SPD) rated at 240 kA and a digital metering unit to monitor voltage, current, power factor, demand KW and with a data communication port for interface with BMS. Main switchboard's short circuit rating will be coordinated with the Utility Company but will be rated for 65 KAIC.

New lighting and power panels will be provided to accommodate respective loads. The equipment locations will be in dedicated rooms or closets.

Interior Lighting System:

The intent of the lighting design is to provide a visual environment for the students and faculty that is supportive of the educational activities within the building. The lighting system will be designed in compliance with the applicable Energy Code and be eligible for the Utility company rebate program.

Interior lighting illumination levels will meet the IES recommended values for applicable activity type, be in compliance with the IECC 2021 energy allowances and LEED for Schools control requirements.

PROPOSED Illumination Levels

Location	Average Illumination Levels
Classrooms	30 FC
Offices, Conference Rooms, Library	30 FC
Kitchen	50 FC
Gymnasium	50 FC
Cafeteria	30 FC
Corridors	20 FC
Utility and Storage Rooms	20 FC

Classroom lighting fixtures will consist of recessed/surface mounted direct/indirect luminaries with integral LED source and electronic dimmable drivers. The fixtures will be pre-wired for continuous dimming control where natural daylight is available and also for multi-level switching. Two daylight dimming zones will be provided in each classroom.

Office lighting fixtures will consist of recessed/surface mounted direct only LED luminaries and electronic drivers for dual-level switching. Offices on the perimeter with windows will have daylight dimming where lighting within the daylight zone exceeds 150W.

In general, lighting power density will be 20-40% less than IECC 2021. The power density reduction relates to associated LEED credit in energy and atmosphere.

Lighting levels will be approximately 30 foot candles in classrooms and offices. The daylight dimming foot-candle level will be in compliance with associated LEED credit in indoor environment

quality.

Gymnasium lighting will be comprised of direct/indirect fixtures with integral LED source and electronic drivers. The fixtures will be provided with poly carbonate lensing. The light level will be designed for approximately 50 foot candles. Multi-level switching will be provided.

Daylight dimming will be provided within 15 feet of skylights or glazing where lighting within the daylight zone exceeds 150W. Daylight dimming controls will be similar in operation to classrooms.

Corridor lighting will be comprised of recessed mounted linear fixtures with integral LED source and electronic drivers. The Corridor light level will be designed for approximately 20-foot candles. Corridor lighting will be controlled via time schedules during normal business hours and set to occupancy control thereafter.

Cafeteria lighting will be a combination of pendant mounted fixtures with direct only and direct/indirect distribution types. All fixtures shall be provided with integral LED source and electronic drivers. The light levels will be designed for approximately 30 foot candles.

Stage and Auditorium theatrical lights with connector strips and a dimming system will be provided for performances. House lighting in Auditorium will be DMX dimmable to black LED and controlled by a theatrical dimming system.

Kitchen and Servery lighting will consist of recessed 2'x2' and 2'x4' acrylic lensed gasketed troffers with aluminum frame doors, integral LED source, electronic drivers and NSF rated for food preparation areas. Light levels will be approximately 50 foot candles.

Media Center lighting will be a combination of pendant decorative pendant fixtures and recessed fixtures with integral LED source and electronic drivers. The light levels will be designed for approximately 30 foot candles. Daylighting controls will be provided on perimeter light fixtures with 15 feet of glazing

Each area will be locally switched and designed for multi-level controls. Each Classroom, Office space, and Toilet room will have occupancy sensors to turn lights off when unoccupied. Occupancy sensors will be set to vacancy mode where required by Energy Code.

Daylight dimming sensors will be installed in each room where natural light is available for continuous dimming of light fixtures. The control system will be in accordance with associated LEED credit in indoor environmental quality when lighting within the daylight zone exceeds 150W threshold.

The entire school will be controlled with an automatic lighting control system for programming of interior and exterior lights "on and off". Lighting control system will be interfaced with BMS system, and will be demand response capable in accordance with associated LEED credit in Energy and atmosphere.

Emergency Lighting System

An exterior 600KW, 750KVA (diesel fired emergency generator with sound attenuated enclosure and base tank with alarms will be provided. An integral resistive load bank will be provided for generator testing under load. Light fixtures and LED Exit signs will be installed to serve all egress areas such as Corridors, Intervening Spaces, Toilets, Stairs, and Exit discharge exterior doors. The Administration area lighting will be connected to the emergency generator.

The generator power system has been sized to support emergency (life safety), and optional standby

building loads to maintain the building at 50 degrees. The life safety branch of the emergency system will be provided with a manual transfer switch on the emergency line side of the transfer switch in compliance with NEC 700.3(F).

a. Emergency (life safety) Power Loads as required by the Code:
   - Emergency exit and egress lighting (interior and building exterior at the exits)
   - Fire alarm system
b. Standby Power Loads:
   - Heating system with associated heat pumps and controls
   - Telephone/ data closets and associated A/C equipment
   - Communication systems (telephone and public address systems)
   - Building DDC system control panels
   - Kitchen refrigeration equipment
   - Lighting and power in the nurse/medical area
   - Security system equipment

Site Lighting System: ***LEED Credit SSC6: Light Pollution Reduction***

Fixtures for area lighting will be pole mounted cut-off 'LED' luminaries in the parking area and roadways. Pole heights will be 20 feet. The exterior lighting will be connected to the automatic lighting control system for photocell "ON" and timed "OFF" operation. The site lighting fixtures will be dark sky compliant. The illumination level will be 0.5fc for parking areas in accordance with the Illuminating Engineering Society.

Building perimeter will be 'LED' wall mounted cut-off fixtures over exterior doors for Exit discharge.

Wiring Devices:

Each classroom will have a minimum of (2) duplex receptacles per teaching wall and (2) double duplex receptacles on dedicated circuits at classroom computer workstations. The teacher's workstation will have a double duplex receptacle also on a dedicated circuit.

Office areas will generally have (1) duplex outlet per wall. At each workstation a double duplex receptacle will be provided.

Corridors will have a cleaning receptacle at approximately 25–40 foot intervals.

Exterior weatherproof receptacles with lockable in-use enclosures will be installed at exterior doors.

A system of computer grade panelboards with double neutrals and surge protective devices will be provided for receptacle circuits.

All receptacles will be of the tamper resistant type.

Fire Alarm System:

A fire alarm and detection with mass notification system will be provided with 60 hours battery back-up standby, 15 minutes of alarm. The system will be of the addressable type where each device will be identified at the control panel and remote annunciator by device type and location to facilitate search for origin of alarms. The notification system will be in conformance with NFPA 72 Chapter 24

emergency communications systems.

Smoke detectors will be provided in open areas, corridors, stairwells, and other egress ways.

The sprinkler system will be supervised for water flow and tampering with valves.

Speaker/strobes will be provided in egress ways, classrooms, assembly spaces, open areas, and other large spaces. Strobe only units will be provided in single toilets and conference rooms.

Manual pull stations will be provided at exit discharge doors.

The system will be remotely connected to automatically report alarms to the Fire Department via a Gamewell local energy master box as approved by the Fire Department.

A mass notification system will be provided with separate strobes from the fire alarm system. Audible tone shall be through fire alarm speakers. System activation shall be through panic buttons and card readers with dedicated lockdown key fob.

Metering:

Measurement devices shall be installed to monitor the electrical energy use for each of the following separately:

- Total electrical energy
- Sub-metering in accordance with ASHRAE 90.1 para. 8.4.3.

Recording and Reporting:

- The electrical energy usage for all loads listed above shall be recorded at a minimum of every 15 minutes and reported at least hourly, daily, monthly, and annually. The system shall be capable of maintaining all data collected for a minimum of 36 months.

Uninterruptible Power Supply (UPS):

One (1) 24 kW, three phase centralized UPS system will be provided with seven minutes of battery back-up.

The system will provide conditioned power to sensitive electronic loads, telecommunication systems, bridge over power interruptions of short duration and allow an orderly shutdown of servers and communication systems during a prolonged power outage.

The UPS system will also be connected to the stand-by generator.

Lightning Protection System:

A system of lightning protection devices will be provided.

The lightning protection equipment will include air terminals, roof main conductors and down conductors, conduits, fasteners, connectors, ground rods, etc.

The facility will be issued a UL Master Label Certificate.

Renewable Energy System Provisions:

Electrical provisions will be made for a roof mounted renewable energy system consisting of a grid

(location on Roof of Addition) connected photovoltaic PV system intended to reduce the facilities demand for power.

Two-Way Communications System:

A Two-Way Communications System will be provided at the elevator lobbies that do not have grade access. Area of rescue assistance call boxes will be provided at Elevator Lobbies with no grade access. The call boxes connect to a main panel located adjacent to the Fire Alarm annunciator panel.

Level 2 AC Dual Electric Vehicle Charging Equipment. (EVSE)

Provide provisions for ten (10) dual port EVSE stations fed with 40 ampere feeders back to a EVSE panel. Two protective bollards will be installed at each charging station.

Distribution Antennae System (DAS):

A public safety radio distributed antenna system (DAS) which consists of bi-directional amplifiers (BDA), donor antennas, coverage antennas, coax cable, coax connectors, splitters, combiners, and couplers. These devices will be used as part of a system for in-building public safety 2-way radio system communication.

PLUMBING

GENERAL

The Plumbing System will be designed per the 10th Edition of the Commonwealth of Massachusetts Building Code (780 CMR) and 248 CMR Fuel Gas and Plumbing Code. All plumbing equipment will be electric. No fossil fuels will be used.

PLUMBING SYSTEMS:

Domestic Cold-Water Service:

The building will have a new 4" domestic water supply and will enter the facility through the Water entry room. The cold-water supply system will be extended 10'-0" outside the building and connected to the underground yard main system. Reduced Pressure Backflow Preventer will be provided to the main domestic water supply to protect the service (per the DEP regulation 310 CMR 22). Potable water will meet both the NSF 61 and NSF 372 standards for lead-free safe drinking water Act. Domestic cold water inside the building will be "L" type copper tube with wrought or cast copper fittings. All cold-water piping will be insulated to prevent condensation.

Domestic Hot Water Service:

Domestic hot water supply will be generated through central hot water heaters in mechanical room. Two electric water heaters (80KW), 120-gallon tank storage will be manifolded to supply hot water distribution. The water heater will be a modulating type and will be capable of providing fixture hot water flow throughout the facility. The facility hot water will operate at 130°F and will serve the commercial kitchen sinks, other kitchen hand sinks, lavatories, Class room sinks, and custodian room sinks.

All lavatories qualifying as "public" lavatories will be provided with individual mixing valves below the fixture to reduce hot water discharge temperatures to 120°F maximum per code. Domestic hot water will be distributed in "L" type copper tube with wrought or cast copper fittings. The hot water (HW) and re-circulating (HWR) piping will be insulated per IECC2015.

Roof Storm Drainage:

The surface of the roof deck will be drained with standard roof drain with cast iron domes. The rainwater system will be sized to handle a rainfall rate of 4 inches per hour, with a total runoff from the main roof and the roof deck of just under 1 cubic foot per second. The storm system will be installed in cast iron piping with all horizontal piping insulated to prevent condensation. The storm system will exit at various locations of the building and connect to the municipal storm system. Waste outlets to accept HVAC condensate and sprinkler discharge shall be provided as needed and connect to the storm water piping system.

Sanitary:

The sanitary waste system will drain by gravity and will run to exit the building and connect to the municipal sewer system. A dedicated grease waste line will be installed to collect grease-laden wastewater from the Kitchen appliances and fixtures. The grease line will exit the building adjacent to the Sanitary Sewer and will be connected to an exterior grease trap outside the building. A new minimum 5,000-gallon capacity outdoor grease interceptor will be placed on the site to intercept grease-laden waste prior to connection to site sewer system. Chamber vents from the outdoor grease interceptor will be routed to the roof independent from the rest of the sanitary waste. Enrichment and project classroom sinks will be provided with a solid interceptor. The elevator sump pump will have gas/oil interceptor in the sanitary waste line.

The above-ground sanitary drainage and vent will be piped in cast iron with “no-hub” joints. (3” or larger). Piping smaller than 3 inch will be piped in copper. Piping below the floor shall be weight cast iron hub and spigot.

A floor drain will be provided in all toilet rooms where more than one water closet/urinal is present. Floor drains will be of cast iron body construction, heavy duty grade, PDI approved. Those for use in toilet rooms and other finished spaces will have rough bronze exposed finishes. Floor drains in Toilet rooms will require automatic trap primer systems. Those for use in mechanical rooms and other unfinished spaces will be all cast iron. All trap primers are to be electric, timer type.

Fixtures and Fixture Count

Plumbing fixtures will be added in the facility to accommodate a population of male students and female students and shall be in accordance with 248 CMR Paragraph 10.10, Table 1.

Plumbing fixtures will be equipped with the following water-conserving features.

Water Closet	Urinals	Lavatory
Dual Flush Valve (Sloan WES-111, 1.6 gpf up and 1.1 gpf down)	Manual operation, 0.125 gpf equal to American Standard 6045.013.002.	Manual, Metering Faucet, Deck mounted lead free, 0.35 gpm aerator equal to Chicago Faucets Model 3500-4E39PABCP.

Water closets and urinals will be commercial vitreous china, wall hung (ADA compliant). Lavatories will be wall hung. Each floor will include a janitor’s closet with a corner mop service basin. Toilet cores on each floor will include an alcove-recessed electric water cooler, in a high-low handicapped accessible configuration to meet MAAB requirements. All toilet and mechanical rooms will have floor drains complete with trap primers. Project classrooms and enrichment classroom sinks will have a self-rimming stainless-steel sink with gooseneck type faucets. Drinking fountain will be dual height with bottle filler.

Sinks for administration kitchen spaces shall be stainless steel (ADA compliant) sinks with maximum 1.5 GPM flow rate. Sink shall be provided with lead free faucet. Plumbing roughing connections and faucets will be provided to each kitchen appliances requiring plumbing work. Non-freeze wall hydrants will be provided along the exterior wall of school building. Non-Freeze deck mounted roof hydrant will be installed to serve rooftop mechanical system within 150 feet. Any art room and STE room sinks will be provided with in-line solids interceptor.

FIRE PROTECTION SYSTEMS

General

The fire protection systems will be designed per Massachusetts State Building Code (780 CMR), NFPA 13 Standard for the Installation of Sprinkler System, NFPA 14 Standard for the installation of Standpipe System and NFPA 20 Standard for the installation of Fire Pump Systems (if required).

System Description

A new 8" fire service shall be extended from the site hydrant water loop into the Water Entry room in the new Building. Cross connection control shall be provided by use a supervised double check valve assembly backflow preventer on the fire service as it enters the building. The room will also house the wet alarm check valve. From there, the fire protection pipe will run to each egress stair to feed the standpipe system. Multiple standpipe risers will be provided with floor control valve stations at each floor to feed the sprinkler system. Each floor control station consists of a monitored shut-off valve, flow switch and an Inspector's test valve and sight glass

A new fire hydrant flow test shall be conducted to assess the water flow and pressure in the area. The flow test results shall be analyzed to confirm whether a fire pump is required or not. The fire pump room, if required, shall be 2-hour fire resistance rated and shall be dedicated to fire pump equipment only. The fire pump room shall be minimum 200 sq. ft. The new fire pump, if required, shall be an automatic electric driven horizontal split case fire pump with an automatic transfer switch. Preliminary calculations estimate the fire pump shall be rated for 60 psi at 750 gpm and 50 HP motor. Preliminary calculations estimate the jockey pump to be rated for 2 HP.

The entire building shall be protected throughout with a wet automatic fire suppression system. A fire department Storz pumper connection will be provided at the exterior wall, within 100ft. of a site hydrant. The FDC will either be wall-mount or free-standing, depending on the final details and the preference of the Fire Department AHJ.

Light hazard areas include class rooms, corridors, cafeteria, rest rooms, offices, media & gym etc. Ordinary hazard group-1 areas of the building include kitchen, mechanical rooms, electrical rooms, locker rooms, Science class rooms, etc.

Required Design Densities:

Light Hazard Areas = 0.10 GPM over 1,500 s.f.

Ordinary Hazard Group 1 = 0.15 GPM over 1,500 s.f.

Ordinary Hazard Group 2 = 0.20 GPM over 1,500 s.f.

Sprinkler spacing (max.):

Light Hazard Areas = 225 s.f.

Ordinary Hazard Areas = 130 s.f.

Manual Class I standpipe system will be designed in accordance with NFPA Standard 14, 2019, and

local Fire Department requirements. Standpipes will be located in each required egress stairway, and adjacent to the Stage. Additionally, standpipes will be located so that no part of the building is more than 200 feet from a standpipe valve. Each standpipe will be equipped with a 2 1/2" fire department hose valve with 1 1/2" reducer at the stair floor landing.

Sprinkler heads in areas with finished ceilings will be concealed pendant type and in areas with no suspended ceilings will be upright sprinkler heads. All sprinklers will be quick response heads. Sprinkler heads in mechanical rooms and Gym will be provided with Wire guards. Dry pipe system will be provided in areas subjected to freezing

The fire protection piping will be Schedule 40 piping with threaded or grooved fittings for any piping sized 1½" and less. For sizes over 2", Schedule 10 piping with roll grooved fittings and couplings will be used. All valves controlling the flow of water will be equipped with supervisory devices that report to the Fire Alarm system.

INFORMATION TECHNOLOGY

Voice/Data Structured Cabling System

Voice/data outlets shall be installed in all academic and administrative spaces including but not limited to all classrooms and instructional areas, large group assembly spaces, gym, cafeteria, and Library. Voice/data outlets shall be installed at every desk workstation in all offices.

Pathways between each Intermediate Distribution Frame (IDF) Room and the Main Distribution Frame (MDF) Room will be furnished and installed using conduit between rooms and the above-finished ceiling of main corridors, as well as conduits between floors. 24 strand OM4 multimode and 12 strand Single mode fiber optic cabling, as well as multi-pair voice riser cable, shall be installed between each IDF and the MDF. Fiber patch panels and voice cross-connect blocks shall be installed in Rooms for terminating fiber and multi-pair riser cable.

Data drops shall be furnished and installed including a voice drop for a telephone in each classroom and instructional space.

In new construction areas with new CMU or gypsum walls, furnish and install in-wall two gang outlet boxes, plaster ring, 1" conduit to nearest accessible ceiling, insulating bushings and pull line for all voice/data outlet locations. In repaired and renovated spaces, outlets will be surface mounted utilizing surface mounted boxes and conduit or surface mount raceway, which shall be directly attached to the surface of the walls between the finished ceiling and the outlet. If nearby accessible ceilings are not feasible, conduits may be extended to the nearest accessible ceiling or directly to nearest IDF room.

A structured cabling system shall be provided consisting of Category 6A voice/data cable, modular jacks, patch panels, wiring blocks, racks, fiber optic cable, fiber patch panels, 2-post and 4-post open equipment racks, device plates, outlet boxes, conduit, etc. for a complete and fully functional voice/data/video system.

Provide structured cabling for wireless access points to be located on ceilings and wall enclosures at designated locations throughout the building to ensure 100% coverage. Provide two Category 6A data cables/jacks at the wireless access point outlet for connection of a future Wireless Access Point to the building Local Area Network.

Digital Signage System

Data outlets and power receptacles shall be installed in strategic areas to support the installation of Digital Signage displays. Data outlets shall consist of Category 6A cable, devices plates, outlet boxes, conduit, etc.

The Digital Signage System shall consist of 65", 75", 86", and/or 98" LED flat panel displays with an easy to manage signage player and software.

Gymnasium Local Sound and Projection System

A dedicated local sound system for the Gymnasium shall be furnished and installed and shall include an amplifier, overhead program playback speakers, Bluetooth for mobile device connections, wireless microphone system, dedicated microphone outlets and an assistive listening system mounted in a sound system rack with a lockable door.

A permanently mounted high lumen projector and a built-in tensioned electric projection screen will

be provided in the Gymnasium with user connection plates and a system interface to control the selection of video sources and system volume.

Cafeteria Local Sound and Projection System

A dedicated local sound system for the cafeteria shall be furnished with an installed and shall include an amplifier, program playback as well as voice lift speakers, Bluetooth for mobile device connections, wireless microphone system, dedicated hardwired microphone outlets and an assistive listening system mounted in a sound system rack with a lockable door.

A permanently mounted high lumen projector and a built-in tensioned electric projection screen will be provided in the cafeteria with user connection plates and a system interface to control the selection of video sources and system volume.

Master Clock and Distributed Communication System

A master clock system with connections to the internet for synchronizing time shall be included in the building. Low voltage secondary clocks shall be installed in all academic and administrative spaces, and in all common spaces such as conference rooms, library, gymnasium, and cafeteria. The master clock shall be in the MDF room. A distributed communication system shall be furnished and installed with public address speakers located in all classrooms and instructional spaces, offices, administrative areas, conference rooms, library, gymnasium, cafeteria and main corridors. Talkback speakers with a call in switch shall be furnished and installed in all academic classroom and instructional spaces. The one-way paging speakers shall be flush mounted 16 feet on center in the ceiling of all corridors and large assembly spaces. Multiple one-way paging horn speakers shall be flush mounted to the exterior walls of the school and interior Gymnasium walls. The distributed communication system central equipment shall be located in the MDF room. The system shall be integrated with the telephone system so that public address announcements can be initiated from any telephone handset using an access code. The system shall be interfaced to the Master Clock system for generating scheduled bell tones over the distributed communication system speakers.

Video Intercom and Door Control System

A video intercom system shall be installed at the school's main entry doors to provide administrators with a means of communicating with visitors to the school before allowing entry. The system shall provide a way to interact with visitors while receiving visual verification. The system shall also provide administrators with the ability to unlock doors for visitors remotely. The system shall include door stations with speaker and camera, master stations with display and control buttons, and all low voltage cabling and power supplies. The door vendor shall provide electronic door latch hardware. Video Intercom shall consist of exterior locations located at the main entrance and the receiving entrance doors, and interior management consol stations to be located at the main office, principal's office, kitchen office and custodial/receiving area.

Integrated Security System

Intrusion Detection: A complete intrusion detection system shall be furnished and installed to include but not be limited to magnetic door contacts, motion detectors, sirens, alarm keypads for

arming and disarming the system, conduit and wire. Intrusion detectors shall be installed in corridors, lobbies and all exterior ground level rooms with windows. All exterior doors and all interior access-controlled doors shall be equipped with door contacts to support both the intrusion and access control systems. All ground-floor rooms with windows shall be equipped with motion sensors. All stairwells and main corridors on the first and second floors shall be equipped with motion sensors.

Video Surveillance: A complete video surveillance system shall be furnished and installed to include but not be limited to a server and software, color IP cameras, dedicated network switches, and adequate network storage for archiving video. Interior IP cameras at all egress doors and corridors shall be furnished and installed. Exterior cameras shall be furnished and installed around the exterior of the building. Dedicated Ethernet switches with Power over Ethernet (PoE) ports shall provide power and connectivity to all IP security cameras to the server. A Network Video Recorder (NVR), Video Management System (VMS), and client software shall be included. The NVR shall be large enough to store thirty (30) days of image storage at 15 fps. A cabinet/rack shall be provided in the MDF to house the main equipment including the NVR, rack-mounted monitor, and a UPS system. Conduit and cabling for security camera surveillance system shall be provided under the voice/data structured cabling system. The NVR system, including all VMS software and licensing, shall be a proprietary system so that the system matches the existing surveillance video equipment VMS installed in other buildings. Cameras shall be manufactured by Axis Communications.

A combination of multi-sensor, dual head, fisheye, and single lens dome cameras shall be placed to provide a minimum of 45ppf resolution in all corridors and public spaces. 8mp cameras will be mounted to the exterior of the school, with additional quad 8mp cameras mounted to parking lot light poles. These light pole camera locations will also be equipped with separate 2” conduit and pull boxes from the building for the installation of fiber optic cabling to the security cameras. Additionally, empty 2” conduit and pull boxes from the school to additional light poles will provide future pathways for the Owner to furnish and install cabling to future pole mounted cameras.

Access Control: A complete access control system shall be furnished and installed at designated door locations. The system shall include Card/Proximity Readers, all low voltage cabling, and power supplies, a system server with management software. The door hardware vendor shall provide electronic door latch hardware and Request to Exit devices. The system shall be a proprietary system to match the existing access control system equipment installed in other school buildings.

A complete conduit system including back boxes pull lines, plaster rings, etc. as required to support all security system devices shall be furnished and installed.

Classroom Speech Reinforcement System

A speech reinforcement system shall be provided in all classrooms size instructional spaces. The system shall consist of an amplifier/speaker assembly installed in the finished ceiling utilizing an integrated and dedicated wireless technology, wireless media connector, and two wireless microphones, one lapel microphone for the teacher and another handheld microphone for students. The system shall be proprietary – Lightspeed Topcat.

The system shall amplify the teacher's voice to increase intelligibility, as well as provide a means for providing enhanced program audio playback for multimedia presentations in the classrooms.

School Network Switches and Wireless Access Points

All modern building systems, including but not limited to lighting, HVAC, security, etc., require network connectivity to the internet to function properly.

Therefore, building-wide Network Switches shall be provided, which will deliver network connectivity to voice and data outlets, wireless access points, VoIP telephone handsets, as well as for all building management systems. The Network switch design will also include multiple 10 GbE connections over fiber between IDF Rooms and the MDF room. The network switches and shall be a proprietary system manufactured by Cisco to match the district wide networking standards, which is the basis for all schools in the district. The wireless access points shall be a proprietary item by Meraki to match the district wide wireless standards.

Telephone and Voicemail System

A telephone system including telephone handsets in all classrooms and instructional spaces; at all administrative/staff office workstations, and in all common areas such as conference rooms, library, etc. shall be provided. The telephone system shall be capable of Voice over IP. All headend equipment, including a voice mail system, sized appropriately for the number of users, shall be installed in the MDF. This may involve a proprietary request so that the telephone system matches existing telephone system equipment installed in other buildings.

The system shall be integrated with the Distributed Communication System so that public address announcements can be made from any telephone system handset with the proper access codes pressed at the handset. The Telephone and Voicemail System shall be a proprietary VoIP system manufactured by Yealink to match the district wide Zoom telephone system standards.

Equipment Phase (FF&E phase)

The following technology systems shall be identified and procured by the Owner as part of the Equipment (FF&E) Phase.

Instructional Video Presentation Equipment

Video presentation equipment at all teaching stations including classrooms, SPED rooms, Library, etc. Equipment shall include 75” and 86” interactive flat panels and document cameras. Some ultrashort interactive projectors may also be deployed in specialized areas. Flat panels (and projectors) shall be mounted to the wall with specialized cabling extending between display device and an interface outlet on the teaching wall. Small group meeting spaces and conference rooms may be equipped with smaller 65” interactive flat panel displays.

Computer Network Equipment

Computer network equipment shall include but not be limited to servers, network storage, firewall appliances, teacher and staff computers, teacher tablets, teacher Chromebooks, student Chromebooks, student iPads, and student computers.

Computer Carts and Lockers

Storage and Charging Carts and Lockers will be purchased for securing and charging student tablets, Chromebooks, and computer laptops. Lockers provide a means for securely storing and charging student devices in classrooms, while carts offer portability and flexibility in utilizing the technology within the school.

Network Copier/Printer Equipment

Large Copier/Printers shall be supplied and supplemented with smaller workgroup laser printers and personal laser printers in key administrative areas.

Portable Video Presentation System

Mobile interactive flat panel and/or projectors for use in areas not equipped with display technology.

Cafeteria Point of Sale Equipment

Electronic Cash Register for processing the purchase of school meals shall be provided.

Visitor Management System

A visitor management system for providing the ability to scan visitor's picture identifications (driver's license) and printing visitor credentials while on school premises shall be provided.

SUSTAINABILITY OVERVIEW & DOCUMENTS

Summary

This section includes the following:

- A Sustainable Design narrative
- A completed LEED for Schools V4 Scorecard indicating the necessary points to achieve a minimum "Silver" Certification, including the minimum of five points of the MSBA-designated LEED-Schools v4 Indoor Air Quality Credits/Points (for 1% additional MSBA reimbursement), that also shows a path for the District to achieve "Gold".
- A signed letter indicating the Designer's acknowledgement of the District's goals for participation in the MSBA Green Schools program for an additional 4% reimbursement points.

THIS PAGE INTENTIONALLY LEFT BLANK

Sustainable Design Narrative

The proposed new Wilmington - Wildwood Elementary School is an approximately 167,035 GSF project located in Wilmington, MA.

The project will be participating in the MSBA High Efficiency Green School Program, as follows:

- It will meet the minimum requirements of the MSBA Green Schools program:
    - Using LEED-S v4, for no additional reimbursement, achieve a minimum of "Silver" certification (50 points minimum), including a minimum total of three points (from seven points available) from the following three categories:
        - MR Building Product Disclosure and Optimization - Material Ingredients
        - IEQ - Low Emitting Materials
        - IEQ – Indoor Air Quality Assessment
    - Meet the minimum energy efficiency requirements described in the MA DOER "Stretch Code Green Community" standards. Wilmington is not a Green Community that has adopted the Stretch Energy Code.

Additionally, the project:

- Will meet the MA Specialized Opt-In Stretch Energy Code (for 3% additional MSBA reimbursement)
- Will earn a minimum of five points of the above-listed LEED-Schools v4 Indoor Air Quality Credits/Points (for 1% additional MSBA reimbursement)

The **Owner has selected a Fossil-free mechanical system (see Mechanical Narrative in Section 4.1.2-K, Page 6: An air-source heat pump plant with displacement system with passive radiant cooling/heating panels and high efficiency air-source to hydronic heat pump chiller/heating plant for chilled/heating hot water**. This system will be designed to meet the Opt-In Energy Code, and the project will be designed to be an all-electric mechanical system.

The attached preliminary LEED v4 for Schools scorecard shows a pathway for the new school project to achieve Gold level LEED v4 certification. There are a total of 62 attempted points in the "Yes" column, which if all are successful will surpass the Silver certification minimum goal to Gold certification, plus 29 attempted points in the "Maybe" column.

The score card includes 23 points in the Energy & Atmosphere category, 16 of which are allocated to the Optimize Energy Performance credit, 6 allocated to the Enhanced Commissioning credit, and one point is currently held for Advaned Energy Metering. Nine points are allocated across many of the credits available in the Indoor Environmental Quality category.

In general, credits were selected for this preliminary scorecard based on the location of the project site and assumed LEED boundary, the size of the building, commonly accomplishable credits based on experience with past school building projects in Massachusetts with similar system types, and credits required by MSBA.

Certified: 40-49 points Silver: 50-59 points Gold: 60-79 points Platinum: 80+ points

April 16, 2025

Ms. Mary Pichetti
Director of Capital Planning
Massachusetts School Board Authority
40 Broad St. Suite 500
Boston, MA 02109

Project: Wilmington Wildwood ECC – Wilmington, MA
Subject: Green School Program

Dear Ms. Pichetti,

This is an acknowledgement that the Wilmington Public School District has identified a goal of 4% additional reimbursement from the MSBA Green School Program. As their Designer, I have submitted a completed LEED for Schools V4 score card showing all prerequisites and **62 attempted 'yes' points and currently 29 'maybe'** which will:

- Meet the minimum requirements of the MSBA Green Schools program, including achieving LEED-Schools v4 "Silver" certification (50 points minimum), and
- 3% additional reimbursement for meeting the MA Specialized Opt-In Stretch Energy Code, and
- 1% additional reimbursement for earning a minimum of five points of the MSBA-designated LEED-Schools v4 Indoor Air Quality Credits/Points

The scope of work for this project will include the construction elements and performance tasks to achieve these goals, and all subsequent documents, including but not limited to, specifications, drawings, and cost estimates will match the scope of work indicated in the submitted scorecard.

Best regards,
DORE + WHITTIER

Lee P. Dore, Assoc. AIA, CSI, LEED AP
Principal

ADA AND MAAB ACCESSIBILITY COMPLIANCE ANALYSIS

Accessibility Regulation Summary

The Project will comply with the Massachusetts Architectural Access Board (MAAB) 521 CMR, or the 2010 Americans with Disability Act Standards for Accessible Design where it is more stringent than MAAB.

Because the School project is new construction, it shall fully comply with CMR 521 (Section 3.2). Spaces accessed only by ladder, crawlspaces, catwalks, or non-passenger elevators are exempt (Section 3.12).

In educational facilities, only administrative areas, instructional spaces, and areas open to students or the general population are required to comply with 521 CMR (Section 12.1.1). Areas with restricted access intended for use only by staff (such as instructor toilets, toilets for kitchen staff, mechanical and other support spaces) are not required to comply with 521 CMR. Such staff-only toilet rooms or spaces will comply with ADA Standards.

Accessible Routes, General Site and Building Elements

An Accessible Route shall be provided from accessible parking, passenger loading areas, and public streets or sidewalks to the accessible building entrance they serve and shall coincide with the route for the general public (521 CMR - Section 20.2). At least one accessible route shall connect the building with all facilities, elements, and spaces on the site and within the building (Section 20.2.1). The accessible route will comply with the Accessible Route provisions of Section 20.

All spaces required to be accessible will be provided with at least one accessible means of egress in accordance with Section 20.11.1.

Curb cuts complying with Section 21 shall be provided wherever an accessible route crosses a curb (Section 21.2).

Accessible parking spaces shall be provided in accordance with Table 23.2.1. One in every six, but not less than 1 accessible space shall be van accessible in accordance with ADA 208.2.4 (note this requirement is more stringent than MAAB Section 23.2.2). Accessible spaces will be located on the shortest accessible route from the parking lot to an accessible entrance (Section 23.3.1). Where an accessible space cannot be located within 200 feet of an accessible entrance, an accessible passenger drop-off shall be provided within 100 feet of the accessible entrance (23.3.3).

Accessible Parking Spaces, Accessible Van Spaces, and the associated access to the site Accessible Route will comply with Section 23.4

Plumbing Elements and Facilities

Single User Toilet Rooms intended for use by the students or the general public, or located in the Administrative Suite, shall be accessible in accordance with 521 CMR. Toilet rooms with restricted access only by staff members shall be accessible in accordance with the 2010 ADA Standards.

Toilet fixture counts have been calculated based on 248 CMR (Massachusetts Fuel Gas and Plumbing Code) and distributed throughout the project based on the anticipated occupant load in each area.

Toilet rooms intended for use only by elementary school aged children (grades K-6) and by pre-kindergarten children, as defined per 521 CMR Section 30.1-b, shall be designed in accordance with Sections 30.14 through 30.20. This includes the single user toilet rooms within classrooms and the gang toilet rooms.

Drinking fountains shall be provided at each set of restrooms, on each floor, along the accessible route and installed in accordance with Section 36.

Special Occupancy Rooms and Features

The spaces or portions of the building described below require unique description and consideration with respect to accessibility.

Stairways and Elevators

All stairways will be designed as accessible stairways in accordance with Section 27. Stairways intended only for use by service staff, including the roof access ladders, are not required to be accessible (Section 12.1.1).

The elevator will be designed in accordance with Section 28 and to accommodate the required gurney size described in 524 CMR (Massachusetts Board of Elevator Regulations) Section 17.40-(1). As such, it will accommodate the dimensional requirements described in 521 CMR Section 28.

Assembly Spaces in Educational Facilities – Generally

Amphitheaters, lecture halls, and classrooms will comply with 521 CMR Chapter 14 for Places of assembly in accordance with section 12.1.3. The gymnasium and cafeteria will also comply with the requirements of Chapter 14.

Assistive Listening Systems shall be provided for all assembly spaces in accordance with Section 14.5.

Gymnasium

Fixed operable bleacher seating will be provided in the Gymnasium, and the requirements for Number of Accessible Seats (Section 14.2) will be provided for each section of operable bleachers.

Cafeteria

No fixed seating will be provided in the Cafeteria, and the requirements for Number of Accessible Seats (Section 14.2) are not applicable to this space.

Cafeteria tables will be a combination of fixed (attached) and loose seating and will accommodate wheelchairs.

The raised platform (Stage) has an accessible route consisting of a ramp designed in accordance with Section 24 (in accordance with Section 14.6.1-a.).

Media Center

The Media Center will be designed to accommodate the requirements for Libraries described in Section 12.2.

At least 5% of all reading and study areas and computer workstations shall be accessible and designed to accommodate the requirements of Section 12.2.2.

At least one lane of the check-out area will have a counter a minimum of 36” long and a maximum of 36" in height (Section 12.2.3).

Security devices and Card Catalogs will not be provided for the facility.

Aisles between stacks will have a minimum clear width of 42" as the preferred dimension described in Section 12.2.6.

Built In Furnishings and Equipment

Per Section 12.4, a minimum of 1 type of each element in each classroom will comply with the following:

- Countertops and sinks will comply with Section 12.2.2-b, c, and d and consist of a Clear Floor Space with Knee Clearance and a countertop height of 28" to 34".
- At least 50% of shelf space in cabinets with comply with Sections 6.5 Forward Reach and 6.6 Side Reach.
- Controls and operating mechanisms shall comply with Section 39 Controls.

THIS PAGE INTENTIONALLY IS BLANK.

Room Function Number 01.023

Function Criteria:

Description:	Home Base for Kindergarten instruction, including a toilet room.
Quantity:	7
Occupant Load:	(18) Students (1) General Education Teacher (1) Para Professional

Location Criteria:

Users:	Teachers, students, specialists, paraprofessionals
Adjacency:	Within grade level team, ground floor, other Kindergarten classrooms and special education spaces, central location. Paired with another Pre-K classroom
Orientation / Views:	Views to Exterior, Connection & Views to Extended Learning Area

Technical Criteria:

Floor Finishes:	Resilient flooring
Wall Finishes:	Wall Board, painted Magnetic writable surface at teaching wall location, 2’ to 7’ for teacher and student use
Ceiling Finishes:	Acoustic ceiling tile system, painted gypsum soffits
Acoustical:	Meets or exceeds LEED pre-requisite for acoustic performance
Windows:	Aluminum windows with vision glazing, room darkening shades
Doors:	Flush Wood Door - Classroom Hardware Set.
HVAC:	Displacement Ventilation with Air Conditioning Radiant panels at perimeter for supplemental heating
Plumbing / FP:	Fully Sprinklered (1) Accessible stainless-steel sink at child height (1) Deep stainless-steel sink
Lighting:	Linear pendant direct/indirect
Electrical:	Typical perimeter power requirements. Additional power required to support specific room equipment
Technology:	Public Address system Clock System Wireless network access (1) Interactive projectors (1) Mobile Teachers station

Fixtures & Furnishings:

Casework:	Types & Configurations indicated in the attached room layout sheets

Room Function Number 01.001

Room Name	STE CLASSROOM
Room Number	256
Department (Name)	CORE ACADEMIC SPACES

Categorization		Areas	
Room Number	256	Programmed	1,080.00
User Room Number			
Additional Number			
Name on Drawing			

Function Criteria:

Description:	Home Base for STE instruction The following zones are to be included within the classroom: Main teaching wall area; student table/desk seating; teacher desk; small group table; reading nook; wet/messy/ cleanup zone in front of sinks.
Quantity:	27
Occupant Load:	(24) Students (1) General Education Teacher (1) Paraprofessional

Location Criteria:

Users:	Teachers, students, specialists, paraprofessionals
Adjacency:	Within grade level team, along with special education spaces, central location.
Orientation / Views:	Views to Exterior, Connection & Views to Extended Learning Area

Technical Criteria:

Floor Finishes:	Resilient flooring
Wall Finishes:	Gypsum Wall Board, painted Magnetic writable surface at teaching wall location, 2’ AFF to 7’ AFF for teacher and student use
Ceiling Finishes:	Acoustic ceiling tile system, painted gypsum soffits
Acoustical:	Meets or exceeds LEED pre-requisite for acoustic performance
Windows:	Aluminum windows with vision glazing, room darkening shades
Doors:	Flush Wood Door - Classroom Hardware Se
HVAC:	Displacement Ventilation with air conditioning Radiant panels at perimeter for supplemental heating
Plumbing / FP:	Fully Sprinklered (1) Accessible stainless-steel sink at child height (1) Deep stainless-steel sink
Lighting:	Linear pendant direct/indirect
Electrical:	Typical perimeter power requirements. Additional power required to support specific room equipment
Technology:	Public Address system Clock System Wireless network access (1) Interactive digital display (1) Mobile Teachers station to coordinate with interactive projector (data & power) Voice amplification/ Sound field system. Phone Handset, wall-mounted, located near door

Fixtures & Furnishings:

Casework:	Types & Configurations indicated in the attached room layout sheets
Specialties:	Types & Configurations indicated in the attached room layout sheets
Furnishings:	Types & Configurations indicated in the attached room layout sheets
Equipment:	Types & Configurations indicated in the attached room layout sheets.
Shelving / Storage:	Types & Configurations indicated in the attached room layout sheets

Additional Requirements:

Equipment/Accessories: Soap & paper towel dispensers

Function Criteria:

Description:	Home base for English Language Learner specialists and pull-out instruction in small groups
Quantity:	2
Occupant Load:	(1) Staff (1-15) Students

Location Criteria:

Users:	Accommodates up to 15 students: Peer modeling benefits larger groups. Instruction flexibility: 1-on-1 or full group sessions.
Adjacency:	Central to the grade level teams. Direct access off corridor.
Orientation / Views:	Exterior views required

Technical Criteria:

Floor Finishes:	Resilient flooring
Wall Finishes:	Gypsum wall board, painted
Ceiling Finishes:	Acoustical ceiling system, painted gypsum soffits.
Acoustical:	Meets or exceeds LEED prerequisite for acoustic performance.
Windows:	Aluminum windows with vision glazing, room darkening shades.
Doors:	Flush wood doors with side light and acoustical seals Office hardware set
Plumbing / FP:	Fully Sprinklered Sink installation needed for classroom activities
Lighting:	Linear pendant direct/indirect
Electrical:	Typical perimeter power requirements.
Technology:	Interactive touch panel with wireless access and docking stations. Smart board included for interactive learning. Additional power required to support specific room equipment Public Address system Clock System Wireless network access interactive projector /d

Fixtures & Furnishings:

Casework:	Types & Configurations indicated in the attached room layout sheets including: Built in Teacher's desk. Teachers storage wardrobe Bookshelves. Secure cabinets for school records and laptops (with charging capabilities). 1-2 file drawers for additional needs. Tall cabinets: one for the wardrobe and another for shelves. Casework for grade-level materials and retail-style book display.
Specialties:	Types & Configurations indicated in the attached room layout sheets including: (2) Marker Board Surfaces
Furnishings:	Types & Configurations indicated in the attached room layout sheets. Flexible space with various furniture configurations: • Tables and desks on casters for mobility. • Kidney-shaped table included. Teacher desk should allow flexibility in arrangement.
Equipment:	Types & Configurations indicated in the attached room layout sheets

Categorization		Areas	
Room Number	131A	Programmed	0.00
User Room Number			
Additional Number	131B, 131C, 131D		
Name on Drawing			

Function Criteria:

Description:	Dedicated, communal, multi-use space within each grade level neighborhood intended to serve as environments for breakout spaces, small and large group instruction, assemblies, workshops, indoor sensory pathways, student presentations, dramatic performances, and “messy” creative projects. Features of extended learning areas include, but are not limited to, the following: • Flexibility at a variety of scales, including furniture, technology, and spatial features • Installations of museum-like exhibits and interactive displays tied to units of study and teaching methods; these would be flexible enough to change throughout the building’s lifetime as curriculum and delivery methods change • Natural daylight and views of nature; when possible direct access to outdoor learning environments from extended learning
Occupant Load:	4) Teachers/Para professionals (50) Students

Location Criteria:

Users:	Teachers, students, specialists, paraprofessionals, administrators, and guest speakers
Adjacency:	Extended learning located immediately outside classrooms to support flexibility of the teaching environment and to allow students and work to “spill out” into the space
Orientation / Views:	Exterior views required

Technical Criteria:

Floor Finishes:	Resilient flooring
Wall Finishes:	Gypsum Wall Board, painted Tile wainscot on large areas of wall, up to 4'6"
Ceiling Finishes:	Acoustical ceiling panels
Acoustical:	Meets or exceeds LEED pre-requisite for acoustic performance
Windows:	Aluminum windows with vision glazing, room darkening shades
Doors:	None
HVAC:	Displacement Ventilation with air conditioning Radiant panels at perimeter for supplemental heating
Plumbing / FP:	Fully Sprinklered
Lighting:	Linear and recessed lighting zoned per functions of space
Electrical:	Typical perimeter power requirements
Technology:	Additional power required to support specific room equipment. Public Address system Clock System Wireless network access

Function Criteria:

Description:	A space to serve a substantially separate population of students in grades PREK-K who require intensive, direct, specialized instruction and related services for the majority of the school day.
Quantity:	6
Occupant Load:	(8) Students (1) Special Education Teacher (2-3) Assistants

Location Criteria:

Users:	Teachers, students, specialists, paraprofessionals
Adjacency:	Within learning communities w/ access to Extended Learning Areas
Orientation / Views:	Views to Exterior & Views to Extended Learning Area

Technical Criteria:

Floor Finishes:	Resilient flooring
Wall Finishes:	Gypsum Wall Board, painted
Ceiling Finishes:	Acoustic ceiling tile system, painted gypsum soffits
Acoustical:	Meets or exceeds LEED pre-requisite for acoustic performance
Windows:	Aluminum windows with vision glazing, room darkening shades
Doors:	Flush Wood Door, with acoustic seals - Classroom Hardware Set
HVAC:	Displacement Ventilation with Air Conditioning Radiant panels at perimeter for supplemental heating
Plumbing / FP:	Fully Sprinklered (2) Accessible stainless-steel sink
Lighting:	Linear pendant direct/indirect, dimmable
Technology:	Public Address system Clock System Wireless network access (1) Interactive projectors (1) Mobile Teachers station to coordinate with interactive projector (data & power) Voice amplification/ Sound field system

Fixtures & Furnishings:

Casework:	Types & Configurations indicated in the attached room layout sheets including: Storage for teachers and paraprofessionals. Storage for 12 students private materials, i.e. lunch boxes, homework folders. Coats, boots etc. will be stored with general classroom in Extended Learning areas. Storage accessed by students Storage not accessible by students
Specialties:	Projectable Magnetic writable surface at teaching wall location, 2’ AFF to 7’ AFF for teacher and student use
Furnishings:	Types & Configurations indicated in the attached room layout sheet
Equipment:	Types & Configurations indicated in the attached room layout sheets including: Mobile Marker boards doubling as room dividers

Room Name	STAGES 1ST-2ND
Room Number	218
Department (Name)	SPECIAL EDUCATION

Categorization		Areas	
Room Number	218	Programmed	900.00
User Room Number			
Additional Number			
Name on Drawing			

Function Criteria:

Description:	A space to serve a substantially separate population of students in grades 1-2 who require intensive, direct, specialized instruction and related services for the majority of the school day.
Quantity:	2
Occupant Load:	(8) Students (1) Special Education Teacher (2-3) Assistants

Location Criteria:

Users:	Teachers, students, specialists, paraprofessionals
Adjacency:	Within learning communities w/ access to Extended Learning Areas
Orientation / Views:	Views to Exterior & Views to Extended Learning Area

Technical Criteria:

Floor Finishes:	Resilient flooring
Wall Finishes:	Gypsum Wall Board, painted
Ceiling Finishes:	Acoustic ceiling tile system, painted gypsum soffits
Acoustical:	Meets or exceeds LEED pre-requisite for acoustic performance
Windows:	Aluminum windows with vision glazing, room darkening shades
Doors:	Flush Wood Door, with acoustic seals - Classroom Hardware Set
HVAC:	Displacement Ventilation with Air Conditioning Radiant panels at perimeter for supplemental heating
Plumbing / FP:	Fully Sprinklered (2) Accessible stainless-steel sink
Lighting:	Linear pendant direct/indirect, dimmable
Technology:	Public Address system Clock System Wireless network access (1) Interactive projectors (1) Mobile Teachers station to coordinate with interactive projector (data & power) Voice amplification/ Sound field system

Fixtures & Furnishings:

Casework:	ypes & Configurations indicated in the attached room layout sheets including: Storage for teachers and paraprofessionals. Storage for 8 students private materials, i.e. lunch boxes, homework folders. Coats, boots etc. will be stored with general classroom in Extended Learning areas.Storage accessed by students Storage not accessible by students
Specialties:	Projectable Magnetic writable surface at teaching wall location, 2’ AFF to 7’ AFF for teacher and student use
Furnishings:	Types & Configurations indicated in the attached room layout sheet
Equipment:	Types & Configurations indicated in the attached room layout sheets including: Mobile Marker boards doubling as room dividers
Shelving / Storage:	n/a

Additional Requirements:

Safety at windows - limited opening for security; soft edge sill
limited ledges/cabinets to avoid climbing

Notes from Michael Ferrara - Band Director/Music Teacher

Beginner Band: 48 students
- 5 Flutes
- 9 Clarinets

Generated from dRofus © 2002-2025 dRofus Inc.

- 4 Saxophones
- 13 Trumpets
- 7 Trombones
- 9 Percussion
- Advanced Band: 28 students
- 4 Flutes
- 5 Clarinets
- 6 Saxophones
- 4 Trumpets
- 1 Trombone
- 8 Percussion
- For percussion:
- Xylophones, glock, cymbals, snare drums, bass drums. a station for auxillary (maracas, tambourine, etc.).
- We do use a drum set for several performances (jazz band).
- While we will utilize an electric keyboard on a stand, there is no need for significant space to accommodate an upright/baby grand piano.

Function Criteria:

Description:	Technology rich learning commons for the school with a focus on literacy across disciplines. The learning commons is a comfortable space for reading, access to many books, space for creative projects, flex space for instruction, showcase area for students to gather as a small community. This hub of learning should be a location where the school community can celebrate learning on display
Quantity:	1
Occupant Load:	2 Classes or Groups (approximately 24 students per group) (2) Staff

Location Criteria:

Users:	Teachers, students, specialists, paraprofessionals, faculty & staff, visitors
Adjacency:	2nd floor Centrally located to the main entry
Orientation / Views:	Exterior Views and into Cafeteria

Technical Criteria:

Floor Finishes:	Carpet Tile
Wall Finishes:	Gypsum Wall Board, painted, acoustical panels.
Ceiling Finishes:	Acoustic ceiling tile system, painted gypsum clouds, exposed glulam beams
Acoustical:	Meets or exceeds LEED pre-requisite for acoustic performance
Windows:	Curtain wall to exterior, room darkening shades.
Doors:	Double doors with glazing
HVAC:	Displacement Ventilation with Air Conditioning
Plumbing / FP:	Fully Sprinklered
Lighting:	Recessed cans and Pendent Lighting
Electrical:	Typical perimeter power requirements. Power for motorized window shades. Power and data for digital displays
Technology:	Additional power required to support specific room equipment Public Address system Clock System Wireless network access

Room Name	EXTENDED LEARNING
Room Number	105A
Department (Name)	CORE ACADEMIC SPACES

Categorization		Areas	
Room Number	105A	Programmed	1,200.00
User Room Number			
Additional Number	105A,105B, 105C, 105D		
Name on Drawing			

Function Criteria:

Description:	Dedicated, communal, multi-use space within each grade level neighborhood intended to serve as environments for breakout spaces, small and large group instruction, assemblies, workshops, indoor sensory pathways, student presentations, dramatic performances, and “messy” creative projects. Features of extended learning areas include, but are not limited to, the following: • Flexibility at a variety of scales, including furniture, technology, and spatial features • Installations of museum-like exhibits and interactive displays tied to units of study and teaching methods; these would be flexible enough to change throughout the building’s lifetime as curriculum and delivery methods change • Natural daylight and views of nature; when possible direct access to outdoor learning environments from extended learning This includes rooms: 105A,105B, 105C, 105D
Quantity:	4
Occupant Load:	4) Teachers/Para professionals (50) Students

Location Criteria:

Users:	Teachers, students, specialists, paraprofessionals, administrators, and guest speakers
Adjacency:	Extended learning located immediately outside classrooms to support flexibility of the teaching environment and to allow students and work to “spill out” into the space
Orientation / Views:	Exterior views required

Technical Criteria:

Floor Finishes:	Resilient flooring
Wall Finishes:	Gypsum Wall Board, painted Tile wainscot on large areas of wall, up to 4'6"
Ceiling Finishes:	Acoustical ceiling panels
Acoustical:	Meets or exceeds LEED pre-requisite for acoustic performance
Windows:	Aluminum windows with vision glazing, room darkening shades
Doors:	None
HVAC:	Displacement Ventilation with air conditioning Radiant panels at perimeter for supplemental heating
Plumbing / FP:	Fully Sprinklered
Lighting:	Linear and recessed lighting zoned per functions of space
Electrical:	Typical perimeter power requirements
Technology:	Additional power required to support specific room equipment. Public Address system Clock System Wireless network access

Fixtures & Furnishings:

PROPOSED CONSTRUCTION METHODOLOGY

The project will be constructed under the Construction Management at Risk methodology in accordance with Massachusetts General Laws Chapter 149A.

The decision to pursue the project delivery method of Massachusetts General Laws Chapter 149A over Massachusetts General Laws Chapter 149, Design-Bid-Build (DBB), was made by the School Building Committee based on prior favorable experience with this construction delivery method in the District and the Town as a whole.

The Town and District just completed its Senior Center Building and has construction underway with the Town Hall and School Administration Building. The members of the School Building Committee involved in these two Town projects experienced both methods and felt that the Chapter 149A method proceeded smoother with more proactive knowledge of the costs and conditions than learning about bids coming in high at the end of Construction Documents when everything is already designed. Bringing the Construction Management Firm on earlier had its benefits earlier in the process and it helped to make a smoother construction project progress with its activities, costs and schedule.

The District's confidence resides in the Massachusetts General Laws Chapter 149A construction delivery method as it provides programming, planning and financial advantages over Chapter 149 Construction Delivery Method.

Key in the decision was the ability to bring a Construction Management firm onto the project to provide its cost estimating and scheduling expertise and insight into the construction marketplace in the Schematic Design Phase. The Massachusetts General Laws Chapter 149, Design-Bid-Build (DBB), had a lot of benefits for the Wilmington Elementary School project. However, the complexity of an occupied North Intermediate School site, traffic mitigation and adjacent and/or in close proximity neighbors, the School Building Committee felt that the Construction Management at Risk Massachusetts General Laws Chapter 149A was better suited for the needs of this project with more flexibility, proactivity and advance notice of potential costs.

The Massachusetts General Laws Chapter 149A Construction Delivery Method also made available the ability to coordinate Early Release Packages that would make the availability of equipment and materials that are essential, have potential of cost escalation, and heavily sought after. The ability to be proactive in the management of these long lead time procurement needs i.e. HVAC and electrical equipment, structural steel that would be potentially sourced in Canada and/or Mexico and incur freight and transit costs. The delivery method advantages and disadvantages were discussed at School Building Committee meetings from the end of Preferred Schematic Report Phase and resulted in a vote

of 20:1 in favor of Massachusetts General Laws Chapter 149A, Construction Management at Risk Construction Delivery Method, at the November 19, 2024 School Building Committee meeting.

The Chapter 149A Construction Delivery Method provided a two-step process with Construction Management firms able to be prequalified with the Construction Management Prequalification and Selection Working Group before shortlisting for the interview and proposal stage. Prequalification of all the Construction Management Firms was performed with thorough reference checks. The Prequalification and Selection Working Group consisted of Town Manager, R. Eric Slagle, Finance Committee Member, Marianne Gallezzo, Director of OPM Services, Julie Leduc of Symmes Maini & McKee Associates, Inc. (SMMA) and Principal of Dore + Whittier Architects, Lee P. Dore.

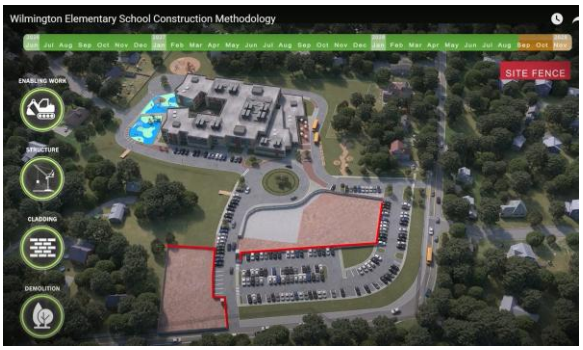
Some of the essential criteria for the District was the ability to have advance knowledge of the potential costs for the proposed new school building, the District's reimbursement rate and the ability to be creative with cost management and/or value engineering and mobilization on a site that was a short distance from the Route 93 exit and on heavily trafficked roads with congestion. The choice of Construction Management at Risk allowed for the Working Group to be able to perform their due diligence through reviewing their Non-Price Proposal and weigh the criteria that mattered the most to them to select the firm that matched their needs most. The District chose to shortlist four (4) firms namely, Consigli Construction Co., Shawmut Design and Construction, W.T. Rich Company, Inc. and Fontaine Bros., Inc. with whom interviews were conducted, two (2) on February 11, 2025 and two (2) on February 12, 2025. before deliberating the final and upon the final review in preparation for their recommendation for the School Building Committee's vote to approve on February 13, 2025, review of the selected firm, Fontaine Bros, Inc. Price Proposal was performed. Fontaine Bros. Inc. demonstrated their ability to be able to think on their feet, ability to cost estimate, manage construction costs, access to real time costs of materials and equipment with their extensive experience building schools, forethought on the subject of laydown space for steel deliveries and other equipment locally, and strong handle on community outreach opportunities to facilitate the Town Meeting and Ballot Vote in the Fall 2025.

The Application to the Inspector General to Proceed with the Construction Manager at Risk Construction Delivery Method was submitted to the Inspector General's office on December 3, 2024. The project received notification from the Inspector General Response to District's Application to Use the Construction Management at Risk Alternative Delivery Method for the Wilmington Wildwood Elementary School Project, dated January 13, 2025, attached.

The cost estimate, project budget, proposed project schedule, estimated reimbursement rate and Total Project Budget Spreadsheet for the Wilmington Elementary School is based on selection of the delivery method of Massachusetts General Laws (M.G.L.) Chapter 149A; Construction Manager at Risk (CMR).

Construction Phasing Plan

In its comments on the PSR submission, the MSBA requested more detail related to a proposed Construction Phasing Site Plan which would illustrate site separation, temporary school circulation, temporary access, parking, laydown areas, trailer location(s), and possible off-site additional logistics area(s). That information is included below.



The construction will broken into two main phases, with some detailed sub-phases. Sequencing depicted in the imagery to the left by Fontaine Brothers, Inc.

- Phase 1 – Site mobilization and site work; Construction Zone to include the field spaces north of the existing building and northern portion of the site. The perimeter of fencing is demarcated by a red line in image. All construction activity, including crew parking, temporary lay down area, and trailer locations to be located within the fenced in area. Existing playground to be relocated on site and provide a separate path for construction access. Existing parking and circulation will remain during construction for continuous school operations.
- Phase 1A –Substantially-Complete new building May 2028; FF&E/Technology fitout July 2028; packing and moving from existing building August 2028; Abatement and Demolition of existing North Intermediate building Summer 2028; Sitework up to the limits of the Phase 1 Fenceline and critical path items necessary for school operation in Fall 2028; open new school September 2028
- Phase 2 – Completion of remaining playgrounds, parking and sitework in non-critical areas

A phased construction approach ensures continuity of education, with students remaining in the current building until the new one is ready for occupancy. Following the move, the existing school will be demolished, allowing for the creation of playgrounds, parking, and final site circulation.

OFFICE OF THE INSPECTOR GENERAL
MASSACHUSETTS

JEFFREY S. SHAPIRO
Inspector General

January 13, 2025

Via Electronic Mail

R. Eric Slagle, Town Manager
Town of Wilmington
121 Glen Road, Room 111
Wilmington, MA 01887
eslagle@wilmingtonma.gov

Re: Application to Use the Construction Management At-Risk Alternative Delivery Method for the Wilmington Wildwood Elementary School Project

Dear Mr. Slagle:

Good day.

On December 3, 2024, pursuant to Chapter 149A of the Massachusetts General Laws and 945 CMR 2.00, the town of Wilmington (Wilmington) submitted to the Office of the Inspector General (OIG) an application to use the construction management at-risk (CM at-risk) alternative delivery method for the Wildwood Elementary School consolidation project.

Based on all the information provided, Wilmington has met the statutory requirements for using the CM at-risk delivery method for the project. Accordingly, the OIG is issuing this notice to proceed to use the CM at-risk delivery method as specified in M.G.L. c. 149A, §§ 1-13. However, please note that the initial application was missing required responses and exhibited a flawed understanding of the CM at-risk delivery method. It is incumbent upon Wilmington and the project team to fully comprehend the statutory requirements in order to execute the project in accordance with the law.

The OIG reminds Wilmington that it must properly dispose of any surplus equipment and supplies from the current schools using Chapter 30B of the Massachusetts General Laws. Please review a recent OIG letter detailing a school district's failure to follow Chapter 30B during a renovation project.

This approval is conditioned on Wilmington using a CM at-risk firm that the Division of Capital Asset Management and Maintenance (DCAMM) has certified, as well as DCAMM-certified trade contractors. Therefore, Wilmington must require each CM at-risk firm to supply both a certificate of eligibility and an update statement during both the prequalification phase and the technical proposal phase of the selection process. In addition, Wilmington must require each trade contractor to supply a certificate of eligibility and an update statement during the prequalification phase and again at the bidding phase of the selection process. Wilmington must reject as invalid all contractors' statements of qualifications, proposals and bids that do not provide such certificates of eligibility or update statements.

If, during the course of the project, Wilmington changes its Owner's Project Manager (OPM) or Designer, please submit information about the new OPM or Designer to the OIG. Also, if Wilmington decides not to proceed with the CM at-risk delivery method for any reason, please notify the OIG within 30 days of that decision.

As a condition of the approval, Wilmington is required to submit the following project milestone information to the OIG.

1. Selected CM at-risk firm,
2. Date the initial cost-plus CM at-risk contract was signed,
3. Date physical on-site work started,
4. Date the guaranteed maximum price (GMP) was set,
5. Percent of design document completion when the GMP was set,
6. Date of substantial completion, and
7. Final total cost of the project.

At each milestone, Wilmington must use this Form to submit the information.

Wilmington must also provide the OIG with a final report within 70 days of project completion. The final report must discuss Wilmington's experience using CM at-risk, the final project schedule, budget and final actual costs. Wilmington must use this Form to submit the final project report.

The project milestone report and final project report forms are available on the OIG's website.

