With implementation of the aforementioned recommendations, safe and efficient access will be provided to the Project site and the Project can be accommodated within the confines of the existing and improved transportation system.

INTRODUCTION

Vanasse & Associates, Inc. (VAI) has conducted a Transportation Impact Assessment (TIA) in order to determine the potential impacts on the transportation infrastructure associated with the proposed construction of a warehouse building to be located at 800 Salem Street (Route 62) in Wilmington, Massachusetts (hereafter referred to as the Project). This study evaluates the following specific areas as they relate to the Project: i) access requirements; ii) potential off-site improvements; and iii) safety considerations; and identifies and analyzes existing traffic conditions and future traffic conditions, both with and without the Project, along Route 62 and at major intersections located along this roadway through which Project-related traffic will travel.

PROJECT DESCRIPTION

The Project will entail the construction of a 237,880± square foot (sf) warehouse building to be located at 800 Salem Street in Wilmington, Massachusetts. The Project site encompasses approximately 28± acres of land that is generally bounded by a materials processing yard, wetlands, and areas of open and wooded space to the north; Route 62 to the south; Route 62 and a materials processing yard to the east; and wetlands and areas of open and wooded space to the west. The Project site currently contains a materials processing yard and associated appurtenances that will be removed to accommodate the Project. Figure 1 depicts the Project site location in relation to the existing roadway network.

Access to the Project site will be provided by way of two driveways configured as follows: a full-access driveway that will intersect the north side of Route 62 approximately 90 feet east of the existing westerly driveway that serves the Project site and a full-access driveway that will intersect the north side of Route 62 approximately 80 feet west of the easterly property line. The existing driveways (three (3)) that serve the Project site will be closed in conjunction with the Project and will result in a net reduction of one (1) driveway along the Route 62 corridor and the elimination of the associated conflicts with vehicles, pedestrians and bicyclists.

The Project will include the construction of 322 parking spaces for employees and visitors, 45 loading bays that can accommodate a similar number of tractor semi-trailer combinations or trailers without tractors, and 29 trailer storage spaces (396 spaces total). The employee/visitor

Figure 1

Site Location Map

R:\9311\9311SLM.dwg, 7/26/2022 7:05:17 PM

parking (322 parking spaces) meets the requirements of Section 6.4.1.1, *Schedule of Uses*, of the Wilmington Zoning Bylaw[3].

STUDY METHODOLOGY

This study was prepared in consultation with the Massachusetts Department of Transportation (MassDOT) and the Town of Wilmington; was performed in accordance with MassDOT's *Transportation Impact Assessment (TIA) Guidelines* and the standards of the Traffic Engineering and Transportation Planning professions for the preparation of such reports; and was conducted in three distinct stages.

The first stage involved an assessment of existing conditions in the study area and included an inventory of roadway geometrics; pedestrian and bicycle facilities; public transportation services; observations of traffic flow; and collection of daily and peak-period traffic counts.

In the second stage of the study, future traffic conditions were projected and analyzed. Specific travel demand forecasts for the Project were assessed along with future traffic demands due to expected traffic growth independent of the Project. A seven-year time horizon was selected for analyses consistent with MassDOT's *Transportation Impact Assessment (TIA) Guidelines*. The traffic analysis conducted in stage two identifies existing or projected future roadway capacity, traffic safety, and site access issues.

The third stage of the study presents and evaluates measures to address traffic and safety issues, if any, identified in stage two of the study.

[3]The Zoning Bylaw requires a minimum of 1.0 parking spaces for each 300 sf of floor area devoted to office use (11,894 sf is proposed) and a minimum of 1.0 parking spaces for each 800 sf of floor area devoted to industrial use (225,986 sf is proposed), which would require a total of 322 parking spaces.

EXISTING CONDITIONS

A comprehensive field inventory of existing conditions within the study area was conducted in March, April and May 2022. The field investigation consisted of an inventory of existing roadway geometrics; pedestrian and bicycle facilities; public transportation services; traffic volumes; and operating characteristics; as well as posted speed limits and land use information within the study area. The study area that was assessed for the Project consisted of Salem Street (Route 62), and the following specific intersections through which Project-related traffic will travel: Route 62 at the Interstate 93 (I-93) southbound ramps; Route 62 at the I-93 northbound ramps; and Route 62 at Woburn Street.

The following describes the study area roadways and intersections.

ROADWAY

Salem Street/Lowell Road (Route 62)

- Two-lane urban minor arterial roadway under Town jurisdiction with the exception of the segment of Salem Street between Middlesex Avenue and Woburn Street where the roadway is under MassDOT jurisdiction;
- Traverses the study area in a general east-west direction, becoming Lowell Road at the North Reading town line;
- Provides two 11 to 13-foot wide travel lanes that are separated by a double-yellow centerline with 1 to 2-foot wide marked shoulders in the vicinity of the Project site and additional travel lanes are provided at major intersections;
- The posted speed limit is 35 miles per hour (mph) eastbound and 40 mph westbound in the vicinity of the Project site;
- A sidewalk is provided along the north side of Salem Street easterly to a point approximately 600 feet east of Woburn Street and along south side between the driveway to 471 Salem Street westerly to Woburn Street;
- Illumination is provided by way of streetlights mounted on wood poles; and
- Land use within the study area consists of the Project site, residential and commercial properties, and areas of open and wooded space.

INTERSECTIONS

Table 1 and Figure 2 summarize lane use, traffic control, and pedestrian and bicycle accommodations at the study area intersections as observed in April and May 2022.

Table 1
STUDY AREA INTERSECTION DESCRIPTION

Intersection	Traffic Control Type[a]	No. of Travel Lanes Provided	Shoulder Provided? (Yes/No/Width)	Pedestrian Accommodations? (Yes/No/Description)	Bicycle Accommodations? (Yes/No/Description)
Route 62/ I-93 SB Ramps	S	1 general-purpose travel lane on all approaches with northbound and eastbound right-turns exiting prior to the intersection by way of channelized right-turn lanes	Yes; 3 to 10 feet on Route 62 and 2 to 3 feet on the I-93 ramps	Yes; sidewalk along the north side of Route 62	Yes; Shared-traveled-way on Route 62[b]
Route 62/ I-93 NB Ramps	S	1 general-purpose travel lane on all approaches with northbound and eastbound right-turns exiting prior to the intersection by way of channelized right-turn lanes	Yes; 3 to 8 feet on Route 62 and 2 feet on the I-93 ramps	Yes; sidewalk along the north side of Route 62	Yes; Shared-traveled-way on Route 62
Route 62/ Woburn St.	TS	1 general-purpose travel lane on Woburn St. approaches; 1 left-turn lane and 1 through/ right-turn lane on Route 62 eastbound approach; 1 left-turn/ through lane and 1 right-turn lane on Route 62 westbound approach	Yes; 2 to 6 feet on all approaches	Yes; sidewalks provided along the north side of Route 62 east and west of the intersection and along the south side to the east; crosswalks are provided for crossing all legs; pedestrian traffic signal equipment and phasing (exclusive) provided	Yes; Shared-traveled-way on all approaches

[a]S = STOP-sign control; TS = Traffic Signal control.
[b]Combined shoulder and travel lane width equal to or exceed 14 feet.

TRAFFIC VOLUMES

In order to determine existing traffic-volume demands and flow patterns within the study area, automatic traffic recorder (ATR) counts, turning movement counts (TMCs), and vehicle classification counts were completed in March 2022. The ATR counts were conducted on March 23rd through 24th, 2022 (Wednesday through Thursday, inclusive) on Route 62 in the vicinity of the Project site in order to record weekday traffic conditions over an extended period, with weekday morning (7:00 to 9:00 AM) and evening (4:00 to 6:00 PM) peak-period TMCs performed at the study area intersections on March 23, 2022 (Wednesday), and on March 29, 2022 (Tuesday). These time periods were selected for analysis purposes as they are representative of the peak-traffic-volume hours for both the Project and the adjacent roadway network.

Traffic-Volume Adjustments

In order to evaluate the potential for seasonal fluctuation of traffic volumes within the study area, traffic-volume data from MassDOT Continuous Count Station No. 5127 located on the Andover Bypass in Andover was reviewed.[4] Based on a review of this data, it was determined that traffic volumes during the month of March are approximately 5.4 percent *below* average-month conditions. As such, the March traffic volumes were adjusted upward by 5.4 percent in order to be representative of average-month conditions.

In order to account for the impact on traffic volumes and trip patterns resulting from the COVID-19 pandemic, traffic-volume data collected at MassDOT Continuous Count Station No. 4096, located on I-93 north of Route 129 in Wilmington, in March 2022 was compared to data collected at the same count station in March 2017. The 2017 traffic volumes were expanded to 2019 by applying the traffic growth procedure detailed in the April 2020 "Guidance on Traffic Counting Data" published by MassDOT[5] in order to allow for a comparison of the data. Based on this pre- and post-COVID-19 traffic-volume comparison, the March traffic-volume data that was collected as part of this assessment was found to be approximately 1.9 percent *below* the conditions that existed prior to the COVID-19 pandemic. As such, the seasonally adjusted March traffic volumes were adjusted upward by an additional 1.9 percent.

The 2022 Existing traffic volumes are summarized in Table 2, with the weekday morning and evening peak-hour traffic volumes graphically depicted on Figures 3 and 4, respectively. Note that the peak-hour traffic volumes presented in Table 2 were obtained from aforementioned figures.

Table 2
2022 EXISTING TRAFFIC VOLUMES

Location/Peak Hour	AWT[a]	VPH[b]	K Factor[c]	Directional Distribution[d]
Route 62, west of the Shea Concrete Driveway:	14,130	--	--	--
Weekday Morning (7:00 – 8:00 AM)	--	1,123	7.9	57.3% WB
Weekday Evening (4:30 – 5:30 PM)	--	1,260	8.9	57.6% EB

[a]Average weekday traffic in vehicles per day.
[b]Vehicles per hour.
[c]Percent of daily traffic occurring during the peak hour.
[d]Percent traveling in peak direction.
EB = eastbound, WB = westbound.

As can be seen in Table 2, Route 62 in the vicinity of the Project site was found to accommodate approximately 14,130 vehicles on an average weekday (two-way, 24-hour volume), with approximately 1,123 vehicles per hour (vph) during the weekday morning peak-hour and 1,260 vph during the weekday evening peak-hour.

PEDESTRIAN AND BICYCLE FACILITIES

A comprehensive field inventory of pedestrian and bicycle facilities within the study area was undertaken in April and May 2022. The field inventory consisted of a review of the location of sidewalks and pedestrian crossing locations along the study roadway and at the study intersections, as well as the location of existing and planned future bicycle facilities. As detailed on Figure 2, a sidewalk is provided along the north side of Salem Street easterly to a point approximately 600 feet east of Woburn Street and along south side between the driveway to 471 Salem Street westerly to Woburn Street. Marked crosswalks are provided for crossing all legs of the Route 62/ Woburn Street intersection, with pedestrian traffic signal equipment and phasing (exclusive) provided.

Formal bicycle facilities are not currently provided along the study area roadways; however, Route 62 and Woburn Street provide sufficient width (combined travel lane and shoulder) on a continuous basis to support bicycle travel in a shared traveled-way configuration.[6]

PUBLIC TRANSPORTATION

Regularly scheduled public transportation services are provided to the Town of Wilmington, but are not currently available at the Project site. The closest public transportation services to the Project site are provided by the Massachusetts Bay Transportation Authority (MBTA), which provides Commuter Rail service to North Station in Boston on the Haverhill Line from North Wilmington Station, which is located at 370 Middlesex Avenue (Route 62), approximately 1.6 miles southwest of the Project site. In addition, paratransit services are provided for eligible persons who cannot use fixed-route bus services all or some of the time due to a physical, cognitive, or mental disability in compliance with the Americans with Disabilities Act (ADA) by the MBTA (the RIDE) and the Lowell Regional Transit Authority (LRTA) (Road Runner).

SPOT SPEED MEASUREMENTS

Vehicle travel speed measurements were performed on Route 62 in the vicinity of the Project site in conjunction with the ATR counts. Table 3 summarizes the vehicle travel speed measurements.

Table 3
VEHICLE TRAVEL SPEED MEASUREMENTS

	Route 62	
	Eastbound	Westbound
Mean Travel Speed (mph)	39	40
85th Percentile Speed (mph)	43	45
Posted Speed Limit (mph)	35	40

mph = miles per hour.

[6] A minimum combined travel lane and paved shoulder width of 14-feet is required to support bicycle travel in a shared traveled-way condition.

As can be seen in Table 3, the mean vehicle travel speed along Route 62 in the vicinity of the Project site was found to be 39 mph in eastbound direction and 40 mph westbound. The measured 85th percentile vehicle travel speed, or the speed at which 85 percent of the observed vehicles traveled at or below, was found to be 43 mph in the eastbound direction and 45 mph westbound, which is 5 to 8 mph above the posted speed limit (35/40 mph) at the Project site. The 85th percentile speed is used as the basis of engineering design and in the evaluation of sight distances and is often used in establishing posted speed limits.

MOTOR VEHICLE CRASH DATA

Motor vehicle crash information for the study area intersections was provided by the MassDOT Highway Division Safety Management/Traffic Operations Unit for the most recent five-year period available (2015 through 2019, inclusive) in order to examine motor vehicle crash trends occurring within the study area. The data is summarized by intersection, type, severity, roadway and weather conditions, and day of occurrence, and presented in Table 4.

Based on a review of this data, no (0) motor vehicle crashes were reported to have occurred along Route 62 at the two (2) east driveways that serve the Project site over the five-year review period. The remaining study area intersections were found to have experienced an average of 4.0 or fewer reported motor vehicle crashes per year over the five-year review period and were found to have motor vehicle crash rates *below* the MassDOT statewide and District average crash rates for similar intersections for the MassDOT Highway Division District in which the intersections are located (District 4). The majority of the reported crashes occurred on a weekday; under clear weather conditions; during daylight; and involved angle-type collisions that resulted in property damage only.

A review of the MassDOT statewide High Crash Location List indicated that there are no locations within the study area or along Route 62 in the Town of Wilmington that are included on MassDOT's Highway Safety Improvement Program (HSIP) listing as high crash locations. In addition, no fatal motor vehicle crashes were reported to have occurred at the study area intersections over the five-year review period.

The detailed MassDOT Crash Rate Worksheets are provided in the Appendix.

[d]Districtwide/Statewide crash rate.
[e]The intersection crash rate is significant if it is found to exceed the MassDOT crash rate for the MassDOT Highway Division District in which the Project is located (District 4).

FUTURE CONDITIONS

Traffic volumes in the study area were projected to the year 2029, which reflects a seven-year planning horizon consistent with MassDOT's *Transportation Impact Assessment (TIA) Guidelines*. Independent of the Project, traffic volumes on the roadway network in the year 2029 under No-Build conditions include all existing traffic and new traffic resulting from background traffic growth. Anticipated Project-generated traffic volumes superimposed upon the 2029 No-Build traffic volumes to reflect 2029 Build traffic-volume conditions with the Project.

FUTURE TRAFFIC GROWTH

Future traffic growth is a function of the expected land development in the immediate area and the surrounding region. Several methods can be used to estimate this growth. A procedure frequently employed estimates an annual percentage increase in traffic growth and applies that percentage to all traffic volumes under study. The drawback to such a procedure is that some turning volumes may actually grow at either a higher or a lower rate at particular intersections.

An alternative procedure identifies the location and type of planned development, estimates the traffic to be generated, and assigns it to the area roadway network. This procedure produces a more realistic estimate of growth for local traffic; however, potential population growth and development external to the study area would not be accounted for in the resulting traffic projections.

To provide a conservative analysis framework, both procedures were used, the salient components of which are described below.

Specific Development by Others

The Planning Departments of the Towns of Wilmington and North Reading were contacted in order to determine if there were any projects planned within the study area that would have an impact on future traffic volumes at the study intersections. Based on this consultation, the following projects were identified for review in conjunction with this assessment:

- ***Proposed Multifamily Residential Development, Middlesex Avenue/Jefferson Road, Wilmington, Massachusetts.*** This project entails the construction of approximately 108± multifamily residential units to be generally situated in the northeast corner of the Middlesex Avenue/Jefferson Road intersection to the southwest of the Project site. Traffic

volumes associated with this project within the study area were obtained from the traffic study prepared for the project and were incorporated into the future conditions traffic volumes.[7]

- ***Proposed Age-Restricted (55+) Condominiums, 104 Lowell Road (Route 62), North Reading, Massachusetts.*** This project entails the construction of approximately 450± age-restricted (55+) condominiums to be located at 104 Lowell Road to the east of the Project site. Traffic volumes associated with this project within the study area were obtained from the traffic study prepared for the project and were incorporated into the future conditions traffic volumes.[8]

No other developments were identified at this time that are expected to result in an increase in traffic within the study area beyond the general background traffic growth rate (discussion follows).

General Background Traffic Growth

Traffic-volume data compiled by MassDOT from permanent count stations located in Wilmington, Andover, Tewksbury, and Woburn were reviewed in order to determine general traffic growth trends in the area. This data indicates that traffic volumes have fluctuated over the past several years (2015 to 2019), with the average growth rate found to be approximately 0.70 percent. In order to provide a prudent planning condition for the Project, a slightly higher 1.0 percent per year compounded annual background traffic growth rate was used in order to account for future traffic growth and presently unforeseen development within the study area.

Roadway Improvement Projects

MassDOT and the Town of Wilmington were consulted in order to determine if there were any planned future roadway improvement projects expected to be complete by 2029 within the study area. Based on these discussions, no future roadway improvement projects aside from routine maintenance activities were identified to be planned within the study area at this time.

No-Build Traffic Volumes

The 2029 No-Build condition peak-hour traffic volumes were developed by applying the 1.0 percent per year compounded annual background traffic growth rate to the 2022 Existing peak-hour traffic volumes and then adding the peak-hour traffic volumes associated with the identified specific development projects by others (Jefferson Road Residential development and 104 Lowell Road Condominiums). The resulting 2029 No-Build weekday morning and evening peak-hour traffic volumes are shown on Figures 5 and 6, respectively.

PROJECT-GENERATED TRAFFIC

Design year (2029 Build) traffic volumes for the study area roadways were determined by estimating Project-generated traffic volumes and assigning those volumes on the study roadways. The following sections describe the methodology used to develop the anticipated traffic characteristics of the Project.

As proposed, the Project will entail the construction of a 237,880± sf warehouse building. In order to develop the traffic characteristics of the Project, trip-generation statistics published by the ITE[9] for various warehouse uses were reviewed, including those for a general warehouse and both sortation and non-sortation type warehouses. Based on this review and the relative size of the warehouse building, ITE Land Use Code (LUC) 150, *Warehousing*, was used to develop the traffic characteristics of the Project as this use produced higher overall traffic volumes for the Project vs. the use of trip-generation data for a non-sortation warehouse given that an end user of the warehouse buildings has not been identified; the sortation-type warehouse produced a disproportionate volume of traffic in relation to the overall size of the buildings that are proposed. The resulting traffic volumes are summarized in Table 5 and have been disseminated into passenger car trips and truck trips.

Table 5
TRIP-GENERATION SUMMARY[a]

Time Period/Direction	(A) Passenger Car Trips	(B) Truck Trips	(C = A+B) Vehicle Trips

Entering	11	4	15
Exiting	37	3	40
Total	48	7	55

[a]Based on ITE LUC 150, *Warehousing; 237,880 sf.*

Project-Generated Traffic Volume Summary

As can be seen in Table 5, using the higher trip rates associated with a general warehouse, the Project is expected to generate 414 vehicle trips on an average weekday (two-way volume over the operational day of the Project, or 207 vehicles entering and 207 exiting), consisting of 270 passenger car (employee) trips and 144 truck trips. During the weekday morning peak hour,

[9]Ibid 1.

the Project is expected to generate 52 vehicle trips (40 vehicles entering and 12 exiting), consisting of 47 passenger car trips and 5 truck trips. During the weekday evening peak hour, the Project is expected to generate 55 vehicle trips (15 vehicles entering and 40 exiting), consisting of 48 passenger car trips and 7 truck trips.

TRIP DISTRIBUTION AND ASSIGNMENT

Given the differing nature of the trips associated with the Project, separate trip-distribution patterns were created for employee trips and truck trips. The employee trip-distribution pattern was developed based on a review of Journey-to-Work data for persons employed in the Town of Wilmington obtained from the U.S. Census and then refined based on the location of major population centers in the area and existing traffic patterns. The truck trip-distribution pattern was determined based on the location of connections of the Interstate Highway System (IHS). Figures 7 and 8 depict the resulting trip-distribution pattern for employees and trucks, respectively. The additional passenger vehicle traffic expected to be generated by the Project was assigned on to the study area roadway network as shown on Figures 9 and 10 for the weekday morning and evening peak hours, respectively, and the additional truck traffic expected to be generated by the Project was assigned onto the study area roadway network as shown on Figures 11 and 12 for the weekday morning and evening peak hours, respectively.

FUTURE TRAFFIC VOLUMES - BUILD CONDITION

The 2029 Build condition traffic volumes were developed by: i) removing the traffic volumes associated with the existing use that occupies the Project site and that will be removed to accommodate the Project from the 2029 No-Build peak-hour traffic volumes; and ii) adding the peak-hour traffic volumes that are expected to be generated by the Project. The 2029 Build weekday morning and evening peak-hour traffic volumes are graphically depicted on Figures 13 and 14, respectively.

A summary of peak-hour projected traffic-volume changes outside of the study area that is the subject of this assessment is shown in Table 6. These changes are a result of the construction of the Project.

Weekday Morning	1,131	1,278	1,260	-18	-1.4
Weekday Evening	1,258	1,431	1,434	3	0.2

As shown in Table 6, Project-related traffic-volume changes outside of the study area relative to 2029 No-Build conditions are anticipated to range from a reduction of 1.4 percent to an increase of 0.6 percent during the peak periods, with corresponding vehicle volume changes shown to range from a reduction of 18 vehicle to an increase of eight (8) vehicles. The identified traffic volume reductions are a result of the removal of trips associated with the existing use that occupies the Project site (materials processing yard). ***When distributed over the peak hour, the predicted traffic-volume increases would not result in a significant impact (increase) on motorist delays or vehicle queuing outside of the immediate study area that is the subject of this assessment.***

TRAFFIC OPERATIONS ANALYSIS

Measuring existing and future traffic volumes quantifies traffic flow within the study area. To assess quality of flow, roadway capacity and vehicle queue analyses were conducted under Existing, No-Build, and Build traffic-volume conditions. Capacity analyses provide an indication of how well the roadway facilities serve the traffic demands placed upon them, with vehicle queue analyses providing a secondary measure of the operational characteristics of an intersection or section of roadway under study.

METHODOLOGY

Levels of Service

A primary result of capacity analyses is the assignment of level of service to traffic facilities under various traffic-flow conditions.[10] The concept of level of service is defined as a qualitative measure describing operational conditions within a traffic stream and their perception by motorists and/or passengers. A level-of-service definition provides an index to quality of traffic flow in terms of such factors as speed, travel time, freedom to maneuver, traffic interruptions, comfort, convenience, and safety.

Six levels of service are defined for each type of facility. They are given letter designations from A to F, with level-of-service (LOS) A representing the best operating conditions and LOS F representing congested or constrained operating conditions.

Since the level of service of a traffic facility is a function of the traffic flows placed upon it, such a facility may operate at a wide range of levels of service, depending on the time of day, day of week, or period of year.

[10]The capacity analysis methodology is based on the concepts and procedures presented in the *Highway Capacity Manual;* Transportation Research Board; Washington, DC; 2010.

Signalized Intersections

The six levels of service for signalized intersections may be described as follows:

- *LOS A* describes operations with very low control delay; most vehicles do not stop at all.
- *LOS B* describes operations with relatively low control delay. However, more vehicles stop than LOS A.
- *LOS C* describes operations with higher control delays. Individual cycle failures may begin to appear. The number of vehicles stopping is significant at this level, although many still pass through the intersection without stopping.
- *LOS D* describes operations with control delay in the range where the influence of congestion becomes more noticeable. Many vehicles stop and individual cycle failures are noticeable.
- *LOS E* describes operations with high control delay values. Individual cycle failures are frequent occurrences.
- *LOS F* describes operations with high control delay values that often occur with oversaturation. Poor progression and long cycle lengths may also be major contributing causes to such delay levels.

Levels of service for signalized intersections are calculated using the operational analysis methodology of the 2000 *Highway Capacity Manual.*[11] and implemented as a part of the Synchro® 11 software as recommended by MassDOT. This method assesses the effects of signal type, timing, phasing, and progression; vehicle mix; and geometrics on delay. Level-of-service designations are based on the criterion of control or signal delay per vehicle. Control or signal delay is a measure of driver discomfort, frustration, and fuel consumption, and includes initial deceleration delay approaching the traffic signal, queue move-up time, stopped delay and final acceleration delay. Table 7 summarizes the relationship between level of service and control delay. The tabulated control delay criterion may be applied in assigning level-of-service designations to individual lane groups, to individual intersection approaches, or to entire intersections.

Table 7
LEVEL-OF-SERVICE CRITERIA
FOR SIGNALIZED INTERSECTIONS[a]

Level of Service	Control (Signal) Delay Per Vehicle (Seconds)
A	≤10.0
B	10.1 to 20.0
C	20.1 to 35.0
D	35.1 to 55.0
E	55.1 to 80.0
F	>80.0

[a]Source: *Highway Capacity Manual*, Transportation Research Board; Washington, DC; 2000; page 16-2.

[11]*Highway Capacity Manual*; Transportation Research Board; Washington, DC; 2000.

Unsignalized Intersections

The six levels of service for unsignalized intersections may be described as follows:

- *LOS A* represents a condition with little or no control delay to minor street traffic.
- *LOS B* represents a condition with short control delays to minor street traffic.
- *LOS C* represents a condition with average control delays to minor street traffic.
- *LOS D* represents a condition with long control delays to minor street traffic.
- *LOS E* represents operating conditions at or near capacity level, with very long control delays to minor street traffic.
- *LOS F* represents a condition where minor street demand volume exceeds capacity of an approach lane, with extreme control delays resulting.

The levels of service of unsignalized intersections are determined by application of a procedure described in the 2010 *Highway Capacity Manual.*[12] Level of service is measured in terms of average control delay. Mathematically, control delay is a function of the capacity and degree of saturation of the lane group and/or approach under study and is a quantification of motorist delay associated with traffic control devices such as traffic signals and STOP signs. Control delay includes the effects of initial deceleration delay approaching a STOP sign, stopped delay, queue move-up time, and final acceleration delay from a stopped condition. Definitions for level of service at unsignalized intersections are also given in the 2010 *Highway Capacity Manual*. Table 8 summarizes the relationship between level of service and average control delay for two-way STOP-controlled and all-way STOP-controlled intersections.

Table 8
LEVEL-OF-SERVICE CRITERIA FOR UNSIGNALIZED INTERSECTIONS[a]

Level-Of-Service by Volume-to-Capacity Ratio		Average Control Delay (Seconds Per Vehicle)
v/c ≤ 1.0	v/c > 1.0	
A	F	≥10.0
B	F	10.1 to 15.0
C	F	15.1 to 25.0
D	F	25.1 to 35.0
E	F	35.1 to 50.0
F	F	>50.0

Vehicle Queue Analysis

Vehicle queue analyses are a direct measurement of an intersection's ability to process vehicles under various traffic control and volume scenarios and lane use arrangements. The vehicle queue analysis was performed using the Synchro® intersection capacity analysis software which is based upon the methodology and procedures presented in the 2010 *Highway Capacity Manual*. The Synchro® vehicle queue analysis methodology is a simulation based model which reports the number of vehicles that experience a delay of 6 seconds or more at an intersection. For signalized intersections, Synchro® reports both the average (50th percentile) the 95th percentile vehicle queue. For unsignalized intersections, Synchro® reports the 95th percentile vehicle queue. Vehicle queue lengths are a function of the capacity of the movement under study and the volume of traffic being processed by the intersection during the analysis period. The 95th percentile vehicle queue is the vehicle queue length that will be exceeded only 5 percent of the time, or approximately 3 minutes out of 60 minutes during the peak one hour of the day (during the remaining 57 minutes, the vehicle queue length will be less than the 95th percentile queue length).

ANALYSIS RESULTS

Level-of-service and vehicle queue analyses were conducted for 2022 Existing, 2029 No-Build, and 2029 Build conditions for the intersections within the study area. The results of the intersection capacity and vehicle queue analyses are summarized on Tables 9 and 10, with the detailed analysis results presented in the Appendix.

The following is a summary of the level-of-service and vehicle queue analyses for the intersections within the study area. For context, we note that an LOS of "D" or better is generally defined as "acceptable" operating conditions. Project-related impacts at the study area intersections are shown in Tables 9 and 10 and are defined as follows:

Signalized Intersection

Route 62 at Woburn Street

No change in overall level-of-service is predicted to occur over No-Build conditions, with Project-related impacts generally defined as a predicted increase in overall average motorist delay that resulted in an increase in vehicle queuing of up to two (2) vehicles. Independent of the Project, the overall intersection and the Woburn Street approaches are predicted to operate over capacity (i.e., LOS "F") under 2029 No-Build conditions during the weekday morning peak-hour.

Unsignalized Intersections

Route 62 at the I-93 Southbound Ramps

No change in level-of-service is predicted to occur for any movement over No-Build conditions, with Project-related impacts generally defined as a predicted increase in average motorist delay that resulted in an increase in vehicle queuing of up to one (1) vehicle. Independent of the Project, the left-turn movements from the I-93 southbound off-ramp are currently operating over capacity under 2022 Existing conditions during the peak hours and right-turn movements from the off-ramp are predicted to operate at capacity (i.e., LOS "E") under 2029 No-Build (without the Project) conditions during the weekday evening peak-hour.

Route 62 at the I-93 Northbound Ramps

No change in level-of-service is predicted to occur for any movement over No-Build conditions, with Project-related impacts generally defined as a predicted increase in average motorist delay that resulted in an increase in vehicle queuing of up to one (1) vehicle. Independent of the Project, left-turn movements from the I-93 northbound off-ramp are currently operating over capacity under 2022 Existing conditions during the peak hours and right-turn movements from the off-ramp are predicted to operate over capacity under 2029 No-Build (without the Project) conditions during the weekday evening peak-hour.

Route 62 at Shea Concrete Driveway and the West Project Site Driveway

All movements at the west Project site driveway intersection with Route 62 are predicted to operate at LOS D or better with negligible vehicle queuing. All movements along Route 62 approaching the Project site driveway were shown to operate at LOS A during both peak hours also with negligible vehicle queuing.

Route 62 at the East 1 Project Site Driveway

This driveway will be closed under 2029 Build conditions with the construction of the Project.

Route 62 at the East 2 Project Site Driveway

All movements at the east Project site driveway intersection with Route 62 are predicted to operate at LOS C or better with negligible vehicle queuing. All movements along Route 62 approaching the Project site driveway were shown to operate at LOS A during both peak hours also with negligible vehicle queuing.

SIGHT DISTANCE EVALUATION

Sight distance measurements were performed at the Project site driveway intersections with Route 62 (two (2) locations) in accordance with MassDOT and American Association of State Highway and Transportation Officials (AASHTO)[13] requirements. Both stopping sight distance (SSD) and intersection sight distance (ISD) measurements were performed. In brief, SSD is the distance required by a vehicle traveling at the design speed of a roadway, on wet pavement, to stop prior to striking an object in its travel path. ISD or corner sight distance (CSD) is the sight distance required by a driver entering or crossing an intersecting roadway to perceive an on-coming vehicle and safely complete a turning or crossing maneuver with oncoming traffic. In accordance with AASHTO standards, if the measured ISD is at least equal to the required SSD value for the appropriate design speed, the intersection can operate in a safe manner. Table 11 presents the measured SSD and ISD at the subject intersections.

[13] *A Policy on Geometric Design of Highway and Streets,* 7th Edition; American Association of State Highway and Transportation Officials (AASHTO); Washington D.C.; 2018.

Table 11
SIGHT DISTANCE MEASUREMENTS[a]

Intersection/Sight Distance Measurement	Feet		
	Required Minimum (SSD)	Desirable (ISD)[b]	Measured
Route 62 at the West Project Site Driveway			
Stopping Sight Distance:			
Route 62 approaching from the east	360	--	426
Route 62 approaching from the west	360	--	489
Intersection Sight Distance:			
Looking to the east from the West Project Driveway	360	695	455[c]
Looking to the west from the West Project Driveway	360	765	413
Route 62 at the East Project Site Driveway			
Stopping Sight Distance:			
Route 62 approaching from the east	360	--	500+
Route 62 approaching from the west	360	--	491
Intersection Sight Distance:			
Looking to the east from the East Project Driveway	360	695	500+
Looking to the west from the East Project Driveway	360	765	277/479[d]

[a]Recommended minimum values obtained from *A Policy on Geometric Design of Highways and Streets,* 7th Edition; American Association of State Highway and Transportation Officials (AASHTO); 2018; and based on a 45 mph approach speed on Route 62.

[b]Values shown are the intersection sight distance for a vehicle turning right or left exiting a roadway under STOP control such that motorists approaching the intersection on the major street should not need to adjust their travel speed to less than 70 percent of their initial approach speed. The critical gap for the intersection sight distance values were increased to 11.5 seconds for left-turn movements and to 10.5 seconds for right-turn movements to reflect the longer gaps that are required for combination trucks (i.e., tractor semi-trailer combinations).

[c]Available sight distance with the trimming/removal of trees and vegetation located within the sight triangle area to the east of the west Project site driveway along the north side of Route 62.

[d]Available sight distance with the removal of a large stone located within the sight triangle area to the west of the east Project site driveway along the north side of Route 62.

As can be seen in Table 11, with the trimming or removal of trees and vegetation located within the sight triangle area of the west Project site driveway and the removal of a large stone located within the sight triangle area of the east Project site driveway, the available lines of sight to and from the Project site driveway intersections were found to exceed the recommended minimum sight distance to function in a safe (SSD) manner based on a 45 mph appropriate approach speed, which is above both the measured 85th percentile vehicle travel speed (43/45 mph) and the posted speed limits (35/40) at the Project site driveways.

CONCLUSIONS AND RECOMMENDATIONS

CONCLUSIONS

VAI has completed a detailed assessment of the potential impacts on the transportation infrastructure associated with the proposed construction of a warehouse building to be located at 800 Salem Street (Route 62) in Wilmington, Massachusetts. The following specific areas have been evaluated as they relate to the Project: i) access requirements; ii) potential off-site improvements; and iii) safety considerations; under existing and future conditions, both with and without the Project. Based on this assessment and using conservative (high) trip estimates for the Project, we have concluded the following:

1. Using trip-generation statistics published by the ITE[14] for a trip intensive warehouse use (general warehousing in this case), the Project is expected to generate approximately 414 vehicle trips on an average weekday (two-way, volume over the operational day of the Project), consisting of 270 passenger car trips and 144 truck trips. During the weekday morning peak-hour, the Project is expected to generate 52 vehicle trips, consisting of 47 passenger car trips and 5 truck trips. During the weekday evening peak-hour, the Project is expected to generate 55 vehicle trips, consisting of 48 passenger car trips and 7 truck trips;

2. The Project will not result in a significant impact (increase) on motorist delays or vehicle queuing over anticipated future conditions without the Project (No-Build condition), acknowledging that one or more movements at the study area intersections are currently operating or are predicted to operate at or over capacity (i.e., LOS "E" or "F", respectively) independent of the Project;

3. Independent of the Project, left-turn movements from the I-93 north and southbound off-ramps to Route 62 were identified to be operating over capacity (i.e., LOS "F") during both peak hours under 2022 Existing conditions, with Project-related impacts on these movements generally defined as an increase in average motorist delay that resulted in an increase in vehicle queuing of up to one (1) vehicle;

4. All movements exiting the Project site driveways are predicted to operate at LOS D or better during the peak hours with negligible vehicle queuing;

[14] Ibid 1.

5. No apparent safety deficiencies were noted with respect to the motor vehicle crash history at the study intersections; and

6. Lines of sight at the Project site driveway intersections with Route 62 were found to meet or exceed, or could be made to meet or exceed the recommended minimum sight distance to function in a safe manner based on the appropriate approach speed.

In consideration of the above, we have concluded that the Project can be accommodated within the confines of the existing transportation infrastructure in a safe and efficient manner with implementation of the recommendations that follow.

RECOMMENDATIONS

A detailed transportation improvement program has been developed that is designed to provide safe and efficient access to the Project site and address any deficiencies identified at off-site locations evaluated in conjunction with this study. The following improvements have been recommended as a part of this evaluation and, where applicable, will be completed in conjunction with the Project subject to receipt of all necessary rights, permits, and approvals.

Project Access

Access to the Project site will be provided by way of two driveways configured as follows: a full-access driveway that will intersect the north side of Route 62 approximately 90 feet east of the existing westerly driveway that serves the Project site and a full-access driveway that will intersect the north side of Route 62 approximately 80 feet west of the easterly property line. The existing driveways (three (3)) that serve the Project site will be closed in conjunction with the Project and will result in a net reduction of one (1) driveway along the Route 62 corridor and the elimination of the associated conflicts with vehicles, pedestrians and bicyclists. The following recommendations are offered with respect to the design and operation of the Project site access and internal circulation:

- The Project site driveways and internal circulating aisles should be 24 feet in width and designed to accommodate the turning and maneuvering requirements of the largest anticipated responding emergency vehicle and a large tractor semi-trailer combination (WB-67 design vehicle).

- Where perpendicular parking is proposed within the employee parking areas, the drive aisle behind the parking should be a minimum of 23 feet in order to facilitate parking maneuvers.

- Vehicles exiting the Project site should be placed under STOP-sign control with a marked STOP-line provided. STOP-signs and marked STOP-lines should also be provided at intersections located within the Project site.

- All signs and pavement markings to be installed within the Project site should conform to the applicable standards of the *Manual on Uniform Traffic Control Devices* (MUTCD).[15]

[15] Ibid 2.

- Americans with Disabilities Act (ADA)-compliant wheelchair ramps should be provided at pedestrian crossings that are to be constructed or modified in conjunction with the Project.

- Signs and landscaping to be installed as a part of the Project within the intersection sight triangle areas of the Project site driveways should be designed and maintained so as not to restrict lines of sight.

- Trees and vegetation located along the north side of Route 62 within the sight triangle areas of the Project site driveways should be trimmed or removed and maintained in order to provide the necessary sight lines for safe operation. In addition, the large stone located within the sight triangle area of the east Project site driveway should also be removed.

- Snow accumulation (windrows) within sight triangle areas of the Project site driveways should be promptly removed where such accumulations would impede sight lines.

Off-Site

Route 62 at Woburn Street

Independent of the Project, the Woburn Street approaches to Route 62 are predicted to operate over capacity (i.e., LOS "F") during the weekday morning peak-hour under 2029 No-Build conditions. In an effort to off-set the predicted impact of the Project and to reduce motorist delays and vehicle queueing, the Project proponent will design and implement an optimal traffic signal timing and phasing plan for the intersection. With the implementation of an optimal traffic signal and phasing plan, intersection overall intersection operations will improve from LOS F to LOS D during the weekday morning peak-hour and no movement or approach will operate below LOS E, an improvement over No-Build conditions. As can be seen in Table 12, all movements at the intersection will continue to operate at LOS D or better during the weekday evening peak-hour. These improvements will be completed prior to the issuance of a Certification of Occupancy for the Project, subject to the receipt of all necessary rights, permit and approvals.

Route 62 at the I-93 Ramps

Independent of the Project, left-turn movements from the I-93 off-ramps (north and southbound) to Route 62 are currently operating over capacity with extended vehicle queueing (up to 28 vehicles), with conditions expected to worsen in the future. The addition of Project-related traffic to the intersections was shown to result in a predicted increase in average motorist delay during the peak hours that resulted in a corresponding increase in vehicle queueing of up to two (2) vehicles. In order to assist the Town and MassDOT to advance improvements along Route 62 within the I-93 interchange area that are desirable independent of the Project, the Project proponent will prepare a Functional Design Report (FDR) and accompanying concept plans to identify potential improvement strategies for the ramp intersections. The FDR and concept plans will be provided to the Town prior to the issuance of a Certificate of Occupancy for the Project.

Transportation Demand Management

Regularly scheduled public transportation services are not currently provided within the study area or to the Project site. In an effort to encourage the use of alternative modes of transportation to single-occupant vehicles, the following Transportation Demand Management (TDM) measures are under consideration as a part of the Project:

- A transportation coordinator will be assigned for the Project to coordinate the TDM program;
- The transportation coordinator will facilitate a rideshare matching program for employees to encourage carpooling;
- A "welcome packet" will be provided to employees detailing the contact information for the transportation coordinator and information to enroll in the employee rideshare program;
- Specific amenities will be provided to discourage off-site trips, including providing a break-room equipped with a microwave and refrigerator; offering direct deposit of paychecks; allowing telecommuting or flexible work schedules; and other such measures to reduce overall traffic volumes and travel during peak-traffic-volume periods;
- Prioritization will be given to local hirings in an effort to reduce traffic volume increases outside of the local area;
- Pedestrian accommodations will be incorporated within the Project site to link the employee parking areas to the warehouse building; and
- Secure bicycle parking will be provided at an appropriate location within the Project site.

With implementation of the aforementioned recommendations, safe and efficient access will be provided to the Project site and the Project can be accommodated within the confines of the existing and improved transportation system.

2017 Average Count Data – Sta. 4096

March ADT: 162,899

Growth Rate (2017-2018): 0.3% [MassDOT Yearly Growth Rates (U4-7)]
Growth Rate (2018-2019): -0.4% [MassDOT Yearly Growth Rates (U4-7)]

$$162{,}899 \times (1.003) \times (0.996) = 162{,}734$$

2022 Average Count Data – Sta. 4096

March ADT: 159,822

COVID Adjustment

$$1 - \frac{162{,}899}{159{,}822} = -0.019$$

Keep in Mind:

This schedule will be effective from May 23, 2022 and will replace the schedule of October 11, 2021.

Holiday Service
Memorial Day (May 30th), July 4th and Labor Day (September 5th) operate on a weekend schedule.
Columbus Day (October 10th) and Juneteenth (observed on June 20th) operate on a regular weekday schedule.

For all holiday schedules, please check MBTA.com/holidays or call 617-222-3200.

Times in purple with "f" indicate a flag stop: Passengers must tell the conductor that they wish to leave. Passengers waiting to board must be visible on the platform for the train to stop.

Bikes: Bicycles are allowed on trains with the bicycle symbol shown below the train number.

High level platform and bridge plate available. Visit **mbta.com/accessibility** for more information.

HCS7 Warrants Report

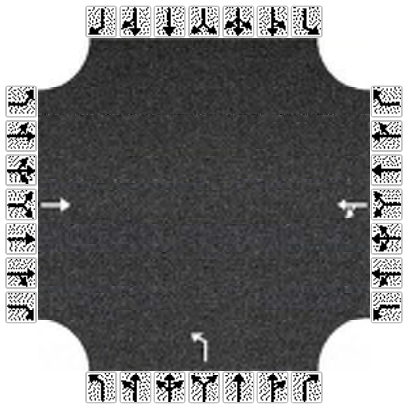
Project Information

Analyst	DCL	Date	7/21/2022
Agency	Vanasse & Associates	Analysis Year	2022
Jurisdiction		Time Period Analyzed	7-9 AM, 4-6 PM
Project Description	Warehouse Development		

General

Major Street Direction	East-West	Population < 10,000	No
Starting Time Interval	7	Coordinated Signal System	No
Median Type	Undivided	Crashes (crashes/year)	0
Major Street Speed (mi/h)	45	Adequate Trials of Crash Exp. Alt.	No
Nearest Signal (ft)	0		

Geometry and Traffic



Approach	Eastbound			Westbound			Northbound			Southbound		
Movement	L	T	R	L	T	R	L	T	R	L	T	R
Number of Lanes, N	0	1	0	0	1	0	1	0	0	0	0	0
Lane Usage		T			LT		L					
Vehicle Volumes Averages (veh/h)	0	179	0	88	212	0	60	0	0	0	0	0
Pedestrian Averages (peds/h)	0			0			0			0		
Gap Averages (gaps/h)	0			0			0			0		
Delay (s/veh)	0.0			0.0			0.0			0.0		
Delay (veh-hrs)	0.0			0.0			0.0			0.0		

School Crossing and Roadway Network

Number of Students in Highest Hour	0	Two or More Major Routes	No
Number of Adequate Gaps in Period	0	Weekend Counts	No
Number of Minutes in Period	0	5-year Growth Factor (%)	0

Railroad Crossing

Grade Crossing Approach	None	Rail Traffic (trains/day)	4
Highest Volume Hour with Trains	Unknown	High Occupancy Buses (%)	0
Distance to Stop Line (ft)		Tractor-Trailer Trucks (%)	10

Warrants

Warrant 1: Eight-Hour Vehicular Volume	
A. Minimum Vehicular Volumes (Both major approaches --and-- higher minor approach) --or--	
B. Interruption of Continuous Traffic (Both major approaches --and-- higher minor approach) --or--	
56% Vehicular --and-- Interruption Volumes (Both major approaches --and-- higher minor approach)	
Warrant 2: Four-Hour Vehicular Volume	✔
Four-Hour Vehicular Volume (Both major approaches --and-- higher minor approach)	✓
Warrant 3: Peak Hour	✔
A. Peak-Hour Conditions (Minor delay -- and-- minor volume --and-- total volume) --or--	
B. Peak-Hour Vehicular Volumes (Both major approaches --and-- higher minor approach)	✓
Warrant 4: Pedestrian Volume	
A. Four Hour Volumes --or--	
B. One-Hour Volumes	
Warrant 5: School Crossing	
Gaps Same Period --and--	
Student Volumes	
Nearest Traffic Control Signal (optional)	
Warrant 6: Coordinated Signal System	
Degree of Platooning (Predominant direction or both directions)	
Warrant 7: Crash Experience	
A. Adequate trials of alternatives, observance and enforcement failed --and--	
B. Reported crashes susceptible to correction by signal (12-month period) --and--	
C. 56% Volumes for Warrants 1A, 1B, --or-- 4 are satisfied	
Warrant 8: Roadway Network	
A. Weekday Volume (Peak hour total --and-- projected warrants 1, 2, or 3) --or--	
B. Weekend Volume (Five hours total)	
Warrant 9: Grade Crossing	
A. Grade Crossing within 140 ft --and--	
B. Peak-Hour Vehicular Volumes

Intersection Summary

Actuated Cycle Length: 94.7
Natural Cycle: 145
Control Type: Actuated-Uncoordinated
~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Splits and Phases: 3: Woburn Street/Andover Street & Route 62

Intersection Summary

Actuated Cycle Length: 99.1
Natural Cycle: 145
Control Type: Actuated-Uncoordinated
~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Splits and Phases: 3: Woburn Street/Andover Street & Route 62

Intersection Summary

Actuated Cycle Length: 94.7
Natural Cycle: 110
Control Type: Actuated-Uncoordinated
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Splits and Phases: 3: Woburn Street/Andover Street & Route 62

RE: 8520

SUBJECT: Transportation Impact Assessment
Proposed Multifamily Residential Development – Jefferson Road
Wilmington, Massachusetts

Vanasse & Associates, Inc. (VAI) has conducted a Transportation Impact Assessment (TIA) in order to determine the potential impacts on the transportation infrastructure associated with the proposed construction of a multifamily residential development that is to be located off Middlesex Avenue (Route 62) and Jefferson Road in Wilmington, Massachusetts (hereafter referred to as the "Project"). This assessment provides an existing conditions context for the Project in relation to the transportation infrastructure and evaluates the following specific areas: i) access requirements; ii) potential off-site improvements; and iii) safety considerations; and qualitatively evaluates the potential impact of the Project along Middlesex Avenue and at major intersections located along this roadway through which Project-related traffic will travel.

This assessment was prepared in consultation with the Town of Wilmington and was performed in general accordance with the MassDOT *Transportation Impact Assessment (TIA) Guidelines* and the standards of the Traffic Engineering and Transportation Professions. Based on this assessment, we have concluded the following with respect to the Project:

1. Using trip-generation statistics published by the Institute of Transportation Engineers (ITE)[1] and after applying appropriate adjustments to account for resident use of alternative modes of transportation, including commuter rail services available from North Wilmington Station which is immediately adjacent to the Project site, the Project is expected to generate approximately 490 vehicle trips on an average weekday (two-way, 24-hour volume), with 33 vehicle trips expected during the weekday morning peak-hour and 43 vehicle trips expected during the weekday evening peak-hour;

2. The Project will not have a significant impact (increase) on motorist delays or vehicle queuing over Existing or anticipated future conditions without the Project (No-Build conditions), with traffic volume increases outside of the immediate proximity of the Project site predicted to be less than one (1) added vehicle every 3-4 minutes during the peak hours. In fact, the Project represents an

[1] *Trip Generation*, 10th Edition; Institute of Transportation Engineers; Washington, DC; 2017.

increase in traffic of less than 5 percent along Middlesex Avenue, which is well within the normal fluctuation in traffic volumes that occurs between Monday and Friday over the course of a typical week;

3. No apparent safety deficiencies were noted with respect to the motor vehicle crash history along Middlesex Avenue in the vicinity of the Project site; and

4. Lines of sight at the Project site driveway intersections with Middlesex Avenue and Jefferson Road and at the Middlesex Avenue/Jefferson Road intersection were found to meet, exceed or could be made to meet or exceed the recommended minimum distances for safe operation based on the appropriate approach speeds.

In consideration of the above, we have concluded that the Project can be accommodated within the confines of the existing transportation infrastructure in a safe and efficient manner with implementation of the recommendations that follow.

PROJECT DESCRIPTION

The Project will entail the construction of multifamily residential development that will be located off Jefferson Road and Middlesex Avenue in Wilmington, Massachusetts. As proposed, the Project will consist of the construction of 108 multifamily residential units to be located in two (2) buildings, with "Building A" to encompass 58 residential units and generally situated in the northeast corner of the Middlesex Avenue/Jefferson Road intersection and "Building B" to encompass 50 residential units and located at the north end of Jefferson Road. The Project site encompasses 25.29± acres of land that is generally bounded by areas of open and wooded space and low-lying wetland areas to the north; Middlesex Avenue, a commercial building (200 Jefferson Road), a gravel lot and a surface parking lot for North Wilmington Station on the Massachusetts Bay Transportation Authority (MBTA) Haverhill Line Commuter Rail system to the south; Lubbers Brook to the east; and Jefferson Road and the MBTA Commuter Rail tracks to the west. At present, the Project site is occupied by several commercial buildings with associated parking lots and appurtenances, Jefferson Road (a private way), and areas of open and wooded space. The existing commercial buildings and associated appurtenances located at 378-380 and 382 Middlesex Avenue will be removed to accommodate the Project; the commercial building located at 200 Jefferson Road will be retained.

©2020 Google Imagery.

Access to the Project site will be provided as follows: *Building A* – access to "Building A" will be provided by way of the existing driveway that serves 382 Middlesex Avenue and intersects the north side of Middlesex Avenue approximately 185 feet east of Jefferson Road and two (2) driveways that will intersect the east side of Jefferson Road approximately 40 feet and 325 feet north of Middlesex Avenue, respectively; *Building B* – access to "Building B" will be provided by way of a driveway that will intersect the north end of Jefferson Road.

On-site parking will be provided for each building consisting of both surface parking and garage parking configured as follows: *Building A* (58 units) – on-site parking will be provided for 96 vehicles, or a parking ratio of approximately 1.66 spaces per unit, including 55 surface parking spaces and 41 covered spaces beneath the residential building; *Building B* (50 units) - on-site parking will be provided for 80 vehicles, or a parking ratio of approximately 1.60 spaces per unit, including 56 surface parking spaces and 24 garage spaces. The proposed parking ratios (1.66/1.60 spaces per unit) are below the parking requirements for a residential use specified in Section 6.4, *Parking and Site Design Standards*, of the Wilmington Zoning Bylaw (2.0 spaces for each dwelling unit are required), but exceed the range of values documented by the Institute of Transportation Engineers (ITE) for comparable multifamily residential communities.[2]

EXISTING CONDITIONS CONTEXT

In order to establish the existing conditions context of the Project with respect to the transportation infrastructure, a review of existing conditions was completed in May 2020. The field investigation consisted of an inventory of existing roadway geometrics; pedestrian and bicycle facilities; traffic volumes (December 2018); and operating characteristics; as well as posted speed limits and land use information within the study area. The study area that was assessed for the Project consisted of Middlesex Avenue and Jefferson Road in the vicinity of the Project site. The following summarizes existing conditions within the study area.

Roadways

Middlesex Avenue (Route 62)

Middlesex Avenue (Route 62) is a two-lane urban minor arterial that is under local jurisdiction in the vicinity of the Project site; north of High Street, Route 62 is under MassDOT jurisdiction between High Street and Woburn Street, and provides a full access interchange with I-93 (Exit 40). In the vicinity of the Project site, Middlesex Avenue provides two 13 to 14-foot wide travel lanes separated by a double-yellow centerline with 3 to 6-foot wide marked shoulders. A railroad crossing with gates and flashing signals is located approximately 200 feet south west of Jefferson Road. The posted speed limit along Middlesex Avenue in the vicinity of the Project site is 25 miles per hour (mph), with prevailing travel speeds measured in December 2018 found to be between 35 and 37 mph.[3] Land use in the vicinity of the Project site consists of commercial properties, North Wilmington Station on the Haverhill Line of the MBTA Commuter Rail system, and areas of open and wooded space.

---

[2] *Parking Generation Manual*, 5th Edition; Institute of Transportation Engineers; Washington, D.C.; 2019. Observed parking demand ratios for an affordable housing community were found to range from 0.32 to 1.66 spaces per dwelling unit, with an average parking demand of 0.99 spaces per dwelling unit and an 85th percentile peak parking demand of 1.33 spaces per dwelling unit. For a traditional multifamily residential community located within ½ mile of a rail transit station, the average parking demand was reported to be 1.12 spaces per dwelling unit and the 85th percentile peak parking demand was identified to be 1.27 spaces per dwelling unit.

[3] The prevailing travel speed is also known as the 85th percentile vehicle travel speed, or the speed at which 85 percent of the observed vehicles traveled at or below during the observation period.

Traffic volume data collected as a part of this assessment in December 2018 indicates that Middlesex Avenue in the vicinity of the Project site accommodates approximately 14,105 vehicles per day on an average weekday and 12,090 vehicles on a Saturday, with approximately 1,105 vehicles per hour (vph) during the weekday morning peak-hour (7:15 to 8:15 AM), 1,125 vph during the weekday evening peak-hour (5:00 to 6:00 PM) and 1,010 vph during the Saturday peak-hour (11:45 AM to 12:45 PM).

Jefferson Road

Jefferson Road is a private way that traverses a general north-south alignment and terminates in a parking lot approximately 720 feet north of Middlesex Avenue. Jefferson Road consists of a 40 foot layout within which a 20± foot wide paved roadway is provided that accommodates two-way travel with no pavement markings. A sidewalk is provided along the west side of the roadway between Middlesex Avenue and the entrance to the commuter rail parking lot (a distance of approximately 250 linear feet). Land use consists of the Project site, the parking lot for the North Wilmington Commuter Rail Station, commercial properties and areas of open and wooded space.

Jefferson Road intersects Middlesex Avenue from the north to from a four-legged intersection with the exit driveway to Elia's Country Store slightly off-set to the west and both the Jefferson Road and the Elia's Country Store driveway approaches under STOP-sign control. Marked crosswalks are provided for crossing Jefferson Road and the Middlesex Avenue northeast leg of the intersection.

Pedestrian and Bicycle Accommodations

Sidewalks are currently provided along both sides of Middlesex Avenue within the study area and along the west side of Jefferson Road between Middlesex Avenue and the entrance to the commuter rail parking lot (a distance of approximately 250 linear feet), with marked crosswalks provided for crossing Jefferson Avenue and Middlesex Avenue at both Jefferson Avenue (northeast leg) and at the commuter rail crossing (northeast of crossing). Formal bicycle facilities were not identified within the immediate study area; however, Middlesex Avenue generally provides sufficient width (combined travel lane and shoulder) to support bicycle travel in a shared travel-way configuration (i.e., motor vehicles and bicyclists sharing the roadway).[4]

Public Transportation

Regularly scheduled public transportation services are provided immediately adjacent to the Project site by way of North Wilmington Station on the Haverhill Line of the MBTA Commuter Rail system. Daily commuter rail service is provided between North Wilmington Station and North Station in Boston, with four (4) in-bound and four (4) out-bound trains provided during the weekday morning and evening peak commuter periods; flag stop service[5] is provided outside of the peak period service on a weekday and on Saturday and Sunday, with six (6) trains provided on Saturday and Sunday. In addition, the MBTA provides The RIDE paratransit services to eligible people who cannot use fixed-route transit all or some of the time due to a physical, cognitive or mental disability in compliance with the Americans with Disabilities Act (ADA), and the Wilmington Department of Elderly Services provides transportation services for Wilmington residents that are over age 60 for medical appointments and shopping within a 13-mile radius of the Town.

[4]A minimum combined travel lane and paved shoulder width of 14-feet is required to support bicycle travel in a shared traveled-way condition.

[5]Commuter rail trains will stop to pick-up a passenger that is visible on the platform to an approaching train; passengers that wish to disembark must inform the conductor prior to arrival at the station.

Motor Vehicle Crash Data

Motor vehicle crash information for Middlesex Avenue in the vicinity of the Project site and for the intersections of Middlesex Avenue at High Street, Middlesex Avenue at Jefferson Road and Middlesex Avenue at Federal Street was provided by the MassDOT Highway Division Safety Management/Traffic Operations Unit for the most recent five-year period available (2013 through 2017, inclusive) in order to examine motor vehicle crash trends occurring within the study area. The data is summarized by intersection, type, severity, roadway and weather conditions, and day of occurrence, and presented in Table 1.

As can be seen in Table 1, the study intersections experienced an average of approximately five (5) or fewer reported motor vehicle crashes per year over the five-year review period, the majority of which were reported to have occurred on a weekday; during daylight; under clear weather conditions; and involved angle or rear-end type collisions that resulted in property damage only. The Middlesex Avenue/High Street intersection was reported to have experienced the largest number of reported crashes, with 24 crashes reported over the five-year review period. No fatal motor vehicle crashes were reported to have occurred at the study area intersections over the five-year review period.

A review of the MassDOT statewide High Crash Location List indicated that there are no locations along Middlesex Avenue in the vicinity of the Project site that are included on MassDOT's Highway Safety Improvement Program (HSIP) listing as high crash locations.

PROJECT-GENERATED TRAFFIC

In order to determine the traffic characteristics of the Project, trip-generation methodologies established by the Institute of Transportation Engineers (ITE)[6] were used. The ITE provides trip-generation information for various types of land uses developed as a result of scientific studies that have been conducted over the past 50 plus years, the most recent update of which was published in 2012. This data includes trip estimates for a similar land use as that proposed (multifamily housing). ITE Land Use Code (LUC) 221, *Multifamily Housing (Mid-Rise)*, was used to establish the base traffic characteristics of the Project.

Transit Use

Given the availability of public transportation services to the Project site (MBTA Commuter Rail service), it is expected that a portion of the residents of the Project will use public transportation services, thereby reducing the volume of traffic that may be associated with the Project. In order to determine the proportion of residents of the Project that may use public transportation, walk or bicycle as their primary mode of transportation, travel mode data obtained from the 2013-2017 American Community Survey (ACS) for the Town of Wilmington and a survey of commuting modes for residents of a similar suburban multifamily residential community located within walking distance of a commuter rail station were reviewed. Based on the ACS data, the following commuting modes were identified for workers age 16 or older that reside within the Town:

- *Single-Occupant Vehicle:* 83.7%
- *Car/Vanpool:* 6.7%
- *Taxi/Motorcycle/Other:* 1.0%
- *Public Transportation:* 4.3%
- *Walk:* 0.7%
- *Bicycle:* 0.1%
- *Worked at Home:* 3.5%

According to the ACS, approximately 16 percent of workers that reside in the Town reported that they used an alternative mode of transportation to single-occupancy vehicles, with approximately 7 percent participating in a car or vanpool, 4 percent using public transportation, 1 percent walking/bicycling and 4 percent reporting that they work from home.

A commuting survey of 253 respondents residing in The Mastlight, a multifamily residential community located at 10-50 Patriot Parkway in Weymouth at Union Point that is within an approximate 8-minute walking distance of the South Weymouth Commuter Rail Station, indicates that approximately 18.6 percent of residents use public transportation (MBTA Commuter Rail), with approximately 4 percent working from home and 1 percent participating in a car/vanpool.

In order to account for the use of alternative modes of transportation to single-occupancy vehicles, the base ITE trip-generation calculations were first converted to person trips using a vehicle occupancy ratio of 1.04 persons per vehicle, which was obtained from the 2013-2017 ACS, and were then disseminated to the modes of transportation that are accessible to the residents of the Project: public transportation (transit), pedestrian/bicycle and automobile.

[6] *Trip Generation*, 10th Edition; Institute of Transportation Engineers; Washington, DC; 2017.

In order to provide conservative (high) traffic volume projections from which to assess the potential impact of the Project on the transportation infrastructure, it was assumed that 90 percent of the trips generated by the Project would consist of automobile trips, with 10 percent of trips assumed to be made using public transportation or other alternative to SOV travel, including working from home. The public transportation rate is higher than the 4 percent utilization documented in the ACS and reflects the proximity of the Project site to the North Wilmington Commuter Rail station. The public transportation utilization data from The Mastlight is direct evidence of the increased inducement of transit usage that can occur when multifamily residential developments are located proximate to transit stations.

Table 2 summarizes the anticipated trip characteristics of the Project using the aforementioned methodology.

Table 2
TRIP GENERATION SUMMARY

Time Period/Direction	Proposed Residential Community (ITE Vehicle Trips)[a]	Person Trips			
		Person Trips[b]	Automobile Trips (90%)	Transit Trips (10%)	Vehicle Trips[c]
Average Weekday Daily					
Entering	294	293	255	28	245
Exiting	294	283	255	28	245
Total	588	566	510	56	490

Entering	10	10	9	1	9
Exiting	27	28	25	3	24
Total	37	38	34	4	33
Weekday Evening Peak Hour					
Entering	29	30	27	3	26
Exiting	19	20	18	2	17
Total	48	50	45	5	43

[a]Based on ITE LUC 221, *Multifamily Housing (Mid-Rise)*; 108 dwelling units.
[b]ITE vehicle trips x vehicle occupancy ratio (VOR) of 1.04.
[c]Automobile person trips divided by 1.04.

As can be seen in Table 2, after accounting for the use of alternative modes of transportation to SOVs, the Project is expected to generate approximately 490 vehicle trips on an average weekday (two-way, 24-hour volume, or 245 vehicles entering and 245 exiting), with 33 vehicle trips (9 vehicles entering and 24 exiting) expected during the weekday morning peak-hour and 43 vehicle trips (26 vehicles entering and 17 exiting) expected during the weekday evening peak-hour.

When dispersed to Middlesex Avenue and over the respective peak-hour, and with consideration of trips generated by the existing active uses that occupy the Project site and that will be removed, the traffic volume increases that are expected from the Project are anticipated to be less than one (1) additional vehicle every 3-4 minutes during the peak hours outside of the immediate proximity of the Project site,

an increase that would not result in an appreciable increase in motorist delays or vehicle queuing over existing conditions. In fact, the Project represents an increase in traffic of less than 5 percent along Middlesex Avenue, which is well within the normal fluctuation in traffic volumes that occurs between Monday and Friday over the course of a typical week.

SIGHT DISTANCE ASSESSMENT

Sight distance measurements were performed at the Project site driveway intersections with Middlesex Avenue and Jefferson Road, and for the Middlesex Avenue/Jefferson Road intersection, in accordance with MassDOT and American Association of State Highway and Transportation Officials (AASHTO)[7] requirements. Both stopping sight distance (SSD) and intersection sight distance (ISD) measurements were performed. In brief, SSD is the distance required by a vehicle traveling at the design speed of a roadway, on wet pavement, to stop prior to striking an object in its travel path. ISD or corner sight distance (CSD) is the sight distance required by a driver entering or crossing an intersecting roadway to perceive an on-coming vehicle and safely complete a turning or crossing maneuver with on-coming traffic. In accordance with AASHTO standards, if the measured ISD is at least equal to the required SSD value for the appropriate design speed, the intersection can operate in a safe manner. Table 3 presents the measured sight lines to and from the subject intersections.

Note that the driveway to "Building B" is located at the end of Jefferson Road, essentially forming an extension thereof, and, as such, clear line of sight is provided along the roadway to/from the driveway. As such, sight distance measurements for the access to "Building B" are not provided in Table 3.

[7] *A Policy on Geometric Design of Highway and Streets,* 7th Edition; American Association of State Highway and Transportation Officials (AASHTO); Washington D.C.; 2018.

Middlesex Avenue approaching from the northeast	305	--	500+
Middlesex Avenue approaching from the southwest	305	--	305
Intersection Sight Distance:			
Looking to the northeast from Jefferson Road	305	385	500+
Looking to the southwest from Jefferson Road	305	445	375

[a]Recommended minimum values obtained from: *A Policy on Geometric Design of Highways and Streets,* 7th Edition; American Association of State Highway and Transportation Officials (AASHTO); 2018; and based on an approach speed of 40 mph along Middlesex Avenue and a 25 mph approach speed along Jefferson Road approaching the north driveway to "Building A" and a 15 mph speed approaching the south driveway.

[b]Value shown are the intersection sight distance for a vehicle turning right or left exiting a roadway under STOP control such that motorists approaching the intersection on the major street should not need to adjust their travel speed to less than 70 percent of their initial approach speed.

[c]Clear line of sight is provided to/from Middlesex Avenue.

[d]With selective trimming/removal of trees and vegetation located within the sight triangle areas of the Project site driveway.

As can be seen in Table 3, lines of sight at the Project site driveway intersections and at the Middlesex Avenue/Jefferson Road intersection meet, exceed or could be made to meet or exceed the recommended minimum distances for safe operation based on the appropriate approach speeds. That being said, it is recommended that the south driveway to "Building A" be configured as a one-way, entrance only driveway given the proximity of the driveway to Middlesex Avenue (approximately 40 feet).

SUMMARY

VAI has conducted a TIA in order to determine the potential impacts on the transportation infrastructure associated with the proposed construction of a multifamily residential development that is to be located off Middlesex Avenue (Route 62) and Jefferson Road in Wilmington, Massachusetts. This assessment has defined the existing conditions context of the Project in relation to the transportation infrastructure and has evaluated the following specific areas as they relate to the Project: i) access requirements; ii) potential off-site improvements; and iii) safety considerations. Based on this assessment, we have concluded the following with respect to the Project:

1. Using trip-generation statistics published by the ITE[8] and after applying appropriate adjustments to account for resident use of alternative modes of transportation, including commuter rail services available from North Wilmington Station which is immediately adjacent to the Project site, the Project is expected to generate approximately 490 vehicle trips on an average weekday (two-way, 24-hour volume), with 33 vehicle trips expected during the weekday morning peak-hour and 43 vehicle trips expected during the weekday evening peak-hour;

2. The Project will not have a significant impact (increase) on motorist delays or vehicle queuing over Existing or anticipated future conditions without the Project (No-Build conditions), with traffic volume increases outside of the immediate proximity of the Project site predicted to be less than one (1) added vehicle every 3-4 minutes during the peak hours. In fact, the Project represents an increase in traffic of less than 5 percent along Middlesex Avenue, which is well within the normal fluctuation in traffic volumes that occurs between Monday and Friday over the course of a typical week;

3. No apparent safety deficiencies were noted with respect to the motor vehicle crash history along Middlesex Avenue in the vicinity of the Project site; and

4. Lines of sight at the Project site driveway intersections with Middlesex Avenue and Jefferson Road and at the Middlesex Avenue/Jefferson Road intersection were found to meet, exceed or could be made to meet or exceed the recommended minimum distances for safe operation based on the appropriate approach speeds.

In consideration of the above, we have concluded that the Project can be accommodated within the confines of the existing transportation infrastructure in a safe and efficient manner with implementation of the recommendations that follow.

RECOMMENDATIONS

A detailed transportation improvement program has been developed that is designed to provide safe and efficient access to the Project site and address any deficiencies identified at off-site locations evaluated in conjunction with this study. The following improvements have been recommended as a part of this evaluation and, where applicable, will be completed in conjunction with the Project subject to receipt of all necessary rights, permits, and approvals.

[8]Ibid 1.

Project Access

Access to the Project site will be provided as follows: *Building A* – access to "Building A" will be provided by way of the existing driveway that serves 382 Middlesex Avenue and intersects the north side of Middlesex Avenue approximately 185 feet east of Jefferson Road and two (2) driveways that will intersect the east side of Jefferson Road approximately 40 feet and 325 feet north of Middlesex Avenue, respectively; *Building B* – access to "Building B" will be provided by way of a driveway that will intersect the north end of Jefferson Road. The following recommendations are offered with respect to the design and operation of the Project site access and internal circulation, many of which are reflected on the Site Plans:

- The Project site driveways should be a minimum of 20 feet in width and designed to accommodate the turning and maneuvering requirements of the largest anticipated responding emergency vehicle.

- Given the proximity of the south driveway to "Building A" to Middlesex Avenue (within 40 feet), this driveway should be configured to function as a one-way entrance drive with the requisite signs ("One Way" and "Do Not Enter") and pavement markings installed at Jefferson Road to regulate use of the driveway.

- Where perpendicular parking is proposed, the drive aisle behind the parking should be a minimum of 23-feet in order to facilitate parking maneuvers.

- Vehicles exiting the Project site should be placed under STOP-sign control with a marked STOP-line provided.

- "No Parking" signs should be installed along both sides of Jefferson Road.

- All signs and pavement markings to be installed within the Project site should conform to the applicable standards of the *Manual on Uniform Traffic Control Devices* (MUTCD).[9]

- Signs and landscaping to be installed as a part of the Project within the intersection sight triangle areas of the Project site roadway should be designed and maintained so as not to restrict lines of sight.

- Existing trees and vegetation located along the east side of Jefferson Road within the sight triangle areas of the "Building A" north driveway should be selectively trimmed or removed as may be necessary to afford the recommended sight distance from the driveway.

- Surface parking for "Building A" should not be located within the sight triangle area of the Middlesex Avenue/Jefferson Road intersection.

- Snow windrows within sight triangle areas of the Project site roadway should be promptly removed where such accumulations would impede sight lines.

- A sidewalk should be installed along at least one side of Jefferson Road between Middlesex Avenue and "Building B" and include Americans with Disabilities Act (ADA) compliant wheelchair ramps where pedestrian crossings will be provided.

- A school bus waiting area should be provided at an appropriate location defined in consultation with Wilmington School Department.

[9] *Manual on Uniform Traffic Control Devices (MUTCD)*; Federal Highway Administration; Washington, D.C.; 2009.

Transportation Demand Management

In an effort to encourage the use of alternative modes of transportation to single-occupant vehicles, the following Transportation Demand Management (TDM) measures should be implemented as a part of the townhouse component of the Project:

- Information regarding public transportation services, maps, schedules and fare information should be posted in a central location and/or otherwise made available to residents;
- A "welcome packet" should be provided to residents detailing available public transportation services, bicycle and walking alternatives, and commuter options available;
- Work-at-home workspaces should be provided to support telecommuting by residents of the Project;
- Pedestrian accommodations should be provided and consist of sidewalks and ADA compliant wheelchair ramps at all pedestrian crossings internal to the Project site that will link building entrances to the sidewalk infrastructure along Jefferson Road and Middlesex Avenue;
- Bicycle parking should be provided consisting of both exterior bicycle racks located proximate to building entrances and weather protected bicycle parking;
- A centralized mail kiosk should be provided to limit off-site trips; and
- Transit screens/displays should be provided in the building lobby to display real-time transportation information (similar to https://transitscreen.com/).

With implementation of the aforementioned recommendations, safe and efficient access will be provided to the Project site and the Project can be accommodated within the confines of the existing and improved transportation system.

Keep in Mind:

This schedule will be effective from October 21, 2019 and will replace the schedule of May 20, 2019

Presidents' Day and 4th of July operate on a **Saturday service schedule.**

New Year's Day, Memorial Day, Labor Day, Thanksgiving Day, and Christmas Day operate on a **Sunday service schedule**.

For all other holiday schedules, please check MBTA.com or call 617-222-3200.

Via Lowell Line: Operates via the Lowell Line between Wilmington and North Station. See the Lowell Line schedule for all stops.

Times in purple with "f" indicate a flag stop: Passengers must tell the conductor that they wish to leave. Passengers waiting to board must be visible on the platform for the train to stop.

Times in blue indicate an early departure (L stop): The train may leave ahead of schedule at these stops.

Bikes: Bicycles are allowed on trains with the bicycle symbol shown below the train number.

High level platform and bridge plate available. Visit mbta.com/accessibility for more information.

Schedules may change in the event of severe weather

The MBTA and Keolis closely monitor weather forecasts to determine if conditions necessitate changes to the Commuter Rail schedule.

During weather events, the symbols below will communicate service level and impact on passengers. Service level for the following day will be announced mid-afternoon on the prior day.

REGULAR SCHEDULE
Trains will operate on a normal schedule.

STORM SCHEDULE
Major changes to the regular schedule. Schedules will be available on mbta.com, and in Boston stations.

NO SERVICE
No passenger service on Commuter Rail.

2020 REDUCED SERVICE SCHEDULE

Reduced service schedule in effect when declared in advance by the MBTA. In most cases, announcement made late in the afternoon on the prior day. Should an event occur requiring a more immediate service change, please check departure times prior to travel, and stay connected to MBTA.com for up-to-the minute information.

Reduced schedule advisory system

The MBTA and Keolis closely monitor events to determine if changes to the Commuter Rail schedule are needed. During these times, the symbols to the right will communicate service level and impact on passengers.

REGULAR SCHEDULE
Trains will operate on a normal schedule.

REDUCED SCHEDULE
Major changes to the regular schedule. Schedules also available on MBTA.com and in Boston stations.

NO SERVICE
No passenger service on Commuter Rail.

Service Change ONGOING

All MBTA services are running on a reduced schedule until further notice in the interest of the health and safety of our riders and employees. Effective May 6, all riders must use a face covering when on the MBTA. Full details: MBTA.com/coronavirus

Commuter Rail Fares

One-Way Fares

Each Commuter Rail station is located in a fare zone, from 1A – 10. Your Commuter Rail fare depends on which zones your boarding and exiting stations are located in.

Commuter Rail One-Way

$2.40 – $13.25

with CharlieTicket or mTicket App

Price based on distance traveled

How to Pay Your Commuter Rail Fare

First, choose how you'll pay your fare

Conductors will check your ticket or pass after you board the train.

Tip! During Fare Is Fair events, your ticket may be checked at any point during your trip, including before you board or after you get off the train.

CharlieTicket

★ Best for frequent Commuter Rail riders who also take the subway or bus
✔ Monthly passes available
⊘ No online card management
⊘ No discounts

One-way and round trip tickets valid on:
Commuter Rail, up to designated zone

Monthly passes valid on:
Commuter Rail, up to designated zone
Subway
Bus
Charlestown Ferry
Hingham/Hull Ferry with Zone 6 passes and up

Note: Interzone passes not valid on subway, Express Bus, and ferry

---

mTicket

★ Best for infrequent Commuter Rail riders or pass holders who don't often take subway or bus
✔ $10 discount on monthly passes
✔ Convenient smartphone app for ticket purchase and validation
✔ 10-ride passes available
⊘ No transfers

	Valid on: Commuter Rail, up to designated zone
Cash Onboard	★ Best for infrequent Commuter Rail riders at stations where tickets can't be purchased at fare vending machines or ticket windows ✔ May include a $3 fee if you board at a station where tickets can be purchased ✔ Only available for one-way and round trip tickets ⊘ Not available during Fare is Fair events

Then, choose where to buy your ticket or pass

- mTicket app
- Ticket booths
- Fare vending machines
- Online
- Retail stores

When you're ready to board the train

The conductor will verify your fare payment after you board the train. The conductor may tuck a small piece of paper on the seat back in front of you to indicate that you paid your fare.

The only exception to this is during Fare Is Fair events, when your ticket may be checked at any point during your trip, including before you board or after you get off the train.

- Pay with a prepaid ticket or pass
- Pay with mTicket

Pay with cash or credit on board

Reduced Fares

Some customers are eligible for reduced fares or can ride the T for free.

TRIP-GENERATION CALCULATIONS

Land Use: 221
Multifamily Housing (Mid-Rise)

Description

Mid-rise multifamily housing includes apartments, townhouses, and condominiums located within the same building with at least three other dwelling units and that have between three and 10 levels (floors). Multifamily housing (low-rise) (Land Use 220), multifamily housing (high-rise) (Land Use 222), off-campus student apartment (Land Use 225), and mid-rise residential with 1st-floor commercial (Land Use 231) are related land uses.

Additional Data

In prior editions of *Trip Generation Manual*, the mid-rise multifamily housing sites were further divided into rental and condominium categories. An investigation of vehicle trip data found no clear differences in trip making patterns between the rental and condominium sites within the ITE database. As more data are compiled for future editions, this land use classification can be reinvestigated.

For the six sites for which both the number of residents and the number of occupied dwelling units were available, there were an average of 2.46 residents per occupied dwelling unit.

For the five sites for which the numbers of both total dwelling units and occupied dwelling units were available, an average of 95.7 percent of the total dwelling units were occupied.

Time-of-day distribution data for this land use are presented in Appendix A. For the eight general urban/suburban sites with data, the overall highest vehicle volumes during the AM and PM on a weekday were counted between 7:00 and 8:00 a.m. and 4:45 and 5:45 p.m., respectively.

For the four dense multi-use urban sites with 24-hour count data, the overall highest vehicle volumes during the AM and PM on a weekday were counted between 7:15 and 8:15 a.m. and 4:15 and 5:15 p.m., respectively. For the three center city core sites with 24-hour count data, the overall highest vehicle volumes during the AM and PM on a weekday were counted between 6:45 and 7:45 a.m. and 5:00 and 6:00 p.m., respectively.

For the six sites for which data were provided for both occupied dwelling units and residents, there was an average of 2.46 residents per occupied dwelling unit.

For the five sites for which data were provided for both occupied dwelling units and total dwelling units, an average of 95.7 percent of the units were occupied.

The average numbers of person trips per vehicle trip at the five center city core sites at which both person trip and vehicle trip data were collected were as follows:

- 1.84 during Weekday, Peak Hour of Adjacent Street Traffic, one hour between 7 and 9 a.m.
- 1.94 during Weekday, AM Peak Hour of Generator
- 2.07 during Weekday, Peak Hour of Adjacent Street Traffic, one hour between 4 and 6 p.m.
- 2.59 during Weekday, PM Peak Hour of Generator

The average numbers of person trips per vehicle trip at the 32 dense multi-use urban sites at which both person trip and vehicle trip data were collected were as follows:

- 1.90 during Weekday, Peak Hour of Adjacent Street Traffic, one hour between 7 and 9 a.m.
- 1.90 during Weekday, AM Peak Hour of Generator
- 2.00 during Weekday, Peak Hour of Adjacent Street Traffic, one hour between 4 and 6 p.m.
- 2.08 during Weekday, PM Peak Hour of Generator

The average numbers of person trips per vehicle trip at the 13 general urban/suburban sites at which both person trip and vehicle trip data were collected were as follows:

- 1.56 during Weekday, Peak Hour of Adjacent Street Traffic, one hour between 7 and 9 a.m.
- 1.88 during Weekday, AM Peak Hour of Generator
- 1.70 during Weekday, Peak Hour of Adjacent Street Traffic, one hour between 4 and 6 p.m.
- 2.07 during Weekday, PM Peak Hour of Generator

The sites were surveyed in the 1980s, the 1990s, the 2000s, and the 2010s in Alberta (CAN), British Columbia (CAN), California, Delaware, District of Columbia, Florida, Georgia, Illinois, Maryland, Massachusetts, Minnesota, New Hampshire, New Jersey, Ontario, Oregon, Pennsylvania, South Carolina, South Dakota, Tennessee, Utah, Virginia, and Wisconsin.

RE: Updated Traffic Impact Assessment
Upton Park Mixed Commercial Development
36 & 38 Upton Drive, Massachusetts

EXECUTIVE SUMMARY

Greenman-Pedersen, Inc. (GPI) previously prepared a *Traffic Impact and Access Study*[1] (TIAS) for a proposed warehouse/office development referred to as Upton Park to be located at #36 & #38 Upton Drive in Wilmington, Massachusetts. The site is currently a vacant vegetated lot with a gravel driveway which spurs off the southwesterly corner of Upton Drive. The site was recently approved for the construction of an approximately ±263,900 square feet (SF) warehouse distribution development within three buildings with access/egress proposed via five driveways along Upton Drive. To attract a wider range of potential tenants to the site, the developer is seeking approval for a mixed commercial development that would allow a potential light industrial, manufacturing, or research and development (R&D) use to occupy a portion of the previously permitted buildings. Access and egress will continue to be provided via the five previously proposed site driveways.

To allow flexibility in the marketing of the overall development, the various uses may be separated between each building and could include up to 19,800 SF of R&D space, up to 39,000 SF of light industrial space, and up to 78,500 SF of manufacturing space with the remainder of the buildings being occupied by warehousing space. This *Updated Traffic Impact Assessment* (Updated TIA) is intended to evaluate the traffic impacts associated with the proposed change in use in comparison to the originally approved development and assess the need for any additional mitigation measures to offset the project's impacts on the study area roadways. The Applicant acknowledges that if the overall development's traffic generation exceeds the amount depicted in this report, than additional studies will be provided to the approving authority.

The study area for this Updated TIA is consistent with the study area contained in the original TIAS and is graphically depicted in Figure 1. The Updated TIA utilizes the traffic volumes and analysis contained in the original 2018 TIAS to evaluate 2022 Existing and 2029 No-Build traffic operations at the study area intersections. The potential traffic to be generated by the proposed mix of light industrial, manufacturing, warehousing, and R&D space has been estimated based on Institute of Transportation Engineers (ITE) trip

[1] *Traffic Impact and Access Study, Upton Park, Wilmington, Massachusetts*; Greenman-Pedersen, Inc.; September 14, 2018.

generation rates and distributed to the roadway network to estimate 2029 Build conditions. The currently proposed development is anticipated to generate an additional 84 vehicle trips (68 entering and 16 exiting) during the weekday AM peak hour and an additional 85 vehicle trips (21 entering and 64 exiting) during the weekday PM peak hour as compared to the previously approved warehouse distribution center.

Capacity and queue analyses were completed at all of the study area intersections for the 2029 Build condition with the currently proposed development and compared to the 2029 No-Build condition and 2029 Build condition with the previously proposed development. The results of the analysis indicate that all movements at the signalized intersections of Route 125 (Ballardvale Street) with the I-93 Northbound (NB) and Southbound (SB) ramps are anticipated to operate at LOS D or better under all analysis conditions. The additional traffic generated by the proposed mixed commercial development is not expected to increase delay on any movement through these intersections by more than four seconds per vehicle or increase queues by more than two vehicles.

Although some movements at the Route 125 / Ballardvale Street intersection will operate at LOS F under 2029 No-Build and Build conditions, the additional traffic generated by the proposed warehouse / office development is not anticipated to increase delay on any movement through the intersection by more than seven seconds per vehicle or increase queues by more than two vehicles.

Similarly, although some side street movements at the unsignalized intersections of Andover Street with Upon Drive and Jonspin Road are expected to operate at LOS F under 2029 No-Build and/or Build conditions, the volume-to-capacity (V/C) ratios will be well below 1.00, indicating there will be adequate capacity to accommodate the anticipated traffic volumes. Improvements are also proposed by the Applicant at the intersection of Andover Street / Upton Drive, which include installation of DO NOT BLOCK INTERSECTION signage and pavement markings, and reconstruction of the median island on Upton Drive to better accommodate truck turns. These improvements will help to facilitate turning movements into and exiting Upton Drive.

Several movements at the intersection of Route 125 / Andover Street are anticipated to operate at LOS E or F during the weekday AM and PM peak hours under 2029 No-Build and Build conditions. However, the additional traffic generated by the proposed mixed commercial development is not expected to increase overall delay through the intersection by more than 13 seconds per vehicle or increase queues by more than five vehicles. Although MassDOT recently installed a new traffic signal controller at this intersection, it operates with a single timing plan 24 hours per day that is designed to accommodate traffic volumes during the weekday AM peak hour. By implementing a separate timing plan for the weekday PM peak hour, all movements through the intersection can operate under capacity (V/C <1.0) and at LOS D or better during the weekday PM peak hour. The Applicant for the development at #30 Upton Drive has committed to contacting MassDOT to implement the recommended signal timing modifications as mitigation for the proposed development.

Based on the findings above, the proposed mixed commercial development can be safely and efficiently accommodated along the existing roadway network. No additional project-specific mitigation is warranted based on the incremental impacts of the development.

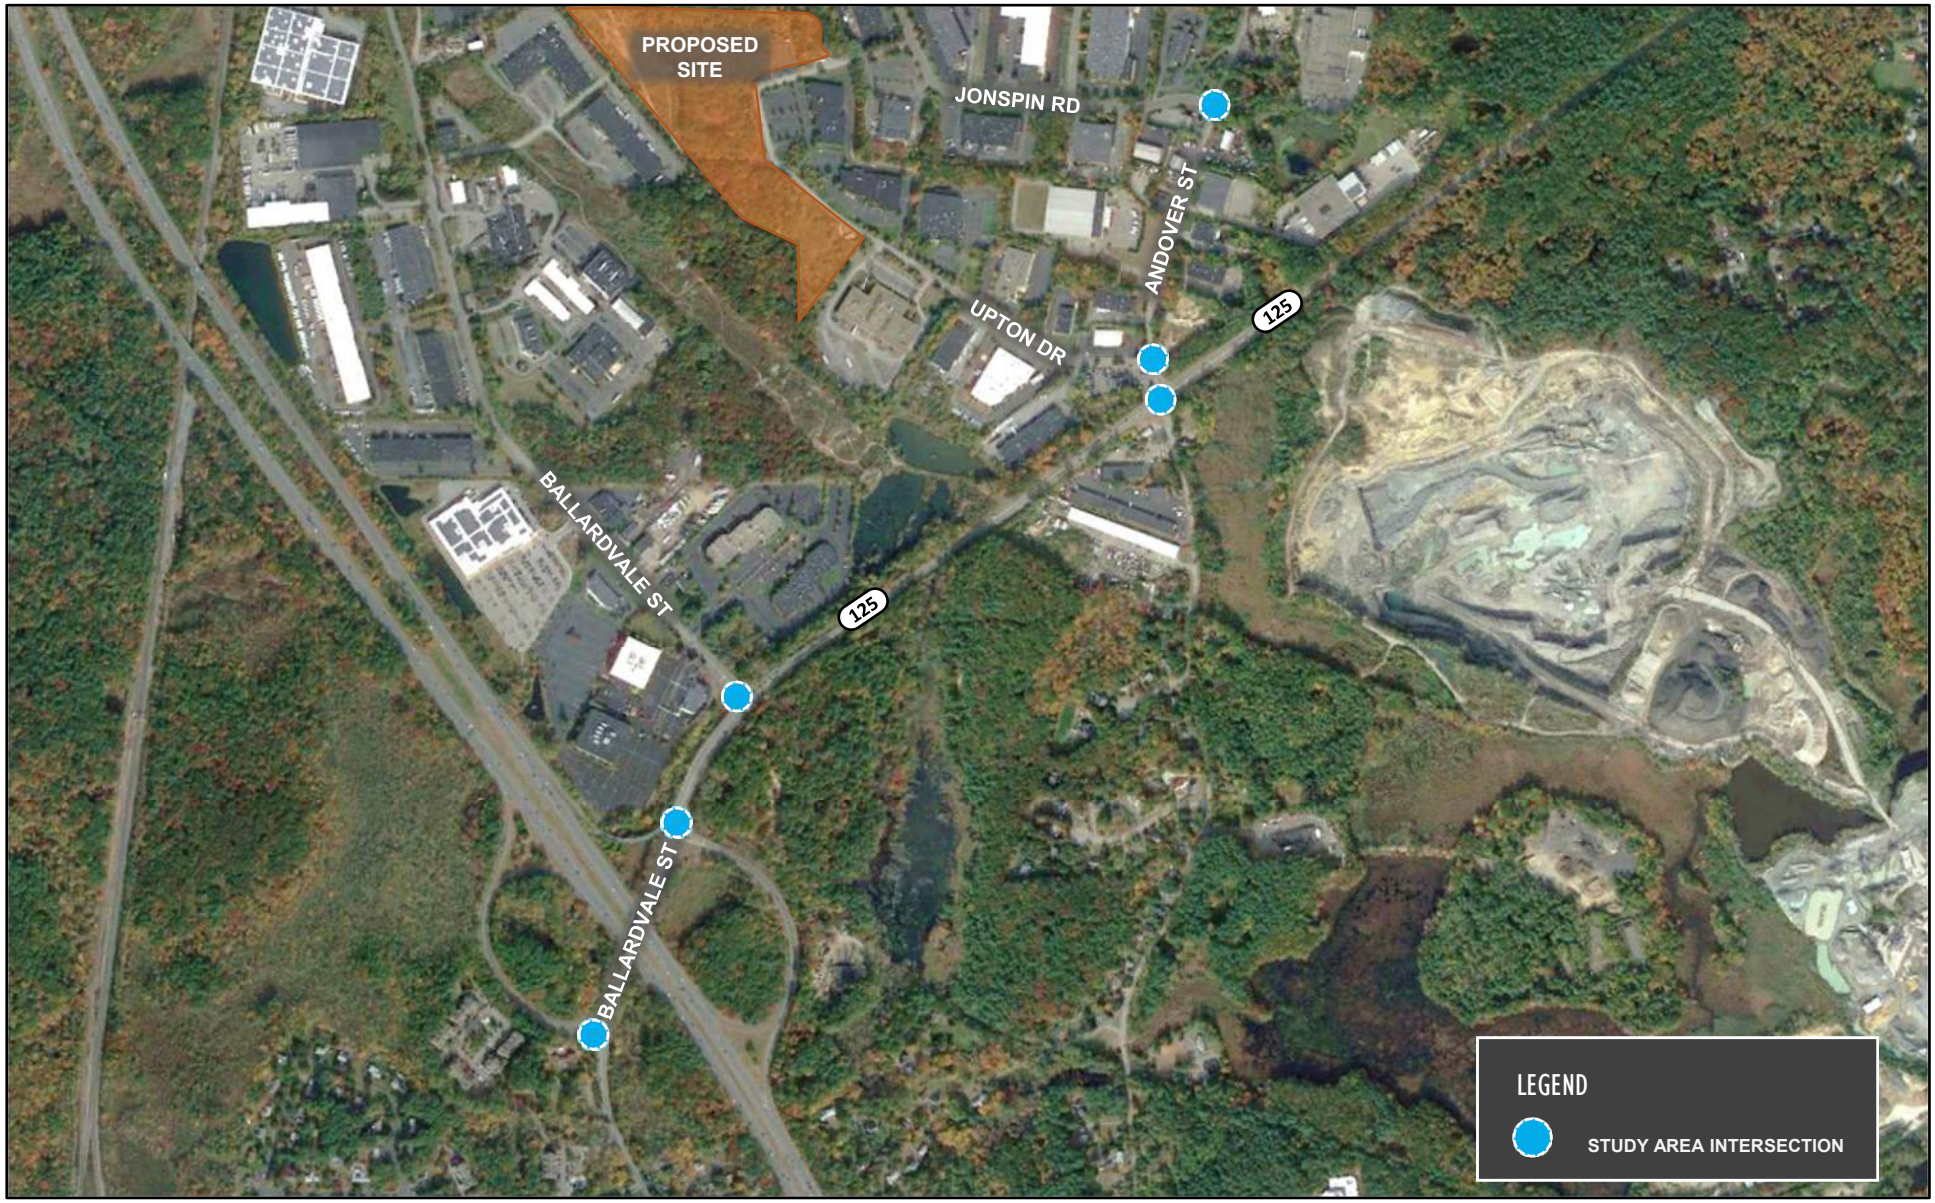

FIGURE 1 – SITE LOCATION MAP

EXISTING CONDITIONS

Study Area

Evaluation of the traffic impacts associated with the proposed project requires an evaluation of existing and projected traffic volumes on the adjacent streets, the volume of traffic expected to be generated by the project, and the impact that this traffic will have on the adjacent streets and nearby intersections. To be consistent with the original *Traffic Impact and Access Study*[2] (TIAS) prepared as part of the permitting for the Upton Park development, the following key intersections have been evaluated in the completion of this study:

- Route 125 (Ballardvale Street) / Route 93 SB Ramps (Signalized)
- Route 125 (Ballardvale Street) / Route 93 NB Ramps (Signalized)
- Route 125 (Ballardvale Street) / Ballardvale Street (Signalized)
- Route 125 / Andover Street (Signalized)
- Andover Street / Upton Drive (Unsignalized)
- Andover Street / Jonspin Road (Unsignalized)

Traffic Volumes

Existing conditions traffic volumes during the weekday AM (7:30 AM – 8:30 AM) and weekday PM (4:30 PM – 5:30 PM) peak hours at the study area intersections were obtained from the original 2018 TIAS[3] prepared for the Upton Park development. Manual turning movement counts (TMCs) and vehicle classification counts were collected in June and August 2018 as part of the Upton Park 2018 TIAS. The TMCs were collected during the weekday AM (7:00 AM – 9:00 AM) and weekday PM (4:00 PM – 6:00 PM) peak periods on Thursday, August 16, 2018 at each of the following intersections:

- Route 125 / Andover Street
- Andover Street / Upton Drive
- Andover Street / Jonspin Road

In addition, GPI previously collected manual turning movement counts along Route 125 and Ballardvale Street in June 2018, while school was in session, as part of a signal timing modification project with the Massachusetts Department of Transportation (MassDOT) during the same weekday AM and PM peak periods at the following intersections:

- Route 125 / Ballardvale Street
- Ballardvale Street / Route 93 NB Ramps
- Ballardvale Street / Route 93 SB Ramps

Seasonal Adjustment

Traffic on a given roadway typically fluctuates throughout the year depending on the area and the type of roadway. To determine if the June and August traffic-volume data needed to be adjusted to account for this

[2] *Traffic Impact and Access Study, Upton Park, Wilmington, MA;* Prepared by Greenman-Pedersen, Inc.; September 14, 2018.

[3] *Traffic Impact and Access Study, Upton Park, Wilmington, MA;* Prepared by Greenman-Pedersen, Inc.; September 14, 2018.

fluctuation, traffic-volume data from Massachusetts Department of Transportation (MassDOT) Permanent Count Stations in the area were researched[4]. Based on the MassDOT traffic-volume data, traffic during the months of June and August is 5.3 and 3.1 percent higher than average-month conditions, respectively. Therefore, the June traffic volumes were unadjusted to represent a conservative (worse case) scenario of average-month conditions. The MassDOT seasonal adjustment data are provided in the Appendix.