All correspondence regarding this project may be sent to igo.municipal@mass.gov.

Please feel free to contact Kerri-Anne Hollingshead, Senior Policy Analyst at Kerri-Anne.Hollingshead@mass.gov or 617-722-8871 or me at Jeffrey.S.Shapiro@mass.gov or 617-722-8806 if you have any questions or concerns regarding this building process approval.

Sincerely,

Jeffrey S. Shapiro, Esq., CIG
Inspector General

DISTRICT'S ANTICIPATED REIMBURSEMENT RATE

The base reimbursement rate for this project from MSBA is 47.84%, with a preliminary estimate of 5% additional incentive points [1% for Maintenance and 4% for Energy Efficiency], for a total of 52.84%.

Category	Reimbursement Points
Reimbursement Rate before Incentives	49.11%
Maintenance	1.67%
Construction Management at Risk	0.00
Major Reconstruction or Reno/Reuse	0.00
Overlay Zoning District – c.40R or c.40S	0.00
Overlay Zoning 100 Units or 50% Units 1, 2, 3 Family Units	0.00
Energy Efficiency – "Green Schools"	4.00%
Model Schools	0.00
Total Incentive Points	5.67%
Anticipated MSBA Reimbursement Rate with Incentives	**54.78%**

NOTES

This template was prepared by the MSBA as a tool to assist Districts and consultants in understanding MSBA policies and practices regarding potential impact on the MSBA's calculation of a potential Basis of Total Facilities Grant and potential Total Maximum Facilities Grant. This template does not contain a final, exhaustive list of all evaluations which the MSBA may use in determining whether items are eligible for reimbursement by the MSBA. The MSBA will perform an independent analysis based on a review of information and estimates provided by the District for the proposed school project that may or may not agree with the estimates generated by the District using this template.

1 - The Estimated Basis of Total Facilities Grant and Estimated Maximum Facilities Grant amounts do not include any potentially eligible contingency funds and are subject to review and audit by the MSBA.

2 - Costs associated with the commissioning of ineligible building area is estimated to result in the recovery of a portion of the overall commissioning cost. The OPM has estimated this recovery of funds to be $_____. The proposed demolition of the _____ School is expected to result in the MSBA recovering a portion of state funds previously paid to the District for the _____ project at the existing facilities completed in ____. The MSBA will perform an independent analysis based on a review of its records and information and estimates provided by the District for the proposed school project that may or may not agree with the estimated cost recovery generated by the District and its consultants using this template.

3 - Pursuant to Section 3.21 of the Project Funding Agreement and the applicable policies and guidelines of the Authority, any project costs associated with the reallocation or transfer of funds from either the Owner's contingency or the Construction contingency to other budget line items shall be subject to review by the Authority to determine whether any such costs are eligible for reimbursement by the Authority. All costs are subject to review and audit by the MSBA.

By signing this Total Project Budget, I hereby certify that I have read and understand the form and further certify, to the best of my knowledge and belief, that the information supplied by the District in the table above is true, accurate, and complete.

TOTAL OF ALL CONSTRUCTION		165,035	$834.63	**$137,743,666**

[1] Inspection, Testing and Monitoring Costs are not included

BASIS OF ESTIMATE

This Schematic Design cost estimate was produced from drawings and specifications prepared by Dore + Whittier and their design team dated February 20, 2025. Design and engineering changes occurring subsequent to the issue of these documents have not been incorporated in this estimate.

This estimate includes all direct construction costs, construction managers overhead and profit and design contingency. Cost escalation assumes start dates indicated.

Bidding conditions are expected to be public bidding under 149a of the Massachusetts General Laws to pre-qualified construction managers, and pre-qualified sub-contractors, open specifications for materials and manufacturers.

The estimate is based on prevailing wage rates for construction in this market and represents a reasonable opinion of cost. It is not a prediction of the successful bid from a contractor as bids will vary due to fluctuating market conditions, errors and omissions, proprietary specifications, lack or surplus of bidders, perception of risk, etc. Consequently the estimate is expected to fall within the range of bids from a number of competitive contractors or subcontractors, however we do not warrant that bids or negotiated prices will not vary from the final construction cost estimate.

ITEMS NOT CONSIDERED IN THIS ESTIMATE

Items not included in this estimate are:

- All professional fees and insurance
- Building Permit costs
- Land acquisition, feasibility, and financing costs
- All Furnishings, Fixtures and Equipment
- Items identified in the design as Not In Contract (NIC)
- Items identified in the design as by others
- Owner supplied and/or installed items (e.g. draperies, furniture and equipment)
- Rock excavation; special foundations (unless indicated by design engineers)
- Utility company back charges, including work required off-site
- Work to City streets and sidewalks, (except as noted in this estimate)
- Construction or occupancy phasing or off hours' work, (except as noted in this estimate)

FONTAINE BROS.

Project Name:	**Wilmington Elementary School**
Document Name:	**Value Engineering Log**
Project Phase:	**Schematic Design**
Review Date:	**Mar-25**

Item #	Category/ Discipline	Item	Recommendations and Values	Accepted	Alternates	Deferred/Rejected	Notes
1	Arch	Change corridor terrazzo to porcelain tile or other more cost effective material	$ 64,368				Terrazzo @ $45/sf - Floor Tile = $31.5 w/ Membrane; Savings of 13.5/sf
2	Arch	Change cafeteria terrazzo to porcelain tile or other more cost effective material (Includes Quiet Cafe's)	$ 115,466				Terrazzo @ $45/sf - Floor Tile = $31.5 w/ Membrane; Savings of 13.5/sf
3	Arch	Change flex classroom/storage from terrazzo to Linoleum	$ 37,370				Terrazzo @ $45/sf - Linoleum = $8/sf; Savings of $37/sf
4	Arch	Change stair 2 and 4 from terrazzo to rubber stair tread	$ 156,640				$181,640 as Terrazzo -> $25K as Rubber
5	Landscape	Reduction 10% in trees	$ 32,900				Trees = 329k
6	Landscape	Reduction 10% in plantings	$ 4,800				Plantings = 48k
7	Landscape/Civil	Consider changing granite curbing to bituminous curb	$ 73,290				4886 Linear Feet. Assume $15/LF savings
8	Landscape/Civil	Consider substituting 6" granite curb for 5" granite curb	$ 24,430				Assuming $5/lf savings.
9	Landscape/Civil	Consider replacing approx. 600 LF of 6' wide sidewalk on south side of main parking lot with grass.	$ 67,680				Approx. 3600 SF at $19/SF of concrete and approx. 60CY of gravel at $50/CY with general fill/topsoil at $35/CY and grass back at $0.45/SF
10	Arch	Reduce Toilet Room wall tile to wet wall only	$ 230,214				4,856 SF at wet walls @ 8' AFF; Reduce 7,548 SF @ $32/per SF put back paint at $1.5/sf
11	Arch	Eliminate LED light strip at stair rails	$ 17,400				Allowance Carried, $17,400
12	Arch	Reduce size of digital graphics in stair 4 - 20%	$ 10,080				1,120 SF @ $45/Per SF
13	Arch	Change Custodial epoxy flooring to sealed concrete	$ 18,480				880 SF @ $25/sf -> Savings of $21/SF
14	Arch	Replace Cafeteria Tectum Ceiling Panels with more cost effective product					$305k Carried for Tectum Ceilings; $30/SF
15	Arch	Replace Tile in custodial with FRP	$ 17,680				1,040 SF @ $32/SF with FRP @ $15/SF
16		**Total:**	**$ 870,798**				

PROJECT DIRECTORY

The Project Directory, dated February 20, 2025, is attached and has been updated since the Preferred Schematic Report submission in October 2024. The update includes the addition of the Construction Manager at Risk, Fontaine Bros., Inc. Fontaine Bros. was selected by the Construction Manager at Risk Prequalification and Selection Working Group, after interviewing four shortlisted firms on February 11, 2025 and February 12, 2025. The Construction Manager at Risk Prequalification and Selection Working Group made its recommendation to the School Building Committee at its meeting on February 13, 2025 and it was voted and approved unanimously. The District's Application for Construction Manager at Risk Construction Method was approved by the Inspector General, dated January 20, 2025.

The School Building Committee Composition letter is also made a part of this section for record as it was in its original state when submitted as a part of the Preferred Schematic Report for record.

Sarah Przybylowicz, MSBA Project Coordinator
Sarah.Przybylowicz@massschoolbuildings.org
Massachusetts School Building Authority
40 Broad Street, Fifth Floor
Boston, Massachusetts 02109

Dear Ms. Przybylowicz:

In accordance with 963 CMR 2.00, attached for your review and approval is the membership of the School Building Committee for the Wildwood Elementary School located in the Town of Wilmington. The Committee was formed in accordance with the provisions of all applicable statutes, local charters, by-laws and agreements of the Town of Wilmington. Committee Members include the following:

Designation	Name and Title	Address	Email Address and Phone Number	Voting Member?
SBC member who is MCPPO certified*	Dennis Kelley, Superintendent Public Buildings Department	30 Church Street, Wilmington	dkelley@wilmingtonma.gov 978-658-3017	Yes
Local Chief Executive Officer	Gregory B. Bendel, Chair Board of Selectmen	121 Glen Road, Wilmington	gbendel@wilmingtonma.gov 781-953-4780	Yes
Administrator or Manager**	R. Eric Slagel, Town Manager	121 Glen Road, Wilmington	eslagle@wilmingtonma.gov 978-658-3311	Yes
School Committee Member (minimum of one)	David A. Ragsdale, School Committee Member	161 Church Street, Wilmington	david.ragsdale@wpsk12.com	Yes
	Nicholas Golden, School Committee Member	161 Church Street, Wilmington	nicholas.golden@wpsk12.com	Yes
	Stephen Turner, School Committee Member	59 Washington Avenue, Wilmington	stephen.turner@wpsk12.com	Yes
Superintendent of Schools	**Dr. Glenn Brand Chair, School Building Committee**	**161 Church Street, Wilmington**	**glenn.brand@wpsk12.com 978-694-6000, Option 4**	**Yes**
Local Official responsible for Building Maintenance	Dennis Kelley, Superintendent, Public Buildings Department	30 Church Street, Wilmington	dkelley@wilmingtonma.gov 978-658-3017	Yes
Representative of Office authorized by law to construct school buildings	R. Eric Slagel, Town Manager	121 Glen Road, Wilmington	eslagle@wilmingtonma.gov (978) 658-3311	Yes
	Judith L. O'Connell, Assistant Town Manager	121 Glen Road, Wilmington	joconnell@wilmingtonma.gov (978) 658-3311	Yes
School Principal	Kate Bissell, Principal Wildwood School	25 Carter Lane, Wilmington	kate.bissell@wpsk12.com	Yes

Designation	Name and Title	Address	Email Address and Phone Number	Voting Member?
	Stacey Scott, Principal Woburn Street School	227 Woburn Street, Wilmington	stacey.scott@wpsk12.com	Yes
Member knowledgeable in educational mission and function of facility	Paul Ruggiero, Assistant Superintendent of Administration and Finance	161 Church Street, Wilmington	Paul.Ruggiero@wpsk12.com	Yes
Local budget official or member of local finance Committee	Marianne Gallezzo Finance Committee	30 Roosevelt Road, Wilmington	mgallezzo@wilmingtonma.gov 978-658-7405	Yes
Members of community with architecture, engineering and/or construction experience	Michael Camoscio, *Mechanical Engineer*	19 Dorothy Avenue, Wilmington	michael.camoscio@stvinc.com	Yes
	Craig P. Miner *Civil Engineer*	215 Burlington Avenue, Wilmington	cminer76@hotmail.com	Yes
	Vivian Varbedian, *Project Management*	39 Marion Street, Wilmington	v.varbedian@gmail.com	Yes
Other: Please provide brief background info/expertise				
Permanent Building Committee:	Dennis Kelley	30 Church Street Wilmington	dkelley@wilmingtonma.gov 978-658-3017	Yes
	Diane M. Allan	7 Stonehedge Drive Wilmington	gdallan@comcast.net 978-658-8576	Yes
	John C. Holloway	2 Winston Avenue Wilmington	j.hollowayjr@verizon.net 978-657-8685	Yes
	Paul J. Melaragni	176 Middlesex Avenue Wilmington	paul.melaragni@state.ma.us 978-658-0264	Yes
Board of Selectmen:	Kevin A. Caira	251 Woburn Street, Wilmington	kcaira@wilmingtonma.gov kevincaira57@gmail.com 978-657-7734	Yes
School Principal:	Stacey Scott Woburn Street School	227 Woburn Street, Wilmington	stacey.scott@wpsk12.com	Yes
Wildwood School Teacher:	Christine Holleran	25 Carter Lane, Wilmington	christine.holleran@wpsk12.com	Yes
Community Members / Parents:	Justin Cusce, *North Side Parent*	12 Senaca Lane, Wilmington	jcusce17@gmail.com	Yes
	Christine Prendergast, *North Side Parent*	7 Pinewood Road, Wilmington	chrissy521@gmail.com	Yes
	Craig Miner, *West Side Parent and Civil Engineer*	215 Burlington Avenue, Wilmington	cminer76@hotmail.com	Yes
	Michael Camoscio, *North Side Parent and Mechanical Engineer*	19 Dorothy Avenue, Wilmington	michael.camoscio@stvinc.com	Yes
	Vivian Varbedian, *Parent and Vice Chair of the School Building Committee*	39 Marion Street, Wilmington	v.varbedian@gmail.com	Yes

Listed below is the past performance of the school building committee, the building committee (temporary or permanent), or any other committee responsible for oversight, management, or

administration of the construction of public buildings and its individual members:

Following approval at the May 1, 2010 Annual Town Meeting to appropriate $1,125,000 to conduct a feasibility study for the Wilmington High School, the School Building Committee guided the completion of that study which led to a December 10, 2011 Special Town Meeting approval of $81,563,115 for construction of a new high school on the existing location. Through the efforts of the School Building Committee to monitor design and construction progress and with financial and technical assistance from the Massachusetts School Building Authority (MSBA) the new high school opened on February 16, 2015.

In 2015, the Facilities Master Plan Committee began work with Harriman Architects (formerly the Cecil Group) to evaluate the condition of school and municipal buildings. The report, issued in January 2018, noted the multiple undersized elementary school buildings, the age and condition of those buildings and advised the Town to consider consolidation of elementary schools and replacement or upgrades.

After approval of this committee by the Authority, the Town will notify the Authority in writing within 20 calendar days of any changes to the membership or the duties of said committee.

Sincerely,

R. Eric Slagle
Town Manager
Town of Wilmington

_____
Approved by MSBA Date

* Please attach the certification from the Office of the Inspector General demonstrating completion of the MCPPO Program.
** "Administrator or Manager" refers to a Town Administrator, Town Manager, or to an equivalent position.

ROLES AND RESPONSIBILITIES

The team's organizational chart (Town of Wilmington, SMMA, Dore+Whittier Architects and Fontaine Bros.) has been included to outline the Roles and Responsibilities of each team member.

COMMUNICATION AND DOCUMENT CONTROL PROCEDURES

Since the outset of this project in 2023, as the Wildwood Early Childhood Center Building Project, in the eligibility phase with the Massachusetts School Building Authority (MSBA), the District's funding partner with the Commonwealth of Massachusetts, it was competing with two (2) Town-wide projects, namely the new Senior Citizen Center Building Project and the new Town Hall / School Administration Building Project. The Wildwood School Building Committee was initially the following individuals for the Wildwood Early Childhood Center:

- Dr. Glenn Brand, *School Superintendent, School Building Committee Chair*
- Diane M. Allan, *Permanent Building Committee*
- Gregory B. Bendel, *Board of Selectmen*
- Kate Bissell, *School Principal*
- Dr. Jennifer Bryson, *School Committee Chair*
- Mary Jane Byrnes, *School Committee Alternate*
- Kevin A. Caira, *Board of Selectmen Alternate*
- Marianne Gallezzo, *Finance Committee Member*
- John C. Holloway, *Permanent Building Committee*
- George W. Hooper II, *Public Buildings Superintendent*
- Jeffrey M. Hull, *Town Manager*
- Theresa M. Manganelli, *Finance Committee*
- Paul J. Melaragni, *Permanent Building Committee*
- Bryan T. Perry, *Finance Director/Town Accountant*
- Melissa D. Plowman, *School Committee Alternate*
- David A. Ragsdale, *School Committee Vice Chair*
- Paul Ruggiero, *Assistant Superintendent of Administration & Finance*
- Kristen Walsh, *School Principal Alternate*

The Wildwood School Building Committee was comprised of fourteen (14) full members and four (4) alternates representing the School Committee, Select Board, and School Principals. Full members of the School Building Committee had voting rights and alternates did not. Alternates were able to exercise the vote of the member of their respective Committee to which they mutually belonged and could only exercise the vote of the voting member if unable to be present representing their Board or Committee. Many of the voting members and alternates were spread across the three building projects in addition to their originating board or committee which left few availabilities to have a continuous flow of information to update the Boards/Committees, gain consensus for a mutually meeting time across all stakeholders and challenged the ability to obtain a quorum to have the Committee vote on important subjects to progress with the Wilmington/ Wildwood Elementary School Building Project.

A number of Wilmington citizens with interest were participating in the School Building Committee Meetings and attending the School Building Committee meetings as audience participants and held potential of more involvement, namely:

- Susan Inman, *Human Resources Director & Assistant Town Manager*
- Christine Holloran, *Teacher, Wildwood*
- Michael Camoscio, *Commissioner, Wilmington Water & Sewer Department*
- Jessica Bourgeois, *Parent & WHS School Advisory Council Member*
- Vivian Varbedian, *Wilmington Community Member*
- Jennifer Binelli, *Wilmington Community Member*
- Alicia Kaylor, *Wilmington Community Member*
- Stephen Turner, *School Committee Member*
- Darcie Martin, *Parent*

There was interest in expanding the School Building Committee membership to involve more diversity of representation within the Wilmington community offering involvement from parents, working professionals, grandparents, guardians and citizens from many professional backgrounds with interest in being involved in the School Building Project and contributing their input and feedback while volunteering their time, experience, and expertise.

The opportunity for the Town of Wilmington for a school building project that is being partially funded by the MSBA is a valuable one for the youngest learners of the Town of Wilmington. It is an opportunity to assist in the improvement of the environment in which curriculum is provided and learning is acquired on a daily basis. The mission of improvement of the school building(s) to provide educational programming that further benefits the students for many years to come is an important one as it will give educational and curriculum parity with other schools in local districts with programs that are not currently offered in Wilmington. With the great number of stakeholders on the project from each of the Town Boards and/or Committees also involved in the other Town-wide projects, the Wildwood Early Childhood Center Building Project needed to get traction for regular meetings with stakeholders that were equally invested from meeting to meeting throughout the entire building project. There were changes in the leadership of the Town that started to evolve, and these changes involved making sure that all members were up to speed with the project information. The School Building Committee added members of the Wilmington community together with Principals and Teachers from the Wildwood Early Childhood School, Woburn Street School and North Intermediate School bringing the members to twenty-three member voting members of the School Building Committee and all members have voting rights and no member had alternate status any longer.

The School Building Committee membership currently has twenty-three (23) voting members as follows:

- Diane M. Allan
- Gregory B. Bendel
- Kate Bissell
- Dr. Glenn Brand, Chair
- Kevin A. Caira
- Michael Camoscio
- Justin Cusce
- Marianne Gallezzo
- Nicholas Golden
- Christine Holloran
- John C. Holloway
- Dennis Kelley
- Craig Miner
- Christine Murray
- Judith O'Connell
- Christine Prendergast
- Paul J. Melaragni
- David A. Ragsdale
- Paul Ruggiero
- Stacey Scott
- R. Eric Slagel
- Stephen Turner
- Vivian Varbedian, Vice Chair

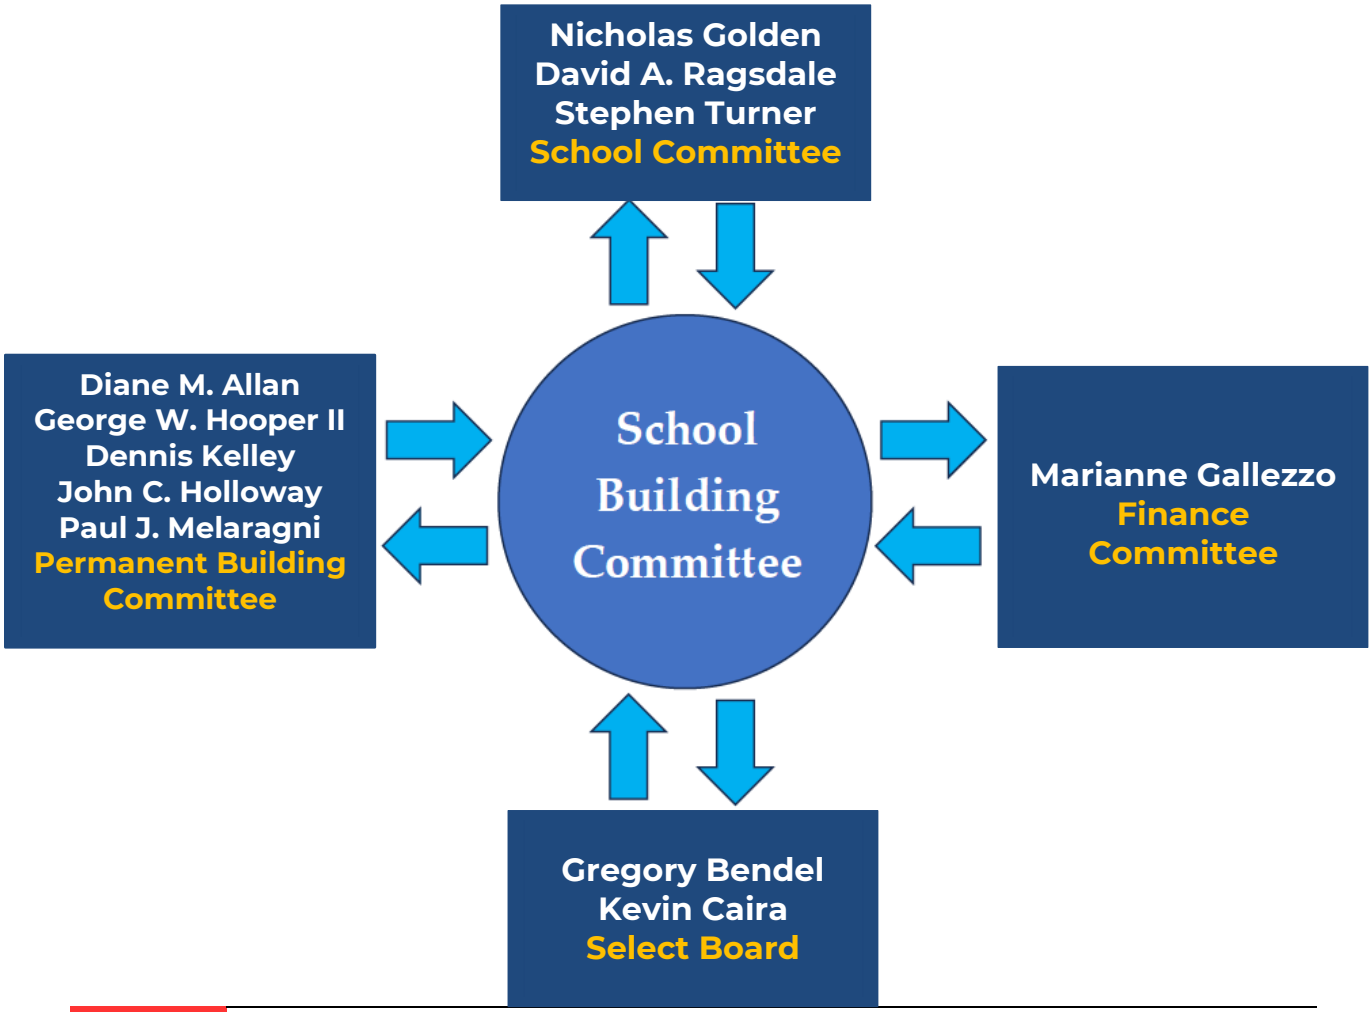
In order to ensure the flow of communication and information was consistent, efficient and effective, a Communication and Document Control Procedure was distributed to all of the members of the School Building Committee. This communication workflow would be in effect and transition through the phases of Eligibility, Feasibility Design, Schematic Design, Design Development and Construction Documents and remain in place as the project is Bid for Construction and proceeds through Construction Administration until the end of Closeout and Audit for the project.

COMMUNICATION WORKFLOW

Within the School Building Committee, it is the responsibility of the members of each of the Town Committee(s) and/or Boards, to share the information provided by the OPM, Designer and Construction Manager at Risk and ensure the correct information is communicated.

The Town of Wilmington is led by its Town Manager and Assistant Town Manager and the leadership boards within the Town that are responsible for the efficient running and effectiveness of the decisions made on its behalf. There is the Finance Committee, Permanent Building Committee, School Committee, Select Board, Municipal Building Department and Public School Department to name a few that are integrally involved in this project.

The Leadership Working Group of the School Building Committee includes Glenn Brand, EdD, Chair of the School Building Committee and Superintendent of Schools for the Town of Wilmington, Vivian Varbedian, Vice Chair, Paul Ruggiero, Assistant Superintendent of Administration and Finance for Wilmington Public Schools, Jeffrey Hull, Town Manager and Susan Inman, Assistant Town Manager, Bryan Perry, Town Accountant and Finance Director, and George W. Hooper II, Superintendent of Public Buildings.



The School Building Committee has undergone changes in leadership since the outset of this school building project starting with the retirement of Town Manager Jeff Hull on October 31, 2023.

- Town Manager Jeffrey Hull retired from the Town of Wilmington after 36 years of service and the Select Board appointed Louis Cimaglia to serve as an Interim Town Manager and transition the role until the new Town Manager, R. Eric Slagle was selected in May/June 2024.
- Assistant Town Manager Susan Inman transitioned her position to Judith O'Connell as Assistant Town Manager in May 2024.
- George W. Hooper II as a member of the original School Building Committee, Permanent Building Committee, and Wildwood Leadership Working Group also had the role as Chair of the Senior Center Building Project and the New Town Hall and School Administration Building Project. Mr. Hooper transitioned his role as Superintendent of Public Buildings, Leadership Working Group and Wildwood School Building Committee to Dennis Kelley as Mr. Hooper continued to hold his Chair positions when he retired from his role with the Town of Wilmington.
- Wilmington's Town Accountant and Finance Director Bryan Perry left the District and the interim replacements did not take on his role outside of Town Finance.

During these transitions, SMMA OPM and Dore+Whittier Architects guided the leadership through the Feasibility Phase with the Preliminary Design Program (PDP) and the Preferred Schematic Report (PSR) submissions made with the MSBA as the project moved into Schematic Design Phase.

The Inspector General Application to utilize the Construction Management at Risk Construction Method for this project was drafted and approved by the Owner's Project Manager in coordination with the Town of Wilmington. After the Notice to Proceed with the Construction Management at Risk Construction Method, the Construction Manager at Risk was solicited, prequalified, procured and contracted for the project through the efforts of the OPM and Designer and the Town's Procurement Coordinator. This was facilitated during the Schematic Design Phase to perform cost estimating services in conjunction with the Designer's cost estimator of record, PM&C, to move towards gaining the project budget information needed for the Wilmington community.

CORRESPONDENCE

- All correspondence shall be by email as original correspondence. Any official documents will also be sent via first class mail.
- All correspondence between the MSBA and the Town shall be copied to the OPM. All correspondence between the MSBA and the OPM shall be copied to the Town.
- All correspondence between the Town, Designer and Construction Manager at Risk shall be through the OPM.
- All correspondence between the MSBA, Designer and Construction Manager at Risk shall be through the OPM.
- All correspondence to the Designer's Consultants shall be through the Designer.
- All correspondence to the Construction Manager at Risk's consultants and subcontractors shall be through the Construction Manager at Risk and OPM.
- Reports submitted to the MSBA shall be by the OPM with copy to the Town. The Designer and

Construction Manager at Risk will provide to the OPM necessary documents supporting all reports for inclusion.

DOCUMENT CONTROL

- The OPM will be responsible for ensuring that the Town has a copy of all executed contracts and amendments.
- The OPM will be responsible for ensuring the MSBA has a copy of all executed contracts and amendments.
- The OPM will prepare agendas for and attend School Building Committee (SBC) meetings in collaboration with the Leadership Team, which includes the Town Manager, the Assistant Town Manager, the School's Superintendent and Chair of the School Building Committee, the Vice Chair of the School Building Committee, the Public Buildings Superintendent , the Designer and the Construction Manager at Risk. The OPM will take minutes and promptly distribute minutes of these meetings to the Owner within 3 business days. All minutes will be distributed to the SBC through the Superintendent's office.
- The OPM attends meetings with other representatives of the Owner, municipal administration, the school department, and neighborhood meetings relating to the Project, take minutes and promptly distribute minutes of these meetings to the Owner. All minutes will be distributed to the SBC through the Superintendent's office. All minutes relating to programming or Designer led meetings will be provided to the Owner within 3 business days by the Designer.
- The OPM will be responsible for ensuring all relevant correspondence i.e. MSBA submissions, project schedules, project budgets, SBC meeting minutes, are provided to the Town through the Superintendent's office for posting on the project and Town's websites. Meeting minutes of the SBC meetings are provided to the Town Clerk for record, electronically or in printed format by the OPM.
- All materials provided by the Designer and Construction Manager at Risk for SBC meetings and community presentations will be submitted to the OPM by noon 3 business days before any public meeting for review.
- All materials for presentations to the SBC or other project-related meetings will be provided by the OPM to the Superintendent's office for distribution 2 business days in advance.
- All materials provided by the Designer and Construction Manager at Risk for MSBA submissions will be submitted to the OPM by noon 3 business days before submission due date for review and comments.

Implementation of this communication and document control workflow procedures streamlined the flow of communication of all parties involved in the project and important to maintain with the emphasis on transparency.

Wilmington Wildwood ECC Public Communications Strategy Plan

01 Purpose
02 Project Overview
03 Audience
04 Channels
05 Timeline
06 Responsibility Matrix

Purpose

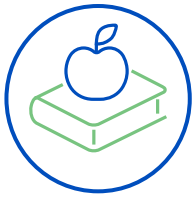
Create and execute a strategy to keep the voters and community informed about this project, its impact on the Town, and the future of its children.

Project Overview

The Wildwood Early Childhood Center has reached the end of its useful life. Now is the time for the Town of Wilmington to provide its children with an elementary school building that will prepare them for the 21st century. The MSBA has partnered with the Town of Wilmington on this project and has included the opportunity to consolidate the Wildwood School (130+ Pre-K students) with the Woburn Street (510+ Pre-K students) or the Woburn Street and the North Intermediate Schools (755+ Pre-K students).

Audience

Government Leadership



School Personnel

Parents

Future Parents

Real Estate Professionals

Empty Nesters

Senior Citizens

A school and community partnership that provides an inclusive, respectful, and collaborative learning environment where all stakeholders are engaged in the development of the whole child.

May 1, 2025

Mr. Michael McGurl
Director of Capital Planning
40 Broad Street, Suite 500
Boston, Massachusetts 02109

Dear Mr. McGurl:

The Town of Wilmington Wildwood School Building Committee ("SBC") has completed review of the Schematic Design Submittal for the Wildwood Early Childhood Center | Wilmington Elementary School project and voted to approve and authorize the OPM to submit the Schematic Design related submittals to the MSBA for consideration on April 15, 2025. A certified copy of the SBC meeting minutes, which includes the specific language of the vote and the number of votes in favor, opposed and abstained, are attached.

The SBC held ten (10) meetings regarding the Wildwood Early Childhood Center | Wilmington Elementary School project since the MSBA Board of Directors approved the District to proceed into Schematic Design on December 13, 2024.

- *December 17, 2024, 6:30 PM, hybrid @ Wilmington High School Large Group Instruction Room, 159 Church Street, Wilmington, MA, and Remote Participation via ZOOM, see Meeting Minutes attached.*
- *January 14, 2025, 6:30 PM, hybrid @ Wilmington High School Large Group Instruction Room, 159 Church Street, Wilmington, MA, and Remote Participation via ZOOM, see Meeting Minutes attached.*
- *January 29, 2025, 7:00 PM, hybrid @ North Intermediate School Cafetorium, 320 Salem Street, Wilmington, MA, and Remote Participation via ZOOM, see Meeting Minutes attached.*
- *February 5, 2025, 6:30 PM, hybrid @ Wilmington High School Large Group Instruction Room, 159 Church Street, Wilmington, MA, and Remote Participation via ZOOM, see Meeting Minutes attached.*
- *February 13, 2025, Remote Participation via ZOOM, see Meeting Minutes attached.*
- *March 5, 2025, 6:30 PM, hybrid @ Wilmington High School Large Group Instruction Room, 159 Church Street, Wilmington, MA, and Remote Participation via ZOOM, see Meeting Minutes attached.*
- *March 25, 2025, 6:30 PM, hybrid @ Wilmington High School Large Group Instruction Room, 159 Church Street, Wilmington, MA, and Remote Participation via ZOOM, see Meeting Minutes attached.*
- *March 31, 2025, 7:00 PM, hybrid @ Wilmington High School Large Group Instruction Room, 159 Church Street, Wilmington, MA, and Remote Participation via ZOOM, see Meeting Minutes attached.*
- *April 3, 2025, 6:00 PM, hybrid @ Town Hall, 121 Glen Road, Room 9, Wilmington, MA, see Meeting Minutes attached.*
- *April 15, 2025, 6:30 PM, hybrid @ Wilmington High School Large Group Instruction Room, 159 Church Street, Wilmington, MA, and Remote Participation via ZOOM, see Meeting Minutes attached.*

Notice of Non-Discrimination
All educational and non-academic programs, activities and employment opportunities at Wilmington Public Schools are offered without regard to race, color, sex, religion, national origin, ethnicity, sexual orientation, gender identity, homelessness, age and/or disability, and any other class or characteristic protected by law.

The meeting minutes are attached and outline any information shared or votes taken. The presentation materials for each meeting, meeting minutes, and summary materials related to the Project are available locally for public review and are posted on the Wilmington Public Schools website with a link to the Wildwood Early Childhood Center Project website: Archived Meeting Agendas & Minutes - Wilmington Public Schools (wpsk12.com).

In addition to the SBC meetings listed above, the District held two (2) public meetings, which were posted in compliance with the Open Meeting Law, at which the Wildwood Early Childhood Center | Wilmington Elementary project was discussed.

- January 29, 2025 @ 6:00 PM, Abutter's Meeting, In Person @ North Intermediate School Cafetorium, 320 Salem Street, Wilmington with broadcast on WCTV, *see PowerPoint presentation attached.*
- March 31, 2025 @ 6:30 PM, Community Forum No. 6, Hybrid @ Wilmington High School, Large Group Instruction Room, 159 Church Street, Wilmington, MA with broadcast on WCTV, *see PowerPoint presentation attached.*

The meeting presentation materials, meeting minutes and summary materials as they relate to the Wildwood Early Childhood Center | Wilmington Elementary project are available locally for public review at **Wilmington Public Schools – Wildwood Building Project** [https://www.wpsk12.com/our_district/facilities/school_building_projects/wildwood_building_project/]

To the best of my knowledge the meetings listed above comply with the requirements of the Open Meeting Law, M.G.L. c. 30A, §§18-25 and 940 CMR 29.00: Open Meetings.

The District has named the **Dr. Glenn Brand, Superintendent of Wilmington Public Schools,** as the local point of contact to receive questions at 978.694.6000 and/or glenn.brand@wpsk12.com. In addition, **Judith O'Connell, Assistant Town Manager,** has been also accepting questions through the Town of Wilmington Town Manager's Office at 978.658.3311 and/or joconnell@wilmingtonma.gov.

By signing this Local Action Certification, I hereby certify that, to the best of my knowledge and belief, that the information supplied by the District is true, complete and accurate.

By: R. Eric Slagle
Chief Executive Officer

Julie Leduc, Director, OPM Services and Project Manager
Sarah Traniello, Assistant Project Manager

Dore+Whittier Architects

Lee P. Dore, Principal, Designer
Rani Philip, Project Manager

Item No.	Action	Discussion
24.01	Record	Chair, Glenn Brand, called the meeting to order at 6:35 PM. Roll Call of the School Building Committee was performed to account for all of those who are present through remote participation on Zoom. The attendance based on the roll call can be found on page 1 of these minutes. The majority were present in person with a handful of members through remote access on Zoom Webinar. Remote and absent members are noted above.
24.02	Record	**Approval of Minutes** G. Brand advised that the draft minutes of the December 3, 2024 School Building Committee Meeting were distributed for review and approval. – **P. Melaragni motioned to approve the revised meeting minutes from the December 3, 2024 School Building Committee meeting, with a second motion by N. Golden.**

Item No.	Action	Discussion
		– **Approval of Minutes Roll Call Vote: Affirmatively responded, passed unanimously. M. Gallezzo abstained due to absence from meeting.**
24.03	Record	**Approval of Invoices** J. Leduc advised that there are two Warrants for approval, Warrant 19A in the amount of $3,750 for SMMA's Basic OPM Services and Warrant 19B in the amount of $95,232.58 for Dore+Whittier Architect's Architectural Design Services. – **P. Ruggiero motioned to approve both Warrants on behalf of the Finance Working Group having met prior to the meeting to review these invoices. Motion seconded by C. Prendergast.** – **Approval of Minutes Roll Call Vote: Affirmatively responded, passed unanimously.**
24.04	Record	**Design Update** – R. Philip provided update to the School Building Committee relating the updates that came forth from the meetings with the User Groups. – Biggest changes were prioritized with Teacher Collaboration Spaces located more centrally to serve the more than 40 staff on 1 level where 2 rooms were needed per level. – Art and Music flex class space towards Music of 1,000 sf. – MSBA asked to see the potential could be seen if living short in space could be lived within. It was determined that it did not work well. Spaces were needed for staff and services and Admin was place with Admin Staff location that allows supervision on each floor. – PreK entry use with parents bringing students into the school meeting staff at the Main Entry. – 35,000 sf portion is reimbursable with the delta of SPED being covered. 9,950 sf with potential for Art after the floor plan review with staff of what works what does not. – Medical Suite changes will be implemented. – Pink are extended learning spaces. 2 offices by the PreK entry. Art is right above the suite. – Teacher Collaboration Space, Toilet Rooms, etc. were added near the Cafeteria with 1 elevator bank (central in building). I Elevator is up to code. This was updated this morning since the release of the teacher Collaboration Spaces with specialists near Admin team and classroom wing. Second floor second Art classroom with closer STEM access to

Item No.	Action	Discussion
		stem areas as desired. Admin is on the right and the Math tutor (200 sf) to meet in space. – Third Floor had greatest changes implemented with no program that needed to go back. There will be 18-22 classrooms on the third floor with 12-14 classrooms on the second and ground floors. – ***How many classrooms, by school building, does this compare to currently?*** – Small group rooms are on all floors between classrooms. There are extended learning spaces with acoustical partitions with small group in classroom areas enabling flexibility. – Areas are fitted with whiteboards in each of the spaces. – Is there a price difference between materials and aesthetics? – What are the majority desiring or envisioning? This knowledge will be helpful in the due diligence that can be performed to price in the estimates. – Dore+Whittier is interpreting and displaying based on the feedback from the SBC with the colored dots provided on the precedent images. – This effort is to assist in narrowing down the overall feeling that is trying to be achieved in the teaching environment i.e. progressive or traditional style. Currently, heading down the road of practical and utilitarian spaces is the direction that is being sought and importantly cost effective. o P. Melaragni advised that Wilmington is not looking for the Taj Mahal. but natural light in places is preferred, natural colorings yet with some playfulness and continuity throughout the spaces in the school. – Landscape is preferred to be softer versus harder with landscape area for movement. – Shading aspect is important on hot sunny days. – Solar canopies vs. panels on roof? – Plaza entries vs. plazas? What is the sentiment? – Hallways with durable wall block with painted surfaces do not make sense. – ***Idea:*** *Neighborhood aesthetic on each floor gets named by school i.e. North, Woburn, Wildwood them classification*
24.05	Record	**Site Investigation** – Traffic Studies have been performed at the North Intermediate site in the morning and afternoon periods observing passenger vehicles and buses with all vehicles accommodated on the site itself

Item No.	Action	Discussion
		and queuing lanes onsite. Graphic showing part of the study with circulation with new PreK-5 and new bus drop-off and some recommendations were made with some operational changes at Middlesex intersection. Middlesex and Salem will be for further study. A signal is recommended at High Street and there is a recommendation for the retiming of some of the signals. Intersection changes could improve these conditions. Currently, 11 buses go to Wildwood, North Intermediate and Woburn Street. With more efficiencies, saving 5+ minutes instead of 2 stops it could be just 1 stop. – M. Gallezzo asked about intersections with traffic studies? E. Slagle will look into seeing if there is info that can be provided about intersections that have had traffic studies performed to date.
24.06	Record	**Working Group Updates** • **Public Relations Working Group** finalized the mailers after approval by the Leadership Working Group and it has gone to Shawsheen Valley Tech for printing. o **M. Gallezzo asked that a copy of the water bill flyer be sent to the SBC after the meeting.** • **Sustainability Working Group –** Life Cost Analysis will be on the horizon for the next topic of conversation for this working group for boilers and building systems. • **Site and Landscape Working Group –** Will be meeting in January
24.07	Record	**Public Comments** – None
24.08	Record	**Discussion and Committee Questions** – MSBA Board of Directors Meeting of December 13, 2024 approved the Wildwood School project to move forward into Schematic Design. – Community Forum and/or Abutters Meeting is going to be planned for January 2025 which will be important to listen to the surrounding community and their concerns and thoughts regarding the new school.
24.09	Record	**Correspondence** – None
24.10	Record	**Next Meeting:** January 14, 2024 at 6:30pm Wilmington High School, Large Group

Item No.	Action	Discussion
		Instruction Room and Remote Participation via Zoom
24.11	Record	**Adjourn** G. Brand thanked the committee for their efforts and invited a motion to adjourn. – **P. Melaragni motioned to adjourn. K. Bissell seconded the motion. Roll call vote, motion carried by unanimous vote.**

The information herein reflects the understanding reached. Please contact the author if you have any questions or are not in agreement with these Project Minutes.

Agenda

Project Name:	Wilmington Wildwood School Project	Project Number:	22127
RE:	School Building Committee	Meeting Date:	December 17, 2024
Prepared by:	Julie Leduc and Sarah Traniello	Meeting Time:	6:30 PM
Location:	Hybrid Meeting:	Meeting No.	25
	Wilmington High School **159 Church Street, Wilmington, Massachusetts** **Large Group Instruction Room** and **Zoom Webinar:** **https://wpsk12.zoom.us/j/83577025187?pwd=cAMl4Rs4iYaPdh4DoHQTNSnWq5XMom.1**		
Distribution:	School Building Committee Members		

1. Call to Order
2. Approval of Minutes – December 3, 2024
3. Approval of Invoices
   - Warrant No. 19A and Warrant No. 19B
4. Design Update *(Votes May Be Taken)*
   - Project Aesthetics Visioning:
     - Recap of Exterior and Landscape Imagery
     - Interior Imagery Exercise
   - User Group Update
     - Space Summary Update *(Vote Required)*
   - Floor Plan Options
   - Site Investigation Outcomes
   - Building Systems
5. Working Group Updates
   - Public Relations Working Group
   - Sustainability / Green Design Working Group *(Members Needed)*
   - Site and Landscape Working Group *(Members Needed)*
6. Discussion/Correspondence/New Items
   - MSBA Board of Directors Meeting Recap
7. Committee Questions
8. Public Comments
9. Next Meeting: **Tuesday, January 14, 2024**
10. Adjourn

The items listed are those reasonably anticipated by the Chair which may be discussed at the meeting. Not all items may in fact be discussed and other items not anticipated may also be brought up for discussion to the extent permitted by law.

Item No.	Action	Discussion
25.01	Record	Chair, Glenn Brand, called the meeting to order at 6:34 PM. Roll Call of the School Building Committee was performed to account for all of those who are present through remote participation on Zoom. The attendance based on the roll call can be found on page 1 of these minutes. The majority were present in person with a handful of members through remote access on Zoom Webinar. Remote and absent members are noted above.
25.02	Record	**Approval of Minutes** G. Brand advised that the draft minutes of the December 17, 2024 School Building Committee Meeting were distributed for review and approval. – **D. Allan advised that she was not present for the December 17, 2024 School Building Committee Meeting, minutes will be corrected. V. Varbedian motioned to approve the revised meeting minutes from the December 17, 2024 School Building**

Item No.	Action	Discussion
		Committee meeting, with a second motion by S. Turner. – **Approval of Minutes Roll Call Vote: Affirmatively responded, passed unanimously. D. Allan, J. O'Connell and D. Ragsdale abstained due to absence from meeting.**
25.03	Record	**Approval of Invoices** J. Leduc advised that there are two Warrants for approval, Warrant 20A in the amount of $3,750 for SMMA's Basic OPM Services - Schematic Design and Warrant 20B for the total of $95,054.50 that includes invoices for Dore+Whittier Architect's Architectural Design Services – Schematic Design in the amount of $53,900, Site Survey Services under Designer Amendment No. 3 in the amount of $5,087.50, Geotechnical Engineering Services under Designer Amendment No. 3 in the amount of $22,242.00 and Traffic Study Services under Designer Amendment No. 3 in the amount of $13,200 and Reimbursement to Michael Camoscio for Payment of Printing, Cutting and Shrink Wrapped Flyers for the Water Bill Inserts which was approved by the Town Leadership for distribution and produced in color by Shawsheen Valley Technical High School for $625.00. – **D. Kelley motioned to approve both Warrant 20A and Warrant 20B on behalf of the Finance Working Group having met prior to the meeting to review these invoices. Motion seconded by S. Turner.** – **P. Melaragni noted that he was not comfortable with this payment being made by a Committee Member to Shawsheen Valley Technical High School as a check should have been cut from another entity to issue payment.** – **Approval of Invoices Roll Call Vote: Affirmatively responded, passed unanimously.**
25.04	Record	**Design Update** R. Philip provided Floor Plan update to the School Building Committee relating Teacher Collaboration Spaces moving to a centralized location on each floor for larger space while moving art classroom to third floor. 2 Staff additions in literacy and administrative coordination. Reduction of wellness rooms to 1 per floor due to their being non-reimbursable by the MSBA. – Floor plan and some changes to center corridor with teacher collaboration spaces and flexible art classroom near STEM classroom so Health classroom was moved adjacent to the stair. Still are making smaller changes. – D. Allan asked about staffing at Town Hall that are not moving from Town Hall to the schools. They are staying the same.

Item No.	Action	Discussion
		– R. Philip walked through the Design Aesthetics and the inspiration being to connect back to the Wilmington community through the Baldwin Apple Tree which dates back to 1740 with its sprawling branches providing shelter and shade. – **Aesthetics = Stages of Growth** o Roots = Strong Foundation o Trunk = Pillar of Learning o Branches = Canopy of Growth o Leaves = Individual Potential o Shade = A place for all to experience shad, light and unity – R. Philip walked through the massing of the building including the large gathering places for students to gather. Displayed the precedent images that were opined upon by the SBC during prior sessions reviewing the interior and exterior precedents for characteristics that appealed and were desired for the new school. o D. Kelley mentioned Wilmington has a more classic look and the wood did not strike as what represents Wilmington and asked Dore+Whittier if the wood will stand the test of time since the District keeps its schools for more than 50 years. L. Dore advised that the wood that has been used on prior school projects is designed to weather over time. Others mentioned that the wood appeared like construction staging. There are concerns about the wood and longevity and P. Melaragni has concerns about potential vandalism where the wood can be carved into and ruin the design intent. D. Allan does not like the wood columns. Looks too modern. A uniform brick along both is preferred with some random blue with a ribbon along the top which is the Wildcats color. o C. Prendergast advised that Team Timber enjoys that natural material of the wood in the portico, canopy and its very functional but also is aware of the maintenance. The canopy aesthetics and on the façade of the building it needs to look like an elementary school and not like a high school or higher. o Canopies lowered reduces the amount of light that is brought into the school. Area over the lobby is the library which will be opened up for more use. The height of the canopy will be

Item No.	Action	Discussion
		modified so it feels like a smaller building to the students coming in. ○ N. Golden advised that the design appears comforting. – *S. Turner likes the overhands to be added with materials holding up the overhang/canopy.*
25.05	Record	**Construction Management at Risk** Virtual walkthrough of the project was conducted with the Construction Management firms that were planning on submitting their qualifications. – There were 7 submissions from the firms of Commodore Builders, Consigli Construction, Dimeo Construction, Fontaine Bros., Gilbane Building Company, Shawmut Design & Construction, and W.T. Rich Company. The CM Prequalification and Selection Working Group reviewed their qualifications to formulate the shortlist that will be invited to submit proposals and interview. – Interviews will be conducted the week of February 10, 2025. ○ The shortlist has been made: Consigli Construction, Fontaine Bros., Shawmut Design & Construction, and W.T. Rich Company. This committee appreciates all of the firms and their efforts that made their firms credentials stand out. The Procurement Officer can distribute the qualifications to the SBC as requested when they are available. – Feedback will be provided and recommended to the SBC at the meeting that will be schedule virtually for February 13, 2025. – The interviews are recorded and not open to the public. E. Slagle will consult with Town Counsel if the interviews must be a posted meeting of the SBC. A transparent process is desired. The SBC vote will be conducted and recorded by WCTV. – Videos of the interviews occurring will be provided to the SBC members for their review and reference to assist in their providing a vote. These will be shared on February 12, 2025. – The CM interviews will be conducted in Town Hall, Room 9. This CM decision is an important one as the CM needs to be onboard to understand and have knowledge of the assumed materials that will be utilized on the project to help set the budget, set in motion any advance procurement that needs to occur and ensure they get the most amount of information to this Committee, MSBA and the Town of Wilmington to set the budget for the project that will be what the Town will vote upon at Town Meeting and Ballot Vote in September 2025.

Item No.	Action	Discussion
		– **N. Golden made motion to approve the 4 Construction Managers that were recommended as the shortlisted firms by the Construction Manager at Risk Prequalification and Selection Working Group and D. Ragsdale seconded the motion.** – **C. Miner abstained from voting. S. Turner had left the meeting and did not participate in roll call.** – **Approval of CM Firm Shortlist Roll Call Vote: Affirmatively responded, passed unanimously.**
24.06	Record	**Working Group Updates** • **Public Relations Working Group** Flyer water bill mailers went to the Town for distribution, after approval by the Leadership Working Group. Shawsheen Valley Tech for produced, see invoice in Warrant 20B. Flyer will be further shared with outreach to school and community groups. Outreach will be initiated with PAWS and PAC to provide information and other activities to provide informational updates on the project. ○ **M. Gallezzo asked that a copy of the water bill flyer be sent to the SBC after the meeting.** *This was sent on 12/18/2025 by S. Traniello and resent by V. Varbedian during the meeting to refresh in email.* • **Sustainability Working Group –** Life Cost Analysis will be ready within the next 2 week and will be explained in greater detail in a conversation for this working group for boilers and building systems. D. Kelley would like to hear more and have more explained to the SBC about the options with respect to Geothermal so there is a better understanding of how it compares with the others and what will best benefit this school and the community once it is built and be able to be maintained by the Town. A lot of decisions are being made in this SD phase and within the next 4 weeks heating and cooling system will need to be selected or get closer to being nailed down once there is a greater understanding. ○ Geothermal System is most expensive and being priced to cover all systems right now as of the 4 options it costs the most. Pricing for each of the systems in the SD phase will be compared back to the pricing obtained in the PSR phase. ○ Picking the system is important. ○ How much cost upfront and how much is the Return on Investment (ROI)?

Item No.	Action	Discussion
		• **Site and Landscape Working Group –** Went through discussion points for the site plans and working through ideas.
25.07	Record	**Public Comments** – Haley Stewart attended the meeting and encouraged having childcare at Town Meeting as it would be ideal so parents can participate fully without distraction. Lots of great ideas to share and enthusiasm in support of the project and would like to join in outreach to the community. G. Brand will connect H. Stewart with the appropriate people she will need to connect with.
25.08	Record	**Discussion and Committee Questions** – PreConstruction Services: the CMs are going to get the estimating for the systems based on the fee set. In the interim, they will use the most expensive of the 4 heating/cooling systems as the placeholder for the cost. – PSR estimate had geothermal in it. – Abutters Meeting will be at North Intermediate School on January 29, 2025 at 6pm immediately before the SBC Meeting at 7pm in the Cafeteria and will be important to listen to the surrounding community and their concerns and thoughts regarding the new school. Mailing will be distributed to abutters inviting them to the Abutters Meeting. – Town Meeting will be held on Saturday, September 13, 2025 – Ballot Vote will be Tuesday, September 16, 2025.
25.09	Record	**Correspondence** – None
25.10	Record	**Next Meeting:** January 29, 2024 at 7:00pm North Intermediate School Cafeteria and Remote Participation via Zoom
25.11	Record	**Adjourn** G. Brand thanked the committee for their efforts and invited a motion to adjourn. – **N. Golden motioned to adjourn. C. Prendergast seconded the motion. Roll call vote, motion carried by unanimous vote.**

The information herein reflects the understanding reached. Please contact the author if you have any questions or are not in agreement with these Project Minutes.

Item No.	Action	Discussion
26.01	Record	Chair, Glenn Brand, called the meeting to order at 7:10 PM. Roll Call of the School Building Committee was performed to account for all of those who are present through remote participation on Zoom. The attendance based on the roll call can be found on page 1 of these minutes. The majority were present in person with a handful of members through remote access on Zoom Webinar. Remote and absent members are noted above.
26.02	Record	**Approval of Minutes** G. Brand advised that the draft minutes of the January 14, 2025 School Building Committee Meeting were distributed for review and approval. – **N. Golden motioned to approve the revised meeting minutes from the January 14, 2025 School Building Committee meeting, with a second motion by M. Camoscio.** – **Approval of Minutes Roll Call Vote: Affirmatively responded, passed unanimously. K. Bissell abstained due to absence from meeting.**

Item No.	Action	Discussion
26.03	Record	**Design Update** R. Philip provided Site Plan update to the School Building Committee outlining the specific areas of the Bus Loop, Parent Drop-Off and Pickup, Accessible Path/Walking Path, Open Play Areas, Active Playground, Raised Garden Beds, Sensory Garden Instruction, Outdoor Classroom, Outdoor Discovery Lab and Dining areas that have been designed to work with the staff and student needs including but not limited to the U-8 playfields and parking that is provided onsite. • With the feedback provided in the Abutters' Meeting immediately prior to this meeting there will be transitional space with turnarounds to be further developed to take into consideration the concerns of the abutters. • Particular attention will be paid at the property lines to take in the effect the acoustics of children playing on the playground or fields, school building adjacency, etc. taking into consideration where screening may need to be trees and/or fencing. • There will be some updates made to the playground space and the fields usage to make the most of the placement of the playgrounds, open field space on the site. • It is important the U-8 soccer field space is going to be utilized space. The size is geared towards the age of the school building occupants for their use. Dore+Whittier advised that with taking some of the schools offline it is important to the community to replace in kind as much as possible. Dore+Whittier is meeting with the Recreation Department to ensure the needs of the students and the community are being met and U-8 fields fit. There is potential to squeeze in another U-8 field where the tennis/pickleball courts were and this will be explored further. • K. Caira advised that there is concern by the Athletic Director about the loss of the soccer and baseball fields at North Intermediate. This feedback has come to him about these specific needs. Dore+Whittier will take this information under advisement and reach out to the Athletic Director and the Recreation Department for further discussions and input. • In addition, L. Dore acknowledges that there are some dedicated items on the North Intermediate School site that have been set in place for period of time. L. Dore advised the school project and its OPM and Design consultants will also be taking into account that within the Town there are important memorials and memorial items that have been put in place in remembrance of significant people in the community. There will be provisions put in place to make sure that these items are taken into consideration for placement and integration into the design. ○ Strategic placement of fields, dedications and monuments will be kept as a permanent part of the project.

Item No.	Action	Discussion
		○ Memorial Items and Historical Items for the Project will be taken into consideration and this listing will be shared with the members of the SBC, etc. • S. Turner advised that the Wildwood School site would be a good location for soccer and baseball fields due to its close proximity to all of the schools. In the loss of 2 fields there will be discussion for a future disposition. R. Philip advised that Dore+Whittier is working with faculty re: what needs to happen in the building with the Administrative Suite, Conference Rooms and Conference Space, Teacher Collaboration Space. The Teacher Collaboration Space went from 6 spaces to 3 spaces. Teaching staff will come in and use the collaboration space when meetings are not being conducted within the space. There is space in the center of the Teacher Collaboration Space for staff to gather around the table and conduct meetings. • **PreK Wing** is space with great sight lines throughout incorporating visuals with seating and planning for the instructional wall. • Questions and concerns raised about shades on door sidelites and windows for security. • **Extended Learning Areas** will have transparency and screening through sidelites and it is important the sightlines are present for staff to see what is going on in the classroom areas. Within the Extended Learning Areas there are different zones, i.e. lunch space, play area, spaces with furniture on casters for flexibility to move and be convertible for an ever changing and flexible space for students to learn in. • **Media Center / Library** will have bookshelves in a central location and a lot of conversations will be taking share with Dore+Whittier to get these spaces to where they are envisioned to suit the students. • *S. Turner likes the diagrams and how it creates identities in how they are interpreted. Teacher's Work Room and Meeting Room is open and fluid. It is a place for teachers to go and do their copying and filing.* **Project Aesthetics** Interior and exterior spaces include common themes of color with natural materials including warm tones, wood tones, green tones and blue tones as part of the theme to be used in the building and included in the wayfinding. It is important to use the color schemes/tones so that students are provided with a feeling of home. Colors associate everything for kids and allows for the perception of wayfinding and helps them know their spaces well. P. Melaragni asked if these would be part of the color palette and if there would be many tones. L.Dore advised P. Melaragni he could join the Color Committee and assist in the choices. • Cafeteria tables shown are placeholders as they are to provide a sense of what the space will look like with furniture in it. Cafeteria tables and furnishings have not been chosen yet.

Item No.	Action	Discussion
		• One of the aspects that is important is to bring the outside inside with the light provided from the floor to ceiling windows, the fixtures included in the space and there are quiet rooms off of the Cafeteria where the STRIDE students will be able to enjoy their lunch and K. Bissell advised that this will be important in the PreK-5 school as there are 30+ students that will need to use these quiet rooms as the larger spaces of the Cafeteria are intimidating to these students. Currently, lunch bunches are held 4-5 days a week. CARES can also use these spaces as shared spaces as well. Never enough meeting rooms so if there ever is a need these spaces can be used when not in use by STRIDE or CARES students. • Overhands and solar studies on the elevations will be coming. Cafeteria is facing Ballardvale abutters. Energy Code and more windows with more sun that comes in may perhaps need work done for sun shading. • View of the Library contained wood beams and reading nook under the stair and bringing the outside inside to the library. • Cafeteria Art Wall and wrap around – good real estate choices and opportunity as well above the kitchen space on the wall. • Lighting Fixtures and Attic Stock – D. Kelley asked that it be taken into consideration that lighting fixtures that are chosen are those that will have longevity and accessibility for the long run. The District keeps its schools for a long time and it would be beneficial to have the lighting fixtures be easily maintained with supplies that will be easily purchase over the long term. • Exciting preference for Terrazzo in circulation space including stairways where it can be made into different shades of color to mimic a waterfall or river on the stairway. Terrazzo is durable and a long lasting material. P. Melaragni and D. Kelley were happy with and love terrazzo. • In specification, everything specified and chosen needs to have 3 equals. Design materials need to be vetted, tested and time tested. Once these choices are made, the specifications start to get formulated from here. • Academic Wing will have sustainable material that is products that are durable, or same color theme throughout – lineoleum in more features and themes to suit the students environment and their needs. • Clear Circulation Paths provided with linoleum in themes assists in wayfinding and also it does not need to be waxed and stripped and is a renewable resource. • Images of the Extended Learning Area show construction of wall seating, zones for teaching and a view towards the North and a view looking back to Extended Learning Area. ○ Window seats, LEGO Wall, Teaching Walls, Play Zones and Extended Learning will be present in the ELA PreK Area.

Item No.	Action	Discussion
		• There are 50 years of terrazzo in school buildings – lots of longevity. **Exterior Update** **Project Inspiration: The Baldwin Apple Tree** *The school would be designed to emulate the tree's essence, where every child could feel rooted and free to grow. Here's how the Baldwin tree is a metaphor for the architectural vision:* • **Roots: A Strong Foundation** The school would be grounded in the values of curiosity and community. The foundation, like the tree's roots, would spread wide and deep, symbolizing the knowledge and support systems that anchor children as they begin their educational journey. • **Trunk: The Pillar of Learning** Central, multi-purpose core: Cafeteria and Gymnasium gathering spaces are the "trunk" of the school. These spaces, tall and strong, are the core where children, teachers, and families can gather for assemblies, cultural events, and celebrations. It represents strength, stability, and shared purpose. • **Branches: A Canopy of Growth** The classrooms wings extend like branches from the central core. Each classroom is designed to be modular and adaptive, filled with natural light and airflow. Extended learning areas and small group rooms foster an environment that encourages exploration and interaction. • **Leaves: Individual Potential** The leaves, ever-changing yet integral to the tree's life, symbolize the children themselves. Outdoor learning spaces, art walls, and play areas are created to nurture each child's unique creativity and curiosity. Each child can grow and flourish, much like the leaves transforming under the sun. • **Shade: A Place for All** Like the Baldwin Tree, the school would offer shelter and inclusion. The design features communal spaces for the Town, ensuring the school is not just for children but a space for everyone to come together—celebrating life, knowledge, and unity. • Baldwin Apple Tree communicated and made into versions as cornice accents in blue. • Several SBC Members were not enthusiastic about the metal panels and requested it be looked at for a more traditional, classic look of brick or stone. This was an interpretation of 3 separate options of varying use of a blue accent color on the metal panel. Concern about the blue color fading over time and the Town keeping its schools a long time it may show its wear. • *N. Golden wanted to know where Dore+Whittier is coming from for the metal panel, what its cost and longevity is as a material. Likes the concept of the Baldwin Apple Tree and understands what the color will be viewed like from Salem Street and color is what kids will home into as it is age*

Item No.	Action	Discussion
		appropriate. Inquired about there being accent colors of brick that might be suitable to explore more options. Thinks the idea of a full tree with branches and what you get as the sun hits the tree is a cool idea. • *S. Turner advised that this school is an elementary school and this concept as shown has even less blue on it than the Middle School currently does and it is important for kids to want to be there at the school and that it is an inviting place to be. Color brought into it may make this what they need. Members advised that the fading of blue shows age but if it is brick, it is viewed as ageless.* • Transitions and types will be further explored as this is a first pass with expressing color into the exterior of the building. • *D. Kelley advised that he sees the metal panel as more maintenance as it is not as resilient to age and damage as a brick or stone product.* • *M. Gallezzo is not a fan of the floor to ceiling windows and wants another material on the walls. Concern about the cost to replace the window(s) if it breaks is a concern.* • *M. Gallezzo, D. Allan and D. Kelley are not fans of the metal panel and see the windows as potentially being more maintenance with fingerprints for custodians, etc.* • *P. Melaragni is not a fan of the "ponderosa" wood beams that are displayed on the exterior of the building. J. O'Connell advised they appear as scaffolding or staging.* • *C. Prendergast loves the design and the warmth and appreciates the attempt to find a happy medium and definitely explore options.* • *It was proposed that the glass start at 4 feet off of the ground as daylighting is likely to be incorporated.* • *S. Turner advised that he would be open to seeing examples of window walls similar to the proposed being used in school buildings and working well with PreK-5. L. Dore advised that Dore+Whittier would provide examples.* • *D. Ragsdale likes the brick vs. metal panel and loves the floor to ceiling windows in the Cafeteria as he likes the light for the students. Enjoys the tree connection to education but concerned about the tree connection to the building working.* • *J. O'Connell is struggling with the blue on the exterior of the building, concerned about the with the safety of the glass in the Cafeteria and the temperature that a window wall might cause in the Cafeteria in addition the potential injury student(s) could sustain if they walk or run into glass curtainwall in an elementary school space.* There will be an analysis of glass for a full wall and partial wall vs. brick.

Item No.	Action	Discussion
		Landscape has a seating wall for students outside of the Cafeteria, bollards will also be present there and there will be security treatment as well. This will be presented with options at upcoming meeting.
24.04	Record	**Building Systems Update** M. Woodward of Garcia Galuska DeSousa (GGD) presented the HVAC System Options and Life Cycle Cost Analysis (LCCA) Summary. The Goals of the LCCA are: • The goal of the mechanical lifecycle engineering economic analysis is to assess the performance of various mechanical system options in comparison to a baseline mechanical system. • Each option is compared to the baseline system over a 50-year cycle to determine the most advantageous system considering utility costs, maintenance costs, replacement costs, and initial construction costs. • By comparison of each option to the baseline system, the option with the greatest total life-cycle savings is generally recommended. LCCA takes into account Energy Simulation of weather data, building occupancy and usage, system operating characteristics and utility rates and how these factors correlate to Energy Economics with Operating Costs, Installation Costs, Maintenance Costs, and Incentives and Tax Credits (if available) resulting in the Life Cycle Cost Analysis. There are specific Proposed Design Criteria Temperature Conditions that are taken into account: Design Outdoor Temperature Data Per ASHRAE Tables for Weather Station – Hanscom AFB: Heating 99.6% @ 2.6°F Heating & Cooling 0.4% @ 91°F db, 74°F wb Classrooms, Office, Cafeteria, Auditorium, Gym are proposed for all options to provide: **Heating, Ventilation @ 70 °F db +/- 2°F** **Air Conditioning : 75°F db +/- 2°F** with 55% RH +/- 5%RH Storage & Utility Room: Heating and Ventilation Only @ **70°F db** for heating Unoccupied temperature setback of **55°F db Heating** and **85°F db Cooling** is provided for **all options**. All of the HVAC options are based on fossil fuel free, electrified heating systems that will be compared to a Massachusetts Opt-In Code Compliant Building and HVAC System. All of the options shall meet or

Item No.	Action	Discussion
		exceed MSBA Requirement for Additional Reimbursement, LEED Requirements, MA Opt-in Stretch Energy Code Requirements. All of the proposed systems include air conditioning. • **BASELINE:** Air Source Heat Pump Plant - Mixed-Air Overhead VAV System and High Efficiency Air- Source to Hydronic Heat Pump Chiller/Heating Plant for Chilled/Heating Hot Water (Fossil Fuel Free) • **OPTION 1:** Air-Source VRF (Variable Refrigerant Flow) and DOAS (Dedicated Outdoor Air Systems w/ Air Source Heat Pump) for Classrooms/Office areas & Air Source Heat Pump Rooftop Units for Gym, & Cafeteria with Supplemental electric heating for entryways, storage, and utility rooms. (Fossil Fuel Free) • **OPTION 2:** Geothermal Water-Source VRF (Variable Refrigerant Flow) and DOAS (Dedicated Outdoor Air Systems w/ Air Source Heat Pump) for Classrooms/Office areas & Water-Source Heat Pump Rooftop Units for Gym, & Cafeteria with Supplemental electric heating for entryways, storage, and utility rooms. (Fossil Fuel Free) • **OPTION 3:** Air Source Heat Pump Plant - VAV Displacement System w/ Passive Radiant Cooling/Heating Panels and High Efficiency Air-Source to Hydronic Heat Pump Chiller/Heating Plant for Chilled/Heating Hot Water (Fossil Fuel Free) • **OPTION 4:** Geothermal Heat Pump Plant - VAV Displacement System w/ Passive Radiant Cooling/Heating Panels and Geothermal Hydronic Heat Pump Chiller/Heating Plant for Chilled/Heating Hot Water (Fossil Fuel Free) The Sustainable Design Working Group after thoughtful consideration has been weighing the options and are leaning towards Option 1 and 3 with Options 2 and 4 not being viable to provide sufficient return on investment for the Town. All of are fossil fuel free systems and over an electrified heating grid that complies with Municipal Buildings in Massachusetts for reimbursement. All of the options shall meet or exceed the MSBA requirement for additional reimbursement as they are incentified, LEED requirements, and MA Opt-in Stretch Energy Code Requirements. • *D. Kelley asked M. Woodward about the systems maintaining 70 degrees in Summer and Winter extreme temperatures. Extreme temperatures in Summer of 90 degrees and Winter of 0 degrees will make the heating and cooling systems struggle a little and work a little harder to maintain the 70 degree temperatures in Summer and Winter which would result in the 2 degree differential that is seen in the above chart.* • *N. Golden asked about whether with climate change if there will need to be provisions or adjustments to the heating and*

Item No.	Action	Discussion

		cooling systems 30 years in the future when the temperatures may be different. M. Woodward advised that there are adjustments that can be made to the systems and the systems have an average 30 year life cycle where by 30 years from now most of the equipment will be aged out. So with that life cycle in 30 years the system may need to be replaced.
		
		All of the proposed options have heating and cooling options built into them.
		
		The Sustainable Design Working Group evaluated the ground source versus air source of the Heating and Cooling Systems proposed.
		
		• It was found there were more benefits to those that are being considered in Options 1 and 3.
		  ○ Option 1 is an Air-Source VRF which is very similar to a residential heating and cooling system with Dedicated Outdoor Air Systems with Air Source Heat Pump and Option 3 being similar to what is existing currently in school buildings with an Air Source Heat Pump with VAV Displacement System with Passive Radiant Cooling/Heating Panels and High Efficiency Air Source to Hydronic Heat Pump Chiller/Heating Plant for Chilled/Heating of Hot Water.
		  ○ Option 3 is a system that involves moving water throughout the system compared to Option 1 which is moving refrigerant fluid throughout the system.
		  ○ Options 2 and 4 involve similar systems but instead are using ground sourced well fields similar in nature to Geothermal (Option 4) utilizing the ground temperature to regulate the system by pumping water through the system utilizing the differential in the ground compared to that of the air temperature to the advantage and pulling heat and rejecting heat to those well fields.
		  ○ LCCA Study Options without Federal Tax Credits was presented by M. Woodward of G-G-D showing the costs, data and what would potentially be the Town's return on investment for each of the options that could potentially be chosen for the new elementary school.
		  ▪ Followed by the Federal Tax Credits available as part of the Inflation Reduction Act (IRA) through the use of Geothermal in comparison to the other options available. The cost of drilling wells is very expensive and is an upfront cost to the project and it is necessary for a geothermal system.

Item No.	Action	Discussion
		○ There is a preference at this time for the Town not wanting to rely on federal tax credits due to the uncertainty of the credits existence when pursuing due to governmental changes that are currently occurring that might result in a system like geothermal incentives of tax credits that may or may not be viable or come to fruition after a considerable upfront investment by the Town. • Without Federal Tax Credits, the only options of Options 1 through 4 are Options 1 and 3. If the project is going to invest more on the Federal Tax Credits, then Options 2 and 4 make more sense for the project. • Option 3 without tax credits is Displacement Ventilation with an Air Source Heat Pump Plant and has the lowest life cycle cost of the system options studied as it yields approximately $5.6M savings over the 50 year study period with an instant payback by having a lower capital investment than the baseline system. • Option 4 has the advantages of a geothermal system is that it yields an approximate $8.7M savings over the 50 year study period with an instant payback, has the second lowest EUI of all the options, its system longevity, reduced maintenance, reduced downtime and improved controllability of equipment and the best acoustics as it does not require exterior mounted condensing equipment. • C. Prendergast asked what the lock-in point to be able to take advantage of the Utility Federal Tax Credit. M. Woodward advised that it is a very good question and it is very much in flux right now and it is something the SBC should discuss relating to their comfort with the direction of the Federal government currently and how it may impact the availability of the Federal Tax Credits. R. Philip advised that that portion of the incentive is not something the Town will see when the new elementary school project is completed as the return on the investment. ○ E. Slagle advised that the Town and the Project either go forward with the geothermal system because it is felt to be a better product and pay more for it and take the windfall later on when or if the Federal Tax Credit is available or the Town and Community goes forward with Option 3 which balances the efficient system with the return on investment. ○ N. Golden advised that he agrees with Town Manager, E. Slagle, as it seems that the Federal picture is too hard to predict at this time. It may be very difficult to state the words geothermal at Town Meeting and be able to convince the community of

Item No.	Action	Discussion
		the Federal Credit incentive when the Option 3 provides the benefits needed for the school project and the Town. ○ *D. Allan advised that Wilmington should not rely upon Federal Tax Credits and advised that the heating and cooling system is the most expensive and important components of the school building and it needs to be the right decision. This information should be digested a little bit more and wait until the next meeting on February 5, 2025 before pursuing a vote on the choice of system with the full SBC to take a vote on the system to pursue. D. Kelley will have this on his shoulders in the future and his input is valuable as to what will be successfully maintained by the Town going forward.* • S. Turner asked how it is reconciled that there is the $1M to $2M delta between the options when the life cycle is less than half of the building especially when it is almost one-third of the duration the Town keeps its schools active. ○ How was that evaluated by the Working Group? ○ How do we evaluate less maintenance time and how does it translate to salary cost for maintaining the system? • *D. Kelley advised that the Sustainability Working Group met today and is not taking into account the amount of site costs that would be incurred also as a result of the geothermal in the need to drill the wells which is potentially a high cost that the project may not get back.* ○ *In comparison to Option 3 which does not need such invasive site costs as it is moving water through the system, there is a greater amount of flexibility and the current maintenance staff and mechanical contractors have more experience with than with geothermal systems.* ○ *D. Kelley advised that the Working Group wanted to see Options 1 and 3 side by side so that an educated decision could be made as to which option is the best Option for this project by seeing the pros and cons of each option side-by-side.* ○ *D. Kelley advised that geothermal does not seem to be the option. M. Camoscio advised that the maintenance costs for Options 3 is nearly as much as Option 4. With Option 4, the investment of $4M more per year would yield more electric savings by going ground source. M. Camoscio advised that with every year, the technology is improving and you can see with the electricity savings being a lot closer

Item No.	Action	Discussion
		than it used to be. M. Camoscio further advised that without the Federal Tax Credit, the benefits of the ground source option of geothermal does not seem like the best path to pursue considering Option 3 is more flexible with the movement of water through the system and is a bit more certain with realizing the benefits of the system. ○ *C. Prendergast asked if any of the options provide more LEED points than others? M. Woodward advised that Option 1 is projected to get 11 LEED points; Options 3 is projected to be worth 16 LEED points as are Options 2 and 4 both each 16 LEED points.* ○ S. Turner advised that the matrix states that Option 3 says that it has the highest outdoor noise. Is it possible to make sure that the system is far away from any of the abutters? *L. Dore advised that there are several ways that can be used to mitigate the outdoor noise that will be produced by the system and the project will work with the abutters to make sure their concerns are heard and mitigate the amount of disruption that could be potentially present with location, acoustical treatments, etc.* ○ *D. Kelley advised that sound attenuation fences and tree screening were discussed at the Abutters Meeting held earlier at 6pm and this is something can be further discussed with the Abutters and the SBC.* • The Sustainable Design Working Group is leaning towards Option 3 as the most advantageous LCCA and interested in more input from others at the February 5, 2025 meeting before making a decision on a system. **This Option will be further reviewed for a decision at the February 5, 2025 School Building Committee Meeting.**
26.05	Record	**Public Comments** – None
26.06	Record	**Discussion and Committee Questions** • **PR Working Group** has met twice and discussions have been discussing scheduling of community outreach opportunities, approach to get out the vote and coordinate for babysitting for the Town Meeting in September, 2025. ○ **Town Meeting: Saturday, September 13, 2025** ○ **Ballot Vote: Tuesday, September 16, 2025**.
26.07	Record	**Correspondence** – None

Item No.	Action	Discussion
26.08	Record	**Next Meeting:** **Wednesday, February 5, 2024** at **6:30pm** **Wilmington High School** Large Group Instruction Room
26.09	Record	**Adjourn** G. Brand thanked the committee for their efforts and invited a motion to adjourn. – **D. Ragsdale motioned to adjourn. V. Varbedian seconded the motion. Roll call vote, motion carried by unanimous vote.**

The information herein reflects the understanding reached. Please contact the author if you have any questions or are not in agreement with these Project Minutes.

Agenda

Project Name:	Wilmington Wildwood School Project	Project Number:	22127
RE:	School Building Committee	Meeting Date:	January 29, 2025
Prepared by:	Julie Leduc and Sarah Traniello	Meeting Time:	6:30 PM
Location:	Hybrid Meeting:	Meeting No.	26
	North Intermediate School Cafeteria **320 Salem Street, Wilmington, Massachusetts** **Cafeteria** and **Zoom Webinar:** **https://wpsk12.zoom.us/j/83577025187?pwd=cAMl4Rs4iYaPdh4DoHQTNSnWq5XMom.1**		
Distribution:	School Building Committee Members		

1. Call to Order
2. Approval of Minutes – January 14, 2025
3. Design Update (*Votes May Be Taken*)
   - Site Plan
   - Floor Plans
   - Project Aesthetics
   - Building Systems Update
4. Construction Manager at Risk Update
5. Working Group Updates
   - Public Relations Working Group
   - Sustainability / Green Design Working Group
   - Site and Landscape Working Group
6. Discussion/Correspondence/New Items
7. Committee Questions
8. Public Comments
9. Next Meeting: **Wednesday, February 5, 2024**
10. Adjourn

The items listed are those reasonably anticipated by the Chair which may be discussed at the meeting. Not all items may in fact be discussed and other items not anticipated may also be brought up for discussion to the extent permitted by law.

SMMA

Cambridge, MA 02138

Minutes

Project Name:	Wilmington Wildwood Early Childhood Center	Project Number:	22127
RE:	School Building Committee	Meeting Date:	2/05/2025
Prepared by:	Sarah A. Traniello	Meeting No:	27
Location:	Hybrid: In Person at Wilmington High School, 159 Church Street, Wilmington, and Remote Participation via Zoom (recording posted on Wildwood Building Project website, WCTV and YouTube)		
Distribution:	School Building Committee		

Attendees

Wildwood School Building Committee

Diane M. Allan	*Remote*	Dennis Kelley	*Present*
Gregory B. Bendel	*Present*	*Craig Miner*	*Remote*
Kate Bissell	*Present*	*Christine Murray*	*Absent*
Dr. Glenn Brand, *Chair*	*Present*	Judith O'Connell	*Remote*
Kevin A. Caira	*Remote*	*Christine Prendergast*	*Remote*
Michael Camoscio	*Remote*	Paul J. Melaragni	*Present*
Justin Cusce	*Present*	David A. Ragsdale	*Present*
Marianne Gallezzo	*Remote*	Paul Ruggiero	*Present*
Nicholas Golden	*Absent*	*Stacey Scott*	*Absent*
Christine Holloran	*Remote*	R. Eric Slagel	*Present*
John C. Holloway	*Absent*	Stephen Turner	*Present*
		Vivian Varbedian, *Vice Chair*	*Present*

SMMA OPM

Julie Leduc, Director, OPM Services and Project Manager *Present*
Sarah Traniello, Assistant Project Manager *Present*

Dore+Whittier Architects

Lee P. Dore, Principal, Designer *Present*
Rani Philip, Project Manager *Present*
Bryce Taft, Designer *Present*

Item No.	Action	Discussion
27.01	Record	Chair, Glenn Brand, called the meeting to order at 6:30 PM. Roll Call of the School Building Committee was performed to account for all of those who are present through remote participation on Zoom. The attendance based on the roll call can be found on page 1 of these minutes. The majority were present in person with a handful of members through remote access on Zoom Webinar. Remote and absent members are noted above.
27.02	Record	**Approval of Minutes** G. Brand advised that the draft minutes of the January 29, 2025 School Building Committee Meeting were distributed for review and approval. – **E. Slagle motioned to approve the revised meeting minutes from the January 29, 2025 School Building Committee meeting, with a second motion by D. Ragsdale.** – **Approval of Minutes Roll Call Vote: Affirmatively responded, passed unanimously.**

Item No.	Action	Discussion
27.03	Record	**Approval of Invoices** P. Ruggiero advised of the invoices reviewed by the Finance Working Group namely Warrant No. 21A and Warrant 21B. Warrant No. 21A for SMMA in the amount of $3,750 and Warrant No. 21B for Dore+Whittier Architects in the amount of $59,504.50. Warrant Nos. 21A and 21B were distributed for review and approval. – **D. Kelley motioned to approve Warrant No. 21A based on the Finance Working Group's recommendation. C. Prendergast seconded the motion.** ○ **Approval of Warrant 21A Roll Call Vote: Affirmatively responded, passed unanimously.** – **D. Kelley motioned to approve Warrant No. 21B based on the Finance Working Group's recommendation. M. Gallezzo seconded the motion.** ○ **Approval of Warrant No. 21B Roll Call Vote: Affirmatively responded, passed unanimously.**
27.03	Record	**Design Update** R. Philip provided Site Plan update to the School Building Committee incorporating the feedback provided from the Site and Landscape Working Group in their recent meetings as well as the Abutter's Meeting of January 29, 2025. There have been buffer improvements made on the site plans, playgrounds have been moved to the locations where the U-8 soccer fields were before. Staff and Principals' concern for security and safety is being taken seriously and factors are being investigated more closely. Open Green Spaces: Trees and acoustical separation is being looked at closely for the abutters to have protection, screening, and setting boundaries. • K-2 playground moved to where green space was previously to ensure that the property lines are not too close. • There will be meetings with Public Safety including Wilmington Police next Tuesday, February 11, 2025 and it has been confirmed. • The K-2 concern over crossing the bus loop lane is a concern. With the Gates in place and implemented during school hours to block traffic, K-2 students should have the protection needed to block traffic. There are 2 gates just past the delivery/loading dock and these 2 gates are what will restrict vehicles from entering the areas where students will be playing and interacting with their outdoor surroundings. • Parents visiting would use the Main Entrance and Nurse's Suite to access the school as there is a door from the Nurse's Suite to the outside where parents would be able to pick up their child from school. • Dore+Whittier and their consultants are exploring a fence with security around the playground areas as well to determine if they are needed in some or all cases. • All trucks accessing the site would access through the bus look and back into the loading dock and then drive out of the

Item No.	Action	Discussion
		loading dock. Loading/Delivery Dock will be used to deliver kitchen, food and paper products. Deliveries would need to be made before school hours start. • The bus loop is 20-feet wide and has a sidewalk. There will be a turning radius survey performed. There will be studies of the turnarounds and parking for the food service and the custodial staff as well. • The shifting of the building south adds more circulation space on that side of the building. • D. Ingram, High School Athletic Director and B. Sawin of the Recreation Department met with Dore+Whittier Architects and shared their current use of the fields that exist at the North Intermediate School and provided their input relating to those that were in the initial draft of the fields for the shared fields and indicated that the U-8 size soccer fields work well. Dore+Whittier Architects will continue to share with them and garner their input through the process. The High School soccer field would need to locate the District's soccer program. The building is near property lines. • The goal of the locations of the playgrounds on the site was to place the playgrounds in close proximity to the grades that each one of the playgrounds serves. Some have proposed placing all of the playgrounds for all of the grades together however PreK- students may need to be closest to the building in order to run to rest rooms. In addition, all of the students on the playground at one time could be 300 students and need help to monitor the students easily. • The site plan does not show mechanical units outside of the building. Where would they be located? *Condensing units would be located on the roof as the units would not be installed on the ground.* • How long are the periods of recess and lunch for the students and how many are there? *Recess is 15-20 minutes and lunches are 30 minutes. There are usually 3 sets of each covering 3 hours of time with the lunches staggered. In total, it equals 1 hour of recess and 2 hours of lunch.* The SBC appreciated Dore+Whittier Architect's responsiveness to the concerns of the neighbors abutting the North Intermediate School in providing as many appropriate revisions that were possible in the short time frame between the last meeting on January 29, 2025 with the Abutters. Performance Space has been adjusted so that the curtain and stage lighting are squared off the stage to help provide accessibility. Dore+Whittier Architects is meeting with the Director of Music next week and will confirm the seat counts for assembly in the Performance Space/Cafetorium. What kind of bathrooms will the students have in this new school? *Boys and girls will have a split entry with a wet wall as boys and girls stay in their individual rooms respectively. PreKindergarten and Kindergarten students are brought to the rest rooms / bathroom by staff members.*

Item No.	Action	Discussion
		• *D. Carreiro said that they will uniformly use rooms once instructed to use which room. There are concerns about there being playtime in the restrooms causing maintenance and custodial issues for resolution.* ○ *G. Bendel advised preference for doors on both boys' and girls' room and D. Allan is in agreement.* • Single stall toilet for adult or student who wants or needs? *Adult stall toilet is provided but student one can be put in.* • Outside groups using bathrooms as well so the bathroom amenities need to be looked at a bit closer as to what is suited for those populations. • What is the feeling on same sex restrooms as a community? Is there a status? Gender neutral in one stall bathroom. Dore+Whittier Architects met with M. Palen from Food Service related to the layout of the School Servery and Kitchen. • M. Palen advised that one distinctive change requested is that there be an increase from 4 serving lines from 3 serving lines to make the best use of the space provided possible to get the most students in for lunch and out for recess in the time allotted. • Kitchen staff existing door was changed so that service could be provided through Servery area by a door that goes around wall to the other side of the counter to service the floor.
27.04	Record	**Project Aesthetics** The project aesthetics were shared showing the view to the South with the Administration on the Lower Level and views towards the stage and tables that have been selected that are easily convertible from luncheon tables to bench seating making for an ease of set up for the custodial staff transforming the cafeteria into an auditorium for an assembly. View to look back towards curtainwall and curtains will be used to shade during performances. B. Taft advised that he went to the drawing table to incorporate the overall aesthetic and came up with a different iteration of the design for introduction of masonry stone block and cast stone and precast concrete. • Brick veneer is red and in similar perspectives to what has been seen before previously. Classroom Wing side to PreK, Grades 1 and 2 and then Grades 4, 5 on the top level. **Option 4** has lighter beige color to the second floor of the classroom wing to the brick stone. Cast stone to cap off to the roof. Stair shafts have the special pop of color to break up the rhythm. South perspective and columns from blown laminate to canopy. More east with double high areas with stone block and gesture of precast column above curtainwall entry. • South Perspective, with classrooms have 3 windows per classroom and this first pass of the design left Committee wanting more outside light into the classrooms. • L. Dore advised that there will be daylighting done on the building and classrooms with larger windows being a

Item No.	Action	Discussion
		possibility. The Southeast perspective has the canopy itself with additional cover and the overhang has been brought down halfway making the canopy not as tall as the prior options had presented like "scaffolding." • Operable windows? How much public safety with operable windows? Operable windows can change and/or break the whole climate of the building. *There are LEED points that are associated with the operable windows or no operable windows so it is something that will definitely need to be looked at. During one of the school visits last October, the Boardwalk School in Acton-Boxborough, the discussion of operable windows arose and it was advised that opening one set of windows could throw off the entire mechanical system making it malfunction and/or work harder and result in condensation in areas that would not be preferrable as it throws off the humidity of the building with windows being opened.* • D. Allan likes the design with the lowered canopy and pillars with precast on the bottom and brick. E. Slagle agreed that he too also likes and approves the canopy drop lowers the profile of the building making it appear more suitable for the age range of the students attending. It is more in sync and makes a world of difference. • Can the middle column be cantilevered to look like a Main Entry presence? *B. Taft advised that this can be done and it will be incorporated.* • B. Taft brings in the color of blue, in **Option 5**, using proportion and accent color with the precast stone or brick with purpose. V. Varbedian likes the punch of color. Dore+Whittier Architects will work to get the right color of blue incorporated into the concept with the right kind of material that will be agreeable to the goals of the project. • D. Allan likes Option 4 as she is not sold on the blue. D. Allan advised that Option 4 does not single the school out as an elementary school and Option 4 blends in with the other schools in Wilmington. • C. Prendergast like the blue and the pillars with the traditional red brick. D. Ragsdale also likes the addition of the blue as well. D. Ragsdale advised that in looking for continuity for classroom space and entries, it would be nice to have connecting canopies/overhangs by carrying the treatment around from the 2 points for cars and the bus drop-off. • North Intermediate Site is flat and missing site elements to highlight the entries and guide the buses and the passenger vehicles around the site. • The blue accent color is intended to be glazed brick, precast panels and there are many varieties of metal panel options that can be selected from. Shown is a precast with pebbles accenting in the precast with a subtle bit of color and

Item No.	Action	Discussion
		additional options for a glazed brick and different shades that can be introduced depending on what is selected. • D. Kelley likes the color that is a combination of both materials. • G. Bendel likes the blue and believes that B. Taft of Dore+Whittier Architects has another version in him to get more blue that aligns with what the SBC is learning towards. B. Taft will change the material in the next iteration. • P. Melaragni likes Option 4 and would like the blue with a lessened blue i.e. the speckled blue (subtle blue accent in precast) or brick blue with more natural, subtle muted colors. E. Slagle appreciates the design concept updates that were provided having had less than a week to turn around and respond to the feedback provided and the results are great. • M. Gallezzo reiterates E. Slagle's statement and advised that L. Dore knows that the design is appreciated as the Design Team is finding the right balance and headed in the right direction. • D. Ragsdale advised that Option 5A would be great with a few different renderings and a feel of viable options so that the SBC could potentially entertain a vote on options at an upcoming meeting. Heading in the right direction through Schematic Design. • How much or how little between Options 4 and 5? Floor to ceiling windows have been brought up and the shortened canopy. • There should be an Abutters Meeting / Community Forum at the end of March as the community input is important.
27.05	Record	**Building Systems Update** The Sustainable Design Working Group after thoughtful consideration has been weighing the options are leaning towards Option 1 and 3 with Options 2 and 4 not being viable to provide sufficient return on investment for the Town. All of the proposed systems include air conditioning. • **BASELINE:** Air Source Heat Pump Plant - Mixed-Air Overhead VAV System and High Efficiency Air- Source to Hydronic Heat Pump Chiller/Heating Plant for Chilled/Heating Hot Water (Fossil Fuel Free) • **OPTION 1:** Air-Source VRF (Variable Refrigerant Flow) and DOAS (Dedicated Outdoor Air Systems w/ Air Source Heat Pump) for Classrooms/Office areas & Air Source Heat Pump Rooftop Units for Gym, & Cafeteria with Supplemental electric heating for entryways, storage, and utility rooms. (Fossil Fuel Free) • **OPTION 3:** Air Source Heat Pump Plant - VAV Displacement System w/ Passive Radiant Cooling/Heating Panels and High Efficiency Air-Source to Hydronic Heat Pump Chiller/Heating Plant for Chilled/Heating Hot Water (Fossil Fuel Free)

Item No.	Action	Discussion
		○ Option 1's maintenance of filters would be in all spaces vs. Option 3's maintenance is on roof and mechanical space. ○ Acoustical treatment to balance the noise would need to be implemented for Option 3 and Option 3 has $435k additional cost however it also has a $5.6M additional life cycle savings and you are married to all systems for parts maintenance. ○ D. Kelley advised that the Working Group is learning toward Option 3 and staff is comfortable and familiar with the system in Option 3. The type of VRF system in Option 1 is for a building sized 50,000 sf or less and is not as efficient as the displacement air system of Option 3. There are an additional 5-points benefit if operable windows are used. Water-based systems works well vs. refrigerant. • **D. Kelley makes motion for selection of Option 3: Air Source Heat Pump Plant - VAV Displacement System w/ Passive Radiant Cooling/Heating Panels and High Efficiency Air-Source to Hydronic Heat Pump Chiller/Heating Plant for Chilled/Heating Hot Water (Fossil Fuel Free).** • **E. Slagle seconds the motion. Roll call vote, affirmatively unanimous.** • **Approval of Building Systems Roll Call Vote: Affirmatively responded, passed unanimously.**
27.06	Record	**Construction Manager at Risk Procurement Update** • Interviews with 4 shortlisted Construction Management Firms will be conducted on Tuesday, February 11 and Wednesday, February 12, 2025. • **Tuesday, February 11, 2025** ○ **5pm Consigi Construction Co.** ○ **6pm W.T. Rich Company Inc.** • **Wednesday, February 12, 2025** ○ **5pm Shawmut Design & Construction** ○ **6pm Fontaine Bros., Inc.** • Interview video replays will be shared with the School Building Committee each evening after the 2 hours of interviews have concluded. • School Building Committee Meeting will be held on Thursday, February 13, 2025 at 6pm to approve the recommendation of the CM-R Selection Working Group. This will be a virtually held meeting over Zoom. K. Lord will send the login information for the meeting.
27.07	Record	**Public Comments** – None

Item No.	Action	Discussion

27.08	Record	**Discussion and Committee Questions**
		• **Project Renaming** to **Wilmington Elementary School**: V. Varbedian asked about the renaming of the Wildwood School Project to the Wilmington Elementary School project for the sake of marketing with the PR Working Group.
		  ○ ***This will be an agenda item for the next meeting for a vote. It ultimately sets the tone also for the next project for the Town.***
		  ○ *It will be needed for the Fun on the Fourth signage.*
		  ○ ***It will be unifying the Town as a whole instead of pitting sides against one another.***
		  ○ *D. Ragsdale advised that it is a good idea and all ideas for the new project name should be sent to E. Slagle and J. O'Connell.*
		  ○ ***Needs to be generic enough so people do not confuse it with the actual name of the school.***
		  ○ *D. Allan advised that this should be clarified for a vote for a name on March 5, 2025.*
		• **PR Working Group** having discussions with list of events to track community outreach for 2025 building up to the September Town Meeting and Ballot Vote.
		• **Upcoming Community Forum will be scheduled and targeting March 31, 2025** before the School Building Committee Meeting.
		• **Notification that there is creation of a new "Yes for Wilmington Schools" Committee** in Town and application has been submitted. PR Working Group will be responsible for providing updates on an ongoing basis to this group of the factual and informational content that is ongoing for the project for sharing with the public.
		• **Upcoming Events in Wilmington provided to the PR Working Group for 2025 to initiate with the coverage across Town.**
		• **Senior Center: February 14, 2025** – Important to initiate presentations about the project to Seniors population and get the momentum going for the project.
		• Discussing **scheduling of community outreach opportunities**, approach to get out the vote and coordinate for babysitting for the Town Meeting in September, 2025.
		  ○ **Town Meeting: Saturday, September 13, 2025**
		  ○ **Ballot Vote: Tuesday, September 16, 2025**.

27.07	Record	**Correspondence** – **Abutters Meeting Questions / FAQs** – Placed into matrix by S. Traniello of SMMA and will be incorporated with email by another abutter's questions and then distributed for answering into an updated version of the **Frequently Asked Questions (FAQs)**

Item No.	Action	Discussion
		– **Additional Questions submitted to School Department by email will also be made into FAQs for responses as well. Distributed to the SBC through T. Ingersoll from WPS.**
27.08	Record	**Next Meeting: Thursday, February 13, 2025** at **6:00pm Virtual Remote Participation Only via Zoom Webinar**
27.09	Record	**Adjourn** G. Brand thanked the committee for their efforts and invited a motion to adjourn. – **V. Varbedian motioned to adjourn. D. Kelley seconded the motion. Roll call vote, motion carried by unanimous vote.**

The information herein reflects the understanding reached. Please contact the author if you have any questions or are not in agreement with these Project Minutes.

Agenda

Project Name:	Wilmington Wildwood School Project	Project Number:	22127
RE:	School Building Committee	Meeting Date:	February 5, 2025
Prepared by:	Julie Leduc and Sarah Traniello	Meeting Time:	6:30 PM
Location:	Hybrid Meeting:	Meeting No.	27
	Wilmington High School **159 Church Street, Wilmington, Massachusetts** **Large Group Instruction Room** and **Zoom Webinar:** **https://wpsk12.zoom.us/j/83577025187?pwd=cAMl4Rs4iYaPdh4DoHQTNSnWq5XMom.1**		
Distribution:	School Building Committee Members		

1. Call to Order
2. Approval of Minutes – January 29, 2025
3. Approval of Invoices
   - Warrant No. 21A and Warrant No. 21B
4. Design Update (*Votes May Be Taken*)
   - Review of Interior, Exterior, Landscape, and Building Systems
5. Construction Manager at Risk Update
6. Working Group Updates
   - Public Relations Working Group
   - Sustainability / Green Design Working Group
   - Site and Landscape Working Group
7. Discussion/Correspondence/New Items
8. Committee Questions
9. Public Comments
   - Next Meeting: **Thursday, February 13, 2025 Fully Virtual Meeting at 6:00PM**
     and
     Wednesday, March 5, 2025 at 6:30PM
10. Adjourn

The items listed are those reasonably anticipated by the Chair which may be discussed at the meeting. Not all items may in fact be discussed and other items not anticipated may also be brought up for discussion to the extent permitted by law.

Bryce Taft, Designer *Remote*

Item No.	Action	Discussion
28.01	Record	Chair, Glenn Brand, called the meeting to order at 6:00 PM. Roll Call of the School Building Committee was performed to account for all of those who are present through remote participation on Zoom. The attendance based on the roll call can be found on page 1 of these minutes. This meeting was conducted through Zoom Webinar as remote participation so those listed as Remote for this meeting were Present and those Absent were not. Remote and absent members are noted above.
28.02	Record	**Construction Manager at Risk Procurement Update** The Construction Manager at Risk Selection Working Group conducted Interviews with 4 shortlisted Construction Management Firms on Tuesday, February 11 and Wednesday, February 12, 2025. • Tuesday, February 11, 2025: Consigi Construction Co. and W.T. Rich Company Inc. • Wednesday, February 12, 2025 Shawmut Design & Construction and Fontaine Bros., Inc. E. Slagle advised that all 4 Construction Management Firms presented the qualifications, experience and capabilities very well. The members unanimously felt that Fontaine Bros. was the best fit for the project

Item No.	Action	Discussion
		based on their presentation with the important points raised that resonated with each of the members of the working group, scores and feedback, and their proposals. After thoughtful consideration and review of each of their proposals, shared with the School Building Committee, the Construction Manager at Risk Selection Working Group recommends the approval of Fontaine Bros. for the Wilmington Elementary School project. The interview videos were shared with the School Building Committee members each evening at the conclusion of the 2 interviews. • School Building Committee Members shared their feedback with the Working Group. • Some of the things that Fontaine Bros. provided in their presentation was a comfort level that the team knew the scope of the operation with hyperfocus on what the Town of Wilmington needed and what the project needed to be successful. • All of the Fontaine Bros. Principals are going to be active on the project on the day-to-day activities. • This kind of project is all Fontaine Bros. Construction does, this is their market and their specialty, everything is about getting it right in their marketplace. • Fontaine Bros. team focus is with their full team • Showed up with the phasing schedule mocked up, arranging the bidding process in such a way to cut down the costs to the Town by eliminating the layers of markup that can be incurred, arrangements made for cueing off-site deliveries nearby to the site to avoid traffic congestion issues that might plague the abutters and neighbors during parent pick-up and drop-off and working through the differences of the 2028 delivery of the new school with adjusted turnover allowing for opening earlier. • Fontaine Bros. record of being on time and on budget is excellent. • D. Ragsdale advised that Fontaine Bros. gave the most detail of their deep dive of getting to a Yes Vote with their knowledge of the project and the Town from their research. • **V. Varbedian made a motion to approve the Construction Manager at Risk Selection Working Group's recommendation of Fontaine Bros. to execute a Notice to Proceed and C. Prendergast seconded the motion.** ○ **Roll call vote, motion carried by unanimous vote.** ***C. Miner abstained from voting.*** • There were a lot of great ideas that were proposed by each of the other Construction Management at Risk firms i.e. billboard on the edge of Rt. 93 advertising the project, Cx Agent on the project from earlier in the project, hiring a PR consultant when necessary to help get out the vote, etc.
28.03	Record	**Public Comments** – None

Item No.	Action	Discussion
28.04	Record	**Discussion and Committee Questions** – None.
28.05	Record	**Correspondence** – Questions submitted to the Wilmington Public Schools and/or Town Manager's office are shared with the SBC and will be incorporated into upcoming Frequently Asked Questions.
28.06	Record	**Next Meeting: Wednesday, March 5, 2025** at **6:30pm** **Wilmington High School,** **Large Group Instruction Room**
28.07	Record	**Adjourn** G. Brand thanked the committee for their efforts and invited a motion to adjourn. – **P. Melaragni motioned to adjourn. G. Bendel seconded the motion. Roll call vote, motion carried by unanimous vote.**

Item No.	Action	Discussion
30.01	Record	Chair, Glenn Brand, called the meeting to order at 6:00 PM. Roll Call of the School Building Committee was performed to account for all of those who are present through remote participation on Zoom. The attendance based on the roll call can be found on page 1 of these minutes. This meeting was conducted through Zoom Webinar as remote participation so those listed as Remote for this meeting were Remote, those Present in Large Group Instruction Room of Wilmington High School are listed as Present and those Absent were not Present via Remote Participation or In Person.
30.02	Record	**Approval of Minutes** G. Brand advised that the draft minutes of the February 5, 2025 and the February 13, 2025 School Building Committee Meeting were distributed for review and approval.

Item No.	Action	Discussion
		• **V. Varbedian made a motion to approve the minutes of the February 5, 2025 meeting, motion was second by P. Melaragni.** • **Approval of Minutes Roll Call vote: Affirmatively responded, passed unanimously. C. Murray and S. Turner abstained.** • **V. Varbedian made a motion to approve the minutes of the February 13, 2025 meeting, motion was seconded by P. Melaragni.** • **Approval of Minutes Roll Call vote: Affirmatively responded, passed unanimously. M. Camoscio, C. Murray, S. Scott abstained.**
30.03	Record	**Approval of Invoices** P. Ruggiero advised of the invoices reviewed by the Finance Working Group, namely Warrant No. 22A and Warrant No. 22B. Warrant No. 22A for SMMA in the amount of $3,750 for OPM Services during Schematic Design and Warrant No. 22B for Dore+Whittier Architects in the amount of $53,900 for Architectural Basic Services for Schematic Design Phase and $445.50 for Site Survey Services under Designer Amendment No. 3. • **P. Ruggiero made a motion to approve Warrant No. 22A in the amount of $3,750 for SMMA, motion was second by C. Prendergast.** • **Approval of Warrant No. 22A Roll Call vote: Affirmatively responded, passed unanimously. K. Caira abstained.** ○ **V. Varbedian asked how much remained of the OPM Contract?** *J. Leduc advised $0.00.* • **P. Ruggiero made a motion to approve Warrant No. 22B in the amount of $54,345.50 for Dore+Whittier Architects, motion was second by C. Prendergast.** • **Approval of Warrant 22B Roll Call vote: Affirmatively responded, passed unanimously.**
30.04	Record	**Construction Manager at Risk Procurement Update** Fontaine Bros., was the Construction Manager at Risk awarded the project entering into PreConstruction with Dore+Whittier Architects and SMMA OPM in the Schematic Design Phase to conduct Cost Estimates for the upcoming reports to be submitted to the MSBA and used for the Project Scope and Budget. David Fontaine Jr., Rob Day, Project Executive, and Mark Abdella, Vice President of CM Services, joined the SBC to share with the SBC their credentials and what tools and skills they would bring to the project in addition to their highly qualified team chosen by the Construction Manager at Risk Selection Working Group as a part of their 2-phase procurement process involving qualifications, proposals of non-price and price, and interviews. D. Fontaine discussed Fontaine Bros. Construction and its history of being in its 4th generation after having started in 1933. They have demonstrated their efficiencies in CM lump sum method of bidding with an accelerated schedule capability. Fontaine's eye for bringing value and proactive approach with cost management having built 130 public schools in Massachusetts and it is its only market Fontaine performs work in and specializes in. Fontaine Bros.

Item No.	Action	Discussion
		is geared towards PreConstruction currently to work with Dore+Whittier Architects and SMMA OPM on the upcoming Cost Estimate for Schematic Design. There will be a Cost Reconciliation Meeting in mid-March for Fontaine and Dore+Whittier Architects' estimator, PM&C, to check their estimates against one another in preparation for the MSBA Schematic Design deliverable at the end of April. • Fontaine Bros. has worked before with Dore+Whittier Architects and SMMA OPM on Northbridge Elementary School in Whitinsville, Massachusetts. As school builders there is a strong familiarity with building on active campuses shared with students, teachers and community members. Fontaine's team strives to lessen the impact of noise to the kids learning within the existing school building while managing to make it safe, secure, uphold respect for black-out times and ensuring that construction deliveries and traffic patterns of circulation are planned, communicated and utilized to ensure that students, teacher and staff, community and abutters have a minimized impact during essential times. • M. Abdella of Fontaine Bros. advised that he will start attending the Public Relations Working Group meetings and work together with the working group to help get the information delivery to the Wilmington community to learn more about the project. M. Abdella will plug-in and add ideas to what already seems like a very well-organized working group. M. Abdella advised that it would be great to have student engagement and district engagement as they take ownership of the project and the school through the duration of the construction process with the mapping of curriculum ideas to incorporate the building functions including job fairs. M. Abdella expressed Fontaine's eagerness to work to facilitate community awareness for the project and wanted to know what had been done successfully for prior projects. Advised that Fontaine has had good luck engaging social media pages and spring, summer and fall sports, community and family activities will bring captive audiences. M. Abdella wanted to know who has already been doing these activities and advised that one can never post enough. • There is an interest in seeing how to engage the marketplace with the quotes and estimates through the project with material increases and tariffs and how interest rates will be impacted and Fontaine will put forward the most economical estimate that is no overly conservative and work to get accuracy with cost savings. • P. Melaragni advised that with the Town of Wilmington with its Vocational Tech School and Fire Substation to be built there are a lot of eyes on costs to value engineer. D. Allan echoed P. Melaragni's sentiments advising further that there are a large number of senior citizens within the Wilmington community that are struggling as a population and will need to see that this project is not a lot of fluff and it is conservative.

Item No.	Action	Discussion
		• Reimbursement rate is based on MSBA driven factors and will be explored by MSBA and is hard to define as it is based on a multitude of average based community factors. There will be equity for the Wilmington schools with a PreK-5 school built for the other side of the Town projected for 2055, once this project is completed and finalized. It is important to stay factual in responses
30.05		**Design Update** **Site Plan Update** R. Philip presented the latest updates in the site plan working with their consultants to move the playgrounds so that the students do not have to cross the road in order to access the playgrounds and also respecting all of the side property line buffers with respect to abutters property lines and roadways, sidewalks, and the buffers go all around the site. There are 2 vehicular gates that will block any trucks and vehicles from accessing portions of the circulation driveway during the school day when school is in session and acts as a security access point blocking access in and out. It is intended for emergencies vehicle use only and allows for the playgrounds to remain secure behind the building as well as where the bus loop exists. • There were changes made to the turnaround in response to abutters concerns and outside of one of the playgrounds on Playground 2B there is an annotation of 10'5" from the drive to the property line over the berm and above it there is 16'-10" from the driveway over the berm with trees to the property line as noted by Town Manager E. Slagle to highlight it is highlighting the area of concern for the abutter where also there is another annotation for 34'-9" from the roadway to the property line over the berm as well. It was asked if Dore+Whittier could look at swinging the playgrounds into the courtyard further and R. Philip advised that it would be looked at further and will need to consult with Public Safety as they will want to gain access into the Courtyard space and the design has remained flexible to accommodate entry. One of the concerns is that these are the youngest learners in the building that are utilizing these playgrounds and their safety and security is important to keep them close to the building as possible for bathroom use as there also will be a large number of students on the playgrounds at one time. • K. Caira asked if both baseball fields were being lost at the North Intermediate School. *R. Philip advised that the baseball diamonds have not been able to be fit back onto the site as the focus has been on the playgrounds and playfields amenities for the PreK-5 students.* K. Caira asked if even a Little League diamond would fit on the site? *R. Philip advised the baseball fields were not able to be placed onto the site and there was no demand for the PreK-5 for a Little League diamond, even in the upper quadrant of the site. The baseball and softball fields were going to need to be relocated to another location within Wilmington. E. Slagle advised that he has had conversations*

Item No.	Action	Discussion
		with J. Magaldi and P. Alunni regarding the loss of the full-size soccer fields and it appears that those will be able to replicated at the Textron fields. Meetings with J. Magaldi are happening this week. • The School Building is 70' away from the property lines. Abutters will be able to see what the school view will be from their property. L. Dore advised at the Abutter's Meeting that he will be able to meet with the Abutters individually and show them what it will be like for them and work with them so that it can be a conversation and working together. • Soccer field is a U-8 at this site due to the age of the students. **Traffic Study Update** Option A Circulation from Salem Street will be able to have 24 vehicles enter in from Salem Street onto the site into the queueing line for parent drop-off/ pick-up and buses will be able to fit 15 from Ballardvale Street which will come in and line up to drop off and pick up students. • There is possibility of using the parking lot to make more queuing space with more cars to fit onto the site during times when it is needed. • There may be a need to be a switch between the car and the bus loops as an alternative and it has been designed to work as such as a back up alternative. • Currently there are about 155 Pickup / Dropoff by family. Grandparents show up earlier. • HC Spaces are by the curb cuts by the entries to PreK and the Main Entrance allowing for the acceptable paths into the school. In Option B Kids would enter where they choose. Ballardvale queueing and ripple effect with the Rt. 93 highway corridor. How will it be impacted? Traffic Consultant from Nitsch is on the phone and will provide more insight. • **Net increase in trips = 3 cars/minute. Net significant backup?** • **24 walking trips vs. 24 bus trips vs. 243 car trips** • **How many participate in CARES? 50% to CARES this number is important to know so that it is known how much space will be used.** • Numbers seem underestimated. Middle school is a 200 with 600 by comparison to what will be present with 855 students plus CARES and includes staff and present dropoff. • **Need to know: % of students will journey by car vs. bus?** • Can we remove one playground to alleviate the queue? *No.* • E. Slagle advised that he is in conversation with Google / Waze.com to have the algorithm altered so that Salem Street and Ballardvale are no longer used as a cut through for others using the Rt. 93 corridor to get to other locations they are trying to reach in adjacent communities. This is one of the stressors that bring a great amount of the traffic to these

Item No.	Action	Discussion
		roadways in Wilmington that result in added stress to the roadways leading to the schools. • 2 Major Intersections: – How do we rate these intersections and take a look at pre-existing efficiencies to combine 3 schools? ○ **Goal: Accelerate engineering the intersections with lines, timing of lights, etc. Mitigation at the beginning and on the radar.** ▪ *P. Melaragni advised that there is a historical house that is likely protected under the Preservation Act at one of the intersections that awareness should be brought to as it would not be able to be adjusted without a lot of red tape.* **Interiors Update** R. Philip discussed updates to the cafeteria, auditorium, gymnasium, library, classroom and corridor spaces that are comfortable, versatile and flexible for student programs and learning with wayfinding and materials like linoleum (low maintenance for D. Kelley's crew.) • It was asked if there would be air curtains in place for the entries? Particularly at the Cafeteria and the Main Entry door? These will be needed with nearly 800 kids going into school at one time.
30.06		**Working Group Updates** – **Public Relations Working Group** has signed up for the Fun on the Fourth event in June. The School Building Committee is able to be present providing the Design Concept Development updates and latest Schematic Design information from the MSBA to the Wilmington community. The School Building Committee is able to be present for this event as it will be providing an unbiased, fact based and information only perspective on the project. ○ **Water Bill** – will be drafted by Dore+Whittier Architect as a 1 page document of facts that will be provided to the be distributed to through Shawsheen Tech printing, cutting and packaging and providing to the Town to be placed into the water bill mailing. ▪ ****D. Allan and M. Gallezzo requested that the School Building Committee get a copy of the water bill before it goes out to provide any feedback that may be necessary.**** ▪ **J. O'Connell advised that she will handle the water bill and billing with Shawsheen Tech with coordination with Dore+Whittier Architects on the content for the water bill itself.** – The 'Vote Yes for Wilmington Schools' is completely separate entity from the School Building Committee. The School Building Committee supplies factual information through the

Item No.	Action	Discussion
		PR Working Group to the Wilmington public. Any material that is generated by the Vote Yes for Wilmington Schools should be vetted for accuracy before information is released and in cases where information needs to be referenced it should be obtained from the Wildwood School Project site, question asked of the Town Manager, or the Wilmington Superintendent's Office.
30.05	Record	**Public Comments** – None
30.06	Record	**Discussion and Committee Questions** – **D. Allan asked that an agenda item be placed on the March 25, 2025 meeting to "Reorganize the Committee's Chair".** – **Revised Meeting Dates were provided for review by the SBC for consideration and approval for future meetings. Once approved they will be placed into everyone's calendar with meeting invitations.** – **Cost Estimate updates will be provided at the meeting on March 25, 2025.** – **There is a meeting on March 31, 2025 as there will be a need to populate the Project Scope and Budget for approval by the School Building Committee on March 31, 2025 that will be submitted for approval by the MSBA.**
30.07	Record	**Correspondence** – Questions submitted to the Wilmington Public Schools and/or Town Manager's office are shared with the SBC and will be incorporated into upcoming Frequently Asked Questions.
30.08	Record	**Next Meeting: Tuesday, March 25, 2025** at **6:30pm** **Wilmington High School,** **Large Group Instruction Room**
30.09	Record	**Adjourn** G. Brand thanked the committee for their efforts and invited a motion to adjourn. – **N. Golden motioned to adjourn. D. Kelley seconded the motion. Roll call vote, motion carried by unanimous vote.**

The information herein reflects the understanding reached. Please contact the author if you have any questions or are not in agreement with these Project Minutes.

TOWN CLERK

2025 FEB 26 AM 8:31

TOWN OF WILMINGTON, MA

SMMA
1000 Massachusetts Ave.
Cambridge, MA 02138

Agenda

Project Name:	Wilmington Wildwood School Project	Project Number:	22127
RE:	School Building Committee	Meeting Date:	March 05, 2025
Prepared by:	Julie Leduc and Sarah Traniello	Meeting Time:	6:30 PM
Location:	Hybrid Meeting:	Meeting No.	29
	Wilmington High School 159 Church Street, Wilmington, Massachusetts 01887 Large Group Instruction Room **and** **Zoom Webinar:** **https://wpsk12.zoom.us/j/83577025187?pwd=cAMl4Rs4iYaPdh4DoHQTNSnWq5XMom.1**		
Distribution:	School Building Committee Members		

1. Call to Order
2. Approval of Minutes
3. Approval of Invoices
4. Construction Manager at Risk Team Introductions
5. Design Update
   - Site Plan Update
   - Interiors Update
   - Traffic Study Update
6. Working Group Updates
7. Discussion/Correspondence/New Items
   - School Project Naming for Outreach Initiatives
8. Committee Questions
9. Public Comments
   - Next Meeting: **Wednesday, March 25, 2025 at 6:30PM**
10. Adjourn

The items listed are those reasonably anticipated by the Chair which may be discussed at the meeting. Not all items may in fact be discussed and other items not anticipated may also be brought up for discussion to the extent permitted by law.

SMMA
1000 Massachusetts Ave.
Cambridge, MA 02138

Minutes

Project Name:	Wilmington Wildwood Early Childhood Center	Project Number:	22127
RE:	School Building Committee	Meeting Date:	03/25/2025
Prepared by:	Sarah A. Traniello	Meeting No:	31
Location:	Hybrid Meeting, Wilmington High School, Large Group Instruction Room, 159 Church Street, Wilmington, Massachusetts and Remote Participation Meeting via Zoom Webinar (recording posted on Wildwood Building Project website, WCTV and YouTube)		
Distribution:	School Building Committee		

Attendees

Wildwood School Building Committee

Diane M. Allan	*Remote*	*Dennis Kelley*	Present
Gregory B. Bendel	*Present*	*Craig Miner*	Present
Kate Bissell	*Present*	*Christine Murray*	Present
Dr. Glenn Brand, Chair	Present	Judith O'Connell	Present
Kevin A. Caira	*Late Arr.*	*Christine Prendergast*	*Absent*
Michael Camoscio	*Present*	*Paul J. Melaragni*	*Absent*
Justin Cusce	Present	*David A. Ragsdale*	Present
Marianne Gallezzo	*Remote*	Paul Ruggiero	Present
Nicholas Golden	Absent	*Stacey Scott*	*Remote*
Christine Holloran	*Remote*	R. Eric Slagel	Present
John C. Holloway	Present	Stephen Turner	Present
		Vivian Varbedian, *Vice Chair*	*Remote*

SMMA OPM

Julie Leduc, Director, OPM Services & Project Manager	Present
Sarah Traniello, Assistant Project Manager	*Absent*

Dore+Whittier Architects

Donald Walter, Principal-In Charge	Remote
Lee P. Dore, Principal, Designer	Present
Rani Philip, Project Manager	Present
Bryce Taft, Designer	Remote

Fontaine Bros.

David Fontaine, Jr., CEO	Absent
Rob Day, Project Executive	Present
Mark Abdella, VP of CM Services	Remote
Chelsea Mutrie, VP of PreConstruction	Remote
Chad L'Ecuyer, Project Manager	Present

Item No.	Action	Discussion
31.01	Record	Chair, Glenn Brand, called the meeting to order at 6:30 PM. Roll Call of the School Building Committee was performed to account for all of those who are present through remote participation on Zoom. The attendance based on the roll call can be found on page 1 of these minutes. This meeting was conducted through Zoom Webinar as remote participation so those listed as Remote for this meeting were Remote, those Present in Large Group Instruction Room of Wilmington High School are listed as Present and those Absent were not Present via Remote Participation or In Person. K. Caira and N. Golden were not present during roll call.

Item No.	Action	Discussion
31.02	Record	**Approval of Minutes** G. Brand advised that the draft minutes of the March 5, 2025 School Building Committee Meeting were distributed for review and approval. Minutes are to be corrected showing that *K. Bissell* was late to the meeting but was present. • **D. Ragsdale made a motion to approve the minutes of the March 5, 2025 meeting, motion was second by V. Varbedian.** • **Approval of Minutes Roll Call vote: Affirmatively responded, passed unanimously. C. Miner and J. Holloway abstained.**
31.03	Record	**Design Update** **Updated Site Plan: Circulation Routes.** In listening to the feedback from the community and members of the SBC and the educations, Dore+Whittier Architects are going to use Option B as the primary circulation route calculating for the project. Option B is the option where there will be 88 +/- vehicle onsite queuing space, 12 +/- bus onsite queueing space and 193 onsite parking spaces. Cars will access the North Intermediate Site from Ballardvale Street and travelling towards the building using the turnaround and exiting back out onto Ballardvale. Buses will access the North Intermediate Site and loop around and exit back to Salem Street. The CARES Program is a well-attended program for the District. Dore+Whittier Architects will work with the District to learn the number of vehicles that will be impacted and identified for queuing purposes. It will be something that will continue to be worked on with the District. For the 3 schools identified for consolidating, there are approximately 200+ families that are involved in that program. This is a significant number and impact. The due diligence will continue to be developed. Dore+Whittier is working to glean how many days of activities would be needed and learned that a good number of days in the year are impacted. CARES offers every day but 3 days of the school year which is a significant number and an impact that should be considered. The CARES program would not be departing the school during the peak flow departure times in the afternoon and would spread the peak traffic flow demand out further and Dore+Whittier are working to obtain more data to share. **Project Imagery: Exterior** R. Philip shared the exterior rendering imagery of the parking, playfield, playground, driveway circulation with the building to give the School Building Committee an idea of what it will look like as it is laid out in the plans. The playground equipment will be selected at a later date but there is playground equipment shown in the rendering as a sampling to know what the space will be used for. Please note that all of the playground and playfield spaces are surrounded by crash resistant fencing and wall structures for the students protection while spending time in the playfields and on the playground structures. D. Ragsdale asked about the basketball courts and their placement on the site and how the school needed them for not only student recreation but also community use. Wanted to know if there was any flexibility in the placement of these courts on the site. *R. Philip advised that when speaking with D. Carriero the Principal of the North Intermediate School*

Item No.	Action	Discussion
		regarding the Site and Landscaping around the schools, she advised that one of the things that there was a real need for more basketball courts as there did not seem to be enough to satisfy the students in their use outside. It was important these courts be incorporated into the amenities for the students outside of the school. L. Dore advised that based on the consolidation and the need to increase the number of outdoor program to 2 basketball courts to accommodate. • D. Kelley asked about the previous option showing this as the drop-off for PreK from this side with the Main Entry instead of the bus loop. Does this new option provide good access into the school? *R. Philip advised that Dore+Whittier will continue to study that with swapping the location of the vehicular circulation and the bus circulation around the site, with the PreK parking being next to the PreK entry there would need to be work done to allow cars to come in using traffic signage for only PreK student drop-off.* • J. O'Connell asked R. Philip and L. Dore if they are taking into account the time and distance it will take for the teaching staff and aids to take the students from the school building to the playgrounds and playfields during the day? Also are you taking into account with what lighting package that you are going to be selecting for the space that you are accounting for the basketball courts. *R. Philip advised that the lower grade recess playgrounds are planned for as close as possible to the building in areas that offer easier access back into the school when needed. Arranging the upper grade playgrounds in locations that are better situated for their age group like as seen with the basketball court that are further from the academic wing but closest to their Cafeteria. While the lower grades have play areas in closer proximity to their academic areas to allow for more outside breaks more frequently if needed. The proximity to the school for these play areas is as close as crossing the driveway and is much closer compared to where you would find the soccer field a bit if a distance from the Woburn Street School. For lighting, lighting is included and typically all downlighting and meeting any of the needed LEED requirements. There will be a lighting study performed in the next phase to allow for the understanding of where the lights are and that the light is being contained on the property and looking at any possibility of glare that could possibly overflow into abutters yards or properties. L. Dore advised that lighting the basketball courts is not anticipated in the program due to the proximity of the abutters and the primary program use is during the day for school use. Certainly the community can access that as the District desires after the fact and the rest of the site lighting, some of which is in the form of security bollards, that block cards from the pedestrian way, every other bollard is a lit bollard and there are wall packs of lights on the building and as R. Philip advised earlier there is also downlighting at various points to get the right lumens that are required.*

Item No.	Action	Discussion
		• J. O'Connell advised that she did not want to get ahead of the leadership to the Town but we are starting to get requests for illuminated basketball services in town that do have lighting that would be able to use these outdoor spaces, summer user and all of that. So there may be mixed groups wanting to use this space and only so many people can be on a limited court at the same time. These requests are coming into the Recreation Department. So in particular for this age, this is something the Town should do as there are not many illuminated court spaces at night. This becomes more of a topic of discussion during the summer when more of the kids are on vacation. *D. Kelley advised that the three basketball courts that are presently onsite are busy and with the warm weather that has been experienced already, lights have already been turned on so that the courts could be used as the courts have been packed. E. Slagle advised that given that this basketball court is right adjacent to one of the abutters' back yards, it probably should not be lit however the basketball in the center of the parking lot area may be fine to illuminate as the proximity to abutter residences and yards is much greater. D. Kelley advised that with the LED lights these days you can have lighting and redirect the light.* J. O'Connell advised that she brought it up to check the box that it has appeared as a Wilmington community need. *R. Philip advised that a note was made to address the subject with the Recreation Department.* J. O'Connell advised that it was also brought up because there is also concern about the parking as there did not seem to be enough parking at Yentile. S. Turner addressed the Option B site plan asking about the top end of the parking lot of Ballardvale is 32 feet and on the other end it is 38 feet of extra square foot space along the basketball court on the playground side of that parking lot. Is there a reason why it is so much further from the road and the other end seems like there is an opportunity for more placement of recreation space? *L. Dore advised that a lot of different setbacks exist on this same site versus Ballardvale but with the parking lot, the setbacks are the same. There is some topographic deviation on there. One of the answers is right along the whole side of the basketball court, as there is actually a retaining wall to be able to split that trying to cover the distance a little bit and fit in the right amount of parking spots between all of them.* • S. Turner advised that he was not suggesting to change the number but was interested in shifting closer to the road to allow more room like there would be 15 feet from the basketball court to the parking lot and the playground could be a bigger parking lot, playground or could be whatever instead of bleachers. There should be a little bit more room to play there and it would be preferable to have space next to the school available to the school for whatever is desired. For instance, having a little bit of trees and greenery along that side of the parking lot by the street is important. It is about 15-20 feet of space which is a decent amount of space.