While the historic traffic count data indicates that traffic volumes in August are typically higher than average month conditions, GPI compared the volumes collected in August to those collected in June for the section of Route 125 between Ballardvale Street and Andover Street, and discovered that the traffic volumes collected in August were 10.5 and 5.2 percent lower than traffic volumes collected in June during the weekday AM and PM peak hours, respectively, in the westbound direction. This difference is likely due to school traffic and summer vacations. To account for this difference, the August traffic volumes were increased accordingly to balance with the June traffic volumes in the westbound direction. In the eastbound direction, however, the August traffic volumes were 17.9 to 2.3 percent higher than the June traffic volumes during the AM and PM peak hours, respectively. Therefore, the June traffic volumes were increased accordingly to balance with the August traffic volumes in the eastbound direction. Overall, two-way traffic volumes along Route 125 between Ballardvale Street and Andover Street were 0.7 to 0.8 percent higher in June than in August. Therefore, all other volumes collected in August were increased by 0.7 to 0.8 percent to account for this seasonal variation in traffic.

Annual Adjustment

The MassDOT directive, "Guidance of Traffic Count Data" dated April 2020 provides growth rates to be applied to traffic volumes on various roadway types to adjust traffic volumes collected prior to March 2020 to 2021 Existing conditions. According to MassDOT's Yearly Growth Rates for data from 2014 to 2018, an adjustment of -0.004 should be applied to traffic volumes collected on Group U4-7 (urban arterials and collectors) to grow volumes from 2018 to 2019 conditions. However, to provide a conservative (worse case) analysis condition, no adjustment was applied to the 2018 traffic volumes to adjust to 2019 conditions. MassDOT's directive also notes the significant decrease in traffic volumes that occurred on nearly all roadways across the Commonwealth due to the COVID-19 pandemic in 2020 and 2021. Therefore, MassDOT recommends that no annual growth adjustment be applied to 2019 traffic volumes to grow them to 2022 conditions. As a result, the 2018 seasonally adjusted traffic volumes were assumed to represent a 2022 Existing condition.

The resulting 2022 Existing traffic-flow networks for the weekday AM and weekday PM peak hours are shown graphically on Figure 2.

[4] *MassDOT Traffic Volumes*; Permanent Count Stations 5022 – Route I-93 north of Ramp Route 62 to I-93 (Wilmington), 5127 – Route 125 south of Route 28 (Wilmington).

FIGURE 2

2022 EXISTING CONDITIONS WEEKDAY PEAK HOUR TRAFFIC VOLUMES

FUTURE CONDITIONS

To estimate the impact of site-generated traffic within the study area, existing traffic volumes were projected to the year 2029. This represents a seven-year design horizon in accordance with the EOEEA/EOT traffic impact assessment guidelines. The proposed development is expected to be occupied within this time period. Traffic volumes on the roadway network at that time will include existing traffic, new traffic due to normal traffic growth, and traffic related to any significant development by others expected to be completed within the area by 2029. Consideration of these factors resulted in the development of 2029 No-Build traffic volumes, which assume that the proposed project is not built. The incremental impacts of the proposed project may then be determined by adding site-generated traffic volumes (Build conditions) and making comparisons to the No-Build conditions.

Traffic Growth

To develop the 2029 No-Build (seven-year) forecast volumes, two components of traffic growth were considered. First, an annual growth percentage was determined. Based on historic traffic-volume counts provided by MassDOT and recent traffic studies completed for other projects in the area, traffic volumes in the area had been increasing at a rate of approximately 1.1 percent per year prior to COVID-19.[5] Therefore a 1.1 percent compounded annual growth was assumed for the project area. The MassDOT adjustment data are provided in the Appendix.

Second, any planned or approved specific developments in the area that would generate a significant volume of traffic on study area roadways within the next seven years were considered. At the time that the project was originally permitted, the following additional projects were identified:

- *58 Jonspin Road (Heilind Electronics Inc.)* – Commercial Development proposes a 60,000 square feet (SF) office building addition and the re-purposing of the existing 41,131 SF manufacturing building located at 58 Jonspin Road. As a result of the project, approximately 50 employees from 30 Upton Drive will be relocated to the new office building. Access is proposed via two full access/egress driveways with one east and one west of the project site. A Traffic Impact and Access Study (TIAS) prepared by Vanasse & Associates Inc. (VAI) dated May 2018 identifies the impacts on surrounding roads resulting from the proposed site-generated traffic.

- *401 Andover Street (Spruce Farm)* – The project consists of 27 age-restricted (age 55+) residential units located at 401 Andover Street. Access is proposed via a full access/egress driveway onto Andover Street. A Traffic Impact Assessment (TIA) prepared by GPI dated April 2017 identifies the impacts on surrounding roads resulting from the proposed site-generated traffic.

- *228 Andover Street (Arrow Paper Corporation)* – The project consists of 34,450 SF building addition located at 228 Andover Street. A Traffic Impact Assessment (TIA) prepared by Dana D. Perkins Inc. dated February 2020 identifies the impacts on surrounding roads resulting from the proposed site-generated traffic. The impact of site-generated traffic volumes on the roadway network is considered minimal, therefore, the trips are accounted for in the conservative background growth rate.

- *225 Andover Street (Self-Storage Facility)* – The project consists of 30,500 SF building addition located at 225 Andover Street. A Traffic Impact Assessment has not yet been received but it is assumed that the vehicle trips resulting from this proposal will be very minimal. Therefore, the impact

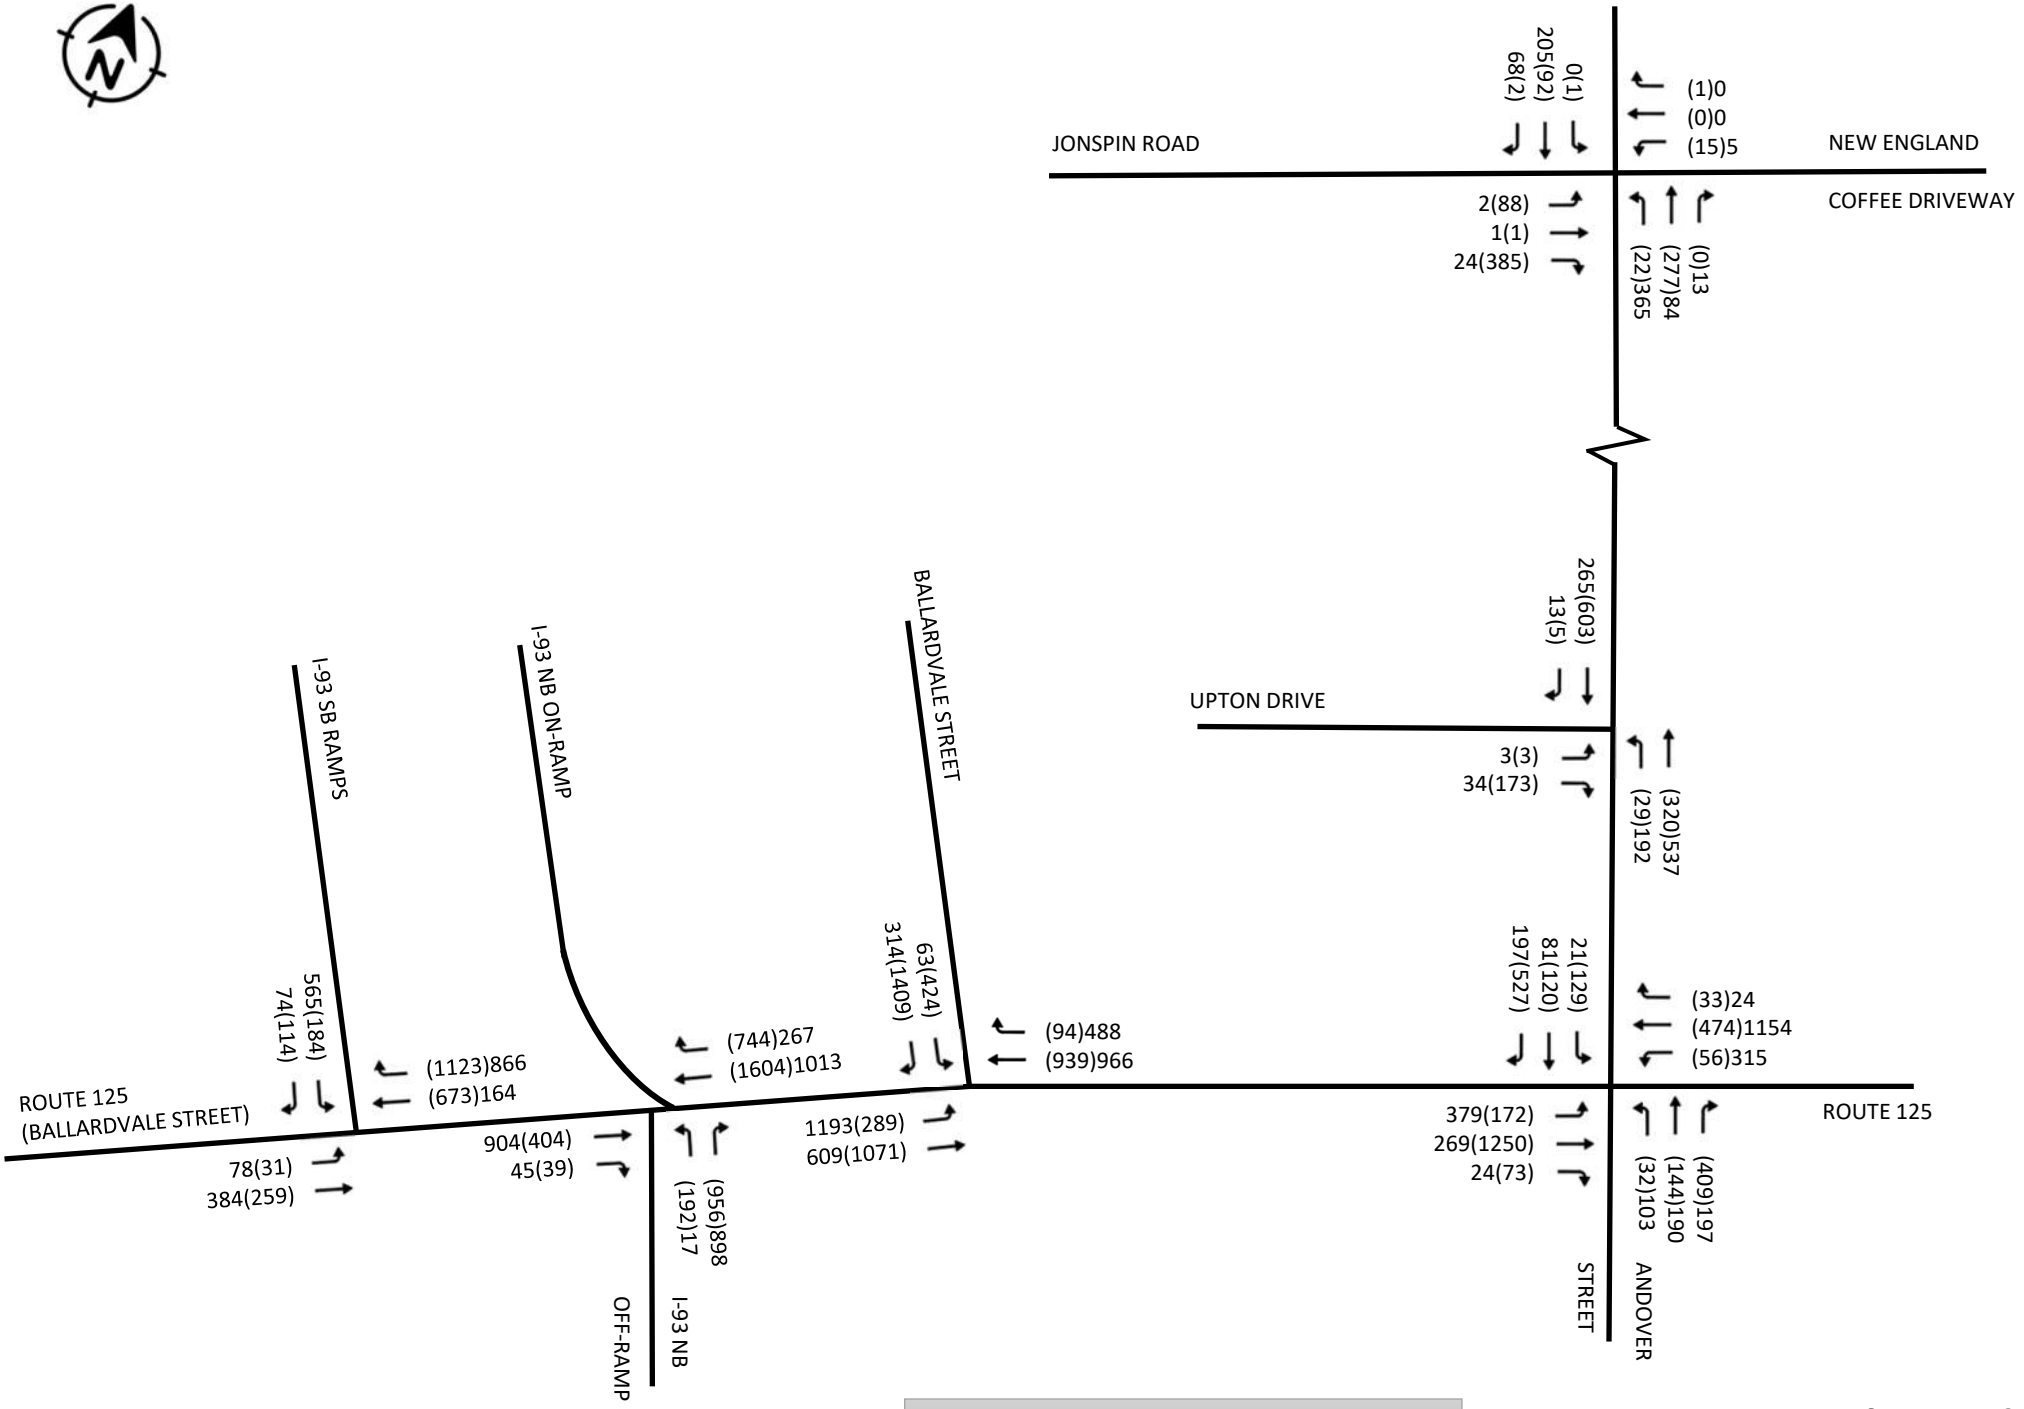
[5] *MassDOT Transportation Data Management System;* Tewksbury and Wilmington, MA.

of site-generated traffic volumes on the roadway network are accounted for in the conservative background growth rate.

Although additional development projects have recently been approved or proposed in the surrounding area, those developments entered the permitting process after the approved development at Upton Park and were required to include the traffic generated by Upton Park within their No-Build traffic-volume projections. Therefore, the traffic generated by these additional projects was not included in the 2029 No-Build projections to assess the impacts of the proposed change in use of Upton Park.

No-Build Conditions

The 2029 No-Build networks were accordingly developed by applying a compounded 1.1 percent annual traffic growth rate (8.0 percent over seven years) to the 2022 Existing traffic volumes and adding the traffic to be generated by the four (4) other planned development. The 2029 No-Build peak-hour traffic-flow networks are shown graphically on Figure 3 for the weekday AM and weekday PM peak hours.



XX (XX) = AM(PM) PEAK HOUR

FIGURE 3

2029 NO-BUILD CONDITIONS
WEEKDAY PEAK HOUR TRAFFIC VOLUMES

Trip Generation

The project consists of constructing three buildings to contain a total of up to ±125,300 SF of warehouse space, ±39,000 SF of light industrial space, ±78,500 SF of manufacturing space, and ±19,800 SF of research and development space. To estimate the volume of traffic to be generated by the proposed development, trip generation rates published by the Institute of Transportation Engineers (ITE) *Trip Generation Manual*[6] were used for Land Use Code (LUC) 150 (Warehouse), LUC 110 (Light Industrial), LUC 140 (Manufacturing), and LUC 760 (Research & Development Center), respectively. Table 1 summarizes the result of trip generation estimates. All trip-generation calculations are provided in the Appendix.

It should be noted that the site was previously approved for the development of three warehouse buildings totaling ±293,600 SF. Table 1 also provides a comparison of the trips generated by the currently proposed development in comparison to the previously approved development on the site.

As shown in Table 1, the currently proposed development is anticipated to generate an additional 84 vehicle trips (68 entering and 16 exiting) during the weekday AM peak hour and an additional 85 vehicle trips (21 entering and 64 exiting) during the weekday PM peak hour.

6 *Trip Generation Manual, 11th Edition*; Institute of Transportation Engineers; Washington, DC; 2021.

TABLE 1
PROPOSED TRIP-GENERATION SUMMARY

[g] Currently Proposed Development Trips minus Previously Approved Development Trips.

Trip Distribution

Having estimated project-generated vehicle trips, the next step is to determine the distribution of project traffic and assign these trips to the local roadway network. The directional distribution of site traffic was based on the trip distribution patterns contained in the *Response to Comments on the TIAS*[7] prepared for the previously permitted Upton Park development, which was reviewed and approved by the Town's peer review consultant. Table 2 summarizes the results of the trip distribution estimates. All trip distribution data are provided in the Appendix.

TABLE 2
Trip Distribution Summary

Roadway	Direction To/From	Percentage Trips to/from
Route 125	West	15%
Route 125	East	10%
I-93	North	30%
I-93	South	30%
Andover Street	North	5%
Andover Street	South	10%
TOTAL	**--**	**100%**

Build Traffic Volumes

Based on the traffic generation and distribution estimates for this project, the traffic volumes associated with the proposed development were assigned to the roadway network. The site-generated traffic networks are shown on Figures 4A and 4B for the weekday AM and weekday PM peak hours, respectively. The site-generated traffic volumes were then combined with the 2029 No-Build traffic volumes to develop the 2029 Build peak-hour traffic-volume networks. The 2029 Build weekday AM and weekday PM peak hour traffic volumes are illustrated on Figure 5.

FIGURE 5

2029 BUILD CONDITIONS
WEEKDAY PEAK HOUR TRAFFIC VOLUMES

CAPACITY AND QUEUE ANALYSIS

Capacity and queue analyses were conducted at all study area locations under 2022 Existing, 2029 No-Build, and 2029 Build traffic-volume conditions. The impact of site-generated traffic can be measured by comparing 2029 No-Build conditions to 2029 Build conditions.

Methodology

The capacity analysis methodology is based on the concepts and procedures in the *Highway Capacity Manual* (HCM)[8] and is described in the Appendix. The TIAS utilizes the HCM 2000 methodology at the signalized intersection due to the fact that *HCM* methodology does not support non-NEMA signal phasing provided at the signalized study rea intersections. MassDOT has recognized such inefficiencies in the HCM 6 method and still accepts the HCM 2000 results as the most recently previously approved method for this scenario. However, the HCM 6 methodology was used for all unsignalized intersections within the study area to utilize the most recent analysis methodology.

For signalized intersections, the maximum back of queue during a typical (average) signal cycle and a 95th percentile signal cycle were calculated for each lane group during the peak periods studied. The back of queue is the length of a backup of vehicles from the stop line of a signalized intersection to the last vehicle in the queue that is required to stop, regardless of the signal indication. The length of this queue depends on a number of factors including signal timing, vehicle arrival patterns, and the saturation flow rate. For unsignalized intersections, the 95th percentile queue represents the length of queue of the critical minor-street movement that is not expected to be exceeded 95 percent of the time during the analysis period (typically one hour). In this case, the queue length is a function of the capacity of the movement and the movement's degree of saturation.

Analysis Results

The results of the level-of-service (LOS) and queue analyses are shown in Table 3 and are discussed below. Capacity and queue analyses were conducted at the study area intersections utilizing *Synchro* software.[9] The capacity and queue analysis worksheets for all conditions are provided in the Appendix.

Route 125 (Ballardvale Street) at Route 93 SB Ramps

All movements at this intersection are anticipated to operate at acceptable levels of service (LOS D or better) under 2029 No-Build and Build conditions during the weekday AM and PM peak hours. The additional traffic generated by the proposed mixed commercial development is not anticipated to increase delay on any given movement by more than one second per vehicle and not increase queues on any approach by more than one vehicle as compared to the 2029 No-Build condition.

Route 125 (Ballardvale Street) at Route 93 NB Ramps

All movements at this intersection are anticipated to operate at acceptable levels of service (LOS D or better) under all analysis conditions. The additional traffic generated by the proposed mixed commercial development is not anticipated to increase delay on any given movement by more than four seconds per

[8] *Highway Capacity Manual 2000*, Transportation Research Board; Washington, D.C.; 2000.

[9] *Synchro plus SimTraffic 10*; Trafficware LLC.; Sugar Land, TX; 2017.

vehicle or increase queues on any approach by more than two vehicles as compared to the 2029 No-Build condition.

Route 125 (Ballardvale Street) at Ballardvale Street

The Route 125 southbound through / right-turn movement currently operates at level-of-service (LOS) E during the weekday AM peak hour and is anticipated to operate at LOS F under 2029 No-Build conditions. However, the additional traffic generated by the proposed mixed commercial development is not anticipated to increase delay on this movement by more than eight (8) seconds per vehicle or increase queues by more than one vehicle. All other movements through the intersection are anticipated to operate at LOS E or better during all analysis time periods. The additional traffic generated by the proposed mixed commercial development will not increase delays on any other movements by more than seven (7) seconds per vehicle or increase queues by more than two vehicles as compared to the 2029 No-Build condition.

Route 125 at Andover Street

Several movements at this intersection are anticipated to operate at LOS E or F during the weekday AM and PM peak hours under 2029 No-Build and Build conditions, particularly the Andover Street northbound and southbound left-turn/through movements and Route 125 eastbound left and westbound right-turn/through movements. However, the additional traffic generated by the proposed warehouse / office development is not expected to increase overall intersection delay by more 13 seconds per vehicle during the weekday AM peak hour or by more than four (4) seconds per vehicle during the weekday PM peak hour. Queues on all approaches are not anticipated to increase by more than five vehicles.

Although MassDOT recently installed a new traffic signal controller at this intersection, it is currently running the same timing plan all day long, resulting in inefficient traffic operations during the weekday PM peak hour. By implementing separate time-of-day plans at the intersection, green time can be better allocated to each phase throughout the day and the signal timings can be optimized for the traffic volumes in each peak time period. As shown in Table 3, with implementation of the separate time-of-day plans, all movements through the intersection are anticipated to operate under capacity (V/C <1.0) and at LOS D or better during the weekday PM peak hour. Therefore, independent of the proposed development, GPI recommends that MassDOT implement time-of-day plans within the new traffic signal controller to optimize operations at this intersection. The developer for the proposed commercial development at 30 Upton Drive has committed to contacting MassDOT to implement the recommended signal timing modifications as a condition of approval.

Andover Street at Upton Drive

Although traffic exiting left from Upton Drive onto Andover Street is expected to experience LOS F during the weekday AM peak hour under 2029 Build conditions, the volume-to-capacity (V/C) ratio will be well below 1.00, indicating there will be more than adequate capacity to accommodate the anticipated traffic volumes. In addition, queues are not expected to exceed seven vehicles exiting Upton Drive

The intersection of Andover Street / Upton Drive is located in close proximity to the signalized intersection of Route 125 / Andover Street. During the weekday AM and PM peak hours, queues from the signal extend along Andover Street beyond Upton Drive. As part of the approval of the previously permitted warehouse / office development at #36 & #38 Upton Drive, the Applicant was required to install DO NOT BLOCK INTERSECTION pavement markings and signage on Andover Street southbound at the intersection with Upton Drive to ensure vehicles stopped at the signal do not block vehicles from exiting or entering Upton Drive. In addition, large trucks occasionally drive over the center median island or curb when turning on and off Upton Drive. To improve turning maneuverability for large trucks, the Applicant was required to remove a portion of the raised landscaped island at the intersection with Andover Street and replace this with a striped or scored concrete island that is mountable by trucks. The Applicant continues to be committed to implementing these modifications at this intersection as mitigation for the proposed mixed

commercial development. A conceptual improvement plan depicting these modifications is provided within the Appendix

Andover Street at Jonspin Road

Although traffic exiting the New England Coffee Driveway onto Andover Street is expected to experience LOS F during the weekday AM peak hour under 2029 No-Build and Build conditions, the proposed mixed commercial development is not anticipated to increase traffic volumes on the New England Coffee Driveway. In addition, the volume-to-capacity (V/C) ratio will be well below 1.00, indicating there will be more than adequate capacity to accommodate the anticipated traffic volumes. Queues on this approach are not expected to exceed one vehicle. All other movements at this intersection are anticipated to operate at acceptable levels of service (LOS D or better) under all analysis conditions.

TABLE 3
Intersection Capacity Analysis Summary

CONCLUSIONS

Existing and future conditions in the study area have been described, analyzed, and evaluated with respect to traffic operations and the impact of the proposed redevelopment. Conclusions of this effort are presented below.

- The site is currently a vacant vegetated lot with a gravel driveway which spurs off the southwesterly corner of Upton Drive. The site was recently approved for the construction of an approximately ±263,900 square feet (SF) warehouse distribution development within three buildings with access/egress proposed via five driveways along Upton Drive. To attract a wider range of potential tenants to the site, the developer is seeking approval for a mixed commercial development that would allow up to 19,800 SF of research and development space, 39,000 SF of light industrial space, 78,500 SF of manufacturing space, and 125,300 SF of warehousing space. Access and egress will continue to be provided via the five previously proposed site driveways.

- The currently proposed development is anticipated to generate an additional 84 vehicle trips (68 entering and 16 exiting) during the weekday AM peak hour and an additional 85 vehicle trips (21 entering and 64 exiting) during the weekday PM peak hour as compared to the previously approved warehouse distribution center.

- All movements at the signalized intersections of Route 125 (Ballardvale Street) with the I-93 Northbound (NB) and Southbound (SB) ramps are anticipated to operate at LOS D or better under all analysis conditions. The additional traffic generated by the proposed mixed commercial development is not expected to increase delay on any movement through these intersections by more than four seconds per vehicle or increase queues by more than two vehicles.

- Although some movements at the Route 125 / Ballardvale Street intersection will operate at LOS F under 2029 No-Build and Build conditions, the additional traffic generated by the proposed warehouse / office development is not anticipated to increase delay on any movement through the intersection by more than seven seconds per vehicle or increase queues by more than two vehicles.

- Similarly, although some side street movements at the unsignalized intersections of Andover Street with Upon Drive and Jonspin Road are expected to operate at LOS F under 2029 No-Build and/or Build conditions, the volume-to-capacity (V/C) ratios will be well below 1.00, indicating there will be adequate capacity to accommodate the anticipated traffic volumes. Improvements are also proposed by the Applicant at the intersection of Andover Street / Upton Drive, which include installation of DO NOT BLOCK INTERSECTION signage and pavement markings, and reconstruction of the median island on Upton Drive to better accommodate truck turns. These improvements will help to facilitate turning movements into and exiting Upton Drive.

- Several movements at the intersection of Route 125 / Andover Street are anticipated to operate at LOS E or F during the weekday AM and PM peak hours under 2029 No-Build and Build conditions. However, the additional traffic generated by the proposed mixed commercial development is not expected to increase overall delay through the intersection by more than 13 seconds per vehicle or increase queues by more than five vehicles. Although MassDOT recently installed a new traffic signal controller at this intersection, it operates with a single timing plan 24 hours per day that is designed to accommodate traffic volumes during the weekday AM peak hour. By implementing a separate timing plan for the weekday PM peak hour, all movements through the intersection can operate under capacity (V/C <1.0) and at LOS D or better during the weekday PM peak hour. The Applicant for the development at #30 Upton Drive has committed to contacting MassDOT to

implement the recommended signal timing modifications as mitigation for the proposed development.

Based on the findings above, the proposed mixed commercial development can be safely and efficiently accommodated along the existing roadway network. No additional project-specific mitigation is warranted based on the incremental impacts of the development.

CAPACITY ANALYSIS METHODOLOGY

CAPACITY ANALYSIS METHODOLOGY

A primary result of capacity analysis is the assignment of levels of service to traffic facilities under various traffic flow conditions. The capacity analysis methodology is based on the concepts and procedures in the *Highway Capacity Manual* (HCM).[10] The concept of level of service (LOS) is defined as a qualitative measure describing operational conditions within a traffic stream and their perception by motorists and/or passengers. A level-of-service definition provides an index to quality of traffic flow in terms of such factors as speed, travel time, freedom to maneuver, traffic interruptions, comfort, convenience, and safety.

Six levels of service are defined for each type of facility. They are given letter designations from A to F, with LOS A representing the best operating conditions and LOS F the worst. Since the level of service of a traffic facility is a function of the traffic flows placed upon it, such a facility may operate at a wide range of levels of service, depending on the time of day, day of week, or period of year. A description of the operating condition under each level of service is provided below:

- *LOS A* describes conditions with little to no delay to motorists.
- *LOS B* represents a desirable level with relatively low delay to motorists.
- *LOS C* describes conditions with average delays to motorists.
- *LOS D* describes operations where the influence of congestion becomes more noticeable. Delays are still within an acceptable range.
- *LOS E* represents operating conditions with high delay values. This level is considered by many agencies to be the limit of acceptable delay.
- *LOS F* is considered to be unacceptable to most drivers with high delay values that often occur, when arrival flow rates exceed the capacity of the intersection.

Unsignalized Intersections

Levels of service for unsignalized intersections are calculated using the operational analysis methodology of the HCM. The procedure accounts for lane configuration on both the minor and major street approaches, conflicting traffic stream volumes, and the type of intersection control (STOP, YIELD, or all-way STOP control). The definition of level of service for unsignalized intersections is a function of average *control* delay. Control delay includes initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay. The level-of-service criteria for unsignalized intersections are shown in Table A-1.

Signalized Intersections

Levels of service for signalized intersections are also calculated using the operational analysis methodology of the HCM. The methodology for signalized intersections assesses the effects of signal type, timing, phasing, and progression; vehicle mix; and geometrics on average *control* delay. Control delay includes initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay. Table A-1 summarizes the relationship between level of service and average control delay.

---

[10] *Highway Capacity Manual 2000*, Transportation Research Board; Washington, D.C.; 2000.

TABLE A-1
Level-of-Service Criteria for Intersections

Level of Service	Unsignalized Intersection Criteria Average Control Delay (Seconds per Vehicle)	Signalized Intersection Criteria Average Control Delay (Seconds per Vehicle)
A	≤10	≤10
B	>10 and ≤15	>10 and ≤20
C	>15 and ≤25	>20 and ≤35
D	>25 and ≤35	>35 and ≤55
E	>35 and ≤50	>55 and ≤80
F	>50	>80

Source *Highway Capacity Manual 2000*, Transportation Research Board; Washington, D.C.; 2000. Pages 10-16 and 17-2.

For signalized intersections, this delay criterion may be applied in assigning level-of-service designations to individual lane groups, to individual intersection approaches, or to the entire intersection. For unsignalized intersections, this delay criterion may be applied in assigning level-of-service designations to individual lane groups or to individual intersection approaches.

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

UTILITY INFORMATION STATEMENT

1. THE SUB-SURFACE UTILITY INFORMATION SHOWN HEREON IS COMPILED BASED ON FIELD SURVEY INFORMATION, RECORD INFORMATION AS SUPPLIED BY THE APPROPRIATE UTILITY COMPANIES, AND PLAN INFORMATION SUPPLIED BY THE CLIENT, IF ANY; THEREFORE WE CANNOT GUARANTEE THE ACCURACY OF SAID COMPILED SUB-SURFACE INFORMATION TO ANY CERTAIN DEGREE OF STATED TOLERANCE. ONLY PHYSICALLY LOCATED SUB-SURFACE UTILITY FEATURES FALL WITHIN NORMAL STANDARD OF CARE ACCURACIES.
2. THE LOCATIONS OF UNDERGROUND PIPES, CONDUITS, AND STRUCTURES HAVE BEEN DETERMINED FROM SAID INFORMATION, AND ARE APPROXIMATE ONLY. COMPILED LOCATIONS OF ANY UNDERGROUND STRUCTURES, NOT VISIBLY OBSERVED AND LOCATED, CAN VARY FROM THEIR ACTUAL LOCATIONS.
3. ADDITIONAL BURIED UTILITIES/STRUCTURES MAY BE ENCOUNTERED.
4. THE STATUS OF UTILITIES, WHETHER ACTIVE, ABANDONED, OR REMOVED, IS AN UNKNOWN CONDITION AS FAR AS OUR COMPILATION OF THIS INFORMATION.
5. IT IS INCUMBENT UPON INDIVIDUALS USING THIS INFORMATION TO UNDERSTAND THAT COMPILING UTILITY INFORMATION IS NOT EXACT, AND IS SUBJECT TO CHANGE BASED UPON VARYING PLAN INFORMATION RECEIVED AND ACTUAL LOCATIONS.
6. THE ACCURACY OF MEASURED UTILITY INVERTS AND PIPE SIZES IS SUBJECT TO FIELD CONDITIONS, THE ABILITY TO MAKE VISUAL OBSERVATIONS, DIRECT ACCESS TO THE VARIOUS ELEMENTS AND OTHER MATTERS.
7. THE PROPER UTILITY ENGINEERING/COMPANY SHOULD BE CONSULTED AND THE ACTUAL LOCATIONS OF SUBSURFACE STRUCTURES SHOULD BE VERIFIED IN THE FIELD (V.I.F.) BEFORE PLANNING FUTURE CONNECTIONS. CONTACT THE DIG SAFE CALL CENTER AT 1-888-344-7233, SEVENTY-TWO HOURS PRIOR TO EXCAVATION, BLASTING, GRADING, AND/OR PAVING.

NOTES

1. THIS DOCUMENT IS AN INSTRUMENT OF SERVICE OF NITSCH ENGINEERING. IT IS ISSUED TO DORE AND WHITTIER FOR PURPOSES RELATED DIRECTLY AND SOLELY TO NITSCH ENGINEERING'S SCOPE OF SERVICES UNDER CONTRACT WITH DORE AND WHITTIER FOR PK-5 SITE. ANY USE OR REUSE OF THIS DOCUMENT FOR ANY REASON BY ANY PARTY FOR PURPOSES UNRELATED DIRECTLY AND SOLELY TO SAID CONTRACT AND PROJECT SHALL BE AT THE USER'S SOLE AND EXCLUSIVE RISK AND LIABILITY, INCLUDING LIABILITY FOR VIOLATION OF COPYRIGHT LAWS, UNLESS WRITTEN AUTHORIZATION IS GIVEN THEREFOR BY NITSCH ENGINEERING.
2. THE PURPOSE OF THIS PLAN IS TO SHOW EXISTING CONDITIONS PLAN AS THE RESULT OF AN ON-THE-GROUND INSTRUMENT SURVEY WHICH OCCURRED OCTOBER 2024.
3. WETLAND RESOURCE AREA BOUNDARIES DELINEATED BY LEC ENVIRONMENTAL CONSULTANTS, INC. ON NOVEMBER 5, 2024.
4. ELEVATION REFERS TO NORTH AMERICAN VERTICAL DATUM (NAVD88) VERTICAL BASED ON RTK GPS OBSERVATIONS WITH CORRECTIONS PROVIDED BY MaCORS NETWORK.
5. THIS PLAN WAS PREPARED WITHOUT THE BENEFIT OF A TITLE SEARCH AND MAY NOT DISCLOSE ANY MATTERS THAT MAY BE REVEALED BY ONE.
6. THIS PLAN DOES NOT SHOW UNWRITTEN OR UNRECORDED EASEMENTS WHICH MAY EXIST. A REASONABLE AND DILIGENT ATTEMPT HAS BEEN MADE TO OBSERVE ANY APPARENT AND VISIBLE USES OF THE LAND. THIS PLAN DOES NOT GUARANTEE THAT NO SUCH EASEMENTS EXIST.
7. LEGAL STATUS OF EASEMENTS, WAYS AND RESTRICTIONS NOT DETERMINED BY THIS SURVEY.
8. TITLE TO LAND IN THE ABUTTING WAYS IS NOT SHOWN AND HAS NOT BEEN DETERMINED AS A RESULT OF THIS SURVEY.

Re: **Preliminary Geotechnical Report**
Proposed Wildwood Early Childhood Center
North Intermediate School – 320 Salem Street Site
Wilmington, MA
LGCI Project No. 2437

Dear Ms. Philip:

Lahlaf Geotechnical Consulting, Inc. (LGCI) has completed a preliminary geotechnical study for the proposed Wildwood Early Childhood Center in Wilmington, Massachusetts. We are submitting our preliminary geotechnical report electronically. Please notify us if you need a hard copy.

The soil samples from our explorations are currently stored at LGCI for further analysis, if requested. Unless notified otherwise, we will dispose of the soil samples after three (3) months.

Thank you for choosing LGCI as your geotechnical engineer.

Very truly yours,

Lahlaf Geotechnical Consulting, Inc.

Abdelmadjid M. Lahlaf, Ph.D., P.E.
Principal Engineer

1. PROJECT INFORMATION

1.1 Project Authorization

This geotechnical report presents the results of the subsurface explorations and a geotechnical evaluation performed by Lahlaf Geotechnical Consulting, Inc. (LGCI) for the proposed Wildwood Early Childhood Center in Wilmington, Massachusetts. We performed our services in general accordance with our proposal No. 24084 dated August 9, 2024, and proposal No. 24107 dated October 15, 2024. Ms. Rani Philip of Dore and Whittier Architects, Inc. (Dore and Whittier) authorized our services by signing our proposals Nos. 24084 and 24107 on August 9, and October 15, 2024, respectively.

1.2 Purpose and Scope of Services

The purpose of our geotechnical services was to perform preliminary subsurface explorations at the site for the proposed Wildwood Early Childhood Center, and to provide preliminary foundation design and construction recommendations. LGCI performed the following services:

- Coordinated our exploration locations with Dore and Whittier and with school staff.
- Marked the exploration locations at the site and notified Dig Safe Systems Inc. (Dig Safe) and the Town of Wilmington for utility clearance.
- Engaged a drilling subcontractor for two (2) days to advance eight (8) soil borings at the site.
- Coordinated with Dore and Whittier who arranged with the Town of Wilmington's Department of Public Works (DPW) to perform five (5) test pits at the site, as requested by the civil engineer.
- Provided an LGCI geotechnical field representative at the site to coordinate and observe the borings and test pits, describe the soil samples, and prepare field logs. The LGCI representative performed four (4) double ring infiltrometer tests within test pits TP-1, TP-2, TP-3, and TP-4.
- Submitted six (6) soil samples for laboratory tests, including two (2) soil samples from the borings, and four (4) samples from the test pits where double ring infiltrometer tests were performed.
- Prepared this preliminary geotechnical report containing the results of our preliminary subsurface explorations and our preliminary recommendations for foundation design and construction.

Our scope does not include preparing specifications, reviewing contract documents, and providing construction services. LGCI would be pleased to perform these services when needed. Recommendations for stormwater management, erosion control, pavement design, slope stability analyses, site specific seismic and liquefaction analyses, pile analysis and design, FEMA 100-year flood elevation, historic uses of site, contaminated soil and groundwater treatment and disposal requirements and techniques, and cost or quantity estimates are not included in our scope of work.

LGCI's scope of services does not include an environmental assessment for the presence or absence of wetlands or analytical testing for hazardous or toxic materials in the soil, surface water, groundwater, or air, on or below or around this site, or mold in the soil or in any structure at the site. Any statements regarding odors, colors, or unusual or suspicious items or conditions are strictly for the information of the client.

1.3 Site Description

Our understanding of the site is based on our field observations, our discussions with Dore and Wittier, and on the following document:

- Drawing EX-1 titled: "Existing Conditions Plan, 320 Salem Street, Wilmington, Massachusetts," (Existing Conditions Plan) prepared by Nitsch Engineering, dated October 24, 2024, and provided to LGCI by Dore and Whittier via e-mail on November 11, 2024.

The North Intermediate School site is located at 320 Salem Street in Wilmington, Massachusetts as shown in Figure 1. The site is bordered by private residential properties and Salem Street on the southern side, by Ballardvale Street on the eastern side, and by private properties on the western and northern sides. The site is occupied by the existing school building, a drop off loop, a paved parking lot, a playground, a basketball court and tennis courts, and athletic fields, including a baseball field and a soccer field.

Based on the Existing Conditions Plan, the grades at the site generally range between El. 90 feet and El. 108 feet, generally rising in the north to south direction.

1.4 Project Description

Our understanding of the proposed construction is based on our discussions with Dore and Whittier and on the following drawing:

- "Site Base Condition, Wilmington Schools, North Intermediate- Wilmington, MA," (Site Base Conditions) prepared by Dore and Whittier, undated, and provided to LGCI by Dore and Whittier on October 11, 2024.

We understand that at this time, the size, layout, and location of the proposed school are preliminary. Based on the Site Base Conditions, the proposed school will have an irregular shape

and will have a footprint of about 80,500 square feet. The proposed building will be located in the area of the existing athletic fields north of the existing building. We understand that the existing building will be demolished to allow for the construction of the proposed athletic fields.

Information about the proposed building finished floor elevation (FFE) and the proposed grading are not available at the time of this report.

1.5 Elevation Datum

We understand that the elevations provided in the Existing Conditions Plan are referenced with respect to the North American Vertical Datum of 1988 (NAVD 1988).

2. SITE AND SUBSURFACE CONDITIONS

2.1 Surficial Geology

LGCI reviewed a surficial geologic map titled: "Surficial Materials Map of Wilmington Quadrangle, Massachusetts," prepared by Byron D. Stone, J.R. and DiGiacomo-Cohen, M.L., Scientific Investigation Map 3402, Quadrangle 113 – Wilmington, 2018.

The surficial geologic map of the site indicates that the natural soils in the general vicinity of the site consist of coarse deposits.

The coarse deposits consist of sand, sand and gravel, and gravel deposits as described below.

Sand Deposits – The sand deposits are comprised mostly of fine to coarse sand. Coarser layers may contain up to 25 percent gravel. Finer layers may contain fine sand, silt, and clay.

Sand and Gravel Deposits – The sand and gravel deposits occur as a mixture of gravel and sand within individual layers and as alternating layers of sand and gravel. The sand and gravel layers range between 25 to 50 percent gravel and 50 to75 percent sand.

Gravel Deposits – The gravel deposits are comprised of at least 50 percent gravel, cobbles, and boulders. Sand occurs within gravel beds and as separate layers within the gravel.

The surficial geologic map also shows swamp deposits not far from the site.

Swamp Deposits – the swamp deposits consist of organic muck and peat that contain minor amounts of sand, silt, and clay, are stratified and poorly sorted, and occur in swamps and freshwater marshes, in kettle depressions, or in poorly drained areas.

The Surficial Geologic Map is shown in Figure 2.

2.2 LGCI's Explorations

2.2.1 General

LGCI coordinated our exploration locations with Dore and Whittier and marked the exploration locations in the field. LGCI notified Dig Safe and the Town of Wilmington for utility clearance prior to starting our explorations at the site.

Unless notified otherwise, we will dispose of the soil samples obtained during our explorations after three (3) months.

2.2.2 LGCI's Soil Borings

LGCI engaged Soil X, Corp. (Soil X) of Leominster, Massachusetts to advance eight (8) soil borings (B-1 to B-8) at the site on October 28 and 29, 2024. The borings were advanced with a Diedrich D-70 Turbo ATV Drill Rig using hollow stem auger boring techniques with 4-1/4-inch inner diameter augers. The borings extended to depths ranging between 10.2 and 20.2 feet beneath the ground surface. Upon completion, the boreholes were backfilled with drill cuttings.

Soil X performed Standard Penetration Tests (SPT) and obtained split spoon samples with an automatic hammer at typical depth intervals of 2 feet or 5 feet as noted on the boring logs in general accordance with ASTM D-1586.

An LGCI geotechnical field representative observed and logged the borings in the field.

2.2.3 LGCI's Test Pits

Dore and Whittier coordinated with the Town of Wilmington DPW to perform five (5) test pits (TP-1, TP-2, TP-2A, TP-3, and TP-4) at the site on October 30 and 31, 2024. The purpose of the test pits was to perform double ring infiltrometer tests as described in Section 2.6. The test pits were excavated with a Volvo EWR150E excavator with a smooth-edge bucket. The test pits extended to depths ranging between 8.0 and 11.3 feet beneath the ground surface. Upon completion, the excavations were backfilled with excavated material in 12- to 18-inch lifts and tamped with the excavator bucket.

An LGCI geotechnical field representative observed and logged the test pits in the field.

2.2.4 Exploration Logs and Locations

The boring and test pit locations are shown in Figure 3A and Figure 3B. Appendices A and B contain LGCI's boring logs and test pits logs, respectively, and Tables 1 and 2 include summaries of LGCI's borings and test pits, respectively.

2.3 Subsurface Conditions

The subsurface description in this report is based on a limited number of explorations and is intended to highlight the major soil strata encountered during our explorations. The subsurface conditions are known only at the actual exploration locations. Variations may occur and should be expected between exploration locations. The exploration logs represent conditions that we observed at the time of our explorations and were edited, as appropriate, based on the results of the laboratory test data and inspection of the soil samples in the laboratory. Percentages of fines, sand, and gravel were estimated to the nearest 5 percent based on our field observations and laboratory inspection of the soil samples, except where a grain-size analysis was performed. The

strata boundaries shown in our exploration logs are based on our interpretations and the actual transitions may be gradual. Graphic soil symbols are for illustration only.

The soil strata encountered in LGCI's borings and test pits were as follows, starting at the ground surface.

Topsoil – A layer of surficial organic topsoil was encountered at the ground surface in borings B-1 to B-7, and in all test pits. The thickness of the topsoil ranged between 0.6 feet and 2.0 feet.

Fill – A layer of fill was encountered at the ground surface in boring B-8 and beneath the topsoil in all borings and test pits. The fill extended to depths ranging between 0.7 and 7.0 feet beneath the ground surface. The samples within this layer were mostly described as well graded sand, poorly graded sand, and silty sand. The fines content in the fill ranged between 0 and 30 percent, and the gravel content ranged between 0 and 25 percent. The fill contained traces of organic soil and roots. The fill contained 5 to 10 percent cobbles up to 12 inches in size in test pit TP-1.

The SPT N-values in this layer ranged between 7 blows per foot (bpf) and 54 bpf, with most values lower than 18 bpf, indicating mostly loose to medium dense material.

The excavation efforts within the fill layer ranged between easy, moderate, and difficult.

Buried Organic Soil – A layer of buried organic soil was encountered beneath the fill layer in borings B-2, B-5, and B-7 The buried organic soil extended to depths of 4.0, 4.4, and 8.0 feet beneath the ground surface in borings B-2, B-5, and B-7, respectively. The samples in this layer were described as silty sand. The fines content in the buried organic soil ranged between 25 and 45 percent. The buried organic soil contained traces of organic soil and roots.

The SPT N-values in this layer ranged between 16 bpf and 40 bpf, indicating medium dense to dense material.

Buried Subsoil – A layer of buried subsoil was encountered beneath the fill in boring B-8 and test pit TP-4. The subsoil extended to depths of 4.0 and 3.2 feet beneath the ground surface in boring B-8 and test pit TP-4, respectively. In boring B-8, the samples were described as silty sand. The fines content in the subsoil ranged between 15 and 35 percent, and the gravel content ranged between 0 and 15 percent. In test pit TP-4, the sample was described as poorly graded sand. The fines content ranged between 10 and 15 percent, and the gravel content ranged between 0 and 5 percent. The samples contained traces of organic soil and roots.

The SPT N-values in this layer ranged between 11 bpf and 14 bpf, indicating a medium dense material.

The excavation effort within the subsoil layer was easy, consistent with loose to medium dense material.

Silt – A layer of silt was encountered beneath the fill layer in boring B-1 and extended to a depth of 9.0 feet beneath the ground surface. The sample was described as silt and was slightly plastic. The sand content ranged between 5 and 10 percent.

The SPT N-value in this layer was 13 bpf, indicating stiff material.

Clay – A layer of clay was encountered beneath the layer of silt in boring B-1 between depths of 9.0 to 14.0 feet. The sample was described as lean clay and was slightly plastic. The sand content ranged between 15 and 20 percent.

The SPT N-value in this layer was 12 bpf, indicating stiff material.

Swamp Deposit – A layer of swamp deposits was encountered beneath the layer of fill in test pit TP-1 and extended to a depth of 10 feet beneath the ground surface. The sample was described as silty sand. The fines content ranged between 20 and 25 percent and the gravel content ranged between 10 and 15 percent. The swamp deposit had traces of organic soil, roots, and an organic odor.

The excavation effort within the swamp deposit layer was difficult possibly due to the presence of roots.

Sand – A layer of sand was encountered in test pit TP-1 and extended to a depth of 11.0 feet beneath the ground surface. The sand was described as poorly graded sand. The fines content ranged between 0 and 5 percent.

The excavation effort within the sand layer was difficult.

Sand and Gravel – A layer of sand and gravel was encountered in all borings and test pits, except in test pit TP-1, and extended to the termination depths of the borings and test pits, except for boring B-6 where the sand and gravel layer extended to the top of weathered rock. The samples in this layer were mostly described as well graded sand and silty sand. Five (5) samples were described as poorly graded sand. The fines content in this layer ranged between 0 and 25 percent, and the gravel content ranged between 0 and 40 percent.

The SPT N-values in this layer ranged between 15 bpf and refusal, with most values ranging between 20 bpf and 67 bpf, indicating dense to very dense material. Please note that the high SPT N-values in the sand and gravel may be due to obstructions such as cobbles and boulders in the sand and gravel and may not represent the true density of the sand and gravel.

Weathered Rock – A layer of weathered rock was encountered in boring B-6 and extended to the termination depth of 19.7 feet beneath the ground surface. The sample within this layer was described as silty sand. The fines content ranged between 15 and 20 percent, and the gravel content ranged between 35 and 40 percent.

2.4 Groundwater

Groundwater was encountered in all the borings, except for B-3, and in test pits TP-1 and TP-2A, at depths ranging between 9.0 and 14.0 feet beneath the ground surface, as shown in Tables 1 and 2, and in the boring and test pit logs.

The groundwater information reported herein is based on observations made during or shortly after the completion of drilling and excavation. The reported groundwater levels may not represent the actual groundwater conditions, as additional time may be required for the groundwater levels to stabilize. The groundwater information presented in this report only represents the conditions encountered at the time and location of the explorations. Seasonal fluctuation should be anticipated.

2.5 Laboratory Test Data

LGCI submitted six (6) soil samples collected from the borings for grain-size analysis. The results of the grain-size analyses are provided in the test data sheets included in Appendix C and are summarized in the table below.

Grain-Size Analysis Test Results

Exploration No.	Sample No.	Stratum	Sample Depth (ft.)	Percent Gravel	Percent Sand	Percent Fines
B-1	S2	Fill	2.0 – 4.0	36.5	43.5	20.0
B-4	S2	Sand and Gravel	2.0 – 4.0	36.9	42.6	20.5
TP-1	Infiltrometer	Fill	5.0	14.1	58.9	27.0
TP-2	Infiltrometer	Fill	4.0	6.8	77.3	15.9
TP-3	Infiltrometer	Sand and Gravel	4.0	31.4	67.1	1.5
TP-4	Infiltrometer	Sand and Gravel	4.6	30.4	58.6	11.0

2.6 Double Ring Infiltrometer Tests

LGCI provided a geotechnical field engineer to perform four (4) double ring infiltrometer tests in test pits TP-1 to TP-4 (one in each).

In each case, the excavation was first advanced to the test depth where the test pit bottom was leveled using the excavator bucket. After the infiltrometer rings were driven into the ground, the test was conducted by filling the rings with water. The test pit was advanced deeper after the completion of the test.

The test results are included in Appendix D and are summarized below.

The results include plots of the hydraulic conductivity for flow within the inner and outer rings. The stabilized portion of the plot for the inner ring indicates the permeability value. The results indicate the following approximate permeability, K, value:

Double Ring Infiltrometer Test Results

Test Pit	Stratum	Test Depth (ft.)	Permeability, K (cm/sec)
TP-1	Fill	5.0	1.00×10^{-3}
TP-2	Fill	4.0	4.06×10^{-3}
TP-3	Sand and Gravel	4.0	6.73×10^{-2}
TP-4	Sand and Gravel	4.5	8.95×10^{-2}

3. EVALUATION AND RECOMMENDATIONS

3.1 Foundation Recommendations

3.1.1 General

Based on the results of the borings and test pits, the subsurface conditions at the site are suitable to support the proposed building after the topsoil, existing fill, buried organic soil, buried subsoil, and swamp deposits are removed or improved as described below. There are a few issues that we would like to highlight for consideration and discussion.

3.1.2 Topsoil, , Existing Fill Buried Organic Soil, Buried Subsoil, and Swamp Deposits

- The topsoil should be removed from within the entire construction area, including the proposed building footprint and the proposed paved areas.

- The existing fill was observed to be variable in composition and density. The existing fill contained traces of organic soil and roots. In addition, the existing fill overlaid buried organic soil and buried subsoil. Existing fill that was not placed with strict moisture, density, and gradation control presents risk of unpredictable settlement that may result in poor performance of floor slabs and foundations. Due to these risks, the existing fill, the buried organic soil, and the buried subsoil should be entirely removed from within the proposed building's footprint and should be replaced with Structural Fill. We anticipate that the removal will extend up to depths ranging between 2 and 6 feet beneath the existing ground surface, and up to a depth of 8 feet beneath the ground surface near boring B-7. The removal may extend to greater depths at locations not explored by LGCI. Laterally, the removal should extend beyond the proposed building's footprint a distance equal to the distance between the bottom of the proposed footings and the top of the native sand and gravel, or 5 feet, whichever is greater.

- At test pit TP-1, performed outside of the proposed building footprint, swamp deposits were observed beneath the existing fill and extended to a depth of 10 feet beneath the ground surface. If encountered within the proposed building footprint, the swamp deposits should be removed and replaced with Structural Fill.

- After the topsoil, existing fill, buried organic soil, buried subsoil, and swamp deposits, if any, are removed from within the proposed building footprint and zone of influence of footings, as described above, the proposed building and other structures may be supported on shallow footings bearing in Structural Fill placed directly on top of the native sand and gravel or stiff silt and clay.

- As an alternative to the removing the existing fill, the buried organic soil, and the buried subsoil we considered the option of improving the ground using aggregate piers (APs) or

rigid inclusions (RIs). We dismissed this option due to the depth to the bottom of these layers being 6 feet or less in a few explorations. We will reconsider this option after additional explorations are performed at the site during future phases of the project.

- The subgrade of footings should be prepared in accordance with the recommendations in Section 4.1.

- The proposed slab may be designed as a slab-on-grade bearing on Structural Fill placed directly on top of the native sand and gravel or stiff silt and clay.

- Within paved areas, the existing fill and the buried organic soil and buried subsoil should be removed to the top of the native sand and gravel or stiff silt and clay or to a depth of 18 inches beneath the bottom of the proposed pavement, whichever occurs first. Where soft organic soil is exposed, the organic soil should be removed. The existing fill and buried organic soil and buried subsoil deeper than 18 inches beneath the bottom of the proposed pavement can remain in place provided that these materials are firm and unyielding following proofrolling as described in Section 4.1.

3.1.3 Additional Explorations

We recommend advancing additional explorations at the site during the schematic design (SD) phase and/or the design development (DD) phase. The additional explorations should include soil borings and test pits. We recommend installing at least one (1) groundwater observation well as part of the additional explorations.

3.2 Foundation Recommendations

We recommend supporting the proposed building on shallow footings placed on Structural Fill placed directly the native sand and gravel layer or the stiff silt and clay. Shallow foundations and slabs-on-grade should be placed on a subgrade that is prepared in accordance with the recommendations in this report. Recommendations for footing design and our settlement estimates are presented in Sections 3.2.1 and 3.2.2, respectively.

3.2.1 Footing Design

- Footings should be founded on Structural Fill placed directly on the native sand and gravel or on the stiff silt and clay. A representative of LGCI should observe the subgrade during construction to confirm that it is consistent with the materials encountered in our borings.

- For footing design, we recommend using a net allowable bearing pressure of 4 kips per square foot (ksf).

- The subgrade of footings should be prepared in accordance with the recommendations in Section 4.1.

- Foundations should be designed in accordance with The Commonwealth of Massachusetts State Building Code 780 CMR, Tenth Edition (MSBC 10th Edition).

- Exterior footings and footings in unheated areas should be placed at a minimum depth of 4.0 feet below the final exterior grade to provide adequate frost cover protection. Interior footings in heated areas may be designed and constructed at a minimum depth of 2 feet below finished floor grades.

- We recommend that wall footings have a minimum width of 2 feet, and that column footings have a minimum width of 3 feet. For foundations with a least lateral dimension smaller than 3 feet, the allowable bearing pressure should be reduced to 1/3 of the recommended allowable bearing pressure times the least dimension in feet.

- Wall footings should be designed and constructed with continuous, longitudinal steel reinforcement for greater bending strength to span across small areas of loose or soft soils that may go undetected during construction.

3.2.2 Settlement

Using the allowable bearing pressure of 4 ksf and the minimum footing sizes recommended above, we estimate for foundations constructed in accordance with the recommendations contained in this report that the total post-construction settlement will be less than about 1 inch and that the differential settlement will be 3/4 inch or less over a distance of 25 feet. Total and differential settlements of these magnitudes are usually considered tolerable for the anticipated construction. However, the tolerance of the proposed structure to the predicted total and differential settlements should be assessed by the structural engineer.

3.3 Concrete Slab Considerations

- The proposed floor slab can be constructed as a slab-on-grade bearing on a minimum of 12 inches of Structural Fill placed directly on top of the native sand and gravel.

- To reduce the potential for dampness in the proposed floor slab, the project architect may consider placing a vapor barrier beneath the floor slab. The vapor barrier should be protected from puncture during construction of the slab.

- For the design of the floor slab bearing on the materials described above, we recommend using a modulus of subgrade reaction, k_{s1}, of 100 tons per cubic foot (tcf). Please note that the values of k_{s1} are for a 1 x 1 square foot area. These values should be adjusted for larger areas using the following expression:

$$Modulus\ of\ Subgrade\ \text{Re}action\ (k_s) = k_{s1} * \left(\frac{B+1}{2B}\right)^2$$

where:

k_s = Coefficient of vertical subgrade reaction for loaded area,
k_{s1} = Coefficient of vertical subgrade reaction for 1 x 1 square foot area, and
B = Width of area loaded, in feet.

Please note that cracking of slabs-on-grade can occur as a result of heaving or compression of the underlying soil, but also as a result of concrete curing stresses. To reduce the potential for cracking, the precautions listed below should be closely followed for construction of all slabs-on-grade:

- Construction joints should be provided between the floor slab and the walls and columns in accordance with the American Concrete Institute (ACI) requirements, or other applicable code.

- Backfill in interior and exterior utility trenches should be properly compacted.

- In order for the movement of exterior slabs not to be transmitted to the building foundation or superstructure, exterior slabs such as approach slabs and sidewalks, should be isolated from the building superstructure.

3.4 Under-slab Drainage

Based on the groundwater levels observed in our borings, we believe that an under-slab drainage system is not required beneath the slab.

3.5 Seismic Design Criteria

In accordance with Section 1613 of MSBC 10th Edition and based on the boring data, the seismic criteria are as follows:

- Site Class: D
- Spectral Response Acceleration at short period, S_s (Table 1604.11): 0.327g
- Spectral Response Acceleration at 1 sec., S_1 (Table 1604.11): 0.072g
- Site Coefficient, F_a (Table 1613.3.3(1)): 1.6
- Site Coefficient, F_v (Table 1613.3.3(2)): 2.4
- Adjusted spectral response S_{ms} (Equation 16-37): 0.523g
- Adjusted spectral responses S_{m1} (Equation 16-38): 0.173g

Based on the SPT data from the borings, we believe the site soils are not susceptible to liquefaction.

3.6 Lateral Pressures for Wall Design

3.6.1 Lateral Earth Pressures

Based on our understanding, the proposed construction will not include retaining walls or below-ground walls. Should the design change, the lateral earth pressures recommended shown below should be used to design proposed retaining walls.

Coefficient of Active Earth Pressure, K_A:	0.33
Coefficient of At-Rest Earth Pressure, K_o:	0.50
Coefficient of Passive Earth Pressure, K_p:	3.0
Total Unit Weight γ:	125 pcf

Note: The values in the table are based on a friction angle for the backfill of 30 degrees and neglecting friction between the backfill and the wall. The design active and passive coefficients are based on horizontal surfaces (non-sloping backfill) on both the active and passive sides, and a vertical wall face.

- Exterior walls of below-ground spaces and retaining walls braced at the top to restrain movement/rotation, should be designed using the "at-rest" pressure coefficient.

- We recommend placing free-draining material within the 3 feet immediately behind retaining walls. We recommend providing weep holes in site walls to promote drainage where possible; or a pipe should be placed at the base of the wall to collect the groundwater. Groundwater collected by the wall drains should be discharged in a lower area if gravity flow is possible.

- Passive earth pressures should only be used at the toe of the wall where special measures or provisions are taken to prevent disturbance or future removal of the soil on the passive side of the wall, or in areas where the wall design includes a key. In any case, the passive pressures should be neglected in the top 2 feet.

- Where a permanent vertical uniform load will be applied on the active side immediately adjacent to the wall, a horizontal surcharge load equal to half of the uniform vertical load should be applied over the height of the wall. At a minimum, a temporary construction surcharge of 100 psf should be applied uniformly over the height of the wall.

- We recommend using an ultimate friction factor of 0.5 between the native sand and gravel or Structural Fill and the bottom of the wall. Below-grade walls should be designed for minimum factors of safety of 1.5 for sliding and 2.0 for overturning. We recommend a factor of safety of 1.5 for global stability of walls.

3.6.2 Perimeter Drains

- Should the design change to include retaining walls, free-draining material should be placed within 3 feet of retaining walls and walls of below-grade spaces. To reduce the potential for dampness in below-ground spaces, if any, perimeter walls of the proposed below-ground spaces should be damp-proofed.

- We recommend that drains be provided behind the exterior of walls of below-ground spaces, if any, and behind site retaining walls, if any. The drains should consist of 6-inch perforated PVC pipes installed with the slots facing down. Perimeter drains should be installed at the bottom of the wall in 18 inches of crushed stone wrapped in a geotextile fabric for separation and filtration. Site retaining walls may be designed with weep holes discharging near the bottom of the face of the walls.

- Groundwater collected by the wall drains could be discharged in a lower area if gravity flow is possible. Alternatively, it should be discharged into the street drains. A permit would be required for discharge into street drains.

3.7 Pavement and Sidewalk Considerations

3.7.1 General

The subsurface conditions encountered at the site are generally suitable to support the proposed driveways, parking lots, and sidewalks after preparation of the subgrade as described in Section 4.1.

- We recommend entirely removing the topsoil and asphalt from within the footprint of the proposed driveways and parking lots.

- The existing fill should be improved within the proposed paved areas and under sidewalks in accordance with the recommendations in Sections 3.1.1 and 4.1.

Cobbles and boulders should be removed to at least 18 inches below the bottom of the pavement and sidewalks.

3.7.2 Pavement Sections

A typical, minimum, standard-duty pavement section that could be used for parking areas is as follows:

1.5" Asphalt "Top Course"
2.0" Asphalt "Base Course"
8" Processed Gravel for Sub-Base (MassDOT M1.03.1)

A typical, minimum, heavy-duty pavement section that could be used for areas of heavy truck traffic is as follows:

2.0" Asphalt "Top Course"
2.5" Asphalt "Base Course"
12" Processed Gravel for Sub-Base (MassDOT M1.03.1)

The pavement sections shown above represent minimum thicknesses representative of typical local construction practices for similar use. Periodic maintenance should be anticipated.

Pavement material types and construction procedures should conform to specifications of the "Standard Specifications for Highways and Bridges," prepared by the Commonwealth of Massachusetts Department of Transportation dated 2023.

Areas to receive relatively highly concentrated, sustained loads such as dumpsters, loading areas, and storage bins are typically installed over a rigid pavement section to distribute concentrated loads and reduce the possibility of high stress concentrations on the subgrade. Typical rigid pavement sections consist of 6 inches of concrete placed over a minimum of 12 inches of subbase material.

3.7.3 Sidewalks

- Sidewalks should be placed on a minimum of 12 inches of Structural Fill with less than 5 percent fines.

- To reduce the potential for heave caused by surface water penetrating under the sidewalk, the joints between sidewalk concrete sections should be sealed with a waterproof compound. The sidewalks should be sloped away from the building or other vertical surfaces to promote flow of water. To the extent possible, roof leaders should not discharge onto sidewalk surfaces.

3.8 Underground Utilities

Boulders at the bottom of utility trenches should be removed to at least 12 inches below the pipe invert and the resulting excavation should be backfilled with suitable backfill. Utilities should be placed on suitable bedding material in accordance with the manufacturer's recommendations. "Cushion" material should be placed, by hand, above the utility pipe in maximum 6-inch lifts. The lift should be compacted by hand to avoid damage to the utility. Where the bedding/cushion material consists of crushed stone, it should be wrapped in a geotextile fabric.

Before placing the bedding material, the bottom of utility trenches should be compacted to a firm and unyielding condition. Where soft or pumping material is encountered, it should be removed and replaced with Ordinary Fill.

Compaction of fill in utility trenches should be in accordance with our recommendations in Section 4.3. To reduce the potential for damage to utilities, placement and compaction of fill immediately above the utilities should be performed in accordance with the manufacturer's recommendations.

4. CONSTRUCTION CONSIDERATIONS

4.1 Subgrade Preparation

- Existing asphalt, topsoil, existing fill, buried organic soil, buried subsoil, swamp deposits, if any, organic materials, abandoned utilities, buried foundations, remnants of demolished buildings, and other below-ground structures should be entirely removed from within the footprint of the proposed building before the start of foundation work.

- Tree stumps, root balls, and roots larger than ½ inch in diameter should be removed and the cavities filled with suitable material and compacted per Section 4.3 of this report.

- Cobbles and boulders should be removed at least 6 inches from beneath footings and 18 inches beneath the bottom of slabs and paved areas. The resulting excavations should be backfilled with compacted Structural Fill under the building and with Ordinary Fill under the subbase of paved areas.

- We recommend removing the existing fill, buried organic soil, buried subsoil, and swamp deposits, if any, from within the proposed building footprint and within the zone of influence of footings. We recommend compacting the exposed subgrade in the native sand and gravel layer or in the deep existing fill to a firm and unyielding condition with at least six (6) passes of a heavy roller compactor imparting a minimum dynamic effort of 40 kips. Where organic soil is exposed or where the subgrade is soft during the compaction effort, the organic soil or soft material should be removed and replaced with Structural Fill. The subgrade in the stiff silt and clay should be cut with a smooth bladed bucket and compacted statically with no more than 2 passes of a roller compactor.

- After the surficial topsoil, buried organic soil, buried subsoil, and existing fill are removed to a depth of 18 inches below the bottom of the proposed pavement, the exposed existing fill, buried organic soil, and buried subsoil should be improved by compacting the exposed surface of the existing fill with at least six (6) passes of a vibratory roller compactor imparting a dynamic effort of at least 40 kips. Where soft organic soil or other soft materials of soil are observed, the organic soil or other soft material should be removed, and the grade should be restored using Ordinary Fill to the bottom of the proposed subbase layer. If pumping of the existing fill or buried subsoil deeper than 18 inches beneath the bottom of the proposed pavement is observed, the soft and/or pumping material should be removed and replaced.

- The base of footing excavations should be compacted with a dynamic vibratory compactor weighing at least 200 pounds and imparting a minimum of 4 kips of force to the subgrade, before placing concrete.

- The subgrade of the proposed slab should be compacted with a dynamic vibratory compactor imparting a minimum of 10 kips of force to the subgrade before placing Structural Fill.

- To reduce the potential for disturbance of the footing subgrade, excavations should be extended an additional 12 inches and restored with Structural Fill or crushed stone to serve as a working mat.

- Fill placed within the footprint of the proposed building should meet the gradation and compaction requirements of Structural Fill shown in Section 4.3.1.

- Fill placed under the subbase of paved areas should meet the gradation and compaction requirements of Ordinary Fill shown in Section 4.3.2.

- Fill placed in the top 12 inches beneath sidewalks should consist of Structural Fill with less than 5 percent fines.

- An LGCI geotechnical representative should observe the exposed subgrades prior to fill and concrete placement to verify that the exposed bearing materials are suitable for the design soil bearing pressure.

- If soft or loose pockets are encountered in the footing excavations, the soft or loose materials should be removed, and the bottom of the footing should be placed at a lower elevation on firm soil, or the resulting excavation should be backfilled with Structural Fill or crushed stone wrapped in a geotextile filter fabric.

4.2 Subgrade Protection

The onsite sand and gravel is frost susceptible. If construction takes place during freezing weather, special measures should be taken to prevent the subgrade from freezing. Such measures should include the use of heat blankets or excavating the final 6 inches of soil just before pouring concrete. Footings should be backfilled as soon as possible after footing construction. Soil used as backfill should be free of frozen material, as should the ground on which it is placed. Earthwork operations should be suspended during freezing weather.

Materials with high fines content are typically difficult to handle when wet as they are sensitive to moisture content variations. Subgrade support capacities may deteriorate when such soils become wet and/or disturbed. The contractor should keep exposed subgrades properly drained and free of ponded water. Subgrades should be protected from machine and foot traffic to reduce disturbance.

4.3 Fill Materials

Fill placed within the footprint of the proposed building should meet the gradation and compaction requirements of Structural Fill. Fill placed outside the building footprint beneath any pavement subbase should meet the gradation and compaction requirements of Ordinary Fill.

Structural Fill and Ordinary Fill should consist of inert, hard, durable sand and gravel, free from organic matter, clay, surface coatings, and deleterious materials.

4.3.1 Structural Fill

The Structural Fill should have a plasticity index of less than 6 and should meet the gradation requirements shown below. Structural Fill should be compacted in maximum 9-inch loose lifts to at least 95 percent of the Modified Proctor maximum dry density (ASTM D1557), with moisture contents within ±2 percentage points of optimum moisture content.

Sieve Size	Percent Passing by Weight
3 inches	100
1 ½ inch	80 - 100
½ inch	50 – 100
No. 4	30 – 85
No. 20	15 – 60
No. 60	5 – 35
No. 200*	0 – 10

* 0 – 5 Under sidewalks and exterior pads and slabs

4.3.2 Ordinary Fill

Ordinary Fill should have a plasticity index of less than 6 and should meet the gradation requirements shown below. Ordinary Fill should be compacted in maximum 9-inch loose lifts to at least 95 percent of the Modified Proctor maximum dry density (ASTM D1557), with moisture contents within ±2 percentage points of optimum moisture content.

Sieve Size	Percent Passing by Weight
6 inches	100
1 inch	50 - 100
No. 4	20 – 100
No. 20	10 - 70
No. 60	5 – 45
No. 200	0 – 20

4.4 Reuse of Onsite Materials

Based on the laboratory tests, the granular portion of the existing fill free of organic soil may be used as Ordinary Fill. The onsite materials are not suitable for reuse as Structural Fill.

Soils with high fines content (higher than about 20 percent) are generally very sensitive to moisture content variations and are susceptible to frost. These soils are difficult to compact at

moisture contents that are much higher or much lower than the optimum moisture content determined from the laboratory compaction test. Therefore, strict moisture control should be implemented during stockpiling, placement, and compaction of the existing fill.

All materials to be used as fill should first be tested for compliance with the applicable gradation specifications. During earthwork operations, the contractor should avoid mixing the reusable soils with fine-grained and/or organic soils.

4.5 Groundwater Control Procedures

Based on the groundwater levels encountered in our explorations, we anticipate the need for groundwater control procedures during footing and utility excavations. We anticipate that filtered sump pumps installed in pits located at least 3 feet below the bottom of the excavation may be sufficient to handle surface runoff that may enter the excavation. The contractor should be prepared to use multiple sump pumps as needed.

The contractor should be permitted to employ whatever commonly accepted means and practices are necessary, including well points, if necessary, to maintain the groundwater level below the excavation, and to maintain a dry excavation during wet weather. Placement of reinforcing steel or concrete in standing water should not be permitted.

Groundwater levels should be maintained at a minimum of 1-foot below the bottom of excavations during construction.

To reduce the potential for sinkholes developing over sump pump pits after the sump pumps are removed, the crushed stone placed in the sump pump pits should be wrapped in a geotextile fabric. Alternatively, the crushed stone should be entirely removed after the sump pumps are no longer in use and the sump pump pits should be restored with suitable backfill.

4.6 Temporary Excavations

All excavations to receive human traffic, including utility trenches, basement or footing excavations, or others (i.e. underground storage tanks, etc.), should be constructed in accordance with the OSHA guidelines.

The site soils should generally be considered Type “C” and should have a maximum allowable slope of 1.5 Horizontal to 1 Vertical (1.5H:1V) for excavations less than 20 feet deep. Deeper excavations, if needed, should have a shoring designed by a professional engineer.

The contractor is solely responsible for designing and constructing stable, temporary excavations and should shore, slope, or bench the sides of the excavations as required to maintain stability of the excavation sides and bottom.

5. RECOMMENDATIONS FOR FUTURE WORK

We recommend engaging LGCI to perform the following services:

- Perform additional explorations at the site and update our geotechnical report.
- Prepare Earth Moving Specifications and review the geotechnical aspect of contract drawings.
- Review contractor submittals and Request for Information (RFIs);
- Provide a field representative during construction to observe the removal of the unsuitable soil, and to observe the subgrade of footings and slabs.

6. REPORT LIMITATIONS

Our analyses and recommendations are based on project information provided to us at the time of this report. If changes to the type, size, and location of the proposed structures or to the site grading are made, the recommendations contained in this report shall not be considered valid unless the changes are reviewed, and the conclusions and recommendations modified in writing by LGCI. LGCI cannot accept responsibility for designs based on our recommendations unless we are engaged to review the final plans and specifications to determine whether any changes in the project affect the validity of our recommendations, and whether our recommendations have been properly implemented in the design.

It is not part of our scope to perform a more detailed site history; therefore, we have not explored for or researched the locations of buried utilities or other structures in the area of the proposed construction. Our scope did not include environmental services or services related to moisture, mold, or other biological contaminants in or around the site.

The recommendations in this report are based in part on the data obtained from the subsurface explorations. The nature and extent of variations between explorations may not become evident until construction. If variations from anticipated conditions are encountered, it may be necessary to revise the recommendations in this report. We cannot accept responsibility for designs based on recommendations in this report unless we are engaged to 1) make site visits during construction to check that the subsurface conditions exposed during construction are in general conformance with our design assumptions and 2) ascertain that, in general, the work is being performed in compliance with the contract documents.

Our report has been prepared in accordance with generally accepted engineering practices and in accordance with the terms and conditions set forth in our agreement. No other warranty, expressed or implied, is made. This report has been prepared for the exclusive use of Dore and Whittier Architects, Inc. for the proposed Wildwood Early Childhood Center at the North Intermediate School located at 320 Salem Street Site in Wilmington, Massachusetts as conceived at this time.

1. The ground surface elevation was interpolated to the nearest foot from drawing titled: “Existing Conditions Plan, 320 Salem Street, Wilmington, Massachusetts,” prepared by Nitsch Engineering, dated October 24, 2024, and provided to LGCI by Dore and Whittier Architects, Inc. via e-mail on November 8, 2024.
2. Groundwater was measured during drilling, at the end of drilling, after drilling, or based on sample moisture whichever is shallower.
3. A layer of silt was encountered beneath the fill in boring B-1, between depths of 6 to 9 feet, and a layer of clay was encountered beneath the silt between depths of 9 and 14 feet.
4. Boring terminated due to split spoon / auger refusal on possible boulder or rock in the sand and gravel layer.
5. Boring terminated in the weathered rock layer.
6. Boring terminated in the sand and gravel layer.
7. "-" means the groundwater or layer was not encountered.

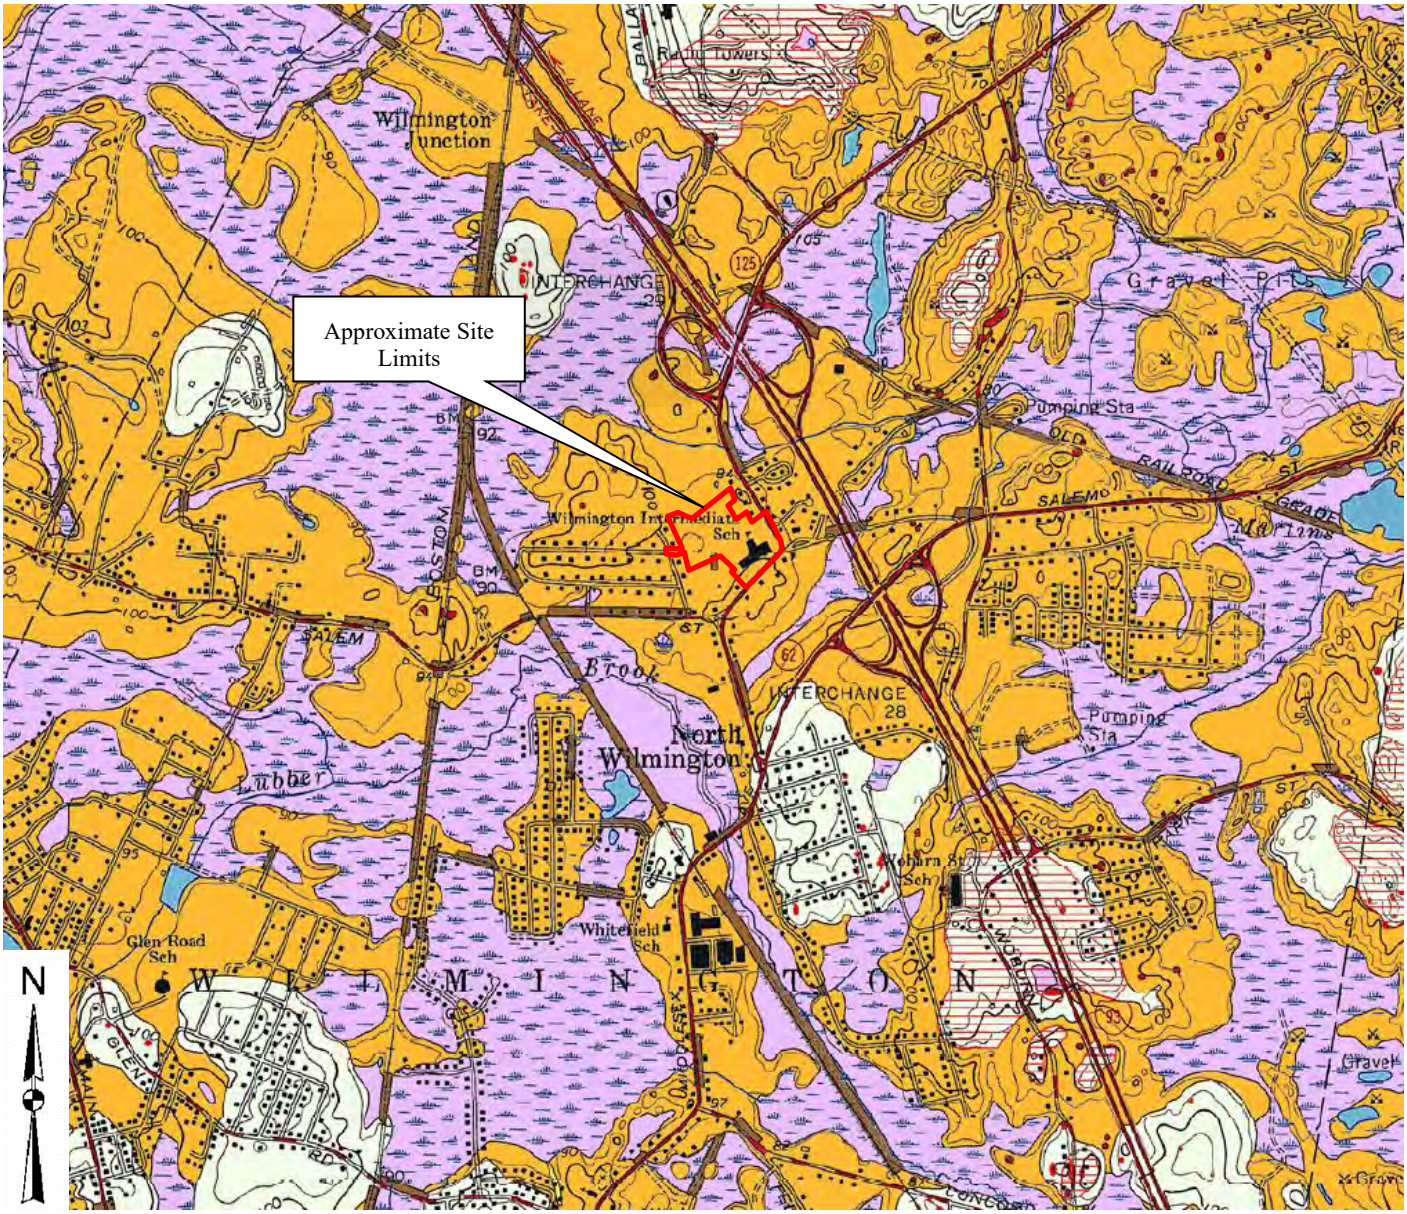
LGCI Lahlaf Geotechnical Consulting, Inc.	Project Location: Wilmington, MA	LGCI Project No.: 2437	Date: Dec . 2024



Swamp deposits—Organic muck and peat that contain minor amounts of sand, silt, and clay, are stratified and poorly sorted, and occur in swamps and freshwater marshes, in kettle depressions, or in poorly drained areas. Unit is shown only where deposits are estimated to be at least 3 ft thick; most deposits are less than 10 ft thick. Swamp deposits overlie glacial deposits or bedrock. They locally overlie glacial till even where they occur within thin glacial meltwater deposits

Coarse deposits consist of *gravel deposits*, *sand and gravel deposits*, and *sand deposits*, not differentiated in this report. *Gravel deposits* are composed of at least 50 percent gravel-size clasts; cobbles and boulders predominate; minor amounts of sand occur within gravel beds, and sand comprises a few separate layers. Gravel layers generally are poorly sorted, and bedding commonly is distorted and faulted due to postdepositional collapse related to melting of ice. *Sand and gravel deposits* occur as mixtures of gravel and sand within individual layers and as layers of sand alternating with layers of gravel. Sand and gravel layers generally range between 25 and 50 percent gravel particles and between 50 and 75 percent sand particles. Layers are well sorted to poorly sorted; bedding may be distorted and faulted due to postdepositional collapse. *Sand deposits* are composed mainly of very coarse to fine sand, commonly in well-sorted layers. Coarser layers may contain up to 25 percent gravel particles, generally granules and pebbles; finer layers may contain some very fine sand, silt, and clay

Re: WILMINGTON – WILDWOOD SCHOOL @ NORTH INTERMEDIATE SCHOOL
320 Salem Street, Wilmington, MA 01887
Limited Subsurface Soil Investigation Memorandum

Dear Ms. Philip:

PEER Consultants P.C. (PEER) completed an initial review of the environmental laboratory analytical results for the initial eight (8) combined geotechnical/geo-environmental borings completed at the North Intermediate School location on October 28, 2024 and October 29, 2024. The weather on October 28, 2024 was partly cloudy to sunny, and the temperature ranged from 34°F to 51°F. The weather on October 29, 2024 was cloudy with haze (smoke), and the temperature ranged from 36°F to 40°F. PEER understands that Soil X was the drilling contractor on the project site, and utilized a Dietrich D70 Turbo Track-Mounted Drill Rig, with hollow stem augers (and no drive and wash) to complete the borings. Soil X was represented by a driller, and driller's assistance. Lahlaf Geotechnical Consulting, Inc., the geotechnical contractor, was represented by Mr. Berke Hatipoglu. PEER was represented by Mr. Dave Gorden, Board Certified Environmental Scientist and Certified Professional Soil Scientist.

During the limited subsurface soil investigation at the North Intermediate School, combined with limited recovery of soil within the split spoons, PEER collected nine (9) separate, composited soil samples from specific boring depths, and/or from across multiple nearby borings, and related to an investigation for the presence or absence of pesticides and/or herbicides in Topsoil (TS) material, and related to an investigation of soil conditions for disposal pre-characterization purposes in Dry Native / Reworked Native / Suspected Imported Similar (DRY) material, and related to an investigation of soil conditions for disposal pre-characterization purposes in Wet Native (WET) material.

Please note that PEER considered reworked native soil to be soil which visually appeared similar to soil on the project site, and soil which was suspected of having been excavated during the development of the existing school, and then redeposited on the surface of other areas of the project site.

PEER selected representative aliquots of soil from the top soil (TS) of each one of the borings B1 through B8, at a depth, in general, from 0-2' (or consisting of the dark brown to black portion of the top soil) to be analyzed for Pesticides and Herbicides [**B1B8 TS**]. Please note that on November 13, 2024, subsequent to PEER receiving the analytical results for the entire sample delivery group from the analytical laboratory, PEER also requested that the analytical laboratory determine the concentration of arsenic in the sample [**B1B8 TS**].

PEER selected soil from the dry (not within the groundwater table) native soil / reworked native soil / suspect imported similar soil to be analyzed for Volatile Organic Compounds (VOCs), Semivolatile Organic Compounds (SVOCs), Metals, Polychlorinated Biphenyls (PCBs), Total Petroleum Hydrocarbons (TPH) Diesel Range Organics (DRO) {C10-C28}, and TPH Gasoline Range Organics (GRO) {C6-C10}, and for General Chemistry parameters such as Percent Solids, Conductivity, Corrosivity (pH), Flashpoint/Ignitability, Reactive Cyanide, and Reactive Sulfide.

Due to the predominance of visually similar soil across the completed borings down to the boring termination depth, PEER collected analytical samples for the above parameters based on the following depth intervals:

- **B3B4B5 DRY** was composited (including representative aliquots of) soil from Boring B3 at depths of 0-2', 2-4', and 4-6'; from Boring B4 at depths of 0-2', 2-2.9', and 4-6'; and from Boring B5 at depths of 0-2' and 4-6'. This composited sample did not include the dark brown to black portion of the top soil.
- **B1 DRY** was composited (including representative aliquots of) soil from Boring B1 at depths of 0-2' and 2-4'. This composited sample did not include the dark brown to black portion of the top soil.
- **B2 DRY** was composited (including representative aliquots of) soil from Boring B2 at depths of 0-2', 2-4', and 4-6'. This composited sample did not include the dark brown to black portion of the top soil.
- **B6 DRY** was composited (including representative aliquots of) soil from Boring B6 at depths of 0-2', 2-4', and 4-6'. This composited sample did not include the dark brown to black portion of the top soil.
- **B8 DRY** was composited (including representative aliquots of) soil from Boring B8 at depths of 0-2', 2-4', 4-6', and 6-8'. This composited sample did not include the dark brown to black portion of the top soil.

PEER selected soil from the presumed wet (due to groundwater) native soil to be analyzed for VOCs, SVOCs, Metals, PCBs, TPH DRO, TPH GRO, and for General Chemistry parameters such as Percent Solids, Conductivity, Corrosivity (pH), Flashpoint/Ignitability, Reactive Cyanide, and Reactive Sulfide.

Due to the predominance of visually similar soil across the completed borings at or below the groundwater table, and down to the boring termination depth, PEER collected analytical samples for the above parameters based on the following depth intervals:

- **B6B8 WET** was composited (included representative aliquots of) soil from Boring B6 at depths of 9-11' and 14-16'; and from Boring B8 at depths of 9-11' and 14-16'.
- **B1B7 WET** was composited (including representative aliquots of) soil from Boring B1 at depths of 9-11' and 14-16'; and from Boring B7 at depths of 8-10', 10-12', and 14-16'.
- **B2 WET** was composited (included representative aliquots of) soil from Boring B2 at depths of 6-8', 9-11', and 14-16'.

PEER reviewed the textural and moisture conditions for each of the eight borings. PEER identified the following conditions in the subsurface soil:

- In general, soil from **Boring B1** consisted of material consisting of sand and gravel to at least 4 feet. The origin of this material (fill versus reworked native versus native) could be determined as the split spoon had no recovery for the 4-6' interval. However, soil from Boring B1 consisted of suspect native clayey silt to silty clay to clay from 6 feet to 11 feet, and suspect native sand and gravel to 19 feet, then suspect bedrock at 19 feet, and auger refusal at 19 feet. Groundwater indicators were observed at approximately between 8 feet and 9 feet.

- In general, soil from **Boring B2** consisted of suspect fill (sand) to 3 feet (with buried top soil observed at approximately 3 feet), then suspect native sand and gravel (with trace clay at depths) to 19.1 feet, then suspect bedrock at 19.1 feet, and auger refusal at 19.1 feet. Groundwater indicators were observed at approximately 6 feet.

- In general, soil from **Boring B3** consisted of suspect reworked native sand and gravel to 2 feet, then suspect native sand and gravel to 8 feet, then suspect bedrock at 9 feet, and auger refusal at 10.5 feet. Groundwater indicators were not observed.

- In general, soil from **Boring B4** consisted of suspect fill (sand) to 2.9 feet, then suspect native silty sand and a suspect weathered cobble to 9.7 feet, then suspect bedrock at 11 feet, and auger refusal at 11 feet. Remnant groundwater indicators (mottling) in a moist soil matrix were observed at approximately 6 feet.

- In general, soil from **Boring B5** consisted of suspect fill (sand) to 4 feet (with buried top soil observed at approximately 4 feet), then suspect native silty sand to 9 feet, then suspect bedrock at 9 feet, and auger refusal at 10 feet. Remnant groundwater indicators (mottling) in a moist soil matrix were observed at approximately 6 feet.

- In general, soil from **Boring B6** consisted of suspect fill (sand) to 2 feet, then suspect native sand and gravel to 19 feet, then suspect bedrock at 19 feet, and auger refusal at 19.7 feet. Groundwater indicators were observed at approximately 6.2 feet.

- In general, soil from **Boring B7** consisted of suspect fill (sand) to 4 feet (with buried organics observed between approximately 4 feet to 8 feet), then suspect native sand and gravel to 20.2 feet, then suspect bedrock at 20.2 feet, and auger refusal at 20.2 feet. Groundwater indicators were observed at approximately 8 feet.

- In general, soil from **Boring B8** consisted of suspect fill (sand) to 1 foot, then suspect native sand and gravel to 19.8 feet, and auger refusal at 19.8 feet. Groundwater indicators were observed at approximately between 8 feet and 9 feet.

PEER estimated and documented a global positioning system (GPS) point for each boring based on an open source electronic application; therefore, the location of each soil boring, as estimated in the below Google Earth image is considered approximate only.

Wildwood School @ North Intermediate School, Wilmington, MA
(North is Up)

PEER compared the laboratory analytical results to Massachusetts Department of Environmental Protection (MADEP) Policy # COMM-97-001, Reuse and Disposal of Contaminated Soil at Massachusetts Landfills, August 1997. PEER also compared the laboratory analytical results to 310 CMR 40.00, the Massachusetts Contingency Plan (MCP) reporting category RCS-1 and reporting category RCS-2. General chemistry laboratory results were separately compared with RCRA Characteristics under 40 CFR 261. Additional discussions pertaining to the comparison of soil analytical results may be found in the paragraphs below.

The following information provides a summary of the laboratory analytical results from soil samples collected by PEER on October 28, 2024 and October 29, 2024. Please refer to Attachment A for a summary of the detected analytes, in surface and subsurface soil. The samples were kept under chain of custody by PEER, and in a cooler with ice packs, until Phoenix Environmental Laboratories, Inc. (Phoenix), of Manchester, CT couriered the samples back to their office on October 30, 2024. PEER received the Analysis Report from Phoenix with the test results on November 6, 2024. PEER received an updated Analysis Report from Phoenix which also included the test results for arsenic in sample **B1B8 TS** on November 14, 2024. Please refer to Attachment B for the November 14, 2024 Phoenix Analysis Report.

VOCs

For the following Samples: B3B4B5 DRY; B1 DRY; B2 DRY; B6 DRY; B6B8 WET; B1B7 WET; and B2 WET, there were no detections of individual VOCs. In addition, there were no exceedances of the MCP RCS-1 Criteria for an individual VOC, and there were no exceedances of the MCP RCS-2 Criteria for an individual VOC. Furthermore, there were no exceedances of Total VOCs for acceptance at a lined landfill, and there were no exceedances of Total VOCs for acceptance at an unlined landfill. VOCs were not detected. VOCs were also not detected in the Trip Blanks for the day. **Refer to Table 1A** within Attachment A.

SVOCs

For the following Samples: B3B4B5 DRY; B1 DRY; B2 DRY; B6 DRY; B6B8 WET; B1B7 WET; and B2 WET, there were no detections of individual SVOCs. In addition, there were no exceedances of the MCP RCS-1 Criteria for an individual SVOC, and there were no exceedances of the MCP RCS-2 Criteria for an individual SVOC. Furthermore, there were no exceedances of Total SVOCs for acceptance at a lined landfill, and there were no exceedances of Total SVOCs for acceptance at an unlined landfill. SVOCs were not detected. **Refer to Table 1B** within Attachment A.

Metals

For the following Samples: B3B4B5 DRY; B1 DRY; B2 DRY; and B1B7 WET, there were neither exceedances of the MCP RCS-1 Criteria for individual Metals nor exceedances of the MCP RCS-2 Criteria for individual Metals. In addition, there were neither exceedances of Metals for acceptance at a lined landfill nor exceedances of Metals for acceptance at an unlined landfill.

Of the 14 metals analyzed for in Samples B3B4B5 DRY; B2 DRY; B6 DRY; B6B8 WET; B1B7 WET; and B2 WET, only eight metals were detected. Nine of 14 metals were detected in Sample B1 DRY.

For Samples B8 DRY; B6B8 WET; and B2 WET, there was each one exceedance of the MCP RCS-1 Criteria for one individual metal (arsenic) and one exceedance of the MCP RCS-2 Criteria for one individual metal (arsenic). However, for Samples B8 DRY; B6B8 WET; and B2 WET, there were neither exceedances of Metals for acceptance at a lined landfill nor exceedances of Metals for acceptance at an unlined landfill.

For Samples B6 DRY; B6B8 WET; and B2 WET, there was each one exceedance of the MCP RCS-1 Criteria for one individual metal (arsenic) and one exceedance of the MCP RCS-2 Criteria for one individual metal (arsenic).