Item No.	Action	Discussion
		• D. Ragsdale also addressed the point that with the lighting of the basketball courts, how late do we as a community want people to be able to play basketball on these courts that are so close to the abutters' homes and backyards in the evening from a noise perspective. R. Philip displayed the image of the playgrounds for the PreK and K-2 with the 3-story academic wing in the background with its courtyard space in between the playgrounds and the start of amenities for outdoor classrooms, garden boxes, four-square on the ground and crash rated fencing around the playground and courtyard space perimeters. • S. Turner advised that when you look from this perspective at these academic wings of the building, it can be seen the similarity this design has to the other school buildings that Wilmington has in town which was one of the wishes of the collective voice relating the design in removing the blue stripes. It leads to wonder about the interior space for the school and how it will be suited for the kids of the age groups that it will be serving. There should be something on the interior space of this elementary school that is a bit brighter and more colorful, where it is not road facing and disrupting the view. When we talk about elementary kids and thinking about a kindergartner or first grader, if there is a place for color besides the interior of the building, would there be a place that would not disrupt the exterior view, be an affordable option and also be something that can be appreciated to bring more vibrancy to that Courtyard area where there might be playing a fair amount of time. *K. Bissell advised that the play structures do bring a fair amount of color and does add to the vibrancy of the building and perhaps the outdoor classroom space and garden space could be an opportunity to bring more vibrancy to the Courtyard.* • D. Kelley advised that if there are students in those classrooms while students are in the Courtyard the voices in the Courtyard space would likely echo and potentially disrupt students in the classrooms as it is assumed that the Courtyard area is all concrete. D. Kelley advised that if it is concrete then it will be good to know the material as there are a lot of ice melts that cannot be used on concrete during the winter season with snow and ice. Is it asphalt in there, or concrete? *R. Philip advised that it is mixed as it is definitely for play and intended for the students. There is some turf on the sides where there will be a decent amount of sun.* D. Kelley advised that during the winter months with snow and ice being removed from those areas there really is not much place to move the snow to get it out of the way of the students and off of the turf and it is something to keep in mind. If Maintenance is desired to get these areas cleared of snow earlier, it will be important to know how access will be gained and where the snow will be relocated to allow students full use of this space.

Item No.	Action	Discussion
		Project Imagery: Interior R. Philip continued into the interior displaying pictures of the main entry with students, the cafeteria space with the stage and gymnasium on the other side of the stage in the background. R. Philip showed images of D. Kelley on scissor lift with the ability to check out the acoustical leaves hanging from the ceiling and changing the light fixtures, when and if needed. Images of the gymnasium space and a view of the gymnasium space that has the stage in the background and cafeteria on the other side. There will be partitions in the gymnasium to break up the gymnasium space into the smaller spaces for the gym activities that are needed to be conducted within them. The center divider in the ceiling shows the partition hanger that it will be utilized to break the 12,000 sf gymnasium into 6,000 sf gymnasium. K. Caira shared concern for the young students having the sun in their eyes from the Cafeteria windows while trying to perform on the stage during their plays. *L. Dore advised that there will be a canopy, sunshade and fins that will be in effect and reducing any glare that would be present. Similar to other locations indoors where there would be blackout shades, similar can be utilized so that if a movie project were shown in the room, there would be no concern for additional sunlight interference.* R. Philip shared the Library Media Center imagery showing the layout of the bookshelves with tables and students with the ability to have 2 classes in the library at one time. Different types of seating were shown to all for students to enjoy the library experience in the manner of their choice for engagement. • Typical classroom space with the casework, surfaces for teaching use, student use, tables and means of engagement with the extended learning areas as well. Structured seating, cubbies and nooks are provided as well. • Grades 3-5 Extended Learning Areas differ slightly in how they are laid out but along the same likes as those for the younger students designed for the student engagement and use for learning purposes. • K. Caira asked if there is an elevator? *R. Philip and L. Dore advised that it is right in between the 2 academic wings. L. Dore advised that the number of elevators is something that is expensive to build initially, and more critically, to maintain, so there is a concerted effort to limit the number in a facility.*
31.04	Record	**Cost Estimate Update** Dore+Whittier Architects engaged PM&C to perform a cost estimate based on their Schematic Design drawings and Fontaine Bros. Construction has conducted their cost estimate on the same. Both estimates were reconciled and found there to be a delta of about $500,000 between the 2 estimates. Dore+Whittier Architects, SMMA and Fontaine Bros. together with their estimators spent 7 hours together reconciling the 2 estimates going line by line. The SBC received copies of the PM&C Reconciled Cost Estimate to ensure the right amount of scope was covered in both with similar pricing and get an understanding if certain items were coming in higher than others.

Item No.	Action	Discussion
		• In previous phases, it has always been an estimated Construction Cost Range. In Preliminary Design Program (PDP), it was $149.3M to $165M for the Estimated Construction Cost Range which is $936 per square foot. This includes the soft costs as well which is the design fees, permitting, fixed furnishings and equipment that would be outside of the scope of the MSBA budget. The 3011 form is underway to work through the project costs for the project and the Construction Cost will be shown when we return for our next meeting as the information is more defined. • In Preferred Schematic Report phase, the Estimated Construction Cost was $136.4M to $150.7M which is $878 per square foot. • Now in the third estimate that has been done for the Schematic Report, the Estimated Construction Cost is $137,743,666 which is $835 per square foot. On Budget! • With each phase, the risk of the unknowns are removed and everything gets more defined with a fine Sharpie. More information is known and definition of the drawings will start to happen so that the picture becomes clearer as the number comes down and the images of what the new proposed school will look like come into perspective. The full project cost will be known next week with the 3011 being fully completed. • D. Allan asked how the $835 per square foot information at Schematic Design compares with the information that is provided by the MSBA on their website for projects of similar scope and nature? *R. Philip shows the information provided by the MSBA with the average being $827 per square foot with the MSBA with 9 Elementary Projects with cost estimates in the range of $673-907 per square foot and displayed where Wilmington's Elementary School comes in at $835 per square foot by comparison on the graph. There is the factor of the unknown tariffs in the marketplace currently that will need to be worked out, planned for and provide contingencies which will be further discussed.* • S. Turner asked a question about amounts being different between the CSI and the Uniformat estimates provided. L. Dore explained that these are 2 different ways of categorizing the estimates and some categories have more items that fall under it that might have fallen under it in the other format thus explaining why there may be the appearance of slightly different numbers for each category but in the end the estimated amounts are the same for the project. It is written in both estimate formats of CSI and Uniformat at the request of the MSBA as it is their preference its delivered in both. • L. Dore explained that currently the project is at about 10-12% design which is a lot of information. Once the project is approved it still moves forward with another 9 months of development in the detailed design process to go. These estimates are a much finer point and the team is much more

Item No.	Action	Discussion
		comfortable at this level with the investigation that has been done from where we were before. There are still some unknowns so there is the carrying of some contingencies i.e. design contingency of 10%, escalation contingency of 7.5%. The escalation contingency is 7.5% is a little higher that what normally would be carried but with concern related to the market and our number that is being prepared is for construction to start a year from now. With everything that is going on right now, the best that can be done as a group right now is to risk protect this project as best we can. The ask to the voters is only going to be done once and then the project is going to live within that for a long time. How do we put some of that risk mitigation into the project without spreading it out throughout all the line items. If things turn back the other way and things become more favorable how do we go back and find that risk that we put in to protect the project. So those are captured in those 2 line items, design contingency and escalation contingency. This way the amount of risk is known and measured and it can be monitored to keep a watchful eye on it as time goes. This helps a budget get set as has been talked about before which is really important and we are trying to make sure all of the scope has been captured. There are 2 pieces to that and it is: the scope that has been heard from the educations and the SBC and also the scope that the MSBA requires. There also are strings that are attached to lead and the fact that this cost estimate represents the project getting 4 extra points of reimbursement because of the energy efficiencies Dore+Whittier Architects has designed into the project. The decisions that have been made in material selection, placement of the building, etc. are all connected to hitting those 4 points and 4 points on this project is a lot of money. The SBC has been very clear with its direction on aesthetic and what is sought for a building that holds its value with where the money is being spent in the building. The SBC is looking for a very utility friendly building that is also maintenance friendly for the long term and that is very supportive of the educational program. The budget that has been put together is very representative of that and value engineering as a subject and when is the appropriate time to start talking about that subject. The team has put together a list of items that the MSBA requires as part of the submission of what has been put together for ideas. If in a budget pinch, what are some of the items that can be easily identified to be taken out of the scope of the project that would not effect square footage, the LEED points that are identified to attain. Dore+Whittier put that list together and it is about $890,000 of items that have been identified. It is not intended to be used today but it is a budget control piece, value engineering is a tool to use to stay on budget. A list of items have been developed that are out there. The budget is something to be maintained once it is approved and these items are a tool to work with.

Item No.	Action	Discussion
		Dore+Whittier worked to be very conservative in view of putting stuff in and working with risk management all will be reviewed tomorrow with E. Slagle explaining where all of those things are. If there is money that is in the budget that doesn't need to get spent in the budget, it stays in the budget and is turned back over to the Town to decide what to do with it. However, it cannot be gotten back and received again. It has been a very thoughtful process to set this project up for risk mitigation. R. Day advised that a lot of it actually is going to be a year and a half because the project is a year and a half and the desire is to be transparent across the project of how the risk is being covered with hundreds of items estimated and carried in contingencies as the documents are further defined. The Consultant team reduces that from price which may go up as details make local status. As stated earlier, the project is 12% designed so these continue to be watched for things that we cannot control such as the tariffs. For instance, the cost of steel was carried there may be premiums of what may go up and details made local status. Fontaine's estimate was based upon amounts that were provided from historical data as well as working with subcontractors to learn of their pricing in the marketplace to provide an estimate that was within 1% of PM&C when reconciled at the end. With $137 million coming that close it was a concerted effort of both teams providing at the end of the day a number that will be protected as the budget for the project. This is at the low end of where the Town wanted to be on the budget, maintain and keep the budget and see where it falls on bid day. S. Turner advised of the appreciation for the level of work that was taken to bring the estimate and budget to the level it is currently. • S. Turner asked if that is enough risk and escalation to be taking into account at this point in time? It would be disappointing to realized that 10% was needed instead of 7.5% at the end of the day and this would bring forward value engineering. Are there any other projects that are in a similar phase to this project where the price escalation and contingency is much different from these percentages we are carrying? Should we put more in there to protect ourselves more? It is known that this is a big number but is it right? *L. Dore advised that we are trying to find that middle ground and there are many other communities sitting around similar to you and deciding upon what that right number is with the public and all are consistently approaching it the same way. Isolating those costs 4% above what would be ordinarily carried above the bubble we are carrying between the design contingency and the escalation costs. 4% on $137 Million. There is a construction cost index that we all pay attention to the Turner Construction Index how much will be the worst in the narrative and will that hit your project is somewhere between 2% and 3%, so with 4% going in is a reasonable number and where there are potential buckets of*

Item No.	Action	Discussion
		allowance that could be put in there to cover more risk and is completely at the Town's discretion. • D. Kelley advised that at some point when you go into bid alternates that when bids come in low you go with the more expensive alternate but if the bids come in low, you add back a value engineer alternate i.e. slate on the Town Hall Building which was less maintenance but a more expensive alternate. *L. Dore advised that once the budget is set and the project is going through design, the project will continue to be priced at the 30%, 60% and 90% and those are the truth tests for the project based on the time and where the market sits. If at 60% the estimate comes back and there is a substantial change from what is being discussed today, the discussion will be had before issuance of the bid documents to make decisions based on what could potentially be deducted change orders. There is still time to be able to look at it with a lot of people and it all depends on what is happening on the street. It is important to know the budget number that we are going in with and how comfortable we are with it and how to maintain that number through the next year and a half through value engineering and deductive alternates used as tools to maintain the budget alignment. We are not carrying deduct alternates going into the budget and we make sure that everything that has been asked for is covered for risk escalation and using our tools to maintain the budget* • D. Allan asked the $137,743,666 is just construction costs, correct? Next week we will see it with the OPM and Dore+Whittier final design and construction administration fees? *L. Dore advised that there will be another 20% of cost, that will be allocated by line item and scope description. The SBC will know what each of those categories are i.e. OPM Fees, Designer fees, loose furnishings, and consultants we need to carry through the Construction Administration period for testing of hazardous materials, etc. and those items will be delineated for the SBC by this Friday for a discussion on it on Monday, March 31, 2025.* D. Allan asked if the SBC will know what is eligible and ineligible from MSBA? L. Dore advised that it will not be known until the MSBA Board Meeting in June 2025.*. Dore+Whittier will have a preliminary idea of what will be eligible and ineligible like it was understood and could be a subject of negotiation with MSBA about caps, ineligible potential spaces with their formula. It will also be provided with the local share of that will be and subject to the negotiations and agreement with the MSBA on the full project budget R. Philip advised that similar to those in the last phase in the MSBA comments, their commentary will indicate that certain spaces were considered ineligible i.e. 6,000 sf of gymnasium but at the end of the day, will be the final number and that will not be known until the MSBA votes on it. June is when they vote on it, June 25, 2025 and it is when the MSBA will approve the project budget and scope agreement. The MSBA will approve*

Item No.	Action	Discussion
		the full project cost, the Town's reimbursement rate, and the maximum share from the State will be • J. O'Connell advised that the next meeting of the SBC will be July 22, 2025 based on the meeting schedule in the packet. How will the SBC be communicating this information decided by the MSBA to the Wilmington community? The Fun on the Fourth event starts on June 25, 2025 which is the same day as the MSBA meeting with the decision regarding this project. *J. Leduc advised that the plan for communicating the update to the public was to have the SBC meeting on June 25, 2025 to present the information regarding the project costs. It was learned that the Fun on the Fourth was having its kickoff that evening of June 25, 2025. During said meeting that will be virtual and in person will be provided to allow the committee to absorb the information provided by MSBA and Dore+Whittier so that it also can be shared with the Wilmington community as well at Fun on the Fourth. E. Slagle advised that the SBC and leadership will have a good idea of what the numbers will be before we get to the June 25, 2025 meeting due to the information shared back and forth and the leadership being privy to. The Town leadership will know maybe not to the penny of where these budget numbers will fall but a fairly good idea of the direction in which they will be moving will be known before getting to the June 25, 2025 MSBA Board Meeting. L. Dore advised that the project will be very close with its calculations but what the maximum share will be for the MSBA but it will not be definite until the MSBA Board vote.* • M. Gallezzo advised that it is not known if we want to start communicating to the public until it is known what the Town of Wilmington is going to put in also. Is that something we want to communicate what the MSBA reimbursement is? Communicate what the Town is going to put towards the project as a whole? *E. Slagle advised that what will happen once the Town gets into that ballpark, that will drive the Town Manager's meetings with the Select Board and the Finance Committee about how the Town is going to get to that ballpark, give or take a couple million dollars and whether or not the Town is going to use some or most of the Capital Stabilization Fund and how the Town will program and structure the debt and by June 25, 2025 that should already be in place. It does not need to wait until the summer and it can be worked on between now and June 2025 but it is important to have a consistent message from June through September 2025 with regards to how the Town plans to pay for it. The tax number should be able to be worked out that day and once that number is received it should be known how the Town is going to use any free cash or spend any Capital Stabilization Fund.*
31.05		**Working Group Updates** **Public Relations Working Group** J. Cusce advised that the SBC and the PR Working Group have secured a table at the Fun on the Fourth event on June 25 through June 29, 2025.

Item No.	Action	Discussion
		There is a Signup Genius updated by M. Camoscio where members of the SBC can sign up for timeslots to staff the table and update the community about the latest developments of the project. There is some fine tuning on the time slots and it will be distributed soon in order to get coverage for the Fun on the Fourth event starting on June 25, 2025. Saturday and Sunday are the busiest days so it would be good to get the most help possible from the SBC after the PR Working Group has had a chance to review further. • J. Leduc asked if the Water Bill should be discussed now and asked if J. O'Connell wanted to discuss its status. There are physical copies of the Water Bill flyer that are available to the SBC in the room and J. O'Connell has received some feedback from a few people on the draft suggested putting a perimeter border around the picture and asked R. Philip to convey her concern about how the border line around the perimeter border. ○ R. Philip advised that it was suggested to place the outline of perimeter of the existing building on the plan and the concern is the outline will appear very small on the plan and may add confusion to those seeing it as to the purpose of the perimeter lines. If there is an overwhelming response, the outline would be placed onto something a little larger but not on the flyer. *D. Kelley advised that it would be helpful to have it perhaps on the location where the QR code will bring you to for the plan if it is not included on the flyer. This way it will be more visible as needed for those who choose to see it.* • J. O'Connell advised that it was requested that "proposed" be placed on the flyer as well so that the Wilmington community know that this project is not a "done deal" and that there are specific actions required in terms of Special Town Meeting and Ballot Vote in addition to the discussion later on this evening about a potential name change for the project. If there were a decision to make a name change this evening, then the name change would take effect and be reflected on this water bill flyer. J. O'Connell advised that there was some concern over the statement "Help Shape the Future of Wilmington Elementary Schools" and whether or not we are over promising in that message that people can come in and talk about anything and everything about the project and potentially get a change. For example, the SBC has already voted for what the preferred option is so it does not want to be misleading that people can change it to the Woburn Street or the Wildwood Street School site(s). However, as heard in this meeting and in the Leadership Meeting earlier in the day, it has been stated and clearly conveyed that not everything in this program is locked down as the project is at 12% of design. This project is locked down and that people still have the ability to help shape the future of this school and encouraged to come to the forums that we will be talking about later. The illustrations shown tonight are not

Item No.	Action	Discussion
		100% voted in and locked in by the Committee. There is still time for community engagement for people to bring their ideas, thoughts and opinions. Another piece of feedback is that it should be conveyed to the Wilmington community that there is a tax in that it will be eye-catching to residents and perhaps incentivize them to come out and speak to something if they knew there was going to be a tax impact. *D. Kelley advised that he is constantly talking with people in the community and is always shocked at a meeting like this one that there is not more public present to participate and be involved in the conversation. We are talking to dollar amounts and with all that is able to be read on Facebook we do not get a lot of community related discussion on the Wilmington Apple. There may be a lot of people online right now and watching at home and it is always a surprise.* • J. O'Connell advised that the finalization of the Water Bill flyer needs to be moved on as soon as tomorrow. If anyone from the SBC feels impassioned to share something that just does not sit well with them, it would need to be addressed now to move forward drawing a line in the sand and move forward. The intent of this in simple fashion is to convey the dates since we do not have a dollar amount at this time and what actions is required to get out there as there is a Special Town Meeting Vote in September 2025 and then a Ballot Vote shortly thereafter. We will have other opportunities to convey public messaging and J. O'Connell's thought process is that if we try and do too much with every publication, the potential of missing the mark increases. Between now and September 13 and 16, the most compelling story that the project right now are those dates and we know the dollar amounts are coming. Another opportunity to convey these dollar amounts will be available when the numbers are more accurate. The QR code shows where the project is at 12% design and the community's vote does matter and with the name change feedback, it can be included as well. It is very small and a snapshot in time with the deadline being April 1, 2025. *D. Allan advised that it was her suggestion as to the placement of the perimeter of the existing North Intermediate School on the plan and it would be included on the website. The Seniors may have difficulty accessing this item via the QR code as it is challenging to access for them on their devices.* • M. Gallezzo asked if there would be a different cost if the flyer were a full sheet of paper instead of a half or ¼ sheet of paper? Is this something that would have to be folded and given to the printer? *J. O'Connell advised that the Town uses a third party and in this instance it would have an impact because the Town has another insert going into the Water Bill coming from the DPW talking about the water restriction usage and it is important that the items would need to be weighed in order to make sure the postage was not tripped for an increased cost to*

Item No.	Action	Discussion
		the Town. J. O'Connell advised that in this instance it would potentially change in cost if it was a full page. • M. Gallezzo asked when the next Water Bill goes out? M. Gallezzo advised July for August 2025 and advised that perhaps it is something that could be done in July for the August quarterly mailing for a full sheet to be placed into the Water Bill. *J. O'Connell advised that anything is possible.* • Community Forum No. 6 has been made virtual as well as in person on March 31, 2025 at 6:00 PM in the Large Group Instruction Room at the Wilmington High School and followed by the School Building Committee Meeting at 7:00 PM. The flyer is in the packets and will be distributed through Tracy Ingersoll with the updated Zoom Meeting link. • Abutter Meeting will be held in May 2025 as advised by J. O'Connell. It may be something that you will want to reconsider location and technology for the May Abutters meeting due to the acoustical issues that were experienced at the North Intermediate School during the last meeting. K. Lord may be able to assist with these arrangements and accommodations. More details to follow. **Sustainability Working Group** The Sustainability Working Group has met twice. • During PSR phase the project was tracking LEED-Schools v4 "Silver" + 4% additional reimbursement with the tracking of 55 points out of a 50 point minimum. • In Schematic Design, the project is currently tracking LEED-Schools v4 "Gold" + 4% additional reimbursement while tracking 64 points with a 50 point minimum. • Once developed more design information, the project is tracking 64 points which is LEED-Schools Gold. • There are a lot of decisions that go into this to get it finalized for the upcoming submission. This is just a brief recap. • The baseline for LEED-Schools v4 is "Silver" and the project was tracking Silver + 4% additional reimbursement through PSR but during the Schematic Design process and reviewing the number of Yes and No in the LEED Matrix it was discovered that the project actually was carrying 64 points which is equal to LEED-Schools v4 "Gold" which is even better. *L. Dore advised that MSBA will tell you to be a part of our program your baseline will need to be LEED-Silver which is 50 points but if the project is looking for more, there are 4 extra points available, 3 of which come from hitting the Massachusetts Stretch Energy Code with the HVAC decisions, 5 of 7 points out of the indoor air quality category which through this process are moved forward and Dore+Whittier are comfortable hitting both of those measures to be considered capturing those whole points that are available.*

Item No.	Action	Discussion
31.06	Record	**Public Comments** – None
31.07	Record	**Discussion and Committee Questions** – **Reorganization of the School Building Committee Chairperson** ○ E. Slagle appreciates all that G. Brand has done for this project and there is an opportunity to maintain the momentum of the project. ○ **E. Slagle made a motion to vote Judy O'Connell as the Chair of the Wildwood School Building Committee effective May 5, 2025. Motion seconded by D. Kelley.** ○ **Roll Call Vote Taken: Unanimous vote. S. Scott did not respond. *K. Caira announced his presence at the SBC Meeting.*** ▪ S. Turner asked for clarification that assuming that in terms of Superintendent of Schools or whatever term they served and the following Permanent Superintendent of Schools, would both by members of this Committee and the Leadership Committee even if they are not the Chair, correct? *G. Brand understood that the Chair could be any member of the School Building Committee and was not specific to the role of Superintendent of Schools or School Committee as there is representation of these Committees on this School Building Committee. It was in conversation with the previous town management to have the Superintendent of Schools as the Chair. E. Slagle advised that it is a kind of ex-officio position so if the interim Superintendent of Schools and the permanent School Superintendent were intended to be members of this and that role would be on that Committee and then the Leadership on the Leadership. Once there is no longer an interim Superintendent, then the Permanent Superintendent of Schools will be all that is needed once the transition occurs.* ○ **J. O'Connell accepted the Chair role for the School Building Committee.** ▪ D. Ragsdale commends V. Varbedian's role as Vice Chair of the School Building Committee as she has done considerable work with the Leadership Team and he feels equally confident in her taking charge of the Committee as she has done at times in Dr. Brand's absence.

Item No.	Action	Discussion
		▪ M. Gallezzo advised that originally the Finance Director was a part of this Committee and welcomes E. Slagle and J. O'Connell to put some policy in place to backfill some of these positions that were not filled with those who have replaced. When the Finance Director left that position was not filled and it should be. There seems to be a kind of drop off and not fill them that has occurred. This committee is very large and it should not be this large. It would be beneficial if going forward there was some sort of policy to balance out the Committee. – **Renaming the Project** was voted upon and rescinded with discussion on 2 occasions during the meeting. Of the 4 shortlisted names, two contained North Elementary or Northside Elementary and these names were contrary to sentiments of the Town leadership at the outset of this project. The desire is to unify the Town not divide it so it was not chosen to move forward with North within its name. There was no decision to choose one of the names and the project will stay the course with Wilmington Elementary School. The project will continue to be Wilmington Wildwood School project with regards to all filings with the MSBA. None of these would end up being the name of the school after it is built. *[Some of the discussion is captured below and more can be found on the video starting at 1:36:00 until 2:22:00.]* ○ E. Slagle advised that when the consolidated project in October had an opportunity to change its name, there was no decision to change the project name. That was nearly 6 months ago and this decision is still perhaps not the best one with 6 months left before the appropriation vote and ballot vote. Wilmington Elementary Consolidation Project or Wilmington PreK-5 Consolidation Project were the 2 options that were not associated with the sides of the Town of Wilmington and spoke to the nature of the project for the Town. M. Gallezzo advised that she agreed with E. Slagle that changing the name of the project at this time would only cause more confusion for the Wilmington community and could result in there being an assumption that there are 2 projects going on when there is only 1 just with a change of names. ○ S. Turner advised that despite the name of the project, we need to go back to the meeting that was at the Shriners Auditorium and put some of the materials on consolidation together with material to build up to the September vote to remind people of what the nature of this project was supposed to be. Those stating that this was only supposed to be the Wildwood Project and it was changed, the project did

Item No.	Action	Discussion
		not change as from that day at Shriners Auditorium and forward this project has been about consolidation regardless of what the project is called. Should this name reflect that it is more than Wildwood? As it started out as a consolidation of 6 schools and now it is at a consolidation of 3 schools. o V. Varbedian advised that the biggest push will be the last 6 months of the project before the vote. If the name is going to change, now is the time. – **J. O'Connell made a motion for the project to continue to be called the Wilmington Elementary School project. Motion seconded by V. Varbedian. M. Gallezzo amended the motion to take no action.** **Schedule Updates** – **Abutters Meeting** – sometime in May 2025 – **School Building Committee** - Merging the May 20, 2025 and the June 2, 2025. – Take no action on this schedule until April 15, 2025 SBC Meeting.
31.08	Record	**Correspondence** – Questions submitted to the Wilmington Public Schools and/or Town Manager's office are shared with the SBC and will be incorporated into upcoming Frequently Asked Questions.
31.09	Record	**Next Meeting:** Following the **Community Forum** at **6:00 PM Monday, March 31, 2025** at **7:00pm Wilmington High School, Large Group Instruction Room**
31.10	Record	**Adjourn** G. Brand thanked the committee for their efforts and invited a motion to adjourn. – **E. Slagle motioned to adjourn. V. Varbedian seconded the motion. Roll call vote, motion carried by unanimous vote.**

The information herein reflects the understanding reached. Please contact the author if you have any questions or are not in agreement with these Project Minutes.

Chad L'Ecuyer, Project Manager	Present

Item No.	Action	Discussion
32.01	Record	Chair, Glenn Brand, called the meeting to order following Community Forum No. 6. Roll Call of the School Building Committee was performed by V. Varbedian to account for all of those who are present through remote participation on Zoom. The attendance based on the roll call can be found on page 1 of these minutes. This meeting was conducted through Zoom Webinar as remote participation so those listed as Remote for this meeting were Remote, those Present in Large Group Instruction Room of Wilmington High School are listed as Present and those Absent were not Present via Remote Participation or In Person. K. Caira and S. Scott did not announce their presence during roll call.

Item No.	Action	Discussion
32.02	Record	**Approval of Minutes** G. Brand advised that the draft minutes of the March 25, 2025 School Building Committee Meeting would be presented at the April 15, 2025 meeting as they were not ready for approval due to the close proximity of this meeting.
32.03	Record	**Approval of Project Scope and Budget** L. Dore reviewed the Project Scope and Budget history with the Preliminary Design Program having and estimated project cost range of $194M to 214.5M which equates to $1,156 to $1,278 per square foot of school. The Schematic Design Construction Cost Estimate came in at $137.7M and Dore+Whittier has been working with the Town Manager, SMMA and Fontaine Bros. over the last week on the 3011 Form to come up with the full project cost. This includes the construction costs plus all of the soft costs that include furnishings, technology, design, management fees and contingencies. Estimating is being done out until the start of construction which is about 18 months. As a group, it was important to make sure that the project was risk protected as there is only one bite at the apple to go out to the Wilmington community in order to have the project approved at Town Meeting for appropriation and Ballot Vote to support this school project and this budget. We had looked from the PDP phase which became $177.6M to $196.3M by the Preferred Schematic Report phase which is $1,086 to $1,200 per square foot and currently at the completion of Schematic Design the Estimated Project budget is $173,250,626 which is $1,037 per square foot and this is for a construction cost of approximately 18 months from now. The project is on budget and a concerted effort has been made to keep the project on budget as the project design moved through the phases while incorporating decisions of the SBC during the course of the its development. The project is on the very low end of range of the pricing and it is a good place to be for the school project. It is felt that enough contingency has been added to take care of enough of the unknowns from a design perspective. There is Design Contingency in place to cover the items that Fontaine Bros. has not seen as Dore+Whittier has not drawn them yet at this stage in the design. A good idea of what goes into the design for what is needed to complete the building but there are some unknowns that this contingency will cover. Fontaine also carries contingency within their cost estimating for that same reason. Outside of construction on the owner's side of soft cost contingency there are Owner costs that have been talked about with construction contingency which is hard cost contingency which is 5% of the project cost and there is another soft cost contingency for those parts of the project that could not be expected at this time in the project. It is important to know that money can be moved from one line item to another if it is not being spent as there is risk protection in place. If the risk does not show itself, then the money can be moved within the budget to accommodate. If budget is not expended by the end of the project, the money would go back to the Owner. • E. Slagle advised that the time with L. Dore and J. Leduc spend on this 3011 form this week was appreciated in addition to the resource of information pulled down from the MSBA about the soft costs and hard costs have been historically for other

Item No.	Action	Discussion
		elementary school projects in the pipeline since 2014 to have an idea of what should be planned for this project. Analysis of the percentages for these costs and comparing with the project's costs shows that the costs that are captured in this project are reasonable as there is an extra buffer that can help plan for what is in question currently with the tariff issue and other costs that are outside of the control of the project that have the potential to impact. It is good to see that it is all baked into the number and still the project cost is coming in under the range that was projected, is a good place to be on this project. These include the OPM and Designer fees that will be consistent with what other projects that have been done since 2014. • C. Prendergast confirmed that the $173M amount is the amount before the reimbursement from the MSBA and there will be a portion that the MSBA is reimbursing the District for and the Wilmington community will be responsible for its portion. N. Golden advised that the $173M amount also includes all of the furnishings, fixtures and equipment and an estimated reimbursement rate that is included. N. Golden asked what this reimbursement rate is based upon? L. Dore explained *the Construction Cost will be based upon everything that is in Fontaine Bros. contract and Project Costs are those that are outside of that so it is all of the new furnishings for the new school, the new technology that will go into the new building, Design Fees, OPM Fees, insurance costs and many layers of contingencies make up the difference. The reimbursement rate in this 3011 form is based upon formulas that make up the reimbursement rate that is in fine print that is baked into this workbook that represents incentives, caps, and in there also includes their base reimbursement rate for Wilmington. There is 1 incentive point for Maintenance because the District has done a good job maintaining these buildings over time. The direction of this Committee is that there is a desire for a sustainable building and 4 points were a reasonable cost to collect all 4 available Sustainable Green points. There are 5 extra incentive points in addition to the base rate and MSBA needs to review and come back to agree with these calculations in order to state what the reimbursement rate will be for this project. The MSBA grant will be looked at to see how the cost to the District can be brought down as a local share.* • M. Gallezzo asked about the contingencies that are in the amount? *L. Dore advised that there is 12% inside of the Construction Cost plus an additional 6.5% outside which is 5% for Owner's Construction Contingency and 1.5% for the Owner's Service contingencies and those that are expended with these Owner Contingencies have decisions that rest with the School Building Committee for the project. J. Leduc advised that there is a hard cost contingency which is where the Change Order decisions approved by the SBC for the construction and purchases for the project will come out of and the Soft Cost*

Item No.	Action	Discussion
		Contingencies where consultant service costs that are approved by the SBC will be covered. Both of these contingencies, hard and soft cost, are only exercised through approval decisions made through the School Building Committee. • S. Turner asked if 18.5% is enough contingency that is needed so that the children and educational program is not impacted in their needs for the new school. *P. Melaragni advised that it is estimated that the reimbursement would be approximately 52.84% for the District* which would add up to a $50M reimbursement which would be a cost of approximately $113M for Wilmington and it could potentially go even lower with some creative ideas on the Town side. V. Varbedian advised that there will be a portion of the items that will be deemed eligible and ineligible of the costs as also seen on the 3011 form by the MSBA so it will not be an exact 52.84% as it will be on a case-by-case basis. • D. Allan asked where the reimbursement rate was derived from? *J. Leduc advised that the MSBA has Wilmington's reimbursement rate listed on its website as 47.84% plus the five (5) incentive points would bring the reimbursement rate to 52.84%.* D. Allan asked if the 18% contingency takes into account inflation? L. Dore advised that it is an attempt to account for future escalations so that contingencies are built into the project. E. Slagle further advised that the reason why there is no specific reimbursement rate that can be confirmed at this time is because the Schematic Design Report together with the 3011 and the Project Scope and Budget need to be reviewed by the MSBA and confirmed that these are all in agreement and within their scope relating to eligible and ineligible spaces. If these are not in agreement, there will be conversations had to review and work with the MSBA so everyone is on the same page with the goals, needs, and scope for this project. • K. Bissell noted that there was a higher than the limit for FFE that is within the 3011 form and acknowledged that it would be based upon the 755 enrollment rate but it does not include the PreK-K population that would be part of that number. Does this additional amount over the cap account for the additional student population that would be the PreK-K? *L. Dore advised that yes it does and that is why the number is higher than the cap and it will need to be taken into consideration due to the enrollment being higher to include the PreK-K students population. The budget line item is account for $2,200 per student for 755 students and the FFE needs over and above that is in line with those that are being seen in the marketplace for PreK-K spaces currently in the process. D. Kelley advised that there is the potential of lowering the cost of FFE as well in the process of the choices of items i.e. lighting. L. Dore advised that Basis of Design products have been chosen for the project that come within the budget that has been set to date and*

Item No.	Action	Discussion
		Massachusetts Public Procurement requires the Designer to have 3 equals for every product and that is what Fontaine has based their pricing upon as well. This is the bar that the design has been started with and it is not an extravagant one and a lot of time has gone into this project to determine what these materials and products are as the SBC has been very clear with the priorities to keep this project not extravagant and keep it within the budget cost and watch to make sure that these prices are not fluctuating. This will be done with 3 more estimates performed after the appropriation vote and this will be the check to ensure that the project is still falling within range of the budgeted amount and see how it is going as the design is further developed. This will assist in determining whether there needs to be a change in course for material selection and reprioritize as needed. It is not desired to cut budget that is set out for the educational program • D. Allan asked if the fees of the Designer and OPM are standard for the project? *E. Slagle advised that the OPM and Designer fees are in alignment with those that are for projects of this type and size in the Commonwealth of Massachusetts. Having reviewed the data on the MSBA site from the last 10 years has been performed to confirm for elementary schools.* **V. Varbedian made a motion to submit the Project Scope and Budget to the MSBA as written. N. Golden seconded the motion. Roll call vote resulted in a unanimous vote, motion passes.**
32.04	Record	**Public Comments** – None

Meeting Minutes
Thursday, April 3, 2025

Dr. Glenn Brand called the meeting to order at 6:00 PM.

Ms. Vivian Varbedian proceeded to make a roll call of attendance.

Present: Diane Allan, Greg Bendel, Glenn Brand, Kevin Caira, Michael Camoscio, Maryanne Gallezzo, Nicholas Golden, Dennis Kelley, Paul Melaragni, Greg Minor, Judy O'Connell, Paul Ruggiero, and Eric Slagle.

Absent: Kate Bissel, Justin Cusce, Christine Holloran, John Holloway, Christine Murray, Christine Prendergast, David Ragsdale, Stephen Turner, and Stacey Scott.

DISCUSSION OF CONSULTANT CONTRACTS

Dr. Brand turned the room over to Mr. Slagle. Mr. Slagle made committee members and viewers at home that the contract for OPM and Design Services are structured by MSBA to expire at the end of Schematic Design Phase. For purposes of the OPM contract, after multiple meetings with the Leadership Teams, SMMA, MSBA, Town Counsel, and various Committee Members, it has been determined that the Town will not be moving forward with SMMA acting as the OPM for the construction phase of the project. Mr. Slagle added that the town had chosen not to exercise the option to make a change in key personnel, rather SMMA has indicated that they would amicably part ways.

Mr. Slagle explained that the town would need to go out to bid for OPM services and that MSBA has provided an outline of how that process would look. A request for services will need to be submitted by April 17th, 2025. Mr. Slagle provided an overview of the required advertising requirements and timeline, resulting in the approval of a new OPM in early July. Mr. Slagle clarified that the Schematic Design Phase would not end on May 1st in conjunction with the submission of the Schematic Design but would end after the June 25th MSBA hearing; SMMA would be assigned to the project until then.

Mr. Slagle explained that Dore and Whittier, as well as the Construction Manager At-Risk firm, Fontaine Bros., Inc., had been notified of the Towns standpoint. Mr. Slagle added that despite parting ways with SMMA, the town still has two excellent firms assigned to the project. Mr. Slagle added that the two firms would be responsible for establishing preliminary estimates, and that SMMA offered $35,000 from their contract for Fontaine Bros., Inc., and Dore and Whittier to do so.

Mr. Slagle informed the Committee that the new OPM will be hired within the budget that was submitted with the 30-11 form. Mr. Slagle explained that most OPMs are aware of similar situations happening, and that he was aware of multiple firms looking forward to bidding on this project.

Mr. Slagle stated that he is fully prepared to execute an amendment with Dore and Whittier for them to continue their services through the construction phase of the project. From his perspective, he was impressed with their flexibility and ability to listen to what the town is saying and bring the design closer to what the town wants. Mr. Ruggiero agreed with Mr. Slagle. Mr. Golden expressed that he was impressed with how they handled the abutters meeting. Mr. Bendel stated that he had been impressed with Rani Phillips of Dore and Whittier, specifically her thoroughness and ability to answer questions. Dr. Brand added that behind the scenes communication has been excellent, and that they have been wonderful to work with. Ms. Allan agreed, stating that she was pleased with their performance so far.

Dr. Brand asked Mr. Slagle if the committee would need to take any action at tonight's meeting with respect to either contract. Mr. Slagle clarified that the committee would be voting on an extension of the Dore and Whittier contract later in the summer.

Ms. O'Connell stated that Mr. Slagle had taken a very methodical approach as a new manager, not rushing any decisions, reaching major milestones in the process, and reaching a collective decision. Ms. O'Connell also added that MSBA had reassured the town that changing OPMs would not negatively affect the project. Mr. Bendel added that the Yentile Farm Project had seen a change in management, and the project had turned out quite well.

VOTE TO ESTABLISH AN OPM REVIEW COMMITTEE (VOTES MAY BE TAKEN)

Mr. Slagle noted that he had asked folks to participate as members of the OPM Review Committee, and that the committee will have a window of May 21st through June 11th, to shortlist firms, interview, have a meeting to select an OPM and to prepare a selection package to provide MSBA. Mr. Slagle stated it would be beneficial to have Mr. Kelley on the Committee, along with Paul Melaragni, Paul Ruggiero, and Judy O'Connell; given their experience and involvement with the project. Mr. Slagle stated that one more member is needed. Ms. Allan volunteered, explaining that she had been involved in a similar process for the Senior Center.

Mr. Slagle made a motion to appoint Mr. Kelley, Paul Melaragni, Paul Ruggiero, Judy O'Connell, and Diane Allan to the OPM Review Committee, seconded by Craig Minor and voted unanimously:

VOTED: To appoint Mr. Kelley, Paul Melaragni, Paul Ruggiero, Judy O'Connell, and Diane Allan to the OPM Review Committee.

DISCUSSION/NEW ITEMS

Ms. O'Connell advised that the water bill inserts had been completed by Shawsheen Tech, and had come out great. These will be delivered to the Treasurer/Collector's Office by April 17th. Ms. O'Connell thanked Mr. Camoscio for establishing a working relationship with Shawsheen Tech, as he had handled the prior water bill insert order. Dr. Brand also thanked Mr. Camoscio for bringing up the Fourth of July Celebration and how to incorporate advertisement materials into the event.

ADJOURNMENT

At the conclusion of the discussion, being no further business, a motion was made by Ms. Varbedian for the Wilmington School Building Committee to adjourn, seconded by Mr. Craig and voted unanimously:

VOTED: That the Wilmington School Building Committee adjourn.

The meeting adjourned at 6:27 pm.

Respectfully submitted,

_____

Thomas F. Donahue

AGENDA FOR WILDWOOD SCHOOL BUILDING COMMITTEE MEETING

April 3, 2025 @ 6:00 p.m.

Town Hall, Room 9, 121 Glen Road, Wilmington

Hybrid Meeting for Committee Members

1. **Call to Order**

2. **Discussion of Consultant Contracts** (votes may be taken)
   a. OPM Contract
   b. Designer/Architect Contract

3. **Vote to Establish an OPM Review Committee** (votes may be taken)

4. **Discussion/New Items**

5. **Adjournment**

RECEIVED
TOWN CLERK
2025 APR -1 PM 4:48
TOWN OF WILMINGTON, MA

SMMA
1000 Massachusetts Ave.
Cambridge, MA 02138

Agenda

Project Name:	Wilmington Wildwood School Project	Project Number:	22127
RE:	School Building Committee	Meeting Date:	April 15, 2025
Prepared by:	Julie Leduc and Sarah Traniello	Meeting Time:	6:30 PM
Location:	Hybrid Meeting: **Wilmington High School** **159 Church Street, Wilmington, Massachusetts** **Large Group Instruction Room** and **Zoom Webinar:** **https://wpsk12.zoom.us/j/83577025187?pwd=cAMl4Rs4iYaPdh4DoHQTNSnWq5XMom.1**	Meeting No.	33
Distribution:	School Building Committee Members		

1. Call to Order
   - Approval of Minutes – March 25, 2025, March 31, 2025 and April 3, 2025
2. Approval of Invoices
   - Warrant No. 23
3. Design Update *(Votes May Be Taken)*
   - Cost Update
   - Schematic Design Report
   - Approval of Schematic Design Report Submission to MSBA
4. Working Group Updates
   - Public Relations Working Group
5. Discussion/Correspondence/New Items
   - Upcoming Meeting Schedule
     - Abutters Meeting: Tuesday, May 13, 2025 @ 6:00 PM *(Tentative)*
       North Intermediate School Cafetorium
6. Committee Questions
7. Public Comments
   - Next Meeting: **Tuesday, June 3, 2025**
8. Adjourn

The items listed are those reasonably anticipated by the Chair which may be discussed at the meeting. Not all items may in fact be discussed and other items not anticipated may also be brought up for discussion to the extent permitted by law.

Dore+Whittier Architects

Donald Walter, Principal-In Charge	Remote
Lee P. Dore, Principal, Designer	Absent
Rani Philip, Project Manager	Present
Bryce Taft, Designer	Absent

Fontaine Bros.

David Fontaine, Jr., CEO	Absent
Rob Day, Project Executive	Present
Mark Abdella, VP of CM Services	Present
Chelsea Mutrie, VP of PreConstruction	Remote
Chad L'Ecuyer, Project Manager	Present

Item No.	Action	Discussion
32.01	Record	Chair, Glenn Brand, called the meeting to order at 6:30 PM. Roll Call of the School Building Committee was performed by J. Leduc to account for all of those who are present through remote participation on Zoom. The attendance based on the roll call can be found on page 1 of these minutes. This meeting was conducted through Zoom Webinar as remote participation so those listed as Remote for this meeting were Remote, those Present in Large Group Instruction Room of Wilmington High School are listed as Present and those Absent were not Present via Remote Participation or In Person. **During roll call to open meeting M. Gallezzo, N. Golden, J. Holloway, C. Prendergast and V. Varbedian did not respond. M. Gallezzo, N. Golden,**

Item No.	Action	Discussion
		and J. Holloway did not announce their presence during the meeting and were absent for the entire meeting however C. Prendergast and V. Varbedian arrived via remote participation after roll call was conducted. All other members were present in person or through remote participation.
32.02	Record	**Approval of Minutes** G. Brand advised that there are 3 sets of draft minutes for approval with the March 25, 2025 School Building Committee Meeting, March 31, 2025 School Building Committee Meeting and the April 3, 2025 School Building Committee. • **G. Bendel made the motion to approval all 3 sets of meeting minutes with E. Slagle seconding the motion to approve.** S. Turner asked the question about whether or not it is possible to vote for the approval of the minutes is viable if member was not present for one of the meetings the minutes were drafted for. *P. Melaragni advised that a member can vote for the minutes if not present for one of the meetings.* • **J. Leduc conducted a roll call for the approval of all 3 sets of meeting minutes was conducted. C. Prendergast joined the meeting just prior. All present remotely and in person approved the meeting minutes and it was accepted unanimously.**
32.03	Record	**Approval of Invoices** G. Brand advised Warrant No. 23 has been submitted for approval that includes Dore+Whittier Architects' invoice of March 31, 2025 for approval in the amount of $69, 589.30. • **D. Kelley on behalf of the Finance Working Group recommends approval for this invoice in the amount of $69,589.30 with a second motion of made by G. Bendel to approve.** P. Melargani asked why there is a 10 percent charge on these invoices from Nitsch Engineering. R. Philip answered that it is because there is a 10 percent as Nitch Engineering is a subconsultant to Dore+Whittier. P. Melaragni asked if the Traffic Survey was completed and L. Dore advised that the Traffic Survey has been completed and the Town has a copy of the traffic survey for its use and reference. • **J. Leduc conducted a roll call for the approval of Warrant No. 23 was conducted. All present remotely and in person approved the meeting minutes and it was accepted unanimously.** • **C. Prendergast and V. Varbedian were both present and voted in the affirmative. C. Miner abstained from voting.**
32.04	Record	**Project Scope and Budget Update** R. Philip reviewed the correction of the record for the Schematic Design pricing that is $1,050 per square foot for the $173,250,626 Estimated Project Cost as well as on the 3011 Form for the MSBA where the square footage that was used originally was for the Preferred Schematic Report Phase as the square footage increased for the Schematic Design Phase

Item No.	Action	Discussion
		and it is indicated within the area circled in red. The square footage was updated in SD and the number has been incorporated into this Project Scope and Budget document. It did not have any impact on the project cost or construction cost because those amounts were based on the Schematic Design square footage. However, it did impact the soft costs because it made more of the soft costs available for reimbursement which works in favor for the District. The impact was about $57,000 more that will be eligible for reimbursement that was shown initially. It did not change the bottom line as it was just an adjustment for what is eligible and ineligible. There is a meeting on Thursday to review this form to review this document and an update will come forth from that meeting. P. Melaragni asked what the original square footage was for record. R. Philip advised of the square footage and advised that the amount of square footage was a couple thousand square feet and with the Art Room being added back into the program plus 2 office spaces. These spaces were in the plan but during the transfer of information it was account for as 2 offices but the actual need was 4 offices and there was a reduction from 6 to 3 of wellness rooms that were associated with the teacher collaboration spaces. It was a few thousand square feet. P. Melaragni advised that it was a difference of 1,472 square feet.
32.05	Record	**Schematic Design Package** R. Philip reviewed the Schematic Design Package that was sent out to the School Building Committee for their perusal with the contents that will be submitted to the MSBA updated them on where the Project stands in this process. There are 4 part of this submission with the first part being a submission of what was submitted to the Department of Education and gives idea of what has been prepared for Special Education. DESE will need to approve this as a part of this process. This will come back from DESE with their approval before the Schematic Design can be approved by the MSBA. The second part of the submission is the Schematic Design Binder with any design changes that have happened with the cost and approvals to date. Also included will the Schematic Design Project Manual containing the outline specifications and the Schematic Design Drawings containing the Site/Civil, Building Floor Plans, Roof Plans and the Interior and Exterior Elevations. These will show all of the materials and systems that go into the new building and it is what the recent cost estimate was based upon. • J. O'Connell asked what the hot spots are within the Schematic Design Submission that the SBC members should be reading and/or reviewing first as it has been broken out into components for ease of reviewing instead of as 1 large volume like the PSR was distributed for their digestion. *R. Philip advised that it will need to be reviewed at the user group level. It is broken out into sections so that it can easily be reviewed piece by piece. For example, the Sustainability Working Group might be more interested in specific sections vs. sections the Public Relations Working Group might be interested in reviewing or the Site/Landscape Working Group might be interested in reviewing, etc. Feel free to start with the Introduction and then*

Item No.	Action	Discussion
		continue to sections of interest. The report contains information that has been reviewed with the Committee by Dore+Whittier and SMMA prior to the submission. • D. Allan asked if the Schematic Design Report contains the cost of the 12,000 sf gymnasium? D. Allan further asked where the estimate for the cost of the 12,000 sf gymnasium vs, the 6,000 sf gymnasium can be found in the Schematic Design report? *R. Philip advised that a cost estimate for the 6,000 sf gymnasium would not be found in the Schematic Design Report. It would not be found in the report since the School Building Committee elected to proceed with the 12,000 sf gymnasium before entering into Schematic Design phase. Therefore, the 12,000 sf gymnasium was what Schematic Design cost estimate pricing was based upon.* • D. Allan asked how much exactly will the 12,000 sf gymnasium cost? *L. Dore advised that just before the School Building Committee decided to move forward with the 12,000 sf gymnasium, an estimate was generated to show the local share for what it would cost and it was around $8Million. Once that was established, the gymnasium placement, its design and the cost estimate, were based upon that decision. L. Dore advised that the Preferred Schematic Report would need to be referred back to see what the final verdict would be on the MSBA side of things related to reimbursement. The reimbursement discussion will come this Thursday when we meet with the MSBA and have a conversation related to reimbursement.* • S. Turner mentioned having attended a Yes for Wilmington Schools event on Sunday. He advised that there is an item within the DESE section, in the first document, that was felt to be very helpful not just for this subject but also for the PR Working Group. It showed the lower grades in the building in pink, the upper grades in purple, and public spaces in green. It was a very simple view but good visualization of how the building functions. It is something to have available when speaking with the community about how the building operates and it was a unique and different view from anything that had been put together before. When we were doing the space planning for the programming, there were areas that were really tiny but this view would be really helpful to those who need something tactile to visualize how the building will function.
32.06	Record	**Next Steps** R. Philip reviewed the Schematic Design next steps once the School Building Committee approves the Schematic Design submission that has been under review with the hyperlink provided to the documents. There will be a Project Scope and Budget Review with the MSBA, MSBA Review Comments from the Schematic Design Report submission will come forth. • Dore+Whittier and SMMA will continue to work with the Leadership Working Group on the responses to said MSBA SD Comments in preparation for the MSBA Board of Directors

Item No.	Action	Discussion
		meeting on June 18, 2025. *[Note: MSBA Board Meeting was moved from June 25, 2025 to June 18, 2025.]* ○ Particular attention will be made to provide the appropriate responses to the items that the MSBA requested to be incorporated in the Schematic Design report to ensure there is a full and thorough report and response. • There are 3 votes that need to happen in order for this project to move forward: ○ MSBA Board Vote of Schematic Design: June 18, 2025 ○ Special Town Meeting: September 13, 2025 ○ Debt Exclusion Ballot Vote: September 16, 2025 After these have been successful, the project will move on to finalize the Project Scope and Budget Agreement with the MSBA. Once this happens, the project will be moving into Design Development, 60% CDs, 90% CDs. There will be cost estimates performed again in the Fall working up to the Special Town Meeting and Ballot Vote by the Town of Wilmington. • P. Melaragni asked what happens if there is a huge disparity in the estimates at that time that are influenced by the tariffs that have been set in place by the Federal Government? *R. Philip advised that the dollar amount approved at Town Meeting and the Cost Estimates may have a larger delta than expected as a result. This will be something that is reviewed during the Project Scope and Budget Agreement processing with the MSBA. As discussed on March 31, 2025 within the Project Budget there are contingencies that have been set in place where a certain percentage has been held with the anticipation that there may be tariffs involved. The School Building Committee would be approving that Project Budget and the Project is going into the process with the knowledge that there is the potential for tariffs to be in place and contingencies have been put in place to cover a reasonable amount of tariffs should they be impacting the project. These are some of the unknowns that may be coming in the future and the project is trying to anticipate these unforeseen items that may influence the project budget. The contingencies have been put into place within a reasonable amount so that the project budget is inflated so much that there is a great amount of excess that we are trying to figure out. Discussions were had with L. Dore of Dore+Whittier Architect, J. Leduc of SMMA and the Town Manager, E. Slagle to see what the comfortable amount would be to move forward with and that is what has been included and as a Project we will continue to monitor it as time passes. We also have Fontaine Bros. at the table to help provide additional insight into the estimated amount that are coming in and set some real world perspective with outreach to trades. The function of the interim estimates throughout the process is to ensure that the project is still continuing to stay within budget as set out and enabling the project to look at any potential value*

Item No.	Action	Discussion
		engineering (VE) that may need to occur to stay within budget. Value engineering is the function of modifying or eliminating items within the project scope that might bring the project back into alignment with the budget as needed. L. Dore further expounded upon R. Philips description of the process where PM&C will perform an estimate for Dore+Whittier and Fontaine Bros. will do an estimate and then the estimates will be reconciled at each step along the way as the project gets more refined. As this goes along, there will be some check ins with the SBC if the budget costs are going off course and there is a need to do some strategic value engineering. In the early phases, there is the ability to reel it back in but as it is getting more developed there are less opportunities and there have been several items for Value Engineering to be used for in order to bring the budget back inline. It is not desired to go there but it is a possibility that it may be needed and it is built in as a part of that process. The contingencies and the unknowns for the tariffs are being built in to build enough of a safety net to cover the unknowns the are unable to be foreseen in advance. A balance has been achieved. • D. Allan asked when it will be known exactly how much reimbursement the District will get from the MSBA? It is understood that Dore+Whittier will be working with them constantly and going back and forth regarding all of these items justifying whether or not is being included in the project or not. When will the SBC get a good handle on that number? *J. Leduc advised that the MSBA Board Meeting is on June 18, 2025 and this is when the Board of Directors will be approving the project and approve the final number. We will have a ballpark number beforehand as we will be working with the MSBA but there are a lot of negotiations that go on with the form that is submitted to the MSBA relating to ineligible costs and eligible costs that we will be working with them on. For the public, a specific number will be able to be provided on June 18, 2025.* • G. Brand asked if is customary to have a 2 month period of time between the MSBA Board Meeting and the Special Town Meeting and Ballot Vote. For instance, Wilmington's MSBA Board Meeting is at the end of June and the Special Town Meeting is scheduled for September 13, 2025 and Ballot Vote on September 16, 2025. Is this customarily done like this on other projects you have worked on? *L. Dore advised that the Town of Wilmington has a lot of runway between the June MSBA Board of Directors Meeting and the Town Meeting and Ballot Vote to get word out to the community about the elementary school project. L. Dore advised that on another project that is underway the District opted to have the Town Meeting and the Ballot Vote before the MSBA Board Meeting and it is contingent upon the MSBA approval of the project. In the case of this project, we have some of June and through the summer to get the word out to the Wilmington community before bringing it before the Special Town Meeting and to*

Item No.	Action	Discussion
		Ballot Vote. To have a definitive number of what the MSBA will be providing for reimbursement and being able to communicate that to the Town is important. • The MSBA Board of Directors meeting is June 18, 2025 instead of June 25, 2025 as it was updated by the MSBA not long ago. • M. Camoscio asked whether or not there was a preferred method to respond to the documents that are being reviewed by the SBC. Is it preferred to place the comments in a Excel spreadsheet, Word document, or email and who should they be sent to and how should they be tracked. *J. Leduc advised that the responses or questions could be sent to Dore+Whittier Architects and they will be reviewed for integration into the submission as deemed appropriate before submitting to the MSBA for the Schematic Design.* • **Approval of Schematic Design Authorize SMMA and Dore+Whittier Architects to submit the Schematic Design Report to the MSBA on behalf of the School Building Committee and the Town.** ○ **Motion made by J. O'Connell and seconded by G. Bendel. Motion passed unanimously with Roll Call vote.**
32.04	Record	**Public Comments** – None
32.05	Record	**Discussion and Committee Questions** – Upcoming Meeting Schedule ○ Tuesday, May 13, 2025 Abutters Meeting to be held at 6pm at the North Intermediate School Cafetorium. Important to meet with the Abutters to work with them with respect to their feedback especially those whose properties are immediately in contact with the North Intermediate Site including but not limited to those within the neighborhood surrounding the school. ○ P. Melaragni advised that it would be nice to see some of the people invited to be from across Salem Street with the net for Abutter outreach to be a little bit further for this round so that more are included to provide their input. *S. Turner advised that the initial set of abutters have not had a chance to see the changes that have come forth in response to their feedback at their last abutters meeting is important to keep in mind. E. Slagle advised that the invitations for this Abutters Meeting will be those attending the first Abutters Meeting and another meeting will be scheduled afterward to broaden the invitation range of households to provide additional input. It is important for those immediately abutting the North Intermediate School site to be able to see first hand what their input resulted in for changes impacting the project so they are aware their input was listened to, amendments to the plan were made and these are the*

Item No.	Action	Discussion
		results as the project stands today as we move forward after submitting the Schematic Design Report. P. Melaragni advised that he is ok with this happening as long as a larger pool of abutters are invited with the next abutters meeting to garner their input as well. P. Melaragni advised that it would be unfortunate for people to come forth before the Town Meeting advising that they were abutters and their voice was not heard and they were not invited to the meeting(s) to learn about the project and give their thoughts and concerns. J. O'Connell advised that it is a listing of abutters that comes out from K. Rasche that is put out and signed off by the assessor. The intention is not to belittle any of the intentions set forth by P. Melaragni with his concerns. However, one of the abutters that would be part of the larger net would be the Avalon Apartment rentals that the quantity of people from the development along could potentially overtake those that are direct abutters. The Town is printing, mailing and distributing these through its mail house for these abutter mailings which takes time and funds to get done. It is ultimately the decision of this body to make it happen and there are also Community Forums in addition to the very public process that the abutters to participate in. D. Ragsdale advised that time is limited before the summer months are upon us and it is essential to take advantage of as many means of outreach that are possible and keep in mind the events that people will be able to attend. S, Turner advised that there are a few small streets off of Salem Street that have only 2 or 3 houses on them and are near the building and they should be included in the mailing as they would have some input on the project being so close but maybe outside of the range being reached to for Abutters. S. Turner advised P. Melaragni is on the right path with his thoughts and it is important to keep in mind the expense of these additional steps. J. O'Connell advised that if the outreach gets too large then it does not become the intimate working group that it was intended to be at the start. D. Allan advised that she would be interested in hearing from those who live across from the North Intermediate School site and give their input as well and understand the perspectives of P. Melaragni and J. O'Connell regarding the outreach and quantities of people participating and the objectives of the meetings being established. A lot of these neighbors are going to be interested in the traffic study and seeing how the bus circulation and vehicle circulation will be in and around the site.

Item No.	Action	Discussion
		○ J. Leduc reminded the remaining meeting dates need to be approved for the School Building Committee. With the Meeting of June 18, 2025 which replaced June 25, 2025, July 22, 2025, August 19, 2025 and September 23, 2025 need to be approved. ○ J. O'Connell clarified that the June 3, 2025, June 17, 2025 and the June 18, 2025 meeting are still on the calendar with the June 17th as a TBD. J. Leduc advised that the TBD is in case anything needs to be discussed or reviewed prior to the MSBA Board Meeting on June 18, 2025 meeting. ▪ **P. Melaragni made the motion to approved these meetings and E. Slagle seconded the motion. Passed unanimously.** – **PR Working Group** ○ G. Bendel advised that during the Working Group discussion he was going to add that it would be helpful to put some of the boards with the dates for the Special Town Meeting in September and the Ballot Vote in September at the Senior Center so that they will be there as reminders of these important dates for the Fall when they need to go to vote and provide their input. It is important to get these things in front of them as soon as possible so that they can be remembered to keep them updated throughout the outreach process. There is a lot of traffic at the Senior Center so G. Bendel would be happy to help with getting that done. J. O'Connell advised about reaching out to DPW to get the electronic messaging boards put into action to remind about the upcoming town meeting and ballot vote and additional information. ○ M. Camoscio advised that the water bill was successfully distributed through J. O'Connell and J. Cusce advised that last year at Town Meeting M. Camoscio and he were outside in the lobby with the boards advertising the project willing to answer any questions and handout any flyers needed to garner information about the project with the public attending that were interested in learning more. It would be helpful to have representation again this year. In addition M. Camoscio advised that there is a need for getting the Fun on the Fourth signup done with SignUpGenius as right now there are only 4 slots that have been filled and for the most part it is for Wednesday, June 25, 2025 and there are several additional slots available to get others to be involved in the outreach for the project. M. Camoscio advised that the Fun on the Fourth event had a lot of people who staffed the table least year that will not be present this year due to being away and participation

Item No.	Action	Discussion
		from members of the Committee will be very helpful and needed to make the event a successful one for outreach on the project. ○ J. O'Connell advised that most everything related to the Town Meeting and Town Elections goes through Beth Lawrenson, Town Clerk, and the Moderator. Anything that is displayed during Town Meeting would need to have their approval so that there is no uncomfortable moments about the contents of poster boards, The same goes for the polling locations as long as it is neutral in nature and not choosing one side over another. ○ G. Brand advised that he will be providing an update at the Town Meeting for the project in addition to scheduled meetings over the next 6 or 7 weeks with all of the PTO Groups for the students at all of the schools. All of the back to school nights have been scheduled for the beginning of school in preparation for the town meeting and ballot vote there will be an opportunity to meet with and discuss for learning about the project during those sessions. ○ The Woburn Street and North Intermediate School will be opened for people to tour and see the status of those schools for themselves. P. Melaragni advised that perhaps for the June 3, 2025 Community Forum it should be held at one of the schools to give the community an idea of the condition of these 2 schools currently so they can see for themselves.
32.06	Record	**Correspondence** – None
32.07	Record	**Next Meeting: Tuesday, June 3, 2025**
32.08	Record	**Adjourn** G. Brand thanked the committee for their efforts and invited a motion to adjourn. – **P. Melaragni motioned to adjourn. E. Slagle seconded the motion. Roll call vote, motion carried by unanimous vote.**

The information herein reflects the understanding reached. Please contact the author if you have any questions or are not in agreement with these Project Minutes.