For Sample B6 DRY, there was one exceedance of the MCP RCS-1 Criteria for one individual metal (arsenic) and one exceedance of the MCP RCS-2 Criteria for one individual metal (arsenic). In addition, for Sample B6 DRY, there was one exceedance of a metal (arsenic) for acceptance at a lined landfill and one exceedance of a metal (arsenic) for acceptance at an unlined landfill.

Based on the above exceedances of arsenic, PEER requested that Phoenix analyze Sample B1B8 TS for arsenic. Arsenic was detected, however, for arsenic in this sample, there were neither exceedances of the MCP RCS-1 Criteria nor exceedances of the MCP RCS-2 Criteria. In addition, for arsenic in this sample, there were neither exceedances for acceptance at a lined landfill nor exceedances for acceptance at an unlined landfill. **Refer to Table 1C** within Attachment A.

PEER notes that spatially, borings B2, B8, and B6 are oriented in a linear shape from north to south across the Property, with one additional boring each (proposed, yet not completed as part of the Geotechnical program) to the east and west of this linear shape.

PEER notes that according to an abstract for the publication “Arsenic In Central Massachusetts Bedrock And Groundwater”, 2010, Authors: McTigue, DF, Stein, CL, Brandon, WC, Kopera, JP, Keskula, AJ, Koteas, CG, the authors cite the following:

> Across the New England "arsenic belt," groundwater arsenic (As) concentrations often exceed the EPA's 0.01-mg/L drinking water standard. In overburden groundwater at a site within this belt in north-central Massachusetts, As has been reported at levels up to 7.6 mg/L. Bedrock at the site consists of Silurian Central Maine Terrane metasediments intruded by the Devonian Ayer granodiorite and Chelmsford granite. Exchange of hydrothermal fluids between these lithologies during intrusion and later deformation, faulting, and metamorphism resulted in crystallization of arsenic-bearing minerals, including arsenopyrite. Quaternary deglaciation and unloading dilated joint systems in the bedrock, allowing increased exposure of the

> mineralogy to meteoric water. Several arsenopyrite alteration products (e.g., scorodite), of varying solubilities, precipitated on fracture surfaces and along grain boundaries between major phases. In the emerging conceptual model for this site, groundwater is recharged in bedrock uplands and moves downgradient through the fracture network, becoming increasingly reducing as it moves along a flow path. Arsenic dissolved from arsenopyrite and arsenic-bearing alteration phases in bedrock remains in solution until the groundwater discharges to lowland areas hydraulically downgradient. In these adjacent lowlands, glacial sand and gravel overburden lies above the bedrock. When the reducing water reaches more oxidizing conditions, As-sorbing hydrous ferric oxides (HFO) precipitate out on the aquifer solids, resulting in accumulation of As in the deep overburden aquifer. A large landfill at this site, now closed and capped, imposed reducing conditions, and As is mobilized into groundwater by reductive dissolution of the HFO. The presence of elevated As in groundwater is consistent with arsenic-bearing phases generated in granitoids at depth during regional metamorphism, which were subsequently altered, and are being solubilized at present by the circulation of shallow groundwater through varying redox environments. This scenario is supported by geochemical and petrographic studies of the granitoids and the occurrence of the highest groundwater and soil arsenic concentrations in the adjacent deep overburden.

PEER notes that the abstract references the term “site”; however, the abstract referenced “site” should not be confused with the Wildwood School at North Intermediate School project location. PEER also notes that the study referenced above is referred to as occurring in the “Primary Study Area”.

PEER further notes that according to the publication "Arsenic and Uranium in Water from Private Wells Completed in Bedrock of East-Central Massachusetts - Concentrations, Correlations with Bedrock Units, and Estimated Probability Maps", by the United States Geological Service, prepared in cooperation with the Massachusetts Department of Environmental Protection and the Massachusetts Department of Public Health, and dated 2011, the authors cite the following:

> The study encompasses the east-central arsenic belt in Massachusetts, the location of nearly all contamination of bedrock wells in the State by arsenic from a natural source. Arsenic has long been known to be present in water from bedrock wells in east-central Massachusetts, and the State straddles an arsenic belt that extends from Connecticut to New Brunswick, Canada. The distribution of bedrock units of crystalline igneous and metamorphic rocks in the study area is complex. The study area is crossed by major faults that divide parts of three geologic terranes that include the Merrimack belt, the Nashoba zone and the Milford-Dedham zone. The Primary Study Area includes most of the Merrimack belt, which extends from the Connecticut Valley belt (indicated by the Merrimack belt western boundary) to the Clinton-Newbury fault, and the western half of the Nashoba zone, which extends from the Clinton-Newbury fault to the Bloody Bluff fault. The Secondary Study Area includes the remainder of the Nashoba zone and the western edge of the Milford-Dedham zone, which begins at the Bloody Bluff fault and extends to the east.

PEER also notes that the study referenced above is referred to as occurring both in the “Primary Study Area” and in the “Secondary Study Area”.

In addition, according to a Probability of Exceeding the Arsenic Drinking Water Standard in Private Drinking Water Wells in Massachusetts, a Map which accompanies / compliments the Publication above, Wilmington in general appears in the ORANGE highlighted Section, inferring that Wilmington has a 5-10% probability of exceeding the public drinking water standard (of 10 parts per billion) for Arsenic in its groundwater. Refer to Attachment C for a copy of this Map.

PEER notes that the slightly elevated concentration of arsenic occurred in two soil samples above the groundwater table and occurred in two soil samples within the groundwater, at locations associated with playing fields which also receive irrigation. PEER understands that Mr. Jamie Magaldi, Wilmington Public Works Director, has indicated that the irrigation system at the North Intermediate runs off of a deep bedrock well (and) the pump house is the brick building (along the western edge of the Property), with two irrigation well points, one near the pump house marked with an irrigation box, and the second along the northwestern edge of the Property, and suspected of being buried.

The presence of arsenic in soil (above the groundwater table), suspected of being formed (i.e., parent material) from the bedrock of the region; combined with the presence of arsenic in soil (above the groundwater table), suspected of being irrigated with groundwater from a deep bedrock well; combined with consideration of the proximity of the irrigation system sprinkler heads to the specific boring locations; and combined with the presence of arsenic in soil within the groundwater table – from this project site, which is located in Wilmington, (i.e., in an arsenic belt in east central Massachusetts), may lend itself to the rationale outlined in the two studies cited above.

Furthermore, the Natural Resource Conservation Service (NRCS) Web Soil Survey indicates that the soil series of Deerfield loamy fine sand, 0 to 3 percent slopes, from parent materials consisting of sandy outwash derived from granite, gneiss, and/or quartzite occurs near boring B2 and B6. The NRCS Web Soil Survey also indicates that the soil series of Udorthents, sandy, from parent materials consisting of loamy alluvium and/or sandy glaciofluvial deposits and/or loamy glaciolacustrine deposits and/or loamy marine deposits and/or loamy basal till and/or loamy lodgment till occurs near boring B6 and B8.

The Surficial Materials Map of the Wilmington Quadrangle, Massachusetts (2018) indicates that the surficial material at this project site consists of:

> "coarse deposits which consist of gravel deposits, sand and gravel deposits, and sand deposits, not differentiated in this report. Gravel deposits are composed of at least 50 percent gravel-size clasts; cobbles and boulders predominate; minor amounts of sand occur within gravel beds, and sand comprises a few separate layers. Gravel layers generally are poorly sorted, and bedding commonly is distorted and faulted due to post depositional collapse related to melting of ice. Sand and gravel deposits occur as mixtures of gravel and sand within individual layers and as layers of sand alternating with layers of gravel. Sand and gravel layers generally range between 25 and 50 percent gravel particles and between 50 and 75 percent sand particles. Layers are well sorted to poorly sorted; bedding may be distorted and faulted due to post depositional collapse. Sand deposits are composed mainly of very coarse to fine sand, commonly in well-sorted layers. Coarser layers may contain up to 25 percent gravel particles, generally granules and pebbles; finer layers may contain some very fine sand, silt, and clay."

PCBs

For the following Samples: B3B4B5 DRY; B1 DRY; B2 DRY; B6 DRY; B6B8 WET; B1B7 WET; and B2 WET, there were neither exceedances of the MCP RCS-1 Criteria for individual Aroclors nor exceedances of the MCP RCS-2 Criteria for individual Aroclors. There were neither exceedances of Total PCBs for acceptance at a lined landfill nor exceedances of Total PCBs for acceptance at an unlined landfill. PCBs were not detected. **Refer to Table 1D** within Attachment A.

TPHs

For the following Samples: B3B4B5 DRY; B1 DRY; B2 DRY; B6 DRY; B6B8 WET; B1B7 WET; and B2 WET, there were neither exceedances of the MCP RCS-1 Criteria for TPH DRO nor exceedances of the MCP RCS-2 Criteria for TPH DRO. There were neither exceedances of TPH DRO for acceptance at a lined landfill nor exceedances of TPH DRO for acceptance at an unlined landfill. Individual DRO (such as Fuel Oil #2/Diesel Fuel, Fuel Oil #4, Fuel Oil #6, Kerosene, Motor Oil, Unidentified) were not detected. There are no comparison parameters for TPH GRO; however, TPH GRO was also not detected in the samples. **Refer to Table 1E** within Attachment A.

Pesticides

For Sample B1B8 TS, there were neither exceedances of the MCP RCS-1 Criteria for individual pesticides nor exceedances of the MCP RCS-2 Criteria for individual pesticides. COMM-97-001 does not provide regulatory criteria for pesticides. **Refer to Table 1F** within Attachment A.

Herbicides

For Sample B1B8 TS, there were neither exceedances of the MCP RCS-1 Criteria for individual herbicides nor exceedances of the MCP RCS-2 Criteria for individual herbicides. COMM-97-001 does not provide regulatory criteria for herbicides. **Refer to Table 1G** within Attachment A.

General Chemistry

For the following Samples: B3B4B5 DRY; B1 DRY; B2 DRY; B6 DRY; B6B8 WET; B1B7 WET; and B2 WET, there were neither exceedances of Conductivity for acceptance at a lined landfill nor exceedances of Conductivity for acceptance at an unlined landfill. There were no exceedances of RCRA Characteristics for flashpoint/ignitability. Flashpoint/ignitability passed. There were no exceedances of RCRA Characteristics for pH. There were no exceedances of RCRA Characteristics for reactivity. Reactivity was Negative. **Refer to Table 1H** within Attachment A.

The Massachusetts Contingency Plan: 310 CMR 40.00

According to 310 CMR 40.0317: Releases and Threats of Release Which Do Not Require Notification, PEER understands that notwithstanding the provisions of 310 CMR 40.0311 through 310 CMR 40.0315, the following releases and threats of release of oil and/or hazardous material are exempt from the notification requirements set forth in 310 CMR 40.0300:

(22) arsenic, beryllium or nickel in Boston Blue Clay or **arsenic in an area documented by the U.S. Geological Survey or in other scientific literature as an area of elevated arsenic measured in soil or groundwater** that -

(a) is consistently present in the environment at and in the vicinity of the sampling location;

(b) is solely attributable to natural geologic or ecologic conditions; and

(c) has not been mobilized or transferred to another environmental medium or increased in concentration in an environmental medium as a result of anthropogenic activities.

PEER understands that as of the date of this Memorandum, PEER is aware of a Fill Management Plan prepared by Parker Environmental Corporation on behalf of Lighthouse Environmental Management, LLC (LEM) in support of a **Fill Project** at the property located on Parcel 35-D 1.2-0 on Stafford Street in Leicester, Massachusetts.

PEER further understands that as of the date of this Memorandum, PEER is aware that anticipated sources of fill material for the **Fill Project** include large volumes of excess soil from excavation and construction projects in Massachusetts with elevated levels of naturally occurring arsenic. The intended fill materials include native and reworked sand, gravel, rock and clay with elevated levels of naturally occurring arsenic. It is anticipated that completion of the fill Project will involve importation of approximately 95,000 cubic yards of material, and take approximately 5 years to complete based on available sources of fill materials. Anticipated sources of fill material include large volumes of excess soil from excavation and construction projects in Massachusetts with elevated levels of naturally occurring arsenic.

Initial Recommendations

As described above, PEER shadowed the geotechnical contractor during the advancement of eight geotechnical soil borings located proximate to the location of the proposed Wildwood School at North Intermediate School, in Wilmington, MA, and collected geo-environmental soil samples concurrent with the geotechnical boring advancement. PEER understands that the eight borings which were advanced proximate to the location of the proposed Wildwood School at North Intermediate School may not necessarily be representative of other soil boring profiles which may be advanced at other locations on the project site during future phases of this proposed project.

Therefore, PEER recommends that additional pre-characterization sampling of the subsurface soil in borings and/or test pits be completed once the exact location of the proposed building is determined and/or once

the location of utility runs requiring excavation and soil management is determined, and/or once the depths and locations of any other excavations related to site infrastructure are known.

Furthermore, should it be determined that the existing North Intermediate School will be demolished as part of any future development of a new school, PEER recommends that additional pre-characterization sampling of the subsurface soil in borings and/or test pits be completed within the parking lot (and paved areas) associated with the building, and proximate to the existing footprint of the building nearest the boiler room, and beneath the current building.

In addition, as it relates to the potential need for project-based dewatering activities (based on the estimated groundwater elevation beneath the project site, and based on the observation of wetlands and waterways on and near the project site), should a construction general permit or a remediation general permit be required for this activity, PEER recommends considering the implementation of a sampling and analysis program for groundwater through the installation of temporary groundwater monitoring wells during any additional subsurface soil investigation, and prior to site redevelopment.

Please contact us directly at 781.238.8880, should you have any questions or require any clarification on this Limited Subsurface Soil Investigation Memorandum at the Wildwood School at North Intermediate School, in Wilmington, MA.

Sincerely,

PEER Consultants, P.C.

David Gorden, BCES
Environmental Science Program Manager

-- = Analyte not detected in soil sample.
NS = Metals were not sampled for in this sample.
NL = COMM-97-001 does not list a standard for this metal.
There were four exceedances of the MCP RCS-1 Criteria for individual Metals (arsenic) and four exceedances of the MCP RCS-2 Criteria for individual Metals (arsenic).
There was one exceedance of a metal (arsenic) for acceptance at a lined landfill and one exceedance of a metal (arsenic) for acceptance at an unlined landfill.

According to the publication "Arsenic and Uranium in Water from Private Wells Completed in Bedrock of East-Central Massachusetts—Concentrations, Correlations with Bedrock Units, and Estimated Probability Maps", by the United States Geological Service, Prepared in cooperation with the Massachusetts Department of Environmental Protection and the Massachusetts Department of Public Health, and dated 2011. The distribution of bedrock units of crystalline igneous and metamorphic rocks in the study area is complex. The study area is crossed by major faults that divide parts of three geologic terranes that include the Merrimack belt, the Nashoba zone and the Milford-Dedham zone. The primary study area includes most of the Merrimack belt, which extends from the Connecticut Valley belt (indicated by the Merrimack belt western boundary) to the Clinton-Newbury fault, and the western half of the Nashoba zone, which extends from the Clinton-Newbury fault to the Bloody Bluff fault. The secondary study area includes the remainder of the Nashoba zone and the western edge of the Milford-Dedham zone, which begins at the Bloody Bluff fault and extends to the east. According to a Probability of Exceeding the Arsenic Drinking Water Standard in Private Drinking Water Wells in Massachusetts, a Map which accompanies the Publication, Wilmington in general appears in the ORANGE highlighted Section, inferring that Wilmington has a 5-10% probability of exceeding the public drinking water standard (of 10 parts per billion) for Arsenic in its groundwater.

Massachusetts does not offer certification for Soil/Solid matrices.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Herbicide Comment:
Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, a dilution was required resulting in an elevated RL.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Parameter	Result	RL/ PQL	Units	Dilution	Date/Time	By	Reference

Massachusetts does not offer certification for Soil/Solid matrices.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

The GRO (C6-C10) is quantitated using an gasoline standard.

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

The TPH (C10-C28) is quantitated using an alkane standard.

Corrosivity is based solely on the pH analysis performed above.

Ignitability is based solely on the results of the closed cup flashpoint analysis performed above. Passed is >140 degree F.

The regulatory hold time for pH is immediately. This pH was performed in the laboratory and may be considered outside of hold-time.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Cyanide. This method is no longer listed in the current version of SW-846.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Sulfide. This method is no longer listed in the current version of SW-846.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Massachusetts does not offer certification for Soil/Solid matrices.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

The GRO (C6-C10) is quantitated using an gasoline standard.

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

The TPH (C10-C28) is quantitated using an alkane standard.

Corrosivity is based solely on the pH analysis performed above.

Ignitability is based solely on the results of the closed cup flashpoint analysis performed above. Passed is >140 degree F.

The regulatory hold time for pH is immediately. This pH was performed in the laboratory and may be considered outside of hold-time.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Cyanide. This method is no longer listed in the current version of SW-846.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Sulfide. This method is no longer listed in the current version of SW-846.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Parameter	Result	RL/ PQL	Units	Dilution	Date/Time	By	Reference

Massachusetts does not offer certification for Soil/Solid matrices.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

The GRO (C6-C10) is quantitated using an gasoline standard.

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

The TPH (C10-C28) is quantitated using an alkane standard.

Corrosivity is based solely on the pH analysis performed above.

Ignitability is based solely on the results of the closed cup flashpoint analysis performed above. Passed is >140 degree F.

The regulatory hold time for pH is immediately. This pH was performed in the laboratory and may be considered outside of hold-time.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Cyanide. This method is no longer listed in the current version of SW-846.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Sulfide. This method is no longer listed in the current version of SW-846.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Massachusetts does not offer certification for Soil/Solid matrices.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

The GRO (C6-C10) is quantitated using an gasoline standard.

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

The TPH (C10-C28) is quantitated using an alkane standard.

Corrosivity is based solely on the pH analysis performed above.

Ignitability is based solely on the results of the closed cup flashpoint analysis performed above. Passed is >140 degree F.

The regulatory hold time for pH is immediately. This pH was performed in the laboratory and may be considered outside of hold-time.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Cyanide. This method is no longer listed in the current version of SW-846.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Sulfide. This method is no longer listed in the current version of SW-846.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Massachusetts does not offer certification for Soil/Solid matrices.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

The GRO (C6-C10) is quantitated using an gasoline standard.

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

The TPH (C10-C28) is quantitated using an alkane standard.

Corrosivity is based solely on the pH analysis performed above.

Ignitability is based solely on the results of the closed cup flashpoint analysis performed above. Passed is >140 degree F.

The regulatory hold time for pH is immediately. This pH was performed in the laboratory and may be considered outside of hold-time.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Cyanide. This method is no longer listed in the current version of SW-846.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Sulfide. This method is no longer listed in the current version of SW-846.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Massachusetts does not offer certification for Soil/Solid matrices.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

The GRO (C6-C10) is quantitated using an gasoline standard.

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

The TPH (C10-C28) is quantitated using an alkane standard.

Corrosivity is based solely on the pH analysis performed above.

Ignitability is based solely on the results of the closed cup flashpoint analysis performed above. Passed is >140 degree F.

The regulatory hold time for pH is immediately. This pH was performed in the laboratory and may be considered outside of hold-time.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Cyanide. This method is no longer listed in the current version of SW-846.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Sulfide. This method is no longer listed in the current version of SW-846.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Massachusetts does not offer certification for Soil/Solid matrices.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

The GRO (C6-C10) is quantitated using an gasoline standard.

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

The TPH (C10-C28) is quantitated using an alkane standard.

Corrosivity is based solely on the pH analysis performed above.

Ignitability is based solely on the results of the closed cup flashpoint analysis performed above. Passed is >140 degree F.

The regulatory hold time for pH is immediately. This pH was performed in the laboratory and may be considered outside of hold-time.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Cyanide. This method is no longer listed in the current version of SW-846.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Sulfide. This method is no longer listed in the current version of SW-846.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Massachusetts does not offer certification for Soil/Solid matrices.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

The GRO (C6-C10) is quantitated using an gasoline standard.

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

The TPH (C10-C28) is quantitated using an alkane standard.

Corrosivity is based solely on the pH analysis performed above.

Ignitability is based solely on the results of the closed cup flashpoint analysis performed above. Passed is >140 degree F.

The regulatory hold time for pH is immediately. This pH was performed in the laboratory and may be considered outside of hold-time.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Cyanide. This method is no longer listed in the current version of SW-846.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Sulfide. This method is no longer listed in the current version of SW-846.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Sarah

For the B1B8 TS sample identifier (Lab ID CR96234), do you still have sufficient soil in this to run the metal arsenic?
If so, though I understand Standard TAT is running at 5 days, what would be the quickest TAT, and what would then be the cost?

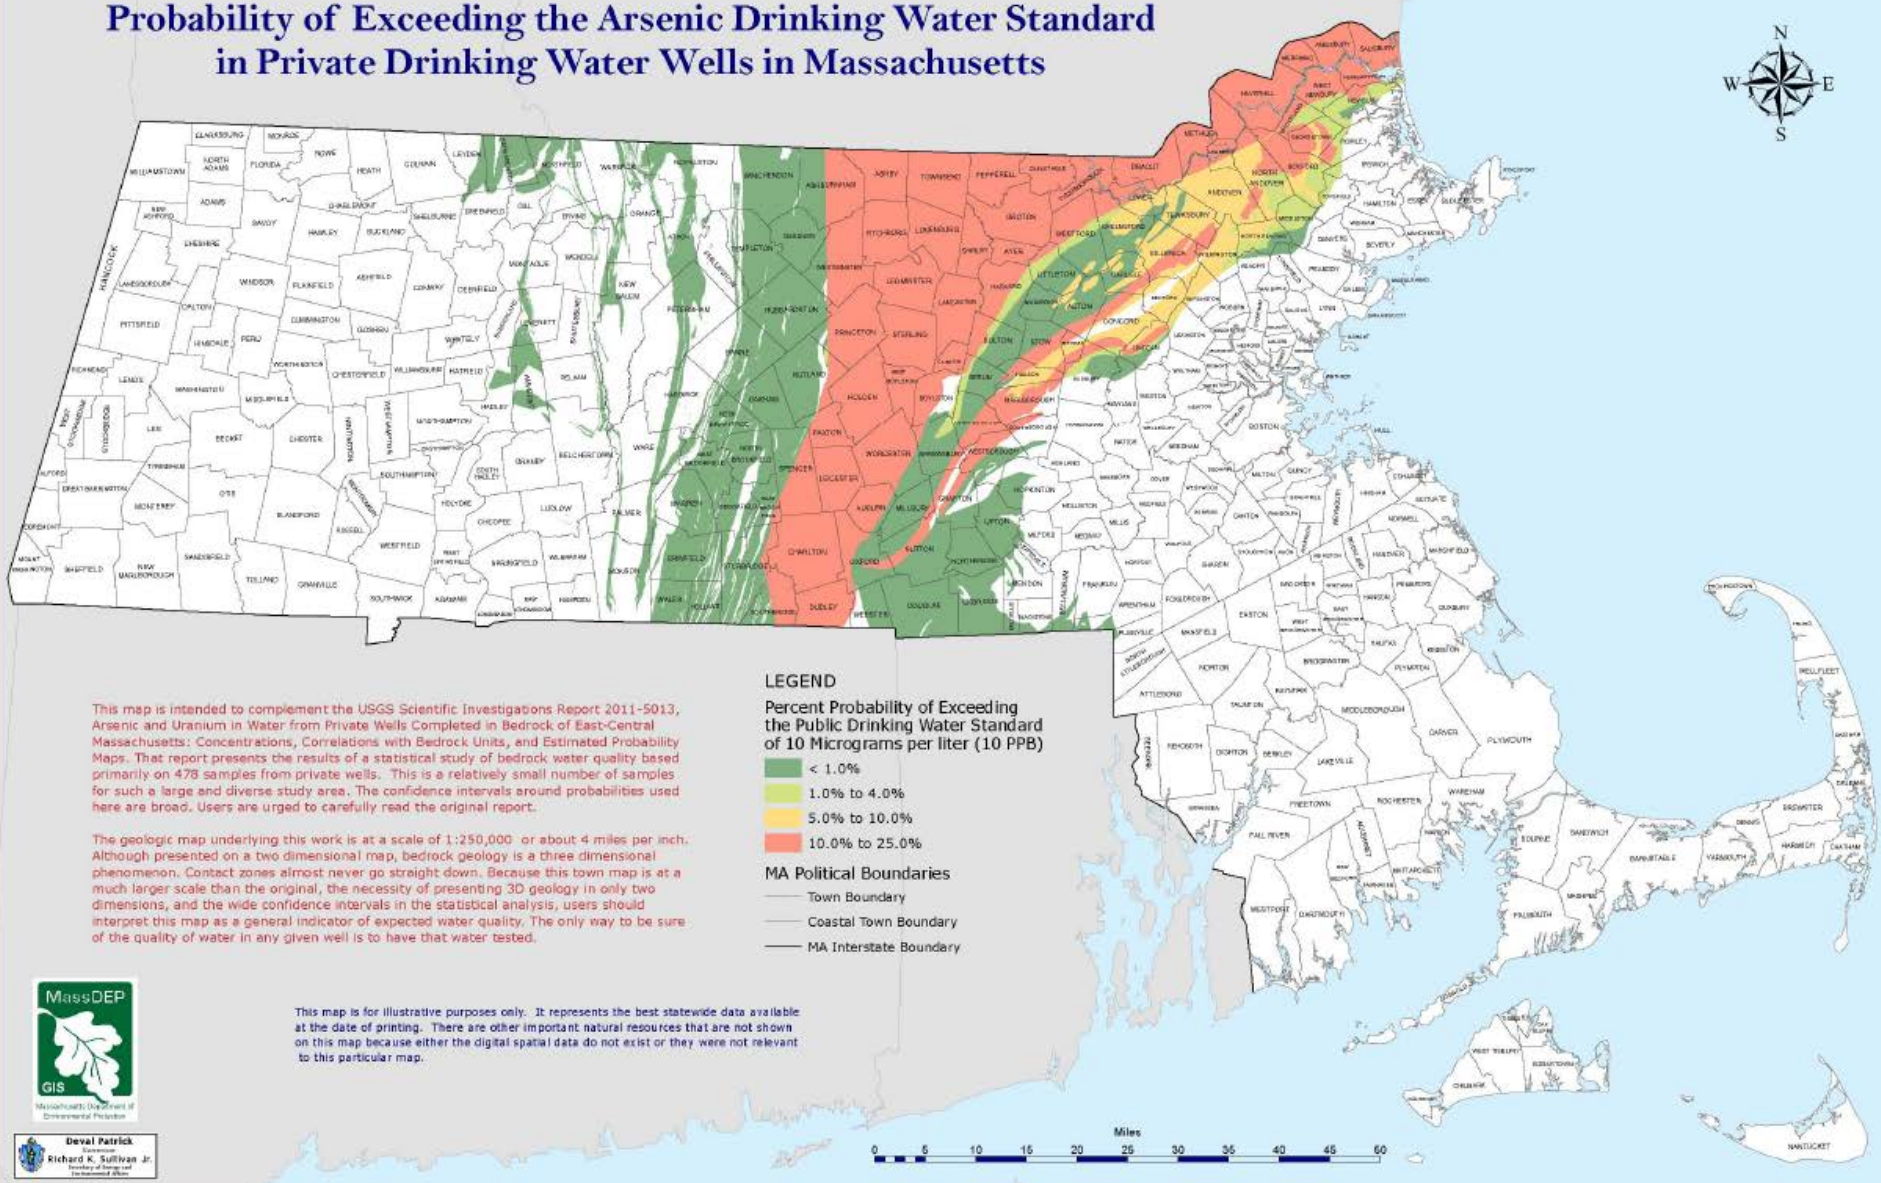
Attachment C

Probability of Exceeding the Arsenic Drinking Water Standard in Private Drinking Water Wells in Massachusetts



This map is intended to complement the USGS Scientific Investigations Report 2011-5013, Arsenic and Uranium in Water from Private Wells Completed in Bedrock of East-Central Massachusetts: Concentrations, Correlations with Bedrock Units, and Estimated Probability Maps. That report presents the results of a statistical study of bedrock water quality based primarily on 478 samples from private wells. This is a relatively small number of samples for such a large and diverse study area. The confidence intervals around probabilities used here are broad. Users are urged to carefully read the original report.

The geologic map underlying this work is at a scale of 1:250,000 or about 4 miles per inch. Although presented on a two dimensional map, bedrock geology is a three dimensional phenomenon. Contact zones almost never go straight down. Because this town map is at a much larger scale than the original, the necessity of presenting 3D geology in only two dimensions, and the wide confidence intervals in the statistical analysis, users should interpret this map as a general indicator of expected water quality. The only way to be sure of the quality of water in any given well is to have that water tested.

This map is for illustrative purposes only. It represents the best statewide data available at the date of printing. There are other important natural resources that are not shown on this map because either the digital spatial data do not exist or they were not relevant to this particular map.

RE: WILMINGTON – WILDWOOD SCHOOL @ NORTH INTERMEDIATE SCHOOL
320 Salem Street, Wilmington, MA 01887

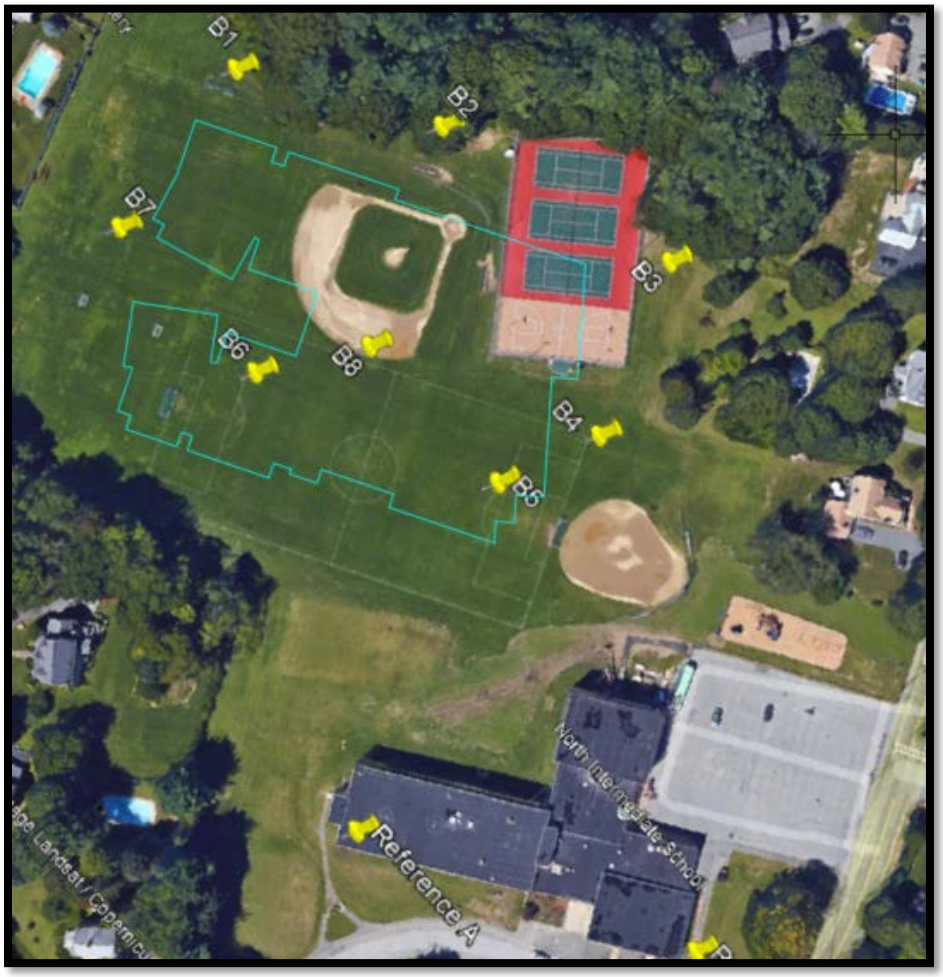
SUBJECT: Soil Quantity Estimates Memorandum, Including "Natural Arsenic" Findings

Dear Ms. Philip:

In response to your request, PEER Consultants (P.C.) has completed a review of information made available to us as part of a recently completed Geotech subsurface investigation (by others) and has prepared an estimate of soil volume characterized as exhibiting elevated levels of presumed "natural Arsenic" encountered in the proposed limits of excavation for the above referenced project.

Background Information

Test results from soils samples taken from several subsurface boring locations, as per the below image, revealed elevated presumed "natural arsenic" levels in the soil encountered within excavation limits of the proposed building footprint. The findings of this memorandum have been determined by compiling and analyzing existing subsurface data and proposed site configurations to estimate the quantity of soil that may require disposal at a "natural arsenic" landfill.



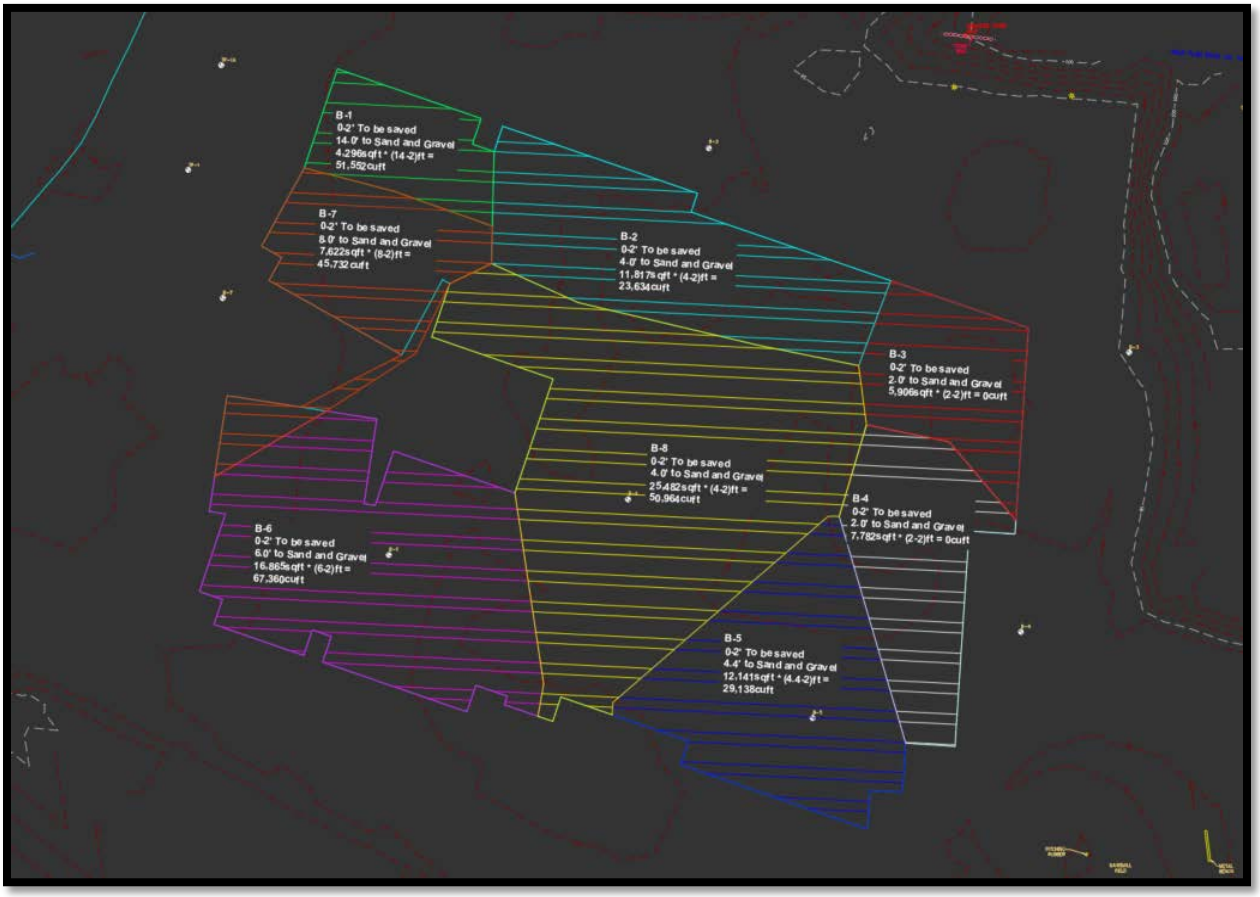
Wildwood School @ North Intermediate School, Wilmington, MA
Proposed New Building

Methodology

To determine an estimate for anticipated excavated soil that may be elevated and go to a "natural arsenic" landfill, PEER first superimposed the proposed building's footprint over an aerial image of the site showing soil boring locations as identified under the recently completed subsurface field testing program under *"Preliminary Geotechnical Report Proposed Wildwood Early Childhood Center North Intermediate School – 320 Salem Street Site Wilmington, Massachusetts"* prepared by Lahlaf Geotechnical Consulting, Inc. Some soil borings lay just outside the proposed footprint but will still be incorporated. Each boring was given a 100 foot (ft) radius which was then used to create sections of the footprint that could be attributed to each boring to loosely determine the soil characteristics for each area. The area of influence for potential excavation was assumed to include an additional 5 feet buffer beyond the proposed building footprint per Subtask 3.1.2, of the Lahlaf Geotechnical report.

After each section has been defined, PEER then using the Soil Boring data developed by Lahlaf Geotechnical Consulting, Inc to determine the anticipated depth of soil that may be sent to a "natural arsenic" landfill. Arsenic was not detected in the top 2 feet of soil above reporting limits so it may be expected to be saved and reused as top soil on-site and not send to a landfill. For each boring, we anticipated soil down to Sand and Gravel may be excavated and sent to a landfill.

Volume of potential excavated soils was determined as a function of the affected depths between ground surface elevation (excluding the top 2 feet) down to encounter clean Sand and Gravel soil materials multiplied by the areas represented by the corresponding soil borings. It should be noted that these volume quantities are estimated only and that the actual excavated soil materials may vary from this estimate.



Wildwood School @ North Intermediate School, Wilmington, MA
Proposed New Building Indicating Established Excavation Areas

Results

B-1 (Green Section) has a depth of 14 feet with Topsoil, Fill, Silt, and Clay before reaching Sand and Gravel. The first 2 feet are presumed to be removed and stored onsite and not sent to a landfill. The area around B-1 resulted in 4,296 ft^2. This will result in a volume of 51,552 ft^3 of soil to be excavated near the boring B-1 location (Green Section).

4,296 ft^2 x 12 ft = 51,552 ft^3 (1,909 CY in situ)

4 ft of Fill x 4,296 ft^2 = 17,184 ft^3
3 ft of Silt x 4,296 ft^2 = 12,888 ft^3
5 ft of Clay x 4,296 ft^2 = 21,480 ft^3

B-2 (Cyan Section) has a depth of 4 feet with Topsoil, Fill, and Buried Organic Soil before reaching Sand and Gravel. The first 2 feet are presumed to be removed and stored onsite and not sent to a landfill. The area around B-2 resulted in 11,817 ft^2. This will result in a volume of 23,634 ft^3 of soil to be excavated near the boring B-2 location (Cyan Section).

11,817 ft^2 x 2 ft = 23,634 ft^3 (875 CY in situ)

0.8 ft of Fill x 11,817 ft^2 = 9,454 ft^3
1.2 ft of Buried Organic Soil x 11,817 ft^2 = 14,180 ft^3

B-3 (Red Section) has a depth of 2 feet with Topsoil and Fill before reaching Sand and Gravel. The first 2 feet are presumed to be removed and stored onsite and not sent to a landfill. The area around B-3 resulted in 5,906 ft^2. This will result in a volume of 0 ft^3 of soil to be excavated near the boring B-3 location (Red Section).

5,906 ft^2 x 0 ft = 0 ft^3 (0 CY in situ)

B-4 (White Section) has a depth of 2 feet with Topsoil and Fill before reaching Sand and Gravel. The first 2 feet are presumed to be removed and stored onsite and not sent to a landfill. The area around B-4 resulted in 7,782 ft^2. This will result in a volume of 0 ft^3 of soil to be excavated near the boring B-4 location (White Section)

7,782 ft^2 x 0 ft = 0 ft^3 (0 CY in situ)

B-5 (Blue Section) has a depth of 4.4 feet with Topsoil, Fill, and Buried Organic Soil before reaching Sand and Gravel. The first 2 feet are presumed to be removed and stored onsite and not sent to a landfill. The area around B-5 resulted in 12,141 ft^2. This will result in a volume of 29,138 ft^3 of soil to be excavated near the boring B-5 location (Blue Section).

12,141 ft^2 x 2.4 ft = 29,138 ft^3 (1,079 CY in situ)

2 ft of Fill x 12,141 ft^2 = 24,282 ft^3
0.4 ft of Buried Organic Soil x 12,141 ft^2 = 4,856 ft^3

B-6 (Magenta Section) has a depth of 6 feet with Topsoil and Fill before reaching Sand and Gravel. The first 2 feet are presumed to be removed and stored onsite and not sent to a landfill. The area around B-6 resulted in 16,865 ft^2. This will result in a volume of 67,360 ft^3 of soil to be excavated near the boring B-6 location (Magenta Section).

16,865 ft^2 x 4 ft = 67,360 ft^3 (2,495 CY in situ)
4 ft of Fill x 16,865 ft^2 = 67,360 ft^3

B-7 (Orange Section) has a depth of 8 feet with Topsoil, Fill, and Buried Organic Soil before reaching Sand and Gravel The first 2 feet are presumed to be removed and stored onsite and not sent to a landfill. The area around B-7 resulted in 7,622 ft^2. This will result in a volume of 45,732 ft^3 of soil to be excavated near the boring B-7 location (Orange Section).

7,622 ft^2 x 6 ft = 45,732 ft^3 (1,693 CY in situ)
4 ft of Fill x 7,622 ft^2 = 30,488 ft^3
2 ft of Buried Organic Soil x 7,622 ft^2 = 15,244 ft^3

B-8 (Yellow Section) has a depth of 4 feet with Fill and Subsoil before reaching Sand and Gravel. The first 2 feet are presumed to be removed and stored onsite and not sent to a landfill. The area around B-8 resulted in 25,482 ft^2. This will result in a volume of 50,964 ft^3 of soil to be excavated near the boring B-8 location (Yellow Section).

25,482 ft^2 x 2 ft = 50,964 ft^3 (1,888 CY in situ)
2 ft of Subsoil x 25,482 ft^2 = 50,964 ft^3

To find the collective estimate for total soil to be excavated, all section volumes are added together.
51,552 ft^3 + 23,634 ft^3 + 0 ft^3 + 0 ft^3 + 29,138 ft^3 + 67,360 ft^3 + 45,732 ft^3 + 50,964 ft^3 = 268,389 ft^3 (9,940 CY)

The estimated total volume of soil excavated directly within the limits of the proposed new building and the addition of an assumed 5 feet buffer around it, resulted in a volume of approximately **268,389 ft^3 or 9,940 CY**. This value includes any top soil, fill, subsoil, and buried organic soil. It does not include Sand and Gravel. This value also presumes the top 2 feet of excavation will be stored on site and can be reused.

Total of Fill = 148,768 ft^3
Total of Silt = 12,888 ft^3
Total of Clay = 21,480 ft^3
Total of Subsoil = 50,964 ft^3
Total of Buried Organic Soil = 34,280 ft^3

Please note boring locations are not exact and all values are rough estimates and do not necessarily reflect the actual value of soils that could be excavated and send to a "natural arsenic" landfill, especially with respect to this phase of the investigation of site soil characteristics.

Additional Information Pertaining to Potential Impacted Soil at the Groundwater Table

Proposed volume of soils excavation for potential disposal at a "natural arsenic" landfill was also calculated to determine the volume of soil that exists at or below the encountered groundwater table.

B-1: Groundwater at 9 vertical feet (VF). Auger refusal at 19 VF. This will result in 10 VF of soil to be removed.

10 ft x 4,296 ft^2 = 42, 960 ft^3 (1,591 CY in situ)

B-2: Groundwater at 9 VF. Auger refusal at 19 VF. This will result in 10 VF of soil to be removed.

10 ft x 11,817 ft^2 = 118,170 ft^3 (4,376 CY in situ)

B-3: Groundwater not detected. Auger refusal at 10.2 VF. This will result in 0 VF of soil to be removed.

B-4: Groundwater at 9 VF. Auger refusal at 11 VF. This will result in 2 VF of soil to be removed.

2 ft x 7,782 ft^2 = 15,564 ft^3 (576 CY in situ)

B-5: Groundwater at 9 VF. Auger refusal at 10.5 VF. This will result in 1.5 VF of soil to be removed.

1.5 ft x 12,141 ft^2 = 18,211 ft^3 (675 CY in situ)

B-6: Groundwater at 14 VF. Auger refusal at 19.7 VF. This will result in 5.7 VF of soil to be removed.

5.7 ft x 16,865 ft^2 = 96,130 ft^3 (3,560 CY in situ)

B-7: Groundwater at 10 VF. Auger refusal at 20.2 VF. This will result in 10.2 VF of soil to be removed.

10.2 ft x 7,622 ft^2 = 77,774 ft^3 (2,879 CY in situ)

B-8: Groundwater at 9 VF. Auger refusal at 19.8 VF. This will result in 10.8 VF of soil to be removed.

10.8 ft x 25,482 ft^2 = 275,206 ft^3 (10,193 CY in situ)

Total volume of soil at and below the encountered groundwater table for potentially being designated for disposal to a "natural arsenic" landfill is approximately **23,850 cubic yards.**

Please do not hesitate to contact us should you have any questions or require any clarification on the results presented here for estimating the Soil Removal Quantities at the *Wildwood School at North Intermediate School, in Wilmington, MA.*

Sincerely,

PEER Consultants, P.C.

EXECUTIVE SUMMARY

Section 1.0: Executive Summary

The Wilmington Elementary School is a new three-story school with an approximate gross area of 167,000 s.f. The building has been simulated with the school's anticipated hours of operation provided by the owner as follows:

It is anticipated that the typical student hours will occur from 6:30 am – 6:00 pm (Mon-Fri) while the building will be occupied between 6 pm – 9 pm (Mon-Fri) for limited community use, sports, and recreation programs. Limited summer programming shall occur throughout the building from 7:00 am – 3:30 pm (Mon-Fri) for special needs, summer camps, recreation, and sports practices. The Gym will also have limited community use on the weekends from 9:00 am – 9:00 pm.

The goal of the mechanical system lifecycle engineering economic analysis is to assess the performance of various mechanical systems in comparison to a baseline mechanical system.

Each option is compared to the baseline system to determine the greatest combined savings over a 50 year cycle to determine the most advantageous system considering anticipated hours of operation, electrical costs, maintenance costs, initial construction costs, and replacement costs.

By comparison of each option to the baseline system, the option with the greatest total life-cycle savings is generally recommended. To further enhance controllability and overall system performance, additional options should be considered that will enhance year round temperature control and comfort at a possible marginal increase in capital cost.

Upon completion of the mechanical system lifecycle engineering economic analysis, the design building is simulated with the recommended mechanical system in comparison to an ASHRAE Standard 90.1-2010 baseline building to project the anticipated energy cost percentage savings for LEED V4 EAc2 – Optimize Energy Performance.

Section 1.1: Mechanical System Analysis

1.1.A: Baseline System Option – Mixed-Air Overhead Chilled/Hot Water Variable Air Volume (VAV) Air Handling Unit Systems with Air-Source Heat Pump (ASHP) Heat Recovery Chiller/Heater Plant

- Chilled/hot water VAV air handling units with energy recovery wheels and terminal VAV boxes with hot water reheat coils and energy recovery providing mixed-air over-head distribution the following areas:
    - RTU-A: 30,000 CFM Classrooms, Support, & Circulation Areas
    - RTU-B: 35,000 CFM Classrooms, Support, & Circulation Areas
    - RTU-C: 30,000 CFM Classrooms, Support, & Circulation Areas
    - RTU-D: 10,000 CFM Gym
    - RTU-E: 5,000 CFM Media Center, Support, & Circulation Areas
    - RTU-F: 10,000 CFM Cafeteria, Stage, & Support Areas
    - RTU-G: 3,000 CFM Kitchen, Custodial, & Support Areas
    - RTU-H: 6,000 CFM Administration, Support, & Circulation Areas
- 100% outside air chilled/hot water VAV make-up air handling unit and kitchen exhaust fans with kitchen hood controls serving the following areas:
    - MAU-A: 4,500 CFM Kitchen Hood Make-Up
- Overhead fiberglass insulated supply and return air ductwork distribution system

- Hot water radiation and unit heaters for heating only areas such as storage rooms, entry ways, corridors, etc.

- (15) 30 ton high-efficiency air-to-water source modular chilled/hot water heat recovery heat pump plant providing chilled and hot water to the building (450 ton total capacity, 335 ton cooling, 320 ton HHW/DHW heating, 4 modules redundant)

  (1) 1,194 MBH (350 kW) electric hot water boiler (Back Up Only)

- Insulated chilled water, hot water, and condensate piping systems

- Chilled and hot water primary pumping with variable frequency drives

- Direct digital controls throughout

1.1.B: System Option One – VRF ASHP System with Supplemental Electric Heating Units

- 100% outside air ASHP heating/cooling VAV air handling units with energy recovery wheels and terminal variable air volume boxes with demand control ventilation providing ventilation to the terminal VRF units serving the following areas:

  - RTU-A: 14,000 CFM Classrooms, Support, & Circulation Areas
  - RTU-B: 16,000 CFM Classrooms, Support, & Circulation Areas
  - RTU-C: 13,000 CFM Classrooms, Support, & Circulation Areas
  - RTU-E: 2,500 CFM Media Center, Support, & Circulation Areas
  - RTU-H: 3,000 CFM Administration, Support, & Circulation Areas

- Terminal VRF heat pump evaporator units serving the spaces indicated above

- Insulated refrigerant and condensate piping systems

- Air-source heat recovery VRF heat pump condensing units (240 ton total capacity)

- ASHP cooling/heating VAV air handling units with energy recovery wheels and demand control ventilation providing mixed-air over-head distribution the following areas:

  - RTU-D: 10,000 CFM Gym
  - RTU-F: 10,000 CFM Cafeteria, Stage, & Support Areas
  - RTU-G: 3,000 CFM Kitchen, Custodial, & Support Areas

- 100% outside air ASHP cooling/heating VAV make-up air handling unit and kitchen exhaust fans with kitchen hood controls serving the following areas:

  - MAU-A: 4,500 CFM Kitchen Hood Make-Up

- Overhead fiberglass insulated supply and return air ductwork distribution system

- Electric radiation and unit heaters for heating only areas such as storage rooms, entry ways, corridors, etc.

- Direct digital controls throughout

1.1.C: System Option Two – Geothermal Variable Refrigerant Flow (VRF) Ground-Source Heat Pump (GSHP) System with GSHP VAV Air Handling Units

- 100% outside air WSHP heating/cooling VAV air handling units with energy recovery heat exchangers and terminal variable air volume boxes with demand control ventilation providing ventilation to the terminal VRF units serving the following areas:
    - RTU-A: 14,000 CFM Classrooms, Support, & Circulation Areas
    - RTU-B: 16,000 CFM Classrooms, Support, & Circulation Areas
    - RTU-C: 13,000 CFM Classrooms, Support, & Circulation Areas
    - RTU-E: 2,500 CFM Media Center, Support, & Circulation Areas
    - RTU-H: 3,000 CFM Administration, Support, & Circulation Areas
- Terminal VRF heat pump evaporator units serving the spaces indicated above
- Insulated refrigerant and condensate piping systems
- Water-source heat recovery VRF heat pump condensing units (240 ton total capacity)
- WSHP heating/cooling VAV air handling unit with energy recovery wheel and demand control ventilation providing mixed-air over-head distribution the following areas:
    - RTU-D: 10,000 CFM Gym
    - RTU-F: 10,000 CFM Cafeteria, Stage, & Support Areas
    - RTU-G: 3,000 CFM Kitchen, Custodial, & Support Areas
- 100% outside air WSHP cooling/heating VAV make-up air handling unit and kitchen exhaust fans with kitchen hood controls serving the following areas:
    - MAU-A: 4,500 CFM Kitchen Hood Make-Up
- Overhead fiberglass insulated supply and return air ductwork distribution system
- Electric radiation and unit heaters for heating only areas such as storage rooms, entry ways, corridors, etc.
- (80) 600’ closed-loop type ground source geothermal wells (4.25 tons each for 335 tons total capacity)
- (1) 1,194 MBH (350 kW) electric hot water boiler (Back Up Only)
- Insulated condenser water, geothermal water, and condensate piping systems
- Condenser and geothermal well primary pumping with variable frequency drives
- Direct digital controls throughout

1.1.D: System Option Three - Chilled/Hot Water VAV Air Handling Unit Displacement Ventilation Systems with ASHP Heat Recovery Chiller/Heater Plant

- 100% outside air hot water heating/chilled water cooling air handling units with energy recovery wheels and terminal variable air volume boxes with demand control ventilation providing displacement ventilation to the following areas:

    - RTU-A: 17,000 CFM Classrooms, Support, & Circulation Areas
    - RTU-B: 20,000 CFM Classrooms, Support, & Circulation Areas
    - RTU-C: 17,000 CFM Classrooms, Support, & Circulation Areas
    - RTU-E: 3,000 CFM Media Center, Support, & Circulation Areas
    - RTU-H: 4,000 CFM Administration, Support, & Circulation Areas

- Passive chilled beam cooling/heating panels located along exterior walls of the above areas

- Hot water heating/chilled water cooling VAV air handling units with energy recovery wheels and demand control ventilation providing displacement ventilation to the following areas:

    - RTU-D: 10,000 CFM Gym
    - RTU-F: 10,000 CFM Cafeteria, Stage, & Support Areas
    - RTU-G: 3,000 CFM Kitchen, Custodial, & Support Areas

- Hot water radiant heating panels located along exterior walls of the above areas

- 100% outside air chilled/hot water VAV make-up air handling unit and kitchen exhaust fans with kitchen hood controls serving the following areas:

    - MAU-A: 4,500 CFM Kitchen Hood Make-Up

- Overhead fiberglass insulated supply and return air ductwork distribution system

- Hot water radiation and unit heaters for heating only areas such as storage rooms, entry ways, corridors, etc.

- (15) 30 ton high-efficiency air-to-water source modular chilled/hot water heat recovery heat pump plant providing chilled and hot water to the building (450 ton total capacity, 335 ton cooling, 320 ton HHW/DHW heating, 4 modules redundant)

- (1) 1,194 MBH (350 kW) electric hot water boiler (Back Up Only)

- Chilled and hot water primary pumping with variable frequency drives

- Direct digital controls throughout

1.1.E: System Option Four – Chilled/Hot Water Cooling/Heating VAV Air Handling Unit Displacement Ventilation Systems with GSHP Heat Recovery Chiller/Heater Geothermal Plant

- This option is identical to Option 3 as outlined above but will utilize the following ground-source chilled/hot water plant equipment rather than the air-source heat pump chilled/hot water plant and wellfield outlined above:

    - (8) 50 ton high-efficiency air-to-water source modular chilled/hot water heat recovery heat pump plant providing chilled and hot water to the building (400 ton total capacity, 335 ton cooling, 320 ton HHW/DHW heating, 2 modules redundant)

    - (80) 600’ closed-loop type ground source geothermal wells (4.25 tons each for 335 tons total capacity)

- (1) 1,194 MBH (350 kW) electric hot water boiler (Back Up Only)
- Chilled, condenser, geothermal well, and hot water primary pumping with variable frequency drives

Section 1.2: Mechanical System Analysis Conclusion

The variable air volume air handling unit system is selected as the baseline system since it is similar to an ASHRAE 90.1/IECC baseline system but complies with the high-efficiency requirements of the MA Opt-In Stretch Energy Code. Unfortunately, the selection may result in overall ownership costs that in some cases are higher when compared to the alterative systems primarily relating to increased annual operating costs with potentially reduced thermal comfort conditions of the building. The option comparison of each alternative system to the baseline assesses the benefits of improved systems with potentially reduced combined operating costs and improved thermal comfort with the goal of selecting the system with the highest ownership savings over the 50 year study period.

Annual electrical consumption is calculated through the results of a thermal dynamic heat transfer analysis utilizing Department of Energy's (DOE) Energy Plus/Carrier Hourly Analysis Program (HAP) software with all architectural data provided by Dore & Whittier Architects.

The building envelope reflects Dore & Whittier Architects' high-efficiency design with effective insulation U-values in accordance with ASHRAE 90.1 Appendix A as follows:

- Roof: U-0.018
- Brick Veneer Walls: U-0.028
- MCM Panel Walls: U-0.025
- Windows: U-0.25, 0.30 SHGC
- Curtainwall: U-0.25, 0.30 SHGC

Utility cost data for electricity was obtained from utility bills provided by the owner as follows:

Reading Municipal Light Department (RMLD): Commercial Schedule C Rate

- Customer Charge: $13.00/month
- Distribution Demand: $13.11177/kW
- Distribution Energy: $0.02554/kWh
- Electrification Energy: $0.00500/kWh
- Fuel Charge: $0.05120/kWh
- Distributed Solar: $0.00402/kWh
- Purchase Power & Trans.: $0.04820/kWh

The "Building Life-Cycle" analysis was performed in BLCC v5.3-22 and includes future worth of each system option considered using the DOE rates for nominal discount (1.4%), escalation (for each utility type based on region), inflation (2.0%), and interest (2.0%). The analysis includes equipment replacement costs for major system components after 20, 30, and 40 years (varying per system option as indicated in the replacement cost estimate sheet).

Our observations of the Mechanical System Payback Summary suggest that Option 3, Displacement Ventilation with an Air-Source Heat Pump Plant, represents the lowest life cycle cost of the system options studied by yielding an approximate $5,680,330 savings over the 50 year study period with an instant payback by having a lower capital investment than the baseline system.

Section 1.3: Geothermal Federal Tax Credit

There are potentially significant federal tax credits available to the school for installing a geothermal heating system. Per the 2022 Inflation Reduction Act, the Federal Investment Tax Credit (§ 48) can range from 6% to 30% if Prevailing Wage and Apprenticeship (PWA) requirements are met. Additional tax credits may also be available for using Domestic Content (up to 10% of related domestic steel and iron material and manufactured product costs). For the purpose of this study, a 25.5% federal tax credit was factored at this time assuming PWA requirements would be met (accounting for a 15% deduction required by projects funded by tax exempt bonds to the 30% incentive). Please note that it is recommended that the Town consult with a financial tax advisor or attorney to complete the required IRS documentation if a Geothermal heating system is selected.

When accounting for the Federal Tax Credit, the Mechanical System Payback Summary suggests that System Option 4 represents the greatest total life cycle savings by yielding an approximate $8,710,034 savings over the 50 year study period with an instant payback.

The geothermal system additionally provides further benefits that should be considered such as providing the second lowest EUI of all options at 22.3 kBTU/s.f./yr. The system further provides system longevity, reduced maintenance, reduced downtime, and improved controllability of equipment. The geothermal design also does not require exterior mounted condensing equipment which will provide the best acoustics of all options studied.

Section 2.0: LEED Energy Savings Summary

To estimate the LEED V4 EAc2 – Optimize Energy Performance savings, energy model simulations have been performed comparing the design building to a baseline ASHRAE Standard 90.1-2010 building.

1. The ASHRAE Standard 90.1-2010 baseline building is as follows:

- Envelope:
  - Wall: U-0.064
  - Roof: U-0.048
  - Windows: 0.55 U-Value, 0.40 SHGC
  - Curtainwall/Storefront: 0.45 U-Value, 0.40 SHGC
- Mechanical System:
  - System 8 - Electric heating/chilled water cooling air handling units with energy recovery wheels and terminal fan-powered VAV boxes with electric reheat coils (one per floor)
  - System 4 – Packaged electric heat pump cooling/heating constant volume single zone air handling units (serving spaces with loads varying by 10 Btuh/s.f. of the average space load)
  - (2) high-efficiency water-cooled chillers with associated cooling tower

- Domestic Hot Water System:
    - Instantaneous electric domestic hot water system
- Lighting System:
    - 0.99 w/s.f.

2. The design building is as follows:

- Envelope:
    - Roof: U-0.018
    - Brick Veneer Walls: U-0.028
    - MCM Panel Walls: U-0.025
    - Windows: U-0.25, 0.30 SHGC
    - Curtainwall: U-0.25, 0.30 SHGC
- Mechanical System:
    - (Refer to System Option descriptions)
- Domestic Hot Water System:
    - Instantaneous electric domestic hot water system
- Lighting System:
    - 0.5 w/s.f.

Section 2.1: LEED Energy Savings Analysis Conclusion

A comparison of the Design Building against the ASHRAE Standard 90.1-2010 Baseline Building results in the following energy cost savings for LEED V4 EAc2 – Optimize Energy Performance for each System Option as follows:

- System Option 1 – 27.1% cost for 11 total points
- System Option 2 – 44.1% cost for 16 total points
- System Option 3 – 42.8% cost for 16 total points
- System Option 4 – 48.6% cost for 16 total points

Note:

The values indicated above are based on energy modelling performed for system comparison purposes only. Our office strongly recommends adding a 30% safety factor to the calculated values of this report for budgeting purposes to account for potential variances to the actual operation of the building. Per ASHRAE Standard 90.1:

Neither the proposed building performance nor the baseline building performance are predictions of actual energy consumption or costs for the proposed design after construction. Actual experience will differ from these calculations due to variations such as occupancy, building operation and maintenance, weather, energy use not covered by this procedure, changes in energy rates between design of the building and occupancy, and the precision of the calculation tool.

1	**1. Variable Refrigerant Flow (VRF) Units w/ Air-Source Condensers serving the Classrooms, Administration and Support Areas 2. ASHP DOAS AHU's w/ ERV & Terminal VAV's w/ DCV providing Ventilation to the VRF Units 3. Mixed-Air Overhead AHSP VAV AHU's w/ ERV & DCV serving the Cafe/Stage and Gym areas 4. Supplemental Electric Resistance Heating Units**	$14,007,900	$0	**$14,007,900**	1,443,027	$291,930	$1.75	**29.5**	$58,460	$1,943,500	$1,185,000	$3,167,000	$350,390	**$54,872**	**$4,025,486**	**Instant*****
2	**1. VRF System w/ Water-Source Heat Pump (WSHP) Heat Recovery Condensing Units 2. WSHP VAV Dedicated Outdoor Air Systems (DOAS) w/ ERV & DCV with Terminal VAV Boxes 3. Supplemental Electric Heating 4. Geothermal Well Field and Distribution Plant**	$19,358,100	$4,936,316	**$14,421,785**	1,183,958	$223,944	$1.34	**24.2**	$62,235	$0	$3,945,000	$0	$286,179	**$119,083**	**$7,382,588**	**Instant*****
3	**1. Displacement Ventilation Diffusers w/ Radiant Cooling/Heating Panels 2. CHW/HHW Dedicated Outdoor Air System (DOAS) AHU's ERV & Terminal VAV's w/ DCV 3. High-Efficiency ASHP Chiller/Heater Plant 4. Backup Electric Boiler Plant**	$14,442,360	$0	**$14,442,360**	1,160,735	$229,174	$1.37	**23.7**	$74,000	$1,620,000	$2,289,500	$1,620,000	$303,174	**$102,088**	**$5,680,330**	**Instant*****
4	**1. Displacement Ventilation Diffusers w/ Radiant Cooling/Heating Panels 2. CHW/HHW DOAS AHU's ERV & Terminal VAV's w/ DCV 3. High-Efficiency Ground Source Heat Pump (GSHP) Chiller/Heater Plant w/ Geothermal Well Field 4. Backup Side-Stream Electric Boiler Plant**	$18,306,360	$4,668,122	**$13,638,238**	1,093,195	$205,748	$1.23	**22.3**	$75,675	$0	$3,379,500	$0	$281,423	**$123,839**	**$8,710,034**	**Instant*****

* Capital Investment Costs based upon in-house cost estimate utilizing cost data from similar past projects and industry standard estimating references. Costs have been estimated for system comparison purposes only and do not incorporate all supplemental/independent HVAC system costs which would be required for all systems studied (i.e. specialty exhaust, overhead and profit).

** Total payment costs indicated for these incentives need to be confirmed by the appropriate parties.

*** Combined expense savings is the difference between the combined annual expense of the baseline and system in comparison.

**** Total life-cycle savings is based on a 50 year study period.

***** Discounted payback years is based upon BLCC5 Life Cycle Analysis.

****** Discounted payback never reached because system is more efficient and/or less expensive than baseline system.

Note 1: Values based on energy model performed for HVAC System Life Cycle Cost Analysis purposes. A 30% safety factor should be applied for budgeting purposes to account for potential variances to the actual operation of the building. Per ASHRAE Standard 90.1:

Neither the proposed building performance nor the baseline building performance are predictions of actual energy consumption or costs for the proposed design after construction. Actual experience will differ from these calculations due to variations such as occupancy, building operation and maintenance, weather, energy use not covered by this procedure, changes in energy rates between design of the building and occupancy, and the precision of the calculation tool.

GGD Consulting Engineers, Inc.

*Combined expense savings is the difference between the combined annual expense of the baseline and building in comparison.
**Energy cost/Greenhouse Gas (GHG) emissions savings percentage is the difference between the annual energy costs of the baseline and building in comparison.

Note 1: Values based on energy model performed for HVAC System Life Cycle Cost Analysis purposes. A 30% safety factor should be applied for budgeting purposes to account for potential variances to the actual operation of the building. Per ASHRAE Standard 90.1:

Neither the proposed building performance nor the baseline building performance are predictions of actual energy consumption or costs for the proposed design after construction. Actual experience will differ from these calculations due to variations such as occupancy, building operation and maintenance, weather, energy use not covered by this procedure, changes in energy rates between design of the building and occupancy, and the precision of the calculation tool.

LIFE CYCLE ANALYSES

NIST BLCC 5.3-22: Comparative Analysis

Consistent with Federal Life Cycle Cost Methodology in OMB Circular A-94

Base Case: Baseline - Mixed-Air VAV w/ ASHP Plant

Alternative: Option 1 - ASHP VRF System

General Information

- Increased Total Investment	-$1,416,655

Net Savings	$7,382,588

NOTE: Meaningful SIR, AIRR and Payback can not be computed unless incremental savings and total savings are both positive.

Energy Savings Summary

Energy Savings Summary (in stated units)

Energy	-----Average	Annual	Consumption-----	Life-Cycle
Type	Base Case	Alternative	Savings	Savings
Electricity	1,738,354.0 kWh	1,183,958.0 kWh	554,396.0 kWh	27,719,041.1 kWh

Energy Savings Summary (in MBtu)

Energy	-----Average	Annual	Consumption-----	Life-Cycle
Type	Base Case	Alternative	Savings	Savings
Electricity	5,931.5 MBtu	4,039.8 MBtu	1,891.7 MBtu	94,581.3 MBtu

Emissions Reduction Summary

Energy Type	-----Average Base Case	Annual Alternative	Emissions----- Reduction	Life-Cycle Reduction
Electricity				
CO2	573,718.42 kg	390,748.09 kg	182,970.33 kg	9,148,265.80 kg
SO2	162.71 kg	110.82 kg	51.89 kg	2,594.57 kg
NOx	438.08 kg	298.37 kg	139.71 kg	6,985.39 kg
Total:				
CO2	573,718.42 kg	390,748.09 kg	182,970.33 kg	9,148,265.80 kg
SO2	162.71 kg	110.82 kg	51.89 kg	2,594.57 kg
NOx	438.08 kg	298.37 kg	139.71 kg	6,985.39 kg

NIST BLCC 5.3-22: Comparative Analysis

Consistent with Federal Life Cycle Cost Methodology in OMB Circular A-94

Base Case: Baseline - Mixed-Air VAV w/ ASHP Plant

Alternative: IRA Rebate Option 4 - GSHP Displacement System

General Information

File Name:	C:\Users\keith_lane.GGDMAIL\BLCC 5.3-22\projects\Wilmington Elementary School.xml
Date of Study:	Wed Jan 15 13:54:21 EST 2025
Project Name:	Wilmington Elementary School
Project Location:	Massachusetts
Analysis Type:	OMB Analysis, Non-Energy Project
Analysis Purpose:	Public Investment or Regulatory Analysis
Analyst:	
Base Date:	September 1, 2026
Service Date:	September 1, 2026
Study Period:	50 years 0 months(September 1, 2026 through August 31, 2076)
Discount Rate:	1.4%
Discounting Convention:	End-of-Year

Comparison of Present-Value Costs

PV Life-Cycle Cost

	Base Case	Alternative	Savings from Alternative
Initial Investment Costs:			
Capital Requirements as of Base Date	$15,838,440	$13,638,238	$2,200,202
Future Costs:			
Energy Consumption Costs	$8,347,407	$5,249,416	$3,097,991
Energy Demand Charges	$3,404,705	$2,125,799	$1,278,906
Energy Utility Rebates	$0	$0	$0
Water Costs	$0	$0	$0
Recurring and Non-Recurring OM&R Costs	$7,068,025	$4,935,090	$2,132,935
Capital Replacements	$0	$0	$0
Residual Value at End of Study Period	$0	$0	$0
	---	---	---
Subtotal (for Future Cost Items)	$18,820,137	$12,310,305	$6,509,832
	---	---	---
Total PV Life-Cycle Cost	$34,658,577	$25,948,543	$8,710,034

Net Savings from Alternative Compared with Base Case

PV of Non-Investment Savings	$6,509,832
- Increased Total Investment	-$2,200,202

Net Savings	$8,710,034

NOTE: Meaningful SIR, AIRR and Payback can not be computed unless incremental savings and total savings are both positive.

Energy Savings Summary

CLIENT: Dore & Whittier Architects
DATE: 1/13/2025 **BY:** KL

Baseline - Air-Source Heat Pump Plant VAV Systems (MA Opt-In Stretch Energy Code Compliant)

ITEM OF WORK	NO.	UNIT PRICE	AREA	PRICE/S.F.	TOTAL
VAV Box with Hot Water Reheat Coils	150	$1,500			$ 225,000
RTU-A: Classroom Overhead VAV CHW/HHW Cooling/Heating w/ ERV & DCV	30,000 CFM	$21/CFM			$ 630,000
RTU-B: Classroom Overhead VAV CHW/HHW Cooling/Heating w/ ERV & DCV	35,000 CFM	$21/CFM			$ 735,000
RTU-C: Classroom Overhead VAV CHW/HHW Cooling/Heating w/ ERV & DCV	30,000 CFM	$21/CFM			$ 630,000
RTU-D: Gym Overhead VAV CHW/HHW Cooling/Heating w/ ERV & DCV	12,000 CFM	$23/CFM			$ 276,000
RTU-E: Media Center Overhead VAV CHW/HHW Cooling/Heating w/ ERV & DCV	5,000 CFM	$25/CFM			$ 125,000
RTU-F: Cafe/Stage Overhead VAV CHW/HHW Cooling/Heating w/ ERV & DCV	12,000 CFM	$23/CFM			$ 276,000
RTU-G: Kitchen/Custodial Overhead VAV CHW/HHW Cooling/Heating w/ ERV & DCV	3,000 CFM	$25/CFM			$ 75,000
RTU-H: Admin. Overhead VAV CHW/HHW Cooling/Heating w/ ERV & DCV	6,000 CFM	$23/CFM			$ 138,000
MAU-A: Kitchen 100% O.A. VAV MAU CHW/HHW Cooling/Heating w/ Kitchen Hood Controls	4,500 CFM	$23/CFM			$ 103,500
(15) 30 Ton High-Efficiency Air-Source Heat Recovery Heat Pump Chiller/Heater Plant (450 ton total capacity, 335 ton cooling, 320 ton HHW/DHW heating)	450 tons	$3,600/ton			$ 1,620,000
(1) 350 kW Electric Boiler including Accessories (For Back-Up Only)	1	$60,000			$ 60,000
Chilled Water Pumps w/ VFD's, Accessories	2	$40,000			$ 80,000
Hot Water Pumps w/ VFD's, Accessories	2	$40,000			$ 80,000
Hot Water Terminal Heating Units			167,000	$2.00	$ 334,000
Hot Water Piping & Ins. and Accessories			167,000	$6.50	$ 1,085,500
Chilled Water Piping & Insulation and Condensate Piping & Pumps			167,000	$7.00	$ 1,169,000
Ductwork including GRD's, Dampers, & General Exhaust Systems			167,000	$25.00	$ 4,175,000
ATC/DDC Controls			167,000	$7.50	$ 1,252,500
Chilled/Hot Water Fan Coil Units (IDF, EMR, etc.)	10	$5,000			$ 50,000
Cabinet Hot Water Unit Heaters	16	$2,000			$ 32,000
Hot Water Unit Heaters	6	$1,200			$ 7,200
Exhaust Fans (Misc. Areas)					$ 40,000
HVAC General Conditions (as-builts, coordination, shop drawings, testing and balancing, Cx support, Project Management)	20.00%	$13,198,700			$ 2,639,740
				TOTAL	$ 15,838,440
				TOTAL ($/FT²)	$ 94.84

Cost estimates have been derived for system comparison purposes only and are based upon recent project costs. Estimates do not necessarily include HVAC systems and equipment that would be required for all system options studied (i.e. specialty cooling & exhaust systems, etc.).

* Air-Source Heat Pump replacement cost of $1,620,000 after 20 year equipment life expectancy carried in Life-Cycle Analysis calculations.

** Rooftop Unit and Pump replacement cost of $3,198,500 after 30 year equipment life expectancy carried in Life-Cycle Analysis calculations.

*** Air-Source Heat Pump replacement cost of $1,620,000 after 40 year equipment life expectancy carried in Life-Cycle Analysis calculations.

Option 1 - Air-Source Heat Pump (ASHP) Variable Refrigerant Flow (VRF) Systems with ASHP Cooling/Heating Air Handling Units

PROJECT:	**Wilmington Elementary School**	
JOB NO:	**894 135 00**	
CLIENT:	**Dore & Whittier Architects**	
DATE:	**1/13/2025**	**BY: KL**

ITEM OF WORK	NO.	UNIT PRICE	AREA	PRICE/S.F.	TOTAL
Indoor VRF Evaporator Units	216	$4,500			$ 972,000
VRF Branch Controllers	14	$12,000			$ 168,000
Outdoor Air Cooled VRF Condensing Units (240 Ton Total Capacity)	240 tons	$3,000/ton			$ 720,000
VAV Box with Demand Ventilation Controls	150	$1,250			$ 187,500
RTU-A: Classroom 100% O.A. ASHP DOAS w/ ERV & DCV	14,000 CFM	$30/CFM			$ 420,000
RTU-B: Classroom 100% O.A. ASHP DOAS w/ ERV & DCV	16,000 CFM	$30/CFM			$ 480,000
RTU-C: Classroom 100% O.A. ASHP DOAS w/ ERV & DCV	13,000 CFM	$30/CFM			$ 390,000
RTU-D: Gym Overhead VAV ASHP w/ ERV & DCV	12,000 CFM	$30/CFM			$ 360,000
RTU-E: Media Center 100% O.A. ASHP DOAS w/ ERV & DCV	2,500 CFM	$35/CFM			$ 87,500
RTU-F: Cafe/Stage Overhead VAV ASHP w/ ERV & DCV	12,000 CFM	$30/CFM			$ 360,000
RTU-G: Kitchen/Custodial Overhead VAV ASHP w/ ERV & DCV	3,000 CFM	$35/CFM			$ 96,000
RTU-H: Admin. 100% O.A. ASHP DOAS w/ ERV & DCV	3,000 CFM	$35/CFM			$ 105,000
MAU-A: Kitchen 100% O.A. ASHP VAV MAU w/ Kitchen Hood Controls	4,500 CFM	$33/CFM			$ 148,500
Electric Terminal Heating Units			167,000	$3.50	$ 584,500
Electric Circuitry for VRF & Electric Terminal Heating Units			167,000	$3.00	$ 501,000
Refrigeration Piping & Insulation and Condensate Piping & Pumps			167,000	$10.00	$ 1,670,000
Ductwork including GRD's, Dampers, & General Exhaust Systems			167,000	$18.00	$ 3,006,000
ATC/DDC Controls w/ Refrigerant Monitoring			167,000	$7.75	$ 1,294,250
Indoor VRF Evaporator Units (IDF, EMR, etc.)	10	$4,500			$ 45,000
Cabinet Electric Unit Heaters	16	$2,000			$ 32,000
Electric Unit Heaters	6	$1,000			$ 6,000
Exhaust Fans (Misc. Areas)					$ 40,000
HVAC General Conditions (as-builts, coordination, shop drawings, testing and balancing, Cx support, Project Management)	20.00%	$11,673,250			$ 2,334,650
				TOTAL	$ 14,007,900
				TOTAL ($/FT²)	$ 83.88

Cost estimates have been derived for system comparison purposes only and are based upon recent project costs. Estimates do not necessarily include HVAC systems and equipment that would be required for all system options studied (i.e. specialty cooling & exhaust systems, etc.).

* Rooftop Unit Condenser & Air-Source VRF Condenser replacement cost of $1,943,450 after 20 year equipment life expectancy carried in Life-Cycle Analysis calculations.

** VRF Evaporator Unit & Branch Controller replacement cost of $1,185,000 after 30 year equipment life expectancy carried in Life-Cycle Analysis calculations.

*** Rooftop Unit & Air-Source VRF Condenser replacement cost of $3,167,000 after 40 year equipment life expectancy carried in Life-Cycle Analysis calculations.

Option 2 - Geothermal Ground-Source Heat Pump (GSHP) Variable Refrigerant Flow (VRF) Systems with GSHP Cooling/Heating Air Handling Units

ITEM OF WORK	NO.	UNIT PRICE	AREA	PRICE/S.F.	TOTAL
Indoor VRF Evaporator Units	216	$4,500			$ 972,000
VRF Branch Controllers	14	$12,000			$ 168,000
Indoor Water-Source VRF Condensing Units (240 Ton Total Capacity including Redundancy)	240 tons	$2,500/ton			$ 600,000
VAV Box with Demand Ventilation Controls	150	$1,250			$ 187,500
RTU-A: Classroom 100% O.A. GSHP DOAS w/ ERV & DCV	14,000 CFM	$24/CFM			$ 336,000
RTU-B: Classroom 100% O.A. GSHP DOAS w/ ERV & DCV	16,000 CFM	$24/CFM			$ 384,000
RTU-C: Classroom 100% O.A. GSHP DOAS w/ ERV & DCV	13,000 CFM	$24/CFM			$ 312,000
RTU-D: Gym Overhead VAV GSHP w/ ERV & DCV	12,000 CFM	$24/CFM			$ 288,000
RTU-E: Media Center 100% O.A. GSHP DOAS w/ ERV & DCV	2,500 CFM	$29/CFM			$ 72,500
RTU-F: Cafe/Stage Overhead VAV GSHP w/ ERV & DCV	12,000 CFM	$26/CFM			$ 312,000
RTU-G: Kitchen/Custodial Overhead VAV GSHP w/ ERV & DCV	3,000 CFM	$29/CFM			$ 87,000
RTU-H: Admin. 100% O.A. GSHP DOAS w/ ERV & DCV	3,000 CFM	$29/CFM			$ 87,000
MAU-A: Kitchen 100% O.A. GSHP VAV MAU w/ Kitchen Hood Controls	4,500 CFM	$27/CFM			$ 121,500
(80) 600' Deep Closed Loop Type Wells (4.25 tons/well; 335 Tons total capacity) including Underground Piping, Coring, Sleeves, Excavation, Dewatering, Oversight, etc.	80	$45,000			$ 3,600,000
(1) 350 kW Electric Boiler including Accessories (For Back-Up Only)	1	$60,000			$ 60,000
Ground/Condenser Water Pumps w/ VFD's, Accessories	2	$40,000			$ 80,000
Geothermal Pumps and VFDs, Accessories	2	$45,000			$ 90,000
Geothermal CW Piping Mains + Added Glycol Fill					$ 120,000
Electric Terminal Heating Units			167,000	$3.50	$ 584,500
Electric Circuitry for VRF & Electric Terminal Heating Units			167,000	$3.00	$ 501,000
Refrigeration Piping & Insulation and Condensate Piping & Pumps			167,000	$10.00	$ 1,670,000
Condenser Water Piping & Insulation and Condensate Piping & Pumps			167,000	$6.00	$ 1,002,000
Ductwork including GRD's, Dampers, & General Exhaust Systems			167,000	$18.00	$ 3,006,000
ATC/DDC Controls w/ Refrigerant Monitoring			167,000	$8.25	$ 1,377,750
Indoor VRF Evaporator Units (IDF, EMR, etc.)	10	$3,500			$ 35,000
Cabinet Electric Unit Heaters	16	$2,000			$ 32,000
Electric Unit Heaters	6	$1,000			$ 6,000
Exhaust Fans (Misc. Areas)					$ 40,000
HVAC General Conditions (as-builts, coordination, shop drawings, testing and balancing, Cx support, Project Management)	20.00%	$16,131,750			$ 3,226,350
				TOTAL	$ 19,358,100
				TOTAL ($/FT²)	$ 115.92

Cost estimates have been derived for system comparison purposes only and are based upon recent project costs. Estimates do not necessarily include HVAC systems and equipment that would be required for all system options studied (i.e. specialty cooling & exhaust systems, etc.).

* VRF Evaporator Unit & Branch Controller, Rooftop Unit, Water-Source Heat Pump, and Pump replacement cost of $3,945,000 after 30 year equipment life expectancy carried in Life-Cycle Analysis calculations.

(80) 600' Deep Closed Loop Type Wells (4.25 tons/well; 335 Tons total capacity) including Underground Piping, Coring, Sleeves, Excavation, Dewatering, Oversight, etc.	80	$45,000			$ 3,600,000
(1) 350 kW Electric Boiler including Accessories (For Back-Up Only)	1	$60,000			$ 60,000
Chilled Water Pumps w/ VFD's, Accessories	2	$40,000			$ 80,000
Hot Water Pumps w/ VFD's, Accessories	2	$40,000			$ 80,000
Compensated Loop Pumps w/ VFD's, Accessories	2	$20,000			$ 40,000
Geothermal Pumps and VFDs, Accessories	2	$45,000			$ 90,000
Geothermal CW Piping Mains + Added Glycol Fill					$ 150,000
Hot Water Terminal Heating/Cooling Units			167,000	$4.00	$ 668,000
Hot Water Piping & Ins. and Accessories			167,000	$6.00	$ 1,002,000
Chilled Water Piping & Insulation and Condensate Piping & Pumps			167,000	$9.00	$ 1,503,000
Ductwork including GRD's, Dampers, & General Exhaust Systems			167,000	$18.00	$ 3,006,000
ATC/DDC Controls			167,000	$8.50	$ 1,419,500
Chilled/Hot Water Fan Coil Units (IDF, EMR, etc.)	10	$5,000			$ 50,000
Cabinet Hot Water Unit Heaters	16	$2,000			$ 32,000
Hot Water Unit Heaters	6	$1,200			$ 7,200
Exhaust Fans (Misc. Areas)					$ 40,000
HVAC General Conditions (as-builts, coordination, shop drawings, testing and balancing, Cx support, Project Management)	20.00%	$15,255,300			$ 3,051,060
				TOTAL	$ 18,306,360
				TOTAL ($/FT²)	$ 109.62

Cost estimates have been derived for system comparison purposes only and are based upon recent project costs. Estimates do not necessarily include HVAC systems and equipment that would be required for all system options studied (i.e. specialty cooling & exhaust systems, etc.).

* Rooftop Unit, Water-Source Heat Pump, and Pump replacement cost of $3,79,500 after 30 year equipment life expectancy carried in Life-Cycle Analysis calculations.

Wilmington Elementary School - Annual Maintenance Costs

Baseline - Air-Source Heat Pump Plant Overhead VAV

Unit Type	Quantity	Cost/Unit	Annual Cost
VAV Box w/ Reheat Coil	150	$75	$11,250
Terminal Equipment (CUH's, UH's, etc.)	167,000	$0.03	$5,010
Water Treatment	167,000	$0.10	$16,700
ATC Controls	167,000	$0.10	$16,700
Large CHW AHU's (>6,000 CFM)	6	$2,000	$12,000
Small CHW AHU's (<6,000 CFM)	3	$1,500	$4,500
Fan Coil Units	10	$125	$1,250
Air-Source Heat Pump Plant	1	$10,000	$10,000
		TOTAL	**$77,410**

Option 1 - Air-Source VRF System

Unit Type	Quantity	Cost/Unit	Annual Cost
Indoor VRF Evaporators		$150	$0
Air-Cooled VRF Outdoor Units	1	$5,000	$5,000
VAV Box	150	$50	$7,500
Terminal Equipment (CUH's, UH's, etc.)	167,000	$0.03	$5,010
ATC Controls	167,000	$0.10	$16,700
Large ASHP AHU's (>6,000 CFM)	5	$2,750	$13,750
Small ASHP AHU's (<6,000 CFM)	4	$2,250	$9,000
Indoor VRF Fan Coil Units	10	$150	$1,500
		TOTAL	**$58,460**

Option 2 - Geothermal VRF System

Unit Type	Quantity	Cost/Unit	Annual Cost
Indoor VRF Evaporators		$150	$0
VRF Ground Source Plant	1	$3,000	$3,000
VAV Box	150	$50	$7,500
Terminal Equipment (CUH's, UH's, etc.)	167,000	$0.03	$5,010
Water Treatment	167,000	$0.075	$12,525
ATC Controls	167,000	$0.10	$16,700
Large WSHP AHU's (>6,000 CFM)	5	$2,000	$10,000
Small WSHP AHU's (<6,000 CFM)	4	$1,500	$6,000
Indoor VRF Fan Coil Units	10	$150	$1,500
		TOTAL	**$62,235**

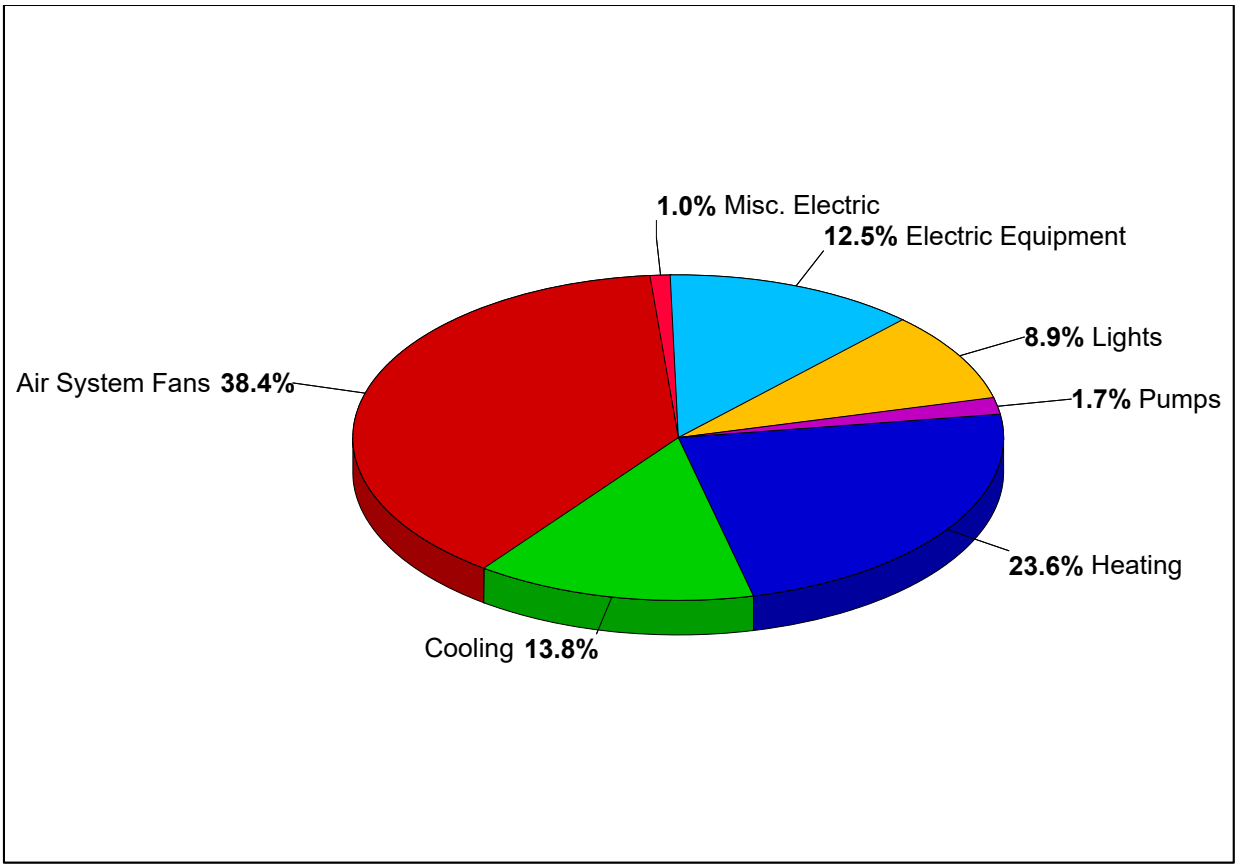
Option 3 - Air-Source Heat Pump Plant Displacement

Unit Type	Quantity	Cost/Unit	Annual Cost
VAV Box	150	$50	$7,500
Terminal Equipment (CUH's, UH's, RP's, etc.)	167,000	$0.05	$8,350
Water Treatment	167,000	$0.10	$16,700
ATC Controls	167,000	$0.10	$16,700
Large CHW AHU's (>6,000 CFM)	5	$2,000	$10,000
Small CHW AHU's (<6,000 CFM)	4	$1,500	$6,000
Fan Coil Units	10	$125	$1,250
Air-Source Heat Pump Plant	1	$7,500	$7,500
		TOTAL	**$74,000**

Option 4 - Geothermal Heat Pump Plant Displacement

Unit Type	Quantity	Cost/Unit	Annual Cost
VAV Box	150	$50	$7,500
Terminal Equipment (CUH's, UH's, RP's, etc.)	167,000	$0.05	$8,350
Water Treatment	167,000	$0.125	$20,875
ATC Controls	167,000	$0.10	$16,700
Large CHW AHU's (>6,000 CFM)	5	$2,000	$10,000
Small CHW AHU's (<6,000 CFM)	4	$1,500	$6,000
Fan Coil Units	10	$125	$1,250
Geothermal Plant	1	$5,000	$5,000
		TOTAL	**$75,675**

ENERGY MODEL OUTPUTS



1. Annual Costs

Component	Annual Cost ($)	($/sqft)	Percent of Total (%)

APPENDIX:
2022 GEOTHERMAL FEDERAL TAX CREDIT REFERENCES

CLIMATEMASTER
A NIBE GROUP MEMBER

IRA 2023

COMMERCIAL GEOTHERMAL

Tax Guide 2023

INFLATION REDUCTION ACT OF 2022 (IRA)

The Inflation Reduction Act of 2022 (IRA) substantially extends and enhances the federal income tax credits and incentives available for the installation of geothermal heat pump (GHP) energy property in commercial buildings, including the introduction of a new direct payment option for non-taxable entities. For taxable businesses, there are also new carryback and transfer provisions along with a continuation of the accelerated depreciation benefits. These new incentives are unfortunately more complex in structure. This guide is designed to provide a detailed review of the new tax and depreciation incentives available for commercial GHP energy property under the IRA.

Federal Income Tax Credits:

- Investment tax credit (ITC) up to 30% of system cost basis
- Domestic content bonus tax credit up to 10% of system cost basis
- Energy community bonus tax credit up to 10% of system cost basis
- Direct-pay option for non-taxable entities
- No cap on total credit amount
- Can be used to offset AMT tax
- Can be used in more than one year
- Can be carried back up to 3 years or transferred/sold to an unrelated party
- Can be combined with solar and other clean energy tax credits

Accelerated Depreciation:

- 5-year MACRS depreciation of system cost basis (less ½ of tax credit)
- Eligible for first-year bonus depreciation

Eligibility:

- Building located in U.S.
- Original use begins with taxpayer
- Construction commenced before 1/1/2035

Business Energy Investment Tax Credit

The business ITC for geothermal heat pump property was originally enacted in the Energy Improvement and Extension Act of 2008. This legislation added geothermal heat pumps to the definition of energy property under section 48(a) of the Internal Revenue Code with a 10% tax credit. This credit was extended by Bipartisan Budget Act of 2018 and most recently enhanced and further extended by the IRA of 2022. Effective 1/1/2023, there is now a 2-tier structure in place with a base credit rate of 6% and an increased rate of 30% if any one of the following criteria are met:

1. The maximum net output capacity of the GHP project is less than 1 megawatt (3.4 million Btu/h) of thermal energy. The Geothermal Exchange Organization (GEO) has submitted analysis that equates this to a total installed system capacity of 445 tons for distributed zone-level GHPs or 285 tons for central plant GHPs. The Department of Treasury is currently developing guidance.
2. The project is installed under specific prevailing wage and apprenticeship requirements. The IRS issued guidance for these requirements in Notice 2022-61 on 11-30-2022.
3. Construction of the project was commenced prior to 1-29-2023.

The ITC for GHP energy property is effective for projects that commence construction prior to 1/1/2035. In 2033 the base rate drops to 5.2% and the increased rate to 26%, while in 2034 they decline to 4.4% and 22% respectively.

Domestic Bonus Tax Credit

The domestic content bonus requires that any steel, iron, or manufactured product that is part of the GHP project at time of completion be produced in the United States. There is a 2-tier structure in place with a base credit rate of 2% and an increased rate of 10% that is based on the same criteria as for the ITC outlined above.

For purposes of this bonus, steel and iron used in the GHP project must be produced in the United States. This requirement applies to construction materials made primarily of steel or iron, but not to steel or iron used as components or sub-components of other manufactured products. Manufactured products are deemed to have been manufactured in the United States if at least 40% of the total cost of the incorporated components and subcomponents are mined, produced, or manufactured in the United States. The percentage of domestic content required for manufactured products increases to 45% for projects that begin construction in 2025, 50% for projects that begin construction in 2026, and 55% for projects that begin construction after 2026. GHP projects certainly appear to be able meet these requirements, however the Department of Treasury is developing necessary guidance.

The Domestic Content Bonus is not available for GHP projects completed before 1/1/2023

Direct Pay

Non-taxable entities have historically been unable to use the ITC. To address this, the IRA creates a new direct pay mechanism that, in effect, provides a refundable credit equal to the GHP project ITC with any domestic content bonus. Entities eligible include tax exempt organizations, a State or political subdivision thereof, the Tennessee Valley Authority, Indian tribal governments, Alaska Native Corporations, and rural electric cooperatives. Examples of these entities include charities, churches, foundations, state and local government buildings, schools, universities, and other nonprofits.

Direct pay is available for GHP projects that are placed in service after 12/31/2022.

Transfer or Sale of Tax Credit

Taxpayers may transfer the ITC including any domestic content bonus to an unrelated taxpayer. Consideration must be paid in cash, is not included in the income of the transferor, and is not deductible to the transferee. The transferee shall be treated as the taxpayer for all purposes with respect to the credit. For GHP energy projects held by a partnership, only the partnership can elect to transfer the eligible credits, not the individual partners. Direct pay is available for GHP projects that are placed in service after 12/31/2022.