School Building Committee Meeting #25

December 17, 2024

smma

DORE + WHITTIER

Massachusetts School Building Authority

Agenda

1. Call to Order
2. Approval of Minutes
3. Approval of Invoices
4. Design Update
    - Project Aesthetics Visioning
    - User Group Update
    - Floor Plan Options
    - Site Investigation Outcomes
    - Building Systems
5. Working Group Updates
    - Public Relations WG
    - Sustainability WG
    - Site and Landscape Working Group
6. Discussion/Correspondence/New Items
7. Committee Questions
8. Public Comments
9. Next Meeting: Jan 14, 2024
10. Adjourn

SMMA OPM

Julie Leduc, Director, OPM Services and Project Manager
Sarah Traniello, Assistant Project Manager

Dore+Whittier Architects

Donald Walter, Principal-In-Charge
Lee P. Dore, Principal, Designer
Rani Philip, Project Manager

Item No.	Action	Discussion
24.01	Record	Chair, Glenn Brand, called the meeting to order at 6:30 PM. Roll Call of the School Building Committee was performed to account for all of those who are present through remote participation on Zoom. The attendance based on the roll call can be found on page 1 of these minutes. The majority were present in person with a handful of members through remote access on Zoom Webinar. Remote and absent members are noted above.
24.02	Record	**Approval of Minutes** An edit was made to the draft meeting minutes where it was noted that P. Melaragni instead of S. Turner with reference to outreach and communications to abutters in the near future be made. – **J. O'Connell motioned to approve the revised meeting minutes from the November 19, 2024 School Building Committee meeting, with a second motion by V. Varbedian.**

smma

Item No.	Action	Discussion
		– **Approval of Minutes Roll Call Vote: Affirmatively responded, passed unanimously. C. Murray abstained due to absence from meeting.**
24.03	Record	**Approval of Invoices** None.
24.04	Record	**Design Update** – R. Philip provided update to the School Building Committee relating to the District's Responses to the MSBA's Comments to the **Preferred Schematic Report** Submission of October 24, 2024. These responses will be submission to the MSBA on December 4, 2024. – **Project Aesthetic Visioning:** Exterior and Landscape Imagery Boards distributed throughout the meeting room for meeting participants to interact with colored Post-Its and dots in **ORANGE**, **YELLOW** and **GREEN** to make notes about what they like, dislike, and features or styles that appeal to them in the precedent boards presented. – Electronic version of the Project Aesthetic Visioning Boards for Exterior and Landscape Imagery will be shared with the entire School Building Committee electronically before the next SBC meeting to engage with and provide further feedback and return to Dore+Whittier Architects.
24.04	Record	**School Building Committee Meeting Calendar** *(vote required)* – J. Leduc presented the School Building Committee Meeting Calendar that takes into consideration the schedules of other boards that members are also members to avoid any meeting conflicts, if possible. – **J. O'Connell made a recommendation for a motion to approve the schedule as it is presented with a second from E. Slagle. Roll call vote, motion passes unanimously.**
24.05	Record	**Construction Manager at Risk Committee Formation** *(vote required)* – J. Leduc updated the School Building Committee that the Application to the Inspector General had been submitted via email to the Inspector General that afternoon by SMMA and confirmed received. In the next sequence of events, SMMA is working with the Town Manager and Town Counsel to draft the Request for Qualifications for the Construction Manager at Risk. Once finalized, the RFQ will hit the street on December 11, 2024 and a Working Group needs to be established to qualify and select the Construction Manager at Risk for the project.

smma

Item No.	Action	Discussion
		– **The Construction Manager at Risk Working Group Members are: P. Ruggiero, M. Gallezzo, and E. Slagle from the School Building Committee together with its consultants, L. Dore of Dore+Whittier Architects and J. Leduc of SMMA.** – **J. O'Connell made a motion to approve P. Ruggiero, M. Gallezzo, E. Slagle, L. Dore of Dore+Whittier Architects and J. Leduc of SMMA as the Construction Manager at Risk Working Group Members. P. Melaragni seconded the motion. Roll call vote was taken and passed.**
24.06	Record	**Working Group Updates** • **Public Relations Working Group** update by J. Cusce that meeting every other week and looking at opportunities like the tree lightings and other outreach opportunities to take advantage of this weekend to distribute flyers and put up the posters to keep everyone aware of the project updates. Upcoming boards and flyers will be distributed again soon and working towards getting something for the February water bill and working with Shawsheen Tech to produce the end product for the first or second week. It has been requested that J. O'Connell be reached to coordinate with water bill as there are some transitions in place that are being worked through. Boards are being provided for Teacher/Parent conferences at t he schools. • **Sustainability Working Group –** There is a Working Group Meeting on Wednesday, December 11, 2024 at 10am to review the LEED goals and requirements including the cost impact and incentive points. • **Site and Landscape Working Group –** R. Philip reviewed the upcoming need for membership of the Site and Landscape Working Group and requests consideration of those interested in joining and becoming involved. D. Kelley advised that Jamie Magaldi of DPW would want to be involved as he is the Tree Warden and Arborist. Principals Kate Bissell, Diane Carreiro and Stacey Scott to start the Working Group with hope of others joining.
24.07	Record	**Public Comments** – None
24.08	Record	**Discussion and Committee Questions** – D. Kelley advised of the interesting concept of the benefits of Geothermal with the potential of concrete maintenance and upkeeping areas that are prone to snow and ice using steam loops

smma

Item No.	Action	Discussion
		underneath asphalt to help thaw those areas instead of chemicals that deteriorate the concrete. – Abutters Meeting will be held in January 2025 for the initial meeting with the immediate neighbors and then there will be a second Abutter Meeting shortly thereafter to reach a broader audience beyond the immediate abutters. This will include property abutters and direct abutters, Avalon complex and will be held in the Cafetorium on a Saturday in North Intermediate School. – Surveys will be performed to document properties and place markers to ensure that there are no encroachments of property lines and any spill overs are able to be caught early.
24.09	Record	**Correspondence** – None
24.10	Record	**Next Meeting:** December 17, 2024 at 6:30pm Wilmington High School, Large Group Instruction Room and Remote Participation via Zoom
24.11	Record	**Adjourn** G. Brand thanked the committee for their efforts and invited a motion to adjourn. – **P. Melaragni motioned to adjourn. K. Bissell seconded the motion. Roll call vote, motion carried by unanimous vote.**

The information herein reflects the understanding reached. Please contact the author if you have any questions or are not in agreement with these Project Minutes.

Approval of Invoices

FOR APPROVAL

SMMA
1000 Massachusetts Ave.
Cambridge, MA 02138

Warrant No. 19 A

Project: Wildwood Early Childhood Center, Wilmington, MA
SMMA Project No. 22127
Date: 12/17/2024
Prepared by: Julie Leduc, Sarah Traniello

Approved On: _____

School Building Committee for the Wilmington Early Childhood Center hereby authorizes the payment for the obligations incurred for the value received in services and for materials shown below:

Vendor	Invoice No.	Invoice Date		Invoice Amount	ProPay Code	Balance After Invoice
SMMA	62364	11/29/2024		$ 3,750.00	0001-0000	$ 11,250.00
OPM Basic Services - Feasibility Study						
			Total	$ 3,750.00		

Activities for the Month of November 2024

1. Weekly Leadership Working Group meetings to review progress
2. Participate in PR Working Group meetings
3. Participate in User Group Meetings over 4 days with Designer and District.
4. Working with Designer and Leadership Working Group to finalize details for the FAS presentation final
5. FAS Subcommittee Prep call on November 7, 2024
6. MSBA FAS Subcommittee Presentation Meeting on November 13, 2024
7. Refinement of Project Schedules under DBB and CMR pending decision by District.
8. Prepare meeting minutes of the October 21, 2024 School Building Committee Meeting for review and approval at the November 19, 2024 SBC Meeting.
9. Prepare presentation and participate in School Building Committee Meeting November 19, 2024
10. Prepare response and documentation in response to MSBA's PSR Comments for District's Response Submission
11. Preparation of the Inspector General Application to Proceed with Construction Management at Risk Construction Delivery Method upon District's decision.
12. Draft, review and refinement of the Request for Qualifications from Construction Managers at Risk.
13. Preparation of CM Procument Schedule for CM Procurement and Selection Working Groups knowledge of upcoming milestone activities.
14. Preparation of Meeting Minutes of the November 19, 2024 School Building Committee Meeting for the December 3, 2024 School Building Committee Meeting.
15. Collaborating with District Office and Town Meeting Calendar to provide the upcoming 6 month of SBC Meetings to encourage the most amount of participation through avoiding meeting conflicts where possible.
16. Finalizing edits requested by MSBA and updating submission to MSBA in hard copy and electronic versions.

Feedback

Core Academic

- Teacher Collab. locate centrally
- No change in Square Footage

Art & Music

- Concerns on a shared Flex space were expressed by users
- Issues for setup and storage needs
- Resulted in an additional Art classroom
- Change in overall Square Footage

Admin & Guidance

- Locating Assistant Principal on second level
- No change in Square Footage

Floor Plan Update

Aesthetic Imagery Visioning:

Interiors

Criteria to Think About:

- Materials
- Colors
- Dramatic or Serene
- Simplistic or Intricate
- Curves versus Angular
- Patterns versus fields
- Window size and patterns:
  - Larger versus smaller
  - Regular rhythm versus irregular variety
- Utility – what is usable versus just for looks
- Authentic – does it feel like it belongs here?
- Mood

Aesthetic Imagery Visioning: Game Plan

School Building Committee – Image Review

- Assortment of boards around the room
- Invite members to view and comment on them in groups of 3-5 people
  - Five minutes per board, then rotate (15 minutes total)
  - Red, yellow, green stickers
  - Post-it sticky notes
  - Comment sheets
  - Discussion!
- Reassemble and review comments
- Look for common themes – Dec 17th
- Look for consensus on direction – Dec 17th

Site Investigation

Site Investigation Outcomes

Traffic Study

Reviewed AM/PM trips for existing conditions, 2031 no build conditions and 2031 build conditions

- Passengers Cars
- Bus

Recommendations:

- Further review of existing operational issues at Middlesex Ave at Salem Street (long term reconfiguration)
- Retime signal at Route 62 at Middlesex Ave/High Street

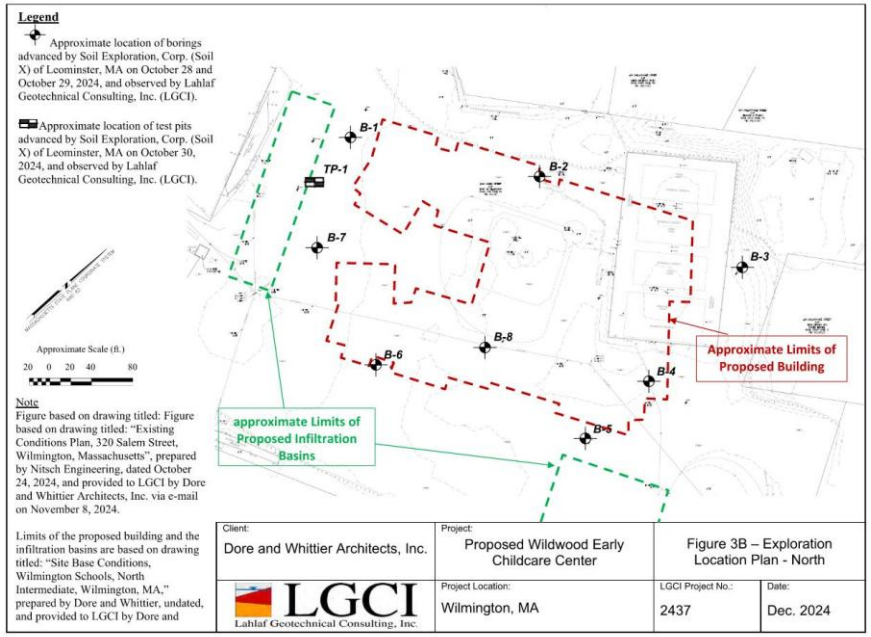
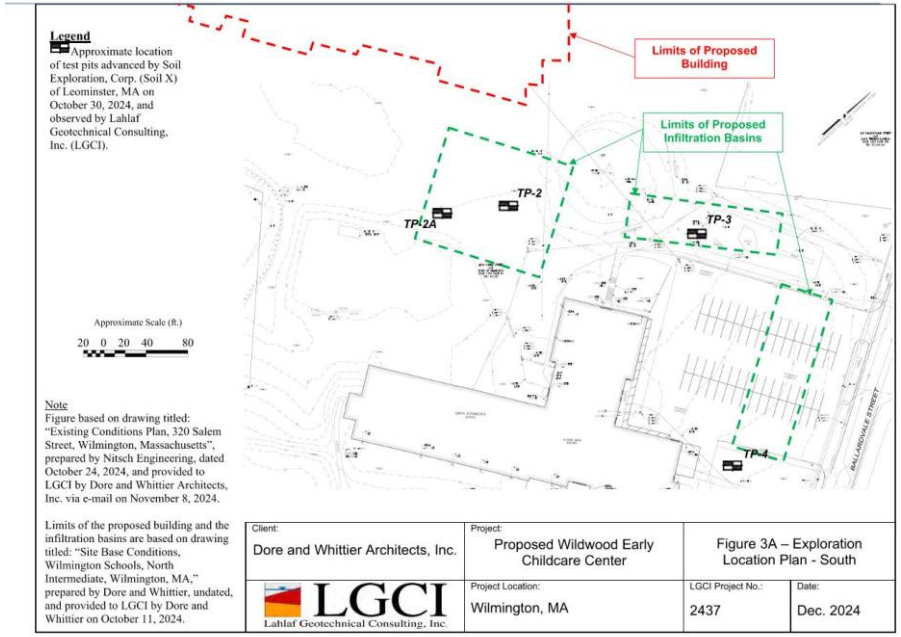
Nitsch Engineering

Site Investigation Outcomes

Geotechnical and Geo-Environmental Investigations





Building Systems Overview

Goal of Life Cycle Cost Analysis (LCCA)

- The goal of the mechanical lifecycle engineering economic analysis is to assess the performance of **various mechanical system options** in comparison to a baseline mechanical system.
- Each option is compared to the baseline system over a 50-year cycle to determine the most advantageous system considering **utility costs, maintenance costs, replacement costs, and initial construction costs**.
- By comparison of each option to the baseline system, the option with the **greatest total life-cycle savings** is generally recommended.
- LCCA ready for review January/February 2025

LCCA: Building System Options

Four Systems for Analysis

OPTION 1 (baseline):

Air Source to Hydronic (HW/CHW) Heat Pump & VAV Displacement System

OPTION 2:

Air-Source Electric VRF (Variable Refrigerant Flow) and DOEAS (Dedicated Outdoor Air Systems w/ Air Source Heat Pumps)

OPTION 3:

Geothermal Heat Pump & VAV Displacement System

OPTION 4:

Geothermal Water Source VRF (Variable Refrigerant Flow) and DOEAS (Dedicated Outdoor Air Systems w/ Air Source Heat Pumps)

Item No. | Action | Discussion
24.01 | Record | Chair, Glenn Brand, called the meeting to order at 6:35 PM. Roll Call of the School Building Committee was performed to account for all of those who are present through remote participation on Zoom. The attendance based on the roll call can be found on page 1 of these minutes. The majority were present in person with a handful of members through remote access on Zoom Webinar. Remote and absent members are noted above.
24.02 | Record | Approval of Minutes
G. Brand advised that the draft minutes of the December 3, 2024 School Building Committee Meeting were distributed for review and approval.
– P. Melaragni motioned to approve the revised meeting minutes from the December 3, 2024 School Building Committee meeting, with a second motion by N. Golden.
smma.com
smma
Page 02
Item No. | Action | Discussion
– Approval of Minutes Roll Call Vote: Affirmatively responded, passed unanimously. M. Gallezzo abstained due to absence from meeting.
Approval of Invoices
J. Leduc advised that there are two Warrants for approval, Warrant 19A in the amount of $3,750 for SMMA's Basic OPM Services and Warrant 19B in the amount of $95,232.58 for Dore+Whittier Architect's Architectural Design Services.
– P. Ruggiero motioned to approve both Warrants on behalf of the Finance Working Group having met prior to the meeting to review these invoices. Motion seconded by C. Prendergast.
– Approval of Minutes Roll Call Vote: Affirmatively responded, passed unanimously.
Design Update
– R. Philip provided update to the School Building Committee relating the updates that came forth from the meetings with the User Groups.
– Biggest changes were prioritized with Teacher Collaboration Spaces located more centrally to serve the more than 40 staff on 1 level where 2 rooms were needed per level.
– Art and Music flex class space towards Music of 1,000 sf.
– MSBA asked to see the potential could be seen if living short in space could be lived within. It was determined that it did not work well. Spaces were needed for staff and services and Admin was place with Admin Staff location that allows supervision on each floor.
– PreK entry use with parents bringing students into the school meeting staff at the Main Entry.
– 35,000 sf portion is reimbursable with the delta of SPED being covered. 9,950 sf with potential for Art after the floor plan review with staff of what works what does not.
– Medical Suite changes will be implemented.
– Pink are extended learning spaces. 2 offices by the PreK entry. Art is right above the suite.
– Teacher Collaboration Space, Toilet Rooms, etc. were added near the Cafeteria with 1 elevator bank (central in building). I Elevator is up to code. This was updated this morning since the release of the teacher Collaboration Spaces with specialists near Admin team and classroom wing. Second floor second Art classroom with closer STEM access to
smma
Page 03
Item No. | Action | Discussion
stem areas as desired. Admin is on the right and the Math tutor (200 sf) to meet in space.
– Third Floor had greatest changes implemented with no program that needed to go back. There will be 18-22 classrooms on the third floor with 12-14 classrooms on the second and ground floors.
– How many classrooms, by school building, does this compare to currently?
– Small group rooms are on all floors between classrooms. There are extended learning spaces with acoustical partitions with small group in classroom areas enabling flexibility.
– Areas are fitted with whiteboards in each of the spaces.
– Is there a price difference between materials and aesthetics?
– What are the majority desiring or envisioning? This knowledge will be helpful in the due diligence that can be performed to price in the estimates.
– Dore+Whittier is interpreting and displaying based on the feedback from the SBC with the colored dots provided on the precedent images.
– This effort is to assist in narrowing down the overall feeling that is trying to be achieved in the teaching environment i.e. progressive or traditional style. Currently, heading down the road of practical and utilitarian spaces is the direction that is being sought and importantly cost effective.
○ P. Melaragni advised that Wilmington is not looking for the Taj Mahal, but natural light in places is preferred, natural colorings yet with some playfulness and continuity throughout the spaces in the school.
– Landscape is preferred to be softer versus harder with landscape area for movement.
– Shading aspect is important on hot sunny days.
– Solar canopies vs. panels on roof?
– Plaza entries vs. plazas? What is the sentiment?
– Hallways with durable wall block with painted surfaces do not make sense.
– Idea: Neighborhood aesthetic on each floor gets named by school i.e. North, Woburn, Wildwood them classification
Site Investigation
– Traffic Studies have been performed at the North Intermediate site in the morning and afternoon periods observing passenger vehicles and buses with all vehicles accommodated on the site itself
smma
Page 04
Item No. | Action | Discussion
and queuing lanes onsite. Graphic showing part of the study with circulation with new PreK-5 and new bus drop-off and some recommendations were made with some operational changes at Middlesex intersection. Middlesex and Salem will be for further study. A signal is recommended at High Street and there is a recommendation for the retiming of some of the signals. Intersection changes could improve these conditions. Currently, 11 buses go to Wildwood, North Intermediate and Woburn Street. With more efficiencies, saving 5+ minutes instead of 2 stops it could be just 1 stop.
– M. Gallezzo asked about intersections with traffic studies? E. Slagle will look into seeing if there is info that can be provided about intersections that have had traffic studies performed to date.
Working Group Updates
• Public Relations Working Group finalized the mailers after approval by the Leadership Working Group and it has gone to Shawsheen Valley Tech for printing.
○ M. Gallezzo asked that a copy of the water bill flyer be sent to the SBC after the meeting.
• Sustainability Working Group – Life Cost Analysis will be on the horizon for the next topic of conversation for this working group for boilers and building systems.
• Site and Landscape Working Group – Will be meeting in January
Public Comments
– None
Discussion and Committee Questions
– MSBA Board of Directors Meeting of December 13, 2024 approved the Wildwood School project to move forward into Schematic Design.
– Community Forum and/or Abutters Meeting is going to be planned for January 2025 which will be important to listen to the surrounding community and their concerns and thoughts regarding the new school.
Correspondence
– None
Next Meeting: January 14, 2024 at 6:30pm Wilmington High School, Large Group
smma
Page 05
Item No. | Action | Discussion
Instruction Room and Remote Participation via Zoom
Adjourn
G. Brand thanked the committee for their efforts and invited a motion to adjourn.
– P. Melaragni motioned to adjourn. K. Bissell seconded the motion. Roll call vote, motion carried by unanimous vote.
ects the understanding reached. Please contact the author if you have any
ement with these Project Minutes.

Warrant No. 20 A

Project: Wildwood Early Childhood Center, Wilmington, MA
SMMA Project No. 22127
Date: 1/14/2025
Prepared by: Julie Leduc, Sarah Traniello

Approved On: _____

School Building Committee for the Wilmington Early Childhood Center hereby authorizes the payment for the obligations incurred for the value received in services and for materials shown below:

Vendor	Invoice No.	Invoice Date	Invoice Amount	ProPay Code	Balance After Invoice
SMMA *OPM Basic Services - Feasibility Study*	62518	1/8/2025	$ 3,750.00	0001-0000	$ 7,500.00
		Total	$ 3,750.00		

Activities for the Month of December 2024

1. Weekly Leadership Working Group meetings to review progress
2. Participate in PR Working Group meetings
3. Preparation of the Monthly Reporting to the MSBA
4. Working with Designer and Leadership Working Group to finalize details for the December 3 and December 17 Meeting Agendas and Presentations
5. Participated in Meetings with the Sustainability Working Group
6. Led the CM-R Procurement Process and conducted CM Prequalification Working Group Kick-Off Meeting
7. Prepared meeting minutes of the December 3, 2024 School Building Committee Meeting for review and approval at the December 17, 2024 SBC Meeting.
8. Prepare meeting minutes of the December 17, 2024 School Building Committee Meeting for review and approval at the January 14, 2025 SBC Meeting.
9. Prepare presentation and participate in School Building Committee Meeting November 19, 2024
10. Prepare response and documentation in response to MSBA's PSR Comments for District's Response Submission
11. Submission of Application and answering any followup questions that were forthcoming relating to the Inspector General Application to Proceed with Construction Management at Risk Construction Delivery Method upon District's decision.
12. Coordination with District Procurement Office for Advertisement Issuance
13. Finalizing the Request for Qualifications for the Construction Manager at Risk and Preparing for Distribution
14. Draft, review and refinement of the Request for Proposals from Construction Managers at Risk for review by Town and Town Counsel.
15. Coordination with District Procurement Office for Distribution of the Request for Qualifications
16. Preparing tabulation documentation for review of anticipated qualifications submissions for review for the Prequalification Working Group
17. Tracking of the Response Forms for the Potential Construction Manager Respondents
18. Created Presentation and Conducted Virtual Walkthrough with Potential Construction Management Firm Respondents and reviewing project details and answering questions.
19. Setting the meetings in the Calendars of the 2025 School Building Committee Meetings and creating Agendas to correspond with these dates as placeholders to be set with the Town Clerk.

Inspiration from Wilmington's History

The Baldwin Tree

The Baldwin apple, a once-popular variety in New England, has deep roots in Wilmington, Massachusetts. Around 1740, a chance seedling was discovered on the farm of John Ball in Wilmington. The farm later came into the possession of a Mr. Butters, who named the apple "Woodpecker" because the tree was frequented by woodpeckers.
-Wikipedia

The apple gained prominence through Colonel Loammi Baldwin, a Revolutionary War veteran and engineer from nearby Woburn. After being introduced to the apple by Deacon Samuel Thompson, Baldwin recognized its potential and propagated it throughout eastern Massachusetts. In honor of his efforts, the apple was named the Baldwin.
–New England Historical Society

To commemorate the origin of the Baldwin apple, a monument was erected in 1895 by the Rumford Historical Association at the corner of Chestnut Street and Emery Lane in Wilmington. The inscription reads:
"This monument marks the site of the first Baldwin Apple Tree found growing wild near here. It fell in the gale of 1815. The apple first known as the Butters, Woodpecker or Pecker apple was named after Col. Loammi Baldwin of Woburn."
-Patch

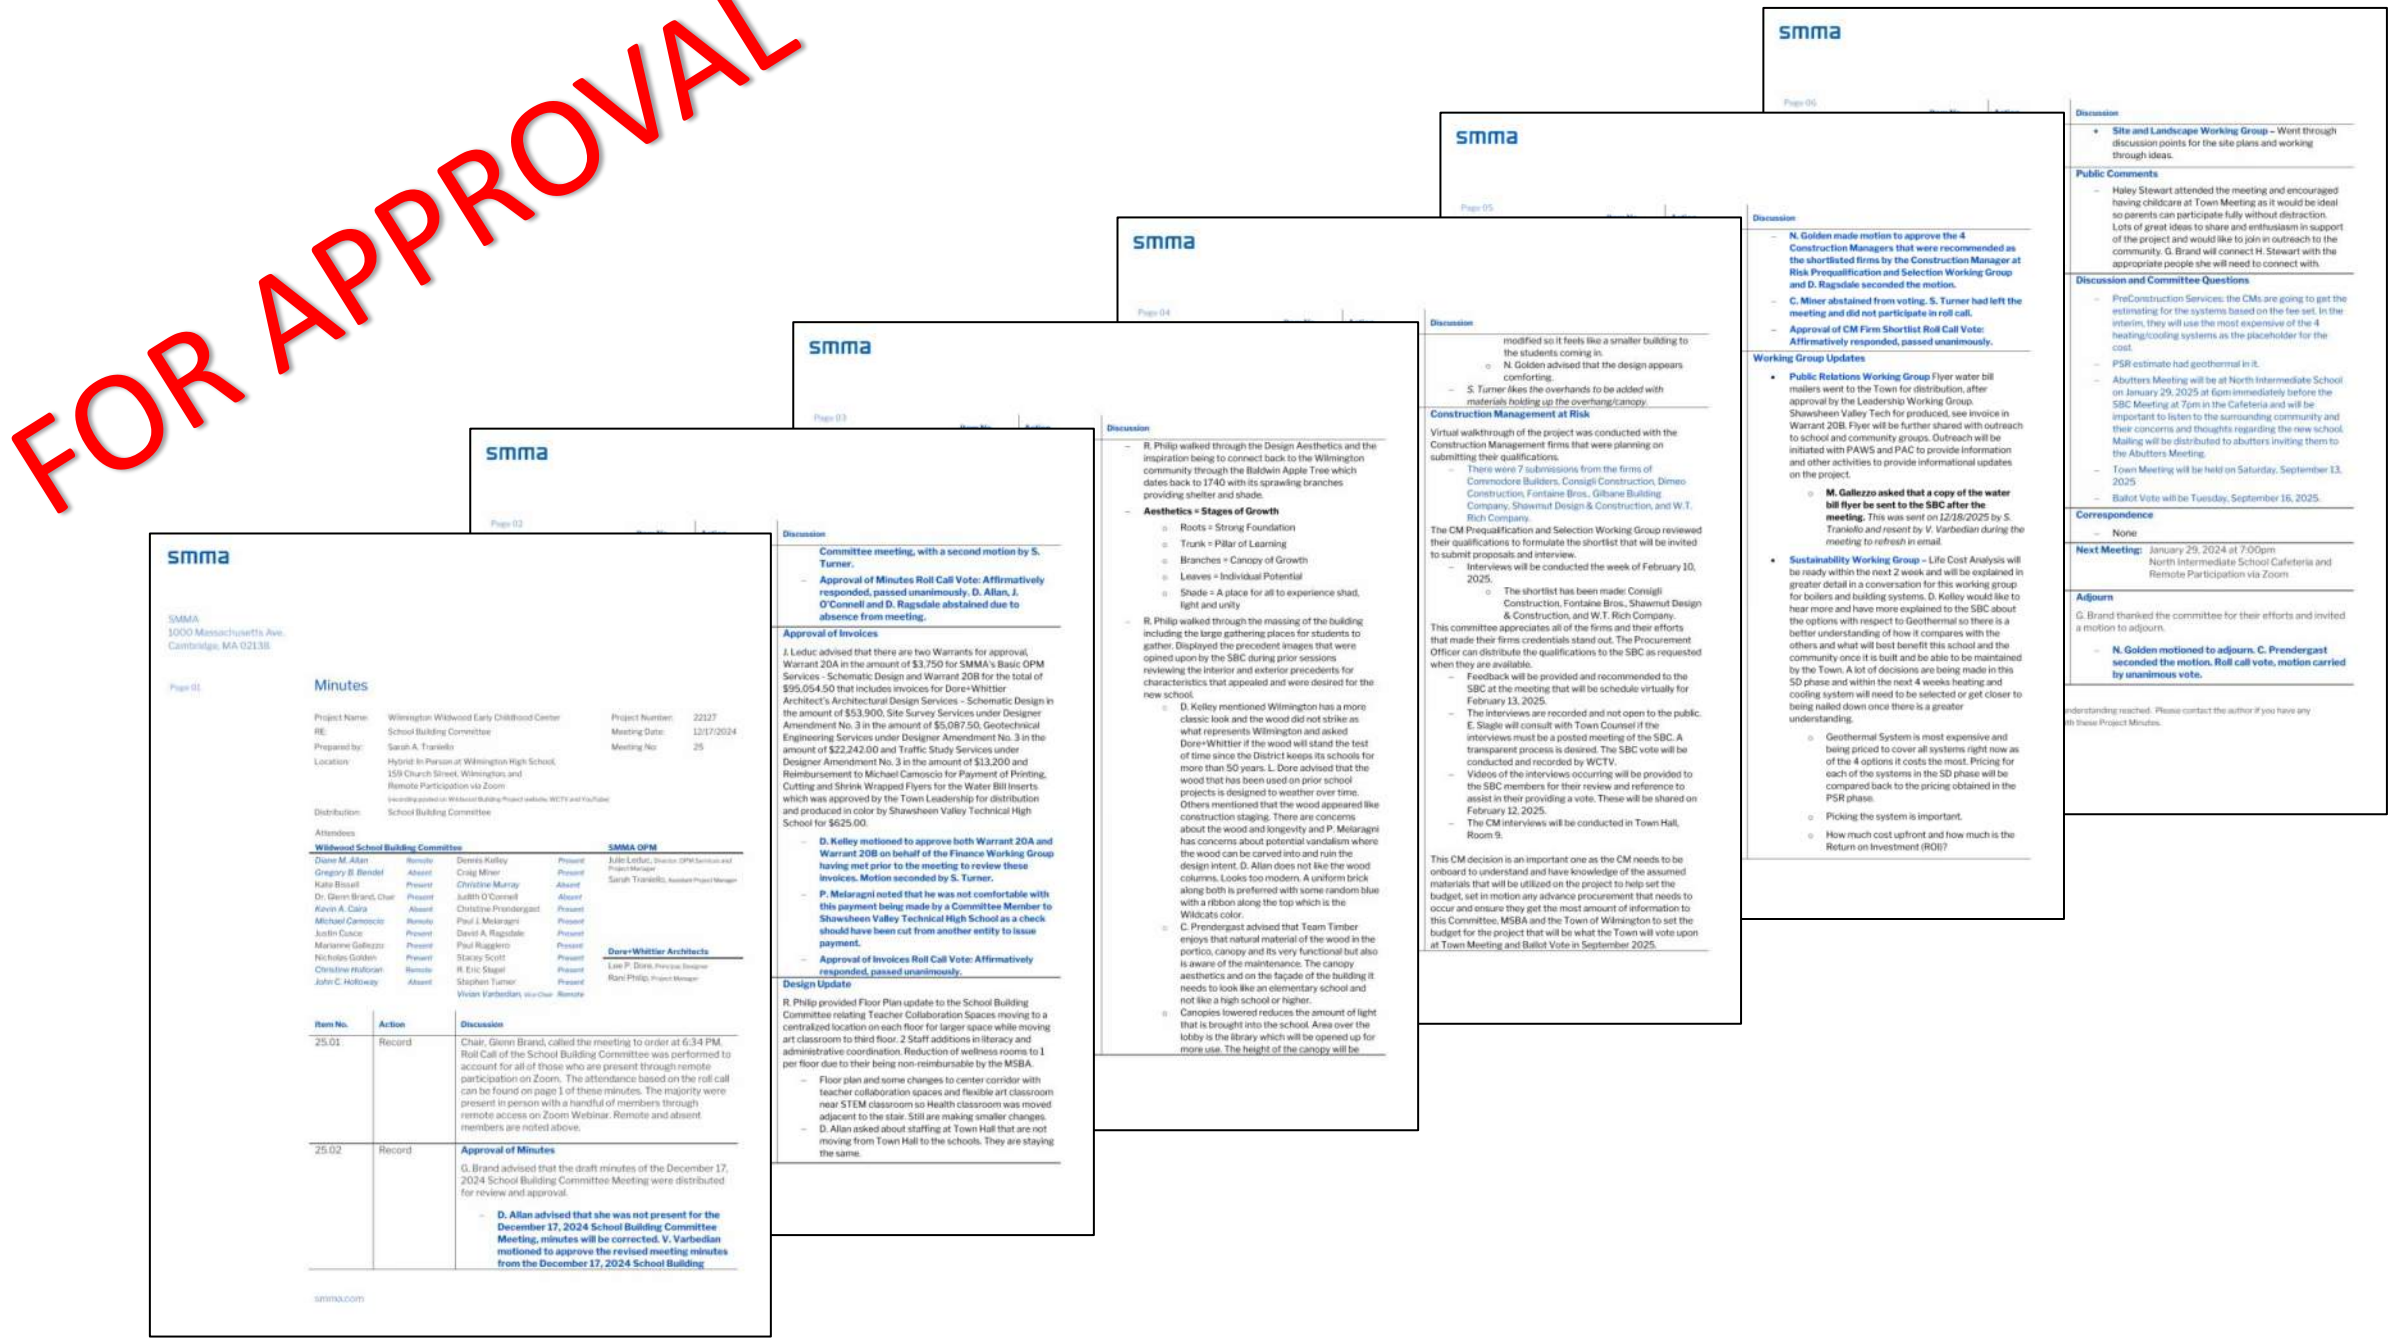
Approval of Minutes



FOR APPROVAL
smma
SMMA
1000 Massachusetts Ave.
Cambridge, MA 02138
Minutes
Project Name: Wilmington Wildwood Early Childhood Center
RE: School Building Committee
Prepared by: Sarah A. Traniello
Location: Hybrid: In Person at Wilmington High School, 159 Church Street, Wilmington, and Remote Participation via Zoom
Distribution: School Building Committee
Project Number: 22127
Meeting Date: 12/17/2024
Meeting No: 25
Attendees
Wildwood School Building Committee
SMMA OPM
Dore+Whittier Architects
Item No. | Action | Discussion
25.01 | Record | Chair, Glenn Brand, called the meeting to order at 6:34 PM. Roll Call of the School Building Committee was performed to account for all of those who are present through remote participation on Zoom. The attendance based on the roll call can be found on page 1 of these minutes. The majority were present in person with a handful of members through remote access on Zoom Webinar. Remote and absent members are noted above.
25.02 | Record | Approval of Minutes
G. Brand advised that the draft minutes of the December 17, 2024 School Building Committee Meeting were distributed for review and approval.
D. Allan advised that she was not present for the December 17, 2024 School Building Committee Meeting, minutes will be corrected. V. Varbedian motioned to approve the revised meeting minutes from the December 17, 2024 School Building
Committee meeting, with a second motion by S. Turner.
Approval of Minutes Roll Call Vote: Affirmatively responded, passed unanimously. D. Allan, J. O'Connell and D. Ragsdale abstained due to absence from meeting.
Approval of Invoices
J. Leduc advised that there are two Warrants for approval, Warrant 20A in the amount of $3,750 for SMMA's Basic OPM Services - Schematic Design and Warrant 20B for the total of $95,054.50 that includes invoices for Dore+Whittier Architect's Architectural Design Services - Schematic Design in the amount of $53,900, Site Survey Services under Designer Amendment No. 3 in the amount of $5,087.50, Geotechnical Engineering Services under Designer Amendment No. 3 in the amount of $22,242.00 and Traffic Study Services under Designer Amendment No. 3 in the amount of $13,200 and Reimbursement to Michael Camoscio for Payment of Printing, Cutting and Shrink Wrapped Flyers for the Water Bill Inserts which was approved by the Town Leadership for distribution and produced in color by Shawsheen Valley Technical High School for $625.00.
D. Kelley motioned to approve both Warrant 20A and Warrant 20B on behalf of the Finance Working Group having met prior to the meeting to review these invoices. Motion seconded by S. Turner.
P. Melaragni noted that he was not comfortable with this payment being made by a Committee Member to Shawsheen Valley Technical High School as a check should have been cut from another entity to issue payment.
Approval of Invoices Roll Call Vote: Affirmatively responded, passed unanimously.
Design Update
R. Philip provided Floor Plan update to the School Building Committee relating Teacher Collaboration Spaces moving to a centralized location on each floor for larger space while moving art classroom to third floor. 2 Staff additions in literacy and administrative coordination. Reduction of wellness rooms to 1 per floor due to their being non-reimbursable by the MSBA.
Floor plan and some changes to center corridor with teacher collaboration spaces and flexible art classroom near STEM classroom so Health classroom was moved adjacent to the stair. Still are making smaller changes.
D. Allan asked about staffing at Town Hall that are not moving from Town Hall to the schools. They are staying the same.
R. Philip walked through the Design Aesthetics and the inspiration being to connect back to the Wilmington community through the Baldwin Apple Tree which dates back to 1740 with its sprawling branches providing shelter and shade.
Aesthetics = Stages of Growth
Roots = Strong Foundation
Trunk = Pillar of Learning
Branches = Canopy of Growth
Leaves = Individual Potential
Shade = A place for all to experience shad, light and unity
R. Philip walked through the massing of the building including the large gathering places for students to gather. Displayed the precedent images that were opined upon by the SBC during prior sessions reviewing the interior and exterior precedents for characteristics that appealed and were desired for the new school.
D. Kelley mentioned Wilmington has a more classic look and the wood did not strike as what represents Wilmington and asked Dore+Whittier if the wood will stand the test of time since the District keeps its schools for more than 50 years. L. Dore advised that the wood that has been used on prior school projects is designed to weather over time. Others mentioned that the wood appeared like construction staging. There are concerns about the wood and longevity and P. Melaragni has concerns about potential vandalism where the wood can be carved into and ruin the design intent. D. Allan does not like the wood columns. Looks too modern. A uniform brick along both is preferred with some random blue with a ribbon along the top which is the Wildcats color.
C. Prendergast advised that Team Timber enjoys that natural material of the wood in the portico, canopy and its very functional but also is aware of the maintenance. The canopy aesthetics and on the façade of the building it needs to look like an elementary school and not like a high school or higher.
Canopies lowered reduces the amount of light that is brought into the school. Area over the lobby is the library which will be opened up for more use. The height of the canopy will be
modified so it feels like a smaller building to the students coming in.
N. Golden advised that the design appears comforting.
S. Turner likes the overhands to be added with materials holding up the overhang/canopy.
Construction Management at Risk
Virtual walkthrough of the project was conducted with the Construction Management firms that were planning on submitting their qualifications.
There were 7 submissions from the firms of Commodore Builders, Consigli Construction, Dimeo Construction, Fontaine Bros., Gilbane Building Company, Shawmut Design & Construction, and W.T. Rich Company.
The CM Prequalification and Selection Working Group reviewed their qualifications to formulate the shortlist that will be invited to submit proposals and interview.
Interviews will be conducted the week of February 10, 2025.
The shortlist has been made: Consigli Construction, Fontaine Bros., Shawmut Design & Construction, and W.T. Rich Company.
This committee appreciates all of the firms and their efforts that made their firms credentials stand out. The Procurement Officer can distribute the qualifications to the SBC as requested when they are available.
Feedback will be provided and recommended to the SBC at the meeting that will be schedule virtually for February 13, 2025.
The interviews are recorded and not open to the public. E. Slagle will consult with Town Counsel if the interviews must be a posted meeting of the SBC. A transparent process is desired. The SBC vote will be conducted and recorded by WCTV.
Videos of the interviews occurring will be provided to the SBC members for their review and reference to assist in their providing a vote. These will be shared on February 12, 2025.
The CM interviews will be conducted in Town Hall, Room 9.
This CM decision is an important one as the CM needs to be onboard to understand and have knowledge of the assumed materials that will be utilized on the project to help set the budget, set in motion any advance procurement that needs to occur and ensure they get the most amount of information to this Committee, MSBA and the Town of Wilmington to set the budget for the project that will be what the Town will vote upon at Town Meeting and Ballot Vote in September 2025.
N. Golden made motion to approve the 4 Construction Managers that were recommended as the shortlisted firms by the Construction Manager at Risk Prequalification and Selection Working Group and D. Ragsdale seconded the motion.
C. Miner abstained from voting. S. Turner had left the meeting and did not participate in roll call.
Approval of CM Firm Shortlist Roll Call Vote: Affirmatively responded, passed unanimously.
Working Group Updates
Public Relations Working Group Flyer water bill mailers went to the Town for distribution, after approval by the Leadership Working Group. Shawsheen Valley Tech for produced, see invoice in Warrant 20B. Flyer will be further shared with outreach to school and community groups. Outreach will be initiated with PAWS and PAC to provide information and other activities to provide informational updates on the project.
M. Gallezzo asked that a copy of the water bill flyer be sent to the SBC after the meeting. This was sent on 12/18/2025 by S. Traniello and resent by V. Varbedian during the meeting to refresh in email.
Sustainablity Working Group – Life Cost Analysis will be ready within the next 2 week and will be explained in greater detail in a conversation for this working group for boilers and building systems. D. Kelley would like to hear more and have more explained to the SBC about the options with respect to Geothermal so there is a better understanding of how it compares with the others and what will best benefit this school and the community once it is built and be able to be maintained by the Town. A lot of decisions are being made in this SD phase and within the next 4 weeks heating and cooling system will need to be selected or get closer to being nailed down once there is a greater understanding.
Geothermal System is most expensive and being priced to cover all systems right now as of the 4 options it costs the most. Pricing for each of the systems in the SD phase will be compared back to the pricing obtained in the PSR phase.
Picking the system is important.
How much cost upfront and how much is the Return on Investment (ROI)?
Site and Landscape Working Group – Went through discussion points for the site plans and working through ideas.
Public Comments
Haley Stewart attended the meeting and encouraged having childcare at Town Meeting as it would be ideal so parents can participate fully without distraction. Lots of great ideas to share and enthusiasm in support of the project and would like to join in outreach to the community. G. Brand will connect H. Stewart with the appropriate people she will need to connect with.
Discussion and Committee Questions
PreConstruction Services: the CMs are going to get the estimating for the systems based on the fee set. In the interim, they will use the most expensive of the 4 heating/cooling systems as the placeholder for the cost.
PSR estimate had geothermal in it.
Abutters Meeting will be at North Intermediate School on January 29, 2025 at 6pm immediately before the SBC Meeting at 7pm in the Cafeteria and will be important to listen to the surrounding community and their concerns and thoughts regarding the new school. Mailing will be distributed to abutters inviting them to the Abutters Meeting.
Town Meeting will be held on Saturday, September 13, 2025
Ballot Vote will be Tuesday, September 16, 2025.
Correspondence
None
Next Meeting: January 29, 2024 at 7:00pm
North Intermediate School Cafeteria and Remote Participation via Zoom
Adjourn
G. Brand thanked the committee for their efforts and invited a motion to adjourn.
N. Golden motioned to adjourn. C. Prendergast seconded the motion. Roll call vote, motion carried by unanimous vote.

Project Aesthetics

Interiors

Aesthetic Imagery Visioning: Interior

Common Themes

WARM TONES:
RED, ORANGE & YELLOW

Inspired by apples, fruits, and fall leaves, warm tones bring energy, creativity, and a sense of playfulness

Applications:
- Pops of color in seating, signage, and playful details like wayfinding markers
- Corridor walls having some apple-red accents for Pre-K and Kindergarten to anchor the roots
- Yellow tones for collaborative zones to inspire optimism and creativity

Design Impact:
- Reds stimulate energy and excitement (but used sparingly to avoid overstimulation)
- Yellows bring cheerfulness and encourage collaboration
- These tones are age-appropriate and create a joyful, lively atmosphere

WOOD TONES:
WARM

Represents the trunk of the tree, serving as a metaphor for strength, stability, and a foundation for growth

Applications:
- In key structural elements such as columns, beams, along with accent walls and ceiling applications in the cafeteria, lobby, library, and corridors
- Used for furniture, handrails, and millwork to create a warm, inviting environment

Design Impact:
- Promotes feelings of safety and comfort, critical for younger students
- Connects students to the natural world, grounding them in a calm, organic setting
- Brings the outdoor environment connected to the interior and exterior

GREENS

Symbolizes the leaves and canopy of the tree, representing a connection to nature. Fostering a sense of growth, renewal, and harmony, much like being in a forest.

Applications:
- Ceiling treatments with leaf-like patterns or acoustic panels in public areas
- Wall accents and wayfinding signage to tie different areas together
- Organic shapes and natural textures further soften the space

Design Impact:
- Enhances focus, reduces stress, and provides a sense of renewal and balance
- Younger grades might see brighter greens (energetic), while older grades might transition to deeper greens (maturity)

BLUES

Reflects the sky and a guiding path through mirroring streams that navigate students through their journey. Blue symbolizes calm, trust, and creativity while connecting to Wilmington.

Applications:
- Flowing floor patterns in hallways, mimicking streams to guide movement
- Accent walls in breakout spaces to create zones of calm for independent work
- Ceiling treatments in collaborative areas to simulate the open sky

Design Impact:
- Encourages a sense of calm and promotes imaginative thinking
- Adds a soft contrast to warmer tones, balancing the overall palette

Project Aesthetics

Exterior Update

Project Inspiration

The school would be designed to emulate the tree's essence, where every child could feel rooted and free to grow. Here's how the Baldwin tree is a metaphor for the architectural vision:

1. **Roots: A Strong Foundation**
   The school would be grounded in the values of curiosity and community. The foundation, like the tree's roots, would spread wide and deep, symbolizing the knowledge and support systems that anchor children as they begin their educational journey.

2. **Trunk: The Pillar of Learning**
   Central, multi-purpose core: Cafeteria and Gymnasium gathering spaces are the "trunk" of the school. These spaces, tall and strong, are the core where children, teachers, and families can gather for assemblies, cultural events, and celebrations. It represents strength, stability, and shared purpose.

3. **Branches: A Canopy of Growth**
   The classrooms wings extend like branches from the central core. Each classroom is designed to be modular and adaptive, filled with natural light and airflow. Extended learning areas and small group rooms foster an environment that encourages exploration and interaction.

4. **Leaves: Individual Potential**
   The leaves, ever-changing yet integral to the tree's life, symbolize the children themselves. Outdoor learning spaces, art walls, and play areas are created to nurture each child's unique creativity and curiosity. Each child can grow and flourish, much like the leaves transforming under the sun.

5. **Shade: A Place for All**
   Like the Baldwin Tree, the school would offer shelter and inclusion. The design features communal spaces for the Town, ensuring the school is not just for children but a space for everyone to come together—celebrating life, knowledge, and unity.

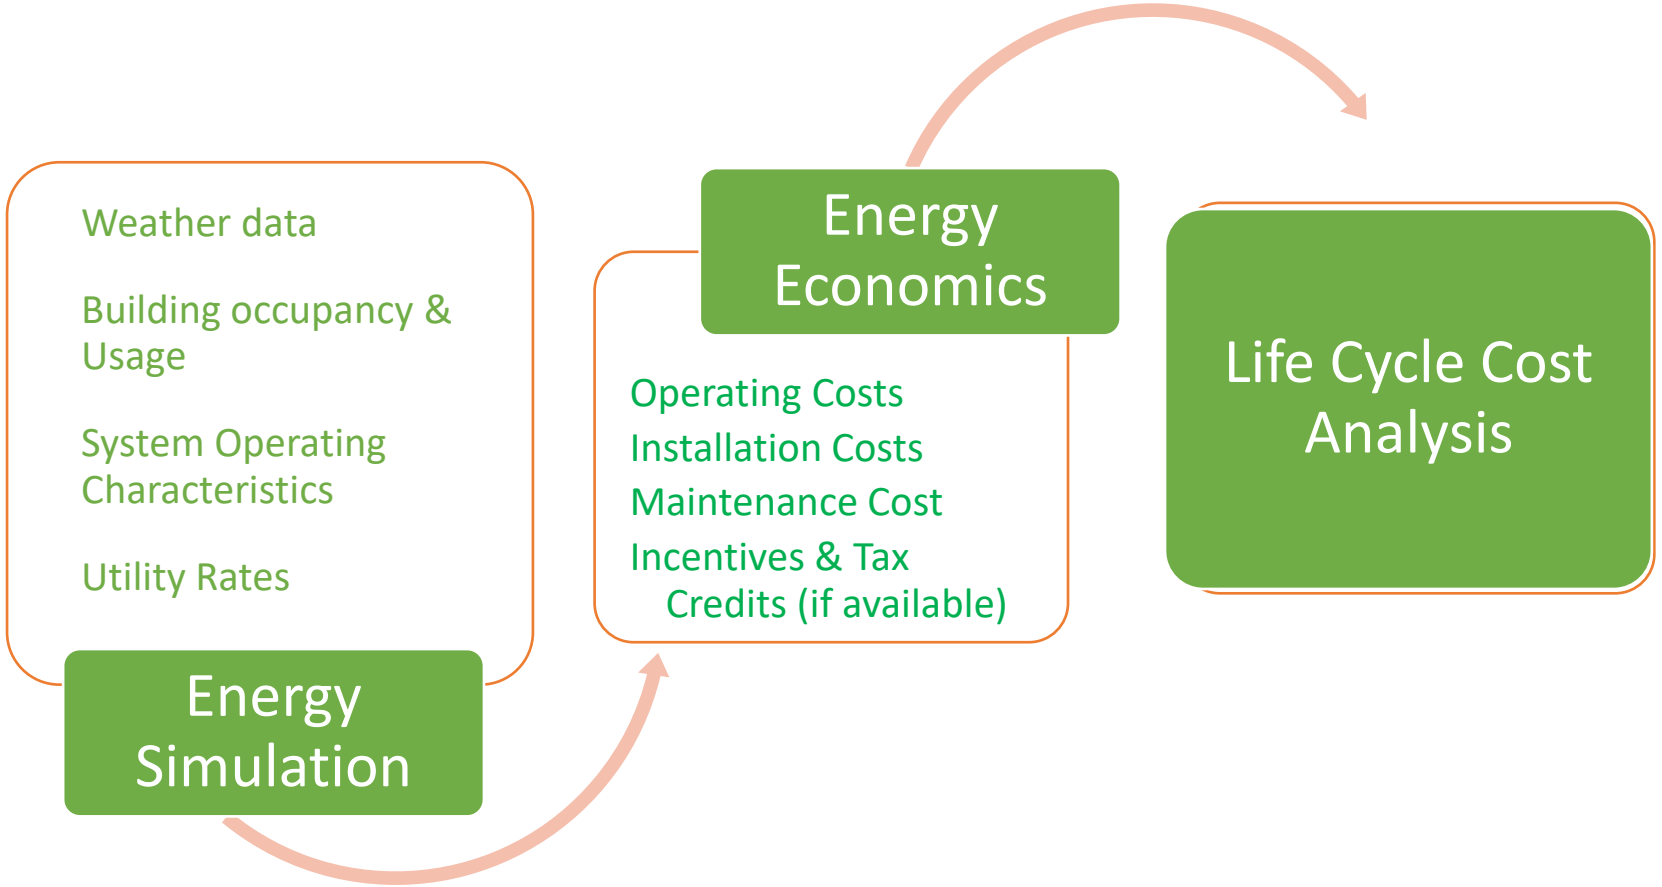
HVAC
System Options
&
Life Cycle Cost Analysis
(LCCA)
Summary

GOAL OF LIFE CYCLE COST ANALYSIS

- The goal of the mechanical lifecycle engineering economic analysis is to assess the performance of **various mechanical system options** in comparison to a baseline mechanical system.
- Each option is compared to the baseline system over a 50-year cycle to determine the most advantageous system considering **utility costs, maintenance costs, replacement costs, and initial construction costs**.
- By comparison of each option to the baseline system, the option with the **greatest total life-cycle savings** is generally recommended.

LCCA - ENERGY ECONOMICS METHODOLOGY



LIFE CYCLE COST ANALYSIS

Proposed Design Criteria Temperature Conditions

Notes:
DB = Dry Bulb
RH = Relative Humidity
WB = Wet Bulb

Design Outdoor Temperature Data

Per ASHRAE Tables for Weather Station – Hanscom AFB: Heating 99.6% @ 2.6°F Heating & Cooling 0.4% @ 91°F db, 74°F wb

Classrooms, Office, Cafeteria, Auditorium, Gym are proposed for all options to provide:

Heating, Ventilation @ 70 °F db +/- 2°F

Air Conditioning : 75°F db +/- 2°F

with 55% RH +/- 5%RH

Storage & Utility Room: Heating and Ventilation Only @ **70°F db** for heating

Unoccupied temperature setback of **55°F db Heating** and **85°F db Cooling** is provided for **all options**.

LCCA HVAC OPTIONS

ALL HVAC OPTIONS ARE BASED ON FOSSIL FUEL FREE, ELECTRIFIED HEATING SYSTEMS THAT WILL BE COMPARED TO A MASSACHUSETTS OPT-IN CODE COMPLAINT BUILDING & HVAC SYSTEM.

ALL OPTIONS SHALL MEET OR EXCEED:

- MSBA Requirement for Additional Reimbursement
- LEED Requirements
- MA Opt-in Stretch Energy Code RequirementS

ALL PROPOSED SYSTEMS INCLUDE AIR CONDITIONING.

LCCA HVAC OPTIONS

BASELINE: Air Source Heat Pump Plant - Mixed-Air Overhead VAV System and High Efficiency Air-Source to Hydronic Heat Pump Chiller/Heating Plant for Chilled/Heating Hot Water (Fossil Fuel Free)

OPTION 1: Air-Source VRF (Variable Refrigerant Flow) and DOAS (Dedicated Outdoor Air Systems w/ Air Source Heat Pump) for Classrooms/Office areas & Air Source Heat Pump Rooftop Units for Gym, & Cafeteria with Supplemental electric heating for entryways, storage, and utility rooms. (Fossil Fuel Free)

OPTION 2: Geothermal Water-Source VRF (Variable Refrigerant Flow) and DOAS (Dedicated Outdoor Air Systems w/ Air Source Heat Pump) for Classrooms/Office areas & Water-Source Heat Pump Rooftop Units for Gym, & Cafeteria with Supplemental electric heating for entryways, storage, and utility rooms. (Fossil Fuel Free)

OPTION 3: Air Source Heat Pump Plant - VAV Displacement System w/ Passive Radiant Cooling/Heating Panels and High Efficiency Air-Source to Hydronic Heat Pump Chiller/Heating Plant for Chilled/Heating Hot Water (Fossil Fuel Free)

OPTION 4: Geothermal Heat Pump Plant - VAV Displacement System w/ Passive Radiant Cooling/Heating Panels and Geothermal Hydronic Heat Pump Chiller/Heating Plant for Chilled/Heating Hot Water (Fossil Fuel Free)

HVAC LCCA CONCLUSIONS

- **Without Tax Credits**…

  Option 3, Displacement Ventilation with an Air-Source Heat Pump Plant, represents the **lowest life cycle cost** (L.L.C.) of the system options studied by yielding an approximate $5,680,330 savings over the 50 year study period with an instant payback by having a lower capital investment than the baseline system.

- **With Utility Federal Tax Credits**…

  Option 4, Ground-Source Heat Pump Displacement Ventilation System, represents the greatest total life cycle savings by yielding an approximate $8,710,034 savings over the 50 year study period with an instant payback.

  The **geothermal system** additionally provides further benefits that should be considered:

  - Second lowest EUI of all options at 22.3 kBTU/s.f./yr.
  - System longevity
  - Reduced maintenance
  - Reduced downtime
  - Improved controllability of equipment
  - Best acoustics - does not require exterior mounted condensing equipment

HVAC LCCA SIMPLIFIED SUMMARY

		Initial Cost	Lifetime Cost Savings	Expected Operating Cost (annual)	Maintenance Zones	Primary HVAC Fluid	Outdoor Noise	Indoor Noise	Ventilation Effectiveness	Frequency of Replacement
Options	1	$14.0M	$4.0M	$350K	All Spaces	Refrigerant	Moderate	Low	Standard	20 yr
	2	$19.4M	$2.5M	$286K	All Spaces	Refrigerant	Low	Low	Standard	30 yr

Minutes
Project Name: Wilmington Wildwood Early Childhood Center
RE: School Building Committee
Prepared by: Sarah A. Trankello
Location: Hybrid: In Person at North Intermediate School, Cafeteria, 320 Salem Street, Wilmington, and Remote Participation via Zoom
Project Number: 22127
Meeting Date: 1/29/2024
Meeting No: 26
Distribution: School Building Committee
Attendees
Wildwood School Building Committee
SMMA OPM
Dore+Whittier Architects
Item No. | Action | Discussion
26.01 | Record | Chair, Glenn Brand, called the meeting to order at 7:10 PM. Roll Call of the School Building Committee was performed to account for all of those who are present through remote participation on Zoom. The attendance based on the roll call can be found on page 1 of these minutes. The majority were present in person with a handful of members through remote access on Zoom Webinar. Remote and absent members are noted above.
26.02 | Record | Approval of Minutes
G. Brand advised that the draft minutes of the January 14, 2025 School Building Committee Meeting were distributed for review and approval.
N. Golden motioned to approve the revised meeting minutes from the January 14, 2025 School Building Committee meeting, with a second motion by M. Camosscio.
Approval of Minutes Roll Call Vote: Affirmatively responded, passed unanimously. K. Bissell abstained due to absence from meeting.

Project: Wildwood Early Childhood Center, Wilmington, MA
SMMA Project No. 22127
Date: 2/5/2025
Prepared by: Julie Leduc, Sarah Traniello

Approved On: _____

School Building Committee for the Wilmington Early Childhood Center hereby authorizes the payment for the obligations incurred for the value received in services and for materials shown below:

Vendor	Invoice No.	Invoice Date	Invoice Amount	ProPay Code	Balance After Invoice
SMMA	62667	1/30/2025	$ 3,750.00	0001-0000	$ 3,750.00
OPM Basic Services - Schematic Design					
		Total	$ 3,750.00		

Activities for the Month of January 2025

1. Weekly Leadership Working Group meetings to review project progress.
2. Participated in Meetings with PR Working Group meetings on January 8, 2025, January 15, 2025, January 22, 2025 and January 29, 2025.
3. Preparation of the Monthly Reporting to the MSBA.
4. Working with Designer and Leadership Working Group to finalize details for the December 3 and December 17 Meeting Agendas and Presentations.
5. Participated in Meetings with Sustainability Working Group on January 15, 2025, January 23, 2025 and January 29, 2025.
6. Participated in Meetings with Site/Landscape Working Group on January 8, 2025 and January 22, 2025.
7. Communications with the Inspector General's Office with questions relating to the Construction Manager at Risk Notice to Proceed for the project and the contents of the Request for Qualifications and Interview Process.
8. Prepared and distributed documentation to be used in the Prequalification Review of the individual Construction Management Qualification Packages.
9. Conducted Prequalification Reference Checks on all 7 Construction Management Firms and prepared documentation for review and consideration by the Construction Manager at Risk Prequalification and Selection Working Group in the efforts to analyze and formulate a shortlist for the purpose of interviews and requesting proposals be submitted.
10. Assembly of the results from members of the Working Group into tabulation documentation for review of anticipated qualifications submissions for review together as CM-R Prequalification / Selection Working Group during review.
11. Led the CM-R Procurement Process and conducted CM Prequalification Working Group Meeting to review the 7 submissions from Construction Management Firms.
12. Coordination with Construction Manager at Risk Prequalification and Selection Working Group members, Town Procurement Officer for the Distribution of Interview Invitations and Scheduling of Interview Dates with Constructon Management Firm Candidates for February 11, 2025 and February 12, 2025.
13. Finalizing the Request for Proposals for the Construction Manager at Risk and Preparing for Distribution through review process with Town Councel and Town Procurement Officer.
14. Coordination with Director of Technology & Digital Learning for Wilmington Public Schools details relating to Construction Management Firm Candidate Interviews on February 11, 2025 and February 12, 2025 to permit WSBC members to be able to be as informed as possible about the contents of the Candidate Interviews as possible to assist in their participation in the final selection process that will be voted on February 13, 2025.

Building Systems Update

GOAL OF LIFE CYCLE COST ANALYSIS

- The goal of the mechanical lifecycle engineering economic analysis is to assess the performance of **various mechanical system options** in comparison to a baseline mechanical system.
- Each option is compared to the baseline system over a 50-year cycle to determine the most advantageous system considering **utility costs, maintenance costs, replacement costs, and initial construction costs**.
- By comparison of each option to the baseline system, the option with the **greatest total life-cycle savings** is generally recommended.

LCCA HVAC OPTIONS

ALL HVAC OPTIONS ARE BASED ON FOSSIL FUEL FREE, ELECTRIFIED HEATING SYSTEMS THAT WILL BE COMPARED TO A MASSACHUSETTS OPT-IN CODE COMPLAINT BUILDING & HVAC SYSTEM.

ALL OPTIONS SHALL MEET OR EXCEED:

- MSBA Requirement for Additional Reimbursement
- LEED Requirements
- MA Opt-in Stretch Energy Code RequirementS

ALL PROPOSED SYSTEMS INCLUDE AIR CONDITIONING.

LCCA HVAC OPTIONS SHORTLIST COMPARISON

BASELINE: Air Source Heat Pump Plant - Mixed-Air Overhead VAV System and High Efficiency Air-Source to Hydronic Heat Pump Chiller/Heating Plant for Chilled/Heating Hot Water (Fossil Fuel Free)

OPTION 1: Air-Source VRF (Variable Refrigerant Flow) and DOAS (Dedicated Outdoor Air Systems w/ Air Source Heat Pump) for Classrooms/Office areas & Air Source Heat Pump Rooftop Units for Gym, & Cafeteria with Supplemental electric heating for entryways, storage, and utility rooms. (Fossil Fuel Free)

OPTION 3: Air Source Heat Pump Plant - VAV Displacement System w/ Passive Radiant Cooling/Heating Panels and High Efficiency Air-Source to Hydronic Heat Pump Chiller/Heating Plant for Chilled/Heating Hot Water (Fossil Fuel Free)

SYSTEM COMPARISON

Variable Refrigerant Flow Air Source Heat Pumps Option 1

- Maintenance zones: All spaces
- Standard Ventilation
- Less Outdoor Noise
- LEED Points: 11
- No additional Initial Cost
- Not Manufacturer Agnostic
- $4.0M added life cycle savings
- Full Heating + Air Conditioning

Displacement Ventilation Air Source Heat Pumps Option 3

- Maintenance zones: Roof and Mech Space
- Improved Ventilation
- Less Indoor Noise
- LEED Points: 16
- +$435K initial cost
- Manufacturer Agnostic
- $5.6M added life cycle savings
- Full Heating + Air Conditioning

Warrant No. 21 B

Project: Wildwood Early Childhood Center, Wilmington, MA
SMMA Project No. 22127
Date: 2/5/2025
Prepared by: Julie Leduc, Sarah Traniello

Approved On: _____

School Building Committee for the Wilmington Early Childhood Center hereby authorizes the payment for the obligations incurred for the value received in services and for materials shown below:

Vendor	Invoice No.	Invoice Date		Invoice Amount	ProPay Code	Balance After Invoice
Dore+Whittier Architects *Architectural Basic Services - Schematic Design*	20	1/30/2025		$ 53,900.00	0002-0000	$ 184,800.00
Dore+Whittier Architects Site Services - Designer Amendment No. 3 *Site Survey*	20	1/30/2025	AM-3	$ 5,604.50	0003-0000	$ 445.50
			Total	$ 59,504.50		

Activities for the Month of January 2025

1. Weekly Leadership Working Group meetings to review progress
2. Participate in PR Working Group meetings
3. Prepare presentation and participate in School Building Committee Meetings on January 14, 2025 and January 29,
4. Report out on investigation reports (Traffic Study, Site Survey, Geotech, Geoenvironmental) of preferred site.
5. Floor plan refinement
6. Meeting with District Leadership Team on January 17, 2025
7. Meetings with User Groups - Follow-up with Technology and Food Services
8. Development of Schematic Design drawings and specifications
9. Development of Exterior, Interior and Landscape Design

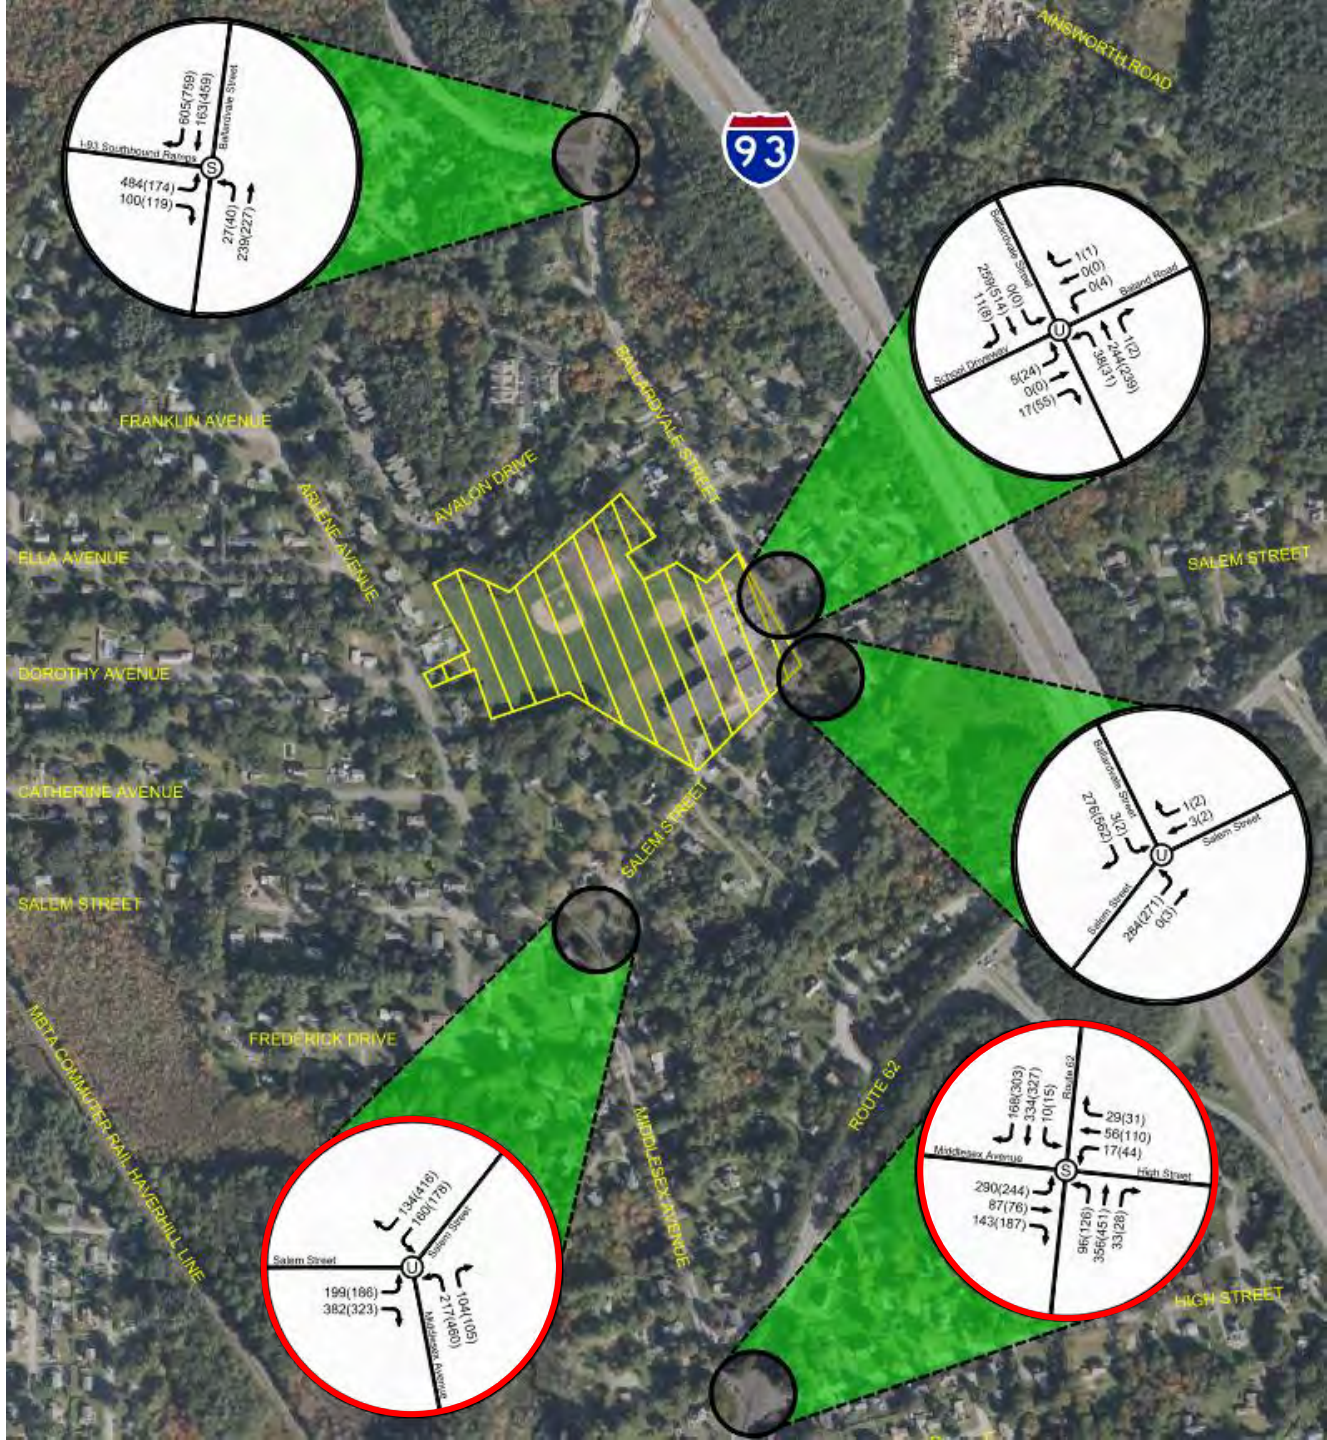
Traffic Study Update

Existing Traffic

- Existing operational issues at intersections
  - Salem Street at Middlesex Avenue
  - Route 62 at Middlesex Avenue/High Street
- Intersection crash rates lower than state and district averages
- 85th percentile vehicle speed is 31 MPH on Ballardvale Street near school driveways
- Approx. 8,000 vehicles per day on Ballardvale Street
- Majority of students arrive and depart by bus
- 193 parking spaces to be provided on-site (recommended 120 spaces minimum)
- Space for 24 vehicles to queue on-site during pick-up/drop-off without spilling onto adjacent roadways



Traffic Impact

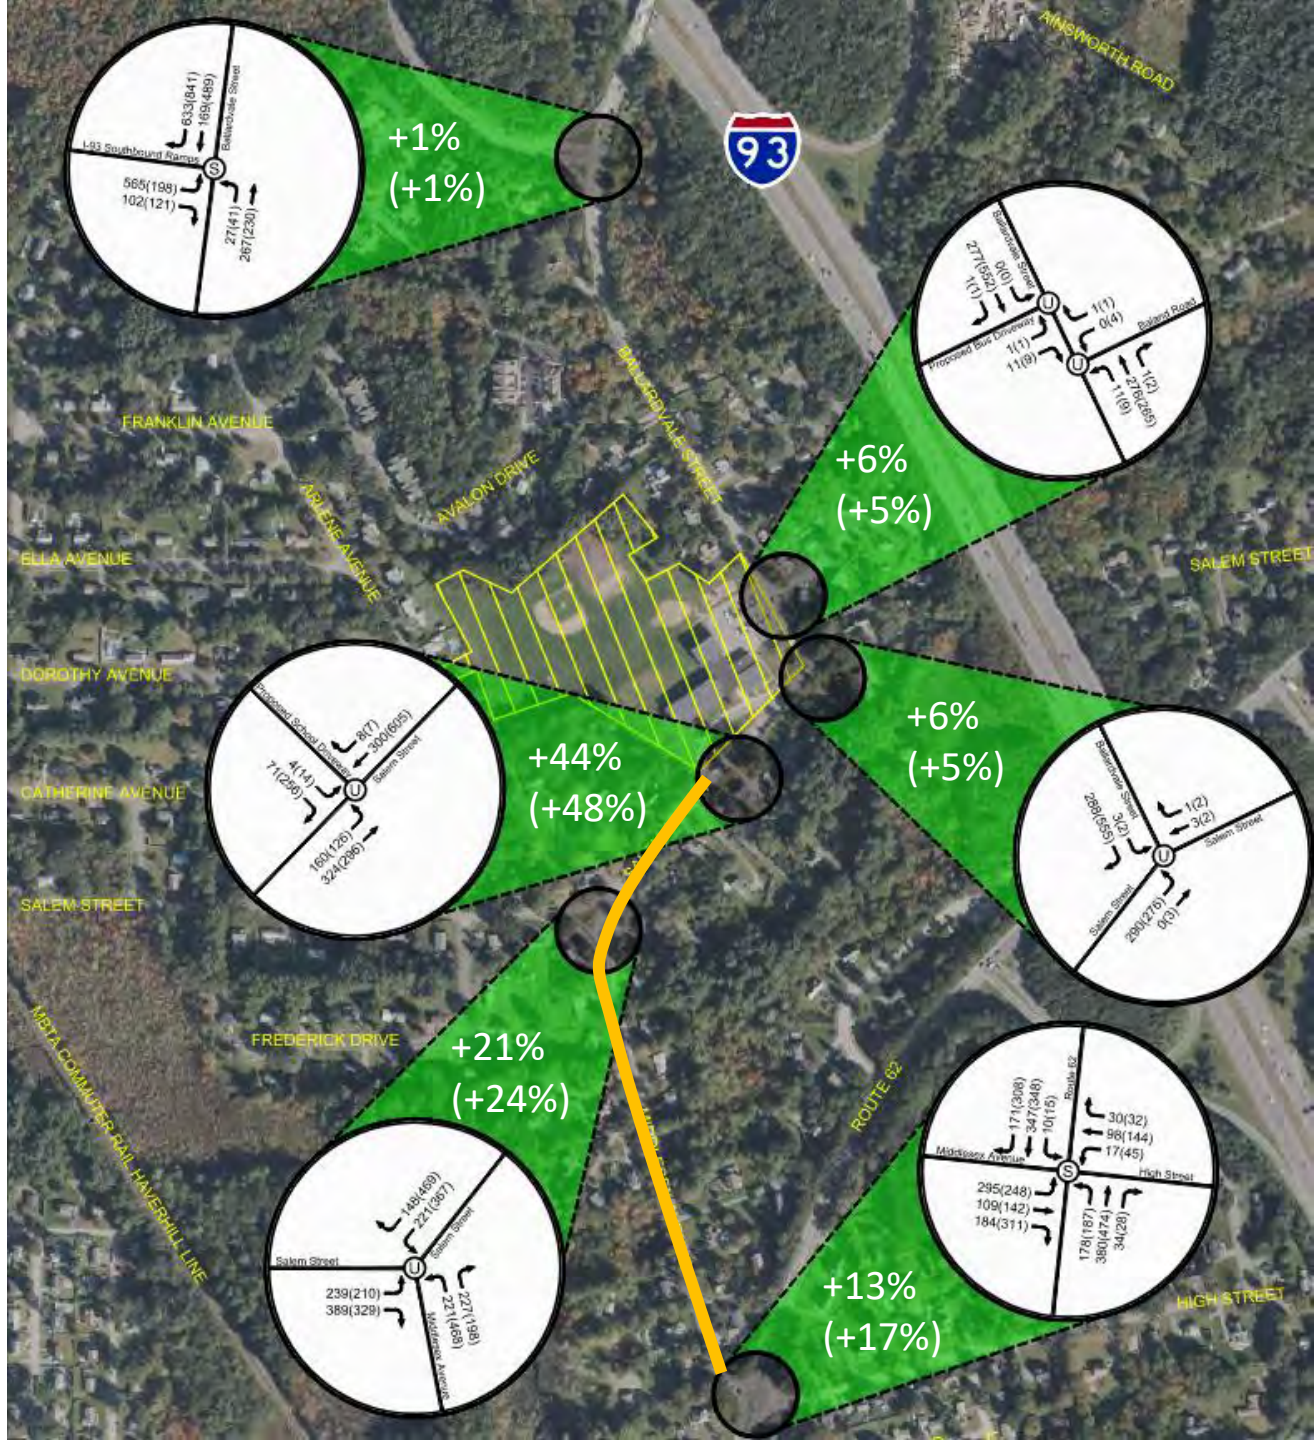
- School trips to increase by a factor of 3.42
- 6% increase on Ballardvale Street
- Most traffic increases concentrated on Salem Street and Middlesex Avenue

Passenger Car Trips – Existing vs Proposed

Time	Elementary School (LUC 520) North Intermediate School		
	Existing with 250 Students	Redeveloped with 855 Students	Net Increase
Weekday Morning Peak	71	243	172
Entering	49	168	119
Exiting	22	75	53
Weekday Afternoon Peak	118	403	285
Entering	39	133	94
Exiting	79	270	191

Anticipated School Trips by Mode

Time	Mode		
	Walking Trips	Passenger Car Trips	Bus Trips
Weekday Morning Peak	24	243	24
Entering	12	168	12
Exiting	12	75	12
Weekday Afternoon Peak	24	403	20
Entering	12	133	10
Exiting	12	270	10



Intersection Operations

Level of Service (LOS) during AM Peak Hour/PM Peak Hour

Build analysis indicates capacity issues present in existing condition further degrades at two intersections:

Salem Street at Middlesex Avenue

- Existing: LOS A/F
- No-Build: LOS A/F+
- Build: LOS A/F+
- Mitigation: Explore alternative intersection designs

Route 62 at Middlesex Avenue/High Street

- Existing: LOS C/C
- No-Build: LOS D/C
- Build: LOS D/D
- Mitigation: Signal retiming to reduce overall delay 19% during PM Peak Hour

All other intersections to operate overall LOS B or better

Level of Service	Average Control Delay (sec/veh)	
	Signalized	Unsignalized
A	0-10	0-10
B	>10-20	>10-15
C	>20-35	>15-25
D	>35-55	>25-35
E	>55-80	>35-50
F	>80	>50

Mark Abdella, VP of CM Services	Present

Item No.	Action	Discussion
29.01	Record	Chair, Glenn Brand, called the meeting to order at 6:00 PM. Roll Call of the School Building Committee was performed to account for all of those who are present through remote participation on Zoom. The attendance based on the roll call can be found on page 1 of these minutes. This meeting was conducted through Zoom Webinar as remote participation so those listed as Remote for this meeting were Remote, those Present in Large Group Instruction Room of Wilmington High School are listed as Present and those Absent were not Present via Remote Participation or In Person.
29.02	Record	**Approval of Minutes** G. Brand advised that the draft minutes of the February 5, 2025 and the February 13, 2025 School Building Committee Meeting were distributed for review and approval.

smma.com

Page 02

Discussion

- **V. Varbedian made a motion to approve the minutes of the February 5, 2025 meeting, motion was second by P. Melaragni.**
- **Approval of Minutes Roll Call vote: Affirmatively responded, passed unanimously. C. Murray and S. Turner abstained.**
- **V. Varbedian made a motion to approve the minutes of the February 13, 2025 meeting, motion was seconded by P. Melaragni.**
- **Approval of Minutes Roll Call vote: Affirmatively responded, passed unanimously. M. Camoscio, C. Murray, S. Scott abstained.**

Approval of Invoices

J. Ruggiero advised of the invoices reviewed by the Finance Working Group, namely Warrant No. 22A and Warrant No. 22B. Warrant No. 22A for SMMA in the amount of $3,750 for OPM Services during Schematic Design and Warrant No. 22B for Dore+Whittier Architects in the amount of $53,900 for Architectural Basic Services for Schematic Design Phase and $445.50 for Site Survey Services under Designer Amendment No. 3.

- **P. Ruggiero made a motion to approve Warrant No. 22A in the amount of $3,750 for SMMA, motion was second by C. Prendergast.**
- **Approval of Warrant No. 22A Roll Call vote: Affirmatively responded, passed unanimously. K. Caira abstained.**
  - **V. Varbedian asked how much remained of the OPM Contract? J. Leduc advised $0.00.**
- **P. Ruggiero made a motion to approve Warrant No. 22B in the amount of $54,345.50 for Dore+Whittier Architects, motion was second by C. Prendergast.**
- **Approval of Warrant 22B Roll Call vote: Affirmatively responded, passed unanimously.**

Construction Manager at Risk Procurement Update

Fontaine Bros., was the Construction Manager at Risk awarded the project entering into PreConstruction with Dore+Whittier Architects and SMMA OPM in the Schematic Design Phase to conduct Cost Estimates for the upcoming reports to be submitted to the MSBA and used for the Project Scope and Budget. David Fontaine Jr., Rob Day, Project Executive, and Mark Abdella, Vice President of CM Services, joined the SBC to share with the SBC their credentials and what tools and skills they would bring to the project in addition to their highly qualified team chosen by the Construction Manager at Risk Selection Working Group as a part of their 2-phase procurement process involving qualifications, proposals of non-price and price, and interviews. D. Fontaine discussed Fontaine Bros. construction and its history of being in its 4th generation after having started in 1933. They have demonstrated their efficiencies in CM lump sum method of bidding with an accelerated schedule capability. Fontaine's eye for bringing value and proactive approach with cost management having built 130 public schools in Massachusetts and it is its only market Fontaine performs work in and specializes in. Fontaine Bros.

Page 03

Discussion

geared towards PreConstruction currently to work with Dore+Whittier Architects and SMMA OPM on the upcoming Cost Estimate for Schematic Design. There will be a Cost Reconciliation Meeting in mid-March for Fontaine and Dore+Whittier Architects' estimator, PM&C, to check their estimates against one another in preparation for the MSBA Schematic Design deliverable at the end of April.

- Fontaine Bros. has worked before with Dore+Whittier Architects and SMMA OPM on Northbridge Elementary School in Whitinsville, Massachusetts. As school builders there is a strong familiarity with building on active campuses shared with students, teachers and community members. Fontaine's team strives to lessen the impact of noise to the kids learning within the existing school building while managing to make it safe, secure, uphold respect for black-out times and ensuring that construction deliveries and traffic patterns of circulation are planned, communicated and utilized to ensure that students, teacher and staff, community and abutters have a minimized impact during essential times.
- M. Abdella of Fontaine Bros. advised that he will start attending the Public Relations Working Group meetings and work together with the working group to help get the information delivery to the Wilmington community to learn more about the project. M. Abdella will plug-in and add ideas to what already seems like a very well-organized working group. M. Abdella advised that it would be great to have student engagement and district engagement as they take ownership of the project and the school through the duration of the construction process with the mapping of curriculum ideas to incorporate the building functions including job fairs. M. Abdella expressed Fontaine's eagerness to work to facilitate community awareness for the project and wanted to know what had been done successfully for prior projects. Advised that Fontaine has had good luck engaging social media pages and spring, summer and fall sports, community and family activities will bring captive audiences. M. Abdella wanted to know who has already been doing these activities and advised that one can never post enough.
- There is an interest in seeing how to engage the marketplace with the quotes and estimates through the project with material increases and tariffs and how interest rates will be impacted and Fontaine will put forward the most economical estimate that is no overly conservative and work to get accuracy with cost savings.
- P. Melaragni advised that with the Town of Wilmington with its Vocational Tech School and Fire Substation to be built there are a lot of eyes on costs to value engineer. D. Allan echoed P. Melaragni's sentiments advising further that there are a large number of senior citizens within the Wilmington community that are struggling as a population and will need to see that this project is not a lot of fluff and it is conservative.

Page 04

Discussion

- Reimbursement rate is based on MSBA driven factors and will be explored by MSBA and is hard to define as it is based on a multitude of average based community factors. There will be equity for the Wilmington schools with a PreK-5 school built for the other side of the Town projected for 2055, once this project is completed and finalized. It is important to stay factual in responses

Design Update

Site Plan Update

R. Philip presented the latest updates in the site plan working with their consultants to move the playgrounds so that the students do not have to cross the road in order to access the playgrounds and also respecting all of the side property line buffers with respect to abutters property lines and roadways, sidewalks, and the buffers go all around the site. There are vehicular gates that will block any trucks and vehicles from accessing portions of the circulation driveway during the school day when school is in session and acts as a security access point blocking access in and out. It is intended for emergencies vehicle use only and allows for the playgrounds to remain secure behind the building as well as where the bus loop exists.

- There were changes made to the turnaround in response to abutters concerns and outside of one of the playgrounds on Playground 2B there is an annotation of 10'5" from the drive to the property line over the berm and above it there is 16'-10" from the driveway over the berm with trees to the property line as noted by Town Manager E. Slagle to highlight it is highlighting the area of concern for the abutter where also there is another annotation for 34'-9" from the roadway to the property line over the berm as well. It was asked if Dore+Whittier could look at swinging the playgrounds into the courtyard further and R. Philip advised that it would be looked at further and will need to consult with Public Safety as they will want to gain access into the Courtyard space and the design has remained flexible to accommodate entry. One of the concerns is that these are the youngest learners in the building that are utilizing these playgrounds and their safety and security is important to keep them close to the building as possible for bathroom use as there also will be a large number of students on the playgrounds at one time.
- K. Caira asked if both baseball fields were being lost at the North Intermediate School. *R. Philip advised that the baseball diamonds have not been able to be fit back onto the site as the focus has been on the playgrounds and playfields amenities for the PreK-5 students.* K. Caira asked if even a Little League diamond would fit on the site? *R. Philip advised the baseball fields were not able to be placed onto the site and there was no demand for the PreK-5 for a Little League diamond, even in the upper quadrant of the site. The baseball and softball fields were going to need to be relocated to another location within Wilmington. E. Slagle advised that he has had conversations*

Page 05

Discussion

with J. Magaldi and P. Alunni regarding the loss of the full-size soccer fields and it appears that those will be able to replicated at the Textron fields. Meetings with J. Magaldi are happening this week.

- The School Building is 70' away from the property lines. Abutters will be able to see what the school view will be from their property. L. Dore advised at the Abutter's Meeting that he will be able to meet with the Abutters individually and show them what it will be like for them and work with them so that it can be a conversation and working together.
- Soccer field is a U-8 at this site due to the age of the students.

Traffic Study Update

Option A Circulation from Salem Street will be able to have 24 vehicles enter in from Salem Street onto the site into the queueing line for parent drop-off/ pick-up and buses will be able to fit 15 from Ballardvale Street which will come in and line up to drop off and pick up students.

- There is possibility of using the parking lot to make more queuing space with more cars to fit onto the site during times when it is needed.
- There may be a need to be a switch between the car and the bus loops as an alternative and it has been designed to work as such as a back up alternative.
- Currently there are about 155 Pickup / Dropoff by family, Grandparents show up earlier.
- HC Spaces are by the curb cuts by the entries to PreK and the Main Entrance allowing for the acceptable paths into the school.

Option B Kids would enter where they choose. Ballardvale queueing and ripple effect with the Rt. 93 highway corridor. How will it be impacted? Traffic Consultant from Nitsch is on the phone and will provide more insight.

- **Net increase in trips = 3 cars/minute. Net significant backup?**
- **24 walking trips vs. 24 bus trips vs. 243 car trips**
- **How many participate in CARES? 50% to CARES this number is important to know so that it is known how much space will be used.**
- Numbers seem underestimated. Middle school is a 200 with 600 by comparison to what will be present with 855 students plus CARES and includes staff and present dropoff.
- **Need to know: % of students will journey by car vs. bus?**
- Can we remove one playground to alleviate the queue? No.
- E. Slagle advised that he is in conversation with Google / Waze.com to have the algorithm altered so that Salem Street and Ballardvale are no longer used as a cut through for others using the Rt. 93 corridor to get to other locations they are trying to reach in adjacent communities. This is one of the stressors that bring a great amount of the traffic to these

Page 06

Discussion

roadways in Wilmington that result in added stress to the roadways leading to the schools.

- 2 Major Intersections: – How do we rate these intersections and take a look at pre-existing efficiencies to combine 3 schools?
  - **Goal: Accelerate engineering the intersections with lines, timing of lights, etc. Mitigation at the beginning and on the radar.**
    - *P. Melaragni advised that there is a historical house that is likely protected under the Preservation Act at one of the intersections that awareness should be brought to as it would not be able to be adjusted without a lot of red tape.*

Interiors Update

R. Philip discussed updates to the cafeteria, auditorium, gymnasium, library, classroom and corridor spaces that are comfortable, versatile and flexible for student programs and learning with wayfinding and materials like linoleum (low maintenance for D. Kelley's crew.)

- It was asked if there would be air curtains in place for the entries? Particularly at the Cafeteria and the Main Entry door? These will be needed with nearly 800 kids going into school at one time.

Working Group Updates

- **Public Relations Working Group** has signed up for the Fun on the Fourth event in June. The School Building Committee is able to be present providing the Design Concept Development updates and latest Schematic Design information from the MSBA to the Wilmington community. The School Building Committee is able to be present for this event as it will be providing an unbiased, fact based and information only perspective on the project.
  - **Water Bill** – will be drafted by Dore+Whittier Architect as a 1 page document of facts that will be provided to the be distributed to through Shawsheen Tech printing, cutting and packaging and providing to the Town to be placed into the water bill mailing.
    - ****D. Allan and M. Gallezzo requested that the School Building Committee get a copy of the water bill before it goes out to provide any feedback that may be necessary.****
    - **J. O'Connell advised that she will handle the water bill and billing with Shawsheen Tech with coordination with Dore+Whittier Architects on the content for the water bill itself.**
- The 'Vote Yes for Wilmington Schools' is completely separate entity from the School Building Committee. The School Building Committee supplies factual information through the

Page 07

Discussion

PR Working Group to the Wilmington public. Any material that is generated by the Vote Yes for Wilmington Schools should be vetted for accuracy before information is released and in cases where information needs to be referenced it should be obtained from the Wildwood School Project site, question asked of the Town Manager, or the Wilmington Superintendent's Office.

Public Comments

- None

Discussion and Committee Questions

- **D. Allan asked that an agenda item be placed on the March 25, 2025 meeting to "Reorganize the Committee's Chair".**
- **Revised Meeting Dates were provided for review by the SBC for consideration and approval for future meetings. Once approved they will be placed into everyone's calendar with meeting invitations.**
- **Cost Estimate updates will be provided at the meeting on March 25, 2025.**
- **There is a meeting on March 31, 2025 as there will be a need to populate the Project Scope and Budget for approval by the School Building Committee on March 31, 2025 that will be submitted for approval by the MSBA.**

Correspondence

- Questions submitted to the Wilmington Public Schools and/or Town Manager's office are shared with the SBC and will be incorporated into upcoming Frequently Asked Questions.

Next Meeting: Tuesday, March 25, 2025 at 6:30pm
Wilmington High School,
Large Group Instruction Room

Adjourn

G. Brand thanked the committee for their efforts and invited a motion to adjourn.

- **N. Golden motioned to adjourn. D. Kelley seconded the motion. Roll call vote, motion carried by unanimous vote.**

Understanding reached. Please contact the author if you have any corrections to these Project Minutes.

52.84% MSBA Reimbursement Rate

NOTES

This template was prepared by the MSBA as a tool to assist Districts and consultants in understanding MSBA policies and practices regarding potential impact on the MSBA's calculation of a potential Basis of Total Facilities Grant and potential Total Maximum Facilities Grant. This template does not contain a final, exhaustive list of all evaluations which the MSBA may use in determining whether items are eligible for reimbursement by the MSBA. The MSBA will perform an independent analysis based on a review of information and estimates provided by the District for the proposed school project that may or may not agree with the estimates generated by the District using this template.

1 - The Estimated Basis of Total Facilities Grant and Estimated Maximum Facilities Grant amounts do not include any potentially eligible contingency funds and are subject to review and audit by the MSBA.

2 - Costs associated with the commissioning of ineligible building area is estimated to result in the recovery of a portion of the overall commissioning cost. The OPM has estimated this recovery of funds to be $_____. The proposed demolition of the _____ School is expected to result in the MSBA recovering a portion of state funds previously paid to the District for the _____ project at the existing facilities completed in ____. The MSBA will perform an independent analysis based on a review of its records and information and estimates provided by the District for the proposed school project that may or may not agree with the estimated cost recovery generated by the District and its consultants using this template.

3 - Pursuant to Section 3.21 of the Project Funding Agreement and the applicable policies and guidelines of the Authority, any project costs associated with the reallocation or transfer of funds from either the Owner's contingency or the Construction contingency to other budget line items shall be subject to review by the Authority to determine whether any such costs are eligible for reimbursement by the Authority. All costs are subject to review and audit by the MSBA.

By signing this Total Project Budget, I hereby certify that I have read and understand the form and further certify, to the best of my knowledge and belief, that the information supplied by the District in the table above is true, accurate, and complete.

Discussion

Approval of Minutes

G. Brand advised that the draft minutes of the March 25, 2025 School Building Committee Meeting would be presented at the April 15, 2025 meeting as they were not ready for approval due to the close proximity of this meeting.

Approval of Project Scope and Budget

L. Dore reviewed the Project Scope and Budget history with the Preliminary Design Program having and estimated project cost range of $194M to 214.5M which equates to $1,155 to $1,278 per square foot of school. The Schematic Design Construction Cost Estimate came in at $137.7M and Dore+Whittier has been working with the Town Manager, SMMA and Fontaine Bros. over the last week on the 3011 Form to come up with the full project cost. This includes the construction costs plus all of the soft costs that include furnishings, technology, design, management fees and contingencies. Estimating is being done out until the start of construction which is about 18 months. As a group, it was important to make sure that the project was risk protected as there is only one bite at the apple to go out to the Wilmington community in order to have the project approved at Town Meeting for appropriation and Ballot Vote to support this school project and this budget. We had looked from the PDP phase which became $177.6M to $196.3M by the Preferred Schematic Report phase which is $1,086 to $1,200 per square foot and currently at the completion of Schematic Design the Estimated Project budget is $173,250,626 which is $1,037 per square foot and this is for a construction cost of approximately 18 months from now. The project is on budget and a concerted effort has been made to keep the project on budget as the project design moved through the phases while incorporating decisions of the SBC during the course of the its development. The project is on the very low end of range of the pricing and it is a good place to be for the school project. It is felt that enough contingency has been added to take care of enough of the unknowns from a design perspective. There is Design Contingency in place to cover the items that Fontaine Bros. has not seen as Dore+Whittier has not drawn them yet at this stage in the design. A good idea of what goes into the design for what is needed to complete the building but there are some unknowns that this contingency will cover. Fontaine also carries contingency within their cost estimating for that same reason. Outside of construction on the owner's side of soft cost contingency there are Owner costs that have been talked about with construction contingency which is hard cost contingency which is 5% of the project cost and there is another soft cost contingency for those parts of the project that could not be expected at this time in the project. It is important to know that money can be moved from one line item to another if it is not being spent as there is risk protection in place. If the risk does not show itself, then the money can be moved within the budget to accommodate. If budget is not expended by the end of the project, the money would go back to the Owner.

- E. Slagle advised that the time with L. Dore and J. Leduc spend on this 3011 form this week was appreciated in addition to the resource of information pulled down from the MSBA about the soft costs and hard costs have been historically for other

smma

Page 03

Discussion

elementary school projects in the pipeline since 2014 to have an idea of what should be planned for this project. Analysis of the percentages for these costs and comparing with the project's costs shows that the costs that are captured in this project are reasonable as there is an extra buffer that can help plan for what is in question currently with the tariff issue and other costs that are outside of the control of the project that have the potential to impact. It is good to see that it is all baked into the number and still the project cost is coming in under the range that was projected, is a good place to be on this project. These include the OPM and Designer fees that will be consistent with what other projects that have been done since 2014.

- C. Prendergast confirmed that the $173M amount is the amount before the reimbursement from the MSBA and there will be a portion that the MSBA is reimbursing the District for and the Wilmington community will be responsible for its portion. N. Golden advised that the $173M amount also includes all of the furnishings, fixtures and equipment and an estimated reimbursement rate that is included. N. Golden asked what this reimbursement rate is based upon? L. Dore explained the Construction Cost will be based upon everything that is in Fontaine Bros. contract and Project Costs are those that are outside of that so it is all of the new furnishings for the new school, the new technology that will go into the new building, Design Fees, OPM Fees, insurance costs and many layers of contingencies make up the difference. The reimbursement rate in this 3011 form is based upon formulas that make up the reimbursement rate that is in fine print that is baked into this workbook that represents incentives, caps, and in there also includes their base reimbursement rate for Wilmington. There is 1 incentive point for Maintenance because the District has done a good job maintaining these buildings over time. The direction of this Committee is that there is a desire for a sustainable building and 4 points were a reasonable cost to collect all 4 available Sustainable Green points. There are 5 extra incentive points in addition to the base rate and MSBA needs to review and come back to agree with these calculations in order to state what the reimbursement rate will be for this project. The MSBA grant will be looked at to see how the cost to the District can be brought down as a local share.
- M. Gallezzo asked about the contingencies that are in the amount? L. Dore advised that there is 12% inside of the Construction Cost plus an additional 6.5% outside which is 5% for Owner's Construction Contingency and 1.5% for the Owner's Service contingencies and those that are expended with these Owner Contingencies have decisions that rest with the School Building Committee for the project. J. Leduc advised that there is a hard cost contingency which is where the Change Order decisions approved by the SBC for the construction and purchases for the project will come out of and the Soft Cost

smma

Page 04

Discussion

Contingencies where consultant service costs that are approved by the SBC will be covered. Both of these contingencies, hard and soft cost, are only exercised through approval decisions made through the School Building Committee.

- S. Turner asked if 18.5% is enough contingency that is needed so that the children and educational program is not impacted in their needs for the new school. P. Melaragni advised that it is estimated that the reimbursement would be approximately 52.84% for the District which would add up to a $50M reimbursement which would be a cost of approximately $113M for Wilmington and it could potentially go even lower with some creative ideas on the Town side. V. Varbedian advised that there will be a portion of the items that will be deemed eligible and ineligible of the costs as also seen on the 3011 form by the MSBA so it will not be an exact 52.84% as it will be on a case-by-case basis.
- D. Allan asked where the reimbursement rate was derived from? J. Leduc advised that the MSBA has Wilmington's reimbursement rate listed on its website as 47.84% plus the five (5) incentive points would bring the reimbursement rate to 52.84%. D. Allan asked if the 18% contingency takes into account inflation? L. Dore advised that it is an attempt to account for future escalations so that contingencies are built into the project. E. Slagle further advised that the reason why there is no specific reimbursement rate that can be confirmed at this time is because the Schematic Design Report together with the 3011 and the Project Scope and Budget need to be reviewed by the MSBA and confirmed that these are all in agreement and within their scope relating to eligible and ineligible spaces. If these are not in agreement, there will be conversations had to review and work with the MSBA so everyone is on the same page with the goals, needs, and scope for this project.
- K. Bissell noted that there was a higher than the limit for FFE that is within the 3011 form and acknowledged that it would be based upon the 755 enrollment rate but it does not include the PreK-K population that would be part of that number. Does this additional amount over the cap account for the additional student population that would be the PreK-K? L. Dore advised that yes it does and that is why the number is higher than the cap and it will need to be taken into consideration due to the enrollment being higher to include the PreK-K students population. The budget line item is account for $2,200 per student for 755 students and the FFE needs over and above that is in line with those that are being seen in the marketplace for PreK-K spaces currently in the process. D. Kelley advised that there is the potential of lowering the cost of FFE as well in the process of the choices of items i.e. lighting. L. Dore advised that Basis of Design products have been chosen for the project that come within the budget that has been set to date and

smma

Page 05

Discussion

Massachusetts Public Procurement requires the Designer to have 3 equals for every product and that is what Fontaine has based their pricing upon as well. This is the bar that the design has been started with and it is not an extravagant one and a lot of time has gone into this project to determine what these materials and products are as the SBC has been very clear with the priorities to keep this project not extravagant and keep it within the budget cost and watch to make sure that these prices are not fluctuating. This will be done with 3 more estimates performed after the appropriation vote and this will be the check to ensure that the project is still falling within range of the budgeted amount and see how it is going as the design is further developed. This will assist in determining whether there needs to be a change in course for material selection and reprioritize as needed. It is not desired to cut budget that is set out for the educational program.

- D. Allan asked if the fees of the Designer and OPM are standard for the project? E. Slagle advised that the OPM and Designer fees are in alignment with those that are for projects of this type and size in the Commonwealth of Massachusetts. Having reviewed the data on the MSBA site from the last 10 years has been performed to confirm for elementary schools.

V. Varbedian made a motion to submit the Project Scope and Budget to the MSBA as written. N. Golden seconded the motion. Roll call vote resulted in a unanimous vote, motion passes.

Meeting Minutes
Thursday, April 3, 2025

Dr. Glenn Brand called the meeting to order at 6:00 PM.

Ms. Vivian Varbedian proceeded to make a roll call of attendance.

Present: Diane Allan, Greg Bendel, Glenn Brand, Kevin Caira, Michael Camoscio, Maryanne Gallezzo, Nicholas Golden, Dennis Kelley, Paul Melaragni, Greg Minor, Judy O'Connell, Paul Ruggiero, and Eric Slagle.

Absent: Kate Bissel, Justin Cusce, Christine Holloran, John Holloway, Christine Murray, Christine Prendergast, David Ragsdale, Stephen Turner, and Stacey Scott.

DISCUSSION OF CONSULTANT CONTRACTS

Dr. Brand turned the room over to Mr. Slagle. Mr. Slagle made committee members and viewers at home that the contract for OPM and Design Services are structured by MSBA to expire at the end of Schematic Design Phase. For purposes of the OPM contract, after multiple meetings with the Leadership Teams, SMMA, MSBA, Town Counsel, and various Committee Members, it has been determined that the Town will not be moving forward with SMMA acting as the OPM for the construction phase of the project. Mr. Slagle added that the town had chosen not to exercise the option to make a change in key personnel, rather SMMA has indicated that they would amicably part ways.

Mr. Slagle explained that the town would need to go out to bid for OPM services and that MSBA has provided an outline of how that process would look. A request for services will need to be submitted by April 17th, 2025. Mr. Slagle provided an overview of the required advertising requirements and timeline, resulting in the approval of a new OPM in early July. Mr. Slagle clarified that the Schematic Design Phase would not end on May 1st in conjunction with the submission of the Schematic Design but would end after the June 25th MSBA hearing; SMMA would be assigned to the project until then.

Mr. Slagle explained that Dore and Whittier, as well as the Construction Manager At-Risk firm, Fontaine Bros., Inc., had been notified of the Towns standpoint. Mr. Slagle added that despite parting ways with SMMA, the town still has two excellent firms assigned to the project. Mr. Slagle added that the two firms would be responsible for establishing preliminary estimates, and that SMMA offered $35,000 from their contract for Fontaine Bros., Inc., and Dore and Whittier to do so.

Mr. Slagle informed the Committee that the new OPM will be hired within the budget that was submitted with the 30-11 form. Mr. Slagle explained that most OPMs are aware of similar situations happening, and that he was aware of multiple firms looking forward to bidding on this project.

Mr. Slagle stated that he is fully prepared to execute an amendment with Dore and Whittier for them to continue their services through the construction phase of the project. From his perspective, he was impressed with their flexibility and ability to listen to what the town is saying and bring the design closer to what the town wants. Mr. Ruggiero agreed with Mr. Slagle. Mr. Golden expressed that he was impressed with how they handled the abutters meeting. Mr. Bendel stated that he had been impressed with Rani Phillips of Dore and Whittier, specifically her thoroughness and ability to answer questions. Dr. Brand added that behind the scenes communication has been excellent, and that they have been wonderful to work with. Ms. Allan agreed, stating that she was pleased with their performance so far.

Dr. Brand asked Mr. Slagle if the committee would need to take any action at tonight's meeting with respect to either contract. Mr. Slagle clarified that the committee would be voting on an extension of the Dore and Whittier contract later in the summer.

Ms. O'Connell stated that Mr. Slagle had taken a very methodical approach as a new manager, not rushing any decisions, reaching major milestones in the process, and reaching a collective decision. Ms. O'Connell also added that MSBA had reassured the town that changing OPMs would not negatively affect the project. Mr. Bendel added that the Yentile Farm Project had seen a change in management, and the project had turned out quite well.

VOTE TO ESTABLISH AN OPM REVIEW COMMITTEE (VOTES MAY BE TAKEN)

Mr. Slagle noted that he had asked folks to participate as members of the OPM Review Committee, and that the committee will have a window of May 21st through June 11th, to shortlist firms, interview, have a meeting to select an OPM and to prepare a selection package to provide MSBA. Mr. Slagle stated it would be beneficial to have Mr. Kelley on the Committee, along with Paul Melaragni, Paul Ruggiero, and Judy O'Connell; given their experience and involvement with the project. Mr. Slagle stated that one more member is needed. Ms. Allan volunteered, explaining that she had been involved in a similar process for the Senior Center.

Mr. Slagle made a motion to appoint Mr. Kelley, Paul Melaragni, Paul Ruggiero, Judy O'Connell, and Diane Allan to the OPM Review Committee, seconded by Craig Minor and voted unanimously:

VOTED: To appoint Mr. Kelley, Paul Melaragni, Paul Ruggiero, Judy O'Connell, and Diane Allan to the OPM Review Committee.

DISCUSSION/NEW ITEMS

Ms. O'Connell advised that the water bill inserts had been completed by Shawsheen Tech, and had come out great. These will be delivered to the Treasurer/Collector's Office by April 17th. Ms. O'Connell thanked Mr. Camoscio for establishing a working relationship with Shawsheen Tech, as he had handled the prior water bill insert order. Dr. Brand also thanked Mr. Camoscio for bringing up the Fourth of July Celebration and how to incorporate advertisement materials into the event.

ADJOURNMENT

At the conclusion of the discussion, being no further business, a motion was made by Ms. Varbedian for the Wilmington School Building Committee to adjourn, seconded by Mr. Craig and voted unanimously:

VOTED: That the Wilmington School Building Committee adjourn.

The meeting adjourned at 6:27 pm.

Respectfully submitted,

_____

5.00 Total Incentive Points

52.84% MSBA Reimbursement Rate

NOTES

This template was prepared by the MSBA as a tool to assist Districts and consultants in understanding MSBA policies and practices regarding potential impact on the MSBA's calculation of a potential Basis of Total Facilities Grant and potential Total Maximum Facilities Grant. This template does not contain a final, exhaustive list of all evaluations which the MSBA may use in determining whether items are eligible for reimbursement by the MSBA. The MSBA will perform an independent analysis based on a review of information and estimates provided by the District for the proposed school project that may or may not agree with the estimates generated by the District using this template.

1 - The Estimated Basis of Total Facilities Grant and Estimated Maximum Facilities Grant amounts do not include any potentially eligible contingency funds and are subject to review and audit by the MSBA.

2 - Costs associated with the commissioning of ineligible building area is estimated to result in the recovery of a portion of the overall commissioning cost. The OPM has estimated this recovery of funds to be $_____. The proposed demolition of the _____ School is expected to result in the MSBA recovering a portion of state funds previously paid to the District for the _____ project at the existing facilities completed in ____. The MSBA will perform an independent analysis based on a review of its records and information and estimates provided by the District for the proposed school project that may or may not agree with the estimated cost recovery generated by the District and its consultants using this template.

3 - Pursuant to Section 3.21 of the Project Funding Agreement and the applicable policies and guidelines of the Authority, any project costs associated with the reallocation or transfer of funds from either the Owner's contingency or the Construction contingency to other budget line items shall be subject to review by the Authority to determine whether any such costs are eligible for reimbursement by the Authority. All costs are subject to review and audit by the MSBA.

By signing this Total Project Budget, I hereby certify that I have read and understand the form and further certify, to the best of my knowledge and belief, that the information supplied by the District in the table above is true, accurate, and complete.

MSBA Process and Schedule

How we got here...
Wilmington Elementary Schools

- All six elementary schools are of similar vintage 1950s/1960s and experience space deficiencies in their educational programs
- Each school needs significant upgrades, including HVAC, plumbing, electrical, exterior windows and envelope, accessibility, etc.
- **Wildwood** was determined to be in the most need of the six district elementary schools.

Educational Challenges Identified

- Multiple transitions in elementary years
- Schools have different start and end times
- Undersized classrooms as compared to MSBA guidelines
- Need for dedicated classrooms for differentiated instruction
- Limitations of spaces to support wide range of student needs
- No designated science and computer spaces (STEM)
- Limited dedicated workspaces for service providers to meet with students
- Limited time and spaces for staff collaboration and combined professional development
- Accessibility throughout buildings
- Nurses Suite with separate examination area

1 Executive Summary

Nitsch Engineering (Nitsch) has completed a detailed Traffic Impact Study (TIS) to evaluate the potential impacts of redeveloping the North Intermediate elementary school on the existing site, combining the student population of the existing North Intermediate school, Woburn Street elementary school, and Wildwood Early Childhood Center to accommodate the larger student population.

The proposed school will provide enhancements to traffic circulation and controls such as providing a dedicated parent loop, extended bus loop with dedicated driveway to separate cars and buses, separate emergency access driveway, and increased parking.

1.1 Trip Generation and Access

The proposed school is anticipated to generate 243 weekday morning peak school hour (8:00 AM – 9:00 AM) trips and 403 weekday afternoon peak school hour (3:15 PM – 4:15 PM) trips. This represents a net increase of 172 trips during the morning peak hour and 285 trips during the afternoon peak hour compared to the existing North Intermediate school on site.

Access and egress to the site will be provided via two primary driveways. The driveway at the southern end of the parcel (south driveway) will provide access and egress to and from Salem Street. The driveway to the east of the site (east driveway) will allow access and egress to and from Ballardvale Street, to be located just north of the existing school driveway. The south driveway will be the designated visitor entrance and the east driveway will be used for deliveries. A staff parking lot at the east end of the site will be accessed by both driveways. There are two site layout alternatives, with Option A designating the south driveway for parent drop-off and pick-up and the east driveway for bus drop-off and pick-up. Option B swaps this arrangement, providing more queueing space for parents. With either site layout, buses and most passenger cars will have separate circulation routes that will minimize conflicts with each other and streamline the student arrival and dismissal patterns.

In addition to the two driveways, a proposed access road will be located west of the school leading to and from Arlene Avenue. This driveway will be designated for emergency access only.

1.2 Parking

A total of 193 parking spaces will be provided on-site. A dedicated parent pick-up/drop-off loop is proposed on-site so parents will be able to circulate through the site to queue in the loop instead of in the parking lot or the surrounding roadways.

1.3 Conclusions and Recommendations

After adding the expected new traffic to the existing traffic on the adjacent intersections, the proposed school is expected to worsen operations at the intersection of Salem Street at Middlesex Avenue and Route 62 at Middlesex Avenue/High Street. Our analysis shows that the expected operational issues can be mitigated through signal retiming at the intersection of Route 62 at Middlesex Avenue/High Street. It is recommended that further study be conducted by the Town of Wilmington to address the existing operational deficiencies at the intersection of Salem Street and Middlesex Avenue in a manner that also provides excess capacity for the projected new trips from the proposed school. No significant impact is expected at the other study intersections.

2 Introduction

Nitsch has prepared this Traffic Impact Study (TIS) for the proposed North Intermediate Elementary School redevelopment, located at 320 Salem Street, Wilmington, Massachusetts. This TIS will review existing roadway conditions, access/egress, crash data, and traffic volumes, and it will assess existing and future traffic conditions at intersections in the study area.

2.1 Existing Site

The site for the proposed redevelopment is located on an approximate twelve-acre lot located at 320 Salem Street, which currently holds the North Intermediate School and a playground, baseball fields, soccer fields, tennis courts, and a basketball court. The school is one of two intermediate schools in the Wilmington Public School system and serves the east region of the Town.

The existing North Intermediate School consists of a building with two stories for a total of 54,569 square feet. A paved play area and a parking lot are also present on the site. The North Intermediate School serves approximately 250 students in grades four and five.

Primary access to the North Intermediate School is provided by a loop on Salem Street, providing access to the main entrance at the south of the building. The loop accommodates one-way traffic, with an ingress driveway at the southeast corner of the building and an egress driveway at the southwest corner of the building. Bus drop-off and pick-up occurs at this loop. Additional access is located to the east of the building and is served by another pair of one-way driveways off Ballardvale Street. Parent drop-off and pick-up occurs in this area, which also provides approximately 52 parking spaces for school staff.

Figure 1 shows the Locus Map and Figure 2 shows the project area.

2.2 Proposed Development

The project consists of the construction of an approximate 163,573-square-foot, three-story elementary school building to replace the existing school facility at 320 Salem Street and will serve 855 students from pre-kindergarten through grade five. The redeveloped building will consolidate students from the Wildwood Early Childhood Center and the Woburn Street Elementary School with the students at the existing North Intermediate school. The Wildwood Early Childhood Center is located at 182 Wildwood Street and serves pre-kindergarten and kindergarten. The building at 182 Wildwood Street was closed in 2023 and the students are temporarily being housed between the West Intermediate School and the Wilmington Middle School. The Woburn Street School is located at 227 Woburn Street and currently serves grades one through three.

A total of 193 parking spaces will be provided on-site. A dedicated parent pick-up/drop-off loop is proposed on-site so parents will be able to circulate through the site to queue in the loop instead of in the parking lot or the surrounding roadways.

Access and egress to the site will be provided via three driveways. The driveway at the south of the parcel (south driveway) will provide access and egress to and from Salem Street. The driveway at the east of the parcel (east driveway) will provide access and egress to and from Ballardvale Street. The driveway at the west of the parcel will provide access and egress to and from Arlene Avenue for emergency use only.

2.3 Study Area

The study area includes seven roadways and five intersections as follows:

Roadways

1. Salem Street
2. Middlesex Avenue
3. Ballardvale Street
4. Baland Road
5. I-93 Southbound Ramps
6. Route 62
7. High Street

Intersections

1. Salem Street and Middlesex Avenue
2. Ballardvale Street and Salem Street
3. Ballardvale Street and Baland Road/School Driveway
4. Ballardvale Street and I-93 Southbound Ramps
5. Route 62 and Middlesex Avenue/High Street

2.4 Methodology

We have conducted this traffic assessment in three phases. The first phase involves an evaluation of existing traffic conditions within the study area, including an inventory of existing roadway and intersection geometry, observations of traffic volumes, review of vehicular crash data, and evaluation of parking utilization.

The second phase of the study establishes the framework for evaluating the transportation impacts of the proposed elementary school development project. We assessed travel demand forecasts for the project, along with future traffic demands on the study area intersections due to projected background traffic growth and other proposed area developments that will occur, independent of the proposed development. We used 2031 as the design year for analysis, reflecting a seven-year horizon. This phase also includes an evaluation of parking demand generated by the project.

The third and final phase involves conducting traffic analyses to evaluate both existing and projected future intersection operations. We used this analysis as the basis for determining the potential project impacts and potential mitigation measures for the elementary school development.

3 Existing Conditions

Nitsch conducted a site visit on Wednesday, October 23, 2024 to observe the roadway conditions and existing traffic. The observations occurred during sunny conditions when school was in-session. The following is a summary of the existing roadways and intersections.

3.1 Roadways

Salem Street

Within the study area, Salem Street is an urban major collector that runs in the east-west direction from the Tewksbury town line east to a dead-end just past the intersection with Ballardvale Street. Salem Street is discontinuous, starting again on the opposite side of I-93 and running concurrently with Route 62 to the North Reading town line. Land use on Salem Street is primarily residential, with some industrial uses on the east segment.

Near the study area, Salem Street is approximately 26 feet wide and has a narrow sidewalk on the north side of the road. Directional travel is separated by a double-yellow center line and the speed limit is 25 mph. Salem Street is under the jurisdiction of the Town of Wilmington.

Middlesex Avenue

Middlesex Avenue is an urban minor arterial that generally runs north-south in Wilmington from the intersection with Salem Street approximately 2.3 miles south to its terminus at Main Street. A portion of Middlesex Avenue runs concurrent with Route 62. After branching off from Route 62 at Church Street, Middlesex Avenue becomes a local roadway until its southern terminus at Route 62. The width of Middlesex Avenue varies but typically measures around 34 feet. The roadway is under the jurisdiction of the town of Wilmington and features a speed limit of 25 mph. The land use along the corridor includes residential neighborhoods, commercial areas, and some recreational spaces. Sidewalks are present on one side of the street in most sections, and on-street parking is mainly restricted.

Ballardvale Street

Ballardvale Street runs north-south and spans approximately 2.5 miles, extending south from the Andover town line to the intersection with Salem Street. Between the Andover Town Line and Route 125, Ballardvale Street is an urban minor arterial that runs through an industrial park and is wide to accommodate large trucks, with two southbound lanes in some places. As it runs concurrently with Route 125, Ballardvale Street is an urban principal arterial that intersects the beginning of Route 125 and a pair of ramps to access Interstate 93 before approaching the study area. Within the study area, Ballardvale Street is an urban major collector that is approximately 24 feet wide, with one lane in each direction. Sidewalks are provided on the west side of Ballardvale Street near the school but terminate as the roadway approaches the I-93 ramps.

The speed limit on Ballardvale Street near the I-93 ramps is 35 mph but it decreases to 25 mph as it approaches the North Intermediate School. During school arrival and dismissal periods, a school zone speed limit of 20 mph is enforced with flashing beacons. Ballardvale Street is under the jurisdiction of the Town of Wilmington, apart from the bridge over I-93 and the ramp intersections, which are owned by MassDOT. Within the study area, land use is primarily residential, with a single institutional use being the North Intermediate School.

Baland Road

Baland Road is a local roadway that runs east-west in the study area. Baland Road begins across from the school driveway off Ballardvale Street and terminates as a dead-end approximately 500 feet to the east. There are several single-family homes on Baland Road, with sidewalks on both sides of the street and no pavement markings. Baland Road is approximately 28 feet wide and has no posted speed limit, assuming the statutory speed limit of 30 mph in thickly settled areas. The roadway is under the jurisdiction of the Town of Wilmington.

Interstate 93 Southbound Ramps

The Interstate 93 (I-93) Southbound Ramps are a pair of cloverleaf-style ramps connecting Ballardvale Street to I-93 southbound. To the north of I-93 are another pair of cloverleaf-style ramps connecting to I-93 northbound, but are outside of the study area. Directional travel on the ramps is separated by a six-foot raised median and bounded by guardrails on both sides of the roadway, with each travel lane being approximately 20 feet wide. There is no posted advisory speed on the ramps and guardrails are provided on both sides of the roadway. The ramps are under the jurisdiction of MassDOT.

Route 62

Route 62 runs east-west through Wilmington and is classified as an urban minor arterial. Extending from the Burlington town line to the North Reading town line, Route 62 spans approximately 4.5 miles. The roadway varies in width, averaging around 36 feet, and accommodates two-way traffic separated by a double-yellow center line. Route 62 has a posted speed limit of 35 miles per hour (mph) and the southbound approach in the study area under the jurisdiction of MassDOT and the northbound approach in the study area is under the jurisdiction of the Town of Wilmington. Near the study area, land use on Route 62 is primarily residential. Sidewalk availability is inconsistent, with some sections having well-maintained sidewalks on one or both sides, while other sections lack pedestrian pathways. On-street parking is generally restricted.

High Street

High Street is classified as a local road that runs primarily north-south from the intersection with Route 62 and Middlesex Avenue approximately two-thirds of a mile to the intersection with Woburn Street. At the intersection with Route 62 and Middlesex Avenue, High Street has an east-west orientation. High Street is approximately 22 feet wide, with directional travel separated by a double yellow centerline and a sidewalk provided on the west/south side of the roadway.

Land Use on High Street is primarily residential. The Woburn Street School is located at the southern end of High Street, as it intersects Woburn Street. The posted speed limit on High Street is 30 mph. The roadway is under the jurisdiction of the Town of Wilmington.

3.2 Study Intersections

Salem Street and Middlesex Avenue

Salem Street and Middlesex Avenue intersect to form a three-way unsignalized intersection, with Salem Street approaching from the west and north and Middlesex Avenue approaching from the south. The three roadways intersect in a triangular shape with several raised median islands and the control is atypical from that of a standard three-way intersection. There are no posted stop signs or yield signs.

The Salem Street eastbound approach is approximately 26 feet wide, providing for two lanes in the unmarked approach. The right-most lane is used as a right-turn lane, where vehicles must yield to southbound traffic. The left-most lane is used as a left-turn lane onto Salem Street heading northbound. From the north, the Salem Street southbound approach consists of a single 12-foot lane. The approach operates freely, with through-moving vehicles getting the right-of-way and right-turning vehicles diverging into a channelized departure lane. From the south, the Middlesex Avenue northbound approach consists of a single lane as it passes a conflict point where eastbound traffic passes through to turn left at the intersection. No right-of-way signs are posted, suggesting eastbound traffic must yield to northbound traffic. However, northbound vehicles in the field were frequently observed yielding to eastbound traffic turning left onto Salem Street, particularly during periods of congestion. North of this conflict point, the northbound approach opens into a 12-foot through lane and a 12-foot left-turn lane. Northbound left-turning vehicles must yield to southbound traffic.

The medians and multiple conflict points have the effect of a modified circular intersection, with eastbound-left and northbound-left turning vehicles yielding to oncoming traffic before entering the intersection and circulating around the median islands. The unusual geometry of the intersection presents multiple challenges including driver confusion, limited sight lines, and limited deflection promoting high speeds. Significant congestion was observed during field observations, particularly in the northbound direction. A sidewalk is present on the north side and west side of the intersection, with a single pedestrian crossing across the west Salem Street leg. There are no bicycle facilities present at the intersection.

Salem Street and Ballardvale Street

Salem Street and Ballardvale Street intersect to form a three-way unsignalized intersection, with Salem Street approaching from the west and east and Ballardvale Street approaching from the north. The Salem Street eastbound approach and the Ballardvale Street southbound approach are free movements, forming the main line of the intersection. The Salem Street westbound approach is under stop control.

The Salem Street eastbound approach and Ballardvale Street southbound approach both consist of a single 12-foot general purpose lane. The Salem Street westbound approach is approximately 20 feet wide and unmarked. A sidewalk is provided on the northwest side of the intersection and a three-foot paved shoulder is present on both sides of the main line. There are no marked crosswalks provided at the intersection.

Ballardvale Street and School Driveway/Baland Road

Ballardvale Street intersects with Baland Road and the North Intermediate School driveway to form a four-way unsignalized intersection, with Ballardvale Street approaching from the north and south, Baland Road approaching from the east, and the school driveway approaching from the west. The school driveway is divided into separate legs for the entrance and exit that are separated by a raised concrete sidewalk approximately 65 feet long. The school driveway entrance is located slightly north of Baland Road and is approximately 26 feet wide. The school driveway exit is located just south of Baland Road and is approximately 60 feet wide.

The Ballardvale Street northbound and southbound approaches each consist of a single 12-foot general purpose lane and operate free. Baland Road is approximately 26 feet wide and is unmarked. While no signs are explicitly posted, the Baland Road and school driveway approaches operate under stop control. Sidewalks are provided on the west side of the intersection. There are no marked crosswalks at the intersection.

Ballardvale Street and I-93 Southbound Ramps

Ballardvale Street intersects with the I-93 southbound ramps to form a three-way signalized intersection, with Ballardvale Street approaching from the north and south and the I-93 southbound ramps approaching from the west. The Ballardvale Street northbound approach consists of an 11-foot left-turn lane and an 11-foot through lane. The Ballardvale Street southbound approach consists of a 12-foot through lane and a 12-foot right-turn lane. The right-turn lane provides channelized access to the I-93 southbound ramp and vehicles must yield to oncoming traffic turning left from Ballardvale Street northbound as they merge onto the ramp. The I-93 southbound ramp eastbound approach consists of two 11-foot left-turn lanes and a 16-foot channelized right turn lane. Vehicles turning right must yield to oncoming traffic from Ballardvale Street southbound.