Credit Carryback

The IRA extends the ITC carryback period to 3 years. The credit must originate in a tax year that begins after 12/31/2022. Any unused portion of the credit can also be carried forward.

Depreciation of Energy Property

Energy property is classified as a 5-year property in section 168(e) (3)(B)(vi) of the Internal Revenue Code, meaning the cost of the property can be deducted on an accelerated MACRS basis. For depreciation purposes, the system cost basis must be reduced by one half of the energy tax credit. In the example of a C-corporation in a 26% overall (federal plus state) tax bracket receiving a 40% ITC (includes the domestic content bonus), MACRS depreciation provides an additional tax savings equal to 20.8% of the energy property basis over the first 5 years, or optionally most within the first year. By comparison, conventional heating and cooling systems are generally depreciated on a 39-year straight line basis and would provide only 3.33% of the basis in tax savings over the first 5 years. The tax benefits for pass-through entities such as S-corporations could be much higher due to the higher marginal tax rates for individuals.

Energy property is eligible for first year bonus depreciation. The bonus allowance is 100% in 2022, 80% in 2023, 60% in 2024, 40% in 2025, 20% in 2026 and phases out in 2027. Refer to IRS Publication 946 for more information regarding how to depreciate property.

Eligible Geothermal Heat Pump Energy Property

The tax credit may be claimed for spending on equipment which uses the ground or ground water as a thermal energy source to heat a structure or as a thermal energy sink to cool a structure. The structure must be located in the United States. Spending includes costs of installation.

The credit cannot be claimed for spending on equipment used solely for a purpose other than heating or cooling a structure or on previously used equipment.

Construction Commenced Requirement

The credit can be claimed on spending for projects on which construction has commenced prior to January 1st, 2035. There is no time limit on when the construction must be completed for GHP energy projects. See IRS Notice 2018-59 for methods of establishing the commencement of construction.

System Cost Basis

The cost basis includes the direct costs associated with the purchase and installation of the energy property as well as any indirect costs that may be partly or fully allocable to its construction (including taxes). This includes equipment such as ground heat exchangers or wells, distribution piping and ductwork, pumps, GHPs and controls along with the associated installation labor and materials. The basis also generally includes those portions of the electrical, plumbing, design and GC fees that are specifically associated with the geothermal property. Utility rebates usually reduce the basis. See the uniform capitalization rules of IRS section 263A.

Dual Use Property Hybrid GHP Systems

If a GHP energy property contains a source of energy other than from the ground or ground water, portions of the system that carry both forms of energy may be considered dual use equipment. This would typically be equipment such as ductwork downstream of the GHP. The presence of an auxiliary energy source solely for emergency back-up purposes is not considered in this determination. Otherwise, if more than 25% of the annual energy (not peak energy) comes from the auxiliary source, any dual use equipment in the system may no longer be eligible for inclusion in the ITC cost basis. These comments are based on an interpretation of a 1979 code definition of energy property for direct use geothermal energy such as hot water for heating. There have been no further guidelines published by the IRS since that time. The IRS may not apply this language in this same way to GHP energy property and, as such, this interpretation is offered on a precautionary basis for those developing hybrid GHP energy projects. See 26 CFR 1.48-9 - Definition of energy property.

Energy Credit and AMT

The ITC can be used to offset both regular income taxes and alternative minimum taxes (AMT).

Ownership Considerations

Geothermal energy property ITC credits and depreciation deductions can only be claimed by the owner of the eligible property, including utilities that own energy property. At present, business models as used by the solar industry where a third-party owner (TPO) leases or sells energy from an energy property to a consumer are prohibited for GHP property due to IRS rules related to "limited use." The issue is the non-removable geothermal loop being dedicated to a single customer, in effect making the TPO a lender rather than a true owner. GEO is working with Treasury to develop a work around.

Energy Communities

The law includes an additional bonus credit of 10% (or 2% for projects over 1MW that don't meet prevailing wage/apprenticeship requirements) for Section 48 technologies that are installed in "energy communities." Energy communities are defined as:

- Census tract or adjoining tract with coal mine closed since 2000, or
- Census tract or adjoining tract with coal plant closed since 2010, or
- Defined as "a brownfield site" by the EPA, or
- a metropolitan or non-metropolitan statistical area where 0.17% or more direct employment, or at least 25% of local tax revenues, are related to extraction, processing, transport, or storage of coal, oil, or natural gas, and unemployment is at or above the national average in the previous year

Claiming the Credit

IRS Form 3468 is used to claim the Energy Credit. Visit www.irs.gov to download the latest tax form and instructions.

Clean Energy Tax Incentives: Elective Pay Eligible Tax Credits

The Inflation Reduction Act of 2022 ("IRA") makes several clean energy tax credits available to businesses; tax-exempt organizations; state, local, and tribal governments; other entities; and individuals. The IRA also enables entities to take advantage of certain clean energy tax credits through its elective pay provision (also colloquially known as direct pay). Elective pay allows several types of entities, such as tax-exempts and governments, to treat the amount of certain credits as a payment against tax on their tax returns and as a result receive direct payments for certain clean energy tax credits.

	Tax Provision	Description
Energy Generation & Carbon Capture	**Production Tax Credit for Electricity from Renewables** (§ 45, pre-2025)	**For production of electricity from eligible renewable sources**, including wind, biomass, geothermal, solar, small irrigation, landfill and trash, hydropower, marine and hydrokinetic energy. **Credit Amount (for 2022):** 0.55 cents/kilowatt (kW); (1/2 rate for electricity produced from open loop biomass, landfill gas, and trash); 2.75 cents/kW if Prevailing Wage and Apprenticeship (PWA) rules are met [1,2,3,7]
	Clean Electricity Production Tax Credit (§ 45Y, 2025 onwards)	**Technology-neutral tax credit for production of clean electricity**. Replaces § 45 for facilities that begin construction and are placed in service after 2024. **Credit Amount:** Starts in 2025, consistent with credit amounts under section 45 [1,2,3,6,7]
	Investment Tax Credit for Energy Property (§ 48, pre-2025)	**For investment in renewable energy projects** including fuel cell, solar, geothermal, small wind, energy storage, biogas, microgrid controllers, and combined heat and power properties **Credit Amount:** 6% of qualified investment (basis); 30% if PWA requirements met [1,4,5,6,8]
	Clean Electricity Investment Tax Credit (§ 48E, 2025 onwards)	**Technology-neutral tax credit for investment in facilities that generate clean electricity** and qualified energy storage technologies. Replaces § 48 for facilities that begin construction and are placed in service after 2024 **Credit Amount:** 6% of qualified investment (basis); 30% if PWA requirements met [1,4,5,6]
	Low-Income Communities Bonus Credit (§ 48(e), 48E(h)) Application required	**Additional investment tax credit for small-scale solar and wind (§ 48(e)) or clean electricity (§48E(h)) facilities** (<5MW net output) on Indian land, federally subsidized housing, in low-income communities, and benefit low-income households. Allocated through an application process. **Credit Amount:** 10 or 20 percentage point increase on base investment tax credit [7]
	Credit for Carbon Oxide Sequestration (§ 45Q)	**Credit for carbon dioxide sequestration** coupled with permitted end uses in the United States. **Credit Amount:** $12-36 per metric ton of qualified carbon oxide captured and sequestered, used as a tertiary injectant, or used, depending on the specified end use; $60-$180 per metric ton if PWA requirements met.[1,7]
	Zero-Emission Nuclear Power Production Credit (§ 45U)	**For electricity from nuclear power facilities.** Facilities in operation prior to August 16, 2022. **Credit Amount (for 2023):** 0.3 cents/kWh (reduced rate for larger facilities); 1.5 cent/kWh if PW req's met [1,7]
Manufacturing	**Advanced Energy Project Credit** (§ 48C) Application required	**For investments in advanced energy projects.** A total of $10 billion will be allocated, not less than $4 billion of which will be allocated to projects in certain energy communities. **Credit Amount:** 6% of taxpayer's qualified investment; 30% if PWA requirements are met [1]
	Advanced Manufacturing Production Credit (§ 45X)	**Production tax credit for domestic clean energy manufacturing** of components including solar and wind energy, inverters, battery components, and critical materials. **Credit Amount:** Varies by component
Vehicles	**Credit for Qualified Commercial Clean Vehicles** (§ 45W)	**For purchasers of commercial clean vehicles**. Qualifying vehicles include passenger vehicles, buses, ambulances, and certain other vehicles for use on public streets, roads, and highways. **Credit Amount:** Up to $40,000 (max $7,500 for vehicles <14,000 lbs) [9]
	Alternative Fuel Vehicle Refueling Property Credit (§ 30C)	**For alternative fuel vehicle refueling and charging property**, located in low-income and non-urban areas. Qualified fuels include electricity, ethanol, natural gas, hydrogen, and biodiesel. **Credit Amount:** 6% of basis for businesses and can increase to 30% if PWA is met.
Fuels	**Clean Hydrogen Production Tax Credit** (§ 45V)	**For producing clean hydrogen** at a qualified, U.S.-based clean hydrogen production facility. **Credit Amount:** $0.60/kg multiplied by the applicable percentage (20% to 100%, depending on lifecycle greenhouse gas emissions), amount increases if PWA is met [1,7]
	Clean Fuel Production Credit (§ 45Z, 2025 onwards)	**Technology neutral tax credit for domestic production of clean transportation fuels**, including sustainable aviation fuels, beginning in 2025* **Credit Amount:** $0.20/gallon ($0.35/gal for aviation fuel) multiplied by CO2 "emissions factor"; $1.00/gallon ($1.75/gal for aviation fuel) multiplied by CO2 "emissions factor" if PWA is met [1,7]

Please see the notes on the next page or see IRS.gov/cleanenergy for more information.

Notes:

The information in this document may be subject to change as guidance is issued or finalized. For all IRA clean energy tax credits, please see **irs.gov/cleanenergy** for further details and eligibility requirements.

[1] Credit is increased by 5 times for projects that pay prevailing wages and use registered apprentices. Apprenticeship requirements do not apply for §§ 45L and 45U. Prevailing wage and apprenticeship requirements do not apply to certain projects, including certain projects of less than 1 megawatt or those that began construction prior to January 29, 2023.

[2] Credit is increased by 10% if the project meets certain domestic content requirements for steel or iron, and manufactured products.

[3] Credit is increased by 10% if located in an energy community.

[4] Credit is increased by up to 10 percentage points for projects meeting certain domestic content requirements for steel, iron, and manufactured products.

[5] Credit is increased by up to 10 percentage points if located in an energy community.

[6] Section 168(e) provides favorable depreciation treatment for facilities or property qualifying for this tax credit. These facilities or property will be treated as a 5-year property for purposes of cost recovery, leaving them with lower taxable income in the earlier years of a clean energy investment.

[7] Credit rate is adjusted annually for inflation.

[8] See section 48 for more detail and applicable exceptions to the credit rate.

[9] The entities eligible for elective pay of the commercial clean vehicle credit is a subset of the entities eligible for elective pay of other credits. In addition, starting January 1, 2024, the amount of a new clean vehicle or previously owned clean vehicle tax credit (but not a commercial clean vehicle credit) can be transferred to a dealer for an equivalent reduction in the eligible vehicle's sales price.

AVAILABLE PROJECT INFORMATION

PART 1 GENERAL

1.01 EXISTING CONDITIONS

A. Certain information relating to existing surface and subsurface conditions and structures is available to bidders but will not be part of Contract Documents, as follows:

1. Geotechnical Report: Prepared by Lahlaf Geotechnical Consulting, Inc., entitled Preliminary Geotechnical Report, and dated December 10, 2024.
   a. A copy of the full report, consisting of 66 pages, follows this section.
   b. This report, by its nature, cannot reveal all conditions that exist on the site. If subsurface conditions are found to vary substantially from this report, changes in the design and construction of foundations will be made, with resulting credits or expenditures to the Contract Price.
2. Hazardous Material Survey: Prepared by Universal Environmental Consultants, entitled Hazardous Materials Determination Survey, and dated October 10, 2023.
   a. A copy of the full report, consisting of 21 pages, follows this section.
3. Geoenvironmental Study: Prepared by PEER Consultants, P.C., entitled Limited Subsurface Soil Investigation Memorandum, and dated November 15, 2024.
   a. A copy of the full report, consisting of 81 pages, follows this section.
4. Traffic Study: Prepared by Nitsch Engineering, entitled Traffic Impact Study, and dated December 9, 2024.
   a. A copy of the full report, consisting of 864 pages, is available for review.

Re: **Preliminary Geotechnical Report**
Proposed Wildwood Early Childhood Center
North Intermediate School – 320 Salem Street Site
Wilmington, MA
LGCI Project No. 2437

Dear Ms. Philip:

Lahlaf Geotechnical Consulting, Inc. (LGCI) has completed a preliminary geotechnical study for the proposed Wildwood Early Childhood Center in Wilmington, Massachusetts. We are submitting our preliminary geotechnical report electronically. Please notify us if you need a hard copy.

The soil samples from our explorations are currently stored at LGCI for further analysis, if requested. Unless notified otherwise, we will dispose of the soil samples after three (3) months.

Thank you for choosing LGCI as your geotechnical engineer.

Very truly yours,

Lahlaf Geotechnical Consulting, Inc.

Abdelmadjid M. Lahlaf, Ph.D., P.E.
Principal Engineer

1. PROJECT INFORMATION

1.1 Project Authorization

This geotechnical report presents the results of the subsurface explorations and a geotechnical evaluation performed by Lahlaf Geotechnical Consulting, Inc. (LGCI) for the proposed Wildwood Early Childhood Center in Wilmington, Massachusetts. We performed our services in general accordance with our proposal No. 24084 dated August 9, 2024, and proposal No. 24107 dated October 15, 2024. Ms. Rani Philip of Dore and Whittier Architects, Inc. (Dore and Whittier) authorized our services by signing our proposals Nos. 24084 and 24107 on August 9, and October 15, 2024, respectively.

1.2 Purpose and Scope of Services

The purpose of our geotechnical services was to perform preliminary subsurface explorations at the site for the proposed Wildwood Early Childhood Center, and to provide preliminary foundation design and construction recommendations. LGCI performed the following services:

- Coordinated our exploration locations with Dore and Whittier and with school staff.
- Marked the exploration locations at the site and notified Dig Safe Systems Inc. (Dig Safe) and the Town of Wilmington for utility clearance.
- Engaged a drilling subcontractor for two (2) days to advance eight (8) soil borings at the site.
- Coordinated with Dore and Whittier who arranged with the Town of Wilmington's Department of Public Works (DPW) to perform five (5) test pits at the site, as requested by the civil engineer.
- Provided an LGCI geotechnical field representative at the site to coordinate and observe the borings and test pits, describe the soil samples, and prepare field logs. The LGCI representative performed four (4) double ring infiltrometer tests within test pits TP-1, TP-2, TP-3, and TP-4.
- Submitted six (6) soil samples for laboratory tests, including two (2) soil samples from the borings, and four (4) samples from the test pits where double ring infiltrometer tests were performed.
- Prepared this preliminary geotechnical report containing the results of our preliminary subsurface explorations and our preliminary recommendations for foundation design and construction.

Our scope does not include preparing specifications, reviewing contract documents, and providing construction services. LGCI would be pleased to perform these services when needed. Recommendations for stormwater management, erosion control, pavement design, slope stability analyses, site specific seismic and liquefaction analyses, pile analysis and design, FEMA 100-year flood elevation, historic uses of site, contaminated soil and groundwater treatment and disposal requirements and techniques, and cost or quantity estimates are not included in our scope of work.

LGCI's scope of services does not include an environmental assessment for the presence or absence of wetlands or analytical testing for hazardous or toxic materials in the soil, surface water, groundwater, or air, on or below or around this site, or mold in the soil or in any structure at the site. Any statements regarding odors, colors, or unusual or suspicious items or conditions are strictly for the information of the client.

1.3 Site Description

Our understanding of the site is based on our field observations, our discussions with Dore and Wittier, and on the following document:

- Drawing EX-1 titled: "Existing Conditions Plan, 320 Salem Street, Wilmington, Massachusetts," (Existing Conditions Plan) prepared by Nitsch Engineering, dated October 24, 2024, and provided to LGCI by Dore and Whittier via e-mail on November 11, 2024.

The North Intermediate School site is located at 320 Salem Street in Wilmington, Massachusetts as shown in Figure 1. The site is bordered by private residential properties and Salem Street on the southern side, by Ballardvale Street on the eastern side, and by private properties on the western and northern sides. The site is occupied by the existing school building, a drop off loop, a paved parking lot, a playground, a basketball court and tennis courts, and athletic fields, including a baseball field and a soccer field.

Based on the Existing Conditions Plan, the grades at the site generally range between El. 90 feet and El. 108 feet, generally rising in the north to south direction.

1.4 Project Description

Our understanding of the proposed construction is based on our discussions with Dore and Whittier and on the following drawing:

- "Site Base Condition, Wilmington Schools, North Intermediate- Wilmington, MA," (Site Base Conditions) prepared by Dore and Whittier, undated, and provided to LGCI by Dore and Whittier on October 11, 2024.

We understand that at this time, the size, layout, and location of the proposed school are preliminary. Based on the Site Base Conditions, the proposed school will have an irregular shape

and will have a footprint of about 80,500 square feet. The proposed building will be located in the area of the existing athletic fields north of the existing building. We understand that the existing building will be demolished to allow for the construction of the proposed athletic fields.

Information about the proposed building finished floor elevation (FFE) and the proposed grading are not available at the time of this report.

1.5 Elevation Datum

We understand that the elevations provided in the Existing Conditions Plan are referenced with respect to the North American Vertical Datum of 1988 (NAVD 1988).

2. SITE AND SUBSURFACE CONDITIONS

2.1 Surficial Geology

LGCI reviewed a surficial geologic map titled: "Surficial Materials Map of Wilmington Quadrangle, Massachusetts," prepared by Byron D. Stone, J.R. and DiGiacomo-Cohen, M.L., Scientific Investigation Map 3402, Quadrangle 113 – Wilmington, 2018.

The surficial geologic map of the site indicates that the natural soils in the general vicinity of the site consist of coarse deposits.

The coarse deposits consist of sand, sand and gravel, and gravel deposits as described below.

Sand Deposits – The sand deposits are comprised mostly of fine to coarse sand. Coarser layers may contain up to 25 percent gravel. Finer layers may contain fine sand, silt, and clay.

Sand and Gravel Deposits – The sand and gravel deposits occur as a mixture of gravel and sand within individual layers and as alternating layers of sand and gravel. The sand and gravel layers range between 25 to 50 percent gravel and 50 to75 percent sand.

Gravel Deposits – The gravel deposits are comprised of at least 50 percent gravel, cobbles, and boulders. Sand occurs within gravel beds and as separate layers within the gravel.

The surficial geologic map also shows swamp deposits not far from the site.

Swamp Deposits – the swamp deposits consist of organic muck and peat that contain minor amounts of sand, silt, and clay, are stratified and poorly sorted, and occur in swamps and freshwater marshes, in kettle depressions, or in poorly drained areas.

The Surficial Geologic Map is shown in Figure 2.

2.2 LGCI's Explorations

2.2.1 General

LGCI coordinated our exploration locations with Dore and Whittier and marked the exploration locations in the field. LGCI notified Dig Safe and the Town of Wilmington for utility clearance prior to starting our explorations at the site.

Unless notified otherwise, we will dispose of the soil samples obtained during our explorations after three (3) months.

2.2.2 LGCI's Soil Borings

LGCI engaged Soil X, Corp. (Soil X) of Leominster, Massachusetts to advance eight (8) soil borings (B-1 to B-8) at the site on October 28 and 29, 2024. The borings were advanced with a Diedrich D-70 Turbo ATV Drill Rig using hollow stem auger boring techniques with 4-1/4-inch inner diameter augers. The borings extended to depths ranging between 10.2 and 20.2 feet beneath the ground surface. Upon completion, the boreholes were backfilled with drill cuttings.

Soil X performed Standard Penetration Tests (SPT) and obtained split spoon samples with an automatic hammer at typical depth intervals of 2 feet or 5 feet as noted on the boring logs in general accordance with ASTM D-1586.

An LGCI geotechnical field representative observed and logged the borings in the field.

2.2.3 LGCI's Test Pits

Dore and Whittier coordinated with the Town of Wilmington DPW to perform five (5) test pits (TP-1, TP-2, TP-2A, TP-3, and TP-4) at the site on October 30 and 31, 2024. The purpose of the test pits was to perform double ring infiltrometer tests as described in Section 2.6. The test pits were excavated with a Volvo EWR150E excavator with a smooth-edge bucket. The test pits extended to depths ranging between 8.0 and 11.3 feet beneath the ground surface. Upon completion, the excavations were backfilled with excavated material in 12- to 18-inch lifts and tamped with the excavator bucket.

An LGCI geotechnical field representative observed and logged the test pits in the field.

2.2.4 Exploration Logs and Locations

The boring and test pit locations are shown in Figure 3A and Figure 3B. Appendices A and B contain LGCI's boring logs and test pits logs, respectively, and Tables 1 and 2 include summaries of LGCI's borings and test pits, respectively.

2.3 Subsurface Conditions

The subsurface description in this report is based on a limited number of explorations and is intended to highlight the major soil strata encountered during our explorations. The subsurface conditions are known only at the actual exploration locations. Variations may occur and should be expected between exploration locations. The exploration logs represent conditions that we observed at the time of our explorations and were edited, as appropriate, based on the results of the laboratory test data and inspection of the soil samples in the laboratory. Percentages of fines, sand, and gravel were estimated to the nearest 5 percent based on our field observations and laboratory inspection of the soil samples, except where a grain-size analysis was performed. The

strata boundaries shown in our exploration logs are based on our interpretations and the actual transitions may be gradual. Graphic soil symbols are for illustration only.

The soil strata encountered in LGCI's borings and test pits were as follows, starting at the ground surface.

Topsoil – A layer of surficial organic topsoil was encountered at the ground surface in borings B-1 to B-7, and in all test pits. The thickness of the topsoil ranged between 0.6 feet and 2.0 feet.

Fill – A layer of fill was encountered at the ground surface in boring B-8 and beneath the topsoil in all borings and test pits. The fill extended to depths ranging between 0.7 and 7.0 feet beneath the ground surface. The samples within this layer were mostly described as well graded sand, poorly graded sand, and silty sand. The fines content in the fill ranged between 0 and 30 percent, and the gravel content ranged between 0 and 25 percent. The fill contained traces of organic soil and roots. The fill contained 5 to 10 percent cobbles up to 12 inches in size in test pit TP-1.

The SPT N-values in this layer ranged between 7 blows per foot (bpf) and 54 bpf, with most values lower than 18 bpf, indicating mostly loose to medium dense material.

The excavation efforts within the fill layer ranged between easy, moderate, and difficult.

Buried Organic Soil – A layer of buried organic soil was encountered beneath the fill layer in borings B-2, B-5, and B-7 The buried organic soil extended to depths of 4.0, 4.4, and 8.0 feet beneath the ground surface in borings B-2, B-5, and B-7, respectively. The samples in this layer were described as silty sand. The fines content in the buried organic soil ranged between 25 and 45 percent. The buried organic soil contained traces of organic soil and roots.

The SPT N-values in this layer ranged between 16 bpf and 40 bpf, indicating medium dense to dense material.

Buried Subsoil – A layer of buried subsoil was encountered beneath the fill in boring B-8 and test pit TP-4. The subsoil extended to depths of 4.0 and 3.2 feet beneath the ground surface in boring B-8 and test pit TP-4, respectively. In boring B-8, the samples were described as silty sand. The fines content in the subsoil ranged between 15 and 35 percent, and the gravel content ranged between 0 and 15 percent. In test pit TP-4, the sample was described as poorly graded sand. The fines content ranged between 10 and 15 percent, and the gravel content ranged between 0 and 5 percent. The samples contained traces of organic soil and roots.

The SPT N-values in this layer ranged between 11 bpf and 14 bpf, indicating a medium dense material.

The excavation effort within the subsoil layer was easy, consistent with loose to medium dense material.

Silt – A layer of silt was encountered beneath the fill layer in boring B-1 and extended to a depth of 9.0 feet beneath the ground surface. The sample was described as silt and was slightly plastic. The sand content ranged between 5 and 10 percent.

The SPT N-value in this layer was 13 bpf, indicating stiff material.

Clay – A layer of clay was encountered beneath the layer of silt in boring B-1 between depths of 9.0 to 14.0 feet. The sample was described as lean clay and was slightly plastic. The sand content ranged between 15 and 20 percent.

The SPT N-value in this layer was 12 bpf, indicating stiff material.

Swamp Deposit – A layer of swamp deposits was encountered beneath the layer of fill in test pit TP-1 and extended to a depth of 10 feet beneath the ground surface. The sample was described as silty sand. The fines content ranged between 20 and 25 percent and the gravel content ranged between 10 and 15 percent. The swamp deposit had traces of organic soil, roots, and an organic odor.

The excavation effort within the swamp deposit layer was difficult possibly due to the presence of roots.

Sand – A layer of sand was encountered in test pit TP-1 and extended to a depth of 11.0 feet beneath the ground surface. The sand was described as poorly graded sand. The fines content ranged between 0 and 5 percent.

The excavation effort within the sand layer was difficult.

Sand and Gravel – A layer of sand and gravel was encountered in all borings and test pits, except in test pit TP-1, and extended to the termination depths of the borings and test pits, except for boring B-6 where the sand and gravel layer extended to the top of weathered rock. The samples in this layer were mostly described as well graded sand and silty sand. Five (5) samples were described as poorly graded sand. The fines content in this layer ranged between 0 and 25 percent, and the gravel content ranged between 0 and 40 percent.

The SPT N-values in this layer ranged between 15 bpf and refusal, with most values ranging between 20 bpf and 67 bpf, indicating dense to very dense material. Please note that the high SPT N-values in the sand and gravel may be due to obstructions such as cobbles and boulders in the sand and gravel and may not represent the true density of the sand and gravel.

Weathered Rock – A layer of weathered rock was encountered in boring B-6 and extended to the termination depth of 19.7 feet beneath the ground surface. The sample within this layer was described as silty sand. The fines content ranged between 15 and 20 percent, and the gravel content ranged between 35 and 40 percent.

2.4 Groundwater

Groundwater was encountered in all the borings, except for B-3, and in test pits TP-1 and TP-2A, at depths ranging between 9.0 and 14.0 feet beneath the ground surface, as shown in Tables 1 and 2, and in the boring and test pit logs.

The groundwater information reported herein is based on observations made during or shortly after the completion of drilling and excavation. The reported groundwater levels may not represent the actual groundwater conditions, as additional time may be required for the groundwater levels to stabilize. The groundwater information presented in this report only represents the conditions encountered at the time and location of the explorations. Seasonal fluctuation should be anticipated.

2.5 Laboratory Test Data

LGCI submitted six (6) soil samples collected from the borings for grain-size analysis. The results of the grain-size analyses are provided in the test data sheets included in Appendix C and are summarized in the table below.

Grain-Size Analysis Test Results

Exploration No.	Sample No.	Stratum	Sample Depth (ft.)	Percent Gravel	Percent Sand	Percent Fines
B-1	S2	Fill	2.0 – 4.0	36.5	43.5	20.0
B-4	S2	Sand and Gravel	2.0 – 4.0	36.9	42.6	20.5
TP-1	Infiltrometer	Fill	5.0	14.1	58.9	27.0
TP-2	Infiltrometer	Fill	4.0	6.8	77.3	15.9
TP-3	Infiltrometer	Sand and Gravel	4.0	31.4	67.1	1.5
TP-4	Infiltrometer	Sand and Gravel	4.6	30.4	58.6	11.0

2.6 Double Ring Infiltrometer Tests

LGCI provided a geotechnical field engineer to perform four (4) double ring infiltrometer tests in test pits TP-1 to TP-4 (one in each).

In each case, the excavation was first advanced to the test depth where the test pit bottom was leveled using the excavator bucket. After the infiltrometer rings were driven into the ground, the test was conducted by filling the rings with water. The test pit was advanced deeper after the completion of the test.

The test results are included in Appendix D and are summarized below.

The results include plots of the hydraulic conductivity for flow within the inner and outer rings. The stabilized portion of the plot for the inner ring indicates the permeability value. The results indicate the following approximate permeability, K, value:

Double Ring Infiltrometer Test Results

Test Pit	Stratum	Test Depth (ft.)	Permeability, K (cm/sec)
TP-1	Fill	5.0	1.00×10^{-3}
TP-2	Fill	4.0	4.06×10^{-3}
TP-3	Sand and Gravel	4.0	6.73×10^{-2}
TP-4	Sand and Gravel	4.5	8.95×10^{-2}

3. EVALUATION AND RECOMMENDATIONS

3.1 Foundation Recommendations

3.1.1 General

Based on the results of the borings and test pits, the subsurface conditions at the site are suitable to support the proposed building after the topsoil, existing fill, buried organic soil, buried subsoil, and swamp deposits are removed or improved as described below. There are a few issues that we would like to highlight for consideration and discussion.

3.1.2 Topsoil, , Existing Fill Buried Organic Soil, Buried Subsoil, and Swamp Deposits

- The topsoil should be removed from within the entire construction area, including the proposed building footprint and the proposed paved areas.

- The existing fill was observed to be variable in composition and density. The existing fill contained traces of organic soil and roots. In addition, the existing fill overlaid buried organic soil and buried subsoil. Existing fill that was not placed with strict moisture, density, and gradation control presents risk of unpredictable settlement that may result in poor performance of floor slabs and foundations. Due to these risks, the existing fill, the buried organic soil, and the buried subsoil should be entirely removed from within the proposed building's footprint and should be replaced with Structural Fill. We anticipate that the removal will extend up to depths ranging between 2 and 6 feet beneath the existing ground surface, and up to a depth of 8 feet beneath the ground surface near boring B-7. The removal may extend to greater depths at locations not explored by LGCI. Laterally, the removal should extend beyond the proposed building's footprint a distance equal to the distance between the bottom of the proposed footings and the top of the native sand and gravel, or 5 feet, whichever is greater.

- At test pit TP-1, performed outside of the proposed building footprint, swamp deposits were observed beneath the existing fill and extended to a depth of 10 feet beneath the ground surface. If encountered within the proposed building footprint, the swamp deposits should be removed and replaced with Structural Fill.

- After the topsoil, existing fill, buried organic soil, buried subsoil, and swamp deposits, if any, are removed from within the proposed building footprint and zone of influence of footings, as described above, the proposed building and other structures may be supported on shallow footings bearing in Structural Fill placed directly on top of the native sand and gravel or stiff silt and clay.

- As an alternative to the removing the existing fill, the buried organic soil, and the buried subsoil we considered the option of improving the ground using aggregate piers (APs) or

rigid inclusions (RIs). We dismissed this option due to the depth to the bottom of these layers being 6 feet or less in a few explorations. We will reconsider this option after additional explorations are performed at the site during future phases of the project.

- The subgrade of footings should be prepared in accordance with the recommendations in Section 4.1.

- The proposed slab may be designed as a slab-on-grade bearing on Structural Fill placed directly on top of the native sand and gravel or stiff silt and clay.

- Within paved areas, the existing fill and the buried organic soil and buried subsoil should be removed to the top of the native sand and gravel or stiff silt and clay or to a depth of 18 inches beneath the bottom of the proposed pavement, whichever occurs first. Where soft organic soil is exposed, the organic soil should be removed. The existing fill and buried organic soil and buried subsoil deeper than 18 inches beneath the bottom of the proposed pavement can remain in place provided that these materials are firm and unyielding following proofrolling as described in Section 4.1.

3.1.3 Additional Explorations

We recommend advancing additional explorations at the site during the schematic design (SD) phase and/or the design development (DD) phase. The additional explorations should include soil borings and test pits. We recommend installing at least one (1) groundwater observation well as part of the additional explorations.

3.2 Foundation Recommendations

We recommend supporting the proposed building on shallow footings placed on Structural Fill placed directly the native sand and gravel layer or the stiff silt and clay. Shallow foundations and slabs-on-grade should be placed on a subgrade that is prepared in accordance with the recommendations in this report. Recommendations for footing design and our settlement estimates are presented in Sections 3.2.1 and 3.2.2, respectively.

3.2.1 Footing Design

- Footings should be founded on Structural Fill placed directly on the native sand and gravel or on the stiff silt and clay. A representative of LGCI should observe the subgrade during construction to confirm that it is consistent with the materials encountered in our borings.

- For footing design, we recommend using a net allowable bearing pressure of 4 kips per square foot (ksf).

- The subgrade of footings should be prepared in accordance with the recommendations in Section 4.1.

- Foundations should be designed in accordance with The Commonwealth of Massachusetts State Building Code 780 CMR, Tenth Edition (MSBC 10th Edition).

- Exterior footings and footings in unheated areas should be placed at a minimum depth of 4.0 feet below the final exterior grade to provide adequate frost cover protection. Interior footings in heated areas may be designed and constructed at a minimum depth of 2 feet below finished floor grades.

- We recommend that wall footings have a minimum width of 2 feet, and that column footings have a minimum width of 3 feet. For foundations with a least lateral dimension smaller than 3 feet, the allowable bearing pressure should be reduced to 1/3 of the recommended allowable bearing pressure times the least dimension in feet.

- Wall footings should be designed and constructed with continuous, longitudinal steel reinforcement for greater bending strength to span across small areas of loose or soft soils that may go undetected during construction.

3.2.2 Settlement

Using the allowable bearing pressure of 4 ksf and the minimum footing sizes recommended above, we estimate for foundations constructed in accordance with the recommendations contained in this report that the total post-construction settlement will be less than about 1 inch and that the differential settlement will be 3/4 inch or less over a distance of 25 feet. Total and differential settlements of these magnitudes are usually considered tolerable for the anticipated construction. However, the tolerance of the proposed structure to the predicted total and differential settlements should be assessed by the structural engineer.

3.3 Concrete Slab Considerations

- The proposed floor slab can be constructed as a slab-on-grade bearing on a minimum of 12 inches of Structural Fill placed directly on top of the native sand and gravel.

- To reduce the potential for dampness in the proposed floor slab, the project architect may consider placing a vapor barrier beneath the floor slab. The vapor barrier should be protected from puncture during construction of the slab.

- For the design of the floor slab bearing on the materials described above, we recommend using a modulus of subgrade reaction, k_{s1}, of 100 tons per cubic foot (tcf). Please note that the values of k_{s1} are for a 1 x 1 square foot area. These values should be adjusted for larger areas using the following expression:

$$Modulus\ of\ Subgrade\ \text{Re}action\ (k_s) = k_{s1} * \left(\frac{B+1}{2B}\right)^2$$

where:

k_s = Coefficient of vertical subgrade reaction for loaded area,
k_{s1} = Coefficient of vertical subgrade reaction for 1 x 1 square foot area, and
B = Width of area loaded, in feet.

Please note that cracking of slabs-on-grade can occur as a result of heaving or compression of the underlying soil, but also as a result of concrete curing stresses. To reduce the potential for cracking, the precautions listed below should be closely followed for construction of all slabs-on-grade:

- Construction joints should be provided between the floor slab and the walls and columns in accordance with the American Concrete Institute (ACI) requirements, or other applicable code.

- Backfill in interior and exterior utility trenches should be properly compacted.

- In order for the movement of exterior slabs not to be transmitted to the building foundation or superstructure, exterior slabs such as approach slabs and sidewalks, should be isolated from the building superstructure.

3.4 Under-slab Drainage

Based on the groundwater levels observed in our borings, we believe that an under-slab drainage system is not required beneath the slab.

3.5 Seismic Design Criteria

In accordance with Section 1613 of MSBC 10th Edition and based on the boring data, the seismic criteria are as follows:

- Site Class: D
- Spectral Response Acceleration at short period, S_s (Table 1604.11): 0.327g
- Spectral Response Acceleration at 1 sec., S_1 (Table 1604.11): 0.072g
- Site Coefficient, F_a (Table 1613.3.3(1)): 1.6
- Site Coefficient, F_v (Table 1613.3.3(2)): 2.4
- Adjusted spectral response S_{ms} (Equation 16-37): 0.523g
- Adjusted spectral responses S_{m1} (Equation 16-38): 0.173g

Based on the SPT data from the borings, we believe the site soils are not susceptible to liquefaction.

3.6 Lateral Pressures for Wall Design

3.6.1 Lateral Earth Pressures

Based on our understanding, the proposed construction will not include retaining walls or below-ground walls. Should the design change, the lateral earth pressures recommended shown below should be used to design proposed retaining walls.

Coefficient of Active Earth Pressure, K_A:	0.33
Coefficient of At-Rest Earth Pressure, K_o:	0.50
Coefficient of Passive Earth Pressure, K_p:	3.0
Total Unit Weight γ:	125 pcf

Note: The values in the table are based on a friction angle for the backfill of 30 degrees and neglecting friction between the backfill and the wall. The design active and passive coefficients are based on horizontal surfaces (non-sloping backfill) on both the active and passive sides, and a vertical wall face.

- Exterior walls of below-ground spaces and retaining walls braced at the top to restrain movement/rotation, should be designed using the "at-rest" pressure coefficient.

- We recommend placing free-draining material within the 3 feet immediately behind retaining walls. We recommend providing weep holes in site walls to promote drainage where possible; or a pipe should be placed at the base of the wall to collect the groundwater. Groundwater collected by the wall drains should be discharged in a lower area if gravity flow is possible.

- Passive earth pressures should only be used at the toe of the wall where special measures or provisions are taken to prevent disturbance or future removal of the soil on the passive side of the wall, or in areas where the wall design includes a key. In any case, the passive pressures should be neglected in the top 2 feet.

- Where a permanent vertical uniform load will be applied on the active side immediately adjacent to the wall, a horizontal surcharge load equal to half of the uniform vertical load should be applied over the height of the wall. At a minimum, a temporary construction surcharge of 100 psf should be applied uniformly over the height of the wall.

- We recommend using an ultimate friction factor of 0.5 between the native sand and gravel or Structural Fill and the bottom of the wall. Below-grade walls should be designed for minimum factors of safety of 1.5 for sliding and 2.0 for overturning. We recommend a factor of safety of 1.5 for global stability of walls.

3.6.2 Perimeter Drains

- Should the design change to include retaining walls, free-draining material should be placed within 3 feet of retaining walls and walls of below-grade spaces. To reduce the potential for dampness in below-ground spaces, if any, perimeter walls of the proposed below-ground spaces should be damp-proofed.

- We recommend that drains be provided behind the exterior of walls of below-ground spaces, if any, and behind site retaining walls, if any. The drains should consist of 6-inch perforated PVC pipes installed with the slots facing down. Perimeter drains should be installed at the bottom of the wall in 18 inches of crushed stone wrapped in a geotextile fabric for separation and filtration. Site retaining walls may be designed with weep holes discharging near the bottom of the face of the walls.

- Groundwater collected by the wall drains could be discharged in a lower area if gravity flow is possible. Alternatively, it should be discharged into the street drains. A permit would be required for discharge into street drains.

3.7 Pavement and Sidewalk Considerations

3.7.1 General

The subsurface conditions encountered at the site are generally suitable to support the proposed driveways, parking lots, and sidewalks after preparation of the subgrade as described in Section 4.1.

- We recommend entirely removing the topsoil and asphalt from within the footprint of the proposed driveways and parking lots.

- The existing fill should be improved within the proposed paved areas and under sidewalks in accordance with the recommendations in Sections 3.1.1 and 4.1.

Cobbles and boulders should be removed to at least 18 inches below the bottom of the pavement and sidewalks.

3.7.2 Pavement Sections

A typical, minimum, standard-duty pavement section that could be used for parking areas is as follows:

1.5" Asphalt "Top Course"
2.0" Asphalt "Base Course"
8" Processed Gravel for Sub-Base (MassDOT M1.03.1)

A typical, minimum, heavy-duty pavement section that could be used for areas of heavy truck traffic is as follows:

2.0" Asphalt "Top Course"
2.5" Asphalt "Base Course"
12" Processed Gravel for Sub-Base (MassDOT M1.03.1)

The pavement sections shown above represent minimum thicknesses representative of typical local construction practices for similar use. Periodic maintenance should be anticipated.

Pavement material types and construction procedures should conform to specifications of the "Standard Specifications for Highways and Bridges," prepared by the Commonwealth of Massachusetts Department of Transportation dated 2023.

Areas to receive relatively highly concentrated, sustained loads such as dumpsters, loading areas, and storage bins are typically installed over a rigid pavement section to distribute concentrated loads and reduce the possibility of high stress concentrations on the subgrade. Typical rigid pavement sections consist of 6 inches of concrete placed over a minimum of 12 inches of subbase material.

3.7.3 Sidewalks

- Sidewalks should be placed on a minimum of 12 inches of Structural Fill with less than 5 percent fines.

- To reduce the potential for heave caused by surface water penetrating under the sidewalk, the joints between sidewalk concrete sections should be sealed with a waterproof compound. The sidewalks should be sloped away from the building or other vertical surfaces to promote flow of water. To the extent possible, roof leaders should not discharge onto sidewalk surfaces.

3.8 Underground Utilities

Boulders at the bottom of utility trenches should be removed to at least 12 inches below the pipe invert and the resulting excavation should be backfilled with suitable backfill. Utilities should be placed on suitable bedding material in accordance with the manufacturer's recommendations. "Cushion" material should be placed, by hand, above the utility pipe in maximum 6-inch lifts. The lift should be compacted by hand to avoid damage to the utility. Where the bedding/cushion material consists of crushed stone, it should be wrapped in a geotextile fabric.

Before placing the bedding material, the bottom of utility trenches should be compacted to a firm and unyielding condition. Where soft or pumping material is encountered, it should be removed and replaced with Ordinary Fill.

Compaction of fill in utility trenches should be in accordance with our recommendations in Section 4.3. To reduce the potential for damage to utilities, placement and compaction of fill immediately above the utilities should be performed in accordance with the manufacturer's recommendations.

4. CONSTRUCTION CONSIDERATIONS

4.1 Subgrade Preparation

- Existing asphalt, topsoil, existing fill, buried organic soil, buried subsoil, swamp deposits, if any, organic materials, abandoned utilities, buried foundations, remnants of demolished buildings, and other below-ground structures should be entirely removed from within the footprint of the proposed building before the start of foundation work.

- Tree stumps, root balls, and roots larger than ½ inch in diameter should be removed and the cavities filled with suitable material and compacted per Section 4.3 of this report.

- Cobbles and boulders should be removed at least 6 inches from beneath footings and 18 inches beneath the bottom of slabs and paved areas. The resulting excavations should be backfilled with compacted Structural Fill under the building and with Ordinary Fill under the subbase of paved areas.

- We recommend removing the existing fill, buried organic soil, buried subsoil, and swamp deposits, if any, from within the proposed building footprint and within the zone of influence of footings. We recommend compacting the exposed subgrade in the native sand and gravel layer or in the deep existing fill to a firm and unyielding condition with at least six (6) passes of a heavy roller compactor imparting a minimum dynamic effort of 40 kips. Where organic soil is exposed or where the subgrade is soft during the compaction effort, the organic soil or soft material should be removed and replaced with Structural Fill. The subgrade in the stiff silt and clay should be cut with a smooth bladed bucket and compacted statically with no more than 2 passes of a roller compactor.

- After the surficial topsoil, buried organic soil, buried subsoil, and existing fill are removed to a depth of 18 inches below the bottom of the proposed pavement, the exposed existing fill, buried organic soil, and buried subsoil should be improved by compacting the exposed surface of the existing fill with at least six (6) passes of a vibratory roller compactor imparting a dynamic effort of at least 40 kips. Where soft organic soil or other soft materials of soil are observed, the organic soil or other soft material should be removed, and the grade should be restored using Ordinary Fill to the bottom of the proposed subbase layer. If pumping of the existing fill or buried subsoil deeper than 18 inches beneath the bottom of the proposed pavement is observed, the soft and/or pumping material should be removed and replaced.

- The base of footing excavations should be compacted with a dynamic vibratory compactor weighing at least 200 pounds and imparting a minimum of 4 kips of force to the subgrade, before placing concrete.

- The subgrade of the proposed slab should be compacted with a dynamic vibratory compactor imparting a minimum of 10 kips of force to the subgrade before placing Structural Fill.

- To reduce the potential for disturbance of the footing subgrade, excavations should be extended an additional 12 inches and restored with Structural Fill or crushed stone to serve as a working mat.

- Fill placed within the footprint of the proposed building should meet the gradation and compaction requirements of Structural Fill shown in Section 4.3.1.

- Fill placed under the subbase of paved areas should meet the gradation and compaction requirements of Ordinary Fill shown in Section 4.3.2.

- Fill placed in the top 12 inches beneath sidewalks should consist of Structural Fill with less than 5 percent fines.

- An LGCI geotechnical representative should observe the exposed subgrades prior to fill and concrete placement to verify that the exposed bearing materials are suitable for the design soil bearing pressure.

- If soft or loose pockets are encountered in the footing excavations, the soft or loose materials should be removed, and the bottom of the footing should be placed at a lower elevation on firm soil, or the resulting excavation should be backfilled with Structural Fill or crushed stone wrapped in a geotextile filter fabric.

4.2 Subgrade Protection

The onsite sand and gravel is frost susceptible. If construction takes place during freezing weather, special measures should be taken to prevent the subgrade from freezing. Such measures should include the use of heat blankets or excavating the final 6 inches of soil just before pouring concrete. Footings should be backfilled as soon as possible after footing construction. Soil used as backfill should be free of frozen material, as should the ground on which it is placed. Earthwork operations should be suspended during freezing weather.

Materials with high fines content are typically difficult to handle when wet as they are sensitive to moisture content variations. Subgrade support capacities may deteriorate when such soils become wet and/or disturbed. The contractor should keep exposed subgrades properly drained and free of ponded water. Subgrades should be protected from machine and foot traffic to reduce disturbance.

4.3 Fill Materials

Fill placed within the footprint of the proposed building should meet the gradation and compaction requirements of Structural Fill. Fill placed outside the building footprint beneath any pavement subbase should meet the gradation and compaction requirements of Ordinary Fill.

Structural Fill and Ordinary Fill should consist of inert, hard, durable sand and gravel, free from organic matter, clay, surface coatings, and deleterious materials.

4.3.1 Structural Fill

The Structural Fill should have a plasticity index of less than 6 and should meet the gradation requirements shown below. Structural Fill should be compacted in maximum 9-inch loose lifts to at least 95 percent of the Modified Proctor maximum dry density (ASTM D1557), with moisture contents within ±2 percentage points of optimum moisture content.

Sieve Size	Percent Passing by Weight
3 inches	100
1 ½ inch	80 - 100
½ inch	50 – 100
No. 4	30 – 85
No. 20	15 – 60
No. 60	5 – 35
No. 200*	0 – 10

* 0 – 5 Under sidewalks and exterior pads and slabs

4.3.2 Ordinary Fill

Ordinary Fill should have a plasticity index of less than 6 and should meet the gradation requirements shown below. Ordinary Fill should be compacted in maximum 9-inch loose lifts to at least 95 percent of the Modified Proctor maximum dry density (ASTM D1557), with moisture contents within ±2 percentage points of optimum moisture content.

Sieve Size	Percent Passing by Weight
6 inches	100
1 inch	50 - 100
No. 4	20 – 100
No. 20	10 - 70
No. 60	5 – 45
No. 200	0 – 20

4.4 Reuse of Onsite Materials

Based on the laboratory tests, the granular portion of the existing fill free of organic soil may be used as Ordinary Fill. The onsite materials are not suitable for reuse as Structural Fill.

Soils with high fines content (higher than about 20 percent) are generally very sensitive to moisture content variations and are susceptible to frost. These soils are difficult to compact at

moisture contents that are much higher or much lower than the optimum moisture content determined from the laboratory compaction test. Therefore, strict moisture control should be implemented during stockpiling, placement, and compaction of the existing fill.

All materials to be used as fill should first be tested for compliance with the applicable gradation specifications. During earthwork operations, the contractor should avoid mixing the reusable soils with fine-grained and/or organic soils.

4.5 Groundwater Control Procedures

Based on the groundwater levels encountered in our explorations, we anticipate the need for groundwater control procedures during footing and utility excavations. We anticipate that filtered sump pumps installed in pits located at least 3 feet below the bottom of the excavation may be sufficient to handle surface runoff that may enter the excavation. The contractor should be prepared to use multiple sump pumps as needed.

The contractor should be permitted to employ whatever commonly accepted means and practices are necessary, including well points, if necessary, to maintain the groundwater level below the excavation, and to maintain a dry excavation during wet weather. Placement of reinforcing steel or concrete in standing water should not be permitted.

Groundwater levels should be maintained at a minimum of 1-foot below the bottom of excavations during construction.

To reduce the potential for sinkholes developing over sump pump pits after the sump pumps are removed, the crushed stone placed in the sump pump pits should be wrapped in a geotextile fabric. Alternatively, the crushed stone should be entirely removed after the sump pumps are no longer in use and the sump pump pits should be restored with suitable backfill.

4.6 Temporary Excavations

All excavations to receive human traffic, including utility trenches, basement or footing excavations, or others (i.e. underground storage tanks, etc.), should be constructed in accordance with the OSHA guidelines.

The site soils should generally be considered Type “C” and should have a maximum allowable slope of 1.5 Horizontal to 1 Vertical (1.5H:1V) for excavations less than 20 feet deep. Deeper excavations, if needed, should have a shoring designed by a professional engineer.

The contractor is solely responsible for designing and constructing stable, temporary excavations and should shore, slope, or bench the sides of the excavations as required to maintain stability of the excavation sides and bottom.

5. RECOMMENDATIONS FOR FUTURE WORK

We recommend engaging LGCI to perform the following services:

- Perform additional explorations at the site and update our geotechnical report.
- Prepare Earth Moving Specifications and review the geotechnical aspect of contract drawings.
- Review contractor submittals and Request for Information (RFIs);
- Provide a field representative during construction to observe the removal of the unsuitable soil, and to observe the subgrade of footings and slabs.

6. REPORT LIMITATIONS

Our analyses and recommendations are based on project information provided to us at the time of this report. If changes to the type, size, and location of the proposed structures or to the site grading are made, the recommendations contained in this report shall not be considered valid unless the changes are reviewed, and the conclusions and recommendations modified in writing by LGCI. LGCI cannot accept responsibility for designs based on our recommendations unless we are engaged to review the final plans and specifications to determine whether any changes in the project affect the validity of our recommendations, and whether our recommendations have been properly implemented in the design.

It is not part of our scope to perform a more detailed site history; therefore, we have not explored for or researched the locations of buried utilities or other structures in the area of the proposed construction. Our scope did not include environmental services or services related to moisture, mold, or other biological contaminants in or around the site.

The recommendations in this report are based in part on the data obtained from the subsurface explorations. The nature and extent of variations between explorations may not become evident until construction. If variations from anticipated conditions are encountered, it may be necessary to revise the recommendations in this report. We cannot accept responsibility for designs based on recommendations in this report unless we are engaged to 1) make site visits during construction to check that the subsurface conditions exposed during construction are in general conformance with our design assumptions and 2) ascertain that, in general, the work is being performed in compliance with the contract documents.

Our report has been prepared in accordance with generally accepted engineering practices and in accordance with the terms and conditions set forth in our agreement. No other warranty, expressed or implied, is made. This report has been prepared for the exclusive use of Dore and Whittier Architects, Inc. for the proposed Wildwood Early Childhood Center at the North Intermediate School located at 320 Salem Street Site in Wilmington, Massachusetts as conceived at this time.

1. The ground surface elevation was interpolated to the nearest foot from drawing titled: “Existing Conditions Plan, 320 Salem Street, Wilmington, Massachusetts,” prepared by Nitsch Engineering, dated October 24, 2024, and provided to LGCI by Dore and Whittier Architects, Inc. via e-mail on November 8, 2024.
2. Groundwater was measured during drilling, at the end of drilling, after drilling, or based on sample moisture whichever is shallower.
3. A layer of silt was encountered beneath the fill in boring B-1, between depths of 6 to 9 feet, and a layer of clay was encountered beneath the silt between depths of 9 and 14 feet.
4. Boring terminated due to split spoon / auger refusal on possible boulder or rock in the sand and gravel layer.
5. Boring terminated in the weathered rock layer.
6. Boring terminated in the sand and gravel layer.
7. "-" means the groundwater or layer was not encountered.

Swamp deposits—Organic muck and peat that contain minor amounts of sand, silt, and clay, are stratified and poorly sorted, and occur in swamps and freshwater marshes, in kettle depressions, or in poorly drained areas. Unit is shown only where deposits are estimated to be at least 3 ft thick; most deposits are less than 10 ft thick. Swamp deposits overlie glacial deposits or bedrock. They locally overlie glacial till even where they occur within thin glacial meltwater deposits

Coarse deposits consist of *gravel deposits*, *sand and gravel deposits*, and *sand deposits*, not differentiated in this report. *Gravel deposits* are composed of at least 50 percent gravel-size clasts; cobbles and boulders predominate; minor amounts of sand occur within gravel beds, and sand comprises a few separate layers. Gravel layers generally are poorly sorted, and bedding commonly is distorted and faulted due to postdepositional collapse related to melting of ice. *Sand and gravel deposits* occur as mixtures of gravel and sand within individual layers and as layers of sand alternating with layers of gravel. Sand and gravel layers generally range between 25 and 50 percent gravel particles and between 50 and 75 percent sand particles. Layers are well sorted to poorly sorted; bedding may be distorted and faulted due to postdepositional collapse. *Sand deposits* are composed mainly of very coarse to fine sand, commonly in well-sorted layers. Coarser layers may contain up to 25 percent gravel particles, generally granules and pebbles; finer layers may contain some very fine sand, silt, and clay

Newburyport, MA 01950

Reference: Hazardous Materials Determination Survey
North Intermediate School, Wilmington, MA

Dear Ms. Phillip:

Thank you for the opportunity for Universal Environmental Consultants (UEC) to provide professional services.

Enclosed please find the report for Hazardous Materials determination survey at North Intermediate School, Wilmington, MA.

Please do not hesitate to call should you have any questions.

Very truly yours,

Universal Environmental Consultants

REPORT
FOR
HAZARDOUS MATERIALS DETERMINATION
SURVEY
AT THE
NORTH INTERMEDIATE SCHOOL
WILMINGTON, MASSACHUSETTS

PROJECT NO: 223 514.00

Survey Dates:
January 20, 2012
October 3, 2023, October 9, 2023

SURVEY CONDUCTED BY:

UNIVERSAL ENVIRONMENTAL CONSULTANTS
12 BREWSTER ROAD
FRAMINGHAM, MA 01702

INTRODUCTION:
UEC has been providing comprehensive asbestos services since 2001 and has completed projects throughout New England. We have completed projects for a variety of clients including commercial, industrial, municipal, and public and private schools. We maintain appropriate asbestos licenses and staff with a minimum of thirty-five years of experience.

UEC was contracted by Dore & Whittier Architects to conduct the following services at the North Intermediate School, Wilmington, MA:

- Inspection and Testing for Asbestos Containing Materials (ACM).
- Inspection for Polychlorinated Biphenyls (PCB's)-Electrical Equipment and Light Fixtures.
- Inspection for PCB's-Caulking.
- Inspection for Lead Based Paint (LBP).
- Mercury in Rubber Flooring inspection and sampling.
- Airborne Mold inspection and sampling.
- Radon sampling.

A comprehensive survey per the Environmental Protection Agency (EPA) NESHAP regulation would be required prior to any renovation or demolition activities.

The scope of work included the inspection of accessible ACM, collection of bulk samples from materials suspected to contain asbestos, determination of types of ACM found and cost estimates for remediation. Bulk samples analyses for asbestos were performed using the standard Polarized Light Microscopy (PLM) in accordance with EPA standard. Bulk samples were collected by a Massachusetts licensed asbestos inspector Mr. Jason Becotte (AI-034963) and analyzed by a Massachusetts licensed laboratory EMSL, Woburn, MA.

Airborne mold samples were analyzed by an EPA trained laboratory EMSL, Woburn, MA.

Radon samples were analyzed by an EPA licensed laboratory AccuStar, Ward Hill, MA.

Refer to samples results.

FINDINGS:
Asbestos Containing Materials (ACM):
The regulations for asbestos inspection are based on representative sampling. It would be impractical and costly to sample all materials in all areas. Therefore, representative samples of each homogenous area were collected and analyzed or assumed. All suspect materials were grouped into homogenous areas. By definition a homogenous area is one in which the materials are evenly mixed and similar in appearance and texture throughout. A homogeneous area shall be determined to be ACM based on findings that the results of at least one sample collected from that area shows that asbestos is present in an amount of 1 percent or greater in accordance with DEP regulations.

All suspect materials that contain any amount of asbestos must be considered asbestos if it is scheduled to be removed per the Department of Environmental Protection (DEP) regulations.

Number of Samples Collected
January 12, 2012
Eight (8) bulk samples were collected from materials suspected of containing asbestos, including:

Type and Location of Sample

1. Ceiling tile at hallway outside gymnasium
2. Ceiling plaster at hallway outside room 207
3. Ceiling plaster at hallway outside room 211

4. Ceiling tile at hallway outside room 104
5. Ceiling plaster at hallway outside room 105
6. Ceiling plaster at hallway outside room 107
7. Ceiling plaster at first floor bathroom
8. Ceiling tile at hallway outside office

Sample Results

Type and Location of Sample	**Sample Result**
1. Ceiling tile at hallway outside gymnasium	No Asbestos Detected
2. Ceiling plaster at hallway outside room 207	No Asbestos Detected
3. Ceiling plaster at hallway outside room 211	No Asbestos Detected
4. Ceiling tile at hallway outside room 104	No Asbestos Detected
5. Ceiling plaster at hallway outside room 105	No Asbestos Detected
6. Ceiling plaster at hallway outside room 107	No Asbestos Detected
7. Ceiling plaster at first floor bathroom	No Asbestos Detected
8. Ceiling tile at hallway outside office	No Asbestos Detected

October 9, 2023
Twelve (12) bulk samples were collected from materials suspected of containing asbestos, including:

Type and Location of Sample

1. Exterior new door framing caulking
2. Exterior new door framing caulking
3. Exterior old door framing lintel caulking
4. Exterior old door framing lintel caulking
5. Exterior window framing caulking
6. Exterior window framing caulking
7. Exterior window framing caulking
8. Exterior window glazing caulking
9. Exterior window glazing caulking
10. Exterior unit vent grille caulking
11. Exterior unit vent grille caulking
12. Exterior unit vent grille caulking

Sample Results

Type and Location of Sample	**Sample Result**
1. Exterior new door framing caulking	No Asbestos Detected
2. Exterior new door framing caulking	No Asbestos Detected
3. Exterior old door framing lintel caulking	5% Asbestos
4. Exterior old door framing lintel caulking	5% Asbestos
5. Exterior window framing caulking	No Asbestos Detected
6. Exterior window framing caulking	No Asbestos Detected
7. Exterior window framing caulking	No Asbestos Detected
8. Exterior window glazing caulking	No Asbestos Detected
9. Exterior window glazing caulking	No Asbestos Detected
10. Exterior unit vent grille caulking	5% Asbestos
11. Exterior unit vent grille caulking	5% Asbestos
12. Exterior unit vent grille caulking	5% Asbestos

Observations and Recommendations:
The condition of ACM is very important. ACM in good condition does not present a health issue unless it is disturbed. Therefore, it is not necessary to remediate ACM in good condition unless it will be disturbed through renovation, demolition, or other activity.

1. Lab countertop was assumed to contain asbestos.
2. Hard joint insulation was assumed to contain asbestos. The ACM was found at various locations within the school including crawl space. ACM debris was found in the crawl space.
3. Flexible connector was assumed to contain asbestos.
4. 9" x 9" Vinyl floor tile and mastic were assumed to contain asbestos.
5. Transite panels were assumed to contain asbestos.
6. Interior windows glazing caulking was assumed to contain asbestos.
7. Sink coating was assumed to contain asbestos.
8. Blackboard/tackboard glue was assumed to contain asbestos.
9. Exterior old door framing lintel caulking was found to contain asbestos.
10. Exterior unit vent grille caulking was found to contain asbestos.
11. Exterior window framing caulking was found to contain asbestos.
12. Exterior window glazing caulking was found to contain asbestos.
13. Exterior door framing caulking was found to contain asbestos.
14. Gymnasium hardwood flooring paper and mastic were assumed to contain asbestos.
15. Transite sewer pipe was assumed to contain asbestos.
16. Damproofing on exterior and foundation walls was assumed to exist and assumed to contain asbestos. A Non-Traditional Work Plan will be required to be prepared and submitted to the DEP for approval.
17. Roofing material was assumed to contain asbestos. Roofing material does not have to be removed by a licensed asbestos contractor. However, the Demolition/Roofing Contractor must comply with OSHA regulation during demolition and with state regulations for proper disposal. A non-traditional abatement plan would have to be prepared and submitted to the DEP for approval
18. All other suspect materials were found not to contain asbestos. Hidden ACM may be found during demolition activities.

Polychlorinated Biphenyls (PCB's)-Electrical Equipment and Light Fixtures:
Observations and Conclusions
Visual inspection of various equipment such as light fixtures, thermostats, exit signs and switches was performed for the presence of PCB's and mercury. Ballasts in light fixtures were assumed not to contain PCB's since there were labels indicating that "No PCB's" was found. Tubes in light fixtures, thermostats, signs, and switches were assumed to contain mercury. It would be very costly to test those equipment and dismantling would be required to access. Therefore, the above-mentioned equipment should be disposed in an EPA approved landfill as part of the demolition project.

PCB's in Caulking:
Observations and Conclusions
Caulking was assumed to contain PCB's.

Lead Based Paint (LBP):
Observations and Conclusions
LBP was assumed to exit on painted surfaces. A school is not considered a regulated facility. All LBP activities performed, including waste disposal, should be in accordance with applicable Federal, State, or local laws, ordinances, codes or regulations governing evaluation and hazard reduction. In the event of discrepancies, the most protective requirements prevail. These requirements can be found in OSHA 29 CFR 1926-Construction Industry Standards, 29 CFR 1926.62-Construction Industry Lead Standards, 29 CFR 1910.1200-Hazards Communication, 40 CFR 261-EPA Regulations. According to OSHA, any amount of LBP triggers compliance.

Mercury in Rubber Flooring:
Observations and Conclusions:
No rubber flooring exists in the school.

Airborne Mold:
Airborne mold testing was performed utilizing Zefon International Incorporated's Air-O-Cell® sampling device following all manufacturer supplied recommended sampling procedures.

The Air-O-Cell® is a direct read total particulate air sampling device. It works using the inertial impaction principle similar to other spore trap devices. It is designed for the rapid collection and analysis of airborne particulate including bioaerosols. The particulate includes fibers (e.g. asbestos, fiberglass, cellulose, clothing fibers) opaque particles (e.g. fly ash, combustion particles, copy toner, oil droplets, paint), and bioaerosols (e.g. mold spores, pollen, insect parts, skin cell fragments).[1]

The method involves drawing a known quantity of air through a sterile sampling cassette. Subsequent to sampling, the cassette is sealed and transferred to a microbiology laboratory under chain of custody protocol for microscopic analysis. This method counts both viable and nonviable mold spores.

Legend:
ND - Not Detected

Observations:
There are currently no guidelines or standards promulgated by a government agency or widely recognized scientific organization for the interpretation of airborne mold spore levels. The most commonly employed tool used to assess if mold growth is occurring in a structure is to compare quantities and species of mold outdoors to indoor. If there were more mold indoor, and/or if species were present indoor which were not present outdoors, then growth is occurring, and remediation is recommended.

Based on comparisons with historical data from projects of similar type, building utilization, geographic location and season, the indoor airborne levels are considered very low. Indoor mold spore counts in the fall are typically in the 1,500-3,500-spores/cubic meter range.

Pollen, insect fragments and Hyphal fragments were either not present or low in the samples. Hyphal fragment is a non-reproductive part of the mold.

Total background particulate on all samples was assessed as “1” on a scale of 1-5 where 1 is low and 5 is high. Skin fragment density on all samples was assessed as “1” on a scale of 1-4 where 1 is low and 4 is high. The total background levels are measured to determine airborne dust not related to airborne mold. Skin fragments are measured to determine proper housing cleaning.

Radon:
Number of Samples Collected
Eight (8) air samples were collected at the following locations:

Location of Sample

1. Office
2. Teacher’s lounge
3. Library
4. Room 100
5. Room 103
6. Room 102
7. Room 107
8. Room 104

Location of Sample	Sample Result
1. Office	0.8 pCi\L
2. Teacher’s lounge	0.8 pCi\L
3. Library	1.4 pCi\L
4. Room 100	0.8 pCi\L

5. Room 103 0.7 pCi\L
6. Room 102 1.5 pCi\L
7. Room 107 2.6 pCi\L
8. Room 104 1.6 pCi\L

Observations and Conclusions:
The measured radon concentrations of the samples were found to be much lower than the EPA guideline of 4 picoCuris of radon per liter of air (pCi/L). No further action is required based on the results.

COST ESTIMATES:
The cost includes removal and disposal of all accessible ACM, other Asbestos Containing materials and an allowance for removal and disposal of inaccessible or hidden ACM that may be found during the demolition project.

Location	Material	Approximate Quantity	Cost Estimate ($)
Interior	Flooring Materials	32,000 SF	160,000.00
	Hard Joint Insulation	1,000 Total	30,000.00
	Hidden Hard Joint Insulation	Unknown	50,000.00
	Debris/Soil in Crawl Space	10,000 SF	30,000.00
	Transite Panels	18 Total	9,000.00
	Windows	70 Total	14,000.00

	Lab Counter Tops	14 Total	7,000.00
	Flexible Connecters	16 Total	3,200.00
	Chalkboards/Tackboards	42 Total	16,800.00
	Miscellaneous Hazardous Materials	Unknown	25,000.00
Exterior	Lintel Caulking	50 LF	2,500.00
	Old Doors	3 Total	1,500.00
	Expansion Joint Caulking	120 LF	3,600.00
	Transite Sewer Pipes	Unknown[1]	50,000.00
	Damproofing on Walls	2,500 Tons[1]	700,000.00
	Roofing Materials	Unknown	75,000.00
Estimated costs for NESHAP Inspection and Testing Services			17,500.00
Estimated costs for Design, Construction Monitoring and Air Sampling Services			155,900.00
		TOTAL:	***1,400,000.00***
		TOTAL:	***1,650,000.00***[2]

[1]: Part of total demolition and site work.
[3]: Work to be Performed by a C.M at Risk Contractor.

DESCRIPTION OF SURVEY METHODS AND LABORATORY ANALYSES:
Asbestos:
Bulk material samples were analyzed using PLM and dispersion staining techniques with EPA /600/R-93/116 method.

Airborne Mold:
The samples were analyzed by an EPA approved laboratory EMSL, Woburn, MA.

Radon:
Radon samples were analyzed by an EPA licensed laboratory AccuStar, Ward Hill, MA.

LIMITATIONS AND CONDITIONS:
This report has been completed based on visual and physical observations made and information available at the time of the site visits, as well as an interview with the Owner's representatives. This report is intended to be used as a summary of available information on existing conditions with conclusions based on a reasonable and knowledgeable review of evidence found in accordance with normally accepted industry standards, state, and federal protocols, and within the scope and budget established by the client. Any additional data obtained by further review must be reviewed by UEC and the conclusions presented herein may be modified accordingly.

This report and attachments, prepared for the exclusive use of Owner for use in an environmental evaluation of the subject site, are an integral part of the inspections and opinions should not be formulated without reading the report in its entirety. No part of this report may be altered, used, copied or relied upon without prior written permission from UEC, except that this report may be conveyed in its entirety to parties associated with Owner for this subject study.

Due to magnification limitations inherent in PLM, asbestos fibers in dimensions below the resolution capability of PLM may not be detected. Samples reported as < 1% or none detected may require additional testing by TEM to confirm asbestos quantities. The above test report relates only to the items tested and may not be reproduced in any form without the express written approval of EMSL Analytical, Inc. EMSL's liability is limited to the cost of analysis. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. Samples received in good condition unless otherwise noted. Estimated accuracy, precision and uncertainty data available available upong request

EMSL maintains liability limited to cost of analysis. Interpretation and use of test results are the responsibility of the client. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. The report reflects the samples as received. Results are generated from the field sampling data (sampling volumes and areas, locations, etc.) provided by the client on the Chain of Custody. Samples are within quality control criteria and met method specifications unless otherwise noted. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method") but augmented with procedures outlined in the 1993 ("final") version of the method. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. Non-friable organically bound materials present a problem matrix and therefore EMSL recommends gravimetric reduction prior to analysis. Unless requested by the client, building materials manufactured with multiple layers (i.e. linoleum, wallboard, etc.) are reported as a single sample. Estimation of uncertainty is available on request.

Samples analyzed by EMSL Analytical, Inc. Woburn, MA NVLAP Lab Code 101147-0, CT PH-0315, MA AA000188, RI AAL-139, VT AL998919, ME LB-0039

Skin Fragment and Fibrous Particulate ratings are based on the percent of non-fungal material they represent: 1 (1-25%), 2 (26-50%), 3 (51-75%), or 4 (76-100%). Background ratings are based on the total area covered by non-fungal particles: 1 (1-25%), 2 (26-50%), 3 (51-75%), 4 (76-99%), or 5 (100%; overloaded, prohibiting accurate detection and quantification). High levels of background will obscure spores and other particulates, leading to underestimation. Present = Spores detected on overloaded samples. Results are not blank corrected unless otherwise noted. The detection limit is equal to one fungal spore, structure, pollen, fiber particle or insect fragment. "*" Denotes particles found at 300X. "-" Denotes not detected. Due to method stopping rules, raw counts in excess of 100 are extrapolated based on the percentage analyzed. EMSL maintains liability limited to cost of analysis. Interpretation and use of test results are the responsibility of the client. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. The report reflects the samples as received. When the information supplied by the customer can affect the validity of the result, it will be noted on the report.

Re: WILMINGTON – WILDWOOD SCHOOL @ NORTH INTERMEDIATE SCHOOL
320 Salem Street, Wilmington, MA 01887
Limited Subsurface Soil Investigation Memorandum

Dear Ms. Philip:

PEER Consultants P.C. (PEER) completed an initial review of the environmental laboratory analytical results for the initial eight (8) combined geotechnical/geo-environmental borings completed at the North Intermediate School location on October 28, 2024 and October 29, 2024. The weather on October 28, 2024 was partly cloudy to sunny, and the temperature ranged from 34°F to 51°F. The weather on October 29, 2024 was cloudy with haze (smoke), and the temperature ranged from 36°F to 40°F. PEER understands that Soil X was the drilling contractor on the project site, and utilized a Dietrich D70 Turbo Track-Mounted Drill Rig, with hollow stem augers (and no drive and wash) to complete the borings. Soil X was represented by a driller, and driller's assistance. Lahlaf Geotechnical Consulting, Inc., the geotechnical contractor, was represented by Mr. Berke Hatipoglu. PEER was represented by Mr. Dave Gorden, Board Certified Environmental Scientist and Certified Professional Soil Scientist.

During the limited subsurface soil investigation at the North Intermediate School, combined with limited recovery of soil within the split spoons, PEER collected nine (9) separate, composited soil samples from specific boring depths, and/or from across multiple nearby borings, and related to an investigation for the presence or absence of pesticides and/or herbicides in Topsoil (TS) material, and related to an investigation of soil conditions for disposal pre-characterization purposes in Dry Native / Reworked Native / Suspected Imported Similar (DRY) material, and related to an investigation of soil conditions for disposal pre-characterization purposes in Wet Native (WET) material.

Please note that PEER considered reworked native soil to be soil which visually appeared similar to soil on the project site, and soil which was suspected of having been excavated during the development of the existing school, and then redeposited on the surface of other areas of the project site.

PEER selected representative aliquots of soil from the top soil (TS) of each one of the borings B1 through B8, at a depth, in general, from 0-2' (or consisting of the dark brown to black portion of the top soil) to be analyzed for Pesticides and Herbicides [**B1B8 TS**]. Please note that on November 13, 2024, subsequent to PEER receiving the analytical results for the entire sample delivery group from the analytical laboratory, PEER also requested that the analytical laboratory determine the concentration of arsenic in the sample [**B1B8 TS**].

PEER selected soil from the dry (not within the groundwater table) native soil / reworked native soil / suspect imported similar soil to be analyzed for Volatile Organic Compounds (VOCs), Semivolatile Organic Compounds (SVOCs), Metals, Polychlorinated Biphenyls (PCBs), Total Petroleum Hydrocarbons (TPH) Diesel Range Organics (DRO) {C10-C28}, and TPH Gasoline Range Organics (GRO) {C6-C10}, and for General Chemistry parameters such as Percent Solids, Conductivity, Corrosivity (pH), Flashpoint/Ignitability, Reactive Cyanide, and Reactive Sulfide.

Due to the predominance of visually similar soil across the completed borings down to the boring termination depth, PEER collected analytical samples for the above parameters based on the following depth intervals:

- **B3B4B5 DRY** was composited (including representative aliquots of) soil from Boring B3 at depths of 0-2', 2-4', and 4-6'; from Boring B4 at depths of 0-2', 2-2.9', and 4-6'; and from Boring B5 at depths of 0-2' and 4-6'. This composited sample did not include the dark brown to black portion of the top soil.
- **B1 DRY** was composited (including representative aliquots of) soil from Boring B1 at depths of 0-2' and 2-4'. This composited sample did not include the dark brown to black portion of the top soil.
- **B2 DRY** was composited (including representative aliquots of) soil from Boring B2 at depths of 0-2', 2-4', and 4-6'. This composited sample did not include the dark brown to black portion of the top soil.
- **B6 DRY** was composited (including representative aliquots of) soil from Boring B6 at depths of 0-2', 2-4', and 4-6'. This composited sample did not include the dark brown to black portion of the top soil.
- **B8 DRY** was composited (including representative aliquots of) soil from Boring B8 at depths of 0-2', 2-4', 4-6', and 6-8'. This composited sample did not include the dark brown to black portion of the top soil.

PEER selected soil from the presumed wet (due to groundwater) native soil to be analyzed for VOCs, SVOCs, Metals, PCBs, TPH DRO, TPH GRO, and for General Chemistry parameters such as Percent Solids, Conductivity, Corrosivity (pH), Flashpoint/Ignitability, Reactive Cyanide, and Reactive Sulfide.

Due to the predominance of visually similar soil across the completed borings at or below the groundwater table, and down to the boring termination depth, PEER collected analytical samples for the above parameters based on the following depth intervals:

- **B6B8 WET** was composited (included representative aliquots of) soil from Boring B6 at depths of 9-11' and 14-16'; and from Boring B8 at depths of 9-11' and 14-16'.
- **B1B7 WET** was composited (including representative aliquots of) soil from Boring B1 at depths of 9-11' and 14-16'; and from Boring B7 at depths of 8-10', 10-12', and 14-16'.
- **B2 WET** was composited (included representative aliquots of) soil from Boring B2 at depths of 6-8', 9-11', and 14-16'.

PEER reviewed the textural and moisture conditions for each of the eight borings. PEER identified the following conditions in the subsurface soil:

- In general, soil from **Boring B1** consisted of material consisting of sand and gravel to at least 4 feet. The origin of this material (fill versus reworked native versus native) could be determined as the split spoon had no recovery for the 4-6' interval. However, soil from Boring B1 consisted of suspect native clayey silt to silty clay to clay from 6 feet to 11 feet, and suspect native sand and gravel to 19 feet, then suspect bedrock at 19 feet, and auger refusal at 19 feet. Groundwater indicators were observed at approximately between 8 feet and 9 feet.

- In general, soil from **Boring B2** consisted of suspect fill (sand) to 3 feet (with buried top soil observed at approximately 3 feet), then suspect native sand and gravel (with trace clay at depths) to 19.1 feet, then suspect bedrock at 19.1 feet, and auger refusal at 19.1 feet. Groundwater indicators were observed at approximately 6 feet.

- In general, soil from **Boring B3** consisted of suspect reworked native sand and gravel to 2 feet, then suspect native sand and gravel to 8 feet, then suspect bedrock at 9 feet, and auger refusal at 10.5 feet. Groundwater indicators were not observed.

- In general, soil from **Boring B4** consisted of suspect fill (sand) to 2.9 feet, then suspect native silty sand and a suspect weathered cobble to 9.7 feet, then suspect bedrock at 11 feet, and auger refusal at 11 feet. Remnant groundwater indicators (mottling) in a moist soil matrix were observed at approximately 6 feet.

- In general, soil from **Boring B5** consisted of suspect fill (sand) to 4 feet (with buried top soil observed at approximately 4 feet), then suspect native silty sand to 9 feet, then suspect bedrock at 9 feet, and auger refusal at 10 feet. Remnant groundwater indicators (mottling) in a moist soil matrix were observed at approximately 6 feet.

- In general, soil from **Boring B6** consisted of suspect fill (sand) to 2 feet, then suspect native sand and gravel to 19 feet, then suspect bedrock at 19 feet, and auger refusal at 19.7 feet. Groundwater indicators were observed at approximately 6.2 feet.

- In general, soil from **Boring B7** consisted of suspect fill (sand) to 4 feet (with buried organics observed between approximately 4 feet to 8 feet), then suspect native sand and gravel to 20.2 feet, then suspect bedrock at 20.2 feet, and auger refusal at 20.2 feet. Groundwater indicators were observed at approximately 8 feet.

- In general, soil from **Boring B8** consisted of suspect fill (sand) to 1 foot, then suspect native sand and gravel to 19.8 feet, and auger refusal at 19.8 feet. Groundwater indicators were observed at approximately between 8 feet and 9 feet.

PEER estimated and documented a global positioning system (GPS) point for each boring based on an open source electronic application; therefore, the location of each soil boring, as estimated in the below Google Earth image is considered approximate only.

Wildwood School @ North Intermediate School, Wilmington, MA
(North is Up)

PEER compared the laboratory analytical results to Massachusetts Department of Environmental Protection (MADEP) Policy # COMM-97-001, Reuse and Disposal of Contaminated Soil at Massachusetts Landfills, August 1997. PEER also compared the laboratory analytical results to 310 CMR 40.00, the Massachusetts Contingency Plan (MCP) reporting category RCS-1 and reporting category RCS-2. General chemistry laboratory results were separately compared with RCRA Characteristics under 40 CFR 261. Additional discussions pertaining to the comparison of soil analytical results may be found in the paragraphs below.

The following information provides a summary of the laboratory analytical results from soil samples collected by PEER on October 28, 2024 and October 29, 2024. Please refer to Attachment A for a summary of the detected analytes, in surface and subsurface soil. The samples were kept under chain of custody by PEER, and in a cooler with ice packs, until Phoenix Environmental Laboratories, Inc. (Phoenix), of Manchester, CT couriered the samples back to their office on October 30, 2024. PEER received the Analysis Report from Phoenix with the test results on November 6, 2024. PEER received an updated Analysis Report from Phoenix which also included the test results for arsenic in sample **B1B8 TS** on November 14, 2024. Please refer to Attachment B for the November 14, 2024 Phoenix Analysis Report.

VOCs

For the following Samples: B3B4B5 DRY; B1 DRY; B2 DRY; B6 DRY; B6B8 WET; B1B7 WET; and B2 WET, there were no detections of individual VOCs. In addition, there were no exceedances of the MCP RCS-1 Criteria for an individual VOC, and there were no exceedances of the MCP RCS-2 Criteria for an individual VOC. Furthermore, there were no exceedances of Total VOCs for acceptance at a lined landfill, and there were no exceedances of Total VOCs for acceptance at an unlined landfill. VOCs were not detected. VOCs were also not detected in the Trip Blanks for the day. **Refer to Table 1A** within Attachment A.

SVOCs

For the following Samples: B3B4B5 DRY; B1 DRY; B2 DRY; B6 DRY; B6B8 WET; B1B7 WET; and B2 WET, there were no detections of individual SVOCs. In addition, there were no exceedances of the MCP RCS-1 Criteria for an individual SVOC, and there were no exceedances of the MCP RCS-2 Criteria for an individual SVOC. Furthermore, there were no exceedances of Total SVOCs for acceptance at a lined landfill, and there were no exceedances of Total SVOCs for acceptance at an unlined landfill. SVOCs were not detected. **Refer to Table 1B** within Attachment A.

Metals

For the following Samples: B3B4B5 DRY; B1 DRY; B2 DRY; and B1B7 WET, there were neither exceedances of the MCP RCS-1 Criteria for individual Metals nor exceedances of the MCP RCS-2 Criteria for individual Metals. In addition, there were neither exceedances of Metals for acceptance at a lined landfill nor exceedances of Metals for acceptance at an unlined landfill.

Of the 14 metals analyzed for in Samples B3B4B5 DRY; B2 DRY; B6 DRY; B6B8 WET; B1B7 WET; and B2 WET, only eight metals were detected. Nine of 14 metals were detected in Sample B1 DRY.

For Samples B8 DRY; B6B8 WET; and B2 WET, there was each one exceedance of the MCP RCS-1 Criteria for one individual metal (arsenic) and one exceedance of the MCP RCS-2 Criteria for one individual metal (arsenic). However, for Samples B8 DRY; B6B8 WET; and B2 WET, there were neither exceedances of Metals for acceptance at a lined landfill nor exceedances of Metals for acceptance at an unlined landfill.

For Samples B6 DRY; B6B8 WET; and B2 WET, there was each one exceedance of the MCP RCS-1 Criteria for one individual metal (arsenic) and one exceedance of the MCP RCS-2 Criteria for one individual metal (arsenic).

For Sample B6 DRY, there was one exceedance of the MCP RCS-1 Criteria for one individual metal (arsenic) and one exceedance of the MCP RCS-2 Criteria for one individual metal (arsenic). In addition, for Sample B6 DRY, there was one exceedance of a metal (arsenic) for acceptance at a lined landfill and one exceedance of a metal (arsenic) for acceptance at an unlined landfill.

Based on the above exceedances of arsenic, PEER requested that Phoenix analyze Sample B1B8 TS for arsenic. Arsenic was detected, however, for arsenic in this sample, there were neither exceedances of the MCP RCS-1 Criteria nor exceedances of the MCP RCS-2 Criteria. In addition, for arsenic in this sample, there were neither exceedances for acceptance at a lined landfill nor exceedances for acceptance at an unlined landfill. **Refer to Table 1C** within Attachment A.

PEER notes that spatially, borings B2, B8, and B6 are oriented in a linear shape from north to south across the Property, with one additional boring each (proposed, yet not completed as part of the Geotechnical program) to the east and west of this linear shape.

PEER notes that according to an abstract for the publication “Arsenic In Central Massachusetts Bedrock And Groundwater”, 2010, Authors: McTigue, DF, Stein, CL, Brandon, WC, Kopera, JP, Keskula, AJ, Koteas, CG, the authors cite the following:

> Across the New England "arsenic belt," groundwater arsenic (As) concentrations often exceed the EPA's 0.01-mg/L drinking water standard. In overburden groundwater at a site within this belt in north-central Massachusetts, As has been reported at levels up to 7.6 mg/L. Bedrock at the site consists of Silurian Central Maine Terrane metasediments intruded by the Devonian Ayer granodiorite and Chelmsford granite. Exchange of hydrothermal fluids between these lithologies during intrusion and later deformation, faulting, and metamorphism resulted in crystallization of arsenic-bearing minerals, including arsenopyrite. Quaternary deglaciation and unloading dilated joint systems in the bedrock, allowing increased exposure of the

> mineralogy to meteoric water. Several arsenopyrite alteration products (e.g., scorodite), of varying solubilities, precipitated on fracture surfaces and along grain boundaries between major phases. In the emerging conceptual model for this site, groundwater is recharged in bedrock uplands and moves downgradient through the fracture network, becoming increasingly reducing as it moves along a flow path. Arsenic dissolved from arsenopyrite and arsenic-bearing alteration phases in bedrock remains in solution until the groundwater discharges to lowland areas hydraulically downgradient. In these adjacent lowlands, glacial sand and gravel overburden lies above the bedrock. When the reducing water reaches more oxidizing conditions, As-sorbing hydrous ferric oxides (HFO) precipitate out on the aquifer solids, resulting in accumulation of As in the deep overburden aquifer. A large landfill at this site, now closed and capped, imposed reducing conditions, and As is mobilized into groundwater by reductive dissolution of the HFO. The presence of elevated As in groundwater is consistent with arsenic-bearing phases generated in granitoids at depth during regional metamorphism, which were subsequently altered, and are being solubilized at present by the circulation of shallow groundwater through varying redox environments. This scenario is supported by geochemical and petrographic studies of the granitoids and the occurrence of the highest groundwater and soil arsenic concentrations in the adjacent deep overburden.

PEER notes that the abstract references the term “site”; however, the abstract referenced “site” should not be confused with the Wildwood School at North Intermediate School project location. PEER also notes that the study referenced above is referred to as occurring in the “Primary Study Area”.

PEER further notes that according to the publication "Arsenic and Uranium in Water from Private Wells Completed in Bedrock of East-Central Massachusetts - Concentrations, Correlations with Bedrock Units, and Estimated Probability Maps", by the United States Geological Service, prepared in cooperation with the Massachusetts Department of Environmental Protection and the Massachusetts Department of Public Health, and dated 2011, the authors cite the following:

> The study encompasses the east-central arsenic belt in Massachusetts, the location of nearly all contamination of bedrock wells in the State by arsenic from a natural source. Arsenic has long been known to be present in water from bedrock wells in east-central Massachusetts, and the State straddles an arsenic belt that extends from Connecticut to New Brunswick, Canada. The distribution of bedrock units of crystalline igneous and metamorphic rocks in the study area is complex. The study area is crossed by major faults that divide parts of three geologic terranes that include the Merrimack belt, the Nashoba zone and the Milford-Dedham zone. The Primary Study Area includes most of the Merrimack belt, which extends from the Connecticut Valley belt (indicated by the Merrimack belt western boundary) to the Clinton-Newbury fault, and the western half of the Nashoba zone, which extends from the Clinton-Newbury fault to the Bloody Bluff fault. The Secondary Study Area includes the remainder of the Nashoba zone and the western edge of the Milford-Dedham zone, which begins at the Bloody Bluff fault and extends to the east.

PEER also notes that the study referenced above is referred to as occurring both in the “Primary Study Area” and in the “Secondary Study Area”.

In addition, according to a Probability of Exceeding the Arsenic Drinking Water Standard in Private Drinking Water Wells in Massachusetts, a Map which accompanies / compliments the Publication above, Wilmington in general appears in the ORANGE highlighted Section, inferring that Wilmington has a 5-10% probability of exceeding the public drinking water standard (of 10 parts per billion) for Arsenic in its groundwater. Refer to Attachment C for a copy of this Map.

PEER notes that the slightly elevated concentration of arsenic occurred in two soil samples above the groundwater table and occurred in two soil samples within the groundwater, at locations associated with playing fields which also receive irrigation. PEER understands that Mr. Jamie Magaldi, Wilmington Public Works Director, has indicated that the irrigation system at the North Intermediate runs off of a deep bedrock well (and) the pump house is the brick building (along the western edge of the Property), with two irrigation well points, one near the pump house marked with an irrigation box, and the second along the northwestern edge of the Property, and suspected of being buried.

The presence of arsenic in soil (above the groundwater table), suspected of being formed (i.e., parent material) from the bedrock of the region; combined with the presence of arsenic in soil (above the groundwater table), suspected of being irrigated with groundwater from a deep bedrock well; combined with consideration of the proximity of the irrigation system sprinkler heads to the specific boring locations; and combined with the presence of arsenic in soil within the groundwater table – from this project site, which is located in Wilmington, (i.e., in an arsenic belt in east central Massachusetts), may lend itself to the rationale outlined in the two studies cited above.

Furthermore, the Natural Resource Conservation Service (NRCS) Web Soil Survey indicates that the soil series of Deerfield loamy fine sand, 0 to 3 percent slopes, from parent materials consisting of sandy outwash derived from granite, gneiss, and/or quartzite occurs near boring B2 and B6. The NRCS Web Soil Survey also indicates that the soil series of Udorthents, sandy, from parent materials consisting of loamy alluvium and/or sandy glaciofluvial deposits and/or loamy glaciolacustrine deposits and/or loamy marine deposits and/or loamy basal till and/or loamy lodgment till occurs near boring B6 and B8.

The Surficial Materials Map of the Wilmington Quadrangle, Massachusetts (2018) indicates that the surficial material at this project site consists of:

> "coarse deposits which consist of gravel deposits, sand and gravel deposits, and sand deposits, not differentiated in this report. Gravel deposits are composed of at least 50 percent gravel-size clasts; cobbles and boulders predominate; minor amounts of sand occur within gravel beds, and sand comprises a few separate layers. Gravel layers generally are poorly sorted, and bedding commonly is distorted and faulted due to post depositional collapse related to melting of ice. Sand and gravel deposits occur as mixtures of gravel and sand within individual layers and as layers of sand alternating with layers of gravel. Sand and gravel layers generally range between 25 and 50 percent gravel particles and between 50 and 75 percent sand particles. Layers are well sorted to poorly sorted; bedding may be distorted and faulted due to post depositional collapse. Sand deposits are composed mainly of very coarse to fine sand, commonly in well-sorted layers. Coarser layers may contain up to 25 percent gravel particles, generally granules and pebbles; finer layers may contain some very fine sand, silt, and clay."

PCBs

For the following Samples: B3B4B5 DRY; B1 DRY; B2 DRY; B6 DRY; B6B8 WET; B1B7 WET; and B2 WET, there were neither exceedances of the MCP RCS-1 Criteria for individual Aroclors nor exceedances of the MCP RCS-2 Criteria for individual Aroclors. There were neither exceedances of Total PCBs for acceptance at a lined landfill nor exceedances of Total PCBs for acceptance at an unlined landfill. PCBs were not detected. **Refer to Table 1D** within Attachment A.

TPHs

For the following Samples: B3B4B5 DRY; B1 DRY; B2 DRY; B6 DRY; B6B8 WET; B1B7 WET; and B2 WET, there were neither exceedances of the MCP RCS-1 Criteria for TPH DRO nor exceedances of the MCP RCS-2 Criteria for TPH DRO. There were neither exceedances of TPH DRO for acceptance at a lined landfill nor exceedances of TPH DRO for acceptance at an unlined landfill. Individual DRO (such as Fuel Oil #2/Diesel Fuel, Fuel Oil #4, Fuel Oil #6, Kerosene, Motor Oil, Unidentified) were not detected. There are no comparison parameters for TPH GRO; however, TPH GRO was also not detected in the samples. **Refer to Table 1E** within Attachment A.

Pesticides

For Sample B1B8 TS, there were neither exceedances of the MCP RCS-1 Criteria for individual pesticides nor exceedances of the MCP RCS-2 Criteria for individual pesticides. COMM-97-001 does not provide regulatory criteria for pesticides. **Refer to Table 1F** within Attachment A.

Herbicides

For Sample B1B8 TS, there were neither exceedances of the MCP RCS-1 Criteria for individual herbicides nor exceedances of the MCP RCS-2 Criteria for individual herbicides. COMM-97-001 does not provide regulatory criteria for herbicides. **Refer to Table 1G** within Attachment A.

General Chemistry

For the following Samples: B3B4B5 DRY; B1 DRY; B2 DRY; B6 DRY; B6B8 WET; B1B7 WET; and B2 WET, there were neither exceedances of Conductivity for acceptance at a lined landfill nor exceedances of Conductivity for acceptance at an unlined landfill. There were no exceedances of RCRA Characteristics for flashpoint/ignitability. Flashpoint/ignitability passed. There were no exceedances of RCRA Characteristics for pH. There were no exceedances of RCRA Characteristics for reactivity. Reactivity was Negative. **Refer to Table 1H** within Attachment A.

The Massachusetts Contingency Plan: 310 CMR 40.00

According to 310 CMR 40.0317: Releases and Threats of Release Which Do Not Require Notification, PEER understands that notwithstanding the provisions of 310 CMR 40.0311 through 310 CMR 40.0315, the following releases and threats of release of oil and/or hazardous material are exempt from the notification requirements set forth in 310 CMR 40.0300:

(22) arsenic, beryllium or nickel in Boston Blue Clay or **arsenic in an area documented by the U.S. Geological Survey or in other scientific literature as an area of elevated arsenic measured in soil or groundwater** that -

(a) is consistently present in the environment at and in the vicinity of the sampling location;

(b) is solely attributable to natural geologic or ecologic conditions; and

(c) has not been mobilized or transferred to another environmental medium or increased in concentration in an environmental medium as a result of anthropogenic activities.

PEER understands that as of the date of this Memorandum, PEER is aware of a Fill Management Plan prepared by Parker Environmental Corporation on behalf of Lighthouse Environmental Management, LLC (LEM) in support of a **Fill Project** at the property located on Parcel 35-D 1.2-0 on Stafford Street in Leicester, Massachusetts.

PEER further understands that as of the date of this Memorandum, PEER is aware that anticipated sources of fill material for the **Fill Project** include large volumes of excess soil from excavation and construction projects in Massachusetts with elevated levels of naturally occurring arsenic. The intended fill materials include native and reworked sand, gravel, rock and clay with elevated levels of naturally occurring arsenic. It is anticipated that completion of the fill Project will involve importation of approximately 95,000 cubic yards of material, and take approximately 5 years to complete based on available sources of fill materials. Anticipated sources of fill material include large volumes of excess soil from excavation and construction projects in Massachusetts with elevated levels of naturally occurring arsenic.

Initial Recommendations

As described above, PEER shadowed the geotechnical contractor during the advancement of eight geotechnical soil borings located proximate to the location of the proposed Wildwood School at North Intermediate School, in Wilmington, MA, and collected geo-environmental soil samples concurrent with the geotechnical boring advancement. PEER understands that the eight borings which were advanced proximate to the location of the proposed Wildwood School at North Intermediate School may not necessarily be representative of other soil boring profiles which may be advanced at other locations on the project site during future phases of this proposed project.

Therefore, PEER recommends that additional pre-characterization sampling of the subsurface soil in borings and/or test pits be completed once the exact location of the proposed building is determined and/or once

the location of utility runs requiring excavation and soil management is determined, and/or once the depths and locations of any other excavations related to site infrastructure are known.

Furthermore, should it be determined that the existing North Intermediate School will be demolished as part of any future development of a new school, PEER recommends that additional pre-characterization sampling of the subsurface soil in borings and/or test pits be completed within the parking lot (and paved areas) associated with the building, and proximate to the existing footprint of the building nearest the boiler room, and beneath the current building.

In addition, as it relates to the potential need for project-based dewatering activities (based on the estimated groundwater elevation beneath the project site, and based on the observation of wetlands and waterways on and near the project site), should a construction general permit or a remediation general permit be required for this activity, PEER recommends considering the implementation of a sampling and analysis program for groundwater through the installation of temporary groundwater monitoring wells during any additional subsurface soil investigation, and prior to site redevelopment.

Please contact us directly at 781.238.8880, should you have any questions or require any clarification on this Limited Subsurface Soil Investigation Memorandum at the Wildwood School at North Intermediate School, in Wilmington, MA.

Sincerely,

PEER Consultants, P.C.

David Gorden, BCES
Environmental Science Program Manager

-- = Analyte not detected in soil sample.
NS = Metals were not sampled for in this sample.
NL = COMM-97-001 does not list a standard for this metal.
There were four exceedances of the MCP RCS-1 Criteria for individual Metals (arsenic) and four exceedances of the MCP RCS-2 Criteria for individual Metals (arsenic).
There was one exceedance of a metal (arsenic) for acceptance at a lined landfill and one exceedance of a metal (arsenic) for acceptance at an unlined landfill.

According to the publication "Arsenic and Uranium in Water from Private Wells Completed in Bedrock of East-Central Massachusetts—Concentrations, Correlations with Bedrock Units, and Estimated Probability Maps", by the United States Geological Service, Prepared in cooperation with the Massachusetts Department of Environmental Protection and the Massachusetts Department of Public Health, and dated 2011. The distribution of bedrock units of crystalline igneous and metamorphic rocks in the study area is complex. The study area is crossed by major faults that divide parts of three geologic terranes that include the Merrimack belt, the Nashoba zone and the Milford-Dedham zone. The primary study area includes most of the Merrimack belt, which extends from the Connecticut Valley belt (indicated by the Merrimack belt western boundary) to the Clinton-Newbury fault, and the western half of the Nashoba zone, which extends from the Clinton-Newbury fault to the Bloody Bluff fault. The secondary study area includes the remainder of the Nashoba zone and the western edge of the Milford-Dedham zone, which begins at the Bloody Bluff fault and extends to the east. According to a Probability of Exceeding the Arsenic Drinking Water Standard in Private Drinking Water Wells in Massachusetts, a Map which accompanies the Publication, Wilmington in general appears in the ORANGE highlighted Section, inferring that Wilmington has a 5-10% probability of exceeding the public drinking water standard (of 10 parts per billion) for Arsenic in its groundwater.

Massachusetts does not offer certification for Soil/Solid matrices.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Herbicide Comment:
Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, a dilution was required resulting in an elevated RL.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Massachusetts does not offer certification for Soil/Solid matrices.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

The GRO (C6-C10) is quantitated using an gasoline standard.

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

The TPH (C10-C28) is quantitated using an alkane standard.

Corrosivity is based solely on the pH analysis performed above.

Ignitability is based solely on the results of the closed cup flashpoint analysis performed above. Passed is >140 degree F.

The regulatory hold time for pH is immediately. This pH was performed in the laboratory and may be considered outside of hold-time.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Cyanide. This method is no longer listed in the current version of SW-846.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Sulfide. This method is no longer listed in the current version of SW-846.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Massachusetts does not offer certification for Soil/Solid matrices.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

The GRO (C6-C10) is quantitated using an gasoline standard.

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

The TPH (C10-C28) is quantitated using an alkane standard.

Corrosivity is based solely on the pH analysis performed above.

Ignitability is based solely on the results of the closed cup flashpoint analysis performed above. Passed is >140 degree F.

The regulatory hold time for pH is immediately. This pH was performed in the laboratory and may be considered outside of hold-time.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Cyanide. This method is no longer listed in the current version of SW-846.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Sulfide. This method is no longer listed in the current version of SW-846.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Massachusetts does not offer certification for Soil/Solid matrices.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

The GRO (C6-C10) is quantitated using an gasoline standard.

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

The TPH (C10-C28) is quantitated using an alkane standard.

Corrosivity is based solely on the pH analysis performed above.

Ignitability is based solely on the results of the closed cup flashpoint analysis performed above. Passed is >140 degree F.

The regulatory hold time for pH is immediately. This pH was performed in the laboratory and may be considered outside of hold-time.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Cyanide. This method is no longer listed in the current version of SW-846.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Sulfide. This method is no longer listed in the current version of SW-846.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Massachusetts does not offer certification for Soil/Solid matrices.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

The GRO (C6-C10) is quantitated using an gasoline standard.

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

The TPH (C10-C28) is quantitated using an alkane standard.

Corrosivity is based solely on the pH analysis performed above.

Ignitability is based solely on the results of the closed cup flashpoint analysis performed above. Passed is >140 degree F.

The regulatory hold time for pH is immediately. This pH was performed in the laboratory and may be considered outside of hold-time.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Cyanide. This method is no longer listed in the current version of SW-846.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Sulfide. This method is no longer listed in the current version of SW-846.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Parameter	Result	RL/ PQL	Units	Dilution	Date/Time	By	Reference

Massachusetts does not offer certification for Soil/Solid matrices.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

The GRO (C6-C10) is quantitated using an gasoline standard.

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

The TPH (C10-C28) is quantitated using an alkane standard.

Corrosivity is based solely on the pH analysis performed above.

Ignitability is based solely on the results of the closed cup flashpoint analysis performed above. Passed is >140 degree F.

The regulatory hold time for pH is immediately. This pH was performed in the laboratory and may be considered outside of hold-time.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Cyanide. This method is no longer listed in the current version of SW-846.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Sulfide. This method is no longer listed in the current version of SW-846.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Parameter	Result	RL/ PQL	Units	Dilution	Date/Time	By	Reference

Massachusetts does not offer certification for Soil/Solid matrices.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

The GRO (C6-C10) is quantitated using an gasoline standard.

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

The TPH (C10-C28) is quantitated using an alkane standard.

Corrosivity is based solely on the pH analysis performed above.

Ignitability is based solely on the results of the closed cup flashpoint analysis performed above. Passed is >140 degree F.

The regulatory hold time for pH is immediately. This pH was performed in the laboratory and may be considered outside of hold-time.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Cyanide. This method is no longer listed in the current version of SW-846.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Sulfide. This method is no longer listed in the current version of SW-846.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Parameter	Result	RL/ PQL	Units	Dilution	Date/Time	By	Reference

Massachusetts does not offer certification for Soil/Solid matrices.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

The GRO (C6-C10) is quantitated using an gasoline standard.

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

The TPH (C10-C28) is quantitated using an alkane standard.

Corrosivity is based solely on the pH analysis performed above.

Ignitability is based solely on the results of the closed cup flashpoint analysis performed above. Passed is >140 degree F.

The regulatory hold time for pH is immediately. This pH was performed in the laboratory and may be considered outside of hold-time.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Cyanide. This method is no longer listed in the current version of SW-846.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Sulfide. This method is no longer listed in the current version of SW-846.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Massachusetts does not offer certification for Soil/Solid matrices.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

TRIP BLANK INCLUDED.

Results are reported on an ``as received`` basis, and are not corrected for dry weight.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

Sarah.

Please proceed with running that sample for total Arsenic at 24 hr TAT.

Cheers...

David

Sarah

For the B1B8 TS sample identifier (Lab ID CR96234), do you still have sufficient soil in this to run the metal arsenic?
If so, though I understand Standard TAT is running at 5 days, what would be the quickest TAT, and what would then be the cost?

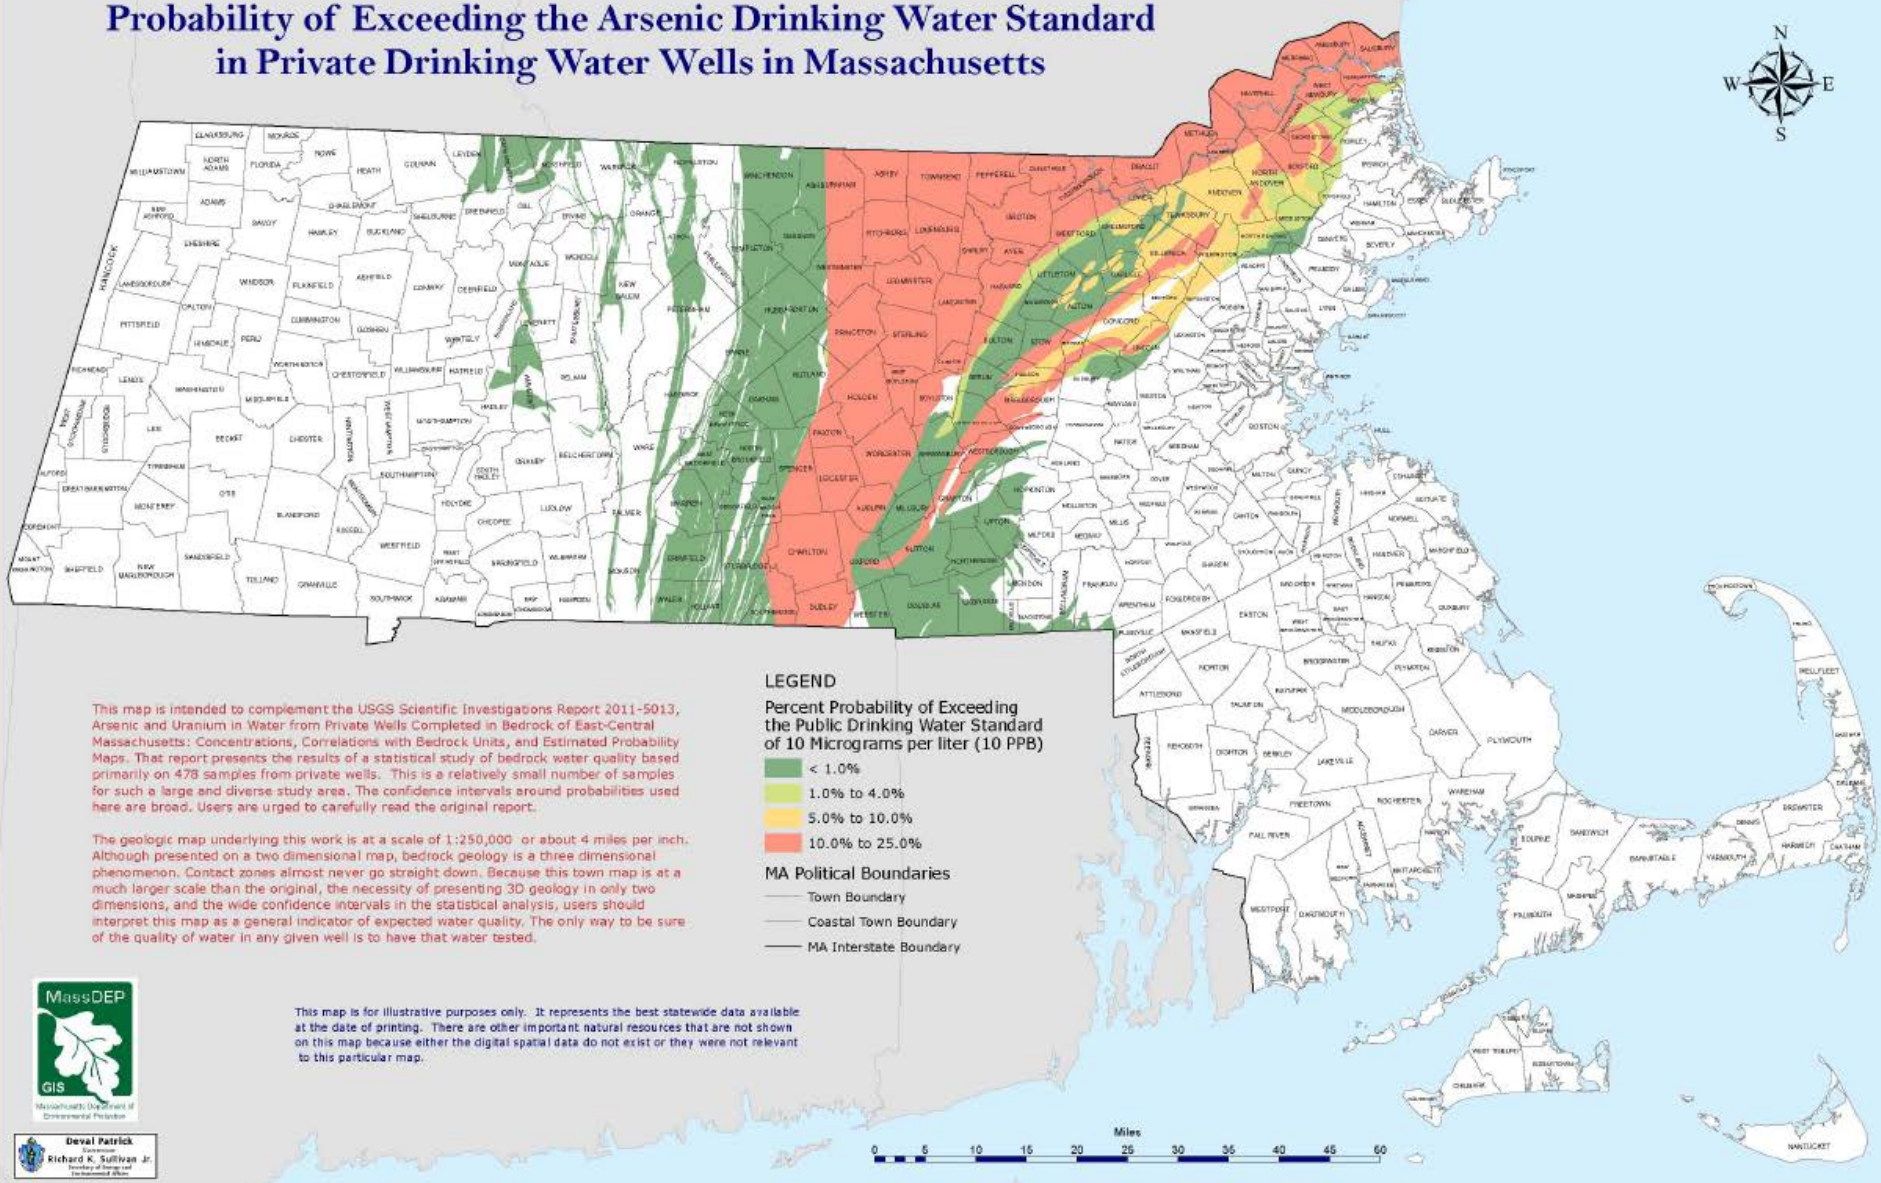
Attachment C

Probability of Exceeding the Arsenic Drinking Water Standard in Private Drinking Water Wells in Massachusetts



This map is intended to complement the USGS Scientific Investigations Report 2011-5013, Arsenic and Uranium in Water from Private Wells Completed in Bedrock of East-Central Massachusetts: Concentrations, Correlations with Bedrock Units, and Estimated Probability Maps. That report presents the results of a statistical study of bedrock water quality based primarily on 478 samples from private wells. This is a relatively small number of samples for such a large and diverse study area. The confidence intervals around probabilities used here are broad. Users are urged to carefully read the original report.

The geologic map underlying this work is at a scale of 1:250,000 or about 4 miles per inch. Although presented on a two dimensional map, bedrock geology is a three dimensional phenomenon. Contact zones almost never go straight down. Because this town map is at a much larger scale than the original, the necessity of presenting 3D geology in only two dimensions, and the wide confidence intervals in the statistical analysis, users should interpret this map as a general indicator of expected water quality. The only way to be sure of the quality of water in any given well is to have that water tested.

This map is for illustrative purposes only. It represents the best statewide data available at the date of printing. There are other important natural resources that are not shown on this map because either the digital spatial data do not exist or they were not relevant to this particular map.

SECTION DC A
SUBSTRUCTURE CRITERIA

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Substructure comprises foundations, basements, floors on grade, and other substructure elements.

B. Foundations: Structures responsible for transferring dead loads, live loads and environmental loads of completed building to the earth in such a way that the building is supported evenly and without movement.

1. Based on the recommendations of the Geotechnical Engineer, the entire structure will be supported on reinforced concrete spread foundations.

C. Slabs on Grade: Structural slabs that are installed over fill or at excavated and compacted grade, including all depressions in the floor, such as trenches, pits and sumps; also equipment bases, under floor and perimeter drainage, thermal insulation at floor edge and moisture barriers installed integrally with floor system.

1. Based on the recommendations of the Geotechnical Engineer, the lowest level slab of the main portion of the proposed structure would be five inch thick concrete slab on grade reinforced with welded wire fabric over a vapor barrier on compacted structural fill. Housekeeping pads supporting mechanical equipment shall be cast directly on the concrete slab on grade or supported metal deck slabs.
2. Exterior approach slabs at entrances and exits, concrete pads supporting transformers, generators and dumpsters shall be concrete slabs on grade over crushed stone or compacted free draining structural fill.

PART 2 PRODUCTS AND METHODS

2.01 METHODS OF CONSTRUCTION

A. Use any of the following methods and techniques:

1. Excavation, backfill and compaction by machine or hand.

A10 FOUNDATIONS

2.02 A1010 – STANDARD FOUNDATIONS

A1010.10 WALL FOUNDATIONS

A. Cast-In-Place concrete foundations walls supporting exterior wall construction and interior wall bearing structure.

1. Based on the recommendations of the Geotechnical Engineer, the building structure can be supported on shallow, reinforced concrete foundations.
2. The exterior foundation walls would be 14 inch to 16 inch thick, reinforced cast-in-place concrete walls on 24 to 36 inches wide continuous reinforced concrete strip footings around the perimeter of the building extending a minimum of 4 feet below finished grade.
3. The reinforced masonry elevator shafts would be supported on 3 foot thick reinforced concrete pit slab with an integral sump pit.
4. Functional Requirements:
   a. Performance Requirements:
      1) 4500 pounds per square inch compressive strength concrete.
      2) Bottom of exterior footing to be minimum 4 feet below grade.
   b. Design Requirements:
      1) Sustainability or LEED requirements:
         1. Recycled Content shall not be less than 25 percent (flyash or slag).

5. Components:
    a. Concrete:
        1) Portland cement
        2) Aggregates
            (a) Normal Weight Fine Aggregate: Shall be washed, inert, natural sand conforming to ASTM C33.
            (b) Normal Weight Coarse Aggregate: Shall be well-graded crushed stone or washed gravel conforming to ASTM C33.
            (c) Light Weight Fine and Coarse Aggregate: Shall conform to ASTM C330.
        3) Potable Water
        4) Admixtures:
            (a) Water reducing Agent: ASTM C494, Type A. Water reducing agent shall be by same manufacturer as air-entraining agent.
            (b) Mid-Range Water Reducing Agent: ASTM C494, Type A.
            (c) High-Range Water Reducing Agent: ASTM C494, Type F or Type G.
            (d) Air entraining agent: ASTM C260.
    b. Reinforcement:
        1) Reinforcing Steel Bars: Shall be newly rolled billet steel conforming to ASTM A615 (Grade 60 unless noted). Bars shall be bent cold. Reinforcing bars being welded shall conform to ASTM A 706, Grade 60.
        2) Welded Wire Fabric ASTM A1064: All welded wire fabric shall be supplied in sheets and is to be used in slabs on grade and on deck as noted.

2.03 **A1010.30 – COLUMN FOUNDATIONS**

A. Based on the recommendations of the Geotechnical Engineer, the building structure can be supported on shallow, reinforced concrete foundations. The columns of the proposed structure would bear on reinforced concrete spread footings and the perimeter foundation walls would bear on continuous reinforced concrete strip footings extending at least 4 feet below grade. With the recommended bearing capacity of the soil of two tons per square foot, a typical interior footing would be 11 feet by 11 feet by 24 inches deep and the typical exterior footings would be 10 feet by 10 feet by 24 inches deep in the three story areas. In the two story areas a typical interior footing would be 9 feet by 9 feet by 24 inches deep and the typical exterior footings would be 8 feet by 8 feet by 24 inches deep. In one story areas a typical interior footing would be 7 feet by 7 feet by 24 inches deep and the typical exterior footings would be 6 feet by 6 feet by 24 inches deep. Typical interior and exterior footings at the Cafeteria and Gymnasium would be 8 feet by 8 feet by 24 inches deep. .

1. Functional Requirements:
    a. Performance Requirements:
        1) 4500 pounds per square inch compressive strength concrete.
        2) Bottom of exterior footing to be minimum 4 feet below grade.
    b. Design Requirements:
        1) Sustainability or LEED requirements:
            (a) Recycled Content shall not be less than 25 percent (flyash or slag).
2. Components:
    a. Concrete:
        1) Portland cement
        2) Aggregates
            (a) Normal Weight Fine Aggregate: Shall be washed, inert, natural sand conforming to ASTM C33.

(b) Normal Weight Coarse Aggregate: Shall be well graded crushed stone or washed gravel conforming to ASTM C33.

3) Potable water
4) Admixtures:
   (a) Water reducing Agent: ASTM C494, Type A. Water-reducing agent shall be by same manufacturer as air entraining agent.
   (b) Mid-Range Water Reducing Agent: ASTM C494, Type A.
   (c) High-Range Water Reducing Agent: ASTM C494, Type F or Type G.
   (d) Air entraining agent: ASTM C260.
5) Reinforcement:
   (a) Reinforcing Steel Bars: Shall be newly rolled billet steel conforming to ASTM A615 (Grade 60 unless noted). Bars shall be bent cold. Reinforcing bars being welded shall conform to ASTM A706, Grade 60.
   (b) Welded Wire Fabric ASTM A1064: All welded wire fabric shall be supplied in sheets and is to be used in slabs on grade and on deck as noted.

A1030 SLABS-ON-GRADE

2.04 **A4010 – STANDARD SLABS-ON-GRADE**

A. Based on the recommendations of the Geotechnical Engineer, the lowest level of the proposed building would be a five inch thick concrete slab-on-grade reinforced with welded wire fabric over a vapor barrier on 12 inches of compacted granular structural fill and a base course of eight inches of compacted gravel.

1. Functional Requirements:
   a. Performance Requirements:
      1) 4500 pounds per square inch compressive strength concrete.
      2) 5000 pounds per square inch compressive strength for site concrete structures exposed to weather.
   b. Concrete Slabs on Grade Partly or Completely Exposed to Freezing Conditions:
      1) Water-Cement Ratio: As recommended by ACI 302.1R.
         (a) Moderate to Severe Exposure: Maximum 0.50.
         (b) Exposure Subject to De-icing Chemicals: Maximum 0.45.
         (c) Exposure to Salt Water: Maximum 0.40.
      2) Air Content: In accordance with recommendations of ACI 201.2R.
   c. Design Requirements:
      1) Sustainability or LEED requirements:
         (a) Recycled content shall not be less than 25 percent (flyash or slag).
2. Components:
   a. Concrete:
      1) Portland cement
      2) Aggregates
         (a) Normal Weight Fine Aggregate: Shall be washed, inert, natural sand conforming to ASTM C33.
         (b) Normal Weight Coarse Aggregate: Shall be well-graded crushed stone or washed gravel conforming to ASTM C33.
      3) Potable water.
      4) Admixtures:
         (a) Concrete Moisture Vapor Reducing Admixture: volatile organic compound (VOC) free, liquid admixture formulated to react with hydroxide ions produced by cement hydration process, creating additional hydration process, creating

additional hydration products within capillary pores, blocking moisture vapor movement through concrete.

(1.) Physical Characteristics:

aa. Hydraulic Conductivity – project specific maximum of 6.0 E-8 CM/S per ASTM D5084.

(b) Water reducing Agent: ASTM C494, Type A. Water reducing agent shall be by same manufacturer as air-entraining agent.

(c) Mid-Range Water Reducing Agent: ASTM C494, Type A.

(d) High-Range Water Reducing Agent: ASTM C494, Type F or Type G.

(e) Air entraining agent: ASTM C260 at interior and exterior slabs.

b. Reinforcement:

1) Reinforcing Steel Bars: Shall be newly rolled billet steel conforming to ASTM A615 (Grade 60 unless noted). Bars shall be bent cold. Reinforcing bars being welded shall conform to ASTM A 706, Grade 60.

2) Welded Wire Fabric ASTM A1064: All welded wire fabric shall be supplied in sheets and is to be used in slabs on grade and on deck as noted.

c. Underslab Vapor Retarder: ASTM E1745 15 MIL Polyolefin sheet under all slab on grade areas at building, with all joints, penetrations and edges sealed.

PART 3 DESIGN CRITERIA

3.01 **BASIC FUNCTION**

A. Provide substructure to support the completed and occupied building safely and without uncontrolled subsidence or other movement.

B. Provide floors on grade to enclose habitable spaces and support interior functions without subsidence, structural cracking or other uncontrolled movement.

C. Where substructure is integral with elements defined within another element group, meet requirements of both element groups.

3.02 **AMENITY AND COMFORT CRITERIA**

A. Thermal Performance: Provide thermal resistance to maintain interior comfort levels specified and in accordance with code and the following:

1. R-value of 10.0 IP (1.76 SI), minimum, under exterior frost pads.

B. Water Penetration Resistance: Prevent ground water penetration into the interior of the building, under any circumstances.

1. Waterproofing: Provide permanent waterproofing at portions of foundation that enclose habitable space, using the following methods:
   a. Permanent, waterproof barrier on exterior of basement construction, protected against damage from backfill.
   b. Drainage: Provide method of collecting and draining water away from exterior surfaces and from underside of elements that enclose habitable space where water table observed in Geotechnical reports is within 24 inches of planned basement floor elevations.

C. Water Accumulation: Prevent accumulation of water in soils adjacent to basement retaining wall foundations and footings by providing continuous drainage system along footing.

D. Floor Flatness (FF): Provide floors on grade engineered and constructed to achieve degree of flatness as follows, when measured in accordance with ASTM E1155:

1. Specified Overall Value (SOV): 35; and 55 at areas of polished concrete slabs.
2. Minimum Localized Value (MLV): 24.

E. Floor Levelness (FL): Provide floors on grade engineered and constructed to achieve degree of levelness as follows, when measured in accordance with ASTM E1155:

1. Typical Specified Overall Value (SOV): 25.

2. Minimum Localized Value (MLV): 17.

3.03 **DURABILITY CRITERIA**

A. Concrete Durability:

1. Monolithic Concrete Floor Slabs on Grade: Composition and finishing as recommended by ACI 302.1R based on type of anticipated traffic and intended use.
   a. Concrete for elevated slabs shall be 4500 pounds per square inch mix.
   b. Concrete for slabs on grade shall be 4500 pounds per square inch mix.
2. Concrete Slabs on Grade Partly or Completely Exposed to Freezing Conditions:
   a. Water-Cement Ratio: As recommended by ACI 302.1R.
      1) Moderate to Severe Exposure: Maximum 0.50.
      2) Exposure Subject to De-icing Chemicals: Maximum 0.45.
      3) Exposure to Salt Water: Maximum 0.40.
   b. Air Content: In accordance with recommendations of ACI 201.2R
   c. Compressive Strength of 4,500 pounds per square inch.

END OF SECTION

SECTION DC B1
SUPERSTRUCTURE CRITERIA

PART 1 GENERAL

1.01 SECTION INCLUDES

A. The superstructure comprises roofs and elevated floors and their supports.

B. Roofs: Roof construction, including canopies and roof equipment screens and elements required for their support, insulation, concrete pads supporting mechanical equipment fireproofing and firestopping.

C. Elevated Floors: Floor construction above grade, including mezzanine, ramp floors, stair construction if part of the structure and roof decks intended for occupant live load; and the elements required for their support, including insulation, fireproofing and firestopping, as well as finishing, if an integral part of the floor construction.

D. The typical lateral load resisting system for the structure would be concentric braced frames of structural steel members and reinforced masonry shear walls.

PART 2 PRODUCTS

2.01 SUPERSTRUCTURE

A. Use the following:

1. Structural steel frame and glulam wood framing, concrete-filled steel deck for floors and unfilled steel deck for roofs.
    a. Columns would be hollow structural steel columns and solid glulam columns. Typical columns would be HSS 8 inch by 8 inch columns, 16 inch by 16 inch glulam columns and the columns at the double story spaces at the Gymnasium and Cafeteria would be HSS 12 inch by 12 inch.

2.02 B1010 – ROOF SUPERSTRUCTURE

A. Structure Supporting Roofs:

1. Estimated weight of structural steel for various roof areas is as follows:
    a. Typical roof framing: 14 pounds per square foot.
    b. Areas of roof supporting mechanical units: 14 pounds per square foot.
    c. Roof framing for the Gymnasium supporting classrooms: 25 pounds per square foot.
    d. Canopies: 20 pounds per square foot.
2. All roof structures are to be designed to support future photovoltaic panel system.
3. Typical structural framing is composed of wide flange steel beams spanning between steel girders, supported by steel columns.
4. The roof construction for the Cafeteria and Library are composed of structural glue-laminated timber beams spanning between steel and glue-laminated girders, supported by steel and glue-laminated columns. The roof construction for the Gymnasium is composed of steel beams or trusses spanning across the width of the gymnasium.
5. Beams: Would be wide flange structural steel members and glue-laminated members.
6. Masonry will be supported on lintels that are supported from roof and floor framing members where the masonry opening dimension is greater than eight feet.
7. Columns: Columns would be hollow structural steel columns and solid glue-laminated columns. Typical columns would be HSS 8 inch by 8 inch columns, 16 inch by 16 inch glulam columns and the columns at the double story spaces at the Gymnasium and Cafeteria would be HSS 12 inch by 12 inch.
8. Lateral Load Resisting System: The typical lateral load resisting system would be concentric braced frames of structural steel members. The lateral load resisting system of the Gymnasium structure would be reinforced masonry shear walls or ordinary concentric braced frames comprised of HSS structural steel members.
9. Functional Requirements:
    a. Design Requirements:

1) Sustainability or LEED requirements:
   (a) All steel is to consist of a minimum of 95 percent recycled steel with over 80 percent post-consumer and 15 percent pre-consumer recycled content.

10. Components:
    a. All wide flange shapes shall be newly rolled steel conforming to ASTM A992, Grade 50 with a minimum yield point of 50 kips per square inch, unless noted otherwise on drawings.
    b. All bars, plates, channels, and angles shall conform to ASTM A36 unless otherwise indicated on the drawings.
    c. Structural tubing shall conform to ASTM A500, Grade C with a minimum yield point of 50 kips per square inch.
    d. Structural pipe shall conform to ASTM A53, Grade B.
    e. Anchor bolts shall conform to ASTM A307 or ASTM F1554 with a minimum yield point of 105 kips per square inch.
    f. High strength bolts ASTM F3125 with ASTM A563, Grade A Hex style nuts and compatible washers. Bolts shall be cold forged with rolled threads. Bolts with torque control snap-off ends may be used.
    g. Hot Dip Galvanizing shall conform to the latest ASTM specification.
    h. Filler metal for welding shall conform to AISC Code, 2005 Edition, Section I.4.5.
    i. Glue-laminated members shall be douglas fir-larch and shall conform to 24F-V4.

B. Roof Decks, Slabs, concrete pads supporting Mechanical Units and Sheathing
   1. The typical roof construction would be galvanized, corrugated, three inch deep Type ‘N’ metal roof deck and galvanized, corrugated three inch deep, Type ‘NAS’ acoustic metal roof deck at the Gymnasium and Cafeteria.
   2. Functional Requirements:
      a. Design Requirements:
         1) Sustainability or LEED requirements:
            (a) All structural steel and deck is to consist of a minimum of 95 percent recycled steel with over 80 percent post-consumer and 15 percent pre-consumer recycled content.
   3. Components:
      a. Type ‘N’, three inch deep, wide rib, 24 inch wide galvanized sheet carbon steel conforming to ASTM A653, Grade 40 with a minimum yield point of 40,000 pounds per square inch.
      b. Type ‘NCAS’, three inch deep, 24 inch wide galvanized sheet carbon steel conforming to ASTM A653, Grade 40 with a minimum yield point of 40,000 pounds per square inch. Bottom flat deck shall be perforated and filled with acoustic batts that fit into ribs. Minimum noise reduction coefficient of 0.90.

2.03 **B1020 – ELEVATED FLOOR SUPERSTRUCTURE**

A. Structure Supporting Floors:
   1. Typical structural framing is composed of wide flange steel beams and glulam beams spanning between steel girders and glulam girders supported by steel and glulam columns. The weight of the structural steel framing the floors is estimated to be 14 pounds per square foot at typical floors. Floor framing above the gymnasium is estimated to be 25 pounds per square foot.
   2. Beams: Would be wide flange structural steel members and glulam members.
   3. Columns: Columns would be hollow structural steel columns. Typical columns would be HSS 8 x 8 columns, 16 x 16 glulam columns and the columns at the double story spaces at the Gymnasium and Cafeteria would be HSS 12 x 12.
   4. Lateral Load Resisted System: The typical lateral load resisting system would be concentric braced frames of structural steel members. The lateral load resisting system of the

Gymnasium structure would be reinforced masonry shear walls or ordinary concentric braced frames comprised of HSS structural steel members.

5. Functional Requirements
   a. Design Requirements:
      1) Sustainability or LEED requirements:
         (a) All structural steel and floor deck is to consist of a minimum of 95 percent recycled steel with over 80 percent post-consumer and 15 percent recycled content.
6. Components:
   a. All wide flange shapes shall be newly rolled steel conforming to ASTM A992, Grade 50 with a minimum yield point of 50 kips per square inch, unless noted otherwise on drawings.
   b. All bars, plates, channels and angles shall conform to ASTM A36 unless otherwise indicated on the drawings.
   c. Structural tubing shall conform to ASTM A500, Grade C with a minimum yield point of 50 kips per square inch, unless noted otherwise on drawings.
   d. Structural pipe shall conform to ASTM A53, Grade B.
   e. Anchor bolts shall conform to ASTM A307 or ASTM F1554 with a minimum yield point of 105 kips per square inch, unless noted otherwise on drawings.
   f. High strength bolts ASTM F3125 with ASTM A563, Grade A Hex style nuts and compatible washers. Bolts shall be cold forged with rolled threads. Bolts with torque control snap-off ends may be used.
   g. Hot Dip Galvanizing shall conform to the latest ASTM specifications.
   h. Filler metal for welding shall conform to AISC Code, 2005 Edition, Section I.4.5.
   i. Glue-laminated members shall be douglas fir-larch and shall conform to 24F-V4.

B. Floor Decks, Slabs and Toppings
   1. Typical floor slab is five ¼ inch light weight concrete composite metal deck slab reinforced with welded wire fabric.
   2. Functional Requirements
      a. Design Requirements:
         1) Sustainability or LEED requirements:
            (a) All deck is to consist of a minimum of 95 percent recycled steel with over 80 percent post-consumer and 15 percent pre-consumer recycled content.
   3. Components:
      a. Floor deck shall be composite wide rib two inch deep sheet carbon, galvanized conforming to ASTM A1008 or A653 with a minimum yield point of 40,000 pounds per square inch. Deck shall be formed with deformations to provide a mechanical lock between concrete and steel.

PART 3 DESIGN CRITERIA

3.01 BASIC FUNCTION

A. Structural elements, above grade, capable of supporting all anticipated loads without failure or damage.

B. Where superstructure elements also must function as elements defined within another element group, meet requirements of both element groups.

3.02 HEALTH AND SAFETY CRITERIA

A. Fire Resistance: Design and select materials to provide fire resistance in accordance with code and the following:
   1. General Structure: the construction of the building is Type II-A – fire resistance of the general building structure, including columns, beams, floors, bearing walls or roof construction is needed, as noted below. The construction of the Library and Cafeteria is Type-IV.

2. Other Members Fire Resistance:
   a. Primary structural steel framing: One hour.
   b. Floor construction and associated secondary structural steel framing: One hour.
   c. Roof construction and associated secondary structural steel framing: One hour.
   d. Primary structural steel framing, floor construction, and associated secondary structural steel framing at Emergency Electrical Rooms: Two hour.

END OF SECTION

SECTION DC B2
EXTERIOR VERTICAL ENCLOSURES CRITERIA

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Exterior enclosure consisting of the essentially vertical separation between exterior and interior conditioned space, including exterior walls, parapets, exterior windows, exterior doors, other openings, exterior wall fixtures, and other exterior enclosure elements.

B. Exterior Walls: The supporting structure; the exterior skin, vapor retarders, air barriers, and insulation; glazed walls; the interior skin if an integral part of the wall; exterior screens and railings; balcony walls and parapets; exterior soffits unless they do not form a weather barrier; firestopping and draft stopping within wall and between wall and floors; and other exterior wall elements.

1. Non-vertical-load bearing and vertical load bearing walls.

C. Exterior Windows: Windows, fixed glazing other than glazed walls, ventilation openings, protection devices for openings, and elements that form or complete the openings, unless an integral part of another element.

D. Exterior Doors and Grilles: Doors at every opening in the exterior wall that function to allow the entrance and exit of people, vehicles, and goods; including exterior doors of various sizes and uses, operable grilles and screens, gates, and other exterior door opening elements.

E. Exterior Louvers and Vents: Exterior louvers which are not an integral part of mechanical equipment, including louvers connected to ducts.

F. Exterior Wall Appurtenances: Elements attached to the outside of the exterior walls, unless consisting of equipment or services fixtures. Exterior wall appurtenances required are those defined in the project program and those made necessary by the design.

G. Horizontal sunshade devices: Modular, shop fabricated, fixed extruded aluminum sun screens to be mounted on structure.

H. Products: Where specific products are required or allowed, use products complying with the additional requirements specified elsewhere.

PART 2 PRODUCTS

2.01 EXTERIOR WALL ELEMENTS

A. Exterior Skin of Exterior Walls:

1. Use the following:
    a. Face brick veneer at typical exterior walls indicated on the building elevations.
        1) Standard modular size; running bond.
        2) Brick Veneer Type 1:
            (a) Basis of Design: Glen Gery Rustic Red Flashed.
            (b) Watsontown Blair Molded Flashed.
            (c) Belden Brick Revere Blend.
        3) Brick Veneer Type 2:
            (a) Basis of Design: Glen Gery Bermuda Blue Glazed.
            (b) Belden Brick Wrangler Glazed.
            (c) Elgin Butler Dynamic Blue.
        4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

b. Cast Stone at areas surrounding curtainwall, mid-wall and roof water table / banding, as indicated on drawings.
    1) 2 foot by 4 foot panels.
        (a) Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
            (1) Basis of Design: Custom Cast Stone: Masonry Veneer.
            (2) Hanover Architectural Products: Reconstructed stone all panels.
            (3) Fernandes Precast Company.
            (4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.
c. Metal composite panel siding at typical exterior walls, as indicated on building elevations.
    1) Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
        (a) Basis of Design: 3A Composites USA; Alucobond: www.alucobondusa.com.
        (b) ALPOLIC Materials; ALPOLIC / fr (fire resistant core): www.alpolic-americas.com.
        (c) Fairview Architectural LLC; VitraBond FR: www.fairviewarchitectural.
        (d) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.
d. Wall Panel System Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
    1) Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
        (a) Centria Architectural Systems: global.centria.com/products. (Basis of Design)
        (b) Doralco Architectural Metal Solutions: www.doralco.com.
        (c) LYMO Architectural Panel Systems Inc.; Back-ventilated metal composite material panel rainscreen system: lymoconstruction.com.
        (d) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.
e. Concrete Unit Veneer Masonry (CUVM) at typical exterior walls indicated on the building elevations.
    1) Size: 3-5/8 inches deep by 15-5/8 inch high by 23-5/8 inches wide.
    2) Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
        (a) Custom Cast Stone, CCS-SF 116 Light Buff. (Basis of Design)
        (b) Hanover Architectural Products, Reconstructed Stone M115 Tudor.
        (c) Shouldice, Texstone Pearl.
        (d) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

2. Joint Sealers in Exterior Skin:
    a. Use the following:

1) Silicone sealant at all exterior masonry veneer and other building joints except for expansion and movement joints.
   (a) Manufacturers:
      (1) Dow Corning Corporation.
      (2) Pecora Corporation.
      (3) Tremoc Global Sealants- Tremco Spectrum 1. (Basis of Design)
      (4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.
2) Preformed compressible foam sealant at movement and expansion joints.
   (a) Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
      (1) Emseal Joint Systems, Ltd.: Seismic Colorseal. (Basis of Design)
      (2) Schul International.
      (3) Tremco Global Sealants.
      (4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

3. Vapor Retarder / Air Barrier:
   a. Use the following:
      1) Two-component synthetic rubber, fluid applied air and vapor barrier membrane at areas of rigid insulation on exterior walls.
         (a) Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
            (1) Carlisle; Fire-Resist Barritech NP. (Basis of Design)
            (2) Henry Company.
            (3) W.R. Meadows.
            (4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

4. Insulation:
   a. Use the following:
      1) At exterior cavity walls with metal stud or CMU backup:
         (a) Rigid polyisocyanurate insulation, R-26 minimum, with spray-applied vapor-retarder/ air infiltration barrier exterior of the sheathing, continuous.
         (b) Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
            (1) Dow Chemical Company.
            (2) Dupont de Nemours, Inc.
            (3) Owens Corning.
            (4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.
         (c) Mineral fiber batt insulation between metal studs, R-21 minimum.
         (d) Manufacturers: Subject to compliance with these specifications, provide products of one of the following:

(1) Certainteed.
(2) Johns Manville.
(3) Owens Corning.
(4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

2) At exterior metal composite material wall panels rain screen:
(a) Mineral wool semi-rigid board insulation, R-29.4 minimum.
(b) Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
(1) Johns Manville.
(2) Rockwool (ROXUL).
(3) Thermafiber.
(4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

3) Foamed-in-place insulation.
(a) Self-adhesive, rubberized asphalt/ polyethylene detail membrane at edges of wall construction to seal penetrations and edges of air barrier materials, including window, storefront, and curtainwall openings, louvers, and bridge transitions in differing materials within supporting structure of exterior walls.
(b) Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
(1) Carlisle Spray Foam.
(2) Johns Manville; JM Corbond III. (Basis of Design)
(3) NCFI Polyurethanes.
(4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

B. Supporting Structure of Exterior Walls:
1. Use one of the following:
a. Load-bearing unit masonry assemblies at locations indicated on drawings.
b. Cold formed metal framing at locations indicated on drawings.
1) Vertical Spans up to 15 feet: 6 inch deep framing.
2) Vertical Spans over 15 feet: 8 inch deep framing.
c. Glazed aluminum curtain wall at locations indicated on drawings.

C. Exterior Ceilings and Soffits:
1. Use one of the following:
a. Metal composite material panel system soffits.
1) Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
(a) 3A Composites USA Alucobond. (Basis of Design)
(b) Alcoa, Inc.; Reynobond Anodized.
(c) ALPOLIC Materials; ALPOLIC / fr.
(d) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability,

performance, and appearance. Submit as substitutions.

D. Exterior Railings:
   1. Use one of the following:
      a. Stainless steel at all locations.

E. Horizontal sunshade devices: Modular, shop fabricated, fixed extruded aluminum sun screens to be mounted on structure.
   1. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
      a. Architectural Grilles & Sunshades, Inc.: www.agsshade.com.
      b. Construction Specialties: www.c-sgroup.com.
      c. Ruskin Company: www.ruskin.com.
      d. Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

2.02 EXTERIOR DOORS

A. Pedestrian Doors:
   1. Provide weatherstripping and thresholds.
   2. Use one of the following:
      a. Aluminum-framed glazed entrance doors at vestibule door locations, and at locations indicated on drawings.
      b. Hollow steel doors at utility and mechanical spaces.
      c. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
         1) Ceco, an Assa Abloy Company.
         2) Curries, and Assa Abloy Company.
         3) Pioneer, an Assa Abloy Company.
         4) Republic, an Allegion Company.
         5) Steelcraft, an Allegion Company.
         6) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

B. Overhead Coiling Doors: at locations indicated on drawings.
   1. Use the following:
      a. Overhead coiling doors, operating hardware, and electric operation.
      b. Include wiring from electric circuit disconnect to operator control station.
      c. Curtain construction: interlocking steel slats.
      d. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
         1) The Cookson Company: www.cooksondoor.com.
         2) Cornell Iron Works, Inc: www.cornelliron.com.
         3) Overhead Door Inc: www.overheaddoor.com.
         4) Raynor Door: DuraCoil Standard: www.raynor.com. (Basis of Design)
         5) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

C. Hardware for Swinging Doors:

1. Use satin, chrome or stainless steel finish at all locations.
2. Hinges: Ball-bearing butt hinges or continuous hinges.
3. Exit Devices: Unless specifically indicated as one type, mortise type, rim type, exposed vertical rod type, concealed vertical rod type, or recessed concealed rod at corridor doors.
4. Locksets: Unless specifically indicated as one type, mortise, bored (cylindrical), interconnected lockset and deadbolt, or unit type.
5. Door Closers: Unless specifically indicated as one type, surface overhead frame-mounted type, surface overhead door-mounted type, concealed overhead frame-mounted type, concealed overhead door-mounted type, or spring hinges.
6. Door Stops: Unless specifically indicated as one type, floor-mounted type, wall-mounted type, or overhead door/frame mounted type.
7. Door Hold-Opens: Unless specifically indicated as one type, floor-mounted type, wall-mounted type, or overhead door/frame mounted type.

D. Glazing in Doors: Glass and plastic.
1. Type: Triple pane insulated glass units.
a. SHCC = 0.31.
b. VLT / SHGC ratio = 1.84.
2. Type: Dual pane insulated glass units, where triple-pane cannot be used:
a. SHGC = 0.39.
b. VLT SHGC ratio = 0.
3. Use one of the following:
a. Fully tempered glass at all locations except where noted otherwise.
b. Security Glazing, double glazed: School Guard (SG4).
1) Locations: At all glazed entry doors.
2) SHGC = 0.33.
3) VLT / SHGC = 1.67.

2.03 WINDOWS

A. Windows (Operable and Fixed):
1. Window Operation: Use the following:
a. Casement outswinging or inswinging windows at locations indicated on drawings.
b. Projected outswinging awning windows at locations indicated on drawings.
c. Fixed non-operable windows at all locations not indicated to be casement or projected outswinging.
2. Glazing: Triple pane insulated units.
a. Security Glazing, double glazed: School Guard (SG4).
1) At all lower operable sash at Level 1.
2) SHGC = 0.33.
3) VLT / SHGC = 1.67.
3. Use one of the following:
a. Aluminum windows, thermally broken, at all locations indicated as type "W-#".
1) SHGC: 0.31.
2) VLT / SHGC ratio: 1.84.
3) Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
(a) EFCO; X-therm 325X. (Basis of Design)
(b) Kawneer; AA 4325.

(c) Graham; GT6800.
(d) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

4. Provide extended perimeter mullions wrapped in composite metal panel as indicated on drawings.

B. Curtainwall Assemblies:
1. Thermally broken extruded aluminum curtainwall framing system with pressure plate glazing installation at large and continuous window installations.
a. Venting window assemblies integrated into curtainwall framing at locations indicated in drawings.
b. Depth: 4 inch minimum (structural tube dimension).
c. Width: 2-1/4 inch minimum (structural tube dimension).
d. Finish: 3-coat PVDF paint finish with 20-year finish warranty.
e. Basis of Design: 5600 X-Therm Series with Duracast pressure plates by EFCO Corp or equal.
f. Doors as specified above.
g. Glazing: insulated glazing, insulated spandrel glazing, and insulated security glazing, see Glazing below.

C. Glazing: Glass.
1. Use the following:
a. Fully tempered glass at locations indicated on drawings or required by code.
b. Low E glass at all locations.
c. Triple pane insulated glass units.
d. Spandrel Glazing to match sealed insulating glass units.

2.04 OTHER EXTERIOR OPENINGS

A. Ventilation Openings: Cover natural and mechanical ventilation openings.
1. Material: Aluminum or steel.
2. Use the following:
a. Stationary blade vents or louvers at locations indicated on mechanical drawings.

2.05 OTHER EXTERIOR ENCLOSURE ELEMENTS

A. Lintels:
1. Use the following:
a. Structural steel framing at openings in brick veneer and concrete masonry back-up wall construction over 10 feet wide.
b. Structural steel HSS framing at all openings in masonry load-bearing walls.

B. Sills:
1. 1/8 inch thick, extruded aluminum; sloped for positive wash; fit under sash leg to 1/2 inch beyond wall face; one piece full width of opening; jamb angles to terminate sill end.
a. Brick sills at window openings above grade.

C. Expansion Control: Provide covers for interior and exterior expansion joints in exterior wall construction that protect joints from debris and provide weather-resistant assembly integrated into wall construction.
1. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
a. Architectural Art

b. Construction Specialties, Inc. (Basis of Design)
c. Inpro Corp.
d. MM Systems Corp.
e. Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

D. Concealed Flashings:
1. Use the following:
a. Stainless steel flashing at head joints, below elevated sills, relieving angles, wall to roof transitions, and base of wall at all brick veneer locations.

PART 3 DESIGN CRITERIA

3.01 BASIC FUNCTION

A. Provide an essentially vertical separation between exterior and interior conditioned space, which keeps out weather, uninvited people, and animals and insects, without unusual action by occupants, while providing convenient movement of occupants between inside and outside, desirable natural light, and views from inside to outside.
B. Fill, cover, close, or otherwise protect every opening in the exterior walls (other than doors) so that the entire exterior enclosure functions as specified, using windows and other opening elements as specified, without using components that must be installed at changes of season.
C. Where exterior enclosure elements also must function as elements defined within another element group, meet requirements of both element groups.

END OF SECTION

SECTION DC B3
EXTERIOR HORIZONTAL ENCLOSURES CRITERIA

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Roofing consisting of every element forming weather and thermal barriers at the sloped or essentially flat weather-proof enclosure over the entire "top-side" of building and over exposed floor superstructure, including plaza decks, balconies, and other exposed floors; including roof coverings, closures for roof openings, roof fixtures, and other roof elements, not including the structural supporting elements of the roof.
   1. Steep Slope Roofing: Lapped roofing shingles, shakes and roofing tiles, including fastening and flashing products and methods.
   2. Low-Slope Roofing: Includes membrane roofing of various types and protected membrane roofing, including fastening and flashing products.
   3. Canopy Roofing: Roofing of various types over canopies.

B. Roof Appurtenances: Every element attached to the roof, unless equipment or services or specified elsewhere, and mounting brackets or frames for roof mounted services and equipment; roof fixtures required are those required by the program, those made necessary by the design, and the following:

C. Horizontal Openings: Skylights, roof windows, ventilation openings, access openings such as hatches, vents, and other elements necessary to close roof openings, and elements associated with those openings.

D. Overhead Exterior Enclosures: Exterior ceilings, soffits, and bulkheads.

E. Products: Where specific products are required or allowed, use products complying with the additional requirements specified elsewhere.

1.02 ABBREVIATIONS AND ACRONYMS

A. AAMA. American Architectural Manufacturers Association; www.aamanet.org.

B. ASTM. ASTM International; www.astm.org.

1.03 REFERENCE STANDARDS

A. Editions of listed standards as referenced by applicable codes, or most current edition if not referenced:

B. AAMA 2605 - Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels (with Coil Coating Appendix).

C. ASTM A792/A792M - Standard Specification for Steel Sheet, 55% Aluminum-Zinc Alloy-Coated by the Hot-Dip Process.

PART 2 PRODUCTS

2.01 ROOF COVERINGS

A. Roof Coverings, General:
   1. Use the following:
      a. Product whose installation method is specified in the code, provided the material complies with specified requirements.

B. Low Slope Flat Roofs:
   1. Use the following:
      a. Elastomeric roofing membrane, EPDM.
         1) Installed over insulation and fully-adhered.

         OR

b. Thermoplastic roofing membrane, TPO.
   1) Installed over insulation and fully-adhered.
   2) Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
      (a) Carlisle Roofing Systems.
      (b) Xcel (Firestone), Ultra Ply Platinum. (Basis of Design)
      (c) GAF.
      (d) Johns Manville.
      (e) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

C. Concealed Deck Roofing/Waterproofing:
   1. Use the following:
      a. Thermoplastic sheet roofing/waterproofing membrane, TPO.
         1) Installed over insulation and fully-adhered.
         2) Provide secondary protective layer of membrane below all roof pavers and vegetative roof components.
         3) Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
            (a) Carlisle Roofing Systems.
            (b) Xcel (Firestone), Ultra Ply Platinum. (Basis of Design)
            (c) GAF.
            (d) Johns Manville.
            (e) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

D. Insulation Over Roof Superstructure:
   1. Use the following:
      a. Low Slope Roofs: Preformed polyisocyanurate insulation board.
         1) Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
            (a) Atlas Roofing.
            (b) DuPont.
            (c) GAF.
            (d) Xcel (Firestone), ISOGard GL. (Basis of Design)
            (e) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.
      b. Insulation to provide R-60 minimum, base insulation thickness, with built-up tapered insulation for crickets and over level rood framing areas.
      c. Installed in multiple layers with staggered joints, taped and sealed.
      d. Steep pitched and low slope roofs: Vented nailbase board with preformed polyisocyanurate insulation factory bonded to 1/2 inch thick OSB with 1-1/2 inch high spacer blocks to provide continuous ventilation cavity below OSB sheathing as top layer of insulation at steep slope roofs.

E. Flashing, Trim, and Accessories:

1. Use the following:
    a. Factory-finished aluminum-zinc alloy coated steel sheet metal.
        1) Sheet Steel: 40 ksi, galvalume coated per ASTM A792/A792M, and prefinished with PVDF 70 percent superior performance AAMA 2605 3-coat system, primed, with chrome conversion pre-treatment.
        2) 22 gage thickness for all roof edge fascia flashings.

2.02 ROOF OPENINGS

A. Roof Openings In General:
    1. Use the following:
        a. Product specified in the code, provided the material complies with specified requirements.
B. Access Openings:
    1. Use the following:
        a. Hinged roof hatches.
        b. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
            1) The Bilco Company; F-50TB: www.bilco.com. (Basis of Design)
            2) Dur-Red.
            3) Milcor.
            4) Nystrom.
            5) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

2.03 ROOF APPURTENANCES

A. Screens:
    1. Provide permanent concealment of rooftop items using roof screens, as indicated on Drawings.
    2. Galvanized steel framed support structure, anchored to building and faces with prefinished corrugated 22 gage steel.
    3. Light-colored 70 percent PVFD coating.
B. Exterior Roof ladders:
    1. Provide ladders as indicated on drawings, or at a minimum to connect all low-slope roofs with the roof at a point of roof access.
    2. Fabricated ladders of painted galvanized steel construction.
    3. Provide ladder cages where height between roof levels or from ground to roof exceeds 24 feet.
C. Roof Walk Pads: Provide roof walk-way pads around all roof top mechanical equipment and from roof hatches to all such equipment.
D. Acoustic Screens: At Rooftop Chiller.
    1. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
        a. Acousticabs: SPS Acoustic Screen SPS/H.
        b. Parklane: AcoustaMod.
        c. RoofScreen: SoundGuard Acoustical Panels.
        d. Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and

appearance. Submit as substitutions.

PART 3 DESIGN CRITERIA

3.01 BASIC FUNCTION

A. Provide a weather-proof enclosure over the entire "top-side" of building that also excludes unwelcome people, animals, and insects without requiring specific action by occupants, while shedding water and preventing uncontrolled water infiltration, withstanding anticipated loading conditions, providing required access, and permitting the entry of desirable natural light.

B. Where roofing elements also must function as elements defined within another element group, meet requirements of both element groups.

3.02 AMENITY AND COMFORT CRITERIA

A. Convenience:

1. Provide a fixed ladder, stair, ship's ladder, or alternating tread stair leading to each hatch used for access to roof equipment or required by code.
2. Access Hatches: Openable from outside, provided user unlocked from inside before exiting.

B. Appearance:

1. Concealment of Services and Equipment: Provide permanent concealment of rooftop items using substantial construction other than screens.
2. Color: Compatible with energy efficiency design.

END OF SECTION

SECTION DC C2
INTERIOR FINISHES CRITERIA

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Interior finishes consisting of the following elements:
   1. Wall finishes, including those applied to the interior face of exterior walls and to the vertical faces of superstructure elements.
   2. Floor finishes.
   3. Ceiling and soffit finishes.
   4. Stair finishes, except for integral stair surfaces.
   5. Cubicle Curtains
   6. Finishes applied to other interior surfaces.

B. Products: Where specific products are required or allowed, use products complying with the additional requirements specified elsewhere.

1.02 ABBREVIATIONS AND ACRONYMS

A. ASTM. ASTM International; www.astm.org.

B. USDA. United States Department of Agriculture: www.usda.gov.

1.03 REFERENCED STANDARDS

A. Editions of listed standards as referenced by applicable codes, or most current edition if not referenced:

B. ASTM D2047 - Standard Test Method for Static Coefficient of Friction of Polish-Coated Flooring Surfaces as Measured by the James Machine.

C. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

D. ASTM E648 - Standard Test Method for Critical Radiant Flux of Floor-Covering Systems Using a Radiant Heat Energy Source.

PART 2 PRODUCTS

2.01 C3030 CEILINGS AND CEILING FINISHES

A. Painted gypsum board ceilings at Extended Learning, soffit areas and underside of stairs, see drawings.

B. Direct-attached wood fiber acoustical panels: provide at areas indicated on drawings.
   1. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
      a. Armstrong Tectum Panels; www.armstrongceilings.com.
      b. Substitutions: The Awarding Authority has determined that use of the product listed is in the project's and public's best interests and will vote to designate the listed product as a proprietary bid product.

C. Integrated ceiling assemblies: provide at areas indicated on drawings.
   1. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
      a. Armstrong AcoustiBuilt Seamless Acoustical Ceiling System; www.armstrong.com.
      b. Substitutions: The Awarding Authority has determined that use of the product listed is in the project's and public's best interests and will vote to designate the listed product as a proprietary bid product.

D. Acoustical tile ceilings: Provide as indicated in drawings.
   1. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:

a. Armstrong World Industries, Inc.; www.armstrongceilings.com.
b. CertainTeed Corporation; www.certainteed.com.
c. Hunter Douglas; www.hunterdouglasarchitectural.com.
d. Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

2. ACP-1a (2 by 2 feet); Calla 15/16-inch grid; Armstrong. Typical for classrooms, educational spaces.
3. ACP-2: Not used.
4. ACP-3: Not used.
5. ACP-4a (2 by 2 feet): Kitchen Zone system. Typical for Kitchen.
6. ACP-5: Not used.
7. ACP6A (2 by 2 feet): Optima system, at Music, Flex, Instrumental, and acoustically sensitive spaces.
8. WD-1: Basis of Design: MetalWorks. Typical at exterior canopies, Extended Learning, Cafeteria balcony, as indicated on drawings.
9. WD-2: Basis of Design: Woodworks Canopies. Typical at exterior canopies, Extended Learning, Cafeteria balcony, as indicated on drawings.

2.02 C3010 WALL FINISHES

A. Refer to elevations and finish schedule in drawings for wall finishes, which include the following:
B. Use one of the following:
1. Glazed ceramic wall tile, TILE-1, at all corridor walls up to 42 inches above finish floor, and paint above.
a. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
1) American Olean Corp.
2) Creative Materials Corp.
3) Dal-Tile. (Basis of Design)
4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.
b. 18-inch by 36-inch rectangular tile.
2. Glazed ceramic wall tile, TILE-2, at Toilet Rooms.
a. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
1) American Olean Corp.
2) Creative Materials Corp.
3) Dal-Tile. (Basis of Design)
4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.
b. 12-inch by 24-inch rectangular tile.
3. Glazed ceramic wall tile, TILE-3, at Kitchen.
a. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
1) American Olean Corp.

2) Creative Materials Corp.
3) Dal-Tile. (Basis of Design)
4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

b. 48-inch by 48-inch square tile.

4. Quarry tile, TILE-5, at Kitchen.
   a. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
      1) American Olean Corp.
      2) Creative Materials Corp.
      3) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.
   b. 8-inch by 8-inch square tile, and cove base.
5. Mortar:
   a. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
      1) ARDEX Engineered Cements.
      2) Bostik, Inc.
      3) Laticrete International. (Basis of Design)
      4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.
6. Grout:
   a. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
      1) ARDEX Engineered Cements.
      2) Bostik, Inc.
      3) Laticrete International.
      4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.
7. Non-ceramic trim: brushed stainless, style to suit application.
   a. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
      1) ARDEX Engineered Cements.
      2) Bostik, Inc.
      3) Schluter Systems.
      4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.
8. Acoustical wall panel treatment at Music, Media Center (Library), Cafeteria, OT / PT, and Flex classrooms.
   a. Type AWP: Fabric-covered acoustical panels for walls.
      1) Manufacturers: Subject to compliance with these specifications, provide products of one of the following:

(a) Acoustical Resources.
(b) Armstrong World Industries.
(c) Decoustics; Fabric-Covered Acoustical Panels for Walls or Ceilings
(d) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

b. Type WWP: Wood veneer sound-absorbing units for walls:
1) Medium density fiberboard core panels with prime grade finished face veneer and non-woven acoustic materials adhered to back of panels, at Media Center (Library) and Cafeteria.
2) Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
(a) RPG Acoustical Systems, Inc.
(b) CertainTeed.
(c) Murano; MDF core panels with prime grade finished face veneer and non-woven acoustic material adhered to back of panel.
(d) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

c. Type DWP: Wrapped thermoformed fiberglass diffusing panels, at Music:
1) Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
(a) Conwed Designscape by CDC Corp.
(b) Golterman and Sabo.
(c) Kinetics: Geometric Diffusers - Offset Pyramidal. (Basis of Design)
(d) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

9. Digitally Printed Wall Covering, DPW; for custom digital graphics provided by Architect:
a. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
1) Astek Wallcoverings: www.astek.com.
2) Designtex; Design Studio www.designtex.com/digital-studio.
3) Dreamscape wall coverings, dreamscapewalls.com.
4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

10. Interior paints (PT) at all rooms unless noted as a different finish herein.
a. Epoxy paint (EPT) at Kitchen, toilet rooms, and maintenance / service rooms for cleaning durability.

11. Concrete masonry units (CMU), painted.
a. Standard 16 by 8-inches.
b. Bullnose corners.
c. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
1) Genest.
2) Jandris. (Basis of Design)

3) Trenwyth.
4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

12. Acoustic ACMU block at 25 percent of exposed CMU walls at Gymnasium.
    a. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
        1) Jandris; Acoustic "Soundcell" CMU. (Basis of Design)
        2) Trenwyth.
        3) Westbrook Concrete Block.
        4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.
    b. NRC: 0.70 minimum.
    c. Running bond.
13. Polished ground-face concrete block (GCB-1), at Stair shafts.
    a. Basis of Design: Jandris.
    b. This item is included in the Schematic Design for purposes of clarifying the scope of the work for cost estimating but is not intended to be proprietary in the final design.
14. Wall and corner guards: (CG).
    a. Type CG-1: Plastic-covered metal.
        1) Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
            (a) Construction Specialties, Inc.; Acrovyn SM-20N.
            (b) Inpro.
            (c) Koroseal Interior Products.
            (d) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.
    b. Type CG-2: Stainless steel.
        1) Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
            (a) Construction Specialties; CO-8 90 degree, CO-8M custom angle, SCO-8M U-shaped. (Basis of Design)
            (b) Inpro.
            (c) Pawling Corp.
            (d) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.
    c. Align with tile height of 4 feet, with 4-inch resilient base.

2.03 C3020 FLOOR FINISHES

A. Refer to finish schedule for floor finishes, which include:
    1. Ceramic floor tile TILE-6 at Toilets.
        a. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
            1) American Olean Corp.

2) Creative Materials Corp.
3) Dal-Tile. (Basis of Design)
4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

b. 12-inch by 24-inch rectangular floor tile.

2. Resinous epoxy floor (EPX-1) and base at back of house and custodial areas, chair storage, receiving, trash and recycling, custodial workshop, custodial storage, and water service.
   a. High build, chemical resistant, self-leveling, high solids.
   b. 1/8-inch.
   c. Non-skid.
   d. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
      1) Dur-a-Flex.
      2) Crossfield Products.
      3) Sherwin Williams; Resuflor. (Basis of Design)
      4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.
3. Wood athletic floor system (WAF):
   a. 2-1/2-inch thick system of hardwood strip flooring system on resilient cushions, including game line markings for full court and half-court basketball and volleyball.
   b. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
      1) Armstrong World Industries.
      2) Robbins Sports Surface. (Basis of Design)
      3) Somerset Hardwood Flooring.
      4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.
   c. Maple, stained, tongue and groove.
4. Stage floor (ST-1) at Stage:
   a. Polymer board, vapor retarder, sleepers, and sub-flooring.
   b. 1/4 inch thick, four by 8 foot sheets, black.
   c. Basis of Design Product: Polyonyx+ Performance Flooring.
      1) This item is included in the Schematic Design for purposes of clarifying the scope of the work for cost estimating but is not intended to be proprietary in the final design.
5. Resilient Athletic Flooring (RAF), at locations indicated on drawings:
   a. Vulcanized, natural and synthetic rubbers.
   b. Thickness: 6 mm minimum.
   c. Sheet width: 72 inches minimum.
   d. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
      1) Connor Sports Flooring; Control XT. (Basis of Design)
      2) Ecore; OSST SPORTS - Compact Marble; www.ecoreathletic.com.
      3) Mondo USA.

4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

6. Resilient sheet linoleum (LIN) flooring with rubber base at Classrooms, Classroom Corridors, and locations indicated on Drawings.
   a. Patterned flooring in multiple colors.
   b. Assume up to ten colors in each room or area.
   c. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
      1) Forbo Flooring, Inc., Marmoleum.
      2) GerFlor. (Basis of Design)
      3) Tarkett.
      4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.
7. Resilient sheet flooring (RSF) at Art, Music, and Nurse's suite:
   a. 100 percent rubber.
   b. Smooth.
   c. Heat welded.
   d. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
      1) Roppe Corp.
      2) Mondo Contract.
      3) Nora Systems, Inc; Norament - Satura. (Basis of Design)
      4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.
8. Rubber stair tread (RST):
   a. One-piece, full width and depth of tread.
   b. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
      1) Mannington.
      2) Nora Systems, Inc; Norament - Satura. (Basis of Design)
      3) Tarkett.
      4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.
9. Resilient Base (RB).
   a. TS rubber, vulcanized thermoset, Style B, cove.
   b. Rolled, premolded corners, end stops.
   c. Basis of Design Product: Roppe Corp.; Wall Base.
10. Carpet Tile (CPT) with rubber base at offices and administration suite.
   a. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
      1) Interface; Aerial Flying Colors. (Basis of Design)
      2) Shaw Contract.

3) Tarkett.
4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

11. Walk-Off Grille (WOG):
    a. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
        1) Amarco.
        2) Construction Specialties.
        3) Matter Surfaces. Design Track. (Basis of Design)
        4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.
12. Walk-Off Mats (WOM) at vestibules (50 percent):
    a. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
        1) Construction Specialties M1 Pedimat. (Basis of Design)
        2) Matter Surfaces.
        3) Reese Enterprises.
        4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.
13. Walk-Off Carpet Tiles: at vestibules (50 percent):
    a. Manufacturers:
        1) Mannington Commercial.
        2) Matter Surfaces; Trilogy. (Basis of Design)
        3) Shaw Carpet.
        4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

2.04 CUBICLE CURTAINS

A. Provide cubicle curtains and tracks at Nurse's office.
    1. Surface mounted overhead tracks and curtain.
    2. Flame resistant or flameproofed close-weave polyester, anti-bacterial, self-deodorizing, sanitized, and pre-shrunk.
    3. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
        a. Designtex.
        b. Knoll.
        c. Maharam; Immerse. (Basis of Design)
        d. Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

PART 3 DESIGN CRITERIA

3.01 BASIC FUNCTION

A. Provide appropriately finished interiors for all spaces required by the program.

B. Where interior finishes are integral with elements defined within another element group, meet requirements of both element groups.

C. In addition to the requirements of this Section, comply with all applicable requirements of Section DC C - Interiors Criteria - Interiors Criteria.

3.02 HEALTH AND SAFETY CRITERIA

A. Flammability:

1. Ceilings in Exits and Corridors: Provide ceilings with indexes not greater than the following, when tested in accordance with ASTM E84.
2. Walls in Exits and Corridors: Provide wall surfaces with indexes not greater than the following, when tested in accordance with ASTM E84.
3. Ceilings in Primary Spaces: Provide ceilings with indexes not greater than the following, when tested in accordance with ASTM E84.
4. Walls in Primary Spaces: Provide wall surfaces with indexes not greater than the following, when tested in accordance with ASTM E84.
5. Floors in Primary Spaces: Provide floor surfaces with ratings not greater than the following:
   a. Critical Radiant Flux of 0.22 W/sq. cm, per ASTM E648.

B. Slip Resistance: For spaces subject to floor wetting, including entry lobbies, provide floor finishes with inherent slip resistance under wet conditions.

1. At building entries, provide means for reducing or minimizing moisture and debris on shoe soles.
2. At spaces such as kitchens, areas in retail spaces, treatment rooms, laboratories, steam rooms, and toilets, provide floor surfaces with minimum static coefficient of friction of 0.60 when dry, measured in accordance with ASTM D2047.
3. At stairs and corridors, provide floor finishes with minimum static coefficient of friction of 0.60, measured in accordance with ASTM D2047.

C. Cleanliness:

1. For kitchens, provide wall, ceiling, and floor surfaces that are USDA approved.

END OF SECTION

SECTION DC C3 1
INFORMATION FIXTURES CRITERIA

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Information specialties consist of the following:
   1. Identifying devices, such as signs, dimensional letters, plaques, and directories.
   2. Visual display surfaces, such as marker boards, tack boards, smart boards, projection screens and other projection surfaces.

B. Products: Where specific products are required or allowed, use products complying with the additional requirements specified elsewhere.

1.02 ABBREVIATIONS AND ACRONYMS

A. CFR. Code of Federal Regulations; www.gpo.gov.

1.03 REFERENCE STANDARDS

A. Editions of listed standards as referenced by applicable codes, or most current edition if not referenced:
   a. 36 CFR 1191 - Americans with Disabilities Act (ADA) Accessibility Guidelines for Buildings and Facilities; Architectural Barriers Act (ABA) Accessibility Guidelines.

PART 2 PRODUCTS

2.01 C 1030 FITTINGS - IDENTIFYING DEVICES

A. Identifying Devices:
   1. Use the following:
      a. Lighted dimensional characters at building exterior at each main entrance and at other locations indicated on drawings.
      b. Vinyl applique letters adhered to the interior and exterior face of each exit door
      c. Vinyl applique letters adhered to the exterior of each window, for emergency response purposes.
      d. Adhesive signage for concealed cavity locations.

B. Identifying Devices using the following methods and techniques:
   1. Prefinished sign systems for surface mounting throughout the project.

C. Interior Wall-Mounted Signs:
   1. Use the following:
      a. Dimensional letter signs using aluminum letters.
      b. Wall or door mounted room identification signs with raised text and braille characters, and pictograms where required by barrier free codes.
      c. Cast bronze commemorative dedication plaques at exterior at Administration Suite / Cafeteria / Entry Vestibule.
      d. Cast aluminum and glass LEED plaque at exterior at Administration Suite / Cafeteria / Entry Vestibule.
      e. Cast bronze time capsule plaque.

D. Directional Signs:
   1. Use one of the following:
      a. Individual, 3-dimensional metal characters at entrances to Gym, Auditorium, Media Center, Cafeteria, and Administrative Offices.

2.02 C1030 FITTINGS - VISUAL DISPLAY SURFACES

A. Erasable Surfaces (Marker Boards):

1. Use one of the following:
    a. Porcelain enameled steel in metal frames.
2. Location and sizes of Marker Boards:
    a. Administration - one 8 foot wide board in metal frame at each conference room. One 6 foot wide board in metal frame at Principals Office, Assistant Principals Office, and Open Office area. One 4 foot wide board in metal frame at Coach's Office, and all other Offices.
    b. Typical Classrooms, and Special Ed Classrooms - Two 6 foot wide boards in frames and with chalk tray, cork map rail, flanking either side interactive smart board. One 12 foot wide board in frame with chalk tray, cork map rail and flag holder at rear of each classroom.
    c. Art and Music Classrooms - Two 8 foot wide boards in frames with chalk tray, cork map rail and flag holder.
    d. Gymnasium - One 6 foot wide board in frame with chalk tray, cork map rail and flag holder, at each teaching station. Two total.
    e. Kitchen - One 4 foot wide marker board in Kitchen area
    f. Small Group - One 4 foot wide board in frame with chalk tray, and smart board
    g. Typical Teacher Collaboration: One 6 foot wide marker board in frames with chalk tray.

B. Tackable Material (Tack Boards):
1. Use one of the following:
    a. Wood fiberboard with linoleum visible surface in metal frames.
2. Location and sizes of Tack Boards:
    a. Lobbies and Corridors - Tackboards at selected locations. Minimum one 6 foot wide board in frame outside each classroom
    b. Administration - two 4 foot wide boards in metal frames at Open Office area.
    c. Typical Classrooms - two 6 foot wide boards per classroom.
    d. Art and Music Classrooms - two 6 foot wide boards.
    e. Gymnasium - two 6 foot wide tack boards
    f. Typical Teacher Collaboration - one 6 foot wide board.

C. Projection Screens:
1. Use the following:
    a. Front projection screens manufactured for the purpose, powered operation for concealed installation above ceilings.
2. Location and Sizes:
    a. Library / Media Center - one 16 foot wide by 9 foot high screen
    b. Platform - one 16 foot wide

C1030 FITTINGS - INTERACTIVE SMART BOARDS WITH INTEGRAL SHORT-THROW WALL MOUNTED LCD PROJECTORS

A. Typical Classrooms - 8 foot wide smart board and LCD projector at teaching wall
B. Library/ Media Center - 8 foot wide smart board and LCD projector. One Ceiling mounted LCD projector.
C. Art and Music Classrooms - 8 foot wide smart board and LCD projector at teaching wall
D. Administration Conference Room -8 foot wide smart board and LCD projector
E. Staff Dining- 8 foot wide smart board and LCD projector

PART 3 DESIGN CRITERIA

3.01 BASIC FUNCTION

A. Signage:
   1. Room or function labels applied to doors or walls immediately adjacent to doorways.
      a. Room Label Signs: Provide room label signs for all spaces.
B. Where information specialties are integral with elements defined within another element group, meet requirements of both element groups.

3.02 AMENITY AND COMFORT CRITERIA

A. Accessibility:
   1. Provide identification devices that comply with ADA Standards for accessible design.
B. Convenience of Visual Display Surfaces:
   1. Except as otherwise indicated, required surface area must be accomplished within the "usable" areas as follows:
      a. Erasable Surfaces: Not less than 36 inches above floor; not more than 84 inches above floor.
      b. Tackable Surfaces: Not less than 36 inches above floor; not more than 84 inches above floor.
      c. Projection Surfaces: Not less than 36 inches above floor; not more than 84 inches above floor.
   2. Projection Surface Access: Either permanently exposed in locations required or easily assembled or lowered without the use of tools.
      a. Surfaces Concealed When Not in Use: Access by up/down controls conveniently located near space entrance(s) and to session presenter location, if any, but minimizing likelihood of tampering by audience members.
C. Appearance:
   1. Provide signage for entire project that is consistent in design with other interior features and coordinated with overall color scheme.

END OF SECTION

SECTION DC C3 2
STORAGE FIXTURES CRITERIA

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Storage specialties consisting of the following elements:
   1. Manufactured casework, such as storage base and wall cabinetry, open bookcases, tall storage cabinets, open mailbox slots, and wardrobe units.
   2. Custom built casework, including display cases, reception desk, circulation desk, and seating benches with storage.
   3. Temporary lockable storage, including metal lockers.
      a. Finished end and filler panels.
      b. Benches.
   4. Fixed and adjustable wall-mounted shelving.
   5. Closet specialties, such as hanging rods and closet specialties.
   6. Accessories, fasteners, and appurtenances for a complete installation.

B. Products: Where specific products are required or allowed, use products complying with the additional requirements specified elsewhere.

PART 2 PRODUCTS

2.01 C1030.09 - BUILT-IN WOOD CABINETRY AND CASEWORK:

A. Use the following:
   1. All casework and cabinetry shall be AWI Premium Grade.
   2. All wood products shall be FSC Certified Wood meeting LEED requirements for chain of custody.
   3. All wood products shall be plain sliced Maple veneer with transparent stain finish.
      a. Doors at teacher wardrobe units in classrooms to feature marker board laminate exterior finish at doors.
   4. Custom-made wood cabinets with stain finish.
      a. ELA window seat with upholstered cushion.
         1) In every ELA and special education classroom.
         2) Upholstered seats.
         3) Quantity: 12.
      b. Admin reception desk.
         1) One 13-foot long linear desk, and one 15-foot long L-shaped reception desk with plastic laminate countertop with hardwood edge.
         2) Solid wood edge.
         3) Solid surface transaction counters.
      c. Under-stair built-in seat:
         1) Built-in seating under Stairs 2 and 5, curving up toward underside of stair. See drawings.
      d. Built-in trash receptacles, at Cafeteria.
         1) Cabinet doors with false base for three trash cans in the countertop.
         2) Quantity: Four.
      e. Media Center built-in window seats with upholstered cushions.
         1) Quantity: two.
      f. Circulation desk: See drawings for location and approximate dimensions.

1) Transaction shelf, knee wall, and base cabinets, with book drop.
2) Plastic laminate countertop.
3) Solid wood edge.
4) Solid surface transaction counter.
5) Built-in book return.

g. Student cubbies.
1) Open-faced cubbies, with name plates.
2) Storage above cubbies, with hinged doors.
3) Student cubbies with doors, facing circulation, and storage above, facing classroom, recessed in walls.

h. Custodial work bench.
1) Custom millwork work bench, L-shaped.

i. Lobby
1) Display case cabinets with base storage and sliding glass doors with glass shelves and mirror at back panel at upper cabinet. Internal lighting within cabinet.
2) Display case cabinets and benches recessed at side of Gym wall-bleachers, facing corridor and exit.

j. Classrooms
1) Student seat benches at windows with reinforced top seat panel 1 inch thick.
2) Veneer plywood "back splash" panels at all surfaces above bench up to height of windowsill trim and splash height of adjacent bookcases.
3) Veneer and finish to match adjacent fabricated bookcase units.

5. Manufactured wood casework, to match Clear Maple, with stain finish:
a. Upper cabinets, with double or single doors, as indicated on drawings.
b. Upper cabinet: narcotics cabinet.
c. Mailbox cubbies at Admin.
d. Base cabinets, with double or single doors, as indicated on drawings.
e. Open sink base cabinets.
f. Closed sink base cabinets.
g. Base cabinets, open, with adjustable shelves.
h. Open base cabinets, with portfolio drawers.
i. Base cabinets with file drawers.
j. Tall storage cabinets, with full doors, or with doors that extend only partway up height of cabinet, as indicated on Drawings.
k. Teacher wardrobe cabinets.
l. Upper cabinets for microwaves.
m. Deep adjustable open tall storage cabinets, at Music.
n. Freestanding bookcases.
o. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
1) CIF Lab Solutions; E Line: www.cifsolutions.com.
2) Institutional Casework Inc: Campbell-Rhea Signatures Series: www.iciscientific.com. (Basis of Design)
3) Kewaunee Scientific; Signature Series: www.kewaunee.com.
4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability,

performance, and appearance. Submit as substitutions.

6. Cabinet Hardware
    a. All doors mounted on five knuckle hinges.
    b. All drawers on heavy duty 100-pound capacity full extension glides with "quiet close" feature.
    c. 4 inch wire pulls.
    d. All doors and drawers to include locks.
    e. US-32 finish hinges.
    f. Coat rod and mirror within teacher wardrobe units.

2.02 MUSIC STORAGE CASEWORK

A. Use the following:
1. Modular instrument storage casework with integral bases, adjustable levelers, and through-bolted fastening, enabling Owner reconfiguration of unit layout.
    a. Acoustically enhanced instrument storage casework finished with interior lining of sound-absorbent material providing sound absorption and noise reduction properties.
2. Uniform storage casework with integral bases, adjustable levelers, and through-bolted fastening, enabling Owner reconfiguration of unit layout.
3. Sheet music storage casework in wheeled retractable units, providing high-density storage, adjustable to fit most sizes of published sheet music, enabling Owner reconfiguration of unit layout.
4. Accessories for a complete installation, including filler panels and finished end and back panels where visible.
5. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
    a. Bradford Systems: www.bradfordsystems.com.
    b. Stevens Advantage: www.stevensadvantage.com.
    c. Wenger Corp; AcoustiCabinets: www.wengercorp.com. (Basis of Design)
    d. Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

2.03 C1030.08 - COUNTERTOPS

A. Horizontal grade high pressure decorative laminate finish countertops (CNTR-PL:) with matching back- and end-splashes 4 inches high.
1. 1-1/2 inch high beveled hardwood nosing at front edge with transparent stain finish; laminate flush with top of nosing.
2. Matte or suede finish.
3. Chemical resistant formulation at Art rooms.
4. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
    a. Formica Corporation: www.formica.com.
    b. Panolam Nevamar: www.panolam.com.
    c. Wilsonart, LLC: www.wilsonart.com. (Basis of Design)
    d. Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

B. Solid surface countertops (CNTR-SSM), at upper transaction counters at reception desk and circulation desk.

1. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
    a. DuPont USA; Corian: www.corian.com
    b. Panolam Nevamar: www.panolam.com.
    c. Wilsonart, LLC: www.wilsonart.com. (Basis of Design)
    d. Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

C. Wood countertops (CNTR-WOOD), maple, clear grade; 1.25 inch minimum thickness.

2.04 C1030.08 - CLOSET SPECIALTIES

A. Use the following:
1. Fixed wood shelving on metal bracket supports with metal hanger rod at closets as indicated in plans.
    a. Maple veneer plywood and solid hardwoods.

2.05 C1030.08 - SHELVING

A. Wall mounted adjustable wood shelving on metal standards at locations as indicated in drawings.
1. Plastic laminate finish on 1 inch thick plywood with hardwood edge reinforcing.
2. Heavy duty surface applied enameled steel standards with dual-prong brackets with seismic attachment of shelving to brackets.

B. Metal library shelving, at locations indicated on drawings.
1. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
    a. Aurora Storage; MJ System 30 Library Shelving: www.aurorastorage.com. (Basis of Design)
    b. BCI; Uniflex-B Shelving System: www.bcilibraries.com
    c. Biblo XPO: Model Shelving and Display Systems: www.bibloxpo.com.
    d. Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

2.06 C1030.05 - LOCKERS

A. Use the following:
1. Metal frame and panel lockers with baked enamel finish at Kitchen and Custodial.
    a. Kitchen: Twelve two tier. 12 inches wide by 12 inches deep by 72 inches high.
    b. Custodial: Ten single tier. 18 inches wide by 15 inches deep by 72 inches high.
    c. "Knock-down" construction with side integral frame.
    d. Continuous sloped tops to be provided at all lockers.
    e. Lockers to be mounted on concrete curb.
    f. Hasp for padlocks.
    g. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
        1) Art Metal Products; AMP KD Wardrobe: www.artmetalproducts.com. (Basis of Design)
        2) List Industries, Inc: www.listindustries.com.
        3) Penco Products, Inc: www.pencoproducts.com.

4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

PART 3 DESIGN CRITERIA

3.01 BASIC FUNCTION

A. Provide storage specialties attached to interior construction that are necessary for proper functioning of spaces required by the project program.

B. Closed Material and Utensils Storage: Provide modular storage cabinets and countertops with capacity adequate to accommodate required functions in spaces designated in the program.

C. Where storage specialties are integral with elements defined within another element group, meet requirements of both element groups.

3.02 AMENITY AND COMFORT

A. Accessibility:
   1. Amounts of Storage: Provide accessible storage comprising not less than 10 percent of available storage specialties of each type, but in no case less than one of each type.
   2. Countertops: Where work surfaces or countertops over storage specialties are required, provide wheelchair access to not less than 10 percent of surface at maximum height of 34 inches from the floor.

B. Noise Control: Provide closed storage specialties equipped with hardware or fittings that minimize the sound generated by door slamming.

C. Stored Item Security:
   1. Locks: Provide locking capability at storage specialties as follows:
      a. Lockers: Dial combination locksets.
      b. Cabinets: Dial combination locksets.
      c. Casework: Dial combination locksets.
      d. Casework Key Cabinet: Provide wall-mounted key cabinet of sheet steel construction, with piano hinged door and lock.
         1) Capacity: Actual quantity of keys, plus 25 percent additional capacity.

D. Ventilation: For lockers, provide for air circulation through fixture by means of door louvers, gaps at head and sill, perforations, or expanded metal panels.

END OF SECTION

SECTION DC C
INTERIORS CRITERIA

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Interior construction consisting of interior partitions, interior windows, interior doors, interior grilles and gates, raised floor construction, suspended ceiling construction, and interior specialties, except for elements classified as equipment or services fixtures.

B. Products: Where specific products are required or allowed, use products complying with the additional requirements specified elsewhere.

1.02 ABBREVIATIONS AND ACRONYMS

A. AWI: American Wood workers Institute; www.awinet.org

B. AWMAC: Architectural Woodwork Manufacturer's Association of Canada; www.awmac.com.

C. UL. Underwriters Laboratories: www.ul.com.

D. WI: Woodwork Institute; www.woodworkinstitute.com.

1.03 REFERENCED STANDARDS

A. Editions of listed standards as referenced by applicable codes, or most current edition if not referenced:

1. AWI/AWMAC/WI - Architectural Woodwork Standards, 2nd Edition, 2014, with Errata (2016).

B. UL. Underwriters Laboratories: www.ul.com.

1. UL 752 - Standard for Bullet-Resisting Equipment; Current Edition, Including All Revisions.

PART 2 PRODUCTS AND METHODS

2.01 C1010 - PARTITIONS

A. Use the following:

1. Unit masonry.
    a. Unit masonry: standard concrete masonry units at fire separation walls, mechanical room, elevator shafts, Gymnasium, and other locations indicated on drawings.
        1) Acoustic concrete masonry units for 25 percent of the wall area of the Gymnasium:
            (a) NRC not less than 0.70.
            (b) Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
                (1) A Jandris & Sons; Soundcell CMU. (Basis of Design)
                (2) Trenwyth.
                (3) Genest.
                (4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.
    b. Polished ground-face concrete masonry units at interior face of enclosed egress stairs.
2. Gypsum wallboard on metal framing and furring: partition types at Kitchen, Cafeteria, and other locations as indicated on drawings.
    a. Bullet resistant fiberglass panels rated to UL 752 Level 3 resistance at partitions scheduled to be bullet resistant.
    b. Acoustic sealant at all penetrations and edges, and penetrations of non-fire-rated partitions
3. Operable partitions.
    a. Paired panel systems at shared walls at locations indicated on drawings.

1) Manually operated.
2) Ceiling-suspended.
3) 3 inch thick system, with minimum STC-50 rating.
4) Full-height steel markerboard surfaces for operable partitions at classrooms, teacher collaboration and Quiet Cafe rooms.
5) Manufacturers:
   (a) Hufcor, Inc.
   (b) Modernfold; 932 series. (Basis of Design)
   (c) Panelfold.
   (d) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

b. Acoustic paired panel system at shared walls at Stage.
1) Manually operated.
2) Ceiling-suspended.
3) Minimum 3 inch thick system, with a minimum STC-55 rating.
4) Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
   (a) Kwik-Wall, by Hufcor, Inc.
   (b) Modernfold; Acousti-Seal Encore, Single Panel. (Basis of Design)
   (c) Panelfold.
   (d) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

4. Partial height partitions:
a. Design and construct partitions using the following:
1) Gypsum board on metal framing, with floor-mounted steel support posts and hardwood cap trim, at general interior areas as indicated on drawings.
b. Toilet partitions:
1) Floor mounted, overhead braced solid color-through plastic partitions, with tamper-resistant hardware:
   (a) Zero sightline ship lap doors.
   (b) Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
      (1) Ampco Products.
      (2) Bradley Corp.
      (3) Scranton Products; Hiny Hiders. (Basis of Design)
      (4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

B. Interior Railings and Handrails:
1. Use the following:
a. Pipe and tube railings with mesh infill, Maple wood top caps on railings, and stainless steel handrail grip surfaces, at egress stairs and classrooms corridor floor openings.
1) 1-1/2 inch diameter round pipe supports with mesh guard infill. Mesh to be rotated 45 degrees.

b. Glass guard, laminated with custom graphics, and handrail system at open stairs and connected Level 2 balconies.
    1) Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
        (a) CR Laurence Co.
        (b) VIVA Railing Shoe System. (Basis of Design)
        (c) Wagner Architectural Glass Systems.
        (d) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

C. Mesh Partitions:
    1. Use the following:
        a. Standard weight steel mesh at locations indicated on drawings.

2.02 C1010 - INTERIOR WINDOWS

A. Interior Windows (Borrowed Lites):
    1. Window Operation: Use the following:
        a. Fixed non-operable windows as indicated on drawings.
    2. Glazing: Single pane glazing.
        a. Single pane fully tempered safety glass at door vision panels and borrowed lites in non-acoustic-rated partitions.
        b. Dual-glazed laminated safety glass at borrowed lites and vision panels in acoustically rated partitions and at acoustic door openings at music and practice rooms.
        c. Bullet-resistant and forced entry resistance rated glazing at transaction windows into Principal's secretary and general waiting, with Level 3 bullet resistance.
    3. Use one of the following:
        a. Hollow metal borrowed lite windows at typical interior borrowed lite locations except as stated below.
        b. Aluminum storefront borrowed lites at as indicated on drawings.
            1) Provide hardwood sill trim at aluminum borrowed lite openings.

B. Lintels at interior windows:
    1. Use the following:
        a. Unit masonry at concrete masonry walls where lintels would be exposed to view.
        b. Steel at concrete masonry walls where lintels will be concealed from view.

2.03 INTERIOR STOREFRONT

A. Provide aluminum storefront borrowed lites as indicated on drawings.
    1. 2 inch by 4-1/2 inch frame dimension; center glazed.
    2. Bullet resistant storefront frames at Vestibule, or other locations as indicated on drawings.

2.04 C1020 INTERIOR DOORS AND FRAMES

A. Interior Pedestrian Doors:
    1. Use the following:
        a. Hollow steel doors and frames at locations subject to high humidity or abuse including the following:
            1) Maintenance Rooms
            2) Mechanical Equipment Rooms
            3) Boiler rooms
            4) Storage rooms (where not accessed from finished public areas).

b. Flush wood doors with hollow steel frames at all locations not specifically identified herein as otherwise.
    1) Quality Level: Premium Grade with A grade veneer, in accordance with AWI/AWMAC/WI (AWS) Section 1300.
    2) 5-ply wood veneer faced doors only. 7- or 9-ply face veneers are not acceptable.
    3) Finish Veneer to be Premium White Maple, plain sliced (flat cut) and bookmatched.
    4) Clear and/or stained Factory finish
    5) Acoustic specialty doors at Music classroom and practice room: STC-53.
c. Glazed aluminum (interior) entrance doors with or without borrowed lites.
    1) Administration suite entrances.
    2) Media Center entrance doors.
    3) Gymnasium entrance doors.
    4) Doors to Stair (Fire Rated).

2. Overhead non-insulated coiling grilles, at kitchen locations indicated on drawings.
    a. Opening sizes: As indicated on door schedule.
3. Glazing in Doors:
    a. Use one of the following:
        1) Fully tempered glass.
        2) Glass Ceramic safety glazing at fire rated openings.
4. Hardware for swinging doors:
    a. Use satin, chrome finish.
    b. Use fire-rated hardware at fire-rated doors.
    c. Door hinges: ball-bearing butt hinges or continuous hinges.
    d. Locksets: Mortise, unless specifically indicated as another type.
    e. Door closers: Surface overhead frame-mounted type, unless otherwise noted.
    f. Door Stops: Floor-mounted type, wall-mounted type, or overhead door/frame mounted type.
    g. Door Hold-Opens: Overhead door/frame mounted type.
    h. Automatic door bottoms: Fully recessed plunger actuated bottoms with seals at all (doors between adjacent classrooms.
5. Lintels at interior windows:
    a. Use the following:
        1) Unit masonry at concrete masonry walls where lintels would be exposed to view.
        2) Steel at concrete masonry walls where lintels will be concealed from view.

2.05 C1010 - OTHER INTERIOR OPENINGS

A. Access Doors:
1. Use the following:
    a. Manufactured metal doors at typical locations in walls and hard-surface ceilings.
        1) At gypsum board ceilings, provide access doors with taping flanges intended for "mudding" into gypsum board finish.
        2) Self-closing rated and non-rated doors with cylinder locks.

B. Expansion Joint Covers:
1. Use one of the following:
    a. Manufactured all-metal cover at all covers at walls and floors.
    b. Manufactured metal covers with resilient filler at ceilings.

c. Provide fire rated backing materials at expansion joints in rated construction and at rated separations.

2.06 C1030 - TOILET, BATH, AND LAUNDRY ACCESSORIES

A. Reflective Surfaces or Mirrors.

B. Toilet, Bath, and Laundry Accessories:

1. Use the following:

a. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:

1) American Specialties, Inc: www.americanspecialties.com.

2) Bobrick Washroom Equipment, Inc., www.bobrick.com. (Basis of Design manufacturer, except where otherwise noted.)

3) Bradley Corporation: www.bradleycorp.com.

4) Rubbermaid Commercial: www.rubbermaidcommercial.com. (Basis of Design manufacturer for freestanding waste receptacles.)

5) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

b. Stainless steel accessories:

1) Combination Paper Towel Dispenser and Waste units (PTDWR): include one for every three sinks (or portion thereof) at gang toilets.

(a) Basis of Design: Bobrick B-3944.

(b) This item is included in the Schematic Design for purposes of clarifying the scope of the work for cost estimating but is not intended to be proprietary in the final design.

2) Paper towel dispensers (PTD): include one at single user toilet room.

(a) Basis of Design at classrooms: Bobrick B-2621.

(b) Basis of Design at toilet rooms: Bobrick B-29744.

(c) This item is included in the Schematic Design for purposes of clarifying the scope of the work for cost estimating but is not intended to be proprietary in the final design.

3) Mirrors (MIR or CLD-MIR or PK-MIR): Safety glass in stainless steel frame; provide one at each lavatory.

(a) Basis of Design: Bobrick B-165 series.

(b) This item is included in the Schematic Design for purposes of clarifying the scope of the work for cost estimating but is not intended to be proprietary in the final design.

4) Wall mounted soap dispensers (SD): include one soap dispenser at each single or pair of lavatories.

(a) Basis of Design: Bobrick 818615.

(b) This item is included in the Schematic Design for purposes of clarifying the scope of the work for cost estimating but is not intended to be proprietary in the final design.

5) Toilet paper dispensers (TPD): include one per each toilet shown.

(a) Basis of Design: Bobrick B-2888.

(b) This item is included in the Schematic Design for purposes of clarifying the scope of the work for cost estimating but is not intended to be proprietary in the final design.