The intersection is controlled by a fully-actuated, uncoordinated traffic signal. The signal operates in three phases. The first phase serves the Ballardvale Street northbound and southbound through movements. The second phase serves the eastbound left-turn movements from the I-93 southbound ramp. The third phase provides a protected left-turn phase for northbound traffic. The Ballardvale Street southbound right and I-93 southbound ramp eastbound right movements are yield-controlled. There are no crosswalks, sidewalks, or bicycle facilities provided at the intersection.

Route 62 and Middlesex Avenue/High Street

Route 62 intersects Middlesex Avenue and High Street to form a four-way signalized intersection, with Route 62 approaching from the north, Middlesex Avenue approaching from the west and south, and High Street approaching from the east. The Route 62 southbound approach consists of an 11-foot left-turn lane, an 11-foot through lane, and an 11-foot right-turn lane. The Middlesex Avenue northbound approach consists of an 11-foot left-turn lane and a 12-foot shared through/right lane. The Middlesex Avenue eastbound approach consists of an 11-foot shared left/through lane and a 12-foot right-turn lane. The High Street westbound approach consists of an 11-foot shared left/through lane and an 11-foot right turn lane. The right turn lanes on the eastbound and westbound approaches are very short, providing storage for only one or two vehicles. The Middlesex Avenue west leg and High Street east leg both have a narrow street-level concrete median separating the approaches and departures. Crosswalks are provided across all four intersection legs and concrete sidewalks are provided on all intersection corners, although the northeast corner sidewalk ends just past the intersection.

The traffic signal is controlled by a fully-actuated, uncoordinated signal. The first phase serves the Route 62 southbound left turn movement, the Middlesex Avenue northbound left-turn movement, and the Middlesex Avenue eastbound right-turn overlap. The second phase serves the Route 62 southbound through and right movements and the Middlesex Avenue northbound through movement. The third phase serves the Middlesex Avenue eastbound and High Street westbound movements. The fourth phase is an exclusive pedestrian phase.

4 Existing Traffic Conditions

4.1 Traffic Count Data

Nitsch retained Precision Data Industries, Inc. (PDI) of Hudson, Massachusetts to collect traffic data within the study area, including both Automatic Traffic Recorder (ATR) counts and Turning Movement Counts (TMC).

ATR Data

PDI collected ATR counts for a continuous 48-hour period at three locations from Wednesday, October 23, 2024 to Thursday, October 24, 2024. The ATR volumes are summarized in Table 1 and the bi-directional average daily traffic (ADT) volumes are shown graphically in Figure 3. The ATR speeds are summarized in Table 1. The full ATR dataset is included in Appendix A.

Table 1 - Automatic Traffic Recorder (ATR) Volume Summary

Location	ADT[a]		Peak Hour Traffic			K Factor[e]
	Volumes (vpd)[b]	Directional Distribution[c]	Period	Volumes (vph)[d]	Directional Distribution[c]	
Ballardvale Street north of Salem Street	7,991	61% SB	Morning Afternoon	644 939	54% SB 69% SB	0.08 0.12
Middlesex Avenue south of Salem Street	12,533	55% SB	Morning Afternoon	902 1,172	67% SB 50% NB/SB	0.07 0.09

			SB	38	40

TMC Data

PDI collected TMC data at the five study intersections on Thursday, October 24, 2024. TMC data was recorded from 8:00 AM to 10:00 AM and from 2:30 PM to 4:30 PM to capture the peak traffic hours during the school day. The counts included passenger vehicles, heavy vehicles, bicycles, and pedestrians.

The morning peak hour for the study area occurred from 8:00 AM to 9:00 AM and the afternoon vehicle peak hour occurred between 3:30 PM and 4:30 PM. However, the afternoon vehicle peak hour for the North Intermediate School driveway, which captures parents and buses entering and exiting the school for pick-up, occurred between 3:15 PM and 4:15 PM. Because of this, traffic volumes occurring between 3:15 PM and 4:15 PM were used for analysis purposes at the intersections of Ballardvale Street at Baland Road/School Driveway and Ballardvale Street at Salem Street to most accurately capture the traffic associated with the existing school during the afternoon peak hour. We used traffic volumes occurring between 3:30 PM and 4:30 PM to analyze the afternoon peak hour at all other study intersections.

Existing Queuing Observations

The Wilmington Department of Public Works (DPW) notes significant queuing issues southbound along Ballardvale Street through the Salem Street and Middlesex Avenue intersection Avenue intersection to the Route 62 and Middlesex Avenue/High Street intersection during morning commuting hours. The first ATR located at Ballardvale Street north of Salem Street captured northbound and southbound traffic in 15-minute increments. According to the ATR data the largest morning southbound 15-minute commuting spikes occurred at 7:00, 8:30, and 9:00 on Wednesday, October 23, 2024, and 7:30, 8:15, and 8:45 on Thursday, October 24, 2024. Notably, measured volumes were higher in the afternoon although the same issue was not noted by the DPW.

Queuing issues present before, during, and after the morning drop-off peak hour of the proposed development according to past DPW observations and the data collected for this study. Additional field observations and data collection would be required to analyze this existing queuing issue.

4.2 Seasonal Adjustment

Nitsch queried MassDOT traffic data for counts nearby that would establish a seasonal adjustment for the volumes we measured in November. No local data was available, so Nitsch used MassDOT's 2023 Weekday Seasonal Adjustment Factors, the most recent year of available data.

All study roadways fall in groups U4-U7 as Urban Minor Arterials, Urban Major Collectors, or Urban Local Roads. Counts within Groups U4-U7 collected during the month of October experience volumes that are 14% higher, respectively, than average counted volumes. To present a conservative approach, we did not seasonally adjust the counted volumes since it would result in lower traffic volumes. MassDOT's 2023 Weekday Seasonal Factors are included in Appendix B.

Figure 4 shows the 2024 existing peak-hour traffic volumes at the study intersections in the form of turning movements. The full TMC dataset is included in Appendix A. Figure 5 shows the 2024 existing peak hour pedestrian and bicycle volumes.

5 Safety Analysis

5.1 Crash Data

We obtained crash data for the study intersections from MassDOT's IMPACT Crash Data Portal for the five most recent complete years of data, 2016-2020. Table 3 summarizes the crash statistics for the five study-area intersections.

A total of 45 crashes were reported within the study area from 2016 to 2020. Twenty-six crashes occurred at the intersection of Route 62 and Middlesex Avenue/High Street, nine crashes occurred at the intersection of Ballardvale Street and I-93 Southbound ramps, eight crashes occurred at the intersection of Salem Street and Middlesex Avenue, and two crashes occurred at the intersection of Ballardvale Street and Baland Road/School Driveway. No crashes occurred at the intersection of Ballardvale Street and Salem Street during the study period.

In terms of severity, eight crashes (18%) resulted in personal injury, and there were no crashes with fatalities. Rear-end crashes were the most frequent type of crash with a total of 26 crashes (58%), followed by angle crashes with 12 (27%), and single vehicle crashes with 4 (9%). One each crash (2% each) occurred of types head-on, same-direction sideswipe, and opposite-direction sideswipe. No crashes involved pedestrians or cyclists. Five crashes (11%) occurred during peak travel hours and seven crashes (16%) occurred during adverse weather or roadway conditions.

At the intersection of Route 62 and Middlesex Avenue/High Street, where 26 of the 45 (58%) crashes occurred, the most common crash type was rear-end, with 17 (65%). This is a common crash type at signalized intersections, and may be attributed to incorrectly timed clearance intervals, poor sight distance, stop-and-go traffic, high speeds, or roadway grades. Both minor street legs have limited stopping sight distance, with curved approaches near the intersection which may contribute to rear-end crashes. At the southbound approach, the speed limit is 45 mph, which can also contribute to rear-end crashes. While this intersection had the most crashes during the study period, only 3 (12%) resulted in personal injury.

Table 3 - Crash Statistics

Intersection	Ballardvale St at I-93 SB Ramps	Ballardvale St at Baland Rd/ School Driveway	Salem Street at Middlesex Ave	Route 62 at Middlesex Ave/ High St	Overall
Total Crashes	**9**	**2**	**8**	**26**	**45**

[a] Rain, snow, sleet/hail/freezing rain/freezing drizzle, blowing sand/snow; Wet, icy, snowy, or slushy road surface

5.2 Intersection Crash Rates

The intersection crash rate is recognized as an effective tool to measure the safety of intersections. Crash rates for intersections are expressed by the number of crashes per million entering vehicles (MEV). Table 4 compares the crash rates for the study intersections with the Statewide and District 4 averages, as appropriate. The intersection crash rate calculations are included in Appendix C.

Table 4 - Crash Rate Summary

Location	Facility Type	Number of Crashes[a]	Crash Rate[b]	Average Rates[b,c]		Comparison to Average Rates	
				District 4	Statewide	District 5	Statewide
Ballardvale St at I-93 SB Ramps	Signalized Intersection	9	0.33	0.73	0.78	55% Lower	58% Lower
Ballardvale St at Baland Rd/ School Driveway	Unsignalized Intersection	2	0.14	0.57	0.57	57% Lower	57% Lower
Salem Street at Middlesex Ave	Unsignalized Intersection	8	0.25	0.57	0.57	68% Lower	68% Lower
Route 62 at Middlesex Ave/ High St	Signalized Intersection	26	0.62	0.73	0.78	16% Lower	21% Lower

[a] Based on 5-year crash history from MassDOT, 2016-2020
[b] Crashes per million entering vehicles (MEV),
[c] Based on the full set of MassDOT crash database entries as queried October 2024

Based on Table 4, crash rates at the five study intersections are all lower than both the district and statewide averages. No crashes occurred at the intersection of Ballardvale Street and Salem Street, so a crash rate was not calculated.

6 Future No-Build Traffic Conditions

Nitsch used the 2024 existing traffic volumes as the baseline for projecting traffic volumes to future 2031 No-Build conditions. To determine future 2031 conditions, the following steps are included:

- Project existing 2024 traffic volumes seven years in the future to the horizon year (2031) using an annual background traffic growth factor to account for regional growth;
- Add traffic volumes associated with any planned developments that may impact the study area;
- Include any planned roadway improvements that may affect traffic volumes; and
- Analyze the study area location to determine future traffic operations.

6.1 Background Growth

General economic shifts and population growth can drive increased traffic volumes in an area over time. Nitsch consulted with MassDOT's Office of Transportation Planning (OTP) to establish a background growth rate to apply to the seven-year planning horizon. Based on recent population trends and the current planning forecasts, OTP recommended an annual growth rate of 0.25 percent per year, which was applied to this study.

6.2 Additional Development

Nitsch contacted the Town of Wilmington's Planning Department to identify any planned developments that will potentially add traffic to the study area. The City identified four development projects that have the potential to impact traffic within the study area, and these projects are described below. The traffic assessments or studies received for these four projects are provided in Appendix D.

Nitsch also queried the MassDOT project information website to identify any planned roadway projects. There are no planned roadway projects in the study area.

181-187 Ballardvale Street

181-187 Ballardvale Street is an approximate 66,100 square-foot (sf) life science research and development building, to be located on the corner of Route 125 and Ballardvale Street, north of the study area. The site currently holds the Ballardvale Technology Center. The Traffic Memo provided by the Town for the project concludes that the project will have nominal impact to the intersection of Route 125 and Ballardvale Street and the intersection of Ballardvale Street and the I-93 Ramps. The trips shown in the Traffic Memo were distributed throughout the network and assigned to the study intersections accordingly.

800 Salem Street

A 237,880 sf warehouse building was recently constructed at 800 Salem Street, approximately 1.5 miles north of the intersection of Route 62 and Middlesex Avenue/High Street. At the time of this report, the building is not yet occupied, so the anticipated traffic from the development was not captured in the traffic counts. A traffic study was provided by the Town of Wilmington for this project and the additional trips estimated by the study were assigned to the intersection of Route 62 and Middlesex Avenue/High Street accordingly. No other study intersection is anticipated to be impacted by this development.

Jefferson Road Multifamily Development

A 108 unit residential development is approved to be located at the corner of Middlesex Avenue and Jefferson Road, approximately one-quarter mile south of the intersection of Route 62 and Middlesex Avenue/High Street. The traffic study received for this project identified the net vehicle trip generation during the weekday morning and weekday afternoon peak hours. We estimate that 50% of the new trips will travel north/south on Route 62 through the study intersection of Route 62 and Middlesex Avenue/High Street. The additional trips were assigned to the intersection accordingly.

Upton Park

Upton Park is a recently constructed office/warehouse development located at 36 and 38 Upton Drive, approximately 1.5 miles north of the project site. At the time of this report, the building is not yet occupied, so the anticipated traffic from the development was not captured in the traffic counts. The traffic study received for this project shows the anticipated new trips from this project at the study intersection of Ballardvale Street and I-93 Southbound ramps. These trips were distributed throughout the network and assigned to the study intersections accordingly.

6.3 2031 No-Build Traffic Volumes

We developed the 2031 No-Build volumes by applying annual growth rates for seven years to the 2024 Existing conditions volumes turning movements and then added the trips generated by the development projects described above. Figure 7 presents the peak hour traffic volumes for 2031 No-Build conditions.

Nitsch Engineering

7 Proposed Future Conditions

7.1 Proposed Development

The existing school will be demolished and a new school will be constructed on the existing site. The new schoolhouse will have 3 stories and an approximate 163,573 square feet of gross floor area (gfa) to accommodate 855 students in Pre-K through 5th grade. The redeveloped building will consolidate three existing schools - the North Intermediate school located at the existing site, the Woburn Street school currently located at 227 Woburn Street, and the Wildwood Early Childhood Center formerly located at 182 Wildwood Street. Two different site layouts were considered during the design, each with their own circulation patterns which are described below. The site plans are provided in Appendix E.

Option A:

Option A provides two primary driveways for access and egress. The driveway at the southern end of the parcel (south driveway) will provide access and egress to and from Salem Street. This driveway will be located near the existing bus loop at the North Intermediate School and will be the designated entrance for visitors and parent-student drop-off and pick-up. The driveway to the east of the site (east driveway) will allow access and egress to and from Ballardvale Street, to be located just north of the existing school driveway. This will be the designated entrance and exit for buses, deliveries, and school staff. With this setup, buses and most passenger cars will have separate circulation routes that will minimize conflicts with each other and streamline the student arrival and dismissal patterns.

In addition to the two driveways, a proposed access road will be located west of the school leading to and from Arlene Avenue. This driveway will be designated for emergency access only.

The bus drop-off/pick-up will occur at the designated loading/unloading zone located at the northeast of the school. Buses will enter from Ballardvale Street and continue west around the school before utilizing the turn-around area at the northwest corner of the school and circling back to the east to stop at the loading/unloading zone. Parents will be directed to enter at the south driveway on Salem Street and drop-off/pick-up at the southeast corner of the school in the designated parent loop, exiting back onto Salem Street. Staff will park in the parking area east of the school accessed by both driveways.

Adjacent to Salem Street and Ballardvale Street, new sidewalks will be constructed as needed to tie into the pedestrian circulation within the site.

A total of 193 parking spaces will be provided on-site. Approximately 600 feet of queuing capacity (approximately 24 vehicles) is proposed on-site for parents, matching the existing amount of on-site queueing.

Option B:

Option B provides two primary driveways for access and egress at the same locations as Option A. However, the driveway at the southern end of the parcel (south driveway) will be the designated entrance and exit for buses and visitors. The east driveway will be the designated entrance and exit for parent-student drop-off and pick-up.

Buses will enter from Salem Street and park in the designated bus loop as they drop-off and pick-up students before circling around and exiting back out onto Salem Street. Parents will be directed to enter on Ballardvale Street near where the existing school entrance is located. They will continue west before utilizing the turn-around

area at the northwest corner of the school and circling back to the east to stop at the loading/unloading zone. The bus loop and driveway provides queuing space for 10 buses at a time and the parent loop provides over 1,700 feet of on-site queuing, enough for approximately 70 passenger vehicles at a time. This is expected to adequately accommodate the morning and afternoon demand due to the staggered arrival rates of parent vehicles.

Note: For the purposes of this traffic study, Option A was used as the preferred option and the analysis presented in this report reflects this driveway use. In follow-up meetings with the Town and discussions with the School Building Committee, Option B later emerged as the preferred alternative based on the additional queuing capacity. While the driveway uses are slightly different, the gross impacts to adjacent intersections under Option B will be the same as presented in the following sections of this study.

7.2 Proposed Trip Generation

Nitsch reviewed the Institute of Transportation Engineers' (ITE) publication *Trip Generation, 11th Edition* to estimate the vehicle trip rates for the existing and the proposed reconstructed school. ITE compiles studies based on similar land uses to establish average trip generation rates based on an independent variable.

Trip generation rates for the elementary school were based on Land Use Code (LUC) 520 (elementary school). The weekday morning drop-off and weekday afternoon pick-up trips are outlined in Table 5 and the ITE data is provided in Appendix F.

Table 5 - ITE Trip Generation

Time	Elementary School (LUC 520)	
	Existing with 250 Students	Redeveloped with 855 Students
Weekday Daily	568	1942
Entering	284	971
Exiting	284	971
Weekday Morning Peak	188	641
Entering	101	346
Exiting	87	295
Weekday Afternoon Peak	113	385
Entering	52	177
Exiting	61	208

Since the existing school driveway is used for staff and parent drop-off/pick-up, the actual number of peak-hour trips generated by the existing land use can be taken from the TMCs at the driveway. The existing land use serves 250 students, meaning the peak-hour trip generation for the proposed redevelopment serving 855 students can be extrapolated by multiplying the existing trip generation by a factor of 3.42, given in the equation:

$$\frac{Future\ Enrollment}{Current\ Enrollment} = \frac{855}{250} = 3.42$$

Table 6 shows the peak-hour trip generation based on the existing counts, the predicted trip generation for the redeveloped school, and the net increase.

Table 6 - Existing and Proposed Trip Generation (As Counted)

Time	Elementary School (LUC 520)		
	North Intermediate School		
	Existing with 250 Students	Redeveloped with 855 Students	Net Increase
Weekday Morning Peak	71	243	172
Entering	49	168	119
Exiting	22	75	53
Weekday Afternoon Peak	118	403	285
Entering	39	133	94
Exiting	79	270	191

As shown in Table 6, the proposed redeveloped School with 855 students would result in approximately 172 additional trips (119 trips in and 53 trips out) during the weekday morning drop-off time and 285 additional trips (94 trips in and 191 trips out) during the weekday afternoon pick-up time. Note that the weekday morning peak hour trips are lower than the ITE estimates, but the weekday afternoon peak hour trips are higher than the ITE estimates.

7.2.1 Bus Trips

Additionally, Nitsch reached out to the principal at the North Intermediate School for bus volumes. In the existing condition, 12 full-size buses are used for pick-up, and 10 full-size buses are used for drop-off. These buses currently serve both the Woburn Street school and North Intermediate School, dropping students off at North Intermediate in the morning before dropping off the remaining first through third graders at Woburn Street (and vice-versa in the afternoon). Since the proposed redevelopment consolidates these two schools, the bus volumes will remain the same as in the existing condition and buses will only need to stop at one school. Bus trips will have a separate distribution pattern than the trips described above, which will be referred to as Passenger Car Trips. Existing Wildwood Early Childhood Center bus trips were not considered separately and were consolidated with North Intermediate School and Woburn Street School routes to remain conservative with Passenger Car Trip distribution. Since the redeveloped school will serve the same catchment area as the existing school, there is expected to be minimal change to the school bus routes.

7.2.2 2031 No-Build (Without School) Traffic Volumes

Due to the relocation of the school driveways, the net trips cannot be directly applied to the existing traffic volumes. Before the new trips can be added into the network, all existing school trips must be removed from the network and then added back in heading to and from the proposed site driveways. We estimated the trip distribution for the existing North Intermediate school based on the school's catchment area (a process discussed in Section 7.3) and removed those trips from the network. Figure 7 shows the 2031 No-Build (Without School) Peak Hour traffic volumes.

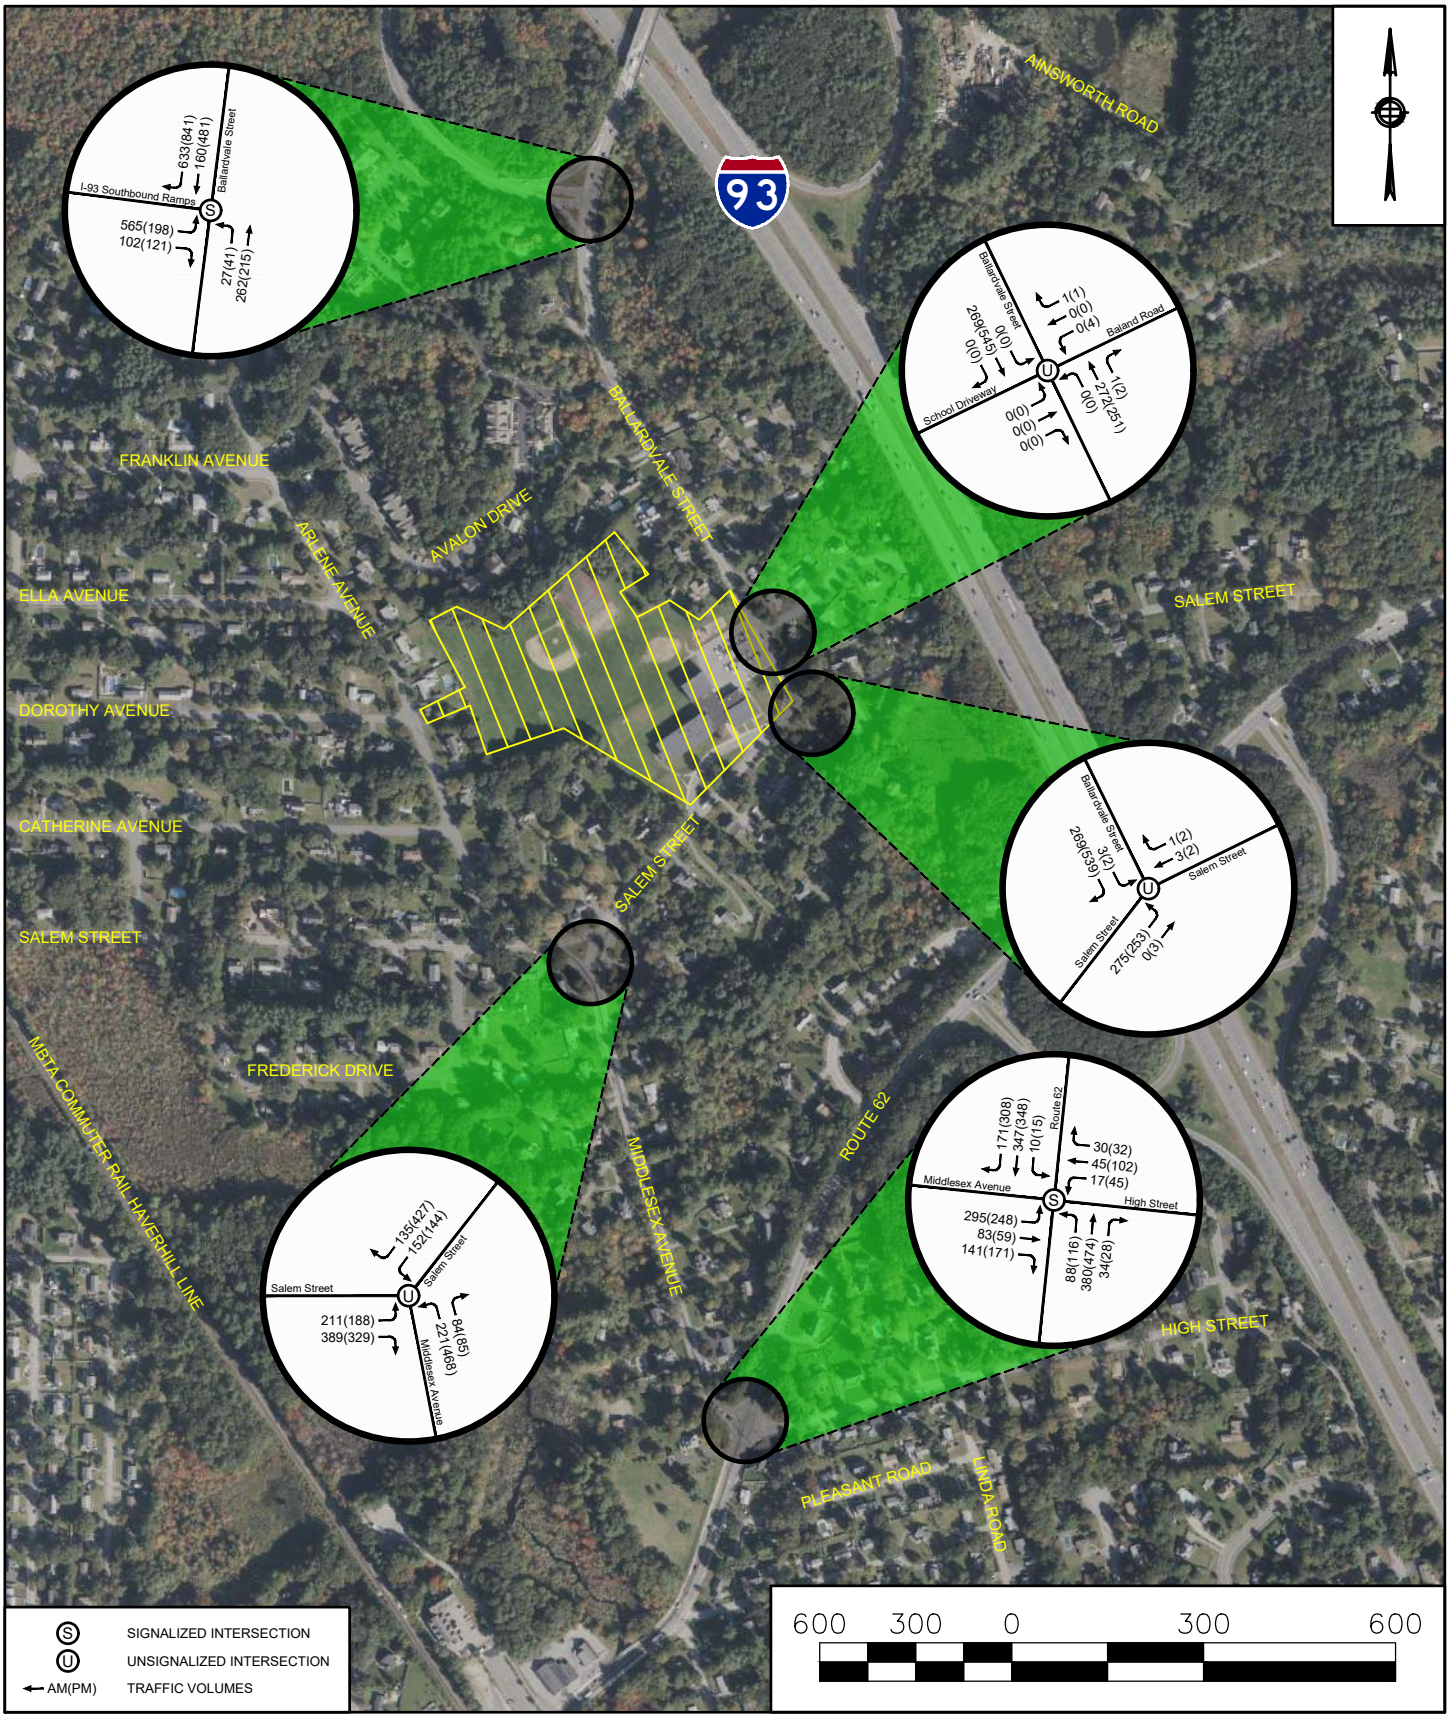

Figure 7 - 2031 No-Build (Without School) Weekday Peak Hour Traffic Volumes

North Intermediate School
320 Salem Street
Wilmington, MA

Data Source: BingMaps
Nitsch Project #: 15428

Nitsch Engineering

7.3 Trip Distribution

The trips to/from the proposed school were distributed and assigned based on the logical travel routes through the existing roadway network within the town of Wilmington. Similar to trip generation, the distribution patterns were split between passenger car trips and bus trips.

Cropper GIS Consulting, LLC completed a Time and Distance Analysis for Wilmington Public Schools in 2023 as part of a long-range planning effort. To determine passenger car distributions, Nitsch used a map included in that analysis displaying the catchment area and student population density for the east school district, which the Wildwood, Woburn Street, and North Intermediate schools serve. Using this map, the catchment area was subdivided based on the most likely route to take to the school and a weight was assigned to it based on the student population density within the subdivision. These weights were then converted into percentages. The catchment map is provided in Appendix G. Table 7 shows the distribution of how passenger cars are predicted to enter and exit the network.

Table 7 - Passenger Car Distribution

Street and Direction	Distribution
Ballardvale Avenue, to/from the north	5%
Salem Street, to/from the west	15%
Middlesex Avenue to/from the southeast	50%
High Street, to/from the southwest	30%

These percentages were carried through the network based on the appropriate route the vehicles would take through the network. It is assumed all of these passenger cars will be entering and exiting through the south driveway on Salem Street. The passenger car trip distribution percentages are shown in Figure 8.

For the bus trips, a slightly different method was used. As discussed in section 7.2.1, the bus routes at the proposed school are not expected to change significantly from the routes at the existing school. As such, the existing school bus routes were converted into a distribution that was carried through the network. Table 8 shows the distribution of how buses are predicted to enter and exit the network.

Table 8 - Bus Distribution

Street and Direction	Distribution
Ballardvale Avenue, to/from the north	10%
Salem Street, to/from the west	20%
Middlesex Avenue to/from the southeast	50%
High Street, to/from the southwest	20%

It is assumed that all buses will enter and exit through the driveway on Ballardvale Street. The Bus Trip Distribution percentages are shown in Figure 9.

Nitsch Engineering

7.4 Mode Split and Assignment

To accurately determine the traffic impacts of the proposed school, alternative modes of transportation were considered in the trip assignment calculations. Since the school is located in a residential area, some students may walk to school. However, this is not expected to be a significant portion of the trips due to most students living outside of a 1/2 mile radius from the school. Based on information received from Wilmington Public Schools, approximately 5% of students (12 students) at the existing North Intermediate school walk to school, 65% take the bus, and the remaining 30% are picked up/dropped off by a parent or guardian.

The number of students walking to the proposed school is not expected to increase compared to existing, since the additional students the school serves will be younger and less likely to commute on foot. As discussed in earlier sections, the number of bus trips are not expected to increase since the current buses serve both the North Intermediate and Woburn Street schools. The passenger car trips, which were calculated based on the existing driveway counts, are expected to increase in proportion to the increase in number of students the school serves.

The peak hour trip generation includes the total amount of pre-kindergarten through fifth grade students (855) including all three schools. The specific mode split of the Wildwood Early Childhood Center was not indicated, therefore we proceeded using mode split information from the North Intermediate School principal. As the grades kindergarten through fifth grade are going to be the primary trip generation driver, it is deemed appropriate to maintain the existing mode split. Table 9 shows the project trips by mode for the proposed school.

Table 9 - Project Trips by Mode

Time	Mode		
	Walking Trips	Passenger Car Trips	Bus Trips
Weekday Morning Peak	24	243	24
Entering	12	168	12
Exiting	12	75	12
Weekday Afternoon Peak	24	403	20
Entering	12	133	10
Exiting	12	270	10

The passenger car and bus distributions were then applied to their respective trips shown in Table 9. The project trip assignment to the study intersections is shown in Figures 10, 11, 12, and 13.

7.5 Proposed 2031 Build Volumes

For the proposed school, the corresponding trip assignment volumes were added to the 2031 No-Build (Without School) Volumes that yield the 2031 Build Volumes. The 2031 Build Peak Hour Turning Movement Volumes are shown in Figure 14.

7.6 Parking Generation and Adequacy

Nitsch used the Institute of Transportation Engineers' (ITE) publication *Parking Generation Manual, 6th Edition* to estimate the parking demand for the proposed development. Parking generation rates for the proposed school were based on Land Use Code (LUC) 520 (Elementary School). The calculated parking demand for the combined school with projected student population of 855 students is 120 spaces. The parking generation worksheet is provided in Appendix F.

As shown in Table 10, the 193 striped parking spaces exceed the 120 parking spaces recommended by ITE and thereby provide adequate capacity for the required parking demand.

Table 10 - Proposed Parking Summary

Parking Spaces Provided	ITE Parking Generation for LUC 520
193 Striped	120

8 Traffic Analysis

8.1 Evaluation Criteria

Traffic operations at intersections are evaluated using the performance measures of average vehicular delay, level of service (LOS), volume-to-capacity (v/c) ratio, and average and 95th percentile queue lengths.

LOS is a qualitative measure that describes operating conditions through letter designations, from A to F. It is defined for intersections in terms of average control delay per vehicle. LOS A indicates the most favorable condition, with minimum traffic delay. LOS F represents the worst condition where there is significant traffic delay. LOS D or better is typically considered desirable for peak-hour operation in urban and suburban settings. The delay designations for each LOS level differ slightly between signalized and unsignalized intersections due to driver expectations and behavior. Table 11 summarizes the LOS criteria for intersections as used in this analysis.

Table 11 - Intersection Level of Service Criteria

Level of Service	Average Control Delay (sec/veh)	
	Signalized	Unsignalized
A	0-10	0-10
B	>10-20	>10-15
C	>20-35	>15-25
D	>35-55	>25-35
E	>55-80	>35-50
F	>80	>50
Source: HCM 6th Edition		

For signalized intersections, LOS is reported by lane group, by approach, and for the entire intersection. For unsignalized intersections, the analysis assumes that the traffic on the mainline is not affected by traffic on the side street. As such, an unsignalized intersection's LOS is generally reported for left-turns on the mainline and all side street movements, and an overall intersection LOS is not always determined.

The v/c ratio is a measure of congestion at an intersection approach. The capacity of a facility is the maximum hourly rate at which persons or vehicles can be expected to traverse a point or a uniform section of a lane or roadway under prevailing roadway, traffic, and control conditions. A v/c ratio below one indicates that the intersection approach has adequate capacity to serve the arriving traffic demand. A v/c ratio that approaches or exceeds 1.0 indicates traffic congestion or poor operating conditions. In that situation, vehicles arrive faster than they can be served, so queue lengths can theoretically grow indefinitely, which is the unstable condition.

Since arrival volumes fluctuate throughout the peak hour, queue lengths vary. The average (50th percentile) queue length represents the maximum back of queue on a typical cycle for a signalized intersection. Average queue lengths are not reported for unsignalized intersections. The 95th percentile queue, reported for both signalized and unsignalized intersections, occurs with 95th percentile traffic volumes, and its length commonly denotes the farthest extent of the vehicle queue.

8.2 Capacity Analyses

We performed capacity analyses for the study intersections under 2024 Existing conditions, 2031 No-Build conditions, and 2031 Build conditions during the weekday morning and afternoon peak hours using Trafficware's Synchro 11 software. Synchro uses, in part, the traffic operational analysis methodology of the Transportation Research Board's *Highway Capacity Manual* (HCM).[1] Since HCM 6th Edition does not support exclusive pedestrian phases, we generated the results of the capacity analyses using Synchro's Percentile Delay Method for delay, v/c ratio, and queue lengths, supported by HCM 2000 Edition methodology for unsignalized intersection analysis and Synchro's Lane, Volumes, and Timings for signalized intersection analysis. The Synchro output sheets for the capacity analyses are included in Appendix H.

8.2.1 2024 Existing Conditions Capacity Analysis

The first analysis evaluated traffic operations with 2024 existing traffic volumes under existing geometric conditions and signal timing/phasing. We derived peak hour factors (PHFs) and heavy vehicle percentages from the TMC data. We applied PHFs on an approach-by-approach basis, and we applied heavy vehicle percentages by lane group. Table 12 summarizes the capacity analysis results for the 2024 Existing conditions.

[1] *Highway Capacity Manual 6th Edition (HCM 6th)*, Transportation Research Board, Washington, D.C., 2016.

[d] 50th and 95th percentile queue lengths (feet) based upon average vehicle length of 25 feet
~ Volume exceeds capacity, queue is theoretically infinite; queue shown is maximum after two cycles
# 95th percentile volume exceeds capacity, queue may be longer; queue shown is maximum after two cycles

Under 2024 Existing conditions, the intersection of Middlesex Avenue and Salem Street operates overall at LOS A in the morning peak hour and LOS F in the afternoon peak hour. It is important to note that due to the atypical layout of this intersection, most modelling software and HCM methodology does not have the full capability to portray the actual operations of the intersection. However, the capacity issue shown in the weekday afternoon peak hour was confirmed in the field. Additionally, conversations with the DPW indicate the intersection experiences significant queues in the morning peak hour, primarily in the southbound direction, and operates below LOS A. Significant queues were observed for the northbound direction primarily in the afternoon peak hour.

Both the unsignalized intersections of Salem Street at Ballardvale Street and Ballardvale Street at School Driveway/Baland Road operate at LOS A during both peak hours in the existing condition. During the weekday afternoon peak hour, the Baland Road westbound movement operates at LOS D and the Driveway eastbound movement operates at LOS C. All other movements operate at LOS B or better.

The signalized intersection of Ballardvale Street at I-93 Southbound Ramps operates overall at LOS B during the weekday morning peak hour and LOS A during the weekday afternoon peak hour. The Ballardvale Street northbound left, northbound through, and southbound through movements operate at LOS E during the weekday morning peak hour. All other movements operate at LOS C or better during both peak hours and indicate no significant queueing.

The signalized intersection of Route 62 at Middlesex Avenue/High Street operates overall at LOS C during both peak hours. The Middlesex Avenue eastbound left/through movement operates at LOS D during both peak hours. According to conversations with the DPW, the Middlesex eastbound approaches may experience longer queues and a lower LOS than modeled. The 95th percentile volume exceeds capacity at this movement for both peak hours in the existing condition. The Middlesex Avenue northbound left and Route 62 southbound left turn movements both operate at LOS E during the weekday morning peak hour and LOS D during the weekday afternoon peak hour. The Route 62 southbound through movement operates at LOS E during the morning peak hour and D in the afternoon peak hour, and all other movements operate at LOS C or better.

8.2.2 2031 No-Build Conditions Capacity Analysis

Under future No-Build conditions, we kept lane geometry, traffic control, and signal timing parameters the same as existing and applied the future volumes determined in Section 6.3 with the same heavy vehicle percentages and PHFs as existing. Table 13 summarizes the analysis results for 2031 No-Build conditions.

Table 13 - Capacity Analysis Summary: 2031 No-Build Conditions

[a] Direction: NB = Northbound, SB = Southbound, EB = Eastbound, WB = Westbound;
Movement: L = Left-turn, T = Through movement, R = Right-turn
[b] Overall v/c ratio is the maximum v/c ratio among lane groups
[c] Average vehicle delay (seconds)
[d] 50th and 95th percentile queue lengths (feet) based upon average vehicle length of 25 feet
~ Volume exceeds capacity, queue is theoretically infinite; queue shown is maximum after two cycles
# 95th percentile volume exceeds capacity, queue may be longer; queue shown is maximum after two cycles
Err Volume significantly exceeds capacity

Under 2031 No-Build conditions, the intersection of Middlesex Avenue and Salem Street continues to operate overall at LOS A in the morning peak hour and LOS F in the afternoon peak hour. The capacity issues shown in the existing conditions analysis and observed in the field are expected to get slightly worse in the no-build condition.

Both the unsignalized intersections of Salem Street at Ballardvale Street and Ballardvale Street at School Driveway/Baland Road continue to operate at LOS A during both peak hours in the no-build condition. During the

weekday afternoon peak hour, the Baland Road westbound movement operates at LOS D and the Driveway eastbound movement operates at LOS C. All other movements continue to operate at LOS B or better.

Under 2031 No-Build conditions, the intersection of Ballardvale Street at I-93 Southbound Ramps continues to operate overall at LOS B during the weekday morning peak hour and LOS A during the weekday afternoon peak hour. The Ballardvale Street northbound left movement and northbound through movement both operate at LOS E during the weekday morning peak hour. The Ballardvale Street southbound through movement continues to operate at LOS D during the weekday morning peak hour, with all other movements operating at LOS C or better during both peak hours and no significant queueing. There are slight increases in delay at each movement due to the expected increase in vehicle traffic but no anticipated capacity issues.

The signalized intersection of Route 62 at Middlesex Avenue/High Street degrades from LOS C overall to LOS D overall during the weekday morning peak hour. The Middlesex Avenue eastbound left/through movement degrades from LOS D to LOS E during the weekday afternoon peak hour. The Middlesex Avenue northbound left and Route 62 southbound left turn and southbound through movements both operate at LOS E during the weekday morning peak hour and LOS D during the weekday afternoon peak hour. All other movements operate at LOS C or better.

8.2.3 2031 Build Conditions Capacity Analysis

We performed capacity analyses for the proposed Build conditions for the additional traffic generated by the proposed school. Under these future Build conditions, we kept lane geometry, traffic control, and signal timing parameters the same as existing for intersections, with the exception of the intersection of Ballardvale Street and Baland Road, where the existing school driveway leg will be removed. We applied the future volumes determined in Section 7.5 with the same heavy vehicle percentages and PHFs as existing. We also included the two new intersections with access driveways for the proposed school: Salem Street at Proposed School Driveway and Ballardvale Street at Proposed Bus Driveway. Table 14 summarizes the analysis results for the 2031 Build conditions.

Table 14 - Capacity Analysis Summary: 2031 Build Conditions

[a] Direction: NB = Northbound, SB = Southbound, EB = Eastbound, WB = Westbound;
Movement: L = Left-turn, T = Through movement, R = Right-turn
[b] Overall v/c ratio is the maximum v/c ratio among lane groups
[c] Average vehicle delay (seconds)
[d] 50th and 95th percentile queue lengths (feet) based upon average vehicle length of 25 feet
~ Volume exceeds capacity, queue is theoretically infinite; queue shown is maximum after two cycles
# 95th percentile volume exceeds capacity, queue may be longer; queue shown is maximum after two cycles
Err Volume significantly exceeds capacity

Under 2031 Build conditions, operations at the intersection of Middlesex Avenue and Salem Street are expected to further degrade due to the significant increase in trips traveling north and south through the intersection. The modeling software shows a capacity error in place of calculating a v/c ratio or delay values, further demonstrating the limitations of the software and HCM methodology at this non-traditional intersection.

Both the unsignalized intersections of Salem Street at Ballardvale Street and Ballardvale Street at Baland Road continue to operate at LOS A during both peak hours in the build condition, indicating no operational issues. Operations at the intersection of Ballardvale Street and Baland Road improve slightly due to the absence of the existing school driveway leg.

Under Build conditions, the intersection of Ballardvale Street at I-93 Southbound Ramps continues to operate overall at LOS B during the weekday morning peak hour and LOS A during the weekday afternoon peak hour. The Ballardvale Street northbound left movement and northbound through movement both operate at LOS E during the weekday morning peak hour. The Ballardvale Street southbound through movement continues to operate at LOS D during the weekday morning peak hour, with all other movements operating at LOS C or better during both peak hours and no significant queueing. The proposed school adds very few trips to the intersection and consequently has little to no impact on delay for each movement.

The signalized intersection of Route 62 at Middlesex Avenue/High Street degrades from LOS C to LOS D overall during the weekday afternoon peak hour. The Middlesex Avenue eastbound left/through movement degrades to LOS F during both peak hours. The Route 62 southbound left movement degrades from LOS D to LOS E during the weekday afternoon peak hour. The High Street westbound throughleft movement degrades from LOS C to LOS D during the weekday afternoon peak hour. All other movements operate at LOS C or better.

The two proposed intersections at the proposed school's driveway each operate overall at LOS A. The southbound movement at the south driveway onto Salem Street operates at LOS D during the weekday afternoon peak hour, which is typical during the busy dismissal period at a large school. Any queuing at this intersection will occur onsite, with no spillover to the surrounding local roadways.

This Build condition analysis indicates no issues at either proposed site driveway. However, existing capacity issues present at the intersection of Salem Street at Middlesex Avenue and Route 62 at Middlesex Avenue/High Street are expected to worsen under the proposed Build condition.

8.2.4 2031 Build Conditions (With Mitigation) Capacity Analysis

The 2031 Build Conditions capacity analysis indicated a capacity issue at the signalized intersection of Route 62 at Middlesex Avenue/High Street and at the unsignalized intersection of Salem Street at Middlesex Avenue during both peak hours. At the intersection of Salem Street at Middlesex Avenue, the 2024 Existing Conditions analysis shows that the capacity issue is a pre-existing condition and is not caused by additional traffic generated by the school so mitigation will not be included in this project.

Using 2031 Build Conditions volume inputs, we analyzed the intersection of Route 62 at Middlesex Avenue/High Street under a mitigated scenario using signal retiming. Signal retiming is a cost-effective way to reduce congestion and delays. This scenario keeps the existing geometry and phasing but adjusts phase splits and cycle length. Table 15 shows the 2031 Build Conditions (With Mitigation).

Table 15 - Capacity Analysis Summary: 2031 Build Conditions (With Mitigation)

Location	Direction / Movement[a]	Weekday Morning Peak Hour					Weekday Afternoon Peak Hour				
		v/c Ratio[b]	Delay[c]	LOS	Queue[d] 50th	Queue[d] 95th	v/c Ratio[b]	Delay[c]	LOS	Queue[d] 50th	Queue[d] 95th

	Middlesex Ave NB - TR	0.63	29.1	C	198	#531	0.75	35.9	D	251	#701
	Route 62 SB - L	0.17	55.5	E	7	29	0.23	58.2	E	9	35
	Route 62 SB - T	0.92	64.1	E	233	#513	0.91	66.7	E	207	#508
	Route 62 SB - R	0.40	13.1	B	24	92	0.59	13.3	B	28	138
	Overall	***1.01***	***44.7***	***D***	***-***	***-***	***1.00***	***41.2***	***D***	***-***	***-***

[a] Direction: NB = Northbound, SB = Southbound, EB = Eastbound, WB = Westbound;
Movement: L = Left-turn, T = Through movement, R = Right-turn
[b] Overall v/c ratio is the maximum v/c ratio among lane groups
[c] Average vehicle delay (seconds)
[d] 50th and 95th percentile queue lengths (feet) based upon average vehicle length of 25 feet
~ Volume exceeds capacity, queue is theoretically infinite; queue shown is maximum after two cycles
# 95th percentile volume exceeds capacity, queue may be longer; queue shown is maximum after two cycles

As shown above, the optimized signal timing at the intersection of Route 62 at Middlesex Avenue/High Street indicates an improvement in operations compared to the 2031 Build Conditions. During the weekday morning peak hour, the intersection remains overall at LOS D, with delay reduced by three seconds. The Middlesex Avenue eastbound shared left/through movement improves from LOS F to LOS E, with delay reduced by 15 seconds. All other movements remain at the same LOS as in the 2031 Build Conditions.

During the weekday afternoon peak hour, the intersection remains overall at LOS D, with delay reduced by nine seconds. The Middlesex Avenue eastbound shared left/though movement improves from LOS F to LOS E, with a significant decrease in delay. The High Street westbound left/though movement improves from LOS D to LOS C, with delay reduced by 13 seconds. All other movements operate at LOS E or better.

The analysis suggests that potential capacity issues from the increased trips due to the proposed development can be mitigated at the intersection of Route 62 and Middlesex Avenue/High Street through signal retiming.

9 Sight Distance

Stopping Sight Distance (SSD) is the length of the roadway ahead that is visible to the driver and should be long enough to enable a vehicle traveling at or near the design speed to stop before reaching a stationary object in its path. Stopping sight distance is the sum of the distance traversed by the vehicle from the instant the driver sights an object necessitating a stop to the instant the brakes are applied, and the distance needed to stop the vehicle from the instant brake application begins.

According to Case B1 in Section 9 from *AASHTO: A Policy on Geometric Design of Highways and Streets 6th edition*, Intersection Sight Distance (ISD) is the recommended length of the leg of the departure sight triangle along the major road in both directions for a vehicle stopped on the minor road waiting to depart that would cause a vehicle on the major roadway to slow down to 70% of its speed. The critical departure sight triangles for the Site Driveway(s) at Ballardvale Street and Salem Street are for traffic approaching from either the left or right. The SSD and ISD values associated with a given design speed are shown in Table 16.

Table 16 – Sight Distance Criteria

Design Speed (mph)	Design Stopping Sight Distance[1] (feet)	Recommended Intersection Sight Distance[2] (feet)
15	80	170
20	115	225
25	155	280
30	200	335
35	250	390
40	305	445
45	360	500
50	425	555
55	495	610
60	570	665
65	645	720
70	730	775
75	820	830
80	910	885

Source: *A Policy on Geometric Design of Highways and Streets, AASHTO, Washington DC (2011)*

[1]Design value based on a grade of less than 3%, a brake reaction distance predicted on a time of 2.5 seconds and a deceleration rate of 11.2 feet per second squared

[2]Recommended value based on Case B1 - a stopped passenger car to turn left onto a two-lane highway with no median and grades 3% or less

Standard practice is to use the 85th percentile speed or 5 MPH over the posted speed limit as the design speed. The posted speed limit for Ballardvale Street and Salem Street is 25 mph. Just north of the intersection of Ballardvale Stret and Salem Street, there is a 20 mph posted speed limit for the southbound direction. However, a posted speed limit of 25 mph was assumed for sight distance purposes to be conservative. According to their respective speed limit, the sight distances were selected for comparison between the site-measured and the

calculated. For both streets, sight distance was measured at approximately 10 feet from the edge of pavement based on observed driving behavior. Table 17 summarizes the sight distance evaluation.

Table 17 – Sight Distance Evaluation

Intersecting Street	Stopping Sight Distance (SSD)			Intersection Sight Distance (ISD)		
	Traveling	Calculated	Measured	Looking	Calculated	Measured
Ballardvale Street and Proposed Bus Driveway	NB	200’	375’	Left	335’	>500’
	SB	200’	> 500’	Right	335’	375’
Salem Street and Proposed School Driveway	EB	200’	> 500’	Left	335’	425’
	WB	200’	425’	Right	335’	350’

As shown in Table 17, the geometries of the adjacent roadways provide ample sight distance. The SSD is adequate for both the northbound and southbound traffic on Ballardvale Street and the eastbound and westbound traffic on Salem Street, and the ISD is also adequate for vehicles exiting the Site Driveways onto Ballardvale Street and Salem Street.

10 Conclusions and Recommendations

10.1 Conclusions

Nitsch has prepared this Traffic Impact Study (TIS) for the proposed redevelopment of the North Intermediate school at 320 Salem Street in Wilmington, MA.

We studied five existing intersections, two signalized and three unsignalized, to establish the impact the proposed school would have on intersection traffic operations.

The crash data over the last five years available from MassDOT indicates that all five study intersections have crash rates below the District 4 and statewide averages. No fatalities occurred amongst the crashes identified.

For future conditions, we projected the existing traffic volumes within the study area over a 7-year period to the horizon year 2031 using an annual growth rate of 0.25%, based on expected regional growth and added vehicle trips expected to be generated by four development projects in the study area.

We used the projected student enrollment to estimate the volume of vehicle trips the proposed school would generate based on the traffic data we collected at the existing school driveway. We distributed the new vehicle trips through the roadway network using the assumed travel routes based on a student population density map and applied a separate distribution to buses based on their existing routes.

We performed a vehicle capacity analysis to compare the weekday morning and afternoon peak hours of the 2024 Existing conditions, 2031 No-Build conditions, and 2031 Build Conditions for each of the study intersections. Under existing conditions, our analysis indicates operational issues at the intersection of Salem Street and Middlesex Avenue. The delay and v/c ratios for the study intersections are expected to increase under 2031 No-Build Conditions, and they would continue to increase under 2031 Build Conditions. At the intersection of Route 62 and Middlesex Avenue/High Street, traffic generated from the proposed development causes the Middlesex Avenue eastbound shared through/left movement to operate at LOS F during both peak hours under the 2031 Build Conditions. The proposed site driveways are both expected to operate well at LOS D or better.

While our analysis was based on site layout Option A, the gross impacts to adjacent intersections will be the same as the current preferred alternative, Option B. Option B will also provide significantly more on-site queueing capacity so that the additional school traffic will not spill over onto local roadways.

Stopping sight distance and intersection sight distance was evaluated at the proposed driveways, with all driveways meeting or exceeding the minimum required sight distance.

10.2 Recommendations

The proposed school is expected to cause operational issues at the intersection of Route 62 and Middlesex Avenue/High Street. We performed a vehicle capacity analysis at that intersection under 2031 Build Conditions using optimized signal timing, which shows all movements operating at LOS E or better and the intersection improving to an overall LOS D during both peak hours. Nitsch recommends that this intersection be retimed as part of the project to minimize delay from the added traffic.

The existing conditions analysis indicates a capacity issue at the intersection of Salem Street and Middlesex Avenue. Based off an initial review, a roundabout may be an appropriate control strategy to increase capacity at this intersection. Nitsch recommends that the town explore this and other potential strategies to reconfigure the intersection and alleviate the existing operational deficiencies.

RE: **Proposed Life Science/Biomanufacturing Facility**
181-187 Ballardvale Street, Wilmington, Massachusetts

MDM Transportation Consultants, Inc. (MDM) has conducted this traffic impact assessment (TIA) for a proposed facility to be located at 181-187 Ballardvale Street in Wilmington, Massachusetts. The location of the site relative to the adjacent roadway network is shown in **Figure 1.** This TIA provides a primary summary of the baseline traffic conditions at the Site and adjacent roadways/ intersections, evaluates existing and projected trip generation, quantifies incremental traffic impacts of the Site development on area roadways, and evaluates safety-related conditions at key study locations that provide access to the Site.

Key findings of the assessment are as follows:

- *Baseline Traffic Volumes.* Ballardvale Street carries approximately 19,956 vehicles per day (vpd) on weekdays. Peak hour traffic flow on Ballardvale Street ranges from approximately 935 to 1,060 vehicles per hour (vph) which represents 6 to 7 percent of daily traffic flow. The traffic flow on Ballardvale Street is skewed heavily in the northbound direction during the weekday morning peak hour and southbound during the weekday evening peak hour. The travel patterns are consistent with employee patterns for the commercial uses along that section of Ballardvale Street.

- *Safety Review.* Based on extensive review of MassDOT crash data, the study intersections all experienced crash rates well below the District 4 average and none of the intersection are listed as HSIP locations. No immediate safety countermeasures are warranted based on the crash history at the remaining study intersections.

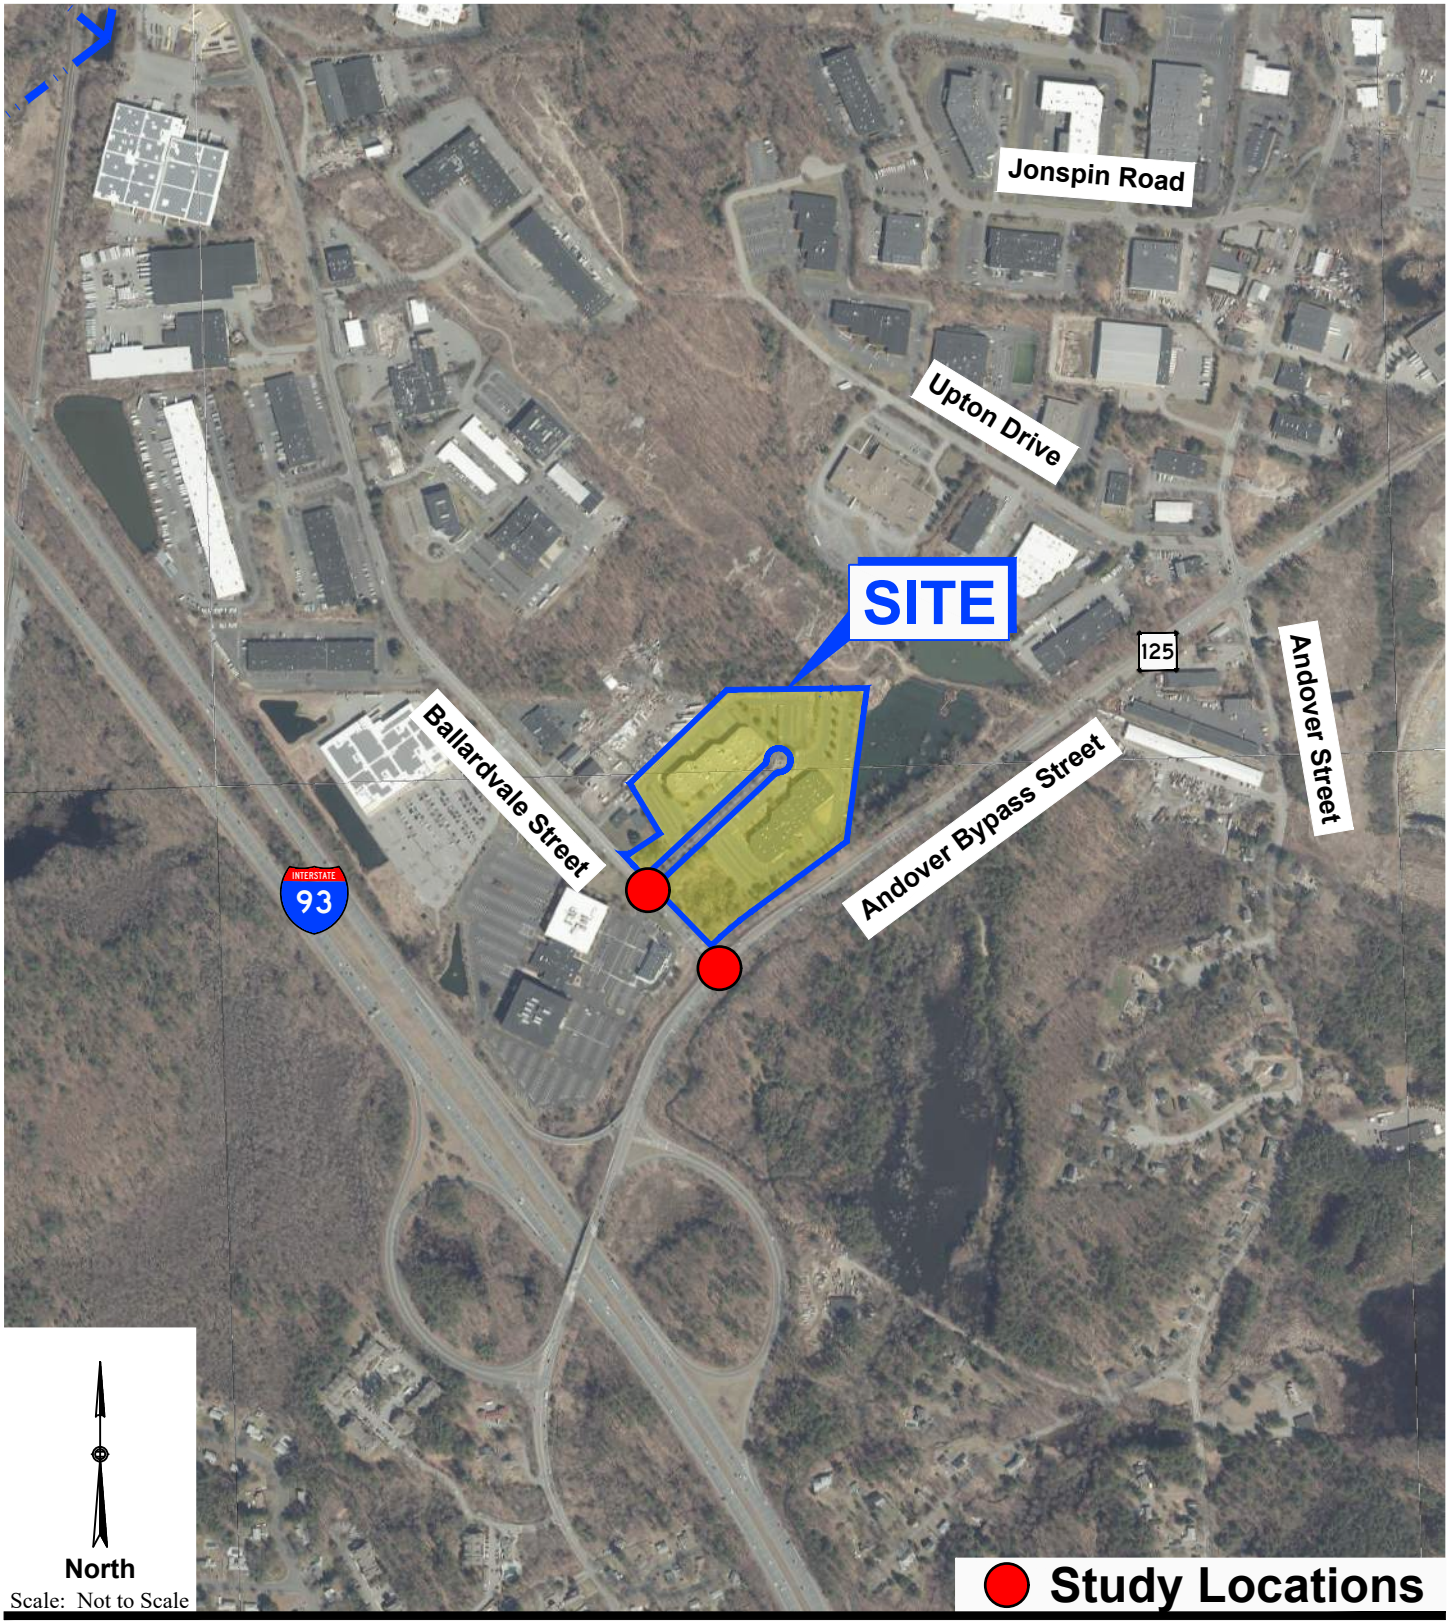

Figure 1

Site Location

MDM TRANSPORTATION CONSULTANTS, INC.
Planners & Engineers

Date: October 2023
Dwg No. 1325 TIS.dwg
Copyright © by MDM Transportation Consultants, Inc. All rights reserved.

- *Traffic Generation*. Projected trip generation for the Site based on industry-standard trip rates the proposed development is estimated to generate approximately 72 vehicle trips (60 entering and 12 exiting) during the weekday morning peak hour and 73 vehicle trips (17 entering and 56 exiting) during the weekday evening peak hour. On a daily basis, the proposed development is estimated to generate approximately 512 vehicle trips.

- *Nominal Impact.* The project at full buildout will result in less than 5% increase in traffic along Ballardvale Street and the gateway intersection at Route 125. The increase in trips due to the project are not expected to alter operating conditions compared to No-Build conditions with less than 2 new total vehicle trip or less every minute.