6) Grab bars (GB, CLD-GB, GB-PK): include two 42 inch grab bars and one 24 inch vertical grab bar at each toilet.
   (a) Basis of Design (GB or CLD-GB): Bobrick B-6806.
   (b) Basis of Design (GB-PK): Bobrick B-6861.99.
   (c) This item is included in the Schematic Design for purposes of clarifying the scope of the work for cost estimating but is not intended to be proprietary in the final design.
7) Sanitary napkin disposal units (SND): provide one at each toilet in single user female toilet rooms.
   (a) Basis of Design: Bobrick B-254 at walls.
   (b) Basis of Design: Bobrick B-354 at Toilet Partitions.
   (c) This item is included in the Schematic Design for purposes of clarifying the scope of the work for cost estimating but is not intended to be proprietary in the final design.
8) Sanitary napkin vendors: provide one in each female gang toilet.
   (a) Basis of Design: Bobrick B-370639.
   (b) This item is included in the Schematic Design for purposes of clarifying the scope of the work for cost estimating but is not intended to be proprietary in the final design.
9) Waste Receptacles (WR).
   (a) Basis of Design: Bobrick B-3644.

c. Baby changing tables, wall-hung, at Family Toilet and Pre-K and K Classroom toilets.
   1) Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
      (a) Basis of Design: Koala Care KB310-SSRE.
      (b) Bradley Corporation.
      (c) American Specialties.
      (d) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

C. Utility Room Accessories:
   1. Combination utility shelf / mop and broom holders.
      a. Basis of Design: Bobrick B-239 X 34.
      b. This item is included in the Schematic Design for purposes of clarifying the scope of the work for cost estimating but is not intended to be proprietary in the final design.

D. Healthcare Accessories
   1. Hand sanitizer dispensers at all entry vestibules, nurse's suite, and at each toilet room.
      a. Basis of Design: B2013.
      b. This item is included in the Schematic Design for purposes of clarifying the scope of the work for cost estimating but is not intended to be proprietary in the final design.
   2. Sharps containers: one at nurse's office.
      a. Basis of Design: Bobrick; B-35016.
      b. This item is included in the Schematic Design for purposes of clarifying the scope of the work for cost estimating but is not intended to be proprietary in the final design.

2.07 C2010 - STAIRS AND RAMPS

A. Use the following:

1. Poured-in-place concrete stairs and ramps at floor level transitions in slab-on-grade construction.
2. Fabricated metal stairs with poured-in-place concrete treads at all stairs above slab on grade level (elevated).
3. Pipe railings and guards of painted steel pipe construction with vertical steel pickets and stainless steel handrail grip surface at all interior stairs and ramps.

2.08 TIME CAPSULE

A. Provide time capsule, to be located at the building, as indicated on the drawings.
   1. Include installation and sealing of capsule.
   2. Provide accessories including archival quality storage bags, and desiccant packets.
   3. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
      a. Erie Landmark Co; Rectangular Capsule. (Basis of Design)
      b. Heritage Time Capsules.
      c. Future Packaging and Preservation.
      d. Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

PART 3 DESIGN CRITERIA

3.01 BASIC FUNCTION

A. Interiors: Provide finished interiors for all spaces indicated in the program, equipped with interior fixtures to function properly for specific occupancies.
B. Interior Partitions: Provide physical separation between spaces, constructed to achieve fire ratings required by code, required security between adjacent spaces, and visual, acoustic, olfactory, and atmospheric isolation as necessary to maintain desirable conditions in each space.
C. Interior Doors: Provide doors between adjacent spaces where required by the program or where proper functioning of adjacent spaces requires movement of people or objects between them.
D. Interior Windows: Provide interior windows between adjacent spaces where required by the program or where proper functioning of adjacent spaces requires limited visual or physical connection between them.
E. Other Interior Openings:
   1. Access Openings: Provide interior openings where required for maintenance access to mechanical services and other concealed systems, designed to be as unobtrusive as possible.
   2. Joint Covers: Provide covers for interior expansion joints that protect joints from debris and provide safe and durable support for anticipated traffic.
F. Interior Finishes: Provide finishes for interior surfaces that are appropriate for the functions of each space.
   1. See Section DC C2 - Interior Finishes Criteria for criteria.
G. Interior Specialties: Provide interior specialties that are necessary for the proper functioning of each space.
   1. Other Interior Fixtures: Provide other interior fixtures to accomplish the design per code requirements and as indicated in the project program.
H. Where interiors elements also must function as elements defined within another element group, meet requirements of both element groups.

3.02 AMENITY AND COMFORT CRITERIA

A. Accessibility: Provide interior specialties that are easily usable by disabled persons without outside assistance.
   1. Provide interior fixtures that comply with state barrier free requirements and ADAAG and MAAB.

B. Doors:
   1. Dimensions: Provide interior doors that are sized appropriately for people likely to move between adjacent spaces.
   2. Height: Not less than 84 inches in height.
   3. Width: Not less than 36 inches in width.

3.03 HEALTH AND SAFETY CRITERIA

A. Fire Safety: Protect door openings in fire-rated walls and partitions in accordance with the code and the following:
   1. Hold-Open Function: At locations indicated in program; any method that allows the door to swing freely and that automatically closes door upon detection of local fire or smoke.
   2. Closers: Sufficient closing force to close and latch door despite drafts and wind, but not more than that specified by code.

B. Emergency Egress: Where doors must be latched or locked, comply with the code and the following:
   1. Locking Devices Requiring a Key for Egress: Not allowed.
   2. Exit Doors Having Occupant Load of 50 or More (Regardless of Occupancy): Use exit hardware that releases the locking/latching mechanism upon the application of a force in the direction of egress travel.

3.04 DURABILITY CRITERIA

A. Expected Life Span of Operating Components: Remaining operable for 10 years under normal exposure conditions for the project site.

B. Wear Resistance:
   1. Door Surfaces: Scuff-resistant in areas where foot impact is likely; highly scratch-resistant in areas where hand contact is likely; applied protective surfaces for vulnerable areas are acceptable.
   2. Door Handles and Knobs: Highly scratch-resistant and of finish that will minimize appearance changes due to wear; satin or brushed finish.

C. Flexible Seal Materials: Minimize deterioration due to operation of doors and aging.

D. Swinging Doors: Control door swing to prevent damage due to impact, to either door or element impacted.

E. Humidity Endurance: At interior spaces exposed to high humidity, such as swimming pool enclosures, provide interior construction that will withstand continuous or intermittent exposure without significant changes in dimension.

END OF SECTION

SECTION DC D1 1
PEOPLE-MOVING EQUIPMENT CRITERIA

PART 1 GENERAL

1.01 SECTION INCLUDES

A. People-moving equipment includes conveying systems and devices that are primarily intended to move people between levels, comprising the following elements:
   1. Elevators: Every component for passenger and service elevators, including items such as shaft rails, pit ladders, exhaust louvers, and car and hoistway doors.
      a. Passenger Elevators: Rated for passenger service and generally wider than deep.
      b. Complete electric traction elevator systems.
         1) Passenger type.

B. Products: Where specific products are required or allowed, use products complying with the additional requirements specified elsewhere.

1.02 ABBREVIATIONS AND ACRONYMS

A. ADA. Americans with Disabilities Act; www.ada.gov.

B. ASME. American Society of Mechanical Engineers; www.asme.org.

1.03 REFERENCE STANDARDS

A. Editions of listed standards as referenced by applicable codes, or most current edition if not referenced:

B. ADA Standards - 2010 ADA Standards for Accessible Design.

C. ASME A17.1 - Safety Code for Elevators and Escalators Includes Requirements for Elevators, Escalators, Dumbwaiters, Moving Walks, Material Lifts, and Dumbwaiters with Automatic Transfer Devices.

PART 2 PRODUCTS

2.01 D1010 PEOPLE-MOVING EQUIPMENT TYPES

A. Use the following:
   1. Passenger elevators at locations indicated on drawings.

2.02 ELEVATORS AND LIFTS

A. Passenger Elevators:
   1. Use the following:
      a. Holeless hydraulic type with telescoping masts in hoistway.
      b. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
         1) Canton Elevator, Incorporated: www.cantonelevator.com.
         2) Schindler Elevator Corporation: www.schindler.com.
         3) TK Elevator; Endura Above-Ground: www.tkelevator.com.
         4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.
      c. Capacity: 4500 pounds.
      d. Speed: 100 feet per minute.
      e. Travel Distance: 80 feet maximum.
      f. Door configuration: Dual speed offset doors at front of cab.
      g. Finishes:
         1) Front: Stainless Steel.

2) Wall panels: Plastic laminate.
3) Floor: Linoleum, by Resilient Flooring Trade-Contractor.
4) Ceiling: Stainless steel panel and frame system, with recessed light fixtures.

PART 3 DESIGN CRITERIA

3.01 BASIC FUNCTION

A. Passenger Elevators: If the project has more than one level, provide passenger elevators to provide access to every habitable floor.

3.02 AMENITY AND COMFORT CRITERIA

A. Accessibility:
   1. Elevators: Provide passenger elevators that comply with the ADA Standards for accessible design.

3.03 HEALTH AND SAFETY CRITERIA

A. Fire Resistance: Where vertical people-moving equipment must pass through fire resistant floor construction, provide fire resistance in compliance with code.
   1. Shaft Enclosure: Not less than two hour fire resistance rating at elevators, shafts, hoistway and control rooms.
   2. Doors: Not less than one hour labeled fire protection rating, or minimum allowed by code for rating of space, whichever is higher.

3.04 STRUCTURAL CRITERIA

A. Comply with structural requirements of code and the following:
   1. Elevator Car Frames: Fully-welded construction.

3.05 DURABILITY CRITERIA

A. Expected Service Life Span: Provide people-moving equipment with functional service life of 25 years, assuming that they will have continuing professional maintenance and periodic replacement of wearing parts.

3.06 OPERATION AND MAINTENANCE CRITERIA

A. Elevators: Comply with provisions of ASME A17.1, unless otherwise indicated.
B. Passenger Elevator Operating System: As follows:
   1. Single Elevators: Selective collective operation.
C. Operating Features for Every Elevator:
   1. Key switch in each elevator car for emergency operating service.
   2. Key-controlled out of service feature.
   3. Emergency power operation of one designated car in accordance with code.
D. System Maintenance: Provide equipment designed to require minimum maintenance.
   1. Substantiation:
      a. Construction Documents: Proposed maintenance contract, for Owner's review.

END OF SECTION

SECTION DC D2
PLUMBING CRITERIA

PART 1 GENERAL

1.01 GENERAL DESIGN CONSIDERATIONS

A. Plumbing system narrative, which defines the scope of work and capacities of the Plumbing system as well as the Basis of Design. The Plumbing Systems shall be designed and constructed for ***LEED v4 for Schools*** were indicated on this narrative.

B. All work installed under Section DC D2 shall comply with the MA Building Code, MA Plumbing Code 248 CMR and all state, county, and federal codes, laws, statutes, and authorities having jurisdiction.

C. All work is new and consists of furnishing all materials, equipment, labor, transportation, facilities, and all operations and adjustments required for the complete and operating installation of the Plumbing work and all items incidental thereto, including commissioning and testing.

D. The building will be serviced by Municipal water and Municipal sewer system.

E. All Plumbing in the building will conform to Accessibility Codes and to Water Conserving sections of the Plumbing Code.

PART 2 RODUCTS

2.01 D2010 PLUMBING FIXTURES

A. Fixtures:

1. Furnish and install all fixtures, including supports, connections, fittings, and any incidentals to make a complete installation.

2. Number of plumbing fixtures will be added in the facility to accommodate population of male students and female students and shall be in accordance with 248 CMR Paragraph 10.10, Table 1.

3. Plumbing fixtures will be equipped with the following water conserving features (for 30 percent indoor water use reduction-LEED-V4, Credit 2).

4. Fixtures shall bear the manufacturer's guaranteed label trademark indicating first quality. All acid resisting enameled ware shall bear the manufacturer's symbol signifying acid resisting material.

5. Vitreous China and acid resisting enameled fixtures, including stops, supplies and traps shall be of one manufacturer by Kohler, American Standard, or Toto. Supports shall be Zurn, Smith, or Josam. All fixtures shall be white. Faucets shall be Toto, Speakman, Symmons, or Chicago.

6. Fixtures shall be as scheduled on drawings and as follows:

   a) Water Closet: High efficiency toilet, 1.28 gallon per flush, wall hung, vitreous china, siphon jet. Manually operated 1.28 gallon per flush-flush valve. Floor mount Water closets are required in PreK Toilets.

   b) Urinal: High efficiency 0.13 gallon per flush urinal, wall hung, vitreous china. Manually operated

0.13 gallon per flush-flush valve.

c) Lavatory: Wall mounted 22 inches by 21-1/4 inches vitreous china lavatory, single hole, punched for concealed armchair carrier. Regenerating hard-wired, single hole, sensor faucet, 0.35 GPM metering mixing faucet programmed for 10 second run-time cycle located under lavatory complete with in-line check stops.

d) Mop Receptor: 24 inches by 24 inches by 10 inches, mop service basin with stainless steel rim guard on exposed sides, 3 inches caulk connection, stainless steel strainer. Include caulking and sealant to seal between unit and finished wall and floor. Furnish and install service sink fitting.

e) Electric Water Cooler: Barrier Free Hi-Lo Electric Water Cooler with bottle filler, 8.0 GPH capacity, tandem mounting, #4 satin finish stainless steel bowls, flex-guard bubbler, push button actuator, ADA compliant. Furnish and install cane touch skirt.

f) Stainless Steel Sinks: Single bowl, 19 inches by 21 inches by 5-1/2 inches deep self rimming countertop mounted, 18 GA type 304 stainless steel sink with offset rear outlet; three-hole punched faucet ledge and quick clip mounting system, sound deadening underside. Concealed deck faucet with 8 inches swing gooseneck spout, 4 inches wrist blade handles, 0.5 GPM aerator.

g) Art room stainless steel counter with backsplash equal to Just Manufacturing Co. SPDT 6130-42, one compartment, 16-gauge, type 304 stainless steel, 18-gauge 304 stainless steel sink fully coated underside insulates for sound and condensation reduction.

h) Provide under sink plaster trap. Pedestal mounted eyewash with stainless steel bowl, dual aerated spray heads with automatic flow controls and flip top dust covers. The eye saver shall be equal to Speakman Model SE-584.

2.02 D2020 DOMESTIC WATER DISTRIBUTION

A. Piping and Fitting: Potable and Non-Potable cold and hot water system water piping shall be Type 'L' hard tempered copper tubing with wrought copper fittings and silver Brite lead-free solder joints.

1. Copper tubing shall be made according to the manufacturer's specifications using sweat fitting and lead-free solder and a noncorrosive flux or press-fit system. Copper flanges will conform to ANSI B16.5, standard.

B. Domestic Cold-Water Service

1. New 4-inch domestic water service from the municipal water system will be provided. A meter and backflow preventer will be provided. A new reduced pressure backflow preventer will be installed at the main domestic water supply to protect the service (per the DEP regulation 310 CMR 22).

2. A new triplex, variable speed water Booster Pump System (5 HP ea.) shall be provided to maintain flow and pressure operation requirements at the remote fixtures. A full line by-pass shall be provided so only the fixtures requiring boosted pressure are served by the booster pump.

3. Boiler water feed and make-up, and any other mechanical take-offs will branch off through a reduced pressure -backflow preventer. Non-freeze wall hydrants with integral back flow preventers are provided along the exterior of the building.

4. Potable water will meet both the NSF 61 and NSF 372 standards for lead-free safe drinking water Act.

5. Domestic cold water inside the building will be “L” type copper tube with wrought or cast copper fittings.

6. All cold-water piping will be insulated to prevent condensation.

C. Domestic Hot Water Service

1. Domestic hot water supply will be generated through central hot water heaters in mechanical room. Two electric water heaters (80KW), 120-gallon tank storage will be manifolded to supply hot water distribution. The water heater will be a modulating type and will be capable of providing fixture hot water flow throughout the facility.

2. The kitchen hot water demand will be generated through one 50 KW electric hot water heater manifold with 120-gallon buffer tank. The hot water will maintain dual system and operate at 140°F to serve the pre-rinse and 3-Compartment sink.

3. The other system will operate at 120-degrees F and will serve the other kitchen appliances, hand sinks, and custodian room sink.

D. The hot water (HW) and re-circulating (HWC) piping will be insulated per IECC2015.

E. All lavatories qualifying as “public” lavatories will be provided with individual mixing valves below the fixture to reduce hot water discharge temperatures to 110-degrees F maximum per code.

F. Valves: Locate all valves so as to isolate all parts of the system. Shutoff valves 3 inch and smaller shall be ball valves, solder end or screwed. Valves shall be by Apollo, Nibco, or Watts.

G. Water meter**:** Type and style as required by the local water department, and sized for the peak intermittent demands of the building. The piping arrangement at meter installation to be as required by the local water department.

H. Cross Connection Protection:

1. Protect potable water piping outlets and connections to equipment or machinery against backflow with an air-gap or approved backflow preventer. The reduced pressure backflow preventer shall be lead-free equal to Watts model 909LF.

2. Backflow preventer type, application, and installation shall comply with the Commonwealth of Massachusetts, Department of Environmental Protection (DEP) Drinking Water Regulations 310 CMR 22.00.

I. Insulation:

1. Insulation for all water piping and all horizontal roof leaders whether concealed or exposed shall be 1-inch thick, heavy density, preformed snap-on insulation equal to Johns Manville Micro-Lok HP, 850 degrees snap-on system, Owens Corning or Knauf.

2. Insulation for cold water piping shall have a factory applied vapor barrier with ends and butts sealed with overlapping 4-inch sealing strips.

3. Valves, fittings, and the underside of roof drain bodies shall be insulated with pre-formed fiberglass fitting insulation cut from dense fiberglass blanket and covered with pre-molded P.V.C. fitting covers.

4. All insulation shall have self-sealing type, all service jacket (ASJ-SSL) factory applied. At exposed piping areas in locker room or gymnasium cover jacket with continuous P.V.C. jacket.

I. Wall Hydrant and Hose Bibb:

1. Wall hydrants shall be Zurn Series Z-1310-PB Ecolotrol cast brass 3/4-inch non-freeze wall hydrant with integral backflow preventer, 3/4-inch hose connections, polished nickel bronze face, loose key handle, brass wall sleeve, and fitted with brass locknut.

2. Hose bibb shall be T and S Brass or equal model #B-720 modified, chrome plated, 3/4-inch hose end, integral stop, vacuum breaker, modified with lock shield and loose tee handle.

J. Water Sub Meters:

1. The domestic water supply system will have water sub meters at a strategic location to record water consumption of fixtures on weekly basis. The following location were determined for remote analysis and trending of water consumption.
   a. Main domestic water supply. (Whole building)
   b. Submeter at domestic hot water supply to plumbing fixtures.
   c. Submeter at cold water supply to plumbing fixtures.

2.02.1 DOMESTIC WATER DISTRIBUTION SUPPLEMENTARY COMPONENTS

A. Workmanship and Installation Methods: All work shall be installed in a first-class manner consistent with the best current practices. All piping shall be installed true to line and grade, shall be grouped together, be parallel to each other. Utilize gang hangers wherever feasible. Group all valves together where feasible.

B. Cleaning and Protection: Protect all materials and equipment during shipment and installation, and properly handle and store at the job site so as to prevent damage, and upon completion of this work, clean all fixtures and equipment and replace damaged parts.

C. Sleeves and Escutcheons: Furnish and install in masonry walls and floors, galvanized steel sleeves.

D. Testing: Test all work in the presence of the Architect and/or Engineer and required by local codes.

E. Chlorination: Upon completion of the plumbing work, thoroughly chlorinate the entire domestic water system before putting same in service.

F. Access Doors: Furnish access doors for access to all concealed parts of the plumbing system that require accessibility. Coordinate types and locations with the Architect.

2.03 D2030 SANITARY DRAINAGE SYSTEM

A. Soil, Waste, and Vent piping system is provided to connect to all fixtures and equipment. System runs from 10 feet outside building and terminates with stack vents through the roof.

B. A separate Grease Waste System starting with connection to an exterior concrete grease interceptor running through the kitchen and servery area fixtures and terminating with a vent terminal through the roof. Point of use grease interceptors are to be provided at designated kitchen fixtures. The exterior grease interceptor of 5,000-gallon capacity will be provided under Sitework scope.

C. Grease Interceptor: Furnish and install fully recessed grease Interceptor at 3 bay sink and dishwasher. The Interceptor shall be equal to Jay R. Smith 8450 integral with extension, 75 GPM flow rate, 150 lbs capacity, 4-inch inlet and outlet.

D. Oil Interceptor: Provide oil interceptors connected at the floor drain of outdoor equipment storage, receiving area, and from elevator sump pump discharge. The floor drain to be rated for 50 gpm flow and shall be equal to Zurn 1186.

E. Piping and Fitting: Soil, Waste and Vent, Kitchen Waste and Vent, and Storm drainage piping to 10 feet outside shall be hub less cast-iron pipe and fittings for 2 inch and above and shall be Type 'L' copper with cast D.W.V. type fittings for 1-1/2 inch and smaller.

F. Art room sinks will be provided with solid interceptors

G. A floor drain will be provided in all toilet rooms where more than one water closet/urinal is present. Floor drains will be of cast iron body construction, heavy duty grade, PDI approved. Those for use in toilet rooms and other finished spaces will have rough bronze exposed finishes. Floor drains in Toilet rooms will require automatic trap primer systems. Those for use in mechanical rooms and other unfinished spaces will all be cast iron. All trap primers are to be electric, timer type..

H. Cleanouts: Cleanouts shall be full size up to 4 inches; threaded bronze plugs located as indicated on the drawings and/or where required in soil and waste pipes. Cleanouts for Special Waste System shall be Zurn #Z9A-C04 polypropylene cleanout plug with Zurn #ZANB-1463-VP nickel bronze scoriated floor access cover.

I. Floor sink shall be equal to Zurn Z-1950

2.03.1 SANITARY DRAINAGE SUPPLEMENTARY COMPONENTS

A. Sleeves and Escutcheons: Furnish and install in masonry walls and floors, galvanized steel sleeves.

B. Testing: Test all work in the presence of the Architect and/or Engineer and as required by local codes.

C. Access Doors: Furnish access doors for access to all concealed parts of the plumbing system that require accessibility. Coordinate types and locations with the Architect.

2.04 D2040 STORM DRAIN SYSTEM

A. Storm Drainage system is provided to drain all roofs with roof drains piped through the building to a point 10 feet outside the building.

B. The surface of the roof deck will be drained with dual-level promenade drains with the lower drain bodies flashed into the waterproofing membrane. The rainwater system will be sized to handle a rainfall rate of 4 inches per hour, with a total runoff from the main roof and the roof deck of just under 1 cubic foot per second.

C. A roof with parapet wall will have overflow drains. Overflow drains will be piped down to level 1 and extended to the exterior wall with a nozzle.

D. The storm system will be installed in cast iron piping with all horizontal piping insulated to prevent condensation. The storm system will exit at various locations of the building and connect to the rainwater collection system.

E. The roof drain shall be large general purpose with cast iron dome. The product equal to Jay R Smith 1010DEK. The overflow drain shall be equal to Jay R Smith 1070 with down spout nozzle to the exterior wall.

PART 3 EXECUTION

3.01 TESTING OF PIPING SYSTEMS

A. General

1. Test all piping systems with water at the pressure head stated for the time interval required without adding water. While any system is being tested, required head pressure shall be maintained until all joints are inspected.

a. All tests shall be witnessed by the inspector having jurisdiction with 48-hour notice given these authorities.

2. Sanitary and Rainwater Leader Systems

a. Test all drainage systems either in their entirety or in sections, after rough piping has been installed. Each section shall be filled with water but no section shall be tested with less than a ten-foot head of water. In testing successive sections at least, the upper ten feet of the next preceding section shall be tested so that no joint of piping in the building except the upper most ten feet of the systems shall be submitted to a test of less than a ten-foot head of water. The water shall be kept in the system for at least 15 minutes before the inspection starts, the system shall than be made tight at all points.

3. Interior Water Piping Systems

a. Upon completion of the entire water supply system or a section of it, it shall be tested and proved tight under water pressure of 150 psi. Gauge should be located on the lowest point in the system and pressure shall hold for a period of 24 hours without introducing additional water. The water used for testing shall be from a potable source of supply.

B. DISINFECTION OF WATER SYSTEM

1. All water piping shall be filled with a solution of chlorine and water (0.5-1.5 ppm) and allowed to stand for at least 48 hrs. After the system has been drained and flushed, and refilled, a sample of the water shall be taken to the local health department for testing. If it has been that all impurities have not been removed, the above shall be repeated until the system is free of all impurities and has been approved by the Department of Health. A copy of said certificate shall be turned over to the Architect and Inspectional Services for record.

3.02 COMMISSIONING REQUIREMENTS

A. The building project shall include commissioning of all Plumbing equipment; commissioning specifications will be prepared by the Commissioning Agent once that entity has been hired by MSBA.

END OF SECTION

SECTION DC DC3
HVAC CRITERIA

PART 1 - GENERAL

1.01 TIME, MANNER AND REQUIREMENTS FOR FILING TRADE BIDS

A. Trade Bid shall be submitted in accordance with the provisions of General Law, Chapter 149A, inclusive, as amended.

B. Sub-Bids for Work under this Section shall be received at the location indicated on the Invitation for Bids.

C. All Trade Bids shall be submitted on the “Form of Trade Bid” furnished by the Awarding Authority complying with Chapter 149A of the General Laws, as amended. The Bid Forms attached herein are for information only and shall not be detached, filled in, or executed. Trade Bids which are incomplete, conditional, obscure, or which contain additions not called for will be rejected.

D. Trade Bids for work under this Section shall be for the complete work required as specified and as shown on the Drawings. Work to be performed under this Trade Bid is included in the Contract Documents as indicated in the Trade Bid Coordination document included in the Bidding and Contract Requirements of this Project Manual.

E. Sub-Bidders must comply with all provisions of Division 01 General Requirements, in the same manner as the Construction Manager.

1.02 GENERAL REQUIREMENTS

A. The following outline specifications are intended to supplement the HVAC system design narratives. The outline specifications below include equipment product data and installation requirements. Refer to narratives for the specific equipment that will be required.

1.03 CODES

A. All work installed under this section shall comply with the State of Massachusetts Building Code and all local, county, and federal codes, laws, statutes, and authorities having jurisdiction.

1.04 DESIGN INTENT AND SYSTEM DESCRIPTION

A. The work of this Section is shown on the drawings and described within the basis of design narrative and these specifications. All work is new and consists of furnishing all materials, equipment, labor, transportation, facilities, and all operations and adjustments required for the complete and operating installation of the Heating, Ventilating and Air Conditioning work and all items incidental thereto, including commissioning and testing.

B. Capacities of systems and equipment are indicated in the HVAC system narrative.

1.05 GENERAL

A. Materials and equipment furnished under this section shall be new, unused, first quality of a manufacturer of established reputation.

PART 2 - PRODUCTS

2.01 D3030 HEATING AND COOLING GENERATING SYSTEMS

A. Air Source Heat Pump Hot and Chilled Water Generator

1. Provide and install a factory assembled, charged, air source six-pipe standard, simultaneous heat pump chiller, which shall produce 130 degrees F heating hot water to serve terminal heating devices, and ventilation heating coils throughout the building. The unit shall similarly produce chilled water to serve terminal cooling and ventilation cooling coil loads. Equipment shall be completely assembled, piped, internally wired, fully charged with refrigerant, and test operated at the factory.
2. Available Manufacturer: Subject to compliance with the requirements of the contract documents provide liquid chiller unit of the following manufacturer:
    a. WaterFurnace
    b. ClimaCool
    c. Trane
    d. Multistack
    e. Or equal

2.02 D3050 FACILITY HVAC DISTRIBUTION SYSTEMS

A. Hydronic Piping and Fittings

1. Hydronic piping shall be Schedule 40 ASTM A-53, black steel pipe with butt welded ends and fittings on 3 inch and above and threaded ends and fittings on 2-1/2 inch and smaller. At the HVAC Trade Contractor's option type "L" copper may be used on all 2-1/2 inch and smaller.

B. Refrigerant Piping and Fittings
1. Refrigerant Piping: Refrigerant piping shall be copper tube; Type ACR, hard-drawn temper; wrought-copper, solder-joint fittings; brazed joints.

C. Valves
1. All valves shall be bronze, brass, or cast iron as system design requires. Locate all valves so as to isolate all parts of the system for normal system operation.
2. Available Manufacturers: Subject to compliance with the requirements of the contract documents provide valves of the following manufacturer:
   a. Milwaukee
   b. Stockham
   c. Nibco
   d. Or equal

D. Pumps
1. Base mounted bronze fitted with high efficiency electric motor. Provide primary and stand-by pump for each system.
2. Available Manufacturers: Subject to compliance with the contract documents provide pumps of the following manufacturer:
   a. Bell & Gossett
   b. Taco
   c. Armstrong
   d. Or equal

E. Insulation
1. All piping shall be insulated with snap-on fiberglass insulation (min. 1-1/2 inch thick) with all service jacket. Fittings shall be insulated with snap on pre-molded covers with loose fill fiberglass insulation.
2. All HVAC supply and return ductwork shall be insulated with fiberglass blanket with a foil vapor barrier. All outside air intake ductwork and exhaust ductwork between inline fans or equipment and the point of building exit shall be insulated with 2 inch rigid fiberglass with foil vapor barrier.
3. All Refrigerant piping shall be provided with closed-cell foam insulation.
4. Piping insulation thickness shall meet or exceed energy code requirements.

2.03 AIRSIDE DISTRIBUTION SYSTEMS

A. Ductwork
1. All ductwork shall be galvanized steel with all seams sealed. Entire ductwork system shall be fabricated and installed per SMACNA standards and IMC code requirements.
2. Ductwork shall be insulated in accordance with energy code requirements.

B. Diffusers, Registers And Grilles
1. All devices shall be steel welded construction with diffusing vanes and baked enamel finish.
2. Available Manufacturers: Subject to compliance with the requirements of the contract documents provide diffusers, registers, and grills of the following manufacturer:
   a. Price
   b. Nailor
   c. Titus
   d. Metalaire
   e. Or equal

C. Displacement Diffusers:
1. All devices shall be steel welded construction with perforated face and intermittent baffle for equalization and shall have a baked enamel finish.
2. Available Manufacturers: Subject to compliance with the requirements of the contract documents provide displacement diffusers of the following manufacturer:
   a. Price
   b. Metalaire
   c. Titus

d. Or equal

D. Indoor and Rooftop Air Handling Units (HVAC 100 percent O.A.)
   1. All units shall be of the draw thru 100 percent outdoor air design and shall be provided with hot water heating coil, chilled water cooling coil, hot water total energy recovery section, reheat section, filters (MERV-14), dampers, and centrifugal supply and return air fan with motor.
   2. Available Manufacturers: Subject to compliance with the requirements of the contract documents provide rooftop air handling units of the following manufacturer:
      a. Nagas
      b. Haakon
      c. Bousquet
      d. Or equal

E. Make-Up Air Units:
   1. All units shall be of the draw thru 100 percent outdoor air design and shall be provided with filters (MERV-13), dampers, and centrifugal supply and return air fan with motor.
   2. Available Manufacturers: Subject to compliance with the requirements of the contract documents provide rooftop air handling units of the following manufacturer:
      a. Daikin
      b. Valent
      c. Greenheck
      d. Or equal

F. Fin Tube Radiation
   1. Commercial slope top fin-tube with steel tube and steel fin. Cover shall be 14 ga. with baked enamel factory finish. All units shall be provided with full backplate, damper, end covers, and splice pieces for a complete installation.
   2. Available Manufacturers: Subject to compliance with the requirements of the contract documents provide fin-tube radiation of the following manufacturer:
      a. Sterling
      b. Vulcan
      c. Ritling
      d. Or equal

G. Unit Heaters
   1. Horizontal or cabinet type with exact location to be determined. All units shall be provided with fan and aquastat control.
   2. Available Manufacturers: Subject to compliance with the requirements of the contract documents provide unit heaters of the following manufacturer:
      a. Trane
      b. Daikin
      c. Sterling
      d. Rittling
      e. Or equal

H. Radiant Heating Panels
   1. General: The radiant panels will have a minimum heating output of 190 Btu/Hour/Linear Foot at 120 degrees F mean water temperature when the room air temperature is 70 degrees F. Panels' widths shall be as indicated or scheduled on the drawings; in general the panels will be 36-48 in width to support lower hot water supply temperatures in the range of 110- 130 degrees F
   2. Radiant panel shall be manufactured utilizing extruded aluminum strips of approximately 0.115 overall thickness. The strips shall have a minimum 0.495 I.D. copper tube firmly attached to aluminum extrusion under all operating temperature conditions. Ends of tubes shall be swaged to 0.569 I.D. for proper soldering fit of ½ inch Type "L" soft copper tubing.
   3. Manufacturer: Subject to compliance with requirements, provide coils of one of the following:
      a. Price
      b. Sterling
      c. Rittling
      d. Or equal

I. Wall Mounted Radiators
1. Commercial radiators are manufactured of cold rolled low carbon steel, fully welded and consisting of header pipes at each end, connected by flat oval water tubes. Radiator shall have a baked enamel factory finish. All units shall be provided with end covers, and splice pieces for a complete installation.
2. Available Manufacturers: Subject to compliance with the requirements of the contract documents provide fin-tube radiation of the following manufacturer:
   a. Sterling
   b. Runtal
   c. Rittling
   d. Or equal

J. VAV (Variable Air Volume) Terminal Boxes
1. VAV Terminal Boxes shall be single duct style with sound trap as manufactured by one of the following:
   a. Price
   b. MetalAire
   c. Nailor
   d. Or equal

2.04 D3060 VENTILATION

A. Exhaust Fans
1. Exhaust fans shall be galvanized steel construction with centrifugal fan and belt drive motor. Each roof fan unit shall be provided with 24 inch high pre-fab curb with motor operated damper in curb.
2. Available Manufacturers: Subject to compliance with the requirements of the contract documents provide exhaust fans of the following manufacturer:
   a. Greenheck
   b. Cook
   c. Twin City
   d. Or equal

2.05 D3070 SPECIAL PURPOSE HVAC SYSTEMS

A. HVAC Instrumentation AND CONTROLS
1. Automatic Temperature Controls – Building Management System
   a. System shall be web accessible, open protocol (BACnet based) direct digital control (DDC) and building energy management system (EMS) to control and monitor building HVAC and lighting systems. Energy metering shall be installed to monitor the energy usage of building HVAC systems and utilities (electricity and water).
   b. Available Manufacturers: Subject to compliance with the requirements of the contract documents, provide automatic temperature controls of the following manufacturer:
      1) Johnson Controls
      2) Siemens
      3) Honeywell
      4) Delta
      5) Schneider Electric
      6) Or equal

B. Systems Testing and Balancing
1. Requirements include measurement and establishment of the quantities of the mechanical systems to meet specifications, and recording and reporting the results. Test, adjust and balance the following mechanical systems:
   - Supply air systems.
   - Return air systems.
   - Exhaust air systems.
   - Outside air systems.
   - Hydronic heating systems.
   - Verify temperature control system operation.
2. Report forms shall be those standard forms prepared by the referenced standard for each respective item and system to be tested, adjusted, and balanced. Bind report forms

complete with schematic systems diagrams and other data in reinforced, vinyl, three-ring binders.

3. An independent testing, adjusting, and balancing agency certified by the AABC or NEBB as a Test and Balance Engineer in those testing and balancing disciplines required for this project.

PART 3 - EXECUTION

3.01 SYSTEM IDENTIFICATION

A. Provide markers on all piping, equipment, and ductwork. Tag all valves in system with corresponding valve lists.

3.02 WORKMANSHIP AND INSTALLATION METHODS

A. All work shall be installed in a first-class manner consistent with the best current practices.

1. All piping shall be installed with slope for proper drainage shall be grouped together, and be parallel to each other. Utilize gang hangers wherever feasible. Group all valves together where feasible.

3.03 CLEANING AND PROTECTION

A. Protect all materials and equipment during shipment and installation, and properly handle and store at the job site so as to prevent damage, and upon completion of this work, clean all fixtures and equipment and replace damaged parts.

3.04 Sleeves And Escutcheons

A. Furnish and install in masonry walls and floors, galvanized steel sleeves. Provide escutcheons where sleeves and pipe penetrations are exposed to view.

3.05 FIRESAFING

A. At all sleeved walls and floors provide firesafe caulking, packing, blanket, for a completely tight system to prevent the passage of smoke and fire.

3.06 OPERATION MANUALS AND MAINTENANCE MANUALS:

A. Refer to the contract specifications for a complete outline of all requirements of operations and maintenance data.

3.07 RECORD DRAWINGS AND CONTROL DOCUMENTS:

A. Refer to the contract specifications project record documents for a complete description of all requirements of recording as built record documents.

3.08 COMMISSIONING:

A. The project shall be commissioned per the project Commissioning Agent’s (CxA) specifications.

END OF SECTION

SECTION DC D4

FIRE SUPPRESSION CRITERIA

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Fire suppression comprises the following elements:

1. Fire Sprinkler Systems: Automatic fire suppression is required for the entire building per MA state Building Code CMR 780, 10th edition and NFPA 13-2019.
2. Standpipe and Hose Systems: Elements that deliver adequate supplies of water to locations in the building for manual fire-fighting per MA state Building Code CMR 780, 10th edition and NFPA 14-2019.

PART 2 PRODUCTS

2.01 FIRE SUPPRESSION SYSTEM TYPES

A. Use one or more of the following:

1. Wet pipe sprinkler system.
2. Standpipe system.

2.02 D4010 - FIRE SPRINKLER AND EXTINGUISHING SYSTEM COMPONENTS

A. Pipe, fittings, hangers and supports:

1. Schedule 40 black steel pipe for 1-1/2 inch and smaller and Schedule 10 for 2 inch and larger.
2. All pipes passing through floors, walls, or partitions shall be provided with sleeves having an internal diameter of approximately one inch larger than the outside diameter of the pipe or insulation on covered lines. Sleeves through floors and through exterior, structural and fire-rated construction shall be hot-dipped galvanized Schedule 40 steel pipe
3. Fittings on fire service piping, 2 in. and larger, shall be Victaulic Fire Lock Ductile Iron Fittings conforming to ASTM A-536 with integral grooved shoulder and back stop lugs and grooved ends for use with Style 009-EZ or Style 005 couplings. Branch line fittings shall be welded or shall be Victaulic 920/920N Mechanical Tees. Schedule 10 pipe shall be roll grooved. Schedule 40 pipe, where used with mechanical couplings, shall be roll grooved and shall be threaded where used with screwed fittings. Fittings for threaded piping shall be malleable iron screwed sprinkler fittings.
4. Welding Materials: Comply, with Section II, Part C, ASME Boiler and Pressure Vessel Code for welding materials appropriate for the wall thickness and chemical analysis of the pipe being welded.

   Brazing Filter Metals: AWS A5.8, Classification Bag1 (Silver).

   Solder Filter Metals: ASTM B 32, 95-5 Tin Antinomy.
5. Gasket Materials: Thickness, material, and type suitable for fluid or gas to be handled, and design temperatures and pressures.
6. Hangers for piping of sizes 4 inches and smaller shall be Carpenter & Paterson figure no. 800 adjustable swivel ring, Tolco Company or approved equal, black steel and hanger rods with machine threads.

7. Hangers for piping of sizes larger than 4 inches shall be the adjustable clevis hanger type, steel with extension rod to structure, Carpenter & Paterson figure no. 100.

B. Sprinklers

1. Upright sprinkler heads in areas with no ceilings shall be Reliable Model "F1FR" Quick Response, upright natural bronze finish heads.
2. Sidewall heads shall be Reliable Model "F1FR" Quick Response with chrome plated head and escutcheon.
3. Concealed heads shall be Reliable Model "G4A" Quick Response concealed type, 1-1/2 inch adjustment white cover plate. In special areas, as may be noted on the Drawings, provide alternate cover plate finishes.
4. Pendant dry sprinkler heads shall be chrome plated with adjustable escutcheon.

C. Sprinkler system equipment

1. Double check valve assembly shall be State approved, U.L./F.M. approved, with iron body bronze mounted construction complete with supervised OS and Y gate valves and test cocks. Double check valve assembly shall be Watts Series 757-OSY, Wilkins 350A-OSY, Ames 2000SS, or approved equal
2. Fire pump shall be 40 HP, 750GPM@60PSI with controller and all accessories. The Fire pump system also includes a 2HP, 10GPM@65 PSI Jockey pump with controller and accessories.
3. Gate valves, 2 inches and smaller shall be outside screw and yoke, bronze, rising stem, wedge disc type, threaded, conforming to MSS SP-80. Gate valve 2-1/2 inches and larger shall be iron body, bronze trim, outside screw and yoke, flanged, UL/FM listed conforming to MSS SP-70. All valves shall be UL listed for at least 175 psi working water pressure (wwp).
4. Globe and angle valves may be used as auxiliary valves (drain valves, test valves, trim valves and valves on compressed air piping) for diameters not over 2 in. They shall be bronze, rising stem, with bronze disc, threaded, conforming to MSS SP-80 Class 150.
5. Check valves shall be swing type except as noted. Valves 2 inches and smaller shall be bronze, regrinding type with renewable disc, screwed caps, threaded, class 150 conforming to MSS SP-80. Check valves 2-1/2 inches and greater shall be iron body, bronze trim, bolted cover, flanged, conforming to MSS SP-71, UL listed for 175 psi wwp.
6. Wet riser check valves shall be approved vertical type for wet systems, complete with drain valve and glycerin filled pressure gauges. Valve internal components shall be replaceable without removing valve from the installed position. UL/FM Global approved.
7. Fire Department connection shall be flush mount cast brass Storz inlet body with drop clappers, 4 inch in size. Polished brass plate lettered with the approved signage. The connection’s lettering and threads shall match Local Fire Department requirements. Confirm finish with Architect prior to ordering.
8. Fire protection test connection shall be polished brass plate with lettering to read “TEST”. Polished brass double female snoot with rigid end N.P.T. x pin lug hose thread swivel, pin lug plug and chain.
9. Water Flow Indicators: Vane type waterflow detector, rated to 250 psig; designed for horizontal or vertical installation; have 2-SPDT circuit switches to provide isolated alarm and auxiliary contacts, 7 ampere 125 volts AC and 0.25 ampere 24 volts DC; complete with factory-set, field-adjustable retard element to prevent false signals, and tamper-proof cover which sends a signal when cover is removed.
10. Electric Alarm: Electrically operated, red enameled gong with pressure alarm switch.

11. Supervisory Switches: SPST, normally closed contacts, designed to signal valve in other than full open position.

2.03 D4020 - STANDPIPE AND HOSE SYSTEM COMPONENTS

A. Fire Department Valves shall be Croker Series 5015 Fire Department Valves fitted with 2-1/2 inch national standard by 1-1/2 inch iron pipe reducer, caps and chains all conforming to Local Fire Department thread standard. Valves shall be polished chrome plated and shall be mounted in a recessed cabinet as indicated on Drawings.

B. Cabinets for the Fire Department Valves shall be Croker #2700 - Modified 18 inches by 18 inches by modified 10 inches deep. cabinet, fully recessed, solid door, prime painted steel. Include graphic and door catch.

C. Provide 24 inches by 24 inches access panels at floor control locations or recessed cabinets as appropriate to the wall construction. Provide graphic.

D. Fire Hose Cabinets located in the stage area shall be Croker Series 2100 full recessed mounted, prime painted steel door with graphic equipped with 2-1/2 inch valve with 1-1/2 inch fire hose rack containing 50 feet of 1-1/2 inch Pr. Superflex hose and nozzle conforming to local fire department standards.

2.04 D4090 - GENERAL

A. All materials and equipment furnished under this Trade Contract shall be new, unused, first quality of a manufacturer of established reputation. Each valve, fitting, section of pipe, piece of equipment, shall have cast or indelibly stamped thereon the manufacturer's name, pressure rating and where applicable, type.

B. Drains and test connections shall be provided in the systems.

C. Protect all materials and equipment during shipment and installation, and properly handle and store at the job site so as to prevent damage, and upon completion of this work, clean all fixtures and equipment and replace damaged parts.

D. All work shall be installed in a first-class manner consistent with the best current practices.

E. All piping shall be installed true to line and grade, shall be grouped together, be parallel to each other. Utilize gang hangers wherever feasible. Group all valves together where feasible.

END OF SECTION

SECTION DC DC5
ELECTRICAL CRITERIA

PART 1 - GENERAL

1.01 TIME, MANNER AND REQUIREMENTS FOR FILING TRADE BIDS

A. Trade Bid shall be submitted in accordance with the provisions of General Law, Chapter 149A, inclusive, as amended.
B. Sub-Bids for Work under this Section shall be received at the location indicated on the Invitation for Bids.
C. All Trade Bids shall be submitted on the “Form of Trade Bid” furnished by the Awarding Authority complying with Chapter 149A of the General Laws, as amended. The Bid Forms attached herein are for information only and shall not be detached, filled in, or executed. Trade Bids which are incomplete, conditional, obscure, or which contain additions not called for will be rejected.
D. Trade bids for work under this Section shall be for the complete work required as specified and as shown on the Drawings. Work to be performed under this Trade Bid is included in the Contract Documents as indicated in the Trade bid Coordination document included in the Bidding and Contract Requirements of this Project Manual.
E. Trade Bidders must comply with all provisions of Division 01 General Requirements, in the same manner as the Construction Manager.

1.02 GENERAL

A. The General Conditions and Supplementary General Conditions of these contract documents are hereby made a part of this Section.
B. Refer to drawings for further definition of location, extent, and details of work described herein.
C. Cooperate and coordinate with other trades in executing work as described in this Section.
D. Where referred to, Standard Specifications, Recommendations of Technical Societies, and/or Manufacturer's Associations, plus Codes of Federal, State, and Local Agencies shall include all amendments current as of date of issue of these specifications.
E. Product specifications are written in such a manner so-as-to specify what materials may be used in a particular location or application and therefore do not indicate what is not acceptable or suitable for a particular location or application. As an example: non-metallic sheathed cable is not specified; therefore, it is not acceptable.
F. All material shall be new and shall be UL listed.

1.03 SUMMARY

A. Work described herein shall be interpreted as work to be done by the Electrical Trade Contractor. Work to be performed by other trades will be referenced to a particular contractor.
B. Provide all labor, materials, tools, and equipment, including scaffolding, to complete the installation of the electrical system. Install, equip, adjust, and put into operation the respective portions of the installation specified, and so interconnect various items or sections of work in order to form a complete and operating whole. The work shall consist of, but shall not necessarily be limited to, the following:
    1. Primary, Secondary and low tension ductbanks, manholes and handholes.
    2. Secondary distribution equipment, including secondary switchboard and metering, motor controls, dry-type transformers, distribution panels, and panelboards, including feeders and subfeeders.
    3. Fire alarm and mass notification system, addressable type.
    4. Emergency power system, including diesel fueled emergency generator, emergency lighting and exit signs.
    5. Lighting systems exterior and interior, including lamps, fixtures, occupancy sensors, controls.
    6. Theatrical lighting system including all track, track heads, DMX controller(s), racks and controls.
    7. All raceway systems, including boxes, couplings, and fittings.
    8. All branch circuit wiring systems, including wiring devices, plates.
    9. Excavation and backfill within building foundation walls for any underground raceways.
    10. Connections and coordination for all building equipment, including mechanical, plumbing, fire protection, elevator.
    11. All testing of equipment installed.

12. Any other item of work hereinafter specified or indicated on electrical drawings.
13. Drilling, coring, and cutting of holes (where the largest dimension thereof does not exceed 12 inches) for electrical conduit systems, and equipment.
14. Systems Identification.
15. Scaffolding, Rigging, and Staging required for all Electrical Work.
16. Hardware – coordinate with Finish Hardware.
17. Fire stopping.
18. Provide Seismic Restraints for all Electrical Systems conforming to the requirements of State Code.
19. Coordination Drawings.
20. Provide cable tray, 120-volt power sources, raceways and backboxes for Paging System, Clock System, Voice, Data and Video Systems and Security System as specified in Section DC D7 and Section DC D8.
21. Lightning Protection System.
22. Temporary Power and Lighting.
23. Electronic Scoreboards and Shot Clocks. Wall mounted, 6-foot by 8-foot multisport scoreboard. Basis of design Daktronics BB2153.
24. Alternates affecting this Section.
25. Distributed Antenna System (DAS).
26. Two-way Communication Call Box System.
27. Photovoltaic System provisions

1.04 DEFINITIONS

A. Most terms used within the documents are industry standard. Certain words or phrases shall be understood to have specific meanings as follows:
   1. Provide: Furnish and install completely connected and in operable condition.
   2. Furnish: Purchase and deliver to a specific location within the building or site.
   3. Install: With respect to equipment furnished by Construction Manager or other Trade Contractors, install means to receive, unpack, move into position, mount, and connect, including removal of packaging materials.
   4. Conduit: Raceways of the metallic type which are not flexible. Specific types as specified.
   5. Connect: To wire up, including all branch circuitry, control and disconnection devices so item is complete and ready for operation.
   6. Subject to Mechanical Damage: Equipment and raceways installed exposed and less than eight feet above finished floor in mechanical rooms or other areas where heavy equipment may be in use or moved.

1.05 ITEMS TO BE FURNISHED ONLY

A. Furnish the following items for installation under designated sections.
   1. Duct smoke detectors and duct carbon monoxide detectors installed under Section DC D4 HVAC Criteria.

1.06 ITEMS TO BE INSTALLED ONLY

A. Install the following items furnished under designated sections.
   1. Technology system specialty back boxes.

1.07 RELATED WORK

A. The following related work is to be performed under designated sections.
   1. Excavation and Backfill: DC G – Sitework Criteria (except within building foundation).
   2. Concrete Bases, Pads and Duct Envelopes: DC A Substructure Criteria.
   3. Finish Painting: DC C2 – Interior Finishes Criteria.
   4. Automatic Temperature Control: DC D4 HVAC Criteria.
   5. Payment for energy for temporary light and power shall be made by the Construction Manager.

1.08 CONTRACT COST BREAKDOWN

A. Submit a breakdown of contract price to aid Architect in determining value of work installed as job progresses.

1.09 INSPECTION OF SITE

A. Electrical bidders will be permitted to inspect the site. Failure to inspect existing conditions or to fully understand work which is required shall not excuse Electrical Subcontractor from his obligations to supply and install work in accordance with specification and drawings and under site conditions as they exist.

1.10 CONTRACTOR'S REPRESENTATIVE

A. Retain a competent representative on the project.

1.11 COOPERATION

A. Work shall be carried out under usual construction conditions, in conjunction with other trade Contractors' work. Cooperate with other Trade Contractors, coordinate work, and proceed in a manner so as not to delay progress.

1.12 CODES, ORDINANCES, AND PERMITS

A. Codes and Ordinances:
   1. NFPA 70 – National Electrical Code – (NEC) 2023
      NFPA 101 – Life Safety Code
      NFPA 72 – National Fire Alarm Code
      Underwriters Laboratories, Inc. UL Standards
      National Electrical Manufactures Association (NEMA) standards
      Institute of Electrical and Electronic Engineers (IEEE), applicable publications
      Illuminating Engineering Society of North America (IESNA), applicable publications
      LEED V4
   2. Code Design Requirements:
      Main service shall be designed per NEC Article 230 – Services.
      Grounding shall be in accordance with NEC Article 250 – Grounding
      Lighting, Electrical Distribution, Receptacles, General Power, Telephone, Fire Alarm, Data Network, Intrusion, Lightning Protection, and Photovoltaic Systems shall be designed in accordance with the National Electrical code (NEC) 2017 and all local codes that may apply.
      Fire Alarm Systems shall be designed per NFPA 70, 101, 72, 25.
      All wiring shall be in compliance with the National Electrical Code – (NEC) 2017

B. Permits: Be responsible for filing documents, payment of fees, and securing inspections and approvals. Owner will pay for backcharges for utility company work in conjunction with the permanent electric service.

1.13 ELECTRICAL ROOMS OR SPACES

A. Be responsible for ensuring that the dedicated space and clearances required in the NEC, Sections 110-16 and 384-4 are maintained for all electrical equipment.

1.14 SUBMITTALS

A. Refer to Supplementary General Conditions for information relative to submission of shop drawings. Six copies are required. No equipment for which review is required shall be installed prior to review, except at the Construction Manager or Trade Contractor's own risk.

1.15 GUARANTEE

A. Keep work in repair without expense to Owner as far as concerns defects in workmanship or materials for a period of not less than one year from date of substantial completion.

1.16 ELECTRICAL CHARACTERISTICS

A. In general, and unless specifically indicated otherwise, all building service, heating, ventilating, air conditioning, and plumbing equipment shall be of the following characteristics.
   1. Motors up to and including 1/3 HP shall be suitable for 120 volts, one phase operation.
   2. Motors larger than 1/3 HP shall be suitable for 480 volts, three phase operation.
   3. Electric heating equipment 4 KW and less shall be suitable for 277-volt single phase operation. Over 4 KW shall be 480-volt three phase.

B. Power Factor: All equipment provided rated greater than 1,000 watts and lighting equipment greater than 15 watts with an inductive reactance load component shall have a power factor of not less than 90 percent under rated load conditions.

1.17 RECORD DRAWINGS

A. Provide two sets of black or blue line, on white drawings to maintain and submit record drawings, one set shall be maintained at site, and which shall be accurate, clear, and complete showing actual location of all equipment as installed.
B. Any addenda sketches and supplementary drawings issued during course of construction shall be attached to drawings.
C. At completion, submit an accurate checked set of drawings.
D. After approval of these drawings, photo reproductions of original tracings shall be revised to incorporate changes, including addenda sketches and supplementary drawings.

1.18 TEMPORARY LIGHT AND POWER

A. Refer to Division 01 General Requirements.

1.19 TEMPORARY ELECTRICAL SUPPORT FACILITIES

A. Refer to Division 01 General Requirements.
B. Provide Electrical Trade Contractor field office and/or storage facilities which shall be located at the direction of the Construction Manager and in accordance with local regulations. Provide all tools, equipment, ladders, and temporary construction required for execution of the work.
C. All scaffolding, ladders, and other temporary construction shall be rigidly built-in accordance with all local and state requirements and shall be removed upon completion.

1.20 INSPECTIONS AND TESTS

A. Inspection: If inspection of materials installed shows defects, such defective work, materials, and/or equipment shall be replaced, and inspection and tests repeated.
B. Tests: Make reasonable tests and prove integrity of work and leave electrical installation in correct adjustment and ready to operate. All panels and switchboards shall have phases balanced as near as practical. A consistent phase orientation shall be adhered to all terminations.

1.21 ENERGY REBATE PROGRAM

A. This project has been designed to incorporate equipment approved for energy rebate such as fixtures, and lighting controls. This project will be designed in compliance with the “Mass Save” Program.

1.22 OWNER FURNISHED EQUIPMENT

A. The owner will furnish certain materials which will be installed and wired under this Section of the specifications. Owner furnished equipment will be specified under the Product Sections of these Specifications.

1.23 INSTRUCTIONAL TECHNOLOGY SYSTEM (I.T.S.)

A. Electrical Contractor shall work closely with the I. T.S. Contractor to assure a first-class installation. Coordinate all back boxes and conduits required prior to installation. In general, the electrical contractor shall provide outlet boxes and conduits from (I.T.S. equipment) outlets to accessible ceiling space.

1.24 WORK COORDINATION AND JOB OPERATIONS

A. Equipment shall not be installed in congested and possible problem areas without first coordinating installation of same with other trades. Relocate electrical equipment installed in congested or problem areas should it interfere with the proper installation of equipment to be installed by other trades.

1.25 PLANS AND SPECIFICATIONS

A. Plans:
    1. Drawings showing layout of electrical systems indicate approximate location of raceways outlets and apparatus. Runs of feeders and branch circuits are schematic and are not intended to show exact routing. Final determination as to routing shall be governed by structural conditions and other obstructions.
B. Specifications:
    1. Specifications supplement drawings and provide specifics pertaining to methods and material to be used.

1.26 IDENTIFICATION

A. Equipment shall be marked for ease of identification as follows.
    1. Provide screw-on nameplates on switchboards, panelboards, F.A. terminal cabinets, starters, and disconnect switches. Nameplates to be of black phenolic with white engraving. For starters and disconnect switches lettering shall be minimum of 1/4 inch high.

2. Space neatly typed directory cards listing circuit designations shall be fastened inside the cover of panelboards. Spare circuits shall be penciled.
3. Wiring device plates on devices connected to normal-emergency circuits shall be red in color.
4. All conductors in boxes larger than standard outlet boxes, in all wireways, trench headers shall be grouped logically and be identified.
5. Grounding conductors and neutrals shall be labeled in panels, wireways as to circuits associated with.

1.27 PROTECTION AND CLEANUP

A. Protection:
   1. Materials and equipment shall be suitably stored and protected from the weather.

1.28 PORTABLE OR DETACHABLE PARTS

A. Retain possession of and be responsible for spare parts, portable and detachable parts, and other removable portions of installation including fuses, keys, locks, blocking clips, inserts, lamps, instructions, drawings, and other devices or materials that are relative to and necessary for proper operation and maintenance of the system until final acceptance, at which time such parts shall be installed or turned over to the Owner, as the case may be.

1.29 SAFETY PRECAUTIONS

A. Provide proper guards, signage, and other necessary construction required for prevention of accidents and to ensure safety of life and property. Remove any temporary safety precautions at completion.

1.30 MOUNTING HEIGHTS

A. All electrical equipment shall be mounted at the following heights unless noted or detailed otherwise on drawings. Notes on architectural drawings shall supersede those noted below or detailed on the electrical drawings. If mounting height of an electrical component is questionable, obtain clarification from Architect before installation.
   1. Duplex convenience outlets, microphone outlets, and telephone outlets - 18 inches.
   2. Light switches, pushbutton stations, HOA switches, and all other toggle or control switches for the operation of heating, ventilating, and air conditioning, plumbing, and general service - 48 inches.
   3. Clock outlets - 84 inches.
   4. Fire alarm pullstations - 48 inches.
   5. Fire alarm audio visual signals - 80 inches or six inches below ceiling, whichever is lower.
   6. Panelboards for lighting, power, telephone, and other auxiliary systems – 78 inch to top.
B. Mounting heights given are from finished floor to centerline. In the case of a raised floor, the surface of the raised floor is the finished floor.

1.31 WORKMANSHIP AND INSTALLATION METHODS

A. Fastenings:
   1. Fasten electric work to building structure in accordance with the best industry practice.
B. General Raceway Installation:
   1. Install the various types of raceways in permitted locations as previously specified. All raceways shall be run concealed. Consult Architect for instruction for raceways which must be exposed in public spaces.

1.32 BRANCH CIRCUITS

A. Provide all branch circuit wiring and outlets for a complete and operational system. The system shall consist of insulated conductors connected to the panelboards and run in raceways, or as cable systems if permitted under the products section, to the final outlet and shall include outlet boxes, supports, fittings, receptacles, plates, fuses.

1.33 FIREPROOFING AND WATERPROOFING

A. Fireproof and waterproof all openings in slabs and walls to maintain the original rating of same.

1.34 CUTTING AND PATCHING

A. All cutting of surfaces, including core drilling of walls and slabs, shall be done by Electrical Subcontractor. Openings through new wall surfaces will be provided by Construction Manager if Electrical Subcontractor gives suitable notice as erection of surface proceeds. If suitable notice is not given, Electrical Subcontractor shall then be responsible for the cost of corrective work required.

1.35 ELEVATOR COORDINATION

A. Elevator Electrical Work:
   1. Several items pertaining to elevator electrical system shall be provided by Electrical Subcontractor as follows:
      a. Power source to elevator machine room including fused disconnect switch and wiring between disconnect switch and controller for each elevator fused disconnect switch (120 volt) for elevator signal system and cab light for each cab light, switch, and GFCI receptacle in each pit and machine room.
      b. Control modules from fire alarm system for elevator recall are to prevent the cab from opening on a fire floor.
      c. Junction box in machine room for cab telephone and paging system.

1.36 MECHANICAL SYSTEM COORDINATION

A. The Mechanical System Subcontractor will be providing various items of mechanical services equipment and control apparatus. In general, Electrical Subcontractor shall connect power wiring to this equipment. Equipment provided by Mechanical System Subcontractors will include built-in disconnecting means and overcurrent protection unless shown otherwise on drawings. This does not include terminal boxes.

1.37 DISTRIBUTION EQUIPMENT TESTING

A. All dry-type transformers, individual motor starters, switchboard and main distribution panels, motor controls, motor control centers, feeder conductors, and emergency systems shall be tested in accordance with the following. In general, all tests shall be done in accordance with the 1995 Acceptance Testing Specifications of the International Electrical Testing Association.
B. Grounding Grids or Electrodes: Measurement of resistance from ground grids or electrodes to earth to determine adequacy of grounding system in building and compliance with specifications and/or electrical code.
C. Settings of Adjustable Devices: Using the result of the fault current and coordination study specified hereinafter, the Testing Contractor shall set all adjustable devices.

1.38 COMMISSIONING REQUIREMENTS

A. The building project shall include commissioning of all Electrical equipment, the building Fire Alarm System, Emergency Lighting System, Security System, and Lighting Control System; commissioning specifications will be prepared by the Commissioning Agent once that entity has been hired by MSBA.

PART 2 - PRODUCTS

2.01 D5020 - ELECTRIC SERVICE

A. Coordinate and cooperate with Utility Company, with respect to providing service and metering. See allowances section for backcharges by utility company with respect to permanent service.
B. Provide all primary system raceways, elbows, pull wires and all pad grounding. The utility company will provide pad mounted transformer and primary conductors including making up of all terminations and connections.
C. Metering: All usage will be on one secondary meter. The utility Company will furnish current transformers and potential transformers to be installed in the switchboard by the Construction
D. Manager. An empty raceway with pull wire from the C/T compartment to the meter backboard shall be provided.

2.02 D5020 - RACEWAYS AND FITTINGS

A. Raceways - General:
   1. No raceway shall be used smaller than 3/4 inch diameter and shall have no more than four 90 degrees bends in any one run, and where necessary, pull boxes shall be provided. Only rigid metal conduit or intermediate metal conduit is allowed for in-slab work. Cable systems, if allowed to be used by other sections of this specification, shall not be used exposed or in slabs, whether listed by "UL" for such use or not.
   2. Rigid metal conduit may be used for service work, exterior work, slab work, and below grade level slab, wet locations, and in penthouse for drops down to equipment from elevations above eight feet and where raceway may be subject to mechanical damage.
   3. Electrical Metallic Tubing (EMT) may be used in masonry block walls, stud partitions, above furred ceilings, where exposed but not subject to mechanical damage, and shall be used for fire alarm work.
   4. Surface metal raceways shall be used where raceways cannot be run concealed.

5. Flexible metal conduit shall be used for final connections to recessed lighting fixtures from above ceiling junction boxes and for final flexible connections to motors and other rotating or vibrating equipment. Liquid tight flexible metal conduit shall be used for the above connections which are located in moist locations. All flexible connections shall include an insulated grounding conductor.
6. Rigid non-metallic conduit may be used at the Construction Manager's option for underground electric and telephone services outside the foundation wall and shall be polyvinyl chloride (PVC) schedule 40, 90 degrees Celsius. If the option of rigid non-metallic conduit is exercised, underground runs outside the foundation wall shall be concrete encased at electrical contractors expense.
7. PVC Schedule 40 may also be used for below slab circuits within building confines and site lighting branch circuits. Below slab rigid non-metallic conduits do not require concrete encasement. Rigid non-metallic conduits shall not be used for exterior feeders, in slabs, nor for elbows which penetrate slabs. Raceways and fittings shall be produced by the same manufacturer.
8. Acceptable manufacturers:
   Pittsburgh Standard Conduit Company
   Republic Steel and Tube
   Youngstown Sheet and Tube Company
   Carlon

B. Outlets, Pull and Junction Boxes:
   1. Outlets:
      a. Each outlet in wiring or raceway systems shall be provided with an outlet box to suit conditions encountered. Boxes installed in normally wet locations or surface mounted shall be of the cast-metal type having hubs. Concealed boxes shall be cadmium plated or zinc coated sheet metal type. Old work boxes with Madison clamps are not allowed in new construction. Through the wall boxes are not permitted.
      b. Acceptable manufacturers:
         Appleton
         Crouse Hinds
         Steel City
         RACO
   2. Pull and Junction Boxes: Where indicated on plans, and where necessary to terminate, tap off, or redirect multiple raceway runs or to facilitate conductor installation, furnish, and install appropriately designed boxes. Boxes shall be fabricated from code gauge steel assembled with corrosion resistant machine screws. Box size shall be in accordance with the Code.
      a. Acceptable Manufacturers:
         Brasch
         Hoffman
         Keystone
         Lee Products Co.
         McKinstry Inc.
         Eldon Inc.

2.03 D5020 - CONDUCTORS

A. All conductors shall be a minimum size of #12 AWG except for control wiring and fire alarm wiring where #14 AWG may be used. For all exit sign circuits, normal/emergency and/or emergency only circuits, exterior lighting circuits, and also where distance from panelboard to first outlet exceeds 80 feet for 120 volts and 150 feet for 277 volts, #10 AWG shall be minimum size wire allowed. All feeder and branch circuit conductor shall be color coded as follows:

1.	208Y/120V	Phase A	Black
2.	208Y/120V	Phase B	Red
3.	208Y/120V	Phase C	Blue
4.	480Y/277V	Phase A	Brown
5.	480Y/277V	Phase B	Orange
6.	480Y/277V	Phase C	Yellow
7.	Grounded Conductor		
		120/208	White
		277/480	Grey

8. Equipment Ground

120/208	Green
277/480	Green with Yellow Trace

B. All conductors not installed in accordance with color scheme shall be replaced. All conductors larger than #6 AWG must be identified with colored tape.

C. Connections throughout the entire job shall be made with solderless type devices.
1. For #10 AWG and smaller: spring type.
2. For #8 AWG and larger: circumferential compression type.
3. Acceptable manufacturers:
3M "Scotchlock"
IDEAL "Wingnut"
BURNDY
MAC
4. Any splices made up in ground mounted pull boxes shall be resin cast waterproof type or waterproof pressure type, as manufactured by King Technology, St. Louis, MO.

D. Conductors shall be copper, soft drawn, and annealed of 98 percent conductivity. Conductors larger than #10 AWG shall be stranded; #10 AWG and smaller shall be solid. Conductors shall be insulated for 600 volts and be of following types:
1. All conductors shall have heat/moisture resistant thermoplastic insulation type THHN/THWN (75 degree Celsius) except as follows:
a. In sizes #1 AWG and larger: Crosslinked polyethylene insulation type XHHW (75 degrees Celsius – 90 degrees Celsius) may be used.
b. Fire alarm system conductors shall be #14 AWG, type THHN, solid. Color-coding of fire alarm conductors shall be in accordance with fire codes.
c. Fixture whips #16AWG type "SF".

E. Stranded conductors for all wiring systems except fire alarm will be allowed if installed and terminated as specified under Execution Section.

F. Mineral-Insulated Metal-Sheathed Fire-Resistive Cables (Type MI) - Cables shall consist of a factory assembly of one or more solid copper conductors insulated with highly-compressed magnesium oxide and enclosed in a seamless, liquid-and-gas-tight continuous copper sheath. Cables shall be rated for 600 volts or less. Cables shall comply with Article 330 of the National Electrical Code. Cables shall be classified by Underwriters Laboratories, Inc. as having a 2-hour fire resistive rating. Cable terminations shall be made with UL listed mineral-insulated cable fittings. Approved Manufacturer - Pyrotenax USA, Inc.

G. Type MC cable may be used for concealed branch circuits in hollow spaces where allowed by code if installed and terminated as specified under Execution Section. Armor to be galvanized steel and shall be UL listed for 2 hour thru-wall fire penetration.

H. Acceptable manufacturers:
American Cable Systems
American Wire & Cable
Cerro
Cornish
Cresent
General Cable
Okonite

2.04 D5020 MEDIUM VOLTAGE CABLE

A. TRXLP Power Cable, 15 KV, one third Concentric Neutral Underground cable, 100 percent insulation thickness compressed stranding and solid conductors:

B. Medium Voltage cable shall be Hendrix power cable no exceptions.
1. (RMLD) Reading Municipal Light Department shall review and approve the submitted cable prior to release. The electrical contractor shall not release the cable until formal approval is granted by (RMLD). Where the electrical contractor releases the equipment prior to formal approval from (RMLD) it will be done so at their own risk and any costs associated with resubmittal, restocking and replacement of the cable including all labor will be the responsibility of the electrical contractor.

C. Description:
1. 4/0 AWG 19XFS AL 15kV 0.175 TRXLP EZ 11#14BC 1/3N LLDPE 1C CTO ICEA S-94-649
2. Cable Weight shall equal 0.72553 lbs/ft

D. Specifications:
   1. Conductor: Aluminum 4/0 AWG 19X filled Compressed Round with a nominal diameter of .512 inches
   2. Conductor Shield: XSC Conventional Semi con
   3. Insulation: 0.175 TRXLP with a minimum diameter of 0.865, Nominal diameter of 0.905 and maximum diameter of 0.950 inches.
   4. Insulation Shield: XSC EZ strip insulation shield with a minimum diameter of 0.925, Nominal diameter of 0.990 and maximum diameter of 1.050 inches.
   5. Metallic Shield: 14 AWG BC 11 Wire 1/3 Neutral with a minimum diameter of 1.055, Nominal diameter of 1.115 and maximum diameter of 1.180 inches.
   6. Jacket: 0.045 LLDPE with a minimum diameter of 1.145, Nominal diameter of 1.245 and maximum diameter of 1.340 inches.

E. Electrical Trade Contractor shall provide all splicing and terminations per manufacturers specifications. All splices shall be made using Elastimold splice kits.

2.05 D5020 - MAIN BUILDING SWITCHBOARD

A. Main building switchboard shall be constructed in accordance with UL 891 and ANSI standards and of the required number of vertical sections bolted together to form one metal enclosed rigid structure. The front shall be accessible. Buses shall be copper.

B. Switchboard shall be arranged for operation as follows:
   Voltage - 480Y/277 volts
   Frequency - 60 cycles
   Service - 3 phase, 4-wire, ampere capacity as indicated on drawings.
   Neutral - full capacity
   Available short circuit current at line terminals - 65,000 RMS amperes symmetrical.
   Integrated equipment rating - 65,000 AIC
   Copper ground bus, full length
   UL service entrance label

2.06 D5020 - PANELBOARDS

A. Panelboards shall be dead-front, door in door safety type equipped with single or multi-pole circuit breakers suitable for 120/208 volt or 277/480 volt, 3 phase, 4 wire operation.

B. Buses shall be copper. Panelboards shall have a circuit directory card mounted in a frame with plastic cover on the inside of door. Panelboards to have a copper ground bus with terminals for each circuit. Panelboards serving isolated ground receptacles shall have a separate ground bus for terminations of the isolated grounds. The isolated ground bus shall be mounted to the panel tub via non-conducting means with a separate grounding conductor run to the normal panel ground bus.

C. Panelboards and distribution panels shall be of the same manufacturer as the switchboard.

2.07 D5020 - DRY-TYPE TRANSFORMERS

A. Dry-type transformers shall be 480-volt, 3 phase, delta connected primary and 120/208 volt, 3 phase, 4 wire wye connected secondary with grounded neutral. They shall be of the KVA size, voltage rating, and characteristics as shown on the drawings. Transformers 75KVA and larger shall have minimum impedance of 4-1/2 percent. Transformers feeding panels with surge suppressors shall be K-13 rated.

B. Provide grounding of separately derived systems in accordance with Code Article 250-26.

C. Transformers shall meet DOE 2016 efficiency standards.

2.08 D5020 - ELECTRICAL POWER EQUIPMENT

A. Motors: Each motor shall have disconnect switches and starters provided under this section. Starters which are a part of "factory assembled" control panel will be provided under section supplying equipment to be controlled but connected under this section.
   1. Provide motor terminal boxes for each motor not furnished with same.

B. Disconnect Switches:
   1. Disconnect (safety) switches shall conform to industrial standards of NEMA, be UL listed and shall be heavy duty type, quick-make, quick-break type with interlocking cover mechanism and provisions for padlocking switch handle in "OFF" position. Three pole toggle switches are not acceptable as substitute for disconnect switches.

2. Acceptable Manufacturers:
   General Electric
   Westinghouse
   Square D/Groupe Schneider
   Siemens
   Allen Bradley

C. Fuses:
1. Provide a complete set of fuses for each item of fusible type equipment. Fusible equipment furnished by the Construction Manager or other Trade Contractors will be complete with fuses, unless noted otherwise on electrical drawings.
2. Acceptable Manufacturers:
   Bussmann, Division of McGraw
   Gould/Shawmut
   GEC-ALSTHOM

2.09 D5020 - ELECTRICAL SYSTEM CONTROLS AND INSTRUMENTS

A. Provide a complete power system consisting of branch circuits, motor disconnect switches, pushbutton stations, motor starters, and other devices to connect and leave in operating condition each piece of electrically operated equipment provided either under this section or other Divisions.
B. All control wiring not indicated in the electrical specifications or not shown on electrical drawings will be provided by Automatic Temperature Control Subcontractor.

2.10 D5020 – SURGE PROTECTION

A. Furnish and install surge protection devices with ratings of 120,000 amperes on the secondary side of the main service overcurrent device and panelboards feeding computer equipment.

2.11 D5020 - AUTOMATED LIGHTING CONTROL SYSTEM

A. General: Summary
1. Section Includes:
   a. Addressable Networked Light Management System.
B. System Description
1. Lighting Control System includes computer-based software that provides control, configuration, monitoring, and reports. System includes the following components:
   a. Central Control Unit
   b. System Server
   c. 0-10V Dimming, Fixed Output Ballasts or 0-10V LED Drivers
   d. System Field Devices (Input and Output Modules)
   e. Lighting Control System Software
   f. Lighting Controllers
   g. Communication Wire
   h. Occupancy sensors
   i. Photo sensors
   j. Power packs
   k. Lighting control panels
   l. Interface to audio visual equipment
   m. Interface to BACnet
C. Basis of Design Products
1. Controls: ENCELIUM Energy Management System by OSRAM SYLVANIA
2. Sensors: ENCELIUM Sensors by OSRAM SYLVANIA and Hubbell Building Automation, Inc.
D. Acceptable Alternate Manufacturers
1. Controls: Lutron, Sensor Switch, Crestron, Philips, Cooper.
2. Sensors: Lutron, Sensor Switch, Watt Stopper, Leviton, Cooper.
E. Field Quality Control
1. Manufacturer’s Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
2. Perform the following field tests and inspections with the assistance of a factory-authorized service representative:
   a. Operational Test: After installing lighting controllers and sensors, and after electrical circuitry has been energized, start units to confirm proper unit operation.

b. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
3. Lighting control devices will be considered defective if they do not pass tests and inspections.
4. Prepare test and inspection reports.

2.12 D5020 - FLOOR OUTLETS (FLUSH TYPE)

A. Section includes flush floor boxes equal to Wiremold RFB Series. Provide an appropriate floor box model that meets the intent of what is shown on the drawings.
B. Quality Assurance
1. Electrical Raceways and Components: Comply with requirements of applicable local codes, NEC, UL, and NEMA Standards pertaining to raceways and components. Listed and labeled in accordance with NFPA 70, Article 100.
C. Floor Boxes
1. RFB4, RFB4-4DB Series Floor Boxes.
D. Activation Covers
1. FloorPort FPCT, FPBT, and FPFFT Series Covers.
2. The covers shall have been evaluated by UL to meet the applicable U.S. and Canadian safety standards for scrub water exclusion when used on tile, terrazzo, wood, and carpet covered floors.
E. Communication Modules Mounting Accessories
1. The floor box manufacturer shall provide a complete line of faceplates and bezels to facilitate mounting of UTP, STP (150 ohm), fiber optic, coaxial, and communication devices. The box shall provide a series of device mounting plates that will accommodate Ortronics workstation connectivity outlets and modular adapters, and other open system devices.
F. Installation
1. Strictly comply with manufacturer's installation instructions and recommendations and approved shop drawings. Coordinate installation with adjacent work to ensure proper clearances and to prevent electrical hazards.
2. Mechanical Security: Raceway systems shall be mechanically continuous and connected to all electrical outlets, boxes, device mounting brackets, and cabinets, in accordance with manufacturer’s installation sheets.
3. Accessories: Provide accessories in accordance with manufacturer’s direction for a complete installation, including insulated bushings and inserts where required by manufacturer.
4. Unused Openings: Close unused box openings using manufacturer's recommended accessories.
5. Provide a minimum concrete pour depth of 3-7/16-inch [87mm] plus 1/16-inch [1.6mm] above the top of the box for the RFB4, RFB4-4DB, RFB2, and the RFB2-OG Series Boxes; 2-7/16-inch [62mm] plus 1/16-inch [1.6mm] for the RFB4-SS and RFB2-SS Series Boxes; and 3-7/16-inch [87mm] plus 13/16-inch [21mm] above the top of the box for the RFB4-CI-1, RFB6, and RFB6-OG Series Boxes; and 4-1/16-inch [103mm] above the top of the RFB4E and RFB4E-OG Series Boxes; and 4-inch [102mm] above the top of the RFB6E and RFB6E-OG Series Boxes. Provide the box with four locations to accommodate leveling for pre-concrete pour adjustment and include four leveling screws for the pre-pour adjustment.
G. Cleaning and Protection
1. Clean exposed surfaces using non-abrasive materials and methods recommended by manufacturer.
2. Protect boxes and fittings until acceptance.

2.13 D5030 - WIRING DEVICES

A. Receptacles: Receptacles shall be flush mounted. All standard 20 ampere devices to be of the same manufacturer.
B. Acceptable Manufacturers:
Twenty ampere duplex grounding type NEMA 5-20R,
Arrow Hart 5739SI,
Thirty amperes, 250-volt NEMA 10-30R complete with plate,
Arrow Hart 9344,
C. Cord Reels:
Two 20A Hubbell HBLI45123GF220M1

D. Switches: 20 amperes,
Arrow Hart 1991 series,
E. Composition material of wiring devices to be nylon with white finish.
F. Coverplates: Brushed US 302 stainless steel.
1. Provide gaskets on all wiring device plates where devices are on walls separating conditioned and non-conditioned spaces.
G. Blank coverplates shall be steel, paintable.
H. Dimmer Controls:
1. All devices shall be UL listed specifically for the required loads (i.e., incandescent, fluorescent, magnetic low voltage, electronic low voltage). Manufacturers shall provide file cards upon request. Universal dimmers are not acceptable.

2.14 D5040 - LIGHTING FIXTURES

A. Provide lighting fixtures complete with LED, drivers, and other devices in accordance with manufacturer's specifications for a first-class installation. Furnish Ceiling Subcontractor with instructions concerning openings necessary and provide frames for NEMA standard ceiling types or special mounting frames, as may be required. Fixtures shall be supported independently of hung ceiling construction.
B. Provide universal arrows on all exit signs and punch out directions as shown on floor plans.
C. Pendant mounted fixtures shall be suspended by means of aircraft cable with aligner and canopy in finished areas or threaded rods in non-public areas. Length of suspension method to be in accordance with manufacturer's recommendations and at the elevations called for as shown on drawings or architectural elevations.
D. Fixture types shall be as scheduled.
E. LED Assemblies
1. LED luminaires shall conform to UL 1598 and to UL 8250 – Safety Standard for Light-Emitting Diode (LED) Light Sources for Use in Lighting Products.
2. Products shall be lead and mercury free.
3. Photometric characteristics shall be established using IESNA LM-79-08, IESNA Approved Method for the Electrical and Photometric Measurement of Solid-State Lighting Products.
4. Site lighting shall utilize LED with dimming drivers.

2.15 D5080 - ACCESS PANELS

A. Provide access panels for access to concealed junction boxes and to other concealed parts of system that require accessibility for operation and maintenance. In general, electrical work shall be laid out so access panels are not required.
B. Access panels shall be prime painted and equipped with screwdriver operated cam locks.
C. Acceptable manufacturers:
Inland Steel Products Company - Milcor
Miami Carey
Walsh-Hannon-Gladwin, Inc. - Way Locator
Specific types:
1. Acoustical Tile Ceiling "Milcor Type AT"
2. Plastered Surfaces "Milcor Type K"
3. Masonry Construction "Milcor Type M"
4. Drywall Construction "Milcor Type DW"

2.16 D5080 - SLEEVES, INSERTS, AND OPENINGS

A. Sleeves: Provide sleeves of proper sizes for all openings required in concrete floors and walls. Sleeves passing through floors shall be set with top of sleeve one inch above finished floor. Core drilling will also be acceptable if in accordance with any structural standards. Any unsleeved openings shall be waterproofed.

2.17 D5080 - GROUNDING SYSTEM

A. All equipment and systems shall be grounded. Refer especially to NEC Section 250 Requiring Connections to Building Steel, Foundation, Water Service, and Interior Piping. Provide transformer pad grounding to be in accordance with utility company standards.

2.18 D5090 - TELEPHONE/DATA SYSTEM PROVISIONS

A. Telephone system instruments and interconnecting wiring will be provided by the ITS Contractor. Data system outlets and interconnecting wiring will be provided by the ITS Contractor.

B. For each telephone outlet or data outlet indicated on the drawings, provide a 4 inch square flush outlet box. In insulated partitions, provide a 1 inch raceway stub up terminating with bushing to above nearest accessible hung ceiling.

2.19 D5010 - STANDBY ELECTRICAL SYSTEM

A. Provide one 350KW, 437.5KVA at .8 PF standby power rated diesel gen. set with 72-hour reserve tank with alarms, integral load bank, and mounted in perfect alignment on an all welded, fabricated steel sub-base which shall allow for attachment of all necessary engine and generator accessories.
Acceptable Manufacturers:
Caterpillar
Onan
Kohler
Generac
Onsite Energy

B. Generator: 350KW, 437.5KVA, 277/480 volt, 3 phase, 4 wire, 60 Hz, 1800 RPM revolving field type main generator with brushless exciter.
Voltage regulation ±1 percent.

C. Generator Control Panel:
1. To completely control operation of engine generator set. Panel to have automatic start control, AC voltmeter, AC ammeter, pointer type frequency meter, voltmeter, ammeter, and selector switch.

D. Automatic Transfer Switch:
1. Provide automatic transfer switches for operation on 277/480 volts, 3-phase, 4-wire operation. Unit to be housed in a NEMA 1 enclosure.
Entire switch shall be listed under UL 1008.
Acceptable Manufacturers:
Russ Electric RMTD (4-Pole)
ASCO (with overlapping neutral contacts)
Onan
Kohler

E. Remote Annunciator Panel: A flush mounted panel shall include a visual signal that battery charger is functioning properly and both audible and visual signals. Annunciator shall meet NFPA 110 Standards.

F. The generator shall be housed in a weatherproof sound attenuated aluminum enclosure.

2.20 D5090 - FIRE ALARM AND DETECTION SYSTEM

A. Work Included:
1. Furnish and install a 24 VDC closed circuit non-code, continuous ringing, supervised, addressable fire alarm system in accordance with the following specifications, to be wired, connected, and left in first class operating condition. All equipment shall be listed by Underwriters Laboratories or approved by Factory Mutual.
2. General Requirements
a. The system shall include but not be limited to all control panels, power supplies, initiating devices, audible (Voice Evac) and visual alarm devices, and all accessories required to provide a complete operating fire alarm system in accordance with code and local fire department.

2.21 D5090 - LADDER TRAY

A. Provide 12-inch wide aluminum ladder tray with 9 inch rung spacing with 6 inch side rail. Ladder tray shall be as manufactured by B-Line. “Ladder Type”. Provide all hangers required.

2.22 D5090 - LIGHTNING PROTECTION SYSTEM

A. General:
1. Provide all labor, material, equipment, and services required for the complete lightning protection system in accordance with NFPA 780, UL96A and applicable contract drawings for the Building. System shall receive UL Master Label.

B. Standards of Quality:
1. All materials shall be the product of a manufacturer regularly engaged in the production of lightning protection equipment.
2. All material shall be manufactured by Heary Bros. Lightning Protection Co, Thompson Lightning Protection, Harger, or East Coast Lightning Equipment.

C. Master Label:
   1. Submit factory certified tests.
   2. Submit guarantee for installation and range of lightning protection.

2.23 D5090 DISTRIBUTED ANTENNA SYSTEM (DAS)

A. A public safety radio distributed antenna system (DAS) which consists of bi-directional amplifiers (BDA), donor antennas, cover antennas, coax cable, coax connectors, splitters, combiners, and couplers shall be provided. These devices will be used as part of a system for in-building public safety 2-way radio system communication.

2.24 D5090 TWO WAY COMMUNICATION CALL BOXES

A. Two-way communication call boxes shall be provided adjacent to each elevator that is above or below grade level. The base station shall be located at a control point on the first floor.

END OF SECTION

SECTION DC D6
COMMUNICATIONS CRITERIA

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Structured Cabling System: for supporting voice and data network communications and equipment.

B. Distributed Communication System: for making public address announcements.
   1. Whole School Public Address System with flush mount ceiling speakers throughout hallways, and all instructional and administrative spaces.
   2. Master and Secondary Clock System: clocks shall be included in all instructional learning and administrative areas including the cafeteria, gymnasium and media center.

C. Data Communications Systems
   1. Building-Wide Local Area Network Switches – Cisco as Proprietary
   2. Wireless Access Points – Meraki as Proprietary
   3. Uninterruptible Power Supply – APC as Proprietary

D. Audio-Video Systems:
   1. For the support of local communications within large group assembly spaces (Gym and Cafeteria.)
   2. Pathways and AV boxes/conduit with coordinated power: for interactive projectors and flat panel displays to be purchased during the equipment phase of the project.
   3. Speech Reinforcement System: for enhancing teacher instruction in all instructional learning spaces. – Lightspeed Topcat as Proprietary
   4. Digital Signage Displays: for paperless communication to staff and visitors in strategic areas.

E. A Voice Over Internet Protocol, VoIP, telephone system shall be provided throughout the project. The telephone system equipment required for this building shall be housed in the MDF room (NET/TELE). – Zoom IP phone service with Yealink handsets as Proprietary

F. The project shall result in an infrastructure to support both wired and wireless network throughout the school. The wired locations shall support network equipment such as computers, phones, and printers.. Wireless network connectivity shall be provided as part of the technology equipment phase. The project shall support the district's continued movement toward virtualized desktop computing and mobile network access.

G. Provisions shall be made for the termination and demarcation of utility cables such as utility telephone service cables, and cable TV. Appropriate space shall be provided to allow organized interconnection between utility feeds and internal systems.

H. The MDF is the main communications room for the building and shall include cable demarcations and the core network equipment and switches. Building riser cables shall be terminated in this room.

I. The IDF rooms are the intermediate wiring rooms and shall be in three strategic areas to ensure that the station cable lengths remain within the distance standards. These rooms shall house the racks and patch panels for the cable termination and shall provide space, power and cooling for the network electronics.

J. The technology cabling system shall consist of fiber optic backbone cables and Category 6A station cables.

K. Pathways: the project shall provide sufficient access, flexibility, and capacity for cable routing throughout the life of the building. Access to cable tray and pathways shall be provided.

L. A Public Address and Master Clock system shall be provided for the entire school. Secondary clocks in all academic spaces including the Gymnasium, Cafeteria, shall be connected to and synchronized by the Master Clock System.

M. Code compliance with NEC NFPA 70, State, and Local codes and AHJ

N. Field Quality Control
   1. Testing with documented test results for submission
   2. Final cleaning, adjustment, and preparation of system components for acceptance by Owner
   3. System training

O. Warranty
   1. Communications System
      a. UTP Warranty Period: 20 years from date of Substantial Completion.

2. Audio - Video System
    a. Manufacturer certified installation firm capable of honoring factory warranties
    b. System warranty period minimum one year

1.02 QUALITY ASSURANCE

A. Installer Qualifications: Project Manager, layout, installation supervision and testing by BICSI certified personnel.

PART 2 PRODUCTS

2.01 COMMUNICATION SYSTEM TYPES AND COMPONENTS

A. Structured Cabling Support Systems
    1. Backboards: Plywood, fire-retardant treated.
    2. Cable Supports: Support brackets, lacing bars, spools, J-hooks, and D-rings.
    3. Cable Trays: Metal, electroplated zinc galvanized.
        a. Basket cable trays.
    4. Conduit and boxes. Flexible metal conduit shall not be used.

B. Structured Cabling System
    1. UTP Cabling:
        a. Horizontal: Category 6A, Communications Plenum Rated, 100-ohm, four-pair cable.
        b. Backbone: Category 5e, Communications Riser Rated, 100-ohm, multi-pair cable.
        c. Classrooms and instructional spaces shall be equipped with one data drop for wall telephone, two data drops for the teacher location, two data drops at the projector, and two data drops for the wireless access point in the ceiling.
        d. Offices and administration areas shall each be equipped with three data drops, one for telephone and two for computer and/or printer equipment.
        e. Work area outlet cords and patch cords.
    6. UTP Cable Hardware:
        a. Connecting Blocks: 110-style IDC for Category 6.
        b. Patch Panels.
        c. Telecommunications Outlet/Connectors: Eight-position modular.
        d. Workstation Outlets: Multi-port-connector assemblies mounted in single or multigang faceplate.
    7. Optical Fiber Cabling:
        a. Singlemode, OS2 9/125.
        b. Patch cords.
    8. Optical Fiber Hardware:
        a. Connectors: Duplex, Type LC.
        b. Patch Panels.
    9. Racks:
        a. Floor-mounted 2-post racks.
        b. Floor-mounted 4-post eequipment racks.
        c. Floor-mounted server cabinets
    10. Horizontal and Vertical Cable management for racks.
    11. Uninterruptable Power Supplies: NEMA L5-30P input, multiple NEMA 5-20R output.
    12. Grounding:
        a. Connectors: Solderless compression type.
        b. Conductors: Per ANSI/J-STD-607-A.
    13. Identification: Preprinted or computer-printed labels for Class 2 level of administration.
    14. Installation - Structured Cabling System.
    15. Approved Wiring Methods and cable terminations
    16. Provisions required by ELECTRICAL to support Structured Cabling System
        a. Conduits and sleeves;
        b. Cable tray;
        c. Cable support and pathways;

   d. 4-inch square flush outlet box with single gang reducer and a one 1 inch conduit stub-up with bushing to above nearest accessible hung ceiling for all data and voice outlets. 4 inch square flush outlet box, with two 1-1/4 inch conduit stub-ups with bushings to above nearest accessible hung ceiling for all AV box locations.
   e. Firestopping

C. Distributed Communications System
   1. Distributed Communication System shall be provided for making paging announcements to classrooms, zoned areas, or on a whole school basis, including designated outside areas
   2. Functionalities include:
      a. Whole school paging and general announcements from a dedicated public address system microphone located in the main administrative area.
      b. Whole school paging and general announcements through any telephone handset located throughout the school through a connection between the telephone system and the Distributed Communication System.
      c. Automated Whole school announcements in the case of an emergency.
      d. Initiating calls from classroom to main office through the use of a classroom call switch.
      e. Hands free communications between main office personnel and teachers in classrooms over talk back speakers.
      f. Volume controlled speakers in all conference rooms, offices and smaller administrative and academic spaces.
      g. Automatic muting of large assembly sound system equipment during emergency announcements.
      h. Analog Secondary wall clocks in all spaces, which are controlled and synchronized by a Master Clock System.
   3. Distributed Equipment
      a. Speakers: flush mount ceiling in all rooms, offices, and corridors; wall mounted flush mount horn speakers in the gym.
      b. Classroom Call-in Switches: flush mount wall in all instructional learning spaces on the far side of the room for imitating hands free communication with office personnel.
      c. 12-inch and 16-inch Analog Secondary Wall Clocks. (12 inches in classrooms and instructional learning spaces, 16 inches in larger assembly spaces)
   4. Main Equipment:
      a. Public Address Main Control Boards.
      b. Power Amplifiers.
      c. Various Interface and Distribution cards/boards.
      d. Integrated Master Clock System.
      e. Floor mounted cabinet.
      f. Uninterruptable Power Supply.
      g. Horizontal and Vertical Cable management for racks.
   5. Speaker and Device Cabling
   6. Grounding:
      a. Connectors: Solderless compression type.
      b. Conductors: Per ANSI/J-STD-607-A.
   6. Identification: Preprinted or computer-printed labels
   7. Installation – Distributed Communication System
   8. Conduits and sleeves
   9. Cable support, bundling, and raceway
   10. Cable terminations
      a. Terminals
      b. Connectors
      c. Labeling

D. Data Communications Systems

1. Network switches and wireless access equipment for providing network connectivity for building systems, telephone system, and Owners provided equipment including but not limited to projectors, computers, tablets, and printers.
2. The specific functionalities shall include:
    a. Chassis or stackable GbE Layer 3 switches in the MDF and IDF's with 1 GbE and PoE ports to support all networked equipment in the building plus.
    b. Minimum of dual 10GbE SFP+ or 25GbE SFP28 optics and uplinks between each IDF closet and MDF.
    c. SFP and SFP+ optics for connecting the school's LAN to the Wide Area Network.
    d. Furnish and install network switches into data racks in MDF and IDF locations.
    e. VLAN configuration of switches to meet the needs of the Owner
    f. Patching of network switch ports to patch panel ports
3. Wireless Access Points with related licensing, ceiling and wall mounts.
4. Data outlet cabling and jacks for future wireless access points.
5. Data outlet cabling and jacks for digital messaging and signage system including large wall mounted flat panel displays with networked signage players.

E. Voice Communication System
1. Building wide enterprise class VoIP telephone system to be furnished and installed for all offices, classrooms, and instructional spaces, with interface to telephone services and the Distributed Communication System, so that paging can be facilitated from any telephone handset.

F. Audio-Visual Communication Systems
1. Audiovisual systems shall be provided for large venue assembly spaces including the cafeteria/stage and gymnasium, and for all classroom and instructional spaces.
2. The specific functionalities that shall be common to each large venue assembly spaces include:
    a. Audio systems configured to provide the appropriate sound levels;
    b. Amplification of program audio and voices.
    c. Loudspeaker systems.
    d. Digital signal processing.
    e. Assistive listening systems.
    f. Wireless microphones with multiple microphones per space to support lectures, presentations, and panel discussions.
    g. Portable audio source inputs (Smartphone, iPod, iPad, and computer or Chromebook).
    h. Touch screen control panels and processors that allow the faculty to select sources and volume without leaving the space.
    i. Override connections from the public address system and the fire annunciation system so that in the case of an emergency message, the local audio system is shut off and the emergency announcement is heard;
    j. Large projection screen and permanently installed large venue projector and lens, with appropriate controls and inputs to support anticipated uses.
3. Speech Reinforcement System:
    a. Classrooms and Classroom size Instructional spaces shall be equipped with a local voice and audio reinforcement system that enhances teacher's speech while also providing program audio playback of any and all multimedia source material. This system shall also be connected to the Owner provided classroom projection system.
    b. Teacher Lapel wireless Microphone
    c. Student wireless Microphone
    d. Ceiling mounted main amplifier and speaker assembly
    e. Wireless media connector
    f. Connections to the audio output of Owner's provided projector
4. Digital Signage Systems include:
    a. 55 inch and 65 inch Flat Panel Displays.
    b. Wall mount brackets.

   c. Signage Player.
   d. Cable connections to power and Structured Cabling System.
5. Wiring, connectors, custom jack plates, power supplies, racks, and hardware
6. Installation – Audio Visual Systems
7. Conduits and sleeves
8. Cable tray
9. Cable support, bundling, and raceway
10. Cable terminations
    a. Terminals
    b. Connectors
    c. Labeling
11. System power
12. System programming
    a. Functions
    b. Touch panel pages and templates
    c. Pushbutton assignments
    d. Feedback control
    e. EDID recognition and resolution management
    f. Optimization of audio signal transmission

2.02 OWNER-FURNISHED PRODUCTS

A. The following items are to be provided by Owner: Performance requirements of the equipment do not apply; only requirements for accommodating items within the project apply.
   1. Computer network hardware and software including but not limited
      a. Servers.
      b. Storage.
      c. Firewall.
      d. Teacher, administrative and student computers.
      e. Tablets.
      f. Chromebooks.
      g. High Speed Copier/Printers.
      h. Workgroup, personal and color laser printers.
   2. Internet, Telephone and CATV Services, including interface hardware.
   3. Instructional Interactive Projectors with mounts, cabling, and connections
   4. Classrooms Document Cameras
   5. Collaborative Flat Panel Displays with mounts, cabling, and connections
   6. Interactive Flat Panel Displays, with mounts, cabling, and connections
   7. Portable Large Venue Projection Cart for Gym
   8. Portable interactive projection system for Gym Teacher
   9. Cafeteria POS System
   10. School Visitor Management System

END OF SECTION

SECTION DC D7
ELECTRONIC SAFETY AND SECURITY CRITERIA

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Electronic safety and security services comprise:
   1. Access Control System. – Genetec as Proprietary
   2. Intrusion Detection and Alarm System. – Proprietary
   3. Video Surveillance and Management System. – Axis Communications camera as Proprietary, Genetec as proprietary VMS and NVX
   4. Video Intercom and Door Control System. – AiPhone as Proprietary

B. The Awarding Authority has determined use of the products listed as proprietary to be in the project's and public's best interest, and will vote to designate the listed products as proprietary bid products. See Section 01 10 00.

PART 2 PRODUCTS

2.01 ACCESS CONTROL SYSTEM AND COMPONENTS

A. An Access Control System shall be provided to facilitate and control individuals to the facility. The Access Control System shall provide:
   1. Control of access to the facility and specific areas and services via Proximity Card or Key Fobs.
   2. An audit trail of which door have been accessed.
   3. The means to immediately lockout use of an access credential if it is lost or if the credential holder is to be denied access.
   4. Remote Control of electrified doors at selected locations.
   5. Unified control of electrified doors, in order that groups of doors or all entry doors may be unlocked and locked together, either manually or on a time schedule, or according to an event like a school lockdown.
   6. Local control of doors or door groups via proximity card or key fob reader
   7. Local control of elevator(s).

2.02 INTRUSION DETECTION SYSTEM AND COMPONENTS

A. System elements as required to detect unauthorized entry by persons into the building either through locked doors or windows on the first floor.
   1. Building Intrusion Alarm System
      a. The building shall be equipped with an alarm system to detect unauthorized intrusion into the building when the school is not occupied.
      b. Motion detectors shall be located in all exterior rooms and spaces on the first floor that have windows.
      c. Door position switches shall be included in all exterior door openings and interior security doors.
      d. The alarm system shall report to an Owner’s contracted central station.
   2. Video-Intercom System
      a. Dedicated video intercom devices shall be designed for selected entry points that receive deliveries and/or visitors. Devices shall provide office administrative personnel with the ability to remotely view and communicate with visitors and to permit access to the school by remotely unlocking entry doors.

2.03 VIDEO SURVEILLANCE SYSTEM AND COMPONENTS

A. System elements as required to provide remote visual and audible monitoring, as well as video recording of areas within and around the facility.
   1. Security Cameras
      a. Cameras shall be Internet Protocol (IP) signal transmission format
      b. Interior cameras shall Super Dynamic Full HD 3 megapixel or higher fixed varifocal lens cameras.
      c. Interior and exterior 360-degree cameras shall be 9-megapixel cameras.
      d. Exterior fixed focal length cameras shall be HD 3 megapixel or higher varifocal lens cameras
      e. Cameras shall be located to view:
         1) Perimeter areas surrounding the facility;
         2) All entry ways to the building.

3) Main Lobby and administration offices.
4) Corridors.
5) Service entry and loading docks.
6) Large assembly spaces like the Gymnasium and Cafeteria.

f. High-Definition full motion video Images from cameras shall be transmitted from cameras using H.264 video compression format.

2. Video Management System (VMS) and Network Video Recorder (NVR)
   a. Full motion video from security cameras shall be stored and managed on a Video Management Server platform with software licensing and storage sized to provide a minimum of 30 days of video sstorage capacity. Preference shall be given to systems not requiring yearly renewable camera licensing fees.
3. Network Switches
   a. Cameras shall be connected to the Video Management System through dedicated GbE PoE Network Switches with 10GbE uplinks from IDF closets to the main Video Management Server Location at the MDF (NETWORK) Room.

2.04 VIDEO INTERCOM AND DOOR CONTROL SYSTEM AND COMPONENTS

A. System elements as required to provide remote visual and intercom communications with visitors at various entrances, as well as provide remote control of exterior and interior door locks.
   1. Door Video Intercom System
      a. Flush mounted video-intercom device at main entrance doors.
      b. Desk mounted management consoles with display, handset, and door control at various administrative office locations.
      c. Cabling, programing, and configuration with door hardware.

PART 3 DESIGN CRITERIA

3.01 SECURITY

A. A comprehensive access control, intrusion detection and surveillance system shall be developed and implemented through this project. The systems shall be connected to the appropriate networks to allow reporting and monitoring by the public safety personnel.

B. Access Control:
   1. Doors to be controlled: multiple exterior and interior doors shall be equipped with access control card readers to electronically control electric door hardware.
   2. Door intercom systems: A video intercom system shall be provided with video intercom door devices at various entry door locations to the building and the service entrance. A video intercom master station shall be located at the main reception desk. The master station shall be programmed to release door locks at the areas equipped with video intercom door Devices.

C. Intrusion Detection:
   1. Detector types and coverage: Motion detectors shall cover the interior common areas and hallway intersections of the first floor. All exterior rooms and spaces with windows or doors shall be equipped with motion sensors.
   2. Intrusion system arming and disarming keypads: Keypads with local zone arming and disarming capabilities shall be located at primary door entrance locations.

D. Surveillance, CCTV:
   1. Approximately 80 interior and exterior cameras shall be furnished and installed. Cameras shall be mounted to the exterior of the building, at main entrances, main lobby, corridors, stairwells, main office, receiving, cafeteria, kitchen, and gymnasium.
   2. Camera types and mounts: Digital dome cameras with interior and exterior surface mounts. All cameras shall be IP based; no cameras shall utilize coaxial cables.
   3. Monitoring: No dedicated security command console or dedicated viewing room is envisioned.

END OF SECTION

SECTION DC E1
EQUIPMENT CRITERIA

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Equipment comprises mechanized, plumbed, and electrical devices, other than equipment that is part of a service system (such as HVAC and electrical), and permanently installed fixtures not covered by another section.
   1. The necessity for some equipment is based on design criteria for either the equipment or the facility itself.
   2. The following equipment is to be included in the contract whether explicitly listed or not:
      a. Permanently installed equipment.
      b. Electrically operated equipment with a permanently wired connection.
      c. Items requiring a water supply or drainage connection.
      d. Items requiring an air distribution or exhaust connection.
      e. Items requiring a special services connection.
      f. Items NOT indicated as Not in Contract (NIC).
      g. Items required by the code.

B. Vehicle and Pedestrian Equipment: Includes dock levelers and bumpers.

C. Institutional Equipment: Includes fire extinguishers, fire extinguisher cabinets, "KnoxBox" type rapid entry systems, automatic defibrillators (AEDs) and cabinets, and education equipment.

D. Appliances consisting of the following elements:
   1. Built-in devices and appliances, including dishwashers.
   2. Large freestanding appliances such as refrigerators, washing machines, clothes dryers, and ice machines.

E. Entertainment and Recreational Equipment: Equipment of types listed below:
   1. Theater and Stage Equipment: Includes equipment for support of theatrical programs consisting of cycloramas, stage curtains, and rigging systems and tracks.
   2. Athletic and Recreational Equipment: Includes interior equipment used in athletic and exercise activities consisting of basketball systems, divider curtains, wall padding, floor sleeves, pull-up bars, climbing walls and PT platform swings.

F. Products: Where specific products are required or allowed, use products complying with the additional requirements specified elsewhere.

1.02 ABBREVIATIONS AND ACRONYMS

A. ADA. Americans with Disabilities Act.

B. ANSI. American National Standards Institute; www.ansi.org.

C. CFR. Code of Federal Regulations; www.govinfo.gov.

D. FDA. Food and Drug Administration; www.fda.gov.

E. MAAB. Massachusetts Architectural Access Board: www.mass.gov/orgs/architectural-access-board.

F. NFPA. National Fire Protection Association; www.nfpa.org.

G. UL. Underwriters Laboratories; www.ul.com.

1.03 REFERENCE STANDARDS

A. Editions of listed standards as referenced by applicable codes, or most current edition if not referenced:

B. 29 CFR 1910 - Occupational Safety and Health Standards.

C. ADA Standards - 2010 ADA Standards for Accessible Design.
D. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
E. NFPA 10 - Standard for Portable Fire Extinguishers.
F. UL 437 - Standard for Key Locks.
G. UL 1037 - Antitheft Alarms and Devices.
H. UL 1332 - Standard for Organic Coatings for Steel Enclosures for Outdoor Use Electrical Equipment.
I. UL 1610 - Central-Station Burglar-Alarm Units.

PART 2 PRODUCTS

2.01 INSTITUTIONAL EQUIPMENT

A. Fire Extinguishers:
   1. Use the following:
      a. Dry chemical type extinguisher, UL-rated, 4A-80B: stainless steel type with gage, at all locations indicated on code plans except as otherwise noted.
         1) Include one fire extinguisher in the elevator machine room, whether indicated on drawings or not.
      b. Wet chemical type 2A:K: stainless steel type with gage; provide one with associated signage per NFPA 10 at commercial kitchen cooking lines.
      c. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
         1) Activar Construction Products Group, Inc. - JL Industries; Cosmic Extinguisher - Multipurpose Chemical: www.activarcpg.com.
         2) Larsen's Manufacturing Co.: www.larsensmfg.com. (Basis of Design)
         3) Potter-Roemer: www.potterroemer.com.
      d. Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

B. Fire Extinguisher Cabinets:
   1. Use the following:
      a. Painted steel cabinets with stainless steel doors and frames with vertical glass panel, for semi-recessed installation, with rounded profile at edge of frame.
      b. Provide fire-rated cabinet assemblies where installed within fire-rated partitions, to match the rating of the partition.
      c. Provide accessories including fire extinguisher brackets and graphic identification.
      d. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
         1) Activar Construction Products Group, Inc. - JL Industries; Ambassador Series: www.activarcpg.com.
         2) Larsen's Manufacturing Co: www.larsensmfg.com. (Basis of Design)
         3) Potter-Roemer: www.potterroemer.com/#sle.
         4) Substitutions: The Awarding Authority has determined that use of the product listed is in the project's and public's best interests and will vote to designate the listed product as a proprietary bid product.

C. "KnoxBox" Type Rapid Entry Systems
   1. Use the following:
      a. Manufacturers:

1) Subject to meeting requirements of this specification, provide rapid entry systems from the following:
   (a) Knox Company; KnoxBox 3200; www.knoxbox.com. (Basis of Design)
   (b) Substitutions: The Awarding Authority has determined that use of the product listed is in the project's and public's best interests and will vote to designate the listed product as a proprietary bid product.

b. Product shall comply with UL 437, UL 1037, UL 1610, and UL 1332.
c. Provide key tags and key rings. Capacity: 10 keys.
d. Lock: UL listed. Double-action rotating tumblers and hardened steel pins accessed by bias cut key.
e. Tamper Alert: connect to building's alarm system. Coordinate with Electrical Criteria section.
f. Quantity: Provide total of four.

D. Automated External Defibrillators (AEDs)
1. Use the following:
   a. Automated External Defibrillators (AEDs) - General: FDA approval required.
      1) Provide automated external defibrillators (AEDs) as indicated on drawings.
   b. Fully automatic battery powered units meeting American Heart Association's current guidelines for performing CPR and use of AED units, self-charging with audible alert when unit is malfunctioning or lacking charge.
   c. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
      1) Cardiac Science Powerheart AED G3 Plus.
      2) Defibtech Lifeline View AED.
      3) Philips Medical Systems; Heartstart FR3: www.usa.philips.com.
      4) Stryker Corporation: www.stryker.com.
      5) ZOLL Medical Corporation: www.zoll.com.
      6) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

E. Educational Equipment:
1. Use the following:
   a. Audio-Visual Equipment:
      1) Projections screens at Cafeteria, Gymnasium and Stage.
         (a) Electric operation.
         (b) Use the following front-projection matte screens:
            (1) Plain white, with backing.
         (c) Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
            (1) BEI Audio-Visual Products: www.beionline.com.
            (2) Da-Lite Screen Co: Professional Electrol: www.da-litescreenstore.com. (Basis of Design)
            (3) Draper, Inc: www.draperinc.com.
            (4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

2.02 APPLIANCES

A. Use the following:

1. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
    a. Bosch USA; www.bosch-home.com/us.
    b. GE (General Electric Company); www.geappliances.com. (Basis of Design, except where otherwise noted)
    c. Hotpoint; www.hotpoint.com.
    d. KitchenAid; www.kitchenaid.com.
    e. Maytag; www.maytag.com.
    f. Summit Appliance; www.summitappliance.com.
    g. Whirlpool; www.whirlpool.com.
    h. Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.
2. Freestanding refrigerator / freezers at locations indicated on drawings.
    a. 23.6 cubic square feet capacity.
    b. Basis of Design Product: General Electric / PYE22KYNFS.
        1) This item is included in the Schematic Design for purposes of clarifying the scope of the work for cost estimating but is not intended to be proprietary in the final design.
3. Freestanding refrigerator / freezers with door locks at Nurse's Office.
    a. Basis of Design Product: Summit Appliance / FF1088W.
        1) This item is included in the Schematic Design for purposes of clarifying the scope of the work for cost estimating but is not intended to be proprietary in the final design.
4. Undercounter refrigerators at locations indicated on drawings.
    a. Basis of Design Product: Summit appliances / FF63BKBISSHVADA.
        1) This item is included in the Schematic Design for purposes of clarifying the scope of the work for cost estimating but is not intended to be proprietary in the final design.
5. Ice makers.
    a. Undercounter 32.56 inches high by 14.5 inches wide by 23.5 inches deep.
    b. Basis of Design Product: Summit Appliances; / BIM44GADA.
        1) This item is included in the Schematic Design for purposes of clarifying the scope of the work for cost estimating but is not intended to be proprietary in the final design.
6. Undercounter dishwashers at locations indicated on drawings.
    a. Top Hidden controls.
    b. 32 inches high by 24 inches wide by 24 inches deep, nominal.
    c. Basis of Design Product: General Electric / GLDT696JSS.
        1) This item is included in the Schematic Design for purposes of clarifying the scope of the work for cost estimating but is not intended to be proprietary in the final design.
7. Separate, side-by-side washer and dryer sets at locations indicated on drawings.
    a. Front-loading high-efficiency washer
        1) 4.8 cubic feet capacity, with multiple load and soil settings.
        2) ENERGY STAR rated.
        3) Basis of Design Product: General Electric / GFW850SPNDG.
            (a)
    b. Front-loading dryer:

1) Smart front load electric dryer.
2) 7.8 cubic foot capacity.
3) Multiple cycles including, at a minimum: delicate, fluff, and sanitize.
4) Basis of Design Product: General Electric / PFD95GSPTDS.
   (a) This item is included in the Schematic Design for purposes of clarifying the scope of the work for cost estimating but is not intended to be proprietary in the final design.

B. Do not use the following:
1. Combination washer/dryers.
2. Stacking washer/dryer sets.

2.03 ENTERTAINMENT AND RECREATIONAL EQUIPMENT

A. Use the following:
1. Theater and stage equipment.
   a. Stage curtains.
      1) Main dead-hung traveler curtain, battens, track, and drapery.
      2) Rear dead-hung traveler curtain, battens, track, and drapery.
      3) Cycloramas: Provide rigging and fabric for one cyclorama at back of performance stage.
      4) Stage curtain fabrics. Polyester velour, 25 ounce minimum, inherently flame-retardant synthetic fabric.
         (a) Fabrics treated with fire retardants shall not be allowed.
         (b) Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
            (1) Beck Studios Inc: www.beckstudios.net.
            (2) Fred Krieger & Company: www.fredkriegerfabrics.com.
            (3) Limelight Productions; www.limelightproductions.com. (Basis of Design)
            (4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.
      5) Stage curtain track support systems: Applicable types for specified curtain types. 14-gage galvanized construction.
         (a) Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
            (1) Automatic Devices Company: www.adctracks.com. (Basis of Design for stage tracks)
            (2) J.R. Clancy, Inc.: www.jrclancy.com. (Basis of Design for stage rigging equipment, head blocks, and loft blocks.)
            (3) Tru-Roll Theatrical Rigging & Hardware; www.truroll.com.
            (4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.
2. Athletic equipment.
   a. Manufacturers for athletic equipment, except where otherwise noted: Subject to compliance with these specifications, provide products of one of the following:
      1) Draper, Inc: www.draperinc.com.
      2) IPI by Bison www.ipibybison.com.

3) Porter Athletic Equipment Company: www.porterathletic.com.
4) Southpaw Enterprises: www.southpaw.com.

b. Gymnasium divider curtains.
   1) Use wall-mounted fold-up motorized divider curtains.
      (a) Self-extinguishing.
      (b) Polyester-reinforced solid vinyl at lower 8 foot sections.
      (c) VCP mesh, woven vinyl-encapsulated polyester yarns with 50 percent grid for air circulation, at upper sections.
      (d) Top tube batten: supporting curtain shall be suspended from each drive pipe support assembly with adjustable 2/0 chain.
      (e) Curtain hoist: electrically operated, recessed keyed switch.
      (f) Basis of Design Product: IP850 Fold-Up Gym Divider Curtain.
         (1) This item is included in the Schematic Design for purposes of clarifying the scope of the work for cost estimating but is not intended to be proprietary in the final design.

c. Basketball backboards, goals, and support framing.
   1) Use ceiling-suspended backstop assemblies, at locations indicated on drawings.
      (a) Basis of Design System: IPI1360-FF.
         (1)
   2) Use Tempered glass rectangular backboards, at locations indicated on drawings.
      (a) Basis of Design Product: IPI Bison VB26.
         (1) This item is included in the Schematic Design for purposes of clarifying the scope of the work for cost estimating but is not intended to be proprietary in the final design.

d. Climbing ropes:
   1) Heavy-duty rope, hung vertically from ceiling, unsecured at bottom.
   2) Hemp, 1-1/2 inch nominal diameter, with knotted ends.
   3) Quantity: Provide total of six.
   4) Basis of Design: Porter Athletics; Climbing Ropes.
      (a) This item is included in the Schematic Design for purposes of clarifying the scope of the work for cost estimating but is not intended to be proprietary in the final design.

e. Panelized climbing wall.
   1) Climbing wall dimensions: 8 feet high by 20 feet wide.
   2) Climbing wall system shall provide modular climbing hold attachment locations compatible with 3/8 inch 16-thread fasteners for surface mount. Handhold Fasteners shall be securely anchored to the sub-surface with adhesive. Handhold fasteners shall be placed at minimum of one per sq ft of climbing wall surface area.
   3) Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
      (a) SOLIDRock™ Panels/ Eldorado Wall Company; eldowalls.com. Basis of Design
      (b) Superior Rock-Climbing Wall; Everlast Climbing; http://everlastclimbing.com/products/standard-climbing-wall/.
      (c) Easy Wall/ Nicrose; http://www.nicros.com/climbing-wall-systems/easywall/.
      (d) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability,

performance, and appearance. Submit as substitutions.

f. Floor sleeves for net and goal posts.
   1) Metal sleeve, with latch cover, cast into concrete subfloor to hold poles for nets and goals, installed flush with finish floor surface.
   2) Quantity: Provide total of six.
   3) Basis of Design: IPI by Bison; Product: VB26.
      (a) This item is included in the Schematic Design for purposes of clarifying the scope of the work for cost estimating but is not intended to be proprietary in the final design.

g. Wall mounted protection pads.
   1) Wall Padding: Foam filling bonded to backing board, wrapped in covering; each panel fabricated in one piece.
   2) Fire Certification: ASTM E84 Class A.
   3) Basis of Design: Porter Athletic; Product: 650 Impact Safe.
      (a) This item is included in the Schematic Design for purposes of clarifying the scope of the work for cost estimating but is not intended to be proprietary in the final design.

h. PT pull-up bar.
   1) Quantity: One.
   2) Basis of Design: Porter Athletic; Adjustable Chinning Bar.
      (a) This item is included in the Schematic Design for purposes of clarifying the scope of the work for cost estimating but is not intended to be proprietary in the final design.

i. PT platform swing:
   1) Dimensions: 31 inches by 31 inches, nominal.
   2) Carpet surface.
   3) Adjustable height.
   4) Provide rotational safety attachment.
   5) Quantity: One.
   6) Basis of Design: Southpaw; Advantage Line Platform Swing 120040.
      (a) This item is included in the Schematic Design for purposes of clarifying the scope of the work for cost estimating but is not intended to be proprietary in the final design.

PART 3 DESIGN CRITERIA

3.01 BASIC FUNCTION

A. Design the facility to accommodate the equipment required by the Owner, which are specified in the project program.

B. General Equipment: Provide general building equipment of the type and in the quantity required and in accordance with the code.

C. Vehicle and Pedestrian Equipment: Provide equipment associated with the following facility functions identified in the project program and required to be furnished by Construction Manager:

D. Appliances: Provide residential equipment per the project program, which is adequate in size and capacity for the performance of functions typical for the type of residential application and the characteristics of the intended user population.
   1. Appliances shall be ADA and MAAB compliant.
   2. Appliances shall meet project's LEED requirements.

E. Where equipment elements also must function as elements defined within another element group, meet requirements of both element groups.

F. In addition to the requirements of this Section, comply with all applicable requirements of Section DC E1 9 - Other Equipment Criteria, and Section DC E2.

3.02 AMENITY AND COMFORT CRITERIA

A. Accessibility:

1. Comply with the ADA Standards for accessible design.
2. Provide accessible controls in every item of commercial and institutional equipment.

3.03 HEALTH AND SAFETY CRITERIA

A. Accident Prevention:

1. Comply with the requirements of 29 CFR 1910, regulations of Occupational Safety and Health Administration.
2. Prevent accidental pinching, crushing, and cutting of operator limbs, fingers, and toes in or by moving parts of equipment by using intelligent design or guards or other protection, without reliance on self-protective operation by operator.
3. Appliances:
    a. Electrical Shock: Provide residential equipment that is safe from electrical shock hazard.

3.04 DURABILITY CRITERIA

A. Impact Resistance:

1. Loading Docks: Prevent accidental damage to building elements caused by trucks backing up to loading dock.

3.05 OPERATION AND MAINTENANCE CRITERIA

A. Capacity:

1. Loading Dock Levelers and Lifts: to serve loading conditions, with minimum 20 percent extra capacity based on manufacturer's rating.
2. Loading Dock Levelers: 25,000 pounds minimum.

B. Ease of Use: Provide easy access to and working clearances around equipment.

C. Ease of Operation:

1. Dock Lifts and Levelers: Easily adjusted without the use of tools.

D. Ease of Maintenance: Not requiring any routine measures to maintain operation or finishes, other than washing with soap and water.

END OF SECTION

SECTION DC E1 1
FOODSERVICE CRITERIA

PART 1 - GENERAL

1.01 GENERAL REQUIREMENTS

A. The Conditions of the Contract and General Requirements of the Project Manual apply to the Construction Manager, Trade Contractor, material suppliers, and all other persons furnishing labor and materials under this Section. General Conditions and applicable parts of Division 1 are included as part of this Section.

B. Examine all Project Specifications and Drawings for requirements which affect work of this Section whether or not such work is specifically mentioned in this Section.

C. Coordinate work with that of all other trades affecting or affected by work of this Section. Cooperate with such trades to assure the steady progress of all work under the Contract.

E. When open-flame or spark producing tools such as blower torches, welding equipment, and the like are required in the process of executing the work, the Construction Manager shall be notified not less than twenty-four hours in advance of the time that the work is to begin and the location where work is to be performed. Provide fire protective covering and maintain constant non-working fire watch where work is being performed and until it is completed.

F. Sustainable Design Intent: Comply with project requirements intended to achieve a LEED SilverRating, with a goal of Gold rating measured and documented according to the LEED Green Building Rating System, of the US Green Building Council (USGBC).

1. Comply with LEED (Leadership in Energy and Environmental Design) Green Building Rating System for New Construction, Version V4 / V4.1

2. Refer to LEED Checklist/Scorecard attached at the end of Section 01 81 13.

1.02 SCOPE

A. Attention is directed to the detailed Item Specifications, which provide for minimum acceptable products. Item Specifications paragraphs may indicate materials or components that exceed the manufacturer's standards and are required for this project.

B. Cooperate and coordinate with others engaged on the project in order that work will progress on schedule.

C. Work to be performed under this Section is shown on Foodservice Equipment Drawings.

D. Install materials furnished under this Section, other than materials that are expressly noted for installation under other Sections. Installation work shall be performed by workmen compatible with that existent on the project site. Equipment shall be of the latest design; new and unused, unless indicated otherwise in the Item Specifications, complete with all standard parts for normal operations and including such accessories or materials as may be required to comply with these Specifications.

E. This Specification is to further describe and supplement the applicable Drawings. What is called for by either the Drawings and/or these Specifications shall be furnished and installed as part of this work. Any questions relative to discrepancies or omissions shall be submitted to the Architect.

F. Provide neatly punched openings or cutouts required to permit passage of plumbing and electrical services by related trades and to accommodate mounted switches and receptacles in the equipment.

G. Work in this Section shall include but shall not be limited to the following:

1. Catalog items of equipment.

2. Fabricated equipment other than catalog items.

3. Plumbing trim consisting of mechanical system components required for standard operation of equipment items such as faucets and waste outlets. Vacuum breakers shall be furnished for equipment where water is introduced less than 2 inch. above flood level.

4. Electrical equipment forming an integral part of equipment items such as electric motors, heating elements, controls, switches, starters, temperature regulators and internal wiring to a control panel or switch, if mounted on the equipment.

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. Finished floor and walls, structural supports for all ceiling supported equipment, acoustical ceilings and related building.

B. Connecting piping, waste lines, traps and vent piping, complete with shut-off valves to all the equipment, and the rough-in for sanitary waste, domestic water, floor drains and plumbing fixtures except those provided under this Section, and related mechanical work.

C. Exhaust ventilating systems complete with blowers, ductwork, hangers, access panels, and insulation between the exhaust collars and the exhaust blowers.

D. External wiring; the mounting and wiring of motor starters, solenoid valves, switches and receptacles not integral with the equipment; mounting and wiring of walk-in refrigerated room ceiling mount light fixtures; wiring of walk-in refrigerated room interior evaporator coils; connecting conduit, and external connections to equipment to the building electrical distribution system.

1.04 SUBMITTALS

A. Submit Shop Drawings for approval in accordance with the General Conditions.

B. Stub-in drawings shall indicate the layout of equipment and dimensioned locations of all services to the equipment.

1. Hand drawn scale: 1/2 inch equals 1 ft., 0 inch
2. CAD drawn scale: 1/4 inch equals 1 ft., 0 inch
3. Stubbed services shall include electrical, hot and cold water, floor drains or floor sinks, solid wastes and exhaust collar connections. Point of connection services shall include steam supply, condensate return, and indirect waste connections. Service dimensions shall include height measured from finish floor.
4. Electrical and plumbing services shall be indicated and coordinated on the same drawing.
5. Call-outs for each stub point indicated at the point, or clearly keyed to a schedule on the same drawing.
6. Special conditions plan shall include all floor recesses, curbs and special wall construction indicated and dimensioned

C. Fabrication drawings shall be furnished for non-catalog items, showing plans, elevations and full construction details with gauges, components, fasteners, erection and connections. Drawings shall be to the minimum scale of 3/4 inch equals 1 ft., 0 inch

D. Standard items of equipment, not built-in or part of other assemblies shall be submitted for approval in the form of bound catalog cuts. Each cut shall include a clearly marked item number, a listing of all optional accessories and finishes, and connection data.

E. Catalog Cuts shall include letters of approval, under a separate binder, indicating compliance with M.G.L. c. 142 and 248 CMR. Only products and materials that have been listed by the Board as Product-approved shall be used for plumbing work performed in the Commonwealth of Massachusetts.

1. Catalog Cuts shall include operation manuals for all existing foodservice equipment that is scheduled for reuse and that requires plumbing work performed in the Commonwealth of Massachusetts.

F. Mechanical refrigeration system submittal shall include the firm name and address of the installation contractor and name of the qualified installer.

G. Energy Star - Specified Energy Star rated equipment and appliances shall serve as the standard for all types of equipment and appliances whenever possible. Kitchen Equipment Contractor shall clearly indicate that items are Energy Star rated both on the submittal cover sheet and manufacturer cut sheets.

H. Failure to comply with approved shop drawings shall be cause for rejection of an improperly built assembly.

1.05 SAMPLES

A. If the bidder's proposed equipment fabricator is unknown to the Architects or Consultant's office, immediately after award of contract, submit the following samples for selection and approval:

1. Section of table showing edge, bullnose, framing, fasteners, gusset, leg, and foot, all assembled.
2. Drawer assembly (will be returned for use on this project).

B. Work delivered to the job shall match approved samples.

1.06 GUARANTEES AND WARRANTEES

A. New equipment furnished for this facility shall be guaranteed for a period of not less than one calendar year beginning on the date of final acceptance of the work of this Section. In the case of a manufacturer whose standard warranty exceeds this period the longer period shall apply. Self-contained refrigeration units for reach-in refrigerators, freezers, ice cream chests and ice machines shall carry a five-year replacement warranty for the sealed unit. The guarantee shall protect against defective material, design and workmanship.

B. In addition to the guarantee called for under the General Conditions, this Construction Manager shall further agree that in the event of failure of any system or item of equipment or improper functioning of specified work during the guarantee period, he shall have "on call" competent service personnel available to make the necessary repairs or replacements of specified work promptly at no cost to the Owner. In the event that replacement of an entire item is required, the Owner shall have the option of full use of the defective equipment until a replacement has been delivered and completely installed.

C. Furnish manufacturer's warrantees for each item of standard equipment and a warranty on fabricated equipment. Submit guarantees and warrantees to the Architect in accordance with conditions found in "Demonstration and Operating Instructions" paragraphs, contained in Part 3, this Section.

1.07 REGULATORY AGENCIES

A. Work shall be in accordance with the governing health, building and safety, and fire protection codes and regulations.

B. Standards of the National Sanitation Foundation (NSF) shall serve as guidelines for the work of this Section.

C. Electric equipment and accessories shall conform to the standards of the National Electric Manufacturers Association (NEMA), Underwriters Laboratories, Inc. (UL) or Electrical Testing Station (ETS).

D. Steam generating equipment and accessories shall conform to the standards of the American Society of Mechanical Engineers (ASME).

E. Energy Star - Specified Energy Star rated equipment and appliances shall serve as the standard for all types of equipment and appliances whenever possible.

F. BOARD OF STATE EXAMINERS OF PLUMBERS AND GAS FITTERS

Board Required Product-approval. Only products and materials that have been listed by the Board as Product-approved shall be used for plumbing work performed in the Commonwealth and governed by M.G.L. c. 142 and 248 CMR.

1.08 EQUALITY OF MATERIALS AND EQUIPMENT

A. The words "or equal" are understood to follow the name of any maker, vendor, or proprietary product, any trade name, plate or catalog number, and any detailed description used in the plans or specifications to define the material, article, assembly or system required. An item shall be considered equal to an item named or described in the plans or specifications if in the opinion of the Architect, it is at least equal in quality, durability, appearance, strength and design, it will perform at least equally the function imposed by the general design for the work, it conforms substantially, even with deviations, to the detailed requirements for the item in the plans and

specifications, and it does not result in increased cost to the Owner. The words "or equal" shall not be construed to permit substantial departure from the detailed requirements of the plans and specifications for any material, article, assembly or system, or of any component parts hereof. Procedures for determining whether an item complies with the standards of this paragraph shall be those set forth in the Supplementary General Conditions amending AIA Document A-201.

PART 2 - PRODUCTS

2.01 MATERIALS AND FINISHES

A. General

1. Metals shall be free from defects impairing strength, durability or appearance, made of new materials with structural properties to withstand strains and stresses to which normally subject.
2. Stock materials, patterns, products and methods of fabrication shall be approved provided that they conform to the requirements specified under Item Specifications.

B. Stainless Steel

1. Stainless steel shall be non-magnetic corrosion resistant chromium-nickel steel, Type 302 or 304 (18-8 Alloy), polished to a Number 4 finish where exposed, unless otherwise noted. Minimum gauges shall be as specified under Item Specifications.

C. Galvanized (Galvannealed) Steel

1. Galvannealed steel shall be commercial quality with tight coat of zinc galvanizing metal applied to a soft steel sheet, subsequently passed through a 1200 degree F. oven, resulting in a spangle free paintable surface. Minimum gauges shall be as specified under Item Specifications.

D. Plastic Laminate Materials

1. The laminate facing shall be GP-50, .050 inch thick, general purpose, high pressure, decorative plastic laminate that meets or exceeds the requirements of NEMA Publication LD3-1985, and NSF Standard 35. The plastic laminate exposed surfaces shall be provided in accordance with the specified manufacturer, finish and color. Balancing sheet shall be backing grade GP-28 in matching color at semi-exposed and BK-20 unfinished where hidden.
2. Plastic laminate covered surfaces shall be factory fabricated with 3/4 inch thick core having plastic laminate facing on both faces and all edges, laminated with waterproof glue under pressure in accordance with the plastic laminate manufacturer's specifications.
3. The core shall be medium density phenolic resin particleboard conforming to ANSI A208.1, Type 2-M-2, 45 pound per cubic foot density minimum.
4. Provide veneer core plywood or solid hardwood edge banding for doors and vertical dividers or panels where hardware is attached to casework.
5. Hinges shall be articulated, spring loaded type equal to Grass CST65-170-F or Stanley, with quantity adequate to support the door without deformation. Do not provide handles on plastic laminate clad doors.

E. Components:

1. Refrigeration:
   a. Fabricated walk-in rooms
   b. Refrigerated display cases
   c. Commercial refrigerators
   d. Mobile milk coolers
2. Freezers:
   a. Fabricated walk-in rooms
   b. Commercial freezers

3. Food Storage Shelving:
   a. Stainless steel wire
   b. Open grid polymer mats on enamel steel wire supports
   c. Aluminum dunnage racks
4. Work Tables and Preparation:
   a. Stainless steel tables and sinks
   b. Food slicer
   c. Food processor
5. Cooking Equipment:
   a. Ranges
   b. Ovens
   c. Kettles
   d. Steamers
   e. Braising pans
   f. Exhaust hood
6. Serving Equipment:
   a. Drop-in mechanical cold-pans
   b. Drop-in hot wells
   c. Food shields
   d. Stainless steel counters
   e. Hot holding cabinets
7. Sinks:
   a. Hand washing sinks
   b. Three compartment wash sink
   c. Mop sink
8. Miscellaneous:
   a. Staff lockers
   b. Trash bins
   c. Mobile carts
   d. Condiment counters
   e. Mobile cash registers

2.02 CONSTRUCTION

A. General

1. Flat metal work items of equipment, such as tables, sinks, or counter tops, and other non-catalog items described under Item Specifications, shall be manufactured by a food service equipment fabricator who has the plant, personnel and engineering facilities to properly design, detail and manufacture high quality food service equipment.
2. The equipment fabricator shall be subject to the approval of the Architect, Owner and Foodservice Consultant. Refer to Paragraph 1.05, Samples.
3. Fabricated foodservice equipment shall be manufactured by one manufacturer, of uniform design, material and finish.
4. Equipment shall conform to the applicable requirements of current Federal, State, and Local Codes and Regulations.

B. Welding

1. The words "weld", "welded" or "welding" as used in this Section of the Specification shall mean that metal joints shall be continuously welded and the exposed parts ground smooth and polished to match adjoining surfaces. Welding electrodes shall match the material being welded.
2. Where spot welding is specified, the welds shall be a maximum spacing of 3 inch on center.
3. Where tack welding is specified, the pieces welded shall have 1/2 inch minimum lengths of welding material at 4 inch on center maximum spacing.

C. Grinding, Polishing and Finishing

1. Exposed welding joints shall be ground flush with the adjoining material and neatly finished to harmonize therewith. Wherever material has been depressed or sunken by a welding operation, such depressions shall be suitably hammered and peened flush with the adjoining surfaces and, if necessary, again welded and ground to eliminate low spots. Ground surfaces shall be polished or buffed to a degree consistent with good workmanship. Coves shall be ground and polished to match adjoining material.
2. Care shall be exercised in grinding operations to avoid excessive heating of metal and discoloration. Abrasives, wheels, and belts used in grinding stainless steel shall be iron free and shall have not been used on carbon steel. The texture of the final polishing operation shall be uniform and smooth. Grain direction shall be uniform, uni-directional for a total length of material. Cross grains and random polishing are not acceptable.
3. The general finish of equipment shall be consistent throughout the job. Brake ends shall be free of open texture or orange peel appearance, and where brake work mars the uniform finish of the material, the marks shall be removed by grinding and polishing, and finishing. Sheared edges shall be free of burrs, projections or fins to eliminate all danger of laceration. Mitered or bullnosed corners shall be neatly finished with the underedge of the material neatly ground to a uniform condition and in no case will overlapping material be acceptable. The equipment surfaces, where exposed, shall be finished to a grained Number 4 (satin) finish unless otherwise specified. An exposed surface shall include an inside surface, which is exposed to view when a swinging or sliding door is opened. Underside of shelves need not be satin finish unless otherwise specified.
4. Excessive distortion caused by welding shall be cause for rejection for that item of equipment.

2.03 BUY-OUT COMPONENTS

A. CASTERS: 5 inch diameter polyurethane tired, swivel, plate or stem mount to suit application, 300 pound capacity, brakes only if specified, NSF approved; Component Hardware C-21-3050 (plate/no brake), C21-3051 (plate/brake) C23-3350 (stem/no brake) or C23-3351 (stem/brake).

B. COUNTER LEGS: Stainless steel, 6 inch to 7-3/4 inch height adjustment; Component Hardware A72-0811, or A77-5048.

C. DOOR AND DRAWER PULLS: Stainless steel, full grip type with beveled edge, NSF approved for stud mounting in device, in horizontal attitude to meet NSF requirements; Component Hardware P63-1012.

D. DOOR HINGES: Stainless steel, lift off type, swedged knuckle for minimum clearance, nylon bearings; Component Hardware M75-1002.

E. DRAWER PANS: Molded plastic or fiberglass, 20 inch by 20 inch by 5 inch deep, NSF approved; Component Hardware S80-2020.

F. DRAWER SLIDES: Stainless steel, NSF approved, full extension, 200 pound capacity with stainless steel ball bearing wheels; Component Hardware S-52 series.

G. FAUCET SETS, DECK MOUNTED: Chrome plated cast bronze with 1/2 inch IPS eccentric flanged female inlets on 8 inch centers, removable cartridges, lever handles, and aerator tip on swivel nozzle or swivel gooseneck to suit the application; T&S Brass B-0221 or B-0321, or equal by Component Hardware, Chicago, or Fisher.

H. FAUCET SETS, POTWASHING SINK: Chrome plated cast bronze with removable cartridges, 3/4 inch passages, eccentric flanged female inlets on 8 inch centers with LL street EL inlets with locknuts, four prong handles, 12 inch swing spout; T&S Brass B-290.

I. FAUCET SETS, SPLASH MOUNTED: Chrome plated cast bronze with 1/2 inch IPS eccentric flanged female inlets on 8 inch centers, removable cartridges, lever handles, and aerator tip on 12 inch swing spout; T&S Brass, B-0231 or equal by Component Hardware, Chicago, or Fisher. Provide each with a mounting kit.

J. GUSSETS: Stainless steel, stepped side, fully closed, NSF approved, mild steel interior reinforcement, wide flange for welding to framing, set screw anchor for leg; Component Hardware A20-0206C.

K. LEG AND BULLET FOOT ASSEMBLIES: Stainless steel tubing, 16 gauge, number 4 finish, adjustable bullet foot with minimum of 3 inch vertical travel, 2,000 pound capacity, top designed for mounting in gusset, length to suit application; Component Hardware A46-6272-C.

L. LEG AND FLANGED FOOT ASSEMBLIES: Stainless steel tubing, 16 gauge, number 4 finish, adjustable bullet foot with 3-1/2 inch diameter flange and two holes for securing to floor, minimum of 3 inch vertical travel, 2,000 pound capacity, top designed for mounting in gusset, length to suit application; Component Hardware A46-4272-C.

M. NUTS: Zinc plated "Pal Nuts" with integral cap and lockwasher; Component Hardware Q-34-1024.

N. SEALANT: Silicone type sealant for sealing equipment to walls or filling crevices between components, TRANSLUCENT, NSF approved; Component Hardware M90-1010, or Dow Corning 732-RTV.

O. SOUND DEADENING BASINS: Component Hardware Q75-1366

P. SOUND DEADENING TOPS AND SHELVES: Component Hardware Q85-5225 "Tacky Tape" installed between all channel or angle reinforced tops, drainboards or undershelves.

Q. WASTE OUTLETS, CRUMB CUP: Stainless steel body, removable crumb cup stopper, gasket, coupling nut and sealing washer, 1-1/2 inch IPS, and optional 4 inch long nickel plated brass tailpiece with gasket; Component Hardware E38-1010.

R. WASTE OUTLETS, LEVER OPERATED: Cast stainless steel rotary type with 1-1/2 inch NPS and 2 inch NPS threads, and removable beehive crumb-cup; Component Hardware DSS-8000.

S. WELD STUDS: Copper flashed steel with 10-24 threads, length to suit; Component Hardware Q-36l.

T. GFCI RECEPTACLES: Pass & Seymour 2095-W, 115 volt, 20 amp GFCI Duplex Receptacle.

2.04 FABRICATED COMPONENTS

A. Box Type Cabinet Construction

1. Sheet metal cabinet bases of box type construction shall be fabricated without general interior framing. Structural strength shall be achieved by the gauge of the metal and the formed angle and channel edges and corners. Vertical sections shall be closed. Cabinet base shall be fabricated of 18 gauge minimum of material specified at Item Specifications. Mount on counter legs or base as specified.

2. Intermediate shelf shall be fabricated of 16 gauge stainless steel with rear and sides turned up 1-1/2 inch tight to the cabinet sides. The front edge of shelf shall be turned down 1-1/2 inch and in 1/2 inch at 45 degrees and shelf spot welded in place. Reinforce underside with longitudinal 14 gauge channel on the centerline.

3. Bottom shelf shall be fabricated of 16 gauge stainless steel similar to the intermediate shelf except that the front edge shall be formed into a full width 1-1/2 inch by 4 inch welded in boxed channel. Rear edge shall be fitted with a full width channel. Underside shall be reinforced.

B. Counters and Drainboards

1. Counters, table tops and drainboards shall be 14 gauge stainless steel, of NSF construction, with edges per Item Specifications. Metal tops shall be made of the largest pieces available and shall appear as one piece with all field and shop joints reinforced and welded, ground and polished. Short pieces of metal will not be acceptable. Counter bends shall be not less than 1/8 inch radius. Wherever a fixture has a waste or drain outlet, the surface shall pitch toward the outlet.

2. Counters, table tops and drainboards shall be reinforced with channel or angle frame as specified in the Item Specifications. Framing shall be secured to the underside with sound deadening material sandwiched between the surfaces, weld studs, and nuts.

3. Wherever bolts or screws are welded to the underside of trim or tops, neatly finish the reverse side of the weld uniform with the adjoining surface of the trim or top. Depressions at these points will not be acceptable. Raise dimples and depressions by peening, or heating and shrinking, and grind and polish to present a flat surface.

C. Crossrails

1. Crossrails shall be not less than 1-1/4 inch outside diameter 16 gauge stainless steel tubing welded, ground and polished to a Number 4 finish. Crossrails shall be welded to legs at a height of 10 inch above finished floor, and shall extend from left to right between front legs, unless otherwise specified, and from front to back between all legs.

D. Drawer Assembly

1. Drawer assemblies shall consist of a removable drawer pan set in a removable 16 gauge stainless steel channel shaped drawer support frame with gusset plate reinforced corners.
2. Support frame shall have double pan front cover consisting of boxed 18 gauge stainless steel outer shell with welded corners, flush mounted recessed stainless steel pull, 20 gauge stainless steel back shell tack welded to outer shell with fiberglass sound deadening between. Drawer shall be provided with rubber bumpers to quiet closing. Support drawer frame on full extension drawer slides.
3. Drawer shall be suspended from table in a three-sided, 16 gauge stainless steel enclosure with flanged-in bottom edges, banded lower front, flanged-out front side and top edges. All sharp corners shall be broken and any exposed exterior threads of slide mounting bolts shall be provided with solid metal acorn nuts.
4. Component Hardware S91-0020 with thermoplastic pan is considered as equivalent to the above specified construction.

E. Edges

1. Marine: Bumped up 1/2 inch at 45 degrees and turned down 1-1/2 inch and in 1/2 inch at 45 degrees; corners welded and square.
2. Raised roll: Coved up and rolled 180 degrees on a 1-1/2 inch diameter with 3 inch height; corners welded and rounded or coved.
3. Rolled: Rolled 180 degrees on a 1-1/2 inch diameter; corners welded and bullnosed.
4. Short (6 inch) splash on counters and tables: Coved up 6 inch, turned back to wall or equipment 1 inch and down 1/2 inch; ends welded closed. Secure tight to face of wall with clips unless specified otherwise and seal joint.
5. Tall (10 inch) splash on preparation sinks, dishtables, counters, and tables: Coved up 8-1/2 inch, turned back to wall or equipment 1-1/2 inch at 45 degrees and down 1/2 inch; ends welded closed. Secure 3 inch off face of wall with brackets unless specified otherwise.
6. Turn down: Turn down 2 inch and in 1/2 inch at 45 degrees; corners welded and square.

F. Framing of Tops, Drainboards, Undershelves

1. Channel: Reinforce with 1 inch by 4 inch by 1 inch 14 gauge galvannealed steel channels; stainless steel if exposed to view. Channels shall run front-to-back at all legs and longitudinally on the centerline. Cross and longitudinal members shall be welded into a single assembly at intersections and sharp corners shall be broken. Framing shall be secured to underside of tops with pairs of weld studs. Framing shall be installed maintaining NSF required clearance to adjacent vertical surfaces and edges of top. The following specified angle framing is considered superior to channel framing and may be used in its place.
2. Angle: 1-1/2 inch by 1-1/2 inch by 1/8 inch perimeter angle frame with crossmembers not over 30 inch on center. Framing shall be secured to top with weld studs, 18 inch on center maximum with three minimum studs on any single face of a table. Perimeter angle frame that is exposed to normal view, shall be stainless steel. Crossmembers and framing not unexposed to normal view shall be iron. Corners of angle frame shall be mitered, or notched and brake formed to form a closed corner. Corner gusset plates used for mounting

of leg gussets shall be 1/8 inch thick and sealed to underside of the top. Iron framework joints shall be ground smooth, and shall be painted with a minimum of two coats of aluminum lacquer after degreasing. Framing shall be installed maintaining NSF required clearance to adjacent vertical surfaces and edges of top. Channel framing shall not be considered equal to specified angle framing.

3. Sound deaden all horizontal framed surfaces with material sandwiched between the framing and the bottom of the surface.

G. Hinged Doors

1. Hinged doors shall be double pan type stainless steel construction with 18 gauge exterior and 20 gauge interior, welded corners, and 1/2 inch fiberglass insulation for sound deadening. Each door shall be provided with a stainless steel recessed handle, and an adjustable tension door catch equal to Component Hardware M22-2430. Doors shall close against the bottom shelf and flush with body of equipment.
2. Louvered hinged doors for ventilation shall be fabricated of the same components and provided with a full perimeter 3 inch wide channel reinforcing frame on the interior face. Remaining face shall be die punched with drip-proof louvers fully utilizing the remaining flat metal or a stainless steel flattened expanded metal grille per Item Specifications.

H. Sinks and Sink Inserts

1. Unless otherwise specified, sinks including sink inserts built into tops of fixtures, shall be made of 14 gauge stainless steel with all vertical and horizontal corners rounded to a radius of approximately 3/4 inch with the intersections meeting in a spherical section. Sinks shall be integrally welded to fixture tops.
2. Sinks with two or more compartments shall have full height, 1 inch thick double wall partitions consisting of two pieces of stainless steel back-to-back so fabricated that each compartment will be a deep bowl with coved corners. Partitions shall be welded in place to the bottom, front and back of the sink with smooth rounded coved corners. Top edges of the partitions shall be continuously welded. The front of the sinks shall consist of a stainless steel smooth, flush apron, same gauge as the sinks. Bottom and rear of partitions shall be closed. Sink dimensions contained in Item Specifications are inside dimensions.
3. Sinks shall be provided with integral 14 gauge stainless steel drainboards when specified. Drainboards and sink basins shall be pitched toward waste outlets and shall be self draining. The underside of all sink basins shall sound deadened. Sink units shall be provided with an integral splash at walls. Provide the necessary holes for the mounting of faucet sets.

I. Sliding Doors

1. Sliding doors shall be double pan type stainless steel construction with 18 gauge exterior and 20 gauge interior, welded corners, and 1/2 inch fiberglass insulation for sound deadening. Each door shall be provided with a stainless steel recessed handle. Provide sliding doors with nylon roller bearing sheaves and overhead track components equal to Component Hardware B58-5523 and 5513 sheaves, B57 track, B62-1093 nylon door guides and B60-1086 door stops.

J. Undershelves

1. Undershelf in an open type table shall be 16 gauge stainless steel unless otherwise noted. Edges shall be turned down 1-1/2 inch and in 1/2 inch at 45 degrees with corners notched out to fit legs to which shelf shall be welded from underside. Line up all edges of shelf with centerline of legs. Reinforce underside with longitudinal 14 gauge channel on the centerline.

K. Wall Brackets

1. Dish tables, sinks and counters with sinks shall be securely anchored 3 inch off the face of the wall unless specified otherwise. Brackets shall be "Z" shaped and fabricated of 3 inch wide, 14 gauge stainless steel. Brackets shall be secured in a vertical attitude to the rear of equipment backsplash with weld studs, and to the wall with appropriate fasteners.

2. Counters that are specified tight-to-wall shall be secured in a hidden manner with steel clips, and the wall/fixture joint shall be sealed.

L. Wall Shelves

1. Wall shelves shall be fabricated of 16 gauge stainless steel, size per Item Specifications, with back and ends raised 1-1/2 inch, front edges of ends angled back, all corners broken, and front turned down 1-1/2 inch, and in 1/2 inch at 45 degrees. Shelf corners shall be welded, ground and polished. Mount shelf 1 inch off face of wall with suitable fasteners on 14 gauge stainless steel flag brackets, 48 inch on center maximum. Flag brackets shall have a web angle of 30 degrees, measured from horizontal.

2.05 ELECTRICAL EQUIPMENT AND WIRING

A. Under this Section, items of equipment having mounted electrical motors, electrical heating units, lighting fixtures, controllers, control stations, switches, receptacles and the like shall be internally wired as specified herein, terminating at a junction box mounted on the equipment and left ready for connection to the building electrical distribution system by the Electrical Trade Contractor. Extra ceiling mount light fixtures for refrigerated rooms shall be delivered to Electrical Trade Contractor for field installation and wiring. Connections to evaporator coils mounted inside refrigerated rooms shall be wired by the Electrical Trade Contractor.

B. Provide openings or cutouts required to accommodate the switches and receptacles in the specified work, and the wiring in conduit from terminal blocks in junction boxes.

C. Electrically operated equipment and fabricator wiring shall conform to the requirements of Underwriter's Laboratories, Inc. Motors over one horsepower shall be equipped with overload protection.

D. Furnish wiring diagrams for equipment as requested by the Architect or Construction Manager, or Electrical Trad Contractor.

PART 3 - EXECUTION

3.01 SANITATION REQUIREMENTS

A. Equipment specified herein shall be fabricated to conform to the "Food Service Equipment Standards" of the National Sanitation Foundation prepared by the Committee on Food Service Standards, and published by the National Sanitation Foundation, Ann Arbor, Michigan. Any differences of opinion on sanitation shall be referred to the State Department of Health for a ruling.

B. Equipment shall be installed in accordance with the manufacturer's instructions and the best practices of the food service industry, with careful attention to eliminating all cracks, crevices and concealed spaces in wet areas that would be difficult to clean or keep free of vermin and soil.

3.02 EXAMINATION AND ACCEPTANCE

A. Determine whether the Construction Manager will furnish and provide temporary power and light, openings and storage space to permit scheduled delivery of equipment. Verify water pressure and provide necessary reducing valves.

B. Examine space in which specified work is to be installed to assure that conditions are satisfactory for the installation of specified work. Report in writing to the Architect, any deficiency in the work of other contractors affecting specified work. Commencement of specified work shall be construed as acceptance of space conditions.

C. Obtain and verify all measurements and conditions on the job, and assume responsibility in respect to same.

D. Inspect flooring and raised concrete bases, wall finishes, painting, ceiling installation and all related work for readiness to commence installation of foodservice equipment. Verify the existence of required mechanical and electrical rough-ins.

3.03 CLEANING UP

A. Debris and surplus materials resulting from installation work shall be removed promptly as work progresses, to a location indicated by the Construction Manager.

B. Following completion, and before final acceptance by the Owner, clean finished surfaces in accordance with the manufacturer's instructions, and leave specified work free of imperfections.

3.04 DEMONSTRATION AND OPERATING INSTRUCTIONS

A. Before final acceptance, and by appointment with the Owner and his representatives, completely demonstrate with power, the correct operation of each new item of operating equipment.

B. Prior to the demonstration, turn on all mechanical and electrical foodservice equipment. Test for leaks, poor connections, and inadequate or faulty performance and correct if necessary. Adjust for proper operation. Thermostatically controlled equipment and equipment with automatic features shall be operated for a sufficient length of time with proper testing equipment to prove controls are functioning as intended. Recalibrate thermostats if necessary.

C. Provide Architect or Foodservice Consultant with a loose leaf bound manual of operating data and maintenance instructions containing complete description, wiring diagrams, operating data, maintenance requirements and other information pertaining to the proper operation and upkeep of the various items of electrical or mechanical equipment. Include names, addresses and telephone numbers of authorized service agencies for all items. Arrange all material in alphabetical order by Manufacturer. Book shall be turned over to Owner after review and approval.

D. Submit guarantees and warranties to the Architect in the above specified manual with all warranty cards completed and becoming effective at the time the equipment was satisfactorily demonstrated.

3.05 PROTECTION OF WORK

A. Protect specified work from damage during transportation to the project site, storage at the site, during installation, and after completion until acceptance by the Owner.

B. Protect adjacent work under other contracts during installation until completion of specified work. After completion, the Trade Contractor for other work shall be responsible for the protection of his work until acceptance by the Owner.

C. Damaged work as determined by the Architect, shall be repaired or replaced as determined by and to the satisfaction of the Architect.

END OF SECTION

SECTION DC E1 9
OTHER EQUIPMENT CRITERIA

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Other equipment consisting of the following elements:
   1. Art Room equipment, including:
      a. Kilns and accessories.
      b. Kiln ventilation systems.
      c. Accessories for a complete installation.

B. Products: Where specific products are required or allowed, use products complying with the additional requirements specified elsewhere.

PART 2 PRODUCTS

2.01 EQUIPMENT

A. Art Room equipment:
   1. Use the following:
      a. Kilns: Freestanding general-purpose kilns, 27 inch diameter nominal, cone 10, with electronic firing and management control; 208 volts.
         1) Quantity: One.
         2) Include manufacturer's recommended kiln furnishing accessory kit.
         3) Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
            (a) L&L Kilns: www.hotkilns.com.
            (b) Paragon Industries: www.paragonweb.com.
            (c) Skutt Kilns; KN-1027: www.skutt.com (Basis of Design)
            (d) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.
      b. Downdraft ducted fume removal system:
         1) Basis of Design Product: Skutt Envirovent-II Fume Removal System.
            (a) This item is included in the Schematic Design for purposes of clarifying the scope of the work for cost estimating but is not intended to be proprietary in the final design.
   2. Heat rejection hood over kilns, ducted to roof, with dedicated exhaust fan.
   3. Kiln controls interconnected to exhaust fan, to sequence exhaust on when kiln is powered on, and sequence fan off when room reaches ambient room design set point.

PART 3 DESIGN CRITERIA

3.01 BASIC FUNCTION

A. Design the facility to accommodate the equipment required by the Owner.

B. Where elements of this section also must function as elements defined within another element group, meet requirements of both element groups.

C. In addition to the requirements of this section, comply with applicable requirements of:
   1. Section DC E1 - Equipment Criteria.

END OF SECTION

SECTION DC E2
FURNISHINGS CRITERIA

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Fixed Furnishings.
   1. Window Treatment: Fixed, non-furnishing accessories for control of light, solar heat gain, privacy, and view at interior and exterior windows, including shades.

B. Products: Where specific products are required or allowed, use products complying with the additional requirements specified elsewhere.

1.02 ABBREVIATIONS AND ACRONYMS

A. CFR. Code of Federal Regulations: www.govinfo.gov.

B. MGL. Massachusetts General Laws; www.malegislature.gov/Laws/GeneralLaws.

1.03 REFERENCE STANDARDS

A. Editions of listed standards as referenced by applicable codes, or most current edition if not referenced.

B. 16 CFR 1112 and 1260 - Safety Standard for Operating Cords on Custom Window Coverings, a Rule by the Consumer Product Safety Commission.

C. 29 CFR 1910 - Occupational Safety and Health Standards.

D. MGL, Part 1, Title II, Chapter 21A, Section 28 - Protection from Harmful Flame Retardants.

PART 2 PRODUCTS

2.01 WINDOW TREATMENTS

A. Use the following:
   1. Window shades throughout the project, at glazed vision panels at interior doors, sidelights, borrowed light openings, transoms, and storefronts in classrooms and other educational spaces, at corridors, and at exterior window and storefront openings.

B. Do not use:
   1. Window blinds.

C. Window Shades:
   1. Use the following:
      a. Top-mounted fabric roller shades at all exterior window and storefront openings at occupied spaces, except for lobby, gymnasium, service and utility spaces, and corridor.
      b. Top Mounted fabric roller shades at all interior windows, glazed vision panels at doors, sidelights, borrowed light openings, transoms, and storefronts, except for gymnasium.
      c. Manual light-filtering shades (WS1) at all classrooms and educational spaces except as otherwise noted on drawings and specifications.
         1) Light-filtering shades shall feature 1 percent transparency of fabric.
      d. Motorized light-filtering shades (WS2) at high transom window at extended learning areas.
      e. Motorized combination light filtering and blackout shades (WS3) at Library / Media Center, and Cafeteria.
      f. Manual blackout shades (WS4) at interior sidelights and storefronts, except where otherwise indicated on drawings.
      g. Installation: Surface-mount, with finished valance.
      h. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
         1) Draper, Inc.: www.draperinc.com (Basis of Design)

(a) Light-filtering shades for exterior windows: Draper; Flexshade with Green Screen Revive:
(b) Light-filtering shades for interior windows; Draper; Techmatic with Green Screen Revive.
(c) Black out shades: Draper; Sunbloc SB900 or SB9100.

2) Rollease Acmeda Contract; Contract Series: www.rolleaseacmedacontract.com.
3) InPro Architectural Products: www.inprocorp.com.
4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

2. Do not use:
   a. Bottom-mounted fabric roller shades.
   b. Top-mounted pleated fabric shades.
   c. Bottom-mounted pleated fabric shades.
   d. Louvered fabric shades.
   e. Roman fabric shades.

PART 3 DESIGN CRITERIA

3.01 BASIC FUNCTION

A. Design the facility to accommodate the furnishings required by the Owner.
B. Provide window treatments attached to interior construction that are necessary for adequate control of light, glare, privacy, and views for spaces with interior and exterior windows.
C. Where window treatments are integral with elements defined within another element group, meet requirements of both element groups.

3.02 HEALTH AND SAFETY CRITERIA

A. Window Treatment:
   1. Provide window treatments that comply with the requirements of 29 CFR 1910, regulations of Occupational Safety and Health Administration.
   2. Safety Standard for Operating Cords: Products of the section shall comply with Safety Standard for Operating Cords: Products of this section shall comply with 16 CFR 1112 and 1260.
   3. Protection From Harmful Flame Retardants: Products of this section shall comply with requirements of MGL, Part 1, Title II, Chapter 21A, Section 28.

END OF SECTION

SECTION DC E2 1
FIXED MULTIPLE SEATING CRITERIA

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Fixed seating consisting of single and multiple seating that is attached to the building, including:
   1. Audience / Gymnasium Seating:
      a. Application: In Gym.
   2. Bleachers:
      a. Electrically-operated telescoping bleacher seating system for approximately 600 people, in three sections of 18 seats and 11 rows per section. Multiple-tiered seating rows comprising of seat, deck components, understructure that permits closing without requiring dismantling, into a nested configuration for storing or for moving purposes.
         1) Wall-attached telescoping stands**:** Forward-folding system with the rear of the understructure permanently attached to the floor and to the rear wall. Rear wall provides structural support and must support loads imposed by the bleacher.
      b. Accessory items including scorer's table, flexrow barrier-free seating, and end curtains.
      c. Electric motor operators, controls, and internal wiring
      d. Accessories for a complete installation.

B. Products: Where specific products are required or allowed, use products complying with the additional requirements specified elsewhere.

1.02 ABBREVIATIONS AND ACRONYMS

A. ASTM: ASTM International; www.astm.org.
B. AWS. American Welding Society; www.aws.org.
C. ICC. International Code Council; www.iccsafe.org.
D. MGL. Massachusetts General Law; www.
E. NFPA: National Fire Protection Association; www.nfpa.org.

1.03 REFERENCE STANDARDS

A. Editions of listed standards as referenced by applicable codes, or most current edition if not referenced.
B. ASTM A36/A36M - Standard Specification for Carbon Structural Steel.
C. ASTM A879/A879M - Standard Specification for Steel Sheet, Zinc Coated by the Electrolytic Process for Applications Requiring Designation of the Coating Mass on Each Surface.
D. ASTM D3597 - Standard Performance Specification for Woven Upholstery Fabrics—Plain, Tufted, or Flocked.
E. ASTM E1352 - Standard Test Method for Cigarette Ignition Resistance of Mock-Up Upholstered Furniture Assemblies.
F. ICC 300 - Bleachers, Folding and Telescopic Seating, and Grandstands.
G. MGL, Part 1, Title II, Chapter 21A, Section 28 - Protection from Harmful Flame Retardants.
H. NFPA 70 - National Electrical Code.
I. NFPA 261 - Standard Method of Test for Determining Resistance of Mock-Up Upholstered Furniture Material Assemblies to Ignition by Smoldering Cigarettes.

PART 2 PRODUCTS (NOT USED)

2.01 AUDIENCE / GYMNASIUM SEATING

A. Use the following:
   1. Bleachers:

a. Telescoping bleachers with molded plastic, individually formed seats.
    1) Integrally molded end caps at aisle end locations.
    2) Integrally molded recess pockets to accept seat number and row letters.
    3) Integrally molded rear closure panel at back of seat to allow for continuous clean sweep of debris at deck level and minimized visibility of structural ribbing.
b. Motorized bleachers to be operated from remote wall-mounted key-switched control.
c. Include front row "flex seating" to permit creation of barrier-free viewing locations in quantities required by applicable codes and accessibility standards.
d. Include aisle railings and collapsible guards at ends of bleachers.
e. Operation:
    1) Integral Power: Keyed wall switch.
        (a) Limit Switches: Automatically stop integral power system when telescoping stands reach fully opened or closed positions.
        (b) Motion Monitor: Flashing light with self-contained warning horn, rated at 85 dB, activates when stands are in motion.
f. Handrails and railings:
    1) Aisle handrails: Single post folding railing segment mounted in center of aisle at every other row beginning at row 2.
    2) End of row guardrails: Self-storing, at open ends of sections beginning at row 2.
    3) Top row seat-level rear guardrail: Non-removable self-storing, mounted behind rear seat with tubular supports, running full width of section.
    4) Railing construction: Round steel or aluminum pipe or tube, with formed elbows at corners and caps at ends of straight runs.
g. Skirt Panel: On first row, provide galvanized steel front skirt panel to prevent players/objects from sliding underneath the first row.
h. Manufacturers:
    1) Hussey Seating Company; MAXAM Telescopic Gym Seat System, with Courtside XCS12 seats: www.husseyseating.com. (Basis of Design)
    2) Interkal LLC; www.interkal.com.
    3) Irwin Seating Company; www.irwinseating.com.
    4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.

2. Accessories:
    a. Scorer's tables: 6 feet wide by 15 inches deep; relocatable to any row of any sections without mounting brackets.
        1) Quantity One.
    b. End curtains: Vinyl.
3. Materials:
    a. Cast Aluminum: AA-380, free of air holes and casting imperfections, all edges ground smooth.
    b. Sheet Steel: ASTM A879/A879M, Commercial Steel (CS) or Drawing Steel (DS) electrogalvanized sheet, 04Z (12G) coating class on both surfaces; chemically treated for baked enamel finish.
    c. Steel Plates, Bars, and Tubes: ASTM A36/A36M.
    d. Fiberglass: Molded plastic material with not less than 30 percent glass fiber reinforcement and integral color pigments.

e. Polypropylene Sheet: Molded high density plastic with minimum tensile strength of 3300 psi, integral color pigments, and textured, scuff-resistant surface finish.
f. Polyurethane Foam: Density not less than 1.8 lb/cu ft, fire retardant, non-hardening and non-oxidizing, with high resistance to alkalis, oils, moisture, and mildew.
g. Upholstery Fabric: ASTM D3597 Heavy-duty woven Polyester fabric. Greenguard gold Certified, Stain repellent to be PFOA & PFOS Free, minimum of 100,000 Double Rubs, Water Soluble cleaning Code. Up to three colors from same pattern to be evenly distributed on Fixed Seating Chairs throughout the Auditorium and Balcony above. Fabric is subject to compliance w/ requirements from awarded Fixed Seating Manufacturer.
h. Manufacturers: Subject to compliance with these specifications, provide products of one of the following:
    1) Maharam; Product: Messenger: www. maharm.com.
    2) Mayer Fabrics; Product: Spectrum; Pattern: Theory; www.mayerfabrics.com. (Basis of Design)
    3) Pallas; Product: Panache: www.https://www.pallastextiles.com.
    4) Or equal: Other manufacturers' products accepted by the Awarding Authority as equal to the specified products in terms of construction, quality, durability, performance, and appearance. Submit as substitutions.
i. Color: Up to three colors, to be selected from manufacturer's standard color offerings.

PART 3 DESIGN CRITERIA

3.01 BASIC FUNCTION:

A. Provide seats for occupants and visitors of the type and in the quantity required by the project program and in accordance with the code.
B. Where fixed seating also must function as elements defined within another element group, meet the requirements of both element groups.
C. Electrical components, devices, and accessories shall be listed and labeled as defined in NFPA 70, by a qualified testing agency and marked for intended location and application. Below standard may be more stringent than applicable building code requirements. Coordinate with local building code requirements for telescoping stands.

3.02 AMENITY AND COMFORT

A. Comfort:
    1. Seating Layout: Provide telescoping stands to comply with ICC 300 Standard for Bleachers, Folding and Telescopic Seating, and Grandstands, except where additional requirements are indicated or imposed by authorities having jurisdiction.
    2. Seat Width: 18 inches long.
        a. Standard: 20 inches center-to-center, 17 inches minimum seat width.
    3. Seat Depth: 12 inches.
        a. Standard: 17 inches deep, minimum front edge to most forward point of back.
    4. Seat Height: 16-1/8 inch from deck to top of seat, plus or minus 1/2 inch.
        a. Standard: 17 inches.
    5. Seat Contour: Accomplished using seat base.
        a. Other Seating: Molded, shaped, or contoured front-to-back and side-to-side, to fit body, with rounded or padded front edge.
    6. Back Height: Measured from top of seat at point at which straight line projection of surface of back intersects with seat; plus or minus 1/2 inch.
        a. Standard: 17 inches.

7. Back Pitch: Slope back from seat, allowing minor contour of back, measured from intersection of straight line projection of surface of back with seat to top front edge of back.
    a. Standard: 20 degrees.
8. Back Contour: Accomplished using seat base or padding.
    a. Molded: Contoured side-to-side, to fit body.
9. Back Resilience:
    a. Extra: Equivalent to 3 inches of polyurethane foam.
10. Arm Height: 7 to 8 inches above seat.
    a. Audience: Level arms.
11. Arm Resilience:
    a. Padded: Equivalent to 3/4 inch of polyurethane foam.

3.03 HEALTH AND SAFETY

A. Fire Retardance:
    1. Seats and Backs: Self-extinguishing when mock-up is exposed to smoldering cigarettes in accordance with ASTM E1352 or NFPA 261.
    2. Exception: Obviously non-combustible materials such as metals and stone.
B. Flame Retardant Chemical Content:
    1. Soft furnishings shall comply with MGL, Part 1, Title II, Chapter 21A, Section 28.

3.04 STRUCTURAL CRITERIA:

A. Structural Performance: Engineer, fabricate and install telescopic gym seating systems to the following structural loads without exceeding allowable design working stresses of materials involved, including anchors and connections. Apply each load to produce maximum stress in each respective component of each telescoping stand unit according to ICC 300.
B. Gymnasium seat assembly: Design to support and resist, in addition to its own weight, the following forces:
    1. Live load of 120 pounds per linear foot on seats and decking
    2. Uniformly distributed live load of not less than 100 pounds per square foot of gross horizontal projection.
    3. Parallel sway load of 24 pounds per linear foot of row combined with sub-paragraph 2. above
    4. Perpendicular sway load of 10 pounds per linear foot of row combined with uniformly distributed live load above.
    5. Parallel and Perpendicular sway loads are not applied concurrently.
C. Hand Railings, Posts and Supports: Engineered to withstand the following forces applied separately:
    1. Concentrated load of 200 pounds applied at any point and in any direction.
    2. Uniform load of 50 pounds per foot applied in any direction.
D. Guard Railings, Post and Supports: Engineered to withstand the following forces applied separately:
    1. Concentrated load of 200 pounds applied at any point and in any direction along top rail.
    2. Uniform load of 50 pounds per foot applied in any direction at top rail.
    3. Uniform load of 50 pounds applied on an area equal to 1 square foot applied on all guardrail infill panels.
E. Manufacturer shall be a current Certified Welding Fabricator as defined by either AWS. The manufacturer shall comply with structural welding codes that are applicable to their products or materials. These welding codes shall be produced by AWS.

F. Product to be supplied shall have a current evaluation report issued by ICC Evaluation Services (ICC-ES) certifying that it meets all structural design requirements of the current ICC 300 Standard for Bleachers, Folding and Telescopic Seating, and Grandstands, including all specified load combinations.

END OF SECTION

SECTION DC F
DEMOLITION CRITERIA

PART 1 GENERAL

1.01 SECTION INCLUDES

A. The work required under this section shall include, but is not limited to the following:
   1. General demolition of structures, including removal of sub-surface foundations and footings completely, as identified in the drawings, and excluding removal of hazardous materials and toxic substances.
   2. Selective demolition of building elements for alteration purposes, excluding removal of hazardous materials and toxic substances.
      a. See Civil and Landscape specifications and drawings for additional information.
   3. Salvage.
   4. Abandonment and removal of existing utilities and utility structures.

B. All demolition work shall be coordinated and phased to comply with the Phasing Plans.

1.02 ABBREVIATIONS AND ACRONYMS

A. CFR. Code of Federal Regulations: www.govinfo.gov.

B. CMR. Code of Massachusetts Regulations: www.mass.gov/code-of-massachusetts-regulations-cmr.

C. DEP. Massachusetts Department of Environmental Protection: www.mass.gov/orgs/massachusetts-department-of-environmental-protection.

D. NFPA. National Fire Protection Association: www.nfpa.org.

1.03 REFERENCE STANDARDS

A. Editions of listed standards as referenced by applicable codes, or most current edition if not referenced.

B. 29 CFR 1926 - Safety and Health Regulations for Construction.

C. 310 CMR 7.00 - 310 CMR 7.00 "Policy Concerning Non-Friable Asbestos Containing Materials".

D. NFPA 241 - Standard for Safeguarding Construction, Alteration, and Demolition Operations.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination per Section 01 31 14 - Coordination and as follows:
   1. Coordinate schedules of operations with Owner prior to starting work.
      a. Schedule demolition and dismantling to cause no interference with the use of the existing buildings.
      b. Cooperate with the Owner to reduce to a minimum all interference with normal use of the building.

B. Preconstruction Meeting required per Section 01 70 00 - Execution and Closeout Requirements.

1.05 EXISTING UTILITY SERVICES:

A. Arrange and pay for disconnecting, removing, and capping utility services within areas of demolition.
   1. Utility company back charges will be paid by Owner.

B. Place markers to indicate locations of disconnected services. Identify service lines and capping locations.

1.06 FIELD CONDITIONS - GENERAL DEMOLITION

A. Occupancy: Structures and parts of structures to be demolished will be vacated and use will be discontinued prior to start of work.

B. Condition of Structures: Owner assumes no responsibility for actual condition of structures to be demolished.

1. Conditions existing at time of inspection for bidding purpose will be maintained by Owner insofar as practicable. However, variations within structure may occur by Owner's removal and salvage operations prior to start of demolition work.
2. Construction Manager shall note and be aware that asbestos-containing roofing materials are present in residual form on the existing roofs.
    a. Abatement of these materials by a licensed Asbestos Abatement Contractor is not required under this Contract. See PART 3 below and the following: for additional requirements.
        1) Section 02 28 20 - Asbestos Abatement.
3. Construction Manager, Trade Bid Contractors, and subcontractors shall be aware that asbestos-containing materials exist within the building. Comply with 29 CFR 1926 regulations concerning protection of employees when performing this work, and 310 CMR 7.00.

C. Salvaged Materials: Items of salvageable value to the Construction Manager may be removed from structure as work progresses. Transport salvaged items from site as they are removed.
1. Exceptions: See SALVAGE paragraph, in PART 3 of this section, for list of items to be salvaged and turned over to Owner or to be re-installed in new construction or renovation areas.
2. Storage or sale of removed items will not be permitted on site.

D. Traffic: Conduct demolition operations and removal of debris to ensure minimum interference with roads, streets, walks, and other adjacent occupied and used facilities.
1. Do not close or obstruct streets, walks, or other occupied or used facilities without permission from Authority Having Jurisdiction (AHJ) and Owner. Provide alternate routes around closed or obstructed traffic ways if required by governing regulations.
2. Maintain safe access around demolition to occupied building areas for Owner, building users, service, fire and police vehicles.
3. Protections: Ensure safe passage of persons around area of demolition. Conduct operations to prevent damage to adjacent buildings, structures, and other facilities and injury to persons.
4. Erect temporary covered passageways if directed to do so by Owner or AHJ.

E. Damages: Promptly repair damage caused to adjacent facilities by demolition operations.

F. Utility Services: Maintain existing utilities indicated to stay in service and protect against damage during demolition operations.
1. Do not interrupt existing utilities serving occupied or used facilities, except when authorized in writing by AHJ and Owner. Provide temporary services during interruptions to existing utilities, as acceptable to governing authorities.
2. Arrange for disconnecting and sealing utilities serving structures to be demolished, prior to start of demolition work.
3. Shut off and cap water service to building areas to be demolished.

G. Utility Services: See Division 26 for disconnection of electrical services. Do not start demolition work until utility disconnections have been completed and verified in writing.

H. Do not start demolition work until utility disconnections have been completed and verified in writing.

I. Remove and legally dispose of freon and glycol that are contained within building systems and fixed equipment.

J. Remove and legally dispose of oil, propane, and associated tanks.

1.07 QUALITY ASSURANCE

A. Demolition Firm Qualifications: Company specializing in the type of work required.

1. Minimum of five years of documented experience.

PART 2 PRODUCTS

2.01 MATERIALS

A. Fill Material: See Section DC G - Sitework Criteria.

PART 3 DESIGN CRITERIA

3.01 DEMOLITION

A. Remove that portion of the existing building as designated on the drawings, additional removals not identified on drawings but necessary to complete the work, and as follows:
   1. Demolition and remedial site work at the North Intermediate School site, 320 Salem Street, Wilmington, MA 01887 to include hazardous material abatement of the existing school building, demolition of the school building and selected site appurtenances, and remedial site work of the resulting vacant lot.
   2. Remove one stand-alone irrigation pump house of approximately 12 feet by 12 feet square.
   3. Remove baseball fields, tennis & basketball courts with surrounding chain link fence, approximately 980 linear feet.
   4. Relocate all playground equipment as shown on drawings.
B. Remove stairs, concrete sidewalks, paving and curbs required to accomplish new work.
C. Fill excavations, open pits, and holes in ground areas generated as result of removals, using specified fill; compact fill as specified in Section DC G - Sitework Criteria.

3.02 GENERAL PROCEDURES AND PROJECT CONDITIONS

A. Comply with applicable codes and regulations for demolition operations and safety of adjacent structures and the public.
   1. Obtain required permits.
   2. Comply with applicable requirements of NFPA 241.
   3. Use of explosives is not permitted.
   4. Take precautions to prevent catastrophic or uncontrolled collapse of structures to be removed; do not allow worker or public access within range of potential collapse of unstable structures.
   5. Conduct operations to minimize effects on and interference with adjacent structures and occupants.
   6. Do not close or obstruct roadways or sidewalks without permits from AHJ.
B. Do not begin removal until receipt of notification to proceed from Owner.
C. Minimize production of dust due to demolition operations. Do not use water if that will result in ice, flooding, sedimentation of public waterways or storm sewers, or other pollution.
D. Perform demolition in a manner that maximizes salvage and recycling of materials.
   1. Dismantle existing construction and separate materials.
   2. Set aside reusable, recyclable, and salvageable materials; store and deliver to collection point or point of reuse.
E. Partial Removal of Paving and Curbs: Neatly saw cut at right angle to surface.

3.03 EXISTING UTILITIES

A. Coordinate work with utility companies. Notify utilities before starting work, comply with their requirements, and obtain required permits.
B. Protect existing utilities to remain from damage.
C. Do not disrupt public utilities without obtaining permits from Authority Having Jurisdiction.
D. Do not close, shut off, or disrupt existing life safety systems that are in use without at least seven days prior written notification to Owner.

E. Do not close, shut off, or disrupt existing utility branches or take-offs that are in use without at least three days prior written notification to Owner.

F. Locate and mark utilities to remain; mark using highly visible tags or flags, with identification of utility type; protect from damage due to subsequent construction, using substantial barricades if necessary.

G. Remove exposed piping, valves, meters, equipment, supports, and foundations of disconnected and abandoned utilities.

3.04 DEBRIS AND WASTE REMOVAL

A. Remove debris, junk, and trash from site and building daily. Burning of materials from demolished structures is not permitted on site.

B. Remove materials not to be reused on site.

C. Transport materials removed from demolished structures and legally dispose off-site.

D. Leave site in clean condition, ready for subsequent work.

E. Clean up spillage and wind-blown debris from public and private lands.

3.05 PROTECTION OF EXISTING BUILDING

A. Use all means and precautions necessary to ensure the safety of the occupants of the building and the good condition of materials, finishes, and systems scheduled to remain.

1. Construction Manager shall maintain the required exits, where indicated or required for code compliance, from all occupied portions of the building.

3.06 SALVAGE

A. Salvage items listed below or indicated on drawings. Consult with Owner for items not listed nor indicated on drawings. Take precautions to ensure that salvaged items are not damaged. For items to be re-used, care and effort shall be taken to preserve mounting and other hardware.

B. Where practicable, salvage sufficient quantities of cut or removed material to replace damaged components of existing construction, when material is not readily obtainable on current market.

END OF SECTION

SECTION DC G1

SITE IMPROVEMENTS CRITERIA

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Site improvements comprise the following elements:

1. Pavements and Surfacing: Finished surfaces for pedestrian, sports, and recreational traffic, other than turf, comprising the following elements:
   a. Exterior paved or surfaced areas such as walkways, plazas, outdoor classrooms, and sports surfaces for hardcourt play and basketball courts.
   b. Exterior steps and ramps that are not connected to buildings, including handrails and stair nosings.

B. Refer to the Civil Engineer Section G2010 'Roadway Pavement' for bituminous concrete/asphalt paving along roadways, driveways, and parking lots.

C. Refer to the G Civil Engineer Section G2013 'Curbs, Gutters and Drains' for granite or precast curbs along roadways and driveways.

1. Site Fixtures and Equipment: Fixtures, equipment, and miscellaneous structures located out-of-doors, except those located on the roof or mounted on walls of buildings. Site fixtures and equipment that are required include:
   a. Flagpoles:
      1) Two Ground-Mounted Flagpoles:
         a) Each with one flag.
         b) Flag size: Owner provided.
         c) Each includes one solar downlight.

   b. Fences and Barriers:
      1) Steel crash-test rated ornamental fencing and gates (4-foot heights) for:
         a) Fencing around outdoor play areas.
      2) Chain link fencing (4-foot heights) for:
         a) Perimeter of soccer field and play area to the east.
      3) Chain link fencing (10-foot heights) for:
         a) Fencing around basketball court area.
      4) Wood Privacy Fence; 6-foot high; to provide screening (visual and sound) for property abutters.
      5) Vehicular Gates (three locations)
         a) To close off any potential vehicular traffic during school play hours.

   c. Athletic fixtures and fixed equipment, including:
      1) Soccer goals.
      2) Basketball goals, player's benches, and sport fence.
      3) Playground equipment in three locations per age group.

   d. Site furnishings, including:
      1) Benches for seating areas as shown on the plans.
      2) Litter and recycling-combined receptacles.

3) Bicycle racks.
4) Ornamental and traffic control steel bollards.
5) Vehicular swing gate.
6) Raised garden beds.
7) Monolithic granite seatwall.
8) Outdoor seating and tables.
9) Outdoor chalkboards.
10) Outdoor learning tables.

e. Minor site structures, including:
1) Circular seatwall at outdoor classroom.
2) Outdoor dining terrace.
3) Storage shed for recess equipment (10’-0” by 12’-0”).
4) Shade sails with concrete engineered footings (three locations).

2. Landscaping: Outdoor plants and elements supporting plants. Landscape planting features that are required are:
a. Turf areas for specific activities as described in the project program.
1) Sports and athletic surfaces at soccer fields, hard court play, and basketball courts.
2) Within portions of the children's play areas.
3) In all lawn areas in front and around the school buildings.
4) Within all parking islands.
5) At main entry plaza.
6) At pick/up and drop-off zones (bus and parent).
7) Screening vegetation to property abutters.

b. Turf for ornamental or erosion-control purposes.
1) Long slopes and hillsides.
2) Adjacent to wetlands, as indicated by permitting agencies.

c. Visual screening
1) As Foundation plantings.
2) Trees for shade to building areas.
3) Inside planters in plazas and outdoor gathering areas.
4) Utility areas.
5) Mixed Deciduous and Evergreen screen planting for property abutters.

d. Shade for outdoor activities.

e. Ornamental plantings at main entry, outdoor gathering areas, outdoor classrooms, outdoor dining plazas, playgrounds, sport courts, and athletic fields.

f. Erosion control plantings in accordance with Section G1010.1 ‘Erosion and Sedimentation Controls’.

D. Products: Where specific products are required or allowed, use products complying with the additional requirements specified elsewhere.

E. Refer to the Civil Engineering Section G1010.1 ‘Erosion and Sedimentation Controls’ for permanent erosion control on long slopes and hillsides.

F. Refer to the G Electrical Section G4020 ‘Site Lighting’ for site lighting for safety and egress.

G. Refer to the G Electrical Section G4020 'Site Lighting' for recessed retaining wall lighting for safety and egress.

H. Refer to the G Electrical Section G4010 'Electrical Distribution' for underground tunnels carrying electrical power or telecommunications comply with requirements for buildings.

1.02 REFERENCE STANDARDS

A. 40 CFR 280 - Technical Standards and Corrective Action Requirements for Owners and Operators of Underground Storage Tanks.

B. AASHTO GDPS - Guide for Design of Pavement Structures.

C. AASHTO GDHS - A Policy on Geometric Design of Highways and Streets.

D. American National Standards Institute (ANSI): Z60.1 American Standard for Nursery Stock, latest edition, published by American Horticulture Industry Association d/b/a AmericanHort.

E. A.O.A.C.: Association of Official Agricultural Chemists.

F. ASTM A36 Structural Steel.

G. ASTM A53 Pipe, Steel, Black and Hot-dipped, Zinc-coated welded and seamless steel pipe.

H. ASTM A153 Zinc Coating (Hot-dip) on Iron and Steel Hardware.

I. ASTM D 75 Practice for Sampling Aggregates

J. ASTM D 6913 Standard Test Method for determining the Particle-Size Distribution (Gradation) of Soils using Sieve Analysis.

K. ASTM D 7928 Standard Test Method for Particle-Size Distribution (Gradation) of Fine-grained Soils using the Sedimentation (Hydrometer) Analysis.

L. ASTM D1557 Moisture-Density Relations of Soils and Soil-Aggregate Mixtures using 10-lb Rammer and 18-in. Drop

M. ASTM F1292 - Standard Specification for Impact Attenuation of Surfacing Materials Within the Use Zone of Playground Equipment.

N. ASTM F1487 - Standard Consumer Safety Performance Specification for Playground Equipment for Public Use.

O. CPSC Pub. No. 325 - Public Playground Safety Handbook.

P. Massachusetts Department of Agricultural Resources (MDAR) - Massachusetts Prohibited Plant List, most recent issued list.

Q. MUTCD – Manual of Uniform Traffic Control Devices, US Highway Administration.

R. NAAMM FP 1001 - Guide Specifications for Design of Metal Flagpoles.

S. Professional Management Guide for Insects, Diseases and Weeds of Trees and Shrubs in New England, UMASS Press Series; https://www.umass.edu/agriculture-food-environment/landscape/publications-resources/umass-extensions-professional-management-guide-for-diseases-of-trees-shrubs.

T. SSHB – Standard Specifications for Highways and Bridges, the Commonwealth of Massachusetts, MassHighway, latest edition.

1.03 FIELD CONDITIONS

A. The following existing elements must be preserved:
   1. Sons of Italy Playground Donation Plaque on Granite Podium, Memorial Benches, and Soccer Field Memorial shall be preserved to be relocated onsite; locations to be determined.
   2. Adjacent existing roads, utilities, street trees, walks, walkways, and connections to the site and other school-related facilities, including the pedestrian access route to Arlene Avenue to the west and the pedestrian woodland connection to the Avalon Apartments to the northwest.

B. The following existing elements must be removed to accomplish new construction:
   1. All existing pavement and curbs are depicted on the Civil Engineering Site Preparation Plans.
   2. All existing trees and shrubs not noted to be protected “Protect and Remain”
   3. All bollards, site signs, timbers, walks, and other site appurtenances located within the limits of work, unless noted to “remain”.

PART 2 - PRODUCTS

2.01 PAVEMENTS AND SURFACING

A. Pavements and Surfacing:

   1. Use the following:
      a. Rigid paving throughout project shall consist of cast-in-place concrete walks, stairs, ramps, plazas and pads for utilities and structures, as depicted on Drawings.
      b. Resilient sports surfacing throughout project shall be used for the final surfacing, above a bituminous concrete base for the hard court play areas and basketball courts.
      c. Gravel Drip strip with aluminum edging at building foundation between foundation wall and planting bed.
      d. Synthetic lawn shall be used at one outdoor learning area and one gathering area with a nailer-board and cast-in-place concrete curb edging.

B. Pedestrian Paving:

   1. Use the following:
      a. Bituminous Concrete | Asphalt play areas and basketball courts shall consist of the following: 8-inch Gravel Borrow for Aggregate Base complying with MHD Specifications Section M1.03.0 Type “B”, 2-inch (minimum) Type I-1 Bituminous Concrete Binder, and 1-inch (minimum) Type I-1 Bituminous Concrete Top Course,
      b. Cast-in-Place Concrete pavement for all pedestrian walks adjacent to the school building, for all plazas and access/egress pads and as otherwise shown on the design plans. Concrete sidewalks shall consist of the following: 6-inch Gravel Borrow for Aggregate Base complying with MHD Specifications Section M1.03.0 Type “B”,

4-inch (minimum) poured-in-place air-entrained, reinforced, 5,000 pounds per square inch (PSI) at 28 days concrete.

1) Concrete Sidewalks shall be a minimum of 6-feet wide and abut the roadway vertical granite curb, precast concrete landscape curbs and/or include an integral cast-in-place curb.
2) Sidewalks and walkways have varied scoring patterns, tooled edges, and medium broom finishes perpendicular to the path of travel.
3) Concrete Sidewalks shall be a minimum of 5-feet wide and abut the roadway vertical granite curb, precast concrete landscape curbs, and/or include an integral cast-in-place curb.

c. Cast-in-Place Concrete paving with scoring pattern at entry plazas to building and along major travel routes through and around the site, also at the main entry, outdoor learning areas, and dining plaza.
d. Synthetic Lawn at one outdoor learning area and one gathering area with a nailer-board and cast-in-place concrete curb edging.

C. Exterior Sports Surfacing:

1. Use the following:
   a. Bituminous Concrete | Asphalt paving at hard court play areas and basketball courts.
   b. Acrylic topping over asphalt at hard court play areas and basketball courts.
   c. Pavement markings for play to include six separate colors – to be further developed.

2.03 SITE FIXTURES AND EQUIPMENT

A. Barriers:

1. Use the following:
   a. Crash Test Rated Steel Ornamental Fences at playground areas (4-foot high).
   b. Evergreen Planting with Wood Privacy Fence (6-foot high) to provide visual and sound barriers for property abutters.
   c. Vinyl Coated Chain-link Fences at basketball courts (10-foot high).
   d. Vinyl Coated Chain-link Fences at soccer field and play area (4-foot high).
   e. Cast-in-Place Concrete Seatwalls at outdoor classrooms.
   f. Monolithic Granite Seatwalls at Bus Drop-Off/Outdoor Dining Plaza areas.
   g. Bollards at bus and parent drop-offs.
   h. Gates at pedestrian access routes to playgrounds and basketball courts.
   i. Vehicular gates block access into roadways.
   j. Metal Louver screen fencing and gates around dumpsters and utilities (8-foot high).

B. Fences:

1. Use the following:
   a. Crash-Test Rated Steel Ornamental Fence at playground areas.
   b. Vinyl-coated chain link fencing (10-foot high) perimeter fence for basketball courts.
   c. Vinyl Coated Chain-link Fences at soccer field and play area (4-foot high).
   d. Wooden Privacy Fence adjacent to property abutters.
   e. Metal Louver screen fencing and gates around dumpsters and utilities (8-foot high).

C. Permanent Site Fixtures:

1. Use products made of the following:
   a. Cast-in-place concrete.
   b. Stainless steel for exterior, non-building stair railings.

c. Aluminum for flagpole.
d. Granite for monolithic seatwalls.
e. Powder-coated steel and aluminum for site furnishings.

2. Do not use products made of:
   a. Terracotta.
   b. Bronze
   c. Fiberglass.

D. Site Furnishings:

1. Use products made of one of the following:
   a. Cast-in-place concrete for pads and foundations for benches, litter receptacles, bicycle racks, traffic control bollards, vehicular swing gate, and monolithic granite seatwalls.

   b. Powder Coated aluminum for:
      1) Backed Benches with armrests; surface mount.
         a) Quantity: 12.
      2) Litter and recycling combined receptacles; surface mount.
         a) Quantity: Eight.
      3) Bicycle racks; embedded.
         a) Quantity: 14.

   c. Powder Coated steel for :
      1) Sculptural Benches; surface mount.
         a) Quantity: Three.

   d. Stainless steel for:
      1) Pedestrian Crash-Test Rated Bollards (with LED light).
         a) Quantity: 18.
      2) Pedestrian Crash-Test Rated Bollards (non-lit).
         a) Quantity: 19.

   e. Reinforced plastic composite for:
      1) Raised garden beds.
         a) Quantity: Six.
      2) Play structures.
         a) Quantity: Three Systems (per age group).

   f. Steel for:
      1) Vehicular swing gate.
         a) Quantity: Three.

   g. Stone masonry for:
      1) Monolithic granite seatwalls.
         a) Quantity: Five.
      2) Natural Stonewall Panel Retaining Wall.
         a) At perimeter of basketball court.

E. Flagpoles: fixed.

1. Provide sheathed metallic flag snaps.
2. Use internal halyard and cam cleat pulley system.

3. Aluminum flagpoles at parent drop-off.
4. Clear Anodic Finish.
5. Including solar downlight.
6. Quantity: Two.

7. Do not use:
   a. Flagpoles with shafts that are constructed of more than one piece.
   b. Fiberglass flagpoles.
   c. Tilting flagpoles.

2.04 LANDSCAPING

A. Landscape Plants:

1. Use the following:

   a. Evergreen types.
      1) Upright, columnar evergreens like White Spruce and Eastern Red Cedar.
      2) Broad, spreading evergreens for foundation plantings and buffers like Junipers and Yews.
      3) Broadleaf evergreens for foundation plantings and landscape features like Rhododendrons.
   b. Deciduous types.
      1) Flowering shrubs provide seasonal interest such as Sweetspire, Lilac and Spirea.

2. Feature Plants.

   a. Upright, columnar evergreens like arborvitae or cedars.
   b. Broad, spreading evergreens for foundation plantings and buffers like junipers and yews.
   c. Broadleaf evergreens for foundation plantings and landscape features like rhododendrons, mountain laurel and holly.

3. Do not use:
   a. Evergreen types.
      1) Hemlocks.
      2) White Pine.

   b. Deciduous types.
      1) Norway Maples as they are an invasive species.
      2) Poplar species because they are weak-limbed.
      3) Gooseberries or Currents.
      4) Species that are categorized as invasive or deleterious.