In summary, MDM finds that incremental traffic associated with the proposed development is not expected to materially impact operating conditions at the study intersections. Implementation of access/egress improvements, proposed pedestrian improvements, and a TDM program as outlined under *Recommendations and Conclusions* will establish a framework of minimizing Site traffic impacts.

PROJECT DESCRIPTION

The site consists of approximately 5.38± acres of land located at the northeastern corner of the Route 125 at Ballardvale intersection. The existing Site includes the Ballardvale Technology Center with includes two 104,900 sf office/manufacturing buildings. Access/egress is via a full access driveway along Ballardvale Street.

Under the proposed Site programming, the proposed facility will provide a total building area of approximately 71,300 square feet (sf) of life science/biomanufacturing space use within an expansion of the existing office park. Access/egress to the site will remain via a single driveway connection to Ballardvale Street. The preliminary site layout prepared by HighPoint Engineering, Inc. is presented in **Figure 2**.

BASELINE TRAFFIC & SAFETY CHARATERISTICS

An overview of roadway classification and geometric characteristics is provided below for the adjacent study roadway.

Ballardvale Street

Ballardvale Street is generally a north-south roadway under local jurisdiction and is classified by the Massachusetts Department of Transportation (MassDOT) as an Urban Minor Arterial roadway. The roadway becomes River Street to the north before connecting to Andover Street in Andover. To the south of the site, Ballardvale Street connects to Route 125 before becoming Middlesex Avenue and providing a connection to Route 62. Adjacent to the site, Ballardvale Street provides a single travel lane in the northbound direction and two travel lanes in the southbound direction, separated by a double yellow centerline. Additional turn lanes are provided at its major intersections. No pedestrian or bicycle facilities are provided withing the study area. Land use along Ballardvale Street in the immediate study area are primarily commercial uses including industrial and office uses in addition to a Target and retail plaza.

Baseline Traffic Data

Daily Traffic Counts

Daily traffic volumes along Ballardvale Street in the site vicinity are summarized in **Table 1** and included in the **Attachments**.

TABLE 1
ROADWAY TRAFFIC-VOLUME SUMMARY – BALLARDVALE STREET

Time Period	Daily Volume (vpd)[1]	Percent Daily Traffic[2]	Peak Hour Volume (vph)[3]	Peak Flow Direction[4]	Peak Hour Directional Volume (vph)
Weekday Morning Peak Hour	19,956	6%	1,251	75% NB	935
Weekday Evening Peak Hour	19,956	7%	1,434	74% SB	1,060

[1]Two-way daily traffic expressed in vehicles per day.
[2]The percent of daily traffic that occurs during the peak hour.
[3]Two-way peak-hour volume expressed in vehicles per hour.
[4]NB = Northbound, SB = Southbound

As summarized in **Table 1**, Ballardvale Street carries approximately 19,956 vehicles per day (vpd) on weekdays. Peak hour traffic flow on Ballardvale Street ranges from approximately 935 to 1,060 vehicles per hour (vph) which represents 6 to 7 percent of daily traffic flow. The traffic flow on Ballardvale Street is skewed heavily in the northbound direction during the weekday morning peak hour and southbound during the weekday evening peak hour. The travel patterns are consistent with employee patterns for the commercial uses along that section of Ballardvale Street.

Existing Trip Generation Characteristics

Observed trip generation for the Ballardvale Technology Center (181-187 Ballardvale Street) has been determined based on turning movement counts conducted at the site driveway along Ballardvale Street in November 2023. **Table 2** presents the existing trip generation characteristics of the Center during the study periods.

TABLE 2
EXISTING TRIP GENERATION – BALLARDVALE TECHNOLOGY CENTER

Period/Direction	OBSERVED TRIPS[1]
Weekday Morning Peak Hour:	
Entering	77
Exiting	4
Total	81
Weekday Evening Peak Hour:	
Entering	11
Exiting	63
Total	74
Weekday Daily (24 hours)	610

[1]Based on turning movement counts conducted at the Ballardvale Technology Center in November 2023.

As summarized in **Table 2**, the existing Ballardvale Technology Center at 181-187 Ballardvale Street is currently fully occupied and observed to generate approximately 81 vehicle trips (77 entering and 4 exiting) during the weekday morning peak hour and 74 vehicle trips (11 entering and 63 exiting) during the weekday evening peak hour. On a daily basis, the existing center was observed to generate 610 vehicle trips on a weekday

Peak Hour Traffic

Traffic volume data were collected at the study intersections in November 2023 during the weekday morning (7:00 AM - 9:00 AM) and weekday evening (4:00 PM – 6:00 PM) periods to coincide with peak traffic activity of the proposed use and the adjacent streets. Review of MassDOT permanent count station data indicates that November an average traffic month. Therefore, then traffic volumes represent an average season analysis and no seasonal adjustment factor is needed. The weekday morning and weekday evening peak hour traffic volumes for the study intersections are shown in **Figure 3**. Traffic count data, MassDOT permanent count station data, and pandemic adjustment calculations are provided in the **Attachments.**

SIGHT LINE EVALUATION

An evaluation of sight lines was conducted at the existing site driveway to ensure that minimum recommended sight lines are available to safely exit onto Ballardvale Street. The evaluation documents existing sight lines for vehicles as they relate to Ballardvale Street with comparison to recommended guidelines for the regulatory speed limit.

The American Association of State Highway and Transportation Officials' (AASHTO) standards[1] reference two types of sight distance which are relevant at the proposed site driveway intersection on Ballardvale Street: stopping sight distance (SSD) and intersection sight distance (ISD). Sight lines for critical vehicle movements at the site driveway intersection with Ballardvale Street were compared to minimum SSD and ISD for the regulatory speed limit in the Site vicinity.

Stopping Sight Distance

Sight distance is the length of roadway visible to the motorist to a fixed object. The minimum sight distance available on a roadway should be sufficiently long enough to enable a below-average operator, traveling at or near a regulatory speed limit, to stop safely before reaching a stationary object in its path, in this case, a vehicle exiting onto Ballardvale Street. The SSD criteria are defined by AASHTO based on design and operating speeds, anticipated driver behavior and vehicle performance, as well as physical roadway conditions. SSD includes the length of roadway traveled during the perception and reaction time of a driver to an object, and the distance traveled during brake application on wet level pavement. Adjustment factors are applied to account for roadway grades when applicable.

SSD was estimated in the field using AASHTO standards for driver's eye (3.5 feet) and object height equivalent to the taillight height of a passenger car (2.0 feet) for the northbound and southbound Ballardvale Street approaches to the Site driveway. **Table 3** presents a summary of the available SSD as they relate to Ballardvale Street and AASHTO's recommended SSD.

TABLE 3
STOPPING SIGHT DISTANCE SUMMARY
BALLARDVALE STREET APPROACHES TO SITE DRIVEWAY

Approach/ Travel Direction	Available SSD	AASHTO Recommended[1] Regulatory Speed Limit[2]
Northbound	450± Feet	305 Feet
Southbound	>500 Feet	305 Feet

[1]Recommended sight distance based on AASHTO, A Policy on Geometric Design of Highways and Streets. Based on driver height of eye of 3.5 feet to object height of 2.0 feet.
[2] Regulatory speed limit: Ballardvale Street = 40 mph

As summarized in **Table 3,** analysis results indicate that the available sight lines exceed AASHTO's recommended SSD criteria for the northbound and southbound travel directions along Ballardvale Street based on the regulatory (posted) speed limit.

Intersection Sight Distance

Clear sight lines provide sufficient sight distance for a stopped driver on a minor-road approach to depart from the intersection and enter or cross the major road. As stated under AASHTO's Intersection Sight Distance (ISD) considerations, "…*If the available sight distance for an entering …vehicle is at least equal to the appropriate stopping sight distance for the major road, then drivers have sufficient sight distance to avoid collisions…To enhance traffic operations, intersection sight distances that exceed stopping sight distances are desirable along the major road*." AASHTO's ISD criteria are defined into several "cases". For the unsignalized Site driveway location, which is under STOP sign control, the ISD in question relates to the ability to turn left or turn right from the proposed driveway.

Available ISD was estimated in the field using AASHTO standards for driver's eye (3.5 feet), object height (3.5 feet) and decision point (8 feet from the edge of the travel way) for the northbound and southbound directions along Ballardvale Street. **Table 4** presents a summary of the available ISD for the departure from the Site driveway and AASHTO's minimum recommended ISD.

TABLE 4
INTERSECTION SIGHT DISTANCE SUMMARY
SITE DRIVEWAY DEPARTURES TO BALLARDVALE STREET

Approach/ Travel Direction	Available ISD	AASHTO Minimum[1] Regulatory Speed Limit[2]	AASHTO Ideal[1] Regulatory Speed Limit[2]
Looking North	>500 Feet	305 Feet	445 Feet
Looking South	450± Feet	305 Feet	385 Feet

[1] Recommended sight distance based on AASHTO, A Policy on Geometric Design of Highways and Streets. Based on driver height of eye of 3.5 feet to object height of 2.0 feet. Minimum value as noted represents SSD per AASHTO guidance.
[2] Regulatory speed limit: Ballardvale Street = 40 mph

The results of the ISD analysis presented in **Table 4** indicate that the available sight lines looking from the Site driveways onto Ballardvale Street will exceed the recommended sight line requirements from AASHTO. MDM recommends that any new plantings (shrubs, bushes) or physical landscape features to be located within the driveway sight lines should also be maintained at a height of 2 feet or less above the adjacent existing roadway grade to ensure unobstructed lines of sight.

Intersection Crash History

In order to identify crash trends and safety characteristics for study area intersections, crash data were obtained from MassDOT for the Town of Wilmington for the five-year period covering 2018-2022 (the most recent full year of data currently available from MassDOT). A summary of the crash data with crash rates for the study intersections with reported crashes is provided in **Table 5** with detailed data provided in the **Attachments.**

Crash rates were calculated for the study intersections as reported in **Table 5**. These rates quantify the number of crashes per million entering vehicles. MassDOT has determined the official District 4 (which includes the Town of Wilmington) crash rate to be 0.73 for signalized intersections and 0.57 for unsignalized intersections. This rate represents MassDOT's "average" crash experience for District 4 communities and serves as a basis for comparing reported crash rates for the study intersections. Where calculated crash rates notably exceed the district average, some form of safety countermeasures may be warranted. A review of Highway Safety Improvement Project (HSIP) locations was also conducted.

TABLE 5
INTERSECTION CRASH SUMMARY
2018 THROUGH 2022[1]

[1] Source: MassDOT Crash Database
[2] Crashes per million entering vehicles
[3] District 4 Average Crash Rate

As summarized in **Table 5**:

- *Route 125 at Ballardvale Street*: A total of twenty-five (25) crashes were reported for the Route 125 signalized intersection with Ballardvale Street. The resulting crash rate of 0.40 is lower than the District 4 average. The reported crashes included fourteen (14) angle/sideswipe type collisions and eleven (11) rear-end type collisions. Eighty-four percent (84%) of the crashes resulted in property-damage only, generally indicative of low-speed crashes. Ninety-two percent (92%) of the crashes occurred under dry roadway conditions, and seventy-six percent (76%) occurred outside of peak travel times. No fatalities or pedestrian-related incidents were reported during the study period.

- *Ballardvale Street at 181-187 and 200 Ballardvale Street Driveways*: A total of nine (9) crashes were reported for the unsignalized Site Driveway intersection with Ballardvale Street. The resulting crash rate of 0.28 is lower than the District 4 average. The reported crashes included four (4) angle/sideswipe type collisions and five (5) rear-end type collisions. Seventy-eight percent (78%) of the crashes resulted in property-damage only, eighty-nine percent (89%) occurred under dry roadway conditions, and fifty-six percent (56%) occurred outside of peak travel times. No fatalities or pedestrian-related incidents were reported during the study period.

In summary, based on extensive review of MassDOT crash data, the study intersections, experienced crash rates below the District 4 averages and none of the intersection are listed as HSIP locations; therefore, no immediate safety countermeasures are warranted based on the crash history at the study intersections.

PROJECTED FUTURE TRAFFIC CONDITIONS

Evaluation of the proposed development impacts requires the establishment of a future baseline analysis condition. This section estimates future roadway and traffic conditions with and without the proposed development. For planning purposes, a seven-year planning horizon (year 2030) was selected consistent with standard industry practice.

To determine the impact of site-generated traffic volumes on the roadway network under future conditions, baseline traffic volumes in the study area were projected to a future year condition. Traffic volumes on the roadway network at that time, in the absence of the development (that is, the No-Build condition), includes existing traffic, new traffic due to general background traffic growth, and traffic related to specific developments by others that are currently under review at the local and/or state level. Consideration of these factors resulted in the development of No-Build traffic volumes. Anticipated site-generated traffic volumes were then superimposed upon these No-Build traffic-flow networks to develop future Build conditions.

The following sections provide an overview of future No-Build traffic volumes and Build traffic volumes.

Historical Area Growth

Nearby permanent count station data published by MassDOT indicates a 0.5 percent per year growth rate. For purposes of this evaluation, a 1.0 percent compounded annual growth rate was used (7.2 percent increase over a 7-year horizon). This growth rate is higher than historic rates and is also expected to account for any small fluctuation in hourly traffic as may occur from time to time in the study area and traffic associated with other potential small developments or vacancies in the area. MassDOT permanent count station data and background growth calculations are provided in the **Attachments**.

Background Development-Related Growth

Development of future No-Build traffic volumes also considers traffic generated through the study area from other specific area developments. Review of Massachusetts Environmental Policy Act (MEPA) files and correspondence with the Town of Wilmington Planning Staff indicates that there are several Site-specific development projects in the area that may increase baseline traffic at the study intersections:

- *36 & 38 Upton Drive*. The commercial development is currently proposed to include 19,800± sf of R&D space, 39,000± sf of light industrial space, 78,500± sf of manufacturing space and 125,300± sf of warehouse space to be located at 36 and 38 Upton Drive in Wilmington. The site-specific trip tracings were obtained from the TIA prepared by Greenman-Pedersen, Inc. in September 2022. Trip tracings for the proposed development are provided in the **Attachments**.

- *30 Upton Drive*. The commercial redevelopment is proposed to include 91,305± sf of warehouse space and 38,935± sf of office space to be located at 30 Upton Drive in Wilmington. The site-specific trip tracings were obtained from the TIA prepared by Greenman-Pedersen, Inc. in December 2021. Trip tracings for the proposed development are provided in the **Attachments**.

- *225 Andover Street*. The 27,395± sf self-storage facility is proposed to be located at 225 Andover Street in Wilmington. The site-specific trips associated with the development are proposed to minimal and accounted for in the conservative background growth.

- *100 Research Drive*. The proposed development includes the construction of approximately 20,000± sf of commercial space. A Traffic Impact Assessment prepared by Vanasse Hangen Brustlin Inc. (VHB) dated July 2019 compares the impact of three land use scenarios. Background trip tracings for the proposed development are based on the highest generating land use, LUC 180 Specialty Contractor, and are provided in the **Attachments**.

2030 No-Build Traffic Volume Networks

In summary, to account for future traffic growth in the study area future No-Build traffic volumes are developed by increasing the Baseline (2023) volumes by approximately 7.2 percent (1.0 percent compounded annually over 7 years). The resulting 2030 No-Build traffic volumes are displayed in **Figure 4**.

Trip Generation

The trip generation estimates for the proposed development are provided for the weekday morning and weekday evening, which correspond to the critical analysis periods for the proposed uses and adjacent street traffic flow. In this case, ITE's land use code (LUC) for General Office (LUC 710) and Manufacturing (140) were selected for analysis purposes; the use category generally aligns with the proposed characterization of the Site. New traffic generated by the project was estimated using trip rates published in ITE's *Trip Generation*[2] for the Land Use Code (LUC) 710 – General Office and LUC 140 – Manufacturing. **Table 6** presents the trip-generation comparison for the proposed development based on ITE methodology and trip rates based on the exiting site uses.

Source: ITE *Trip Generation*, 11th Edition; 2021.
[1]Based on Table 2 applied to 71.3ksf.
[2]ITE LUC 710 – General Office trip rates applied to 28,500 sf.
[3]ITE LUC 140 – Manufacturing Park trip rates applied to 42,800 sf.

As summarized in **Table 6**, based on industry-standard trip rates the proposed development is estimated to generate approximately 72 vehicle trips (60 entering and 12 exiting) during the weekday morning peak hour and 73 vehicle trips (17 entering and 56 exiting) during the weekday evening peak hour. On a daily basis, the proposed development is estimated to generate approximately 512 vehicle trips.

Trip Distribution

The directional distribution of development-generated trips on the roadway network is a function of a number of variables including local area populations and the efficiency of the roadways leading to the Site. Existing roadway travel patterns served as the primary basis for determining the trip distribution pattern for the proposed development. The distribution of the site generated trips is displayed in **Figure 5**. Trip distribution calculations are provided in the **Attachments**.

Development-related trips for the proposed development are assigned to the roadway network using the trip-generation estimates shown in **Table 6** and the distribution patterns presented in **Figure 5**. Development-related trips at each intersection approach for the weekday morning and weekday evening peak hours are quantified in **Figure 6**.

2030 Build Traffic Conditions

2030 Build condition traffic volumes are derived by adding incremental traffic increases for the proposed development of the Site to the 2030 No-Build conditions. **Figure 7** presents the 2030 Build condition traffic-volume networks for the weekday morning and weekday evening peak hours.

QUALTATIVE STATEMENT OF IMPACT

This section provides a quantitative statement of impact and described trip increases associated with the development relative to future 2030 No-Build conditions along Ballardvale Street. A comparison of the total intersection entering volume for the two gateway study intersections during the weekday morning peak hour and weekday evening peak hour, are summarized in **Table 7**.

TABLE 7
ROADWAY TOTAL ENTERING VOLUME

	Peak Hour	2030 No-Build Entering Volume[1]	Project Impact # of New Trips	Project Impact %Δ
Route 125 at Ballardvale Street	Weekday AM	2,997	65	2.2%
	Weekday PM	3,518	65	1.8%
Ballardvale Street at Site Driveway	Weekday AM	1,502	72	4.8%
	Weekday PM	1,741	73	4.2%

[1] Volumes based on traffic peak hour turning movement counts conducted in November 2023.

As shown in **Table 7**, the project at full buildout will result in less than 5% increase in traffic along Ballardvale Street and the gateway intersection at Route 125. The increase in trips due to the project are not expected to alter operating conditions compared to No-Build conditions with less than 2 new total vehicle trip or less every minute.

RECOMMENDATIONS AND CONCLUSIONS

Based on this preliminary report, MDM has identified several mitigation actions that are likely to be required through the local permitting process to support the project. These include (a) access-related improvements, (b) pedestrian and bicycle accommodations, and (c) a transportation demand management (TDM) program to enhance traffic operations and travel safety:

Access/Egress Improvements

- *Signs and Pavement Markings.* A STOP sign (R1-1) and STOP line pavement marking should be installed on the Site Driveway approach to Ballardvale Street. The sign and pavement markings shall conform to Manual on Uniform Traffic Control Devices (MUTCD) standards.

- *Sight Line Maintenance.* The sight lines for the Sight Driveway approach to Ballardvale Street should be maintained with the construction of the Site. Any new plantings (shrubs, bushes) or physical landscape features to be located within the sight lines should also be maintained at a height of 2 feet or less above the adjacent roadway grade to ensure unobstructed lines of sight.

Pedestrian and Bicycle Accommodations

- *Pedestrian Accommodation.* The design shall incorporate sidewalks that connect the proposed building entrances with the proposed parking areas.

- *Bicycle Amenities*. The Proponent shall incorporate secure and weather-protected bicycle racks to encourage and facilitate this mode of transportation to/from the Site by employees.

Transportation Demand Management (TDM)

A preliminary list of potential TDM program elements may include the following, subject to refinement of the development program and further evaluation by the Proponent:

- *On-Site Transportation Coordinator*
- *TMA Membership*
- *Public Transportation Information & Promotion*
- *Preferential Parking for Carpools, Vanpools*
- *Electric Vehicle Charging Station*
- *Preferential Parking for Low-Emission Vehicles*
- *Workforce Transportation Program*
- *Off-Peak Shift Changes*
- *Automatic Employee Payroll Reduction*
- *Commuter Assistance Programs*
- *Guaranteed Ride Home*
- *Pedestrian Infrastructure*
- *Bicycle Racks*
- *Secure Covered Bike Parking*
- *On-Site Support Services/Amenities*

CONCLUSIONS

In summary, MDM finds that incremental traffic associated with the proposed development is not expected to materially impact operating conditions at the study intersections. Implementation of access/egress improvements, proposed pedestrian improvements, and a TDM program as outlined under *Recommendations and Conclusions* will establish a framework of minimizing Site traffic impacts.

□ Sight Distance Calculations

Stopping Sight Distance - Posted Speed

Ballardvale Street

		SPEED (MPH)	BRAKE REACTION DISTANCE (FT)	BRAKING DISTANCE (FT)	CALCULATED STOPPING SIGHT DISTANCE (FT)
Direction 1	NB	40	147	153.3	300.3
Direction 2	SB	40	147	153.3	300.3

INPUTS	Direction 1	Direction 2
Travel Direction	NB	SB
Speed	40	40
Grade	0	0
t	2.5	2.5
a	11.2	11.2

Stopping Sight Distance (SSD) - Source: AASHTO

SSD = Reaction Distance + Brake Distance

Reaction Distance = 1.47 x t x V

Brake Distance = V^2 / (30 x ((a/32.2)+G))

Where:
t = reaction time (sec)
V = travel speed (mph)
G= roadway grade
a - deceleration rate (ft/sec^2)

Intersection Sight Distance Calculations

Source: *A Policy on Geometric Design of Highways and Street, 6th Edition;* AASHTO; 2011.

Passenger Car
ISD = 1.47 * V * t

V = speed
t = time gap

t = 7.5 s for a passenger car for Left Turn from a Stop
t = 6.5 s for a passenger car for Right Turn from a Stop

Ballardvale Street

		Average Speed		Ideal ISD	SAY
Looking North (left-turn from a stop)	ISD = 1.47*	40	* 7.5 =	441	**445 feet**
Looking South (right-turn from a stop)	ISD = 1.47*	40	* 6.5 =	382.2	**385 feet**

RE: **Response to Comments – Wilmington Engineering/ Planning & Conservation**
Proposed Life Science/Biomanufacturing Facility
181-187 Ballardvale Street – Wilmington, MA

MDM Transportation Consultants, Inc. (MDM) has prepared the following responses to transportation-related comments as issued in a letter by the Town of Wilmington Engineering Division dated February 6, 2024, a letter by the Town of Wilmington Department of Planning and Conservation dated January 29, 2024, and a letter by The Engineering Corporation (TEC) dated March 7, 2024. The. To facilitate review, specific transportation related comments are paraphrased with corresponding responses.

Town of Wilmington Engineering Division Letter

Traffic and Site Layout Comments

Comment 3: *"The Engineering Division recommends that the Traffic Memorandum provided be peer reviewed by a third-party traffic engineer. The study area should also be expanded to include the junction of Route 93 and Route 125. Further, at Community Development Technical Review (CDTR), Town staff discussed with the Applicant the Town's desire to improve pedestrian mobility and connectivity along this section of Ballardvale Street. The Town engaged VHB, Inc. in c.2021 to study pedestrian mobility in this location and develop concept level plans to improve pedestrian safety and connectivity in the area. This study is furnishable to the Applicant and Planning Board upon request. The project may present an opportunity to advance (in part) the goal of pedestrian improvements along the corridor with such improvements being mutually beneficial to both the Town and Applicant."*

Response: The Traffic Memorandum (TM) by MDM dated November 8, 2023, has been sent out for peer review by TEC with comments received on March 7, 2024. MDM's responses are provided in a subsequent section of this memo.

As shown in the TM, the project will result in a nominal increase in traffic activity at the Ballardvale Street (Route 125) signalized intersection with I-93. Specifically, the increase in trips due to the project is not expected to alter operating conditions compared to No-Build conditions with less than 1 vehicle trip or less per minute. A review of crash history indicates that neither of the Ballardvale Street intersections with I-93 are listed as high crash locations (HSIP) by MassDOT. MDM finds the relative traffic increases for the proposed project represent an inconsequential change in area roadway volumes - a level of change that falls well within normal day-to-day fluctuations in traffic entering and exiting the study area. Therefore, there is no material benefit to studying the Route 125 and 93 interchange ramps as part of this project.

The Proponent will work with the Town to provide an easement along the site frontage to accommodate the planned multi-modal improvements along this section of Ballardvale Street. For reference, the concept level plans to improve pedestrian safety and connectivity in the area prepared by the Town by VHB, Inc. in c.2021 are provided in the **Attachments**.

Comment 4: "*A truck turning maneuverability plan shall be provided for review. Turning exhibits shall be provided for the largest truck size expected to use the site, as well as trash pickup, and the Wilmington Ladder Truck.*"

Response: Truck turning maneuverability plans which include a WB-50, refuse vehicle, and Wilmington Ladder truck as prepared by Highpoint Engineering, Inc. are provided in the **Attachments** for reference. As shown the site has been designed to accommodate the largest design vehicle, refuse vehicle, and Wilmington Ladder truck.

Comment 5: "*The proposed layout does not appear to comply with the Town's Zoning Bylaw Section 6.4 Parking and Site Design Standards. Specifically, offset/setback of paved surfaces to property lines. The Applicant's cover letter indicates that the Applicant is seeking a waiver request from this zoning bylaw section, however, there appears to be an opportunity to increase the offset of the proposed parking bay to the northerly adjoining property boundary without sacrificing parking or impeding circulation. The Board may wish to discuss this with the Applicant.*"

Response: The site plan set has been updated by Highpoint Engineering, Inc. to remove the need for the requested waiver for offset/setback (see **Attachments** for reference).

Comment 6: "*The parking chart shown on the plans provides a split of 40% office and 60% Industrial/Manufacturing for the two existing buildings and the proposed building. The Applicant should provide additional information on existing uses, including floor plans, to demonstrate that the 40/60 split is appropriate."*

Response: The existing tenant list indicates a split of 38% office space and 62% R&D space. A breakdown of existing tenants is provided in the **Attachments**. The Proponent will continue to convert office to R&D space as opportunity presents. Furthermore, as shown in **Table 6** of the TA the existing uses of the site are generating trips at approximately half the industry standard ITE rate. Therefore, based on the existing tenant mix a 40/60 split is appropriate and results in a conservative parking estimate.

Comment 7: "*The Applicant's Engineer shall evaluate reducing the entrance radii proposed at the existing site driveway intersection at Ballardvale Street. Further, the Department of Public Works requests vertical granite curbing for each radii (proposed within the Public Right of Way) with details and plan callouts for appropriate transition curbing accordingly.*"

Response: Highpoint considered reducing the entrance radius from 35 ft to 30 ft as suggested by the Town. However, it was found that the 30 ft radii would not allow a WB-50 trailer to make a right turn into the property from Ballardvale Street without the rear tired riding up on the curb. Therefore, the entrance radii were kept at 35 feet. The site layout has been revised to include vertical granite curb within the right-of-way as requested by the Department of Public Works.

Town of Wilmington Department of Planning and Conservation Letter

Comment 8: "*As discussed at the January 22, 2024, Community Development Technical Review (CDTR) team meeting, a peer review of the traffic memorandum will be recommended to the Planning Board. As requested by the applicant, the review can be initiated prior to the Planning Board meeting.*"

Response: The Traffic Memorandum (TM) by MDM dated November 8, 2023, has been sent out for peer review by TEC with comments received on March 7, 2024. MDM's responses are provided in a subsequent section of this memo.

Comment 9: "*A truck turning exhibit shall be included with the revisions. This should show the turn radius of the Wilmington Fire Truck apparatus as well as any other large trucks that will access loading docks and dumpsters.*"

Response: Truck turning maneuverability plans which include a WB-50, refuse vehicle, and Wilmington Ladder truck as prepared by Highpoint Engineering, Inc. are provided in the **Attachments** for reference. As shown the site has been designed to accommodate the largest design vehicle, refuse vehicle, and Wilmington Ladder truck.

The Engineering Corp (TEC) Letter

Traffic Impact Assessment Comments

TEC Comment 5: *"To assess sight distance, the Applicant utilized the posted speed limit of 40 MPH along Ballardvale Street northwest bound rather than using 85th percentile travel speeds in each direction. Since the access drive to the Ballardvale Technology Center is located roughly 450 feet northwest of Route 125, TEC believes the posted speed limit is a conservative estimate of travel speed. Vehicles turning from Route 125 onto Ballardvale Street will likely not attain a speed of 40 MPH prior to the access drive. In addition, the posted speed along Ballardvale Street southeast bound prior to the access drive is 25 MPH, so TEC believes using a 40 MPH speed in this direction is also a conservative approach. The sight distances reported in Tables 3 and 4 of the TIA are in accordance with the American Association of State Highway and Transportation Officials (AASHTO) requirements. In a field review conducted on February 15, 2024, TEC confirmed the measured Stopping Sight Distance (SSD) and Intersection Sight Distance (ISD) provided in the TIA. The Applicant has recommended that any new plantings or physical landscape features within the proposed Project driveway should be maintained at a height of 2 feet or less to ensure unobstructed lines of sight. The site plans should show the sight line triangles based on the AASHTO criteria provided in MDM's report. The Applicant should also commit to maintain vegetation along the site frontage consistently to ensure that sight lines remain unobstructed at the site driveway intersection with Ballardvale Street."*

Response: MDM concurs, the sight line triangles will be provided on the final site plan set by Highpoint Engineering. The Site Layout Plan will also include a note citing that "Signs, landscaping and other features located within sight triangle areas shall be designed, installed and maintained so as not to exceed 2-feet in height. Snow windrows located within sight triangle areas that exceed 3.5-feet in height or that would otherwise inhibit sight lines shall be promptly removed."

TEC Comment 6: "*The TIA presents motor vehicle crash data for the study intersections between 2018 and 2022, the most recent five-year period available from MassDOT. During this period, there were 25 crashes at the Route 125/Ballardvale Street intersection, 4 of which resulted in personal injury, and 9 crashes at the Ballardvale Street/181-187 and 200 Ballardvale Street driveways, 2 of which resulted in personal injury. Neither of the intersections had fatalities or crashes involving bicycles or pedestrians. The crash rates at each of the intersections were determined to be 0.40 for the former and 0.28 for the latter. Both are below MassDOT District 4 averages for signalized and unsignalized intersections, 0.73 and 0.57, respectively. Neither of the intersections contains a Highway Safety Improvement Plan (HSIP) cluster, so MDM has not recommended any immediate term safety countermeasures. TEC generally agrees with this assessment. However, on Ballardvale Street northwest bound, there is a transition from two lanes to one at the 181-187 and 200 Ballardvale Street driveways, which may have contributed to some of the crashes. TEC also observed queues that extend back from the Route 125 traffic signal that can frequently block the site driveway during the late afternoon and evening peak period. TEC recommends that the Applicant explore options to revise the pavement markings and signs along Ballardvale Street northwest bound to improve safety, including a striped 'Do Not Block' box."*

Response: The Proponent will work with the Town and if approved by the DPW the pavement markings will be updated to revise the northwest bound lane drop markings an signage as appropriate and to install a striped "Do Not Block box" markings and signage at the 181/187 driveway.

TEC Comment 10: "*There was no capacity or queue analysis conducted as part of the TIA. Rather, MDM provided a qualitative assessment of operations, essentially comparing 2030 No-Build volumes with 2030 Build volumes. On page 14, they have shown in Table 7 and have stated that the increase in traffic at each of the study locations will be less than 5%, and therefore, will have minimal impact on operations. While TEC generally concurs with the qualitative results, MDM should also provide 2023 Existing, 2030 No-Build and 2030 Build capacity and queue analyses as part of the TIA utilizing Highway Capacity Manual (HCM) methodologies if the Board desires additional quantitative analysis to assess the incremental increase in vehicle delays.*"

Response: As previously indicated, the project will result in a nominal increase in traffic activity at the study intersections. Specifically, the increase in trips due to the project is not expected to alter operating conditions compared to No-Build conditions with approximately 1 directional vehicle trip or less per minute. MDM finds the relative traffic increases for the proposed project represent an inconsequential change in area roadway volumes - a level of change that falls well within normal day-to-day fluctuations in traffic entering and exiting the study area. Therefore, there is no material benefit to providing capacity and queue analysis.

TEC Comment 11: "*MDM has recommended several mitigation measures for the Project: a) Access/ Egress Improvements, b) Pedestrian and Bicycle Accommodations, and c) Transportation Demand Management (TDM). These are described on page 15 of the TIA. TEC generally concurs with the identified measures. However, TEC understands that the Town is considering multi-mode improvements to Ballardvale Street between the Target Plaza and the 181-187 and 200 Ballardvale Street driveways. These improvements include a Shared Use Path (SUP) and/or sidewalk along both sides of Ballardvale Street and a crosswalk with a Pedestrian Hybrid Beacon (PHB) between 193 and 206 Ballardvale Street. In lieu of other data collection, analysis, or physical mitigation to address their increase in vehicular traffic, TEC recommends that the Applicant provide sidewalks along the site access to Ballardvale Street and provide fair-share mitigation funding to be utilized by the Town for the planning and design phase of the Ballardvale Street multi-modal improvements.*"

Response: The Proponent is not providing a walkway from the development to Ballardvale Street but will work with the Town to provide an easement along the site frontage to accommodate the planned multi-modal improvements along this section of Ballardvale Street and will work with the Town to provide appropriate fair share mitigation funding for the planning and design of the multi-modal improvements by the Town.

Site Plan Comments

TEC Comment 14: "*The Applicant should provide an Autoturn truck sweep analysis to demonstrate the ability of the expected delivery vehicles, service vehicles, or emergency vehicles to circulate around the site without leaving the paved surface and access the loading docks for each building. The Applicant should review any potential need for cross-access easements for employee and/or truck access.*"

Response: Truck turning maneuverability plans which include a WB-50, refuse vehicle, and Wilmington Ladder truck as prepared by Highpoint Engineering, Inc. are provided in the **Attachments** for reference. As shown the site has been designed to accommodate the largest design vehicle, refuse vehicle, and Wilmington Ladder truck. No cross-access easements for employee and/or truck access is required.

TEC Comment 15: "*The Applicant should coordinate with the Town of Wilmington Fire Department for preferred locations of fire lanes (if needed), confirmation of on-site hydrant locations (if needed), and sign requirements for fire lanes within the site.*"

Response: Based on discussions with the Town of Wilmington Fire Department no fire lanes or further requirements are needed. Highpoint Engineering, Inc. will continue to coordinate with WFD as needed.

TEC Comment 16: "*The plans should depict a 12" stop line and stop sign at the access drive as described in the*
TIA."

Response: A 12" STOP line and STOP sign (R1-1) will be included on the final site plan set prepared by Highpoint Engineering.

TEC Comment 17: "*The bottom of all traffic signs on-site should be a minimum of 7 feet above the ground surface per the Manual on Uniform Traffic Control Devices (MUTCD) when directly impeding sidewalks or travel paths. Detail C1 on Sheet C600 and Detail C4 on Sheet C601 show the height to be 6 feet above the ground surface.*"

Response: The updated bottom of all traffic signs on-site will be updated to a minimum of 7 feet above the ground surface per MUTCD guidance. This will be included on the final site plan set prepared by Highpoint Engineering.

TEC Comment 18: "*Details should be provided showing the layout and dimensions of compact vehicle parking spaces. Alternatively, a note could be added to Detail C1 on Sheet C601 denoting the size as 8' x 16'.*"

Response: The site proposes two different sized compact spaces; (7.5' x 16') and (8′ x 16′). The site layout has been revised to include where the compact spaces are proposed, and site details have been revised to include both on the site plan sets prepared by Highpoint Engineering.

TEC Comment 19: "*The Applicant has proposed to provide sidewalks connecting building entrances with the parking areas. As noted in Comment 11 above, TEC recommends that the Applicant also provide sidewalks along the reconstructed access drive to its intersection with Ballardvale Street. This will provide a continuous connection from the proposed building to the future Ballardvale Street improvements. There are several informal footpaths that lead from the northerly edge of the parking lot toward the north in the direction of the powerline easement and Upton Drive. A sidewalk along the driveway will potentially provide a connection for other walkers in the area.*"

Response: See Response to TEC Comment 11.

TEC Comment 20: "*The site plans should include a plan sheet depicting the sight triangles to and from the site driveway and identify areas to restrict vegetation, signage, and off-street parking to maintain AASHTO minimum recommendations. Notes should indicate: "Signs, landscaping and other features located within sight triangle areas shall be designed, installed, and maintained so as not to exceed 2.0 feet in height. Snow windrows located within sight triangle areas that exceed 3.5 feet in height or that would otherwise inhibit sight lines shall be promptly removed." All permanent and temporary signs should be located outside the sight line triangles.*"

Response: See Response to TEC Comment 5.

TEC Comment 21: "*The Applicant should denote the designated locations of secure and weather protected bicycle racks as described in the TIA.*"

Response: The site plan has been updated by Highpoint Engineering to include the location of the bicycle racks. The design of the shelter will be coordinated with the architect to fit into the overall design.

TEC Comment 22: "*Since the property abuts Route 125, a MassDOT-owned roadway, it is likely that an Indirect Access Permit will be required. The Applicant should be prepared to submit the appropriate Permit Application and supporting documents to the District 4 Office in Arlington.*"

Response: After the site plan review process, if required a Highway Access Permit will be submitted to MassDOT for the driveway.

TEC Comment 23: "*Although snow storage areas are shown on the plan, the Applicant should provide a snow removal and parking management plan for Town staff review.*"

Response: Given the adequate snow storage areas on the Site, the Proponent doesn't anticipate a snow storage problem. If snow was overly restricting parking the excess snow from any parking areas blocked will be removed from the Site at the expense of the Proponent.

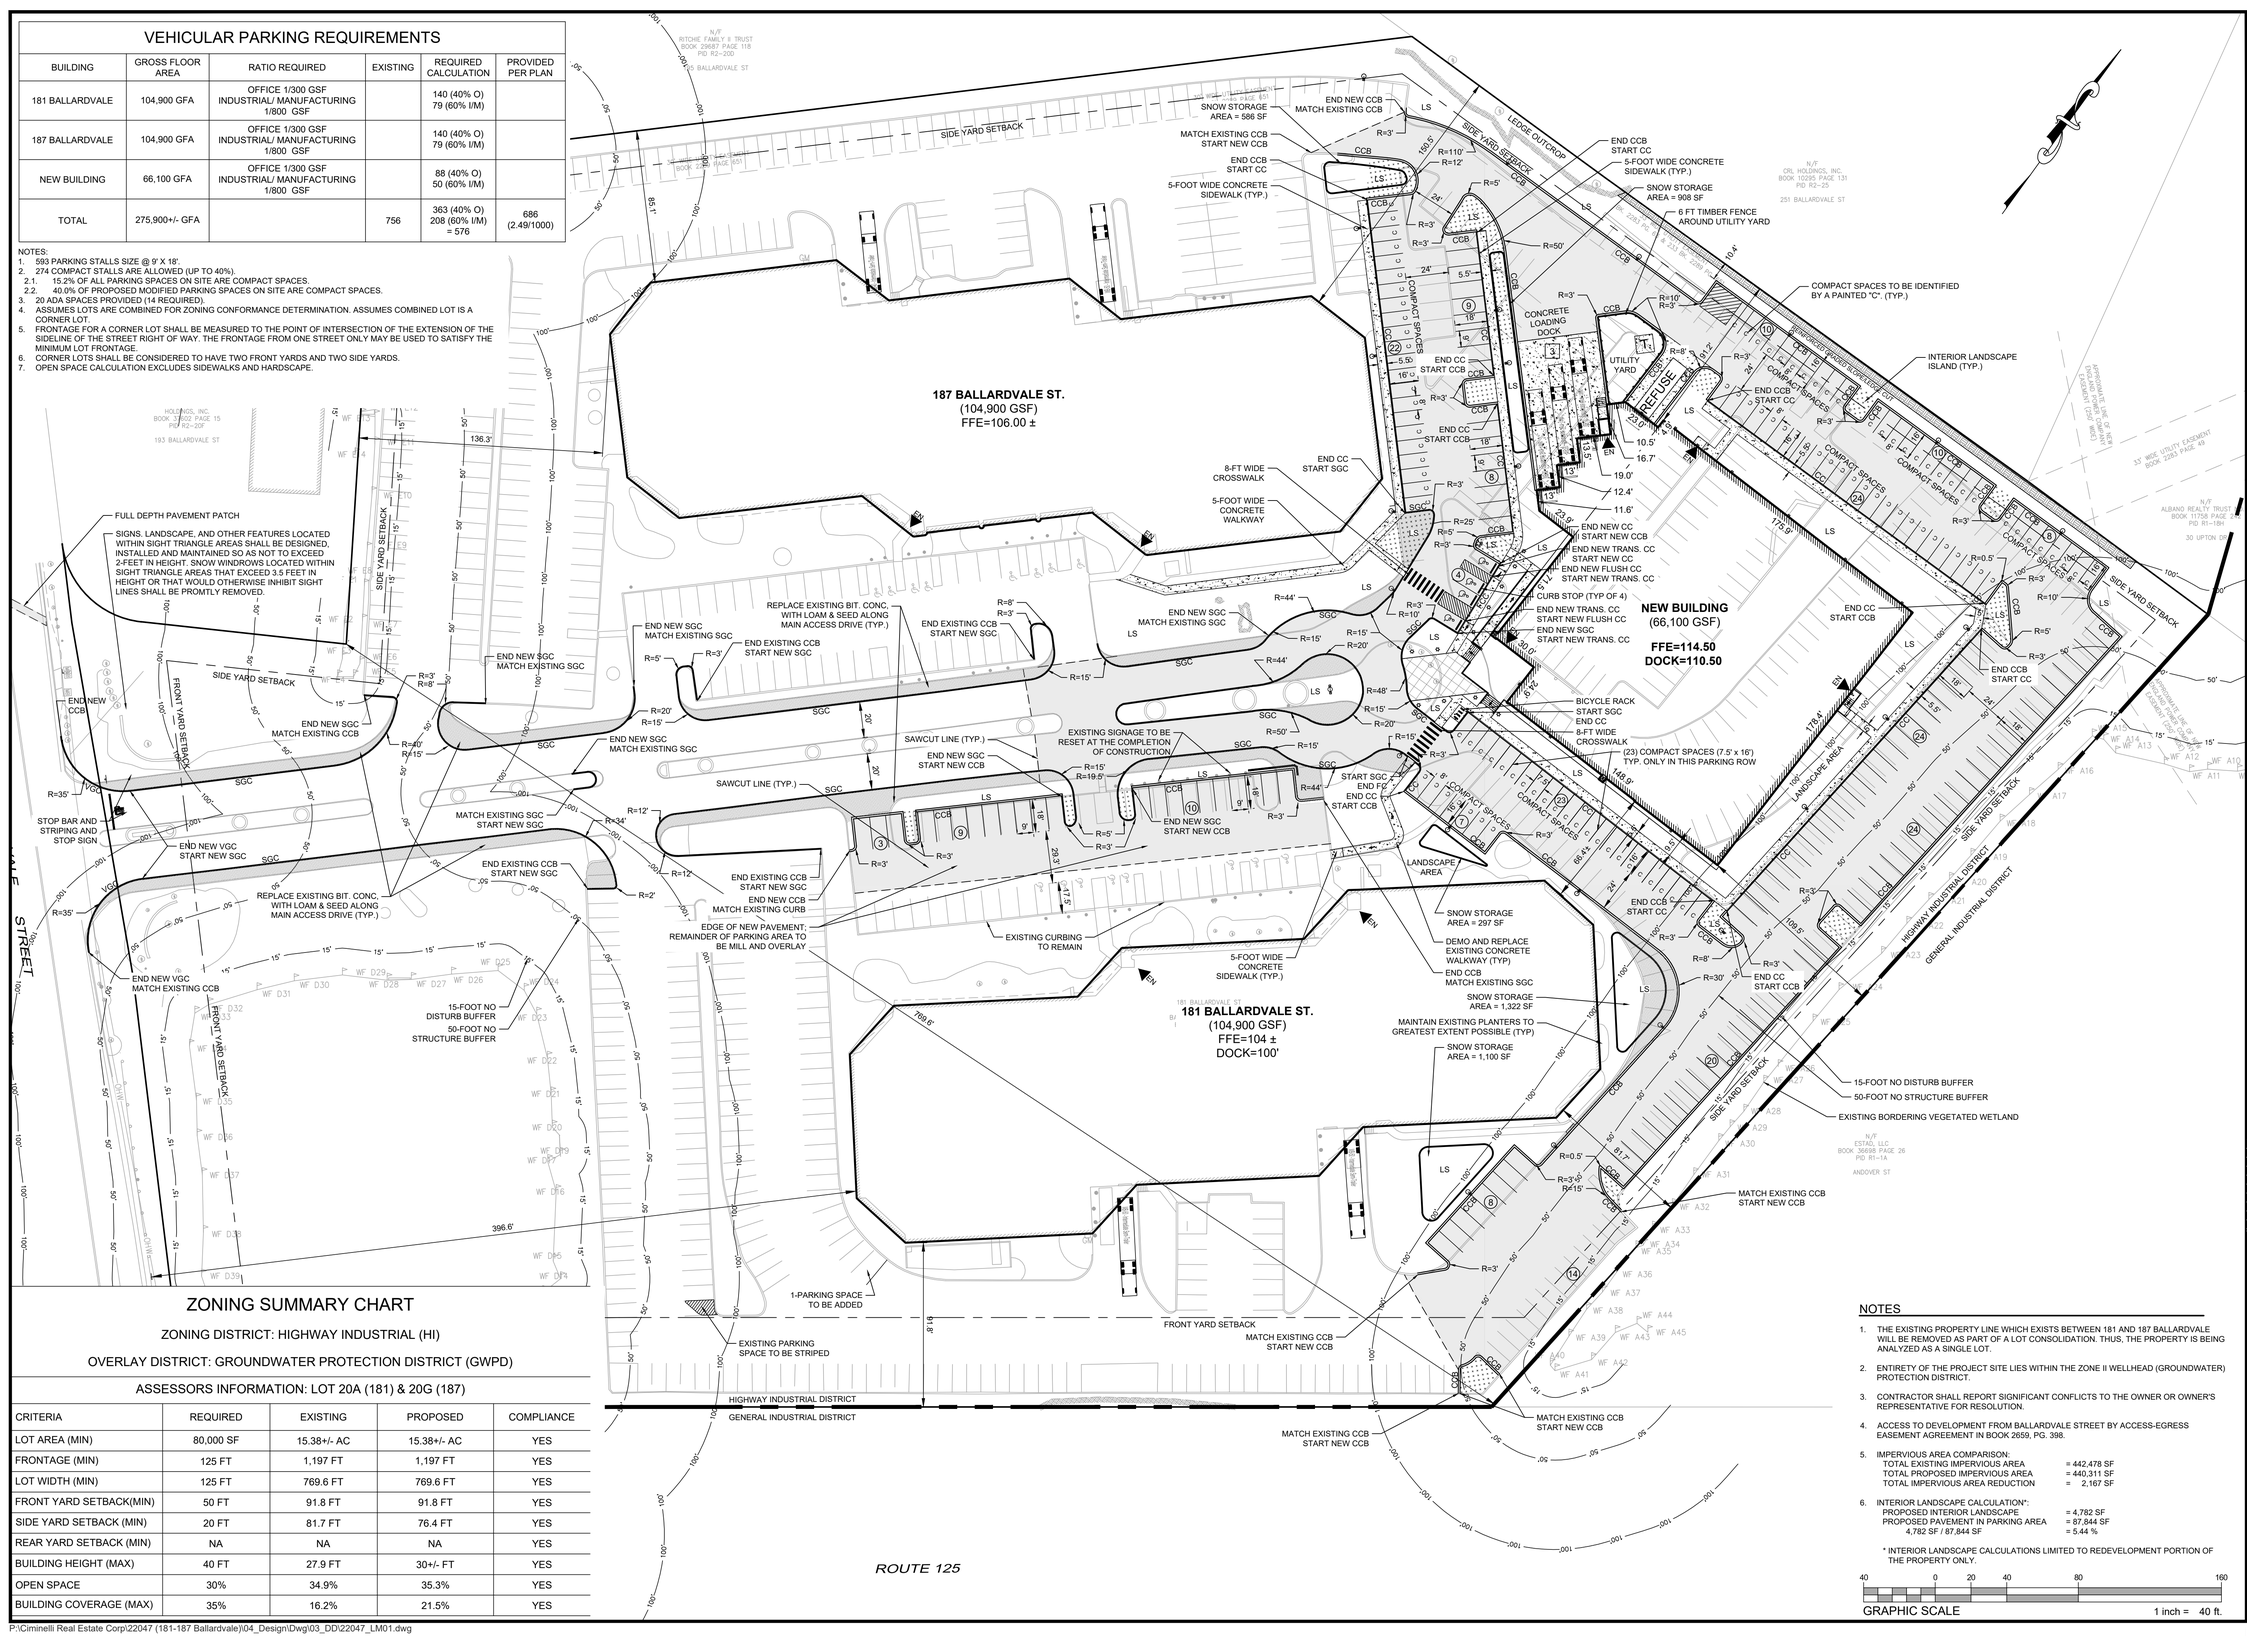
VEHICULAR PARKING REQUIREMENTS

BUILDING	GROSS FLOOR AREA	RATIO REQUIRED	EXISTING	REQUIRED CALCULATION	PROVIDED PER PLAN
181 BALLARDVALE	104,900 GFA	OFFICE 1/300 GSF INDUSTRIAL/ MANUFACTURING 1/800 GSF		140 (40% O) 79 (60% I/M)	
187 BALLARDVALE	104,900 GFA	OFFICE 1/300 GSF INDUSTRIAL/ MANUFACTURING 1/800 GSF		140 (40% O) 79 (60% I/M)	
NEW BUILDING	66,100 GFA	OFFICE 1/300 GSF INDUSTRIAL/ MANUFACTURING 1/800 GSF		88 (40% O) 50 (60% I/M)	
TOTAL	275,900+/- GFA		756	363 (40% O) 208 (60% I/M) = 576	686 (2.49/1000)

NOTES:
1. 593 PARKING STALLS SIZE @ 9' X 18'.
2. 274 COMPACT STALLS ARE ALLOWED (UP TO 40%).
   2.1. 15.2% OF ALL PARKING SPACES ON SITE ARE COMPACT SPACES.
   2.2. 40.0% OF PROPOSED MODIFIED PARKING SPACES ON SITE ARE COMPACT SPACES.
3. 20 ADA SPACES PROVIDED (14 REQUIRED).
4. ASSUMES LOTS ARE COMBINED FOR ZONING CONFORMANCE DETERMINATION. ASSUMES COMBINED LOT IS A CORNER LOT.
5. FRONTAGE FOR A CORNER LOT SHALL BE MEASURED TO THE POINT OF INTERSECTION OF THE EXTENSION OF THE SIDELINE OF THE STREET RIGHT OF WAY. THE FRONTAGE FROM ONE STREET ONLY MAY BE USED TO SATISFY THE MINIMUM LOT FRONTAGE.
6. CORNER LOTS SHALL BE CONSIDERED TO HAVE TWO FRONT YARDS AND TWO SIDE YARDS.
7. OPEN SPACE CALCULATION EXCLUDES SIDEWALKS AND HARDSCAPE.



ZONING SUMMARY CHART

ZONING DISTRICT: HIGHWAY INDUSTRIAL (HI)

OVERLAY DISTRICT: GROUNDWATER PROTECTION DISTRICT (GWPD)

ASSESSORS INFORMATION: LOT 20A (181) & 20G (187)

CRITERIA	REQUIRED	EXISTING	PROPOSED	COMPLIANCE
LOT AREA (MIN)	80,000 SF	15.38+/- AC	15.38+/- AC	YES
FRONTAGE (MIN)	125 FT	1,197 FT	1,197 FT	YES
LOT WIDTH (MIN)	125 FT	769.6 FT	769.6 FT	YES
FRONT YARD SETBACK(MIN)	50 FT	91.8 FT	91.8 FT	YES
SIDE YARD SETBACK (MIN)	20 FT	81.7 FT	76.4 FT	YES
REAR YARD SETBACK (MIN)	NA	NA	NA	YES
BUILDING HEIGHT (MAX)	40 FT	27.9 FT	30+/- FT	YES
OPEN SPACE	30%	34.9%	35.3%	YES
BUILDING COVERAGE (MAX)	35%	16.2%	21.5%	YES

NOTES

1. THE EXISTING PROPERTY LINE WHICH EXISTS BETWEEN 181 AND 187 BALLARDVALE WILL BE REMOVED AS PART OF A LOT CONSOLIDATION. THUS, THE PROPERTY IS BEING ANALYZED AS A SINGLE LOT.
2. ENTIRETY OF THE PROJECT SITE LIES WITHIN THE ZONE II WELLHEAD (GROUNDWATER) PROTECTION DISTRICT.
3. CONTRACTOR SHALL REPORT SIGNIFICANT CONFLICTS TO THE OWNER OR OWNER'S REPRESENTATIVE FOR RESOLUTION.
4. ACCESS TO DEVELOPMENT FROM BALLARDVALE STREET BY ACCESS-EGRESS EASEMENT AGREEMENT IN BOOK 2659, PG. 398.
5. IMPERVIOUS AREA COMPARISON:
   TOTAL EXISTING IMPERVIOUS AREA = 442,478 SF
   TOTAL PROPOSED IMPERVIOUS AREA = 440,311 SF
   TOTAL IMPERVIOUS AREA REDUCTION = 2,167 SF
6. INTERIOR LANDSCAPE CALCULATION*:
   PROPOSED INTERIOR LANDSCAPE = 4,782 SF
   PROPOSED PAVEMENT IN PARKING AREA = 87,844 SF
   4,782 SF / 87,844 SF = 5.44 %

   * INTERIOR LANDSCAPE CALCULATIONS LIMITED TO REDEVELOPMENT PORTION OF THE PROPERTY ONLY.

Dear Reviewer:

This letter shall certify that this *Transportation Impact Assessment* has been prepared under my direct supervision and responsible charge. I am a Registered Professional Engineer (P.E.) in the Commonwealth of Massachusetts (Massachusetts P.E. No. 38871, Civil) and hold Certification as a Professional Traffic Operations Engineer (PTOE) from the Transportation Professional Certification Board, Inc. (TPCB), an independent affiliate of the Institute of Transportation Engineers (ITE) (PTOE Certificate No. 993). I am also a Fellow of the Institute of Transportation Engineers (FITE).

Sincerely,

VANASSE & ASSOCIATES, INC.

Jeffrey S. Dirk

EXECUTIVE SUMMARY

Vanasse & Associates, Inc. (VAI) has conducted a Transportation Impact Assessment (TIA) in order to determine the potential impacts on the transportation infrastructure associated with the proposed construction of a warehouse building to be located at 800 Salem Street (Route 62) in Wilmington, Massachusetts (hereafter referred to as the Project). This assessment was prepared in consultation with the Town of Wilmington and the Massachusetts Department of Transportation (MassDOT), and was performed in accordance with MassDOT's *Transportation Impact Assessment (TIA) Guidelines* and the standards of the Traffic Engineering and Transportation Planning professions for the preparation of such reports.

An end user for the proposed warehouse building has not been determined and, as such, the trip estimates for the Project have been evaluated using a warehouse type that results in the highest overall trip estimates for the Project in order to provide conservative (high) traffic volumes from which to assess the potential impact of the Project on the transportation infrastructure.

Based on this assessment, we have concluded the following with respect to the Project:

1. Using trip-generation statistics published by the Institute of Transportation Engineers (ITE)[1] for a trip intensive warehouse use (general warehousing in this case), the Project is expected to generate approximately 414 vehicle trips on an average weekday (two-way, volume over the operational day of the Project), consisting of 270 passenger car trips and 144 truck trips. During the weekday morning peak-hour, the Project is expected to generate 52 vehicle trips, consisting of 47 passenger car trips and 5 truck trips. During the weekday evening peak-hour, the Project is expected to generate 55 vehicle trips, consisting of 48 passenger car trips and 7 truck trips;

2. The Project will not result in a significant impact (increase) on motorist delays or vehicle queuing over anticipated future conditions without the Project (No-Build condition), acknowledging that one or more movements at the study area intersections are currently operating or are predicted to operate at or over capacity (i.e., level-of-service (LOS) "E" or "F", respectively) independent of the Project;

[1] *Trip Generation*, 11th Edition; Institute of Transportation Engineers; Washington, DC; 2021.

3. Independent of the Project, left-turn movements from the I-93 north and southbound off-ramps to Route 62 were identified to be operating over capacity (i.e., LOS "F") during both peak hours under 2022 Existing conditions, with Project-related impacts on these movements generally defined as an increase in average motorist delay that resulted in an increase in vehicle queuing of up to one (1) vehicle;

4. All movements exiting the Project site driveways are predicted to operate at LOS D or better during the peak hours with negligible vehicle queuing;

5. No apparent safety deficiencies were noted with respect to the motor vehicle crash history at the study intersections; and

6. Lines of sight at the Project site driveway intersections with Route 62 were found to meet or exceed, or could be made to meet or exceed the recommended minimum sight distance to function in a safe manner based on the appropriate approach speed.

In consideration of the above, we have concluded that the Project can be accommodated within the confines of the existing transportation infrastructure in a safe and efficient manner with implementation of the recommendations that follow.

RECOMMENDATIONS

A detailed transportation improvement program has been developed that is designed to provide safe and efficient access to the Project site and address any deficiencies identified at off-site locations evaluated in conjunction with this study. The following improvements have been recommended as a part of this evaluation and, where applicable, will be completed in conjunction with the Project subject to receipt of all necessary rights, permits, and approvals.

Project Access

Access to the Project site will be provided by way of two driveways configured as follows: a full-access driveway that will intersect the north side of Route 62 approximately 90 feet east of the existing westerly driveway that serves the Project site and a full-access driveway that will intersect the north side of Route 62 approximately 80 feet west of the easterly property line. The existing driveways (three (3)) that serve the Project site will be closed in conjunction with the Project and will result in a net reduction of one (1) driveway along the Route 62 corridor and the elimination of the associated conflicts with vehicles, pedestrians and bicyclists. The following recommendations are offered with respect to the design and operation of the Project site access and internal circulation:

- The Project site driveways and internal circulating aisles should be 24 feet in width and designed to accommodate the turning and maneuvering requirements of the largest anticipated responding emergency vehicle and a large tractor semi-trailer combination (WB-67 design vehicle).

- Where perpendicular parking is proposed within the employee parking areas, the drive aisle behind the parking should be a minimum of 23 feet in order to facilitate parking maneuvers.

- Vehicles exiting the Project site should be placed under STOP-sign control with a marked STOP-line provided. STOP-signs and marked STOP-lines should also be provided at intersections located within the Project site.

- All signs and pavement markings to be installed within the Project site should conform to the applicable standards of the *Manual on Uniform Traffic Control Devices* (MUTCD).[2]

- Americans with Disabilities Act (ADA)-compliant wheelchair ramps should be provided at pedestrian crossings that are to be constructed or modified in conjunction with the Project.

- Signs and landscaping to be installed as a part of the Project within the intersection sight triangle areas of the Project site driveways should be designed and maintained so as not to restrict lines of sight.

- Trees and vegetation located along the north side of Route 62 within the sight triangle areas of the Project site driveways should be trimmed or removed and maintained in order to provide the necessary sight lines for safe operation. In addition, the large stone located within the sight triangle area of the east Project site driveway should also be removed.

- Snow accumulation (windrows) within sight triangle areas of the Project site driveways should be promptly removed where such accumulations would impede sight lines.

Off-Site

Route 62 at Woburn Street

Independent of the Project, the Woburn Street approaches to Route 62 are predicted to operate over capacity (i.e., LOS "F") during the weekday morning peak-hour under 2029 No-Build conditions. In an effort to off-set the predicted impact of the Project and to reduce motorist delays and vehicle queueing, the Project proponent will design and implement an optimal traffic signal timing and phasing plan for the intersection. With the implementation of an optimal traffic signal and phasing plan, intersection overall intersection operations will improve from LOS F to LOS D during the weekday morning peak-hour and no movement or approach will operate below LOS E, an improvement over No-Build conditions. All movements at the intersection will continue to operate at LOS D or better during the weekday evening peak-hour. These improvements will be completed prior to the issuance of a Certification of Occupancy for the Project, subject to the receipt of all necessary rights, permit and approvals.

Route 62 at the I-93 Ramps

Independent of the Project, left-turn movements from the I-93 off-ramps (north and southbound) to Route 62 are currently operating over capacity with extended vehicle queueing (up to 28 vehicles), with conditions expected to worsen in the future. The addition of Project-related traffic to the intersections was shown to result in a predicted increase in average motorist delay during the peak hours that resulted in a corresponding increase in vehicle queueing of up to two (2) vehicles. In order to assist the Town and MassDOT to advance improvements along Route 62 within the I-93 interchange area that are desirable independent of the Project, the Project proponent will prepare a Functional Design Report (FDR) and accompanying concept plans to identify potential improvement strategies for the ramp intersections. The FDR and concept plans will be provided to the Town prior to the issuance of a Certificate of Occupancy for the Project.

[2] *Manual on Uniform Traffic Control Devices (MUTCD)*; Federal Highway Administration; Washington, D.C.; 2009.

Transportation Demand Management

Regularly scheduled public transportation services are not currently provided within the study area or to the Project site. In an effort to encourage the use of alternative modes of transportation to single-occupant vehicles, the following Transportation Demand Management (TDM) measures are under consideration as a part of the Project:

- A transportation coordinator will be assigned for the Project to coordinate the TDM program;
- The transportation coordinator will facilitate a rideshare matching program for employees to encourage carpooling;
- A "welcome packet" will be provided to employees detailing the contact information for the transportation coordinator and information to enroll in the employee rideshare program;
- Specific amenities will be provided to discourage off-site trips, including providing a break-room equipped with a microwave and refrigerator; offering direct deposit of paychecks; allowing telecommuting or flexible work schedules; and other such measures to reduce overall traffic volumes and travel during peak-traffic-volume periods;
- Prioritization will be given to local hirings and an effort to reduce traffic volume increases outside of the local area;
- Pedestrian accommodations will be incorporated within the Project site to link the employee parking areas to the warehouse building; and
- Secure bicycle parking will be provided at an appropriate location within the Project site.