4. Use the following:
   a. Outdoor plants in all courtyards.

5. Do not use:
   a. Species that are categorized as invasive or deleterious.

B. Turf:

1. Use a combination of the following:
   a. General Lawn Seed Mix; (Northeast Nursery or equal) for general lawn areas.

b. Shade Lawn Seed Mix (Northeast Nursery or equal) for shade lawn areas.
c. Slope | Sustainable Seed Mix; Slopes >3:1 with Erosion Control Blanket; Northeast Nursery or equal) for sloped lawn areas.
d. Multi-Use Athletic Field Seed Mix; (Northeast Nursery or equal) for multi-use or athletic field areas.
e. Black Beauty Turf Type Tall Fescue (SODCO or equal) for general sod lawn areas.
f. Microclover Black beauty/Players Best (SODCO or equal) for high use sod lawn areas.
g. Erosion Control/Restoration Mix for Detention Basins and Moist Sites Seed Mix; Slopes > 3:1 with Erosion Control Blanket; (New England Wetland Plants or equal) for wet restoration grass areas and bioswales.
h. Erosion Control/Restoration Mix for Detention Basins and Moist Sites Seed Mix; (New England Wetland Plants or equal) for wet restoration grass areas and bioswales.
i. Erosion Control/Restoration Mix for Detention Basins and Dry Sites Seed Mix; Slopes > 3:1 with Erosion Control Blanket; (New England Wetland Plants or equal) for dry restoration grass areas and bioswales.
j. Erosion Control/Restoration Mix for Detention Basins and Dry Sites Seed Mix; (New England Wetland Plants or equal) for dry restoration grass areas and bioswales.
k. FACW Wetland Meadow Mix; ERNMX-122; (Ernst Seed or equal) for wildflower seed.
l. Mesic to Dry Native Pollinator Mix; ERNMX-105 (Ernst Seed or equal) for pollinator wildflower seed.
m. Retention Basin Floor Mix; ERMNX-126; (Ernst Seed or equal) for native grass rain garden and bioswale areas.
n. New England Native Warm Season Grass Mix (New England Wetland Plants or equal) for native grass areas.
o. New England Conservation/ Wildlife Mix (New England Wetland Plants or equal) for conservation restoration grass areas.
p. New England Roadside Matrix Upland Seed Mix (New England Wetland Plants or equal) for erosion control and restoration grass areas.

2. Do not use:
   a. Non-specified plant species.
   b. Any seed or sod mixture containing invasive species.

3. Use one of the following methods of installation:
   a. Sodding may be used in lieu of seeding, if approved by Architect.
   b. Seeding, hand or mechanical at rates specified.
   c. Plugging is acceptable only for perennial, non-grass species (bio basins, swales).
   d. Hydroseeding is mandated for areas more than one acre, steep or long slopes or as indicated due to seasonal requirements.

4. Do not use:
   a. Plugging for any grass species or large area coverage.
   b. Hydroseeding for non-grass seed plantings.

C. Evergreen Ground Covers:

1. Use the following:
   a. Juniper.
   b. Prostrate Plum Yew.
   c. Vinca.
   d. Liriope.

2. Do not use:
    a. Invasive plant species.

D. Deciduous Ground Covers:

1. Use the following:
    a. Ajuga.
    b. Daylily.
    c. Ferns.
    d. Hosta.
    e. Ornamental clumping grasses.
    f. Ornamental mixed perennials.

2. Do not use:
    a. Invasive plant species.

E. Evergreen Shrubs:

1. Use the following:
    a. Azalea.
    b. Holly.
    c. Juniper.
    d. Mugo pine.
    e. Rhododendron.
    f. Yew.

2. Do not use:
    a. Non-specified plant species.
    b. Invasive plant species.

F. Deciduous Shrubs:

1. Use the following:
    a. Clethra.
    b. Fothergilla.
    c. Hydrangea.
    d. Lilac.
    e. Ninebark.
    f. Sweetspire.
    g. Spirea.
    h. Viburnum.
    i. Winterberry.
    j. Witchhazel.

2. Do not use:
    a. Invasive plant species.

G. Vines:

1. Use one of the following:
    a. Clematis.
    b. Trumpet vine.
    c. Wisteria.

2. Do not use:
    a. Invasive plant species.

H. Shade Trees:

1. Use the following:
    a. Honeylocust (thornless).
    b. Linden.
    c. Red Maple (Red Sunset).
    d. Swamp White Oak.
    e. Sweetgum.
    f. Tuliptree.
    g. White oak.

2. Do not use:
    a. Invasive plant species.

I. Specimen Trees:

1. Use the following:
    a. Flowering cherry.
    b. Flowering crabapple.
    c. Fringe tree.
    d. Hornbeam.
    e. Kousa Dogwood.
    f. Magnolia.
    g. Paperbark maple.
    h. River Birch.
    i. Stewartia.
    j. White Spruce.

2. Do not use:
    a. Invasive plant species.

J. Street Trees:

1. Use the following:
    a. Hackberry.
    b. Honeylocust (Thornless).
    c. Red Maple (Red Sunset).
    d. Swamp oak.
    e. White oak.

2. Do not use:
    a. Invasive plant species.

K. Mulch:

1. Use one of the following:
    a. Well-rotted shredded hardwood.
    b. Well-rotted leaf mulch.

2. Do not use:
    a. Peanut, pecan, or cocoa-bean shells.
    b. Peat moss.

c. Rounded riverbed gravel.
d. Crushed or chipped marble or granite.
e. Processed wood fiber.

L. Edgings for Beds:

1. Use the following:
   a. Shovel cut edge.

2. Do not use:
   a. Brick.
   b. Concrete.
   c. Redwood.
   d. Western red cedar.
   e. Polyethylene plastic.

M. Irrigation Systems:
   a. Total square footage for sprinkler irrigation of the three natural turf playing fields, for a total of 31,306 +/- square feet.
   b. Domestic water will be provided from the building as the primary water supply for irrigation. The cost of plumbing a separate domestic service to the irrigation system shall be included by the Construction Manager, including:
      1) Licensed Trade Project Plumbers Carrying Indoor Irrigation Work.
         a) Work must be carried to 10 feet outside building walls per Code.
      2) Sewer Abatement (Irrigation) Water Meter for Billing.
      3) Reduced Pressure Zone (RPZ) Backflow Preventer.
      4) Copper Pipe and Valves.
      5) Floor Drains.
      6) Winterization.
   c. Applying potable water judiciously requires the use of a “smart” irrigation controller that can calculate the correct amount of water to apply based on real-time climate conditions (i.e.: rain, temperature, soil moisture) and automatically adjust the running time, or suspend daily irrigation if moisture conditions are met, for each customized zone. Irrigation will only be applied to supplement rainfall, not serve as a substitute. Generally, irrigation is applied overnight in the early hours of the morning to prevent irrigation water from staying on plant leaves too long and to not interfere with general maintenance and site operation. Quick-coupling valves at-grade will be in lockable valve boxes for various hand-watering and winterization practices. The irrigation system shall have a winterization port to force compressed air through the mainline and laterals in October to prevent pipes cracking from ice. A qualified irrigation service provider is recommended for annual maintenance and commissioning for optimal performance.
   d. Internet-based controls will further enhance system management to notify the end-user of leaks, breaks, faults, and overall water use for commissioning. The Construction Manager shall provide ethernet data to the irrigation controller and/or pump station for remote management and system push notifications, emails, and text alerts on flow sensing, automatic system shutdown with leaks and breaks, harvested water versus domestic water consumption, and weather advisories (e.g., incoming rain, temperatures).
   e. The Construction Manager shall only subcontract qualified contractors with experience using these products:
      1) Irrigation Controller:
         a) Baseline BaseStation3200 with BaseManager 2.0.
         b) Rain Bird ESP-LXD with IQ v4.0.
         c) Hunter ACC2 with Centralus.

2) Two-Wire Based System (for Expandability).
3) Internet Based Controls:
    a) Construction Manager to Purchase Tablet and Stylus for Irrigation Management.
4) PVC Mainline.
5) Stainless Steel Rotor Sprinklers for Athletic Fields.
6) Pressure Regulating Valves and Sprinklers.

f. Electrically, the irrigation controller only requires a 120-Volt, 1-Phase, 20-Amp GFCI Supply. The controller shall be grounded to the building earth ground system. An internal transformer shall convert to 24-Volt AC for direct-burial valve wire in the field. Electrical Trade Contractor shall provide power and conduit for irrigation from inside of the building to the landscape for the irrigation contractor to begin work.
g. It is presumed that downstream of all plumbing equipment such as the backflow preventer, meter, and various valves, a dynamic pressure of 60 pounds per square inch (psi) at 30 gallons per minute (gpm) flow rate can be achieved. If pressure is too low, a booster pump will be required to sufficiently irrigate the athletic fields. The booster pump will require a separate power supply and coordination for space (indoors or outdoors, in enclosure).
h. Booster pump station power at this point is to be determined but currently our assumptions are for a 3-Phase (Voltage to be determined), 2-horsepower booster pump to adequately increase pressure for athletic field irrigation.

END OF SECTION

SECTION DC G

SITEWORK CRITERIA

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Site work comprises the following elements:

1. Site Clearing: Furnish all labor, materials, and equipment required and perform all site preparation, complete as indicated and as specified herein. Unless otherwise indicated, the areas to be cleared, grubbed and stripped shall consist of the entire Worksite, with the exception of those areas specifically designated to remain in an undisturbed, natural condition.
2. Earth Moving: Furnish all labor, materials, equipment and incidentals necessary to perform all excavation, fill and grading required to complete the Work as indicated on the Contract Drawings and as specified herein. The Work shall include excavation for drain manholes, drain pipes, and paving; all backfilling, compaction and fill; embankment and grading; disposal of waste and surplus materials; temporary support of excavation, excavation dewatering and surface water control during excavation. All materials not re-used on-site shall be disposed of by the General Contractor. Materials required in the Work which are not available from on-site excavated materials shall be imported from approved off-site sources.
3. Erosion and Sedimentation Controls: Erosion and sedimentation control shall be provided as shown on the attached Contract Drawings with materials and procedures as specified herein. If the General Contractor varies construction activities from those shown on the contract drawings, the General Contractor must, at no additional cost to the Owner, prepare and implement an Erosion and Sedimentation Control Plan (hereinafter called The Plan) to prevent storm water, soil erosion and air pollution due to project construction activities. The Plan shall implement erosion and sedimentation control prevention and treatment procedures such that stormwater runoff discharged from the site shall meet the following general requirements:
    a. All work shall be performed in accordance with the erosion control measures shown on The Plan.
    b. Best management practices (BMPs) shall be used to address storm water pollution prevention in accordance with MADEP Stormwater Management Guidelines and EPA NPDES Regulations.
    c. The Plan shall be implemented and installed prior to commencement of earthwork activities.
    d. The EPA NPDES Stormwater Pollution Prevention Plan Shall be kept on-site at all times and review / project inspections shall take place as specified therein.
4. Asphalt Pavement: Furnish labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
    a. Hot-mix asphalt pavement at all excavations made in any existing pavement.
    b. Pavement-marking paint.
5. Curbs: Furnish all labor, materials, equipment, and supervision to construct the various types of granite curbing, in accordance with the Drawings and Specifications.
6. Water Utilities: Furnish all labor, tools, equipment and materials and perform all operations necessary to install buried ductile iron pipe, valves, fittings, polyethylene services, and appurtenances as shown on the drawings and as specified herein. All materials are to conform to the requirements of the Town of Wilmington Water Department.
7. Sanitary Sewerage Utilities: Furnish all labor, materials, equipment and incidentals required to install and test polyvinyl chloride (PVC) sewer pipe, fittings and appurtenances as indicated and as specified herein.

8. Precast Concrete Drainage and Sanitary Sewerage Structures: Furnish all labor, materials, equipment and incidentals required to install and test precast concrete manholes, catch basins, stormwater pretreatment separator, frames and covers, frames and grates, and appurtenances as indicated on the drawings and as specified herein.
9. Storm Drainage Utilities: Furnish all labor, materials, equipment and incidentals required to install high density polyethylene pipe, fittings and appurtenances as indicated and as specified herein.

PART 2 PRODUCTS

2.01 G1010 – CLEARING AND GRUBBING

A. Clearing

1. Cut and remove all roots, grass, weeds, rubbish and any other objectionable material resting on or protruding through the surface of the ground in the area of construction, as indicated on the Contract Drawings as the Limit of Work.

B. Grubbing

1. Grub and remove all stumps, roots in excess of 1 1/2 inches in diameter, matted roots, brush, timber, logs, concrete rubble and other debris encountered to a depth of 30 inches below original grade or 18 inches beneath the bottom of excavations, whichever is deeper.

C. Stripping

1. Strip topsoil and subsoil from all areas to be excavated as detailed on the contract drawings. Topsoil shall be free from brush, trash, stones larger than 2 inches in diameter and other extraneous material. Avoid mixing topsoil with subsoil. Stockpile and protect topsoil in area.

D. Disposal

1. General Contractor shall dispose of rubbish and debris from site preparation operations by hauling such materials and debris to an approved offsite disposal area. No rubbish or debris of any kind shall be buried on the site.

E. Protection

1. Trees and other vegetation not indicated to be removed in the contract drawings shall remain and shall be protected from damage by all construction operations. Provide protection to prevent damage to surrounding trees, not within the limit of work or specified to be removed, from the felling operations. Clearing operations shall be conducted in a manner so as to provide for the safety of employees and others.

2.02 G1010.1 – EROSION AND SEDIMENTATION CONTROLS

A. In order to minimize erosion, the natural vegetation of the area shall be preserved at locations adjacent to and outside the limits of work as indicated on the Contract Drawings. All earthwork, grading, moving of equipment and other operations likely to cause disturbed soil conditions and erosion and siltation and tracking of sediments, shall be planned and performed in a sequence as to avoid sedimentation and erosion of disturbed soil.

B. Furnish all labor, materials, equipment and incidentals required to perform installation, maintenance, temporary pumping, removal and area cleanup related to erosion and sedimentation control work as indicated and as specified herein.

C. Crushed Stone

1. For temporary access ways, staging areas, stone filter boxes, stone filter berms, setting bed for riprap, and sediment filtration devices, crushed stone shall conform to the Commonwealth of Massachusetts Department of Highways Standard Specifications for Highways and Bridges, as amended, M2.01.3.

D. Geosynthetic Materials

1. Drainage Fabric, Silt Fence, Filter Fabric and Filter Cloth shall be Mirafi Envirofence; American Excelsior “Siltstop” fence or DGIP series siltfence, or approved equal.
2. Erosion control blanket shall be constructed of a porous, biodegradable geotextile matting specifically manufactured to retain soil moisture, to hold soil temperatures and to generally

stabilize soils where stormwater flows in channels, swales or on recently planted slopes such as Mirafi 100X; Curlex Excelsior, North American Green Bionet 575BN, or approved equal. Erosion control blanket shall be installed to protect soil and seedlings where specified. The erosion control fabric shall be 'stapled' to the surface which it is installed in accordance with the recommendation of the selected manufacturer. All materials used in the construction of and installation of the fabric must be biodegradable and require no maintenance by the Owner.

E. Sediment Fence:

1. Wooden stakes shall be 4-ft in length, 2 in by 2 in oak.
2. Sediment fence fabric shall be a woven, polypropylene, ultraviolet resistant, selected to provide a barrier to prevent the transport of sediment laden water with fines and debris, yet provide the passage of water.
3. Prefabricated commercial sediment fence may be substituted for built in field fence.
4. 1/4-in woven wire mesh shall be galvanized steel or hardware cloth.
5. Temporary mulch:
   a. Wood chip mulch or bark chip mulch: Chipped material shall have a uniform consistency and be free of rock and soil. Material shall be stockpiled on the site in approved areas at the direction of the Owner.
   b. Straw mulch shall be comprised of threshed straw of oats, wheat, barley, or rye that is free from noxious weeds, mold or other objectionable material. The straw mulch shall contain a minimum of 50 percent by weight of material to be 10 in or longer. Straw shall be in an air dry condition and suitable for placement with blower equipment.
6. Hay bales shall be bales made of straw of oats, wheat, barley, rye or natural hay and shall be utilized to control sediment runoff during construction activities. Each bale shall be either wire-bound or string tied. Bales shall be placed with bindings oriented around the bale rather than over and under. Furnish oak wood stakes 2-in by 2-in by 4-ft long or 1/2-in by 4-ft long rebar as indicated.
7. Tackifier for use on straw mulch areas shall be a latex acrylic copolymer emulsion specifically manufactured for use as a tackifier. Asphalt tackifier shall not be used.
8. Temporary seeding for erosion control
9. Dust Control
10. Cloth Filters: Cloth filters at catch basins shall be The Dandy Bag as manufactured by Dandy Products, Inc. or equal; Siltsack as manufactured by Jennian Enterprises; Drainpac as manufactured by Drainworks.

2.03 G1070 – EARTH MOVING

A. Structural Fill

1. Structural Fill shall be gravel, sandy gravel, or gravelly sand free of organic material, wood, trash, snow, ice, frozen soil and other materials which may be compressible or which cannot be compacted as specified herein and shall be graded within the following limits:

Sieve Size	Percent Finer by Weight
4 in	100 percent
No. 4	30 to 90 percent
No. 40	10 to 50 percent
No. 200	0 to eight percent

B. Controlled Density Fill

1. Controlled Density Fill shall conform to the Commonwealth of Massachusetts Department of Highways Standard Specifications for Highways and Bridges, as amended, specification M4.08.0.

C. Common Fill

1. Common Fill shall consist of mineral soil free from organic materials, topsoil, wood, trash and other objectionable materials which may be compressible or which cannot be properly compacted. Common Fill shall not contain stones that are greater than 2/3 the lift thickness of common fill being placed. Common fill shall not contain granite blocks, broken concrete, masonry rubble or other similar materials. It shall have physical properties such that it can be readily spread and compacted during filling. Snow, ice and frozen soil will not be permitted. Soil excavated as part of the Work which meets the above requirements in this paragraph, as shown by a certified sieve analysis may be used in the Work.

D. Select Common Fill

1. Select Common Fill shall be as specified above for Common Fill, except that the material shall contain no stones larger than 2-in in diameter. Soil excavated as part of the Work which meets the requirements of this paragraph, as shown by a properly executed and certified sieve analysis may be used in the Work.

E. Riprap

1. Riprap shall be sound, durable rock which is angular in shape. Rounded stones, boulders, sandstone or similar soft stone will not be acceptable. Material shall be free from over-burden, spoil, shale and organic material, and meet the following Commonwealth of Massachusetts Department of Highways Standard Specifications for Highways and Bridges, as amended:

   a. Type 1: M2.02.2 (Dumped Riprap)

   b. Type 2: M2.02.4 (Modified Rockfill)

   c. Type 3: M2.06.0 (Slope Paving)

F. Crushed Stone

1. Crushed stone for temporary access ways, construction entrances, walkways, setting bed for riprap, and sediment filtration devices shall conform to the Commonwealth of Massachusetts Department of Highways Standard Specifications for Highways and Bridges, as amended, specification M2.01.3.

2. Dense-graded crushed stone for subbase material in project pavement sections shall conform to the Commonwealth of Massachusetts Department of Highways Standard Specifications for Highways and Bridges, as amended, specification M2.01.7.

G. Screened Gravel

1. Screened gravel shall be used for drainage pipe and drainage structures bedding as indicated or if standing water is observed in the pipe trench prior to installation and at other locations as specified on the Contract Drawings.

2. Screened gravel shall consist of hard, durable, rounded or subangular particles of proper size and gradation and shall be free from sand, loam, clay, excess fines and deleterious materials. The gravel shall be graded within the following limits:

Sieve Size	Percent Finer by Weight
3-in	100 percent
No. 4	40 to 75 percent
No. 50	8 to 28 percent
No. 200	0 to ten percent

H. Sand

1. Sand shall conform to ASTM C33 for fine aggregate.

2.04 G2010 – ROADWAY PAVEMENT

A. Hot-mix Asphalt Pavement Bituminous Concrete Paving shall be Class I, as specified in Sections 460 and M3.11.0 of the reference standard indicated in Paragraph 1.04 of this Specification.

B. Asphalt Tack coat shall consist of either emulsified asphalt, Grade RS 1 conforming to Section M3.03.0, or cutback asphalt, Grade RC 70 or RC 250 conforming to Section M3.02.0 of the reference standard indicated in Paragraph 1.04 of this Specification.

C. Pavement-Marking Paint: Acrylic/latex type, low VOC, traffic marking paint.

2.05 G2013 – CURBS

A. Granite curb: Granite curb required to complete the work of this Section shall be a structural granite conforming to ASTM C 615, Class I Engineering Grade, suitable for curbstone use.

1. Curb shall be light grey, free from seams which impair structural integrity, and with percentage of wear less than 32 percent, as determined by ASTM C 131.
2. Curb materials shall conform to MHD Specifications Section M9.04.0 and shall meet requirements specified in the subsection of Division III, Materials of the MHD Specifications.
3. Provide split vertical face and sawn top for all curb sizes. Provide thermal finish on exposed pavement/paver side only.

B. Precast Concrete Curb: Provide precast concrete curbs with a minimum compression strength of 5,000 pounds per square inch. Castings shall have plane smooth surfaces, true to line and face, free from defects, sharp arises, and with curved surfaces accurately reproduced. Overall dimensions for each casting shall not vary more than 1/16 inch from those indicated.

1. Curb units shall be cast at the manufacturers plant. Job site castings will not be permitted.
2. Curbing to be set on a radius of 100 feet or less shall be cast to the curve required. Ends shall be formed or sawed on radial lines.
3. Curb Foundation: One part of Portland cement to six parts No. 1A coarse aggregate dry mix.

2.06 G2020 – PARKING LOT PAVEMENT

A. Hot-mix Asphalt Pavement Bituminous Concrete Paving shall be Class I, as specified in Sections 460 and M3.11.0 of the reference standard indicated in Paragraph 1.04 of this Specification.

B. Asphalt Tack coat shall consist of either emulsified asphalt, Grade RS 1 conforming to Section M3.03.0, or cutback asphalt, Grade RC 70 or RC 250 conforming to Section M3.02.0 of the reference standard indicated in Paragraph 1.04 of this Specification.

C. Pavement-Marking Paint: Acrylic/latex type, low VOC, traffic marking paint.

2.07 G3010 – WATER UTILITIES

A. Ductile Iron Pipe

1. All ductile iron pipe shall conform to AWWA C151, Class 52.
2. All ductile iron pipe shall have a bituminous outside coating in accordance with AWWA C151.
3. All ductile iron pipe shall be cement mortar lined and seal coated in accordance with AWWA C104. Cement mortar lining shall be double thickness.

B. Ductile Iron Fittings

1. Ductile iron fittings shall conform to AWWA C110 or C153, Class 350.
2. All ductile iron fittings shall have a bituminous outside coating in accordance with AWWA C110.
3. All ductile iron fittings shall be cement mortar lined and seal coated in accordance with AWWA C104. Cement mortar lining shall be double thickness.

C. Joints

1. Joints for pipe and fittings shall be restrained push-on or restrained mechanical joints conforming to AWWA C111. Gaskets shall be of SBR. Un-restrained joints may not be used.
2. Joints shall be suitable for 250 psi working pressure and be fabricated of heavy section ductile iron casting.

3. Bolts and nuts shall be low carbon and conforming to ASTM A307, Grade B.

D. Solid Sleeves
   1. Solid sleeves shall be long body type, ductile iron with mechanical joints and retainer glands shall be of the solid type, long laying length.
   2. Solid sleeves shall be cement mortar lined and seal coated in accordance with AWWA C104. Cement mortar lining shall be double thickness.

E. Flexible Couplings: Flexible Couplings shall be cast iron with rubber gaskets.

F. Retainer Glands: Retainer glands shall be Ebba Iron Sales Inc. – Mega Lug or Ford Co. – 1400 Series.

G. Valves: Valves shall be resilient seated gate valves for buried service, and be manufactured in accordance with AWWA C509. Valves shall be provided with a minimum of two O-ring stem seals. Valves shall be epoxy coated, 8mm thick, interior and exterior.

H. Valve Boxes and Covers: Valve Boxes and covers shall be cast iron, tar coated, two-piece adjustable sliding type which include cast iron covers.

I. Water Services
   1. Corporation Cocks shall be ball valves, open left, with compression fittings.
   2. Curb Stops shall be ball valves, open left, with compression fittings.
   3. Curb stops shall have service boxes which shall be tar coated, cast iron, sliding type with inlaid covers. Shaft shall be 2 ½ inches diameter with extension rods.
   4. Service pipes shall be high density polyethylene copper tube size for use with compression fittings. The pipe shall be polyethylene #4508, SDR-9 rates for 200 psi.
   5. Compression fittings shall be used for joining polyethylene tubing.
   6. Coupling shall be straight coupling, three part, both ends pack joints for polyethylene pipe with a split locking clamp with stainless steel screw.
   7. Cut and remove all roots, grass, weeds, rubbish and any other objectionable material resting on or protruding through the surface of the ground in the area of construction, as indicated on the Contract Drawings as the limit of work.

J. Hydrants
   1. Break flange type, (AWWA C502, latest revision), designed for 250 psi working pressure, steamer connection 4 inch, 2-2¼ inch side hose connections, national standard threads, positive drain, open left with pentagon operating nut, inlet 6 inches, 7 inch diameter barrel and mechanical joint hub. Hydrants shall be restrained back to main, thrust block behind, 3/4 inch stone from bottom of hydrant boot to 8 inches over drain port, and 5-1/4 inch valve opening. All hydrants shall be set with steamer facing the street or parking lots with a minimum of 15 inches from finish grade to bottom of steamer connection. All hydrants shall be painted per local municipality Water Department requirements.

2.08 G3020 – SANITARY SEWERAGE UTILITIES

A. Polyvinyl Chloride (PVC) Gravity Pipe and Fittings
   1. PVC solid wall gravity pipe and fittings shall be Type PSM, PVC SDR 35 and conform to ASTM D3034.
   2. Pipe shall be furnished in standard laying lengths in accordance with ASTM D3034 and fittings shall be furnished in lengths of not more than 3 feet.
   3. PVC pipe and fittings shall have bell and spigot push-on ends. The bell shall consist of an integral wall section with a solid cross-section elastomeric gasket securely locked in place to prevent displacement during assembly.

B. Polyvinyl Chloride (PVC) Pressure Pipe and Fittings

1. PVC pressure pipe shall be SDR 21 PVC with rubber ring joints and shall conform to ASTM D2241, ASTM D1784, and ASTM F477.
2. PVC pipe and fittings shall have bell and spigot push-on ends. The bell shall consist of an integral wall section with a solid cross-section elastomeric gasket securely locked in place to prevent displacement during assembly.
3. Restrained joints, where required, will be restraining glands. Restraining glands shall be EBAA Iron Series 2000 PV or Series 1500 by Uni-Flange or equal.
4. PVC perforated pressure pipe shall be Schedule 40 PVC with all solvent welds.

C. Testing
1. All PVC pipe shall be field tested. Supply all labor, equipment, material, gauges, pumps, meter, and incidentals required for testing.
2. Gravity pipe shall be visibly inspected for leakage.
3. Pressure test each pressure pipe upon completion of the pipe laying and backfilling operations.

D. Cleaning: Prior to final completion of the Work, thoroughly clean all the new pipelines and remove all dirt, stones, pieces of wood or other materials.

2.09 G3030 – STORM DRAINAGE UTILITIES

A. High Density Polyethylene (HDPE) Pipe
1. High Density Polyethylene (HDPE) Pipe resins shall be high molecular weight, high density polyethylene with a cell classification number of 345434C in accordance with ASTM D3350.
2. All polyethylene pipe shall meet the requirements of ASTM F714.
3. Pipe shall be furnished in standard laying lengths not exceeding 25-ft.
4. All high density polyethylene pipe and fittings shall be made from the same resin.

B. Pipe Identification: The following shall be continuously indent printed on the pipe and spaced at intervals not exceeding 5-ft.:
1. Name and/or trademark of the pipe manufacturer.
2. Nominal pipe size.
3. Dimension ratio.
4. The letters PE followed by the polyethylene grade in accordance with ASTM D1248, followed by the hydrostatic design basis in 100's of psi, e.g., PE 3408.
5. Manufacturing standard reference, e.g., ASTM F714.
6. A production code from which the date and place of manufacture can be determined.

C. Testing
1. All HDPE pipe shall be field tested. Supply all labor, equipment, material, gauges, pumps, meter, and incidentals required for testing. Pressure test each pipe upon completion of the pipe laying and backfilling operations.

D. Cleaning: Prior to final completion of the Work, thoroughly clean all the new pipelines and remove all dirt, stones, pieces of wood or other materials.

2.10 G3030.4 – PRECAST CONCRETE DRAINAGE AND SANITARY SEWERAGE STRUCTURES

A. General
1. Cement shall conform to ASTM C150, Type II cement or equal unless otherwise stated.
2. Provide lifting lugs or holes in each precast section for proper handling.
3. Like items of material/equipment shall be end products of one manufacturer.
4. Precast sections shall be properly cured prior to shipping.

B. Precast Concrete Manhole Sections and Catch Basins: Precast concrete base sections, riser sections, transition top sections, flat slap tops and grade rings shall conform to ASTM C478 and meet the following requirements:
   1. Design precast concrete base and flat slab for their own weight, weight of soil, and a live load equal to AASHTO H-20 truck loading applied at finish grade.
   2. Bottom slab thickness shall equal the riser wall thickness or flat slab thickness, whichever is greater.
   3. Construct precast concrete base as shown on the drawings.
   4. Base, riser, and transition top sections shall have tongue and groove joints.
   5. Top section shall be eccentric cone where cover over pipe exceeds 4-feet and as shown on the Drawings. Top section shall be flat slab where cover over pipe is 4-feet or less.
   6. Provide integrally cast knock out panels in precast concrete manhole sections at locations, and with sizes shown on the drawings. Knock out panels shall have no steel reinforcing.

C. Stormwater Pretreatment Separator
   1. Design Criteria: Performance objective of 80 percent TSS to recharge system at design flow.
   2. The stormwater pretreatment separator shall be capable of containing spills of floatable substances such as oil and gasoline.
   3. The manhole risers and frames and covers for the stormwater pretreatment separator shall be provided by the manufacturer.
   4. Design precast concrete base and flat slab for their own weight, weight of soil, and a live load equal to AASHTO H-20 truck loading applied at finish grade.
   5. The particle separator shall be easy to maintain.

D. Brick Masonry
   1. Bricks for channels and shelves shall conform to ASTM C32, grade SS.
   2. Brick for raising frames to finished grade shall conform to ASTM C62.
   3. Mortar shall be composed of one part Portland cement, two parts sand, and hydrated lime not to exceed ten-pounds to each bag of cements. Portland cement shall be ASTM C150, Type II; hydrated lime shall conform to ASTM C207.
   4. Sand shall be washed, cleaned, screened, well graded with all particles passing a No. 4 sieve and conform to ASTN C33.
   5. Frames and Covers and Frames and Grates:
   6. Frames and covers and frames and grates shall be cast iron. Cast iron shall conform to ASTM A48, Class 30.
   7. Frames and covers shall have a 24-inch diameter clear opening unless otherwise indicated on the drawings.
   8. Frames and grate shall have a 24-inch square clear opening unless otherwise indicated on the drawings.

E. Jointing Precast Concrete Sections
   1. Seal tongue and groove joints of precast sections with either rubber O-ring gasket or preformed flexible joint sealant.
   2. Completed joint shall withstand 15 psi internal water pressure without leakage or displacement of gasket or sealant.

F. Pipe Connections: Connect pipe to precast concrete structures using the following methods:
   1. Flexible sleeve- integrally cast sleeve in precast section or install sleeve in a formed or cored opening.
   2. Compression gasket – integrally cast compression gasket in precast concrete section.
   3. At the discretion of the Engineer, grout in place using non-shrink and waterproof mortar.

G. Manhole Rungs: Manhole rungs shall be steel reinforced, copolymer polypropylene, 14-inch wide, M.A. Industries Inc. Type PS2-PF-SL, or equal.

H. Damp proofing: Sanitary precast structures shall have two coats of bituminous waterproofing applied to the exterior surfaces by brush or spray and in accordance with the manufacturer's recommendations. Damp proofing shall be Hydrocide 648 by Sonneborn Building Products; Dehydratine 4 by A. C. Horn Inc., RIW Marine Liquid by Toch Brothers or equal.

END OF SECTION

SECTION 01 10 00
SUMMARY

PART 1 GENERAL

1.01 PROJECT

A. Project Name: Wilmington Elementary School.

B. Owner's Name: Town of Wilmington - Wilmington Public Schools.

C. Architect's Name: Dore & Whittier Architects Inc.

D. The project consists of the construction of a new elementary school including educational spaces, assembly spaces including a Library, Gymnasium, Cafeteria, and related support spaces.

1. Project area: 165,125 square feet.
2. Preliminary opinion of probable construction cost: $187,000,000.

1.02 CONTRACT DESCRIPTION

A. Contract type: Construction Management contract with Trade Contract sub-bids as defined by Massachusetts General Law Chapter 149A.

1.03 PREVAILING WAGES

A. Pursuant to M.G.L. c.149, s.26-27H, Massachusetts prevailing wages are applicable to this project and shall be paid to all contractors' field labor. See requirements in General Conditions.

1.04 WORKFORCE DIVERSITY REQUIREMENTS

A. See Section 00 21 13.02 - Workforce Diversity for project's diversity requirements, including: definition; goals for minority and women workforce participation; liaison committee; reports and records; access to work site; solicitations for subcontracts, and for the procurement of materials and equipment; sanctions; severability; Construction Manager's certification, and subcontractor requirements.

1. All Trade Contractors and non-trade-bid subcontractors shall implement a program to meet these workforce diversity goals for their scope of work. Within four weeks of award, Construction Managers shall develop and submit a workforce diversity plan that outlines the Construction Manager’s program and specific plan of action for achieving the goals. This program shall include a commitment of effort, resources and intentions to achieve the goals.
2. Recruitment efforts: If any Construction Manager, Trade Contractor, or non-trade-bid subcontractor cannot meet the goals due to lack of appropriate employees, said contractor shall be required to diligently exercise each of the following procedures:
    a. Newspaper advertisement.
    b. Assistance from local hiring agency.
    c. Union hall contact / response.
    d. Radio ad notices.
    e. Documentable recruitment efforts.
3. In the event that the work is progressing, and the goals are not being met, any or all of the following may occur, at the discretion of the Owner:
    a. Written notification from Owner to contractor of areas of shortcomings.
    b. Weekly on-site meeting attended by Construction Manager project team and senior management to review plan implementation and areas for improvement.
    c. Withholding payment due to Construction Manager, equal to ten percent of total outstanding payment due.
4. Failure to meet goals may result in sanctions by the Awarding Authority.

5. In the case of blatant disregard of these goals, Construction Manager may be subject to contract termination and associated damages for breach of contract.
6. A reduction of the goals may be allowed, but only after good faith efforts have been demonstrated that the maximum achievable outcome is being realized.

1.05 PRODUCT/ ASSEMBLY/ SYSTEM SUBSTITUTIONS

A. Where the Bid Documents stipulate particular acceptable products, utilization of one of the listed products is encouraged. In accordance with MGL Chapter 30, § 39M, products of other manufacturers not listed in the specifications shall be submitted as substitutions with accompanying comparison to specified product and will be evaluated by the Awarding Authority for equality to the specified product. The submitting contractor shall prepare sufficient data to enable review and comparison of submitted products for conformance to specification requirements, and comparison to listed products in terms of construction, quality, strength, performance, durability, and/or appearance. Allow for 30 days review time for Substitution Requests. The Awarding Authority shall make final determination of acceptance.

1.06 PROPRIETARY PRODUCTS

A. Where the Bid Documents stipulate a particular product with a designation as a "Proprietary Product" the Awarding Authority has undertaken a reasonable investigation of the specified product and competing products, if any, and determined that, for sound reasons in the public interest, the product has been voted as proprietary by the Awarding Authority. In accordance with MGL Chapter 30, §39M, the Awarding Authority will consider products of other manufacturers for equality to the specified product under the criteria defined in the statute. The submitting contractor shall submit a Substitution Request Form per the paragraph above and Section 01 25 00 - Substitution Procedures and 01 25 01 - Substitution Request Form, with sufficient data and supporting literature to enable review and comparison of submitted products for conformance with statutory requirements, and allowing the Awarding Authority to evaluate if the proposed substitution:
   1. Is at least equal in quality, durability, appearance, strength, and design.
   2. Will perform at least equally the function imposed by the general design for the public work being contracted or material being purchased.
   3. Conforms substantially, even with deviations, to the detailed requirements for the item specified as proprietary.
B. The Awarding Authority will make final determination of acceptance.
C. Proprietary products include the following, inclusive of accessories, sealants, and other items required per manufacturer to meet terms of warranties and for a complete installation:
   1. Section 07 21 00 - Thermal Insulation:
      a. Cellular Glass Insulation: Pittsburgh Corning FOAMglas Perinsul SIB.
   2. Section 08 71 00 - Door Hardware:
      a. Schlage Primus locks, cylinders, and keying.
   3. Section 08 80 00 - Glazing:
      a. School Guard laminated security glazing.
         1) Where School Guard glazing is used, sealant and accessories shall be of types approved by School Guard manufacturer.
   4. Section 09 21 16 - Gypsum Board Assemblies.
      a. Cementitious tile backing board products for wet areas:
         1) PermaBASE Building Products, LLC provided by National Gypsum Company; PermaBase Cement Board.
         2) USG Corporation; Durock Brand Glass-Mat Tile Backerboard.

5. Section 09 51 00 - Acoustical Ceilings:
    a. Direct-attached wood fiber acoustical panels: Armstrong Tectum Panels.
6. Section 09 58 00 - Integrated Ceiling Assemblies:
    a. Armstrong AcoustiBuilt Seamless Acoustical Ceiling System.
7. Section 10 44 00 - Fire Protection Specialties:
    a. Knox; Rapid Entry System.
8. Division 27 - Communications:
    a. Network Switches: Cisco.
    b. Wireless: Meraki.
    c. VOIP Phone: Yealink - Zoom.
    d. Distributed Communication: Bogen Hybrid IP / Analog System.
    e. Classroom Audio Systems: Lightspeed Technologies TopCat.
9. Section 28 10 00 - Electronic Building Security Systems:
    a. Door access control systems, including door hardware, control electronic hardware, and operating system software: TO BE DETERMINED IN A LATER DESIGN PHASE.
    b. Video surveillance equipment, including closed circuit video cameras, control electronic hardware, and operating system software: Axis Communications.
    c. Intrusion Detection:TO BE DETERMINED IN A LATER DESIGN PHASE.

1.07 CORI REQUIREMENTS

A. CORI requirements apply to all contractors working on the site.

1.08 OSHA REQUIREMENTS

A. Pursuant to M.G.L. C. 30, SEC. 39S (A)(2), all employees to be employed on the project site shall have successfully completed a course in construction safety and health approved by OSHA and of at least ten hours in duration.

1.09 CRISIS-RELATED RESPONSE REQUIREMENTS

A. Contractors shall be prepared to comply with crisis-related provisions of federal, state, or local mandates or laws currently enacted or enacted in the future throughout the life of the project, without additional compensation. In addition, crisis-related provisions shall be accommodated by contractors without claim for schedule extensions.

1.10 OWNER OCCUPANCY

A. Owner intends to continue to occupy the existing North Intermediate School building during the construction of the new building. Owner will occupy the new building during demolition of the existing North Intermediate School.
B. Cooperate with Owner to minimize conflict and to facilitate Owner's operations.
C. Schedule the work to accommodate Owner occupancy.

1.11 CONTRACTOR USE OF SITE AND PREMISES

A. Construction Operations: Limited to areas noted on Drawings.
B. Arrange use of site and premises to allow:
    1. Owner occupancy of adjacent portions of the existing building during the construction period.
C. Provide access to and from site pursuant to requirements of local authorities, fire department and emergency responder agencies, law, and Owner.
D. Emergency Building Exits During Construction: Keep all exits open during construction period; provide temporary access paving as indicated on phasing plans. Review any unanticipated temporary closure of exits or rerouting of egress paths with local authorities to obtain approval prior to closing exits. Provide temporary exit signs when exit routes are altered.
E. Existing building spaces may not be used for storage.

F. Time Restrictions:
   1. Comply with Town of Wilmington ordinances.
G. Utility Outages and Shutdown:
   1. Utility interruptions shall be limited to momentary disconnect-connect switchovers scheduled in advance and approved in advance by Owner. To the extent possible, limit disruption of utility services to hours the building is unoccupied.
      a. Do not disrupt or shut down life safety systems, including but not limited to fire sprinklers and fire alarm system, without seven days' notice to Owner and authorities having jurisdiction.
   2. Prevent accidental disruption of utility services to other facilities.

1.12 WORK SEQUENCE

A. Construct work in multiple phases with separate Dates of Substantial Completion.
   1. Phases are generally described as the following: See drawings and project phasing drawings for additional information related to the activities of each phase.
      a. Phase 1: Site enabling and partial site demolition. Sitework and Building Completion.
      b. Phase 2: Demolition of existing building and site. Sitework and Project Completion.

1.13 LIQUIDATED DAMAGES

A. Liquidated damages apply to each project phase, and to the overall completion of the project.
   1. See Section 00 52 00 - Owner-Contractor Agreement Form (A101, Article TO BE DETERMINED IN A LATER DESIGN PHASE) for liquidated damages.

1.14 LEED CERTIFICATION

A. This project is intended to obtain LEED for Schools v4 certification, LEED "Gold" level, as a sustainable project. The Basis of Design products listed in this Specification were selected by the design team to provide the credits described in Section 01 81 13.10 - LEED for Schools Version 4 Project Scorecard.
B. The Construction Manager and subcontractors shall be responsible for evaluating and making product selections for content that would assist in obtaining LEED credits, and to document LEED construction phase credits to the LEED Manager, and to evaluate product selections for potential LEED credits, and to maintain the minimum number of Construction Phase credits required in order to obtain the listed certification level.

Project Summary & Applicable Codes

The Wilmington Elementary School (the Project) includes construction of a new elementary school serving grades Pre-Kindergarten through grade 5. This summary is intended to convey compliance of the completed school building project with the 10th Edition of the Massachusetts State Building Code (CMR 780) which is anticipated to be effective when the project is eligible for construction permitting.

Applicable Codes:

1. Massachusetts State Building Code (780 CMR), 10th Edition (2021 IBC with amendments)
2. Uniform Sate Plumbing Code (248 CMR 10.00)
3. Massachusetts Architectural Access Board (MAAB) Regulations (521 CMR)
4. 2010 Americans with Disabilities Act Standards for Accessible Design (where more stringent than MAAB)
5. Massachusetts Base Energy Code (780 CMR, Chapter 13), 10th Edition (2021 IECC with amendments)
6. Massachusetts Fire Code (537 CMR 1.00) 2021 NFPA 1 with MA Amendments
7. Massachusetts Electrical Code (527 CMR 12.00) 2023 NFPA 70 with MA Amendments
8. Massachusetts Board of Elevator Regulations (524 CMR)

Occupancy Characteristics

The completed project will contain classrooms for grades Pre-K through 5, administrative offices, a cafeteria (including a performance platform) and associated kitchen, a gymnasium, and associated support spaces (mechanical, electrical, and storage spaces).

The occupancy of the complex will be generally classified as Use Group E (Educational) as defined in Section 305 with specific functions and occupancies defined as follows:

Level	Function	Use Group
1	Classrooms	E
	Offices	B (2)
	Gymnasium	E (1)
	Media Center (Library)	E (1)
	Cafeteria & Kitchen	E (1)
	Storage	S-2 (2)
	Utility & Miscellaneous	U (2)(3)
2	Classrooms	E
	Offices	B(2)
	Storage	S-2 (2)
	Utility & Miscellaneous	U (2)
3	Classrooms	E
	Offices	B(2)
	Storage	S-2 (2)
	Utility & Miscellaneous	U (2)

Note 1: Assembly areas that are accessory to Group E occupancies are not considered separate occupancies (§303.1.3).
Note 2: Accessory occupancies are not required to be separated from the main occupancy (§508.2.4).
Note 3: Incidental Accessory Occupancies shall be separated from the main occupancy as described in Table 509.

Physical Characteristics

The project is organized into a three-story classroom wing to the west and a one and two-story public spaces building to the east. The classroom wing contains primarily educational spaces while the public wing incorporates large volume assembly spaces, additional educational spaces, and administrative areas.

The total facility area of the project identified in the Code Plan Diagrams is described as follows:

Level	Building Area (SF)
1	76,560
2	42,479
3	41,692
Total:	**160,731**

The building heights from the average grade plane to highest portion of the flat roof can be characterized as follows:

Stories	Building Height (Area)
Three-Story	44 feet (Classrooms)
Two-Story	29 feet (Media Center, Gymnasium

Construction Type, Allowable Height, Allowable Area

Occupancy Separations & Mixed Use

The building is classified as **Type IIA** construction.

Allowable Height

The allowable tabular building height in feet as described in table 504.3 for Type II A, Group E in a building equipped with an automatic sprinkler system is **85 feet.** The maximum roof height, above the average grade is **44 feet,** at the three-story classroom wing.

The allowable tabular building height in stories as described in table 504.4 for Type II A, Group E in a building equipped with an automatic sprinkler system is **4 stories.** The maximum number of stories at the classroom wings is **3 stories.**

Allowable Area

The allowable tabular area in square feet as described in Table 506.2 for Type II B, Group E in a multistory building equipped with an automatic sprinkler system is **79,500 square feet**.

The project includes a fire access road providing 30-plus foot wide access to 100% of the perimeter of the building. The amount of Area Increase determined in accordance with Table 506.3.3 is **0.75.**

The Project is considered Mixed-Occupancy, Multistory building, and the allowable area for each story is determined in accordance with Section 506.2.2. Because the building is less than four stories, each story will comply individually with Section 508.1 for Mixed Use and Occupancy.

Allowable Area (Aa) = [A_1 + (NS x I_1)]
Aa = [79,500 + (26,500 x 0.75)] = **99,375 SF**

Levels 2, 3 includes unseparated accessory occupancies that do not occupy more than 10 percent of the floor area of the story and complies with Section 508.2 for Accessory Occupancies.

Level 1 includes accessory occupancies that do occupy more than 10 percent of the floor area of the story and will comply with with Section 508.4 for Separated Occupancies.

In order to comply with Section 508.4, portions of the B group occupancy (at the Administration Area), U group occupancies, and S-2 occupancies will be separated from the other occupancies in accordance with Table 508.4 as follows:

- Group B occupancies require a 1-hour fire-resistance rated separation with an automatic sprinkler system.
- Group U and S occupancies have no fire-resistance rated separation requirement with automatic sprinkler system.

Allowable areas for each occupancy group have been calculated assuming Single-Occupancy, Multistory Buildings for a three-story Construction Type IIA building in accordance with section 506.2.2. The allowable areas for each occupancy group are as follows:

Allowable Area-Educational (Aae) = [79,500 + (26,500 x 0.75)] = **99,375 SF**

Allowable Area-Business (Aab) = [112,500 + (37,500 x 0.75)] = **140,625 SF**

Allowable Area-Utility (Aau) = [57,000 + (19,000 x 0.75)] = **71,250 SF**

Allowable Area-Storage S-2 (Aas) = [237,000 + (79,000 x 0.75)] = **296,250 SF**

Level 1 - Allowable Building Area Sum of the Ratios Calculation			
Separated Occupancy	**Allowable Building Area**	**Actual Separated Occupancy Area**	**Ratio (Actual:Allowable)**
E	99,375	67,547	0.680
B	140,625	3,590	0.026
U	71,250	3,802	0.053
S	296,250	1,620	0.005
		Sum of the Ratios:	**0.764**

Level 1 complies with Section 508.4 for separated mixed use.

The following Incidental Uses will be provided with the required separation and/or protection in accordance with Table 509:

Incidental Use per Table 509	**Separation and/or Protection**
Electrical rooms containing transformers over 112 1/2 Kva	1 hour separation [1]
Emergency Electrical rooms & closets	2 hour separation [1]

Note 1: Separation based on NEC requirement, included for convenience

Fire Resistance Rating of Building Elements:

Fire resistance rating of building elements for **Type IIA** construction are based on the requirements of Table 601 or by other code provisions as described below. Refer to Means of Egress section of this Summary for rating of egress components.

Primary Structural Elements

1 hour fire-resistance rating

- Fire protection of structural member in roof construction shall not be required, including protection of primary structural frame members, roof framing and decking where every part of the roof construction is 20 feet or more above any floor immediately below.
- Heavy Timber complying with section 2304.11 shall be allowed for roof construction, including primary structural frame members, where a 1-hour or less fire-resistance rating is required.

The Project will utilize Heavy Timber framing in accordance with section 2304.11. Heavy Timber portions will support the roof construction over the Cafeteria.

Bearing Walls

Exterior: **1-hour** fire-resistance rating
Interior: **1-hour** fire-resistance rating

Other Exterior Walls

The building is significantly separated from any other building and therefore exterior walls are not subject to the fire resistive rating requirements based on separation distance in Table 602.

Exterior walls may be required to be rated in close proximity to exit enclosures in accordance with Section 1023.7.

Portions of exterior walls within 4 feet of the intersection with the fire wall between Code Buildings AB and C will be rated for 1-hour in accordance with section 706.5.1.2.

Interior Walls & Partitions

No requirement based on construction type per Table 601. Interior walls and partitions shall be rated based on the specific conditions outlined in the Occupancy Separations and Mixed Use, Building Separations, or Special Use & Occupancy Considerations sections of this Code Summary. Additional interior wall & partition ratings may also be required by other sections of the code and are described elsewhere in this Summary.

Floor Construction and Secondary Members:

1-hour fire-resistance rating

No requirement based on construction type per Table 601. Horizontal assemblies in compliance with Section 711.2 will be required to separate occupancies as outlined in the Occupancy Separations and Mixed Use, Building Separations, or Special Use & Occupancy Considerations sections of this Code Summary.

Roof Construction and Secondary Members:

1 hour fire-resistance rating

- Fire protection of structural member in roof construction shall not be required, including protection of primary structural frame members, roof framing and decking where every part of the roof construction is 20 feet or more above any floor immediately below.
- Heavy Timber complying with section 2304.11 shall be allowed for roof construction, including primary structural frame members, where a 1-hour or less fire-resistance rating is required.

The Project will utilize Heavy Timber framing in accordance with section 2304.11. Heavy Timber portions will support the roof construction over the Cafeteria.

Means of Egress

Occupant Loads will be calculated based on Table 1004.1.2 for Assembly Spaces without fixed seating, by actual seat count for spaces with fixed seating (1004.4), or by the design occupant load where this value exceeds the tabular values in accordance with Section 1004.2. Occupant loads for individual spaces can be found on the Code Plan Diagrams.

For the sake of these calculations, General Classrooms and other instructional spaces intended to contain only loose furniture are calculated as "Classroom area" (20 net square feet per occupant). Art Studios, Music Classrooms, and other vocational or specialty instruction spaces intended to contain large amounts of fixed casework and/or equipment are calculated as "Shops and other vocational areas" (50 net square feet per occupant).

The number of required exits per story (per section 1006.3) and the total egress capacity required and provided are summarized on the Code Plan Diagrams.

Two exits or exit access doorways shall be provided from all spaces with a maximum occupant load larger than 49 per Table 1006.2.1; this requirement is applicable to all general classrooms with a net square footage over 1000 SF unless an alternative means of calculating the occupant load is reviewed and accepted by the Authority Having Jurisdiction.

Kindergarten and Pre-K classrooms will have a maximum occupancy of 49 posted at the door to the classrooms in lieu of the calculation at 20 SF / occupant. As such, the space is not required to have two means of egress, exit signs, or doors with exit devices.

Three exits shall be provided from spaces with an occupant load of 501 to 1,000 occupants, and four exits shall be provided from spaces with an occupant load greater than 1,000 occupants (1006.2.1.1). Exits shall be arranged in accordance with section 1007.1.1.

The maximum length of exit access travel distance shall not exceed 250 feet in accordance with Table 1017.2.

Corridors are not required to be rated per Table 1020.1.

Corridors with a required Educational occupancy of 100 or more shall not be less than 72" wide in accordance with Table 1020.2, or not less than 44" for all other portions of the building.

Dead end corridors shall not be greater than 50' in length (1020.4 Ex. 2)

Interior exit stairways, which provide a protected path of egress travel to the exit discharge, shall be enclosed with fire barriers and / or horizontal assemblies with a rating of not less than 1 hour (1023.2).

Exit access stairways, which serve only two stories, are not required to be enclosed with a rated shaft enclosure (1019.3.1).

Special Occupancy & Use Considerations

Cafeteria with Performance Platform

Total occupant loads for the Cafeteria where calculated assuming concentrated seating segregated into seating "zones". The total occupant load for the Cafeteria is greater than 50 and less than 500, requiring two means of egress per Section 1006.2.

The area identified on the plans as the Platform specifically meets the code definition of a Platform defined in section 202. Portions of section 410 related to stages, proscenium ratings, roof vents, egress from stairs, and rated separations are not applicable to the platform. The construction of the platform will comply with section 410.4.

Gymnasium

The occupant load of the gymnasium has been calculated using a conservative approach that assumes an event such as a town meeting where loose chairs are organized on the gymnasium floor. Refer to the Code Plan for total occupant load. Using this assumption, the total occupancy of the gymnasium and platform exceeds 500 occupants, and three exits are required. All three of these exits pass into corridors.

Media Center

The occupant load for the Media Center has assumed portions of the space containing shelving will be classified as Stacks and the other portions will be classified as Reading Areas in accordance with table 1004.1.2.

Special Egress Considerations:

Stairways:

Exit access stairways connecting only two stories not open to other stories are not required to be enclosed (1019.3, Ex. 1). The exit access stairway from the upper level adjacent to the Media Center that descends to the Cafeteria will not be enclosed.

Where the exterior stair enclosure walls are not rated, the exterior walls that are less than 180 degrees from the unrated exterior wall of a stairway enclosure shall have a fire resistance rating of not less than 1 hour for a distance of 10 feet from the stair enclosure per section 1023.7. Openings within these walls will have a fire protection rating of ¾ hour.

Fire Protection Systems

Sprinkler systems will be provided in accordance with 903.3.2(1)(a). Such systems will be NFPA 13 systems as required by Section 903.3.1.1

Sprinklers will not be provided in the elevator machine room per Section 903.2 Exception 2. Specific areas exempted from fire protection under section 903.3.1.1.1 require the approval of the fire code official.

Alternative fire-extinguishing systems shall be provided for all Type I hoods in commercial kitchens per section 904.2.2.

Because no floor level is more than 30 feet above the lowest level of fire department vehicle access, no Class III standpipes are required due to building height per section 905.3.1. However, a standpipe will be provided in the enclosed stair as directed by the local Fire Department.

Per section 905.4, Class I standpipe hose connections will be provided to improve the firefighting operations in the following locations:

- At floor level landings of enclosed egress stairs.

The new school will be provided with portable fire extinguishers in accordance with Section 906.1. In addition to general portable fire distribution, additional portable fire extinguishers will be provided in the following locations:

- Within 30 feet of commercial cooking equipment.
- In the elevator machine room.
- On each floor of structure *while under construction* (to be provided by the General Contractor).
- Where required by the International Fire Code sections on Table 906.1. (No such areas have been identified in the project).
- Special hazard areas such as Science Classrooms, Tech classrooms, or other locations required by the fire code official. (No such areas have been identified in the project).

Fire alarm and detection systems will be installed in accordance with Section 907. Refer to Fire Alarm drawings for additional information and requirements.

Emergency Power & Lighting

Emergency Power shall be provided by an on-site generator and in accordance with Chapter 27 to provide the illumination levels set forth in Section 1008. Refer to Electrical drawings for additional information related to generator and egress lighting.

Plumbing Fixtures

The required plumbing fixture types and counts have been calculated based on 248 CMR 10.00: Uniform State Plumbing Code, Table 1.

Toilet fixtures, including toilets and lavatories, are provided for Kindergarten and Pre-kindergarten students in dedicated classrooms, as permitted by 248 CMR section 10.10 (15)(c)12.d

Pre-Kindergarten
Classrooms with Unisex / Gender-neutral toilet rooms pet 10.10 (15)(c)12.d

	Students Only	Toilets	Lavs			Jan. Sink	DF
Required Student Fixtures[1]:	**90**	**5**	**9**			**1 per Flr**	
Provided:						YES	
Gen Neut Allocation[4]	1 Tlt fix per Classroom	5	5				
Lavs Provide in Classrooms[10]	2 per Classroom		10				
Total Fixtures Provided:		**5**	**15**			**0**	**0**

Kindergarten
Classrooms with Unisex / Gender-neutral toilet rooms pet 10.10 (15)(c)12.d

	Students Only	Toilets	Lavs			Jan. Sink	DF
Required Student Fixtures[1]:	**144**	**6**	**6**			**1 per Flr**	
Provided:						YES	
Gen Neut Allocation[4]	1 Tlt fix per Classroom	8	8				
Lavs Provide in Classrooms[10]	2 per Classroom		16				
Total Fixtures Provided:		**8**	**24**			**0**	**0**

Educational Occupancy Scenario - Whole Building (Excluding Pre-Kindergarten & Kindergarten)

	Total Occupants	F Toilets	F Lavs	M Toilet	M Lav	M Urinal	Jan. Sink	DF
Required Student Fixtures[1]:	**890**	**11**	**18**	**11**	**18**	**up to 50%**	**1 per Flr**	**7**
Provided:							4	7
Group Toilet Rooms		28	20	21	21	7

Required Fixtures[3]:	**1115**	**16**	**12**	**8**	**12**	**up to 67%**
Provided[5]:						
Group Toilet Rooms		20	14	20	14	6
Gen Neut Allocation[4]	5 GN = 2F / 3M	1	1	1	1	0
Total Fixtures Provided:		**21**	**15**	**21**	**15**	**6**

1. Student Fixture Counts based on 248 CMR 10.10(15) Table 1 for "Public & Private Schools, Kindergarten, Middle & High School"
2. Faculty Fixture Counts based on 248 CMR 10.10(15) Table 1 for "Public & Private Schools, Kindergarten, Middle & High School Staff"
3. Student Fixture Counts based on 248 CMR 10.10(15) Table 1 for "Assembly - Indoor Recreational Facilities, Rinks, Swimming Pools, Gymnasiums and Other with Spectator Seating (Patrons & Staff)"
4. Gender Neutral Allocation accounts for how designated single user gender neutral toilet rooms have been allocated to male or female fixture requirements to satisfy minimum fixture requirements of Table1.
5. Only "open to public" gang and single user toilet rooms on Level 1 have been included in the provided fixtures for Assembly use tabulation.
6. Gender Neutral toilet rooms are used to satisfy the minimum fixture requirements using one of the two options provided in 10.10(15)(g) for each occupancy group.
7. Where option (c) 2. is utilized, the balance of required fixutres are provided in gender-designated gang toilet rooms
8. Where option (c) 1. is utilized, all required plumbing fixtures are provided in gender neutural single user toilet rooms
9. Fixture Counts based on 248 CMR 10.10(15) Table 1 for "Public & Private Pre-Schools and Daycare" one single user rest toom is allowed for up to 20 children and staff combined. The district has committed to a Pre-Kindergarten target class size of 15 students per classroom.
10. Per 248 CMR 10.10(15)(b)(12)(d)(ii) for Students younger than six years old, lavatories may be installed in classroom areas.
11. Per 248 CMR 10.10(15)(b)(12)(d)(i) for Students younger than six years old, unisex/gender neutral toilet facilities may be installed.

The minimum fixture counts for students in Special Education classrooms and in Kindergarten through 2nd grade classrooms are provided as unisex/gender-neutral toilet rooms as permitted in section 10:10(15)(g)(2) of 248 CMR. Gang toilet rooms are provided to meet the required fixture counts for students in grades 3 through 5.

Energy Efficiency

Although the Town of Wilmington is not a Strech Code or Opt-In Code community, the new school building will be designed in accordance with the Massachusetts Municipal Opt-In Specialized Code (225 CMR 23.00: 2021 International Energy Code with Massachusetts Amendments, including Appendix CC.)

The Project will seek compliance through the Targeted Performance Compliance requirements of Section C401.2.1(2).

The building envelope will demonstrate compliance with the Component Performance Alternative method for Low Glazed Wall System Buildings described in section C402.1.5.1.

A solar ready zone will be indicated on the drawings in accordance with the requirements of section C402.3 and Appendix CB. The required reserved electrical requirements stipulated in Appendix CB will be provided.

Section C402.5 - Air Leakage Thermal Envelope

A continuous air barrier complying with Section C402.5.1 will be provided for the building envelope.

The air leakage of all fenestrations will be specified in accordance with the limitations described in Table C402.5.3.

Building entrances shall be designed with Vestibules in accordance with Section C402.5.5. Exterior doors exempt from this requirement include:

- The Shipping / Receiving door and Mechanical Room door. (Section 402.5.8, Ex. 2).

Accessibility

The Project will comply with the Massachusetts Architectural Access Board (MAAB) 521 CMR, or the 2010 Americans with Disability Act Standards for Accessible Design where it is more stringent than MAAB.

Because the School Project is new construction, it shall fully comply with CMR 521 (Section 3.2). Spaces accessed only by ladder, crawlspaces, catwalks, or non-passenger elevators are exempt (Section 3.12).

In educational facilities, only administrative areas, instructional spaces, and areas open to students or the general population are required to comply with 521 CMR (Section 12.1.1). Areas with restricted access intended for use only by staff (such as instructor toilets, toilets for kitchen staff, mechanical and other support spaces) are not required to comply with 521 CMR. Such staff-only toilet rooms or spaces will comply with ADA Standards.

Accessible Routes, General Site and Building Elements

An Accessible Route shall be provided from accessible parking, passenger loading sizes, and public streets or sidewalks to the accessible building entrance they serve and shall coincide with the route for the general public (Section 20.2). At least one accessible route shall connect the building with all facilities, elements, and spaces on the site and within the building (Section 20.2.1). The accessible route will comply with the provisions of Section 20.

All spaces required to be accessible will be provided with at least one accessible means of egress in accordance with Section 20.11.1.

Curb cuts complying with Section 21 shall be provided wherever an accessible route crosses a curb (Section 21.2).

Accessible parking spaces shall be provided in accordance with Table 23.2.1. One in every six, but not less than 1 accessible space shall be van accessible in accordance with ADA 208.2.4 (note this requirement is more stringent than MAAB Section 23.2.2). Accessible spaces will be located on the shortest accessible route from the parking to an accessible entrance (Section 23.3.1). Where an accessible space cannot be located within 200 feet of an accessible entrance, an accessible passenger drop-off shall be provided within 100 feet of the accessible entrance (23.3.3). Accessible Parking Spaces, Accessible Van Spaces, and the associated access to the site Accessible Route will comply with Section 23.4

Plumbing Elements and Facilities

Single User Toilet Rooms intended for use by the students or general public or located in the Administrative Suite shall be accessible in accordance with 521 CMR. Toilet rooms with restricted access only by staff members shall be accessible in accordance with the 2010 ADA Standards.

Toilet fixture counts have been calculated based on 248 CMR (Massachusetts Fuel Gas and Plumbing Code) and distributed throughout the project based on the anticipated occupant load in each area.

Toilet rooms intended for use only by pre-kindergarten (Pre-K) and elementary school aged children (as defined Section 30.1-b) shall be designed in accordance with Sections 30.14 through 30.20. This includes single user toilet rooms in Special Education classrooms, single user toilet rooms in Pre-Kindergarten through 2nd grade classrooms, and gang toilet rooms serving assembly spaces and the grades 3 through 5 classroom wing.

Drinking fountains shall be located on each floor along the accessible route and installed in accordance with 521 CMR Section 36.

Special Occupancy Rooms and Features

The spaces or portions of the building described below require unique description and consideration with respect to accessibility.

<u>Stairways and Elevators.</u>

All stairs connecting public and educational or administrative staff areas will be designed as accessible stairways in accordance with Section 27. Stairways intended only for use by service staff, including the roof access stairs or ladders, are not required to be accessible (Section 12.1.1).

The elevator will be designed in accordance with Section 28 and to accommodate the required gurney size described in 524 CRM (Massachusetts Elevator Regulations) Section 17.40-(1). As such, it will accommodate the dimensional requirements described in 521 CMR Section 28.

<u>Assembly Spaces in Educational Facilities - Generally</u>

Amphitheaters, lecture halls, and classrooms will comply with Chapter 14 for Places of assembly in accordance with section 12.1.3. The gymnasium and cafeteria will also comply with the requirements of Chapter 14.

Assistive Listening Systems shall be provided for all assembly spaces in accordance with 14.5.

<u>Gymnasium</u>

Fixed operable bleacher seating will be provided in the Gymnasium, and the requirements for Number of Accessible Seats (Section 14.2) will be provided for each section of operable bleachers.

<u>Cafeteria</u>

No fixed seating will be provided in the Cafeteria, and the requirements for Number of Accessible Seats (Section 14.2) are not applicable to this space.

Cafeteria tables will be a combination of fixed (attached) and loose seating and will accommodate wheelchairs.

The raised platform (Stage) has an accessible route consisting of a ramp designed in accordance with Section 24 (per Section 14.6.1-a.).

<u>Media Center</u>

The Media Center will be designed to accommodate the requirements for Libraries described in Section 12.2.

At least 5% of all reading and study areas, stacks, reference rooms, computer work stations, shall be accessible and designed to accommodate the requirements of Section 12.2.2.

At least one lane of the check-out area will have a counter a maximum of 36" in height (Section 12.2.3).

Security devices and Card Catalogs will not be provided for the facility.

Aisles between stacks will have a minimum clear width of 42" as the preferred dimension described in Section 12.2.6.

Built In Furnishings and Equipment

Per Section 12.4, a minimum of 1 type of each element in each classroom will comply with the following:

- Countertops and sinks will comply with Section 12.2.2-b, c, and d and consist of a Clear Floor Space with Knee Clearance and a countertop height of 28" to 34".
- At least 50% of shelf space in cabinets with comply with Sections 6.5 Forward Reach and 6.6 Side Reach.
- Controls and operating mechanisms shall comply with Section 39 Controls.

UTILITY INFORMATION STATEMENT

1. THE SUB-SURFACE UTILITY INFORMATION SHOWN HEREON IS COMPILED BASED ON FIELD SURVEY INFORMATION, RECORD INFORMATION AS SUPPLIED BY THE APPROPRIATE UTILITY COMPANIES, AND PLAN INFORMATION SUPPLIED BY THE CLIENT, IF ANY; THEREFORE WE CANNOT GUARANTEE THE ACCURACY OF SAID COMPILED SUB-SURFACE INFORMATION TO ANY CERTAIN DEGREE OF STATED TOLERANCE. ONLY PHYSICALLY LOCATED SUB-SURFACE UTILITY FEATURES FALL WITHIN NORMAL STANDARD OF CARE ACCURACIES.
2. THE LOCATIONS OF UNDERGROUND PIPES, CONDUITS, AND STRUCTURES HAVE BEEN DETERMINED FROM SAID INFORMATION, AND ARE APPROXIMATE ONLY. COMPILED LOCATIONS OF ANY UNDERGROUND STRUCTURES, NOT VISIBLY OBSERVED AND LOCATED, CAN VARY FROM THEIR ACTUAL LOCATIONS.
3. ADDITIONAL BURIED UTILITIES/STRUCTURES MAY BE ENCOUNTERED.
4. THE STATUS OF UTILITIES, WHETHER ACTIVE, ABANDONED, OR REMOVED, IS AN UNKNOWN CONDITION AS FAR AS OUR COMPILATION OF THIS INFORMATION.
5. IT IS INCUMBENT UPON INDIVIDUALS USING THIS INFORMATION TO UNDERSTAND THAT COMPILING UTILITY INFORMATION IS NOT EXACT, AND IS SUBJECT TO CHANGE BASED UPON VARYING PLAN INFORMATION RECEIVED AND ACTUAL LOCATIONS.
6. THE ACCURACY OF MEASURED UTILITY INVERTS AND PIPE SIZES IS SUBJECT TO FIELD CONDITIONS, THE ABILITY TO MAKE VISUAL OBSERVATIONS, DIRECT ACCESS TO THE VARIOUS ELEMENTS AND OTHER MATTERS.
7. THE PROPER UTILITY ENGINEERING/COMPANY SHOULD BE CONSULTED AND THE ACTUAL LOCATIONS OF SUBSURFACE STRUCTURES SHOULD BE VERIFIED IN THE FIELD (V.I.F.) BEFORE PLANNING FUTURE CONNECTIONS. CONTACT THE DIG SAFE CALL CENTER AT 1-888-344-7233, SEVENTY-TWO HOURS PRIOR TO EXCAVATION, BLASTING, GRADING, AND/OR PAVING.

NOTES

1. THIS DOCUMENT IS AN INSTRUMENT OF SERVICE OF NITSCH ENGINEERING. IT IS ISSUED TO DORE AND WHITTIER FOR PURPOSES RELATED DIRECTLY AND SOLELY TO NITSCH ENGINEERING'S SCOPE OF SERVICES UNDER CONTRACT WITH DORE AND WHITTIER FOR PK-5 SITE. ANY USE OR REUSE OF THIS DOCUMENT FOR ANY REASON BY ANY PARTY FOR PURPOSES UNRELATED DIRECTLY AND SOLELY TO SAID CONTRACT AND PROJECT SHALL BE AT THE USER'S SOLE AND EXCLUSIVE RISK AND LIABILITY, INCLUDING LIABILITY FOR VIOLATION OF COPYRIGHT LAWS, UNLESS WRITTEN AUTHORIZATION IS GIVEN THEREFOR BY NITSCH ENGINEERING.
2. THE PURPOSE OF THIS PLAN IS TO SHOW EXISTING CONDITIONS PLAN AS THE RESULT OF AN ON-THE-GROUND INSTRUMENT SURVEY WHICH OCCURRED OCTOBER 2024.
3. WETLAND RESOURCE AREA BOUNDARIES DELINEATED BY LEC ENVIRONMENTAL CONSULTANTS, INC. ON NOVEMBER 5, 2024.
4. ELEVATION REFERS TO NORTH AMERICAN VERTICAL DATUM (NAVD88) VERTICAL BASED ON RTK GPS OBSERVATIONS WITH CORRECTIONS PROVIDED BY MaCORS NETWORK.
5. THIS PLAN WAS PREPARED WITHOUT THE BENEFIT OF A TITLE SEARCH AND MAY NOT DISCLOSE ANY MATTERS THAT MAY BE REVEALED BY ONE.
6. THIS PLAN DOES NOT SHOW UNWRITTEN OR UNRECORDED EASEMENTS WHICH MAY EXIST. A REASONABLE AND DILIGENT ATTEMPT HAS BEEN MADE TO OBSERVE ANY APPARENT AND VISIBLE USES OF THE LAND. THIS PLAN DOES NOT GUARANTEE THAT NO SUCH EASEMENTS EXIST.
7. LEGAL STATUS OF EASEMENTS, WAYS AND RESTRICTIONS NOT DETERMINED BY THIS SURVEY.
8. TITLE TO LAND IN THE ABUTTING WAYS IS NOT SHOWN AND HAS NOT BEEN DETERMINED AS A RESULT OF THIS SURVEY.

EXISTING CONDITIONS/SURVEY NOTES:

1. EXISTING CONDITIONS, INCLUDING SITE ACREAGE, ARE BASED ON A SURVEY PREPARED BY NITSCH ENGINEERING, 2 CENTER PLAZA, SUITE 430, BOSTON, MA 02108, ENTITLED "EXISTING CONDITIONS PLAN 320 SALEM STREET, WILMINGTON, MASSACHUSETTS", SHEET EX-1 AND EX-2, REVISED 12-27-2024 (DRAFT).
2. SITE IMPROVEMENTS AND TOPOGRAPHY SHOWN HEREON ARE BASED ON AN ON-THE-GROUND INSTRUMENT SURVEY PERFORMED BY NITSCH ENGINEERING ON OCTOBER 2024.
3. ELEVATIONS SHOWN HEREON ARE BASED ON NAVD 88 DATUM AND WERE GENERATED VIA RTK GPS OBSERVATIONS. THE COORDINATES SHOWN HEREON ARE BASED ON THE MASSACHUSETTS STATE PLANE COORDINATE SYSTEM – MAINLAND ZONE 2001 AS REFERENCED TO THE NORTH AMERICAN DATUM OF 1983 (NAD 83). THE COORDINATES WERE GENERATED VIA RTK GPS SURVEY OBSERVATIONS.
4. THE SITE IS NOT WITHIN A 100-YEAR FLOOD PLAIN, AS SHOWN OF FLOOD INSURANCE RATE MAPS, NUMBER 25017C0283F AND 25017C0284E, EFFECTIVE DATE JULY 6, 2016 AND JUNE 4, 2010, RESPECTIVELY.

LAYOUT AND MATERIALS NOTES

1. ALL LINES AND DIMENSIONS ARE PARALLEL OR PERPENDICULAR TO THE LINES FROM WHICH THEY ARE MEASURED UNLESS OTHERWISE INDICATED.
2. REFER TO MEP PLANS FOR SITE LIGHTING LOCATIONS AND DETAILS.
3. CONTRACTOR SHALL REPORT SIGNIFICANT CONFLICTS TO THE OWNER AND THE ENGINEER FOR RESOLUTION.
4. DIMENSIONS OF PARKING SPACES AND DRIVEWAYS ARE FROM FACE OF CURB TO FACE OF CURB. PARKING SPACES ARE 10'x20', UNLESS NOTED OTHERWISE.
5. DIMENSIONS FROM BUILDING ARE FROM FACE OF BUILDING. CONTRACTOR SHALL VERIFY ALL CONDITIONS IN THE FIELD AND REPORT ANY DISCREPANCIES TO THE ENGINEER. THE CONTRACTOR SHALL STAKE OUT BUILDING FROM THE LATEST ARCHITECTURAL DRAWINGS.
6. THE CONTRACTOR SHALL NOTIFY THE ENGINEER OF ANY DISCREPANCIES BETWEEN SITE PLAN DIMENSIONS AND BUILDING PLANS BEFORE PROCEEDING WITH ANY PORTION OF SITE WORK WHICH MAY BE AFFECTED SO THAT PROPER ADJUSTMENTS TO THE SITE LAYOUT CAN BE MADE IF NECESSARY.
7. SEE ARCHITECTURAL DRAWINGS FOR EXACT BUILDING DIMENSIONS AND ALL DETAILS CONTIGUOUS TO THE BUILDING, LIGHTING, ENTRANCES, DOORWAY PADS, LOADING DOCK DETAILS, ETC.
8. ACCESSIBLE RAMPS WITH DETECTABLE WARNING PANELS WILL BE PROVIDED AT ALL CROSSWALKS, AND SHALL BE PER MASSACHUSETTS STATE CODE AND THE AMERICANS WITH DISABILITIES ACT (ADA) ACCESSIBILITY GUIDLINES (WHICHEVER IS MORE STRINGENT).
9. EACH HANDICAP PARKING SPACE SHALL BE PROVIDED WITH A SIGN SIX (6) FEET IN HEIGHT LOCATED AT THE BACK OF THE THE CURB. THE SIGN SHALL CONTAIN THE INTERNATIONAL SYMBOL OF ACCESSIBILITY AS DESCRIBED IN THE AMERICANS WITH DISABILITIES ACT.
10. PROTECT EXISTING PROPERTY MONUMENTS AND ABUTTING PROPERTIES DURING CONSTRUCTION ACTIVITIES.
11. ALL SITE CONSTRUCTION SHALL BE IN CONFORMANCE WITH THE MASSACHUSETTS DEPARTMENT OF TRANSPORTATION STANDARD SPECIFICATIONS FOR HIGHWAYS AND BRIDGES, AND THE TOWN OF WILMINGTON PUBLIC WORKS.
12. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE LEGAL REMOVAL AND DISPOSAL OF ALL DEBRIS FROM THE SITE AND AS MAY BE DIRECTED BY THE A/E.
13. ALL FENCING AND GATES SHALL BE INSTALLED IN ACCORDANCE WITH THE MANUFACTURERS DIRECTION, SEE LA PLANS FOR DETAILS.
14. THE SITE CONTRACTOR SHALL SAW CUT AND MATCH ALL EXISTING ROAD PAVEMENT AS REQUIRED TO SET NEW CURBING AND CONSTRUCT NEW UTILITIES IN THE STREET.
15. THE USE OF FILL CONTAINING HAZARDOUS MATERIALS OR WASTE IS FORBIDDEN.
16. SEE LANDSCAPE PLANS FOR ALL PLANTING INFORMATION AS WELL AS ADDITIONAL LAYOUT AND MATERIAL INFORMATION.
17. THE MARKING OF THE LIMITS OF WORK IN THE FIELD PRIOR TO THE START OF CONSTRUCTION OR SITE CLEARING IS REQUIRED.
18. SEE DEMOLITION SHEET C1.00 AND DETAIL SHEET C5.00 FOR EROSION CONTROL NOTES.
19. WHERE CURBING ABRUPTLY ENDS, PROVIDE A TRANSITION CURB TO A FLUSH CONDITION WITH THE PROPOSED SURFACE/GRADES, SEE DETAIL 6/C5.02.
20. SIGNIFICANT TREES, INCLUDING THEIR BRANCHES AND THEIR ROOT SYSTEMS, SHALL BE PROTECTED WITH SHIELDS, FENCES OR BARRIERS.
21. THE CLEANING OF CATCH BASIN SUMPS AND STORMWATER BASINS IS REQUIRED FOLLOWING CONSTRUCTION AND ACCORDING TO ANY OPERATIONS AND MAINTENANCE PLAN THEREAFTER.

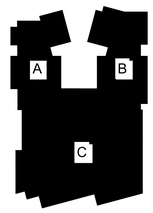
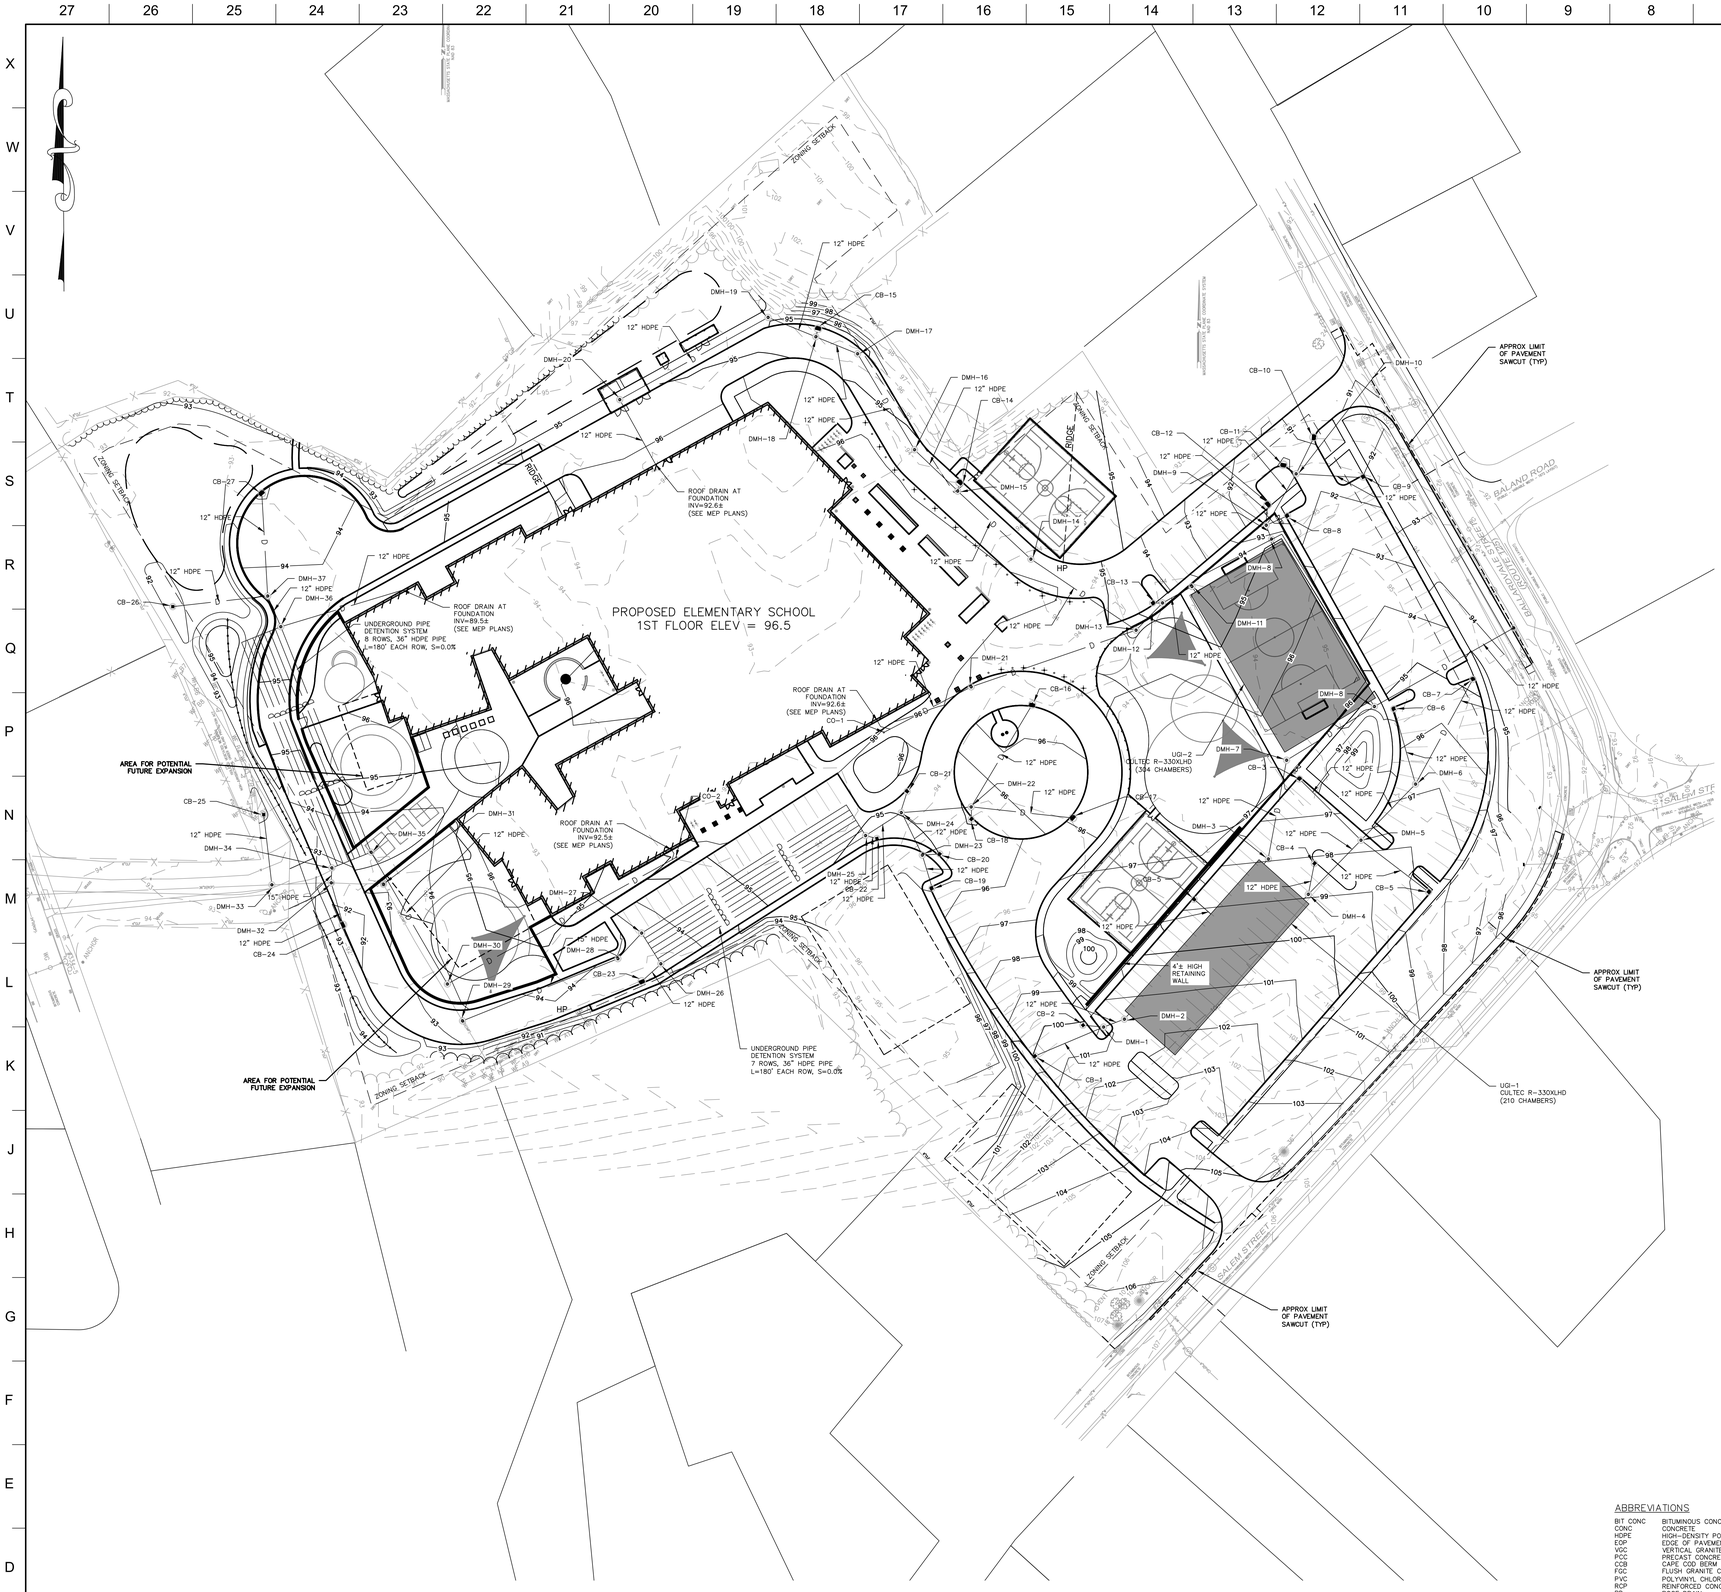
KEY PLAN



ORIENTATION AND SCALE:

SHEET TITLE:
LAYOUT AND MATERIALS PLAN

SHEET NUMBER:
C2.00



EXISTING CONDITIONS/SURVEY NOTES:

1. EXISTING CONDITIONS, INCLUDING SITE ACREAGE, ARE BASED ON A SURVEY PREPARED BY NITSCH ENGINEERING, 2 CENTER PLAZA, SUITE 430, BOSTON, MA 02108, ENTITLED "EXISTING CONDITIONS PLAN 320 SALEM STREET, WILMINGTON, MASSACHUSETTS", SHEET EX-1 AND EX-2, REVISED 12-27-2024 (DRAFT).
2. SITE IMPROVEMENTS AND TOPOGRAPHY SHOWN HEREON ARE BASED ON AN ON-THE-GROUND INSTRUMENT SURVEY PERFORMED BY NITSCH ENGINEERING ON OCTOBER 2024.
3. ELEVATIONS SHOWN HEREON ARE BASED ON NAVD 88 DATUM AND WERE GENERATED VIA RTK GPS OBSERVATIONS. THE COORDINATES SHOWN HEREON ARE BASED ON THE MASSACHUSETTS STATE PLANE COORDINATE SYSTEM – MAINLAND ZONE 2001 AS REFERENCED TO THE NORTH AMERICAN DATUM OF 1983 (NAD 83). THE COORDINATES WERE GENERATED VIA RTK GPS SURVEY OBSERVATIONS.
4. THE SITE IS NOT WITHIN A 100-YEAR FLOOD PLAIN, AS SHOWN OF FLOOD INSURANCE RATE MAPS, NUMBER 25017C0283F AND 25017C0284E, EFFECTIVE DATE JULY 6, 2016 AND JUNE 4, 2010, RESPECTIVELY.

GRADING AND DRAINAGE NOTES

1. ALL SITE WORK SHALL MEET OR EXCEED THE SITE WORK SPECIFICATIONS PREPARED FOR THIS PROJECT. THE CONTRACTOR SHALL BE RESPONSIBLE FOR VERIFYING THAT THE PROPOSED IMPROVEMENTS SHOWN ON THE PLANS DO NOT CONFLICT WITH ANY KNOWN EXISTING OR OTHER PROPOSED IMPROVEMENTS. IF ANY CONFLICTS ARE DISCOVERED, THE CONTRACTOR SHALL NOTIFY THE ARCHITECT AND THE DESIGNER PRIOR TO ANY SITE WORK WHICH WOULD BE AFFECTED.
2. EXCEPT WHERE NOTED OTHERWISE, ALL DRAINAGE PIPES WITHIN THE SITE SHALL BE HDPE.
3. ALL EXCESS EXCAVATED MATERIAL SHALL BE REMOVED FROM THE SITE BY THE CONTRACTOR AT NO ADDITIONAL COST TO THE OWNER.
4. ALL SITE CONSTRUCTION SHALL BE IN CONFORMANCE WITH THE MASSACHUSETTS DEPARTMENT OF TRANSPORTATION STANDARD SPECIFICATIONS FOR HIGHWAYS AND BRIDGES, AND THE TOWN OF WILMINGTON PUBLIC WORKS.
5. CONTRACTOR SHALL GRADE AND CONSTRUCT ALL ACCESSIBLE HANDICAP RAMPS IN ACCORDANCE WITH THE MASSACHUSETTS STATE CODE AND THE AMERICANS WITH DISABILITIES ACT (ADA) ACCESSIBILITY GUIDELINES (WHICHEVER IS MORE STRINGENT). SEE CONSTRUCTION DETAILS FOR SLOPE AND DIMENSIONAL REQUIREMENTS.
6. AN EROSION CONTROL BARRIER SHALL BE INSTALLED ALONG THE EDGE OF PROPOSED DEVELOPMENT AS SHOWN ON THE PLANS PRIOR TO THE COMMENCEMENT OF CONSTRUCTION OPERATIONS.
7. CONTRACTOR SHALL INSTALL SILT SACKS ON DOWN STREAM CATCH BASINS. PRIOR TO INSTALLING A SILT SACK THE CONTRACTOR SHALL CLEAN OUT THE SUMP OF THE CATCH BASIN.
8. ALL NEW CATCH BASINS TO BE PROVIDED WITH SILT SACKS FOR THE DURATION OF CONSTRUCTION ACTIVITIES.
9. THE CONTRACTOR SHALL VERIFY EXISTING GRADES IN THE FIELD AND REPORT ANY DISCREPANCIES IMMEDIATELY TO THE DESIGNER. THE CONTRACTOR SHALL MAKE ALL ARRANGEMENTS FOR THE ALTERATION AND ADJUSTMENT OF GAS, ELECTRIC, TELEPHONE AND ANY OTHER PRIVATE UTILITIES BY THE UTILITY COMPANIES, AS REQUIRED. WHERE AN EXISTING UTILITY IS FOUND TO CONFLICT WITH THE PROPOSED WORK, THE LOCATION, ELEVATION AND SIZE OF THE UTILITY SHALL BE ACCURATELY DETERMINED WITHOUT DELAY BY THE CONTRACTOR, AND THE INFORMATION FURNISHED TO THE OWNER AND ENGINEER FOR RESOLUTION.
10. CONTRACTOR SHALL PROTECT ALL UNDERGROUND DRAINAGE, SEWER AND UTILITY FACILITIES FROM EXCESSIVE VEHICULAR LOADS DURING CONSTRUCTION. ANY DAMAGE TO THESE FACILITIES RESULTING FROM CONSTRUCTION LOADS WILL BE RESTORED TO ORIGINAL CONDITION.
11. EXCAVATION REQUIRED WITHIN THE PROXIMITY OF EXISTING UTILITY LINES SHALL BE DONE BY HAND. CONTRACTOR SHALL REPAIR ANY DAMAGE TO EXISTING UTILITY LINES OR STRUCTURES INCURRED DURING CONSTRUCTION OPERATIONS AT NO COST TO THE OWNER.
12. ALL UTILITY COVERS, GRATES, ETC. TO REMAIN SHALL BE ADJUSTED TO BE FLUSH WITH THE FINISH GRADE UNLESS OTHERWISE NOTED. RIM ELEVATIONS FOR STRUCTURES AND MANHOLES ARE APPROXIMATE.
13. AT ALL LOCATIONS WHERE EXISTING CURBING OR PAVEMENT ABUTS NEW CONSTRUCTION, THE EDGE OF THE EXISTING CURB OR PAVEMENT SHALL BE SAW CUT TO A CLEAN, SMOOTH EDGE. BLEND NEW PAVEMENT, CURBS AND EARTHWORK SMOOTHLY INTO EXISTING BY MATCHING LINES, GRADES AND JOINTS.
14. PITCH EVENLY BETWEEN SPOT GRADES. GRADE ALL AREAS TO DRAIN.
15. THE CONTRACTOR SHALL SCHEDULE HIS WORK TO ALLOW THE FINISHED SUBGRADE ELEVATIONS TO DRAIN PROPERLY WITHOUT PUDDLING. SPECIFICALLY, ALLOW WATER TO ESCAPE WHERE PROPOSED CURB MAY RETAIN RUNOFF PRIOR TO APPLICATION OF THE FINISH SUBGRADE. PROVIDE TEMPORARY POSITIVE DRAINAGE AS REQUIRED.
16. EXISTING TREES AND SHRUBS OUTSIDE THE LIMITS OF GRADING SHALL BE REMOVED ONLY UPON PRIOR APPROVAL OF THE OWNER.
17. THE CONTRACTOR SHALL REMOVE ALL EROSION CONTROL BARRIERS AFTER REVEGETATION OF DISTURBED AREAS AND AFTER APPROVAL OF THE DESIGNER AND OWNER. SEE ADDITIONAL EROSION CONTROL NOTES ON DEMOLITION SHEET C1.00 AND DETAIL SHEET C5.00.
18. SEE EXISTING CONDITIONS SURVEY, BY NITSCH ENGINEERING FOR RIMS, INVERTS, PIPE SIZES, PIPE MATERIALS, SERVICES, AND STRUCTURES NOT LABELED HEREON.
19. NEW SEWER AND DRAIN CONNECTIONS MUST BE CORED AND ATTACHED WITH AN INSERT-A-TEE OR APPROVED EQUAL IF FACTORY WYE IS NOT AVAILABLE OR DAMAGED.
20. PIPE LENGTHS AND SLOPES IN THE DRAINAGE STRUCTURE TABLES ARE BASED ON CENTER TO CENTER LENGTHS AND SLOPES.

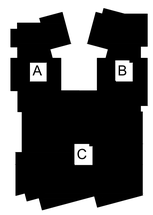
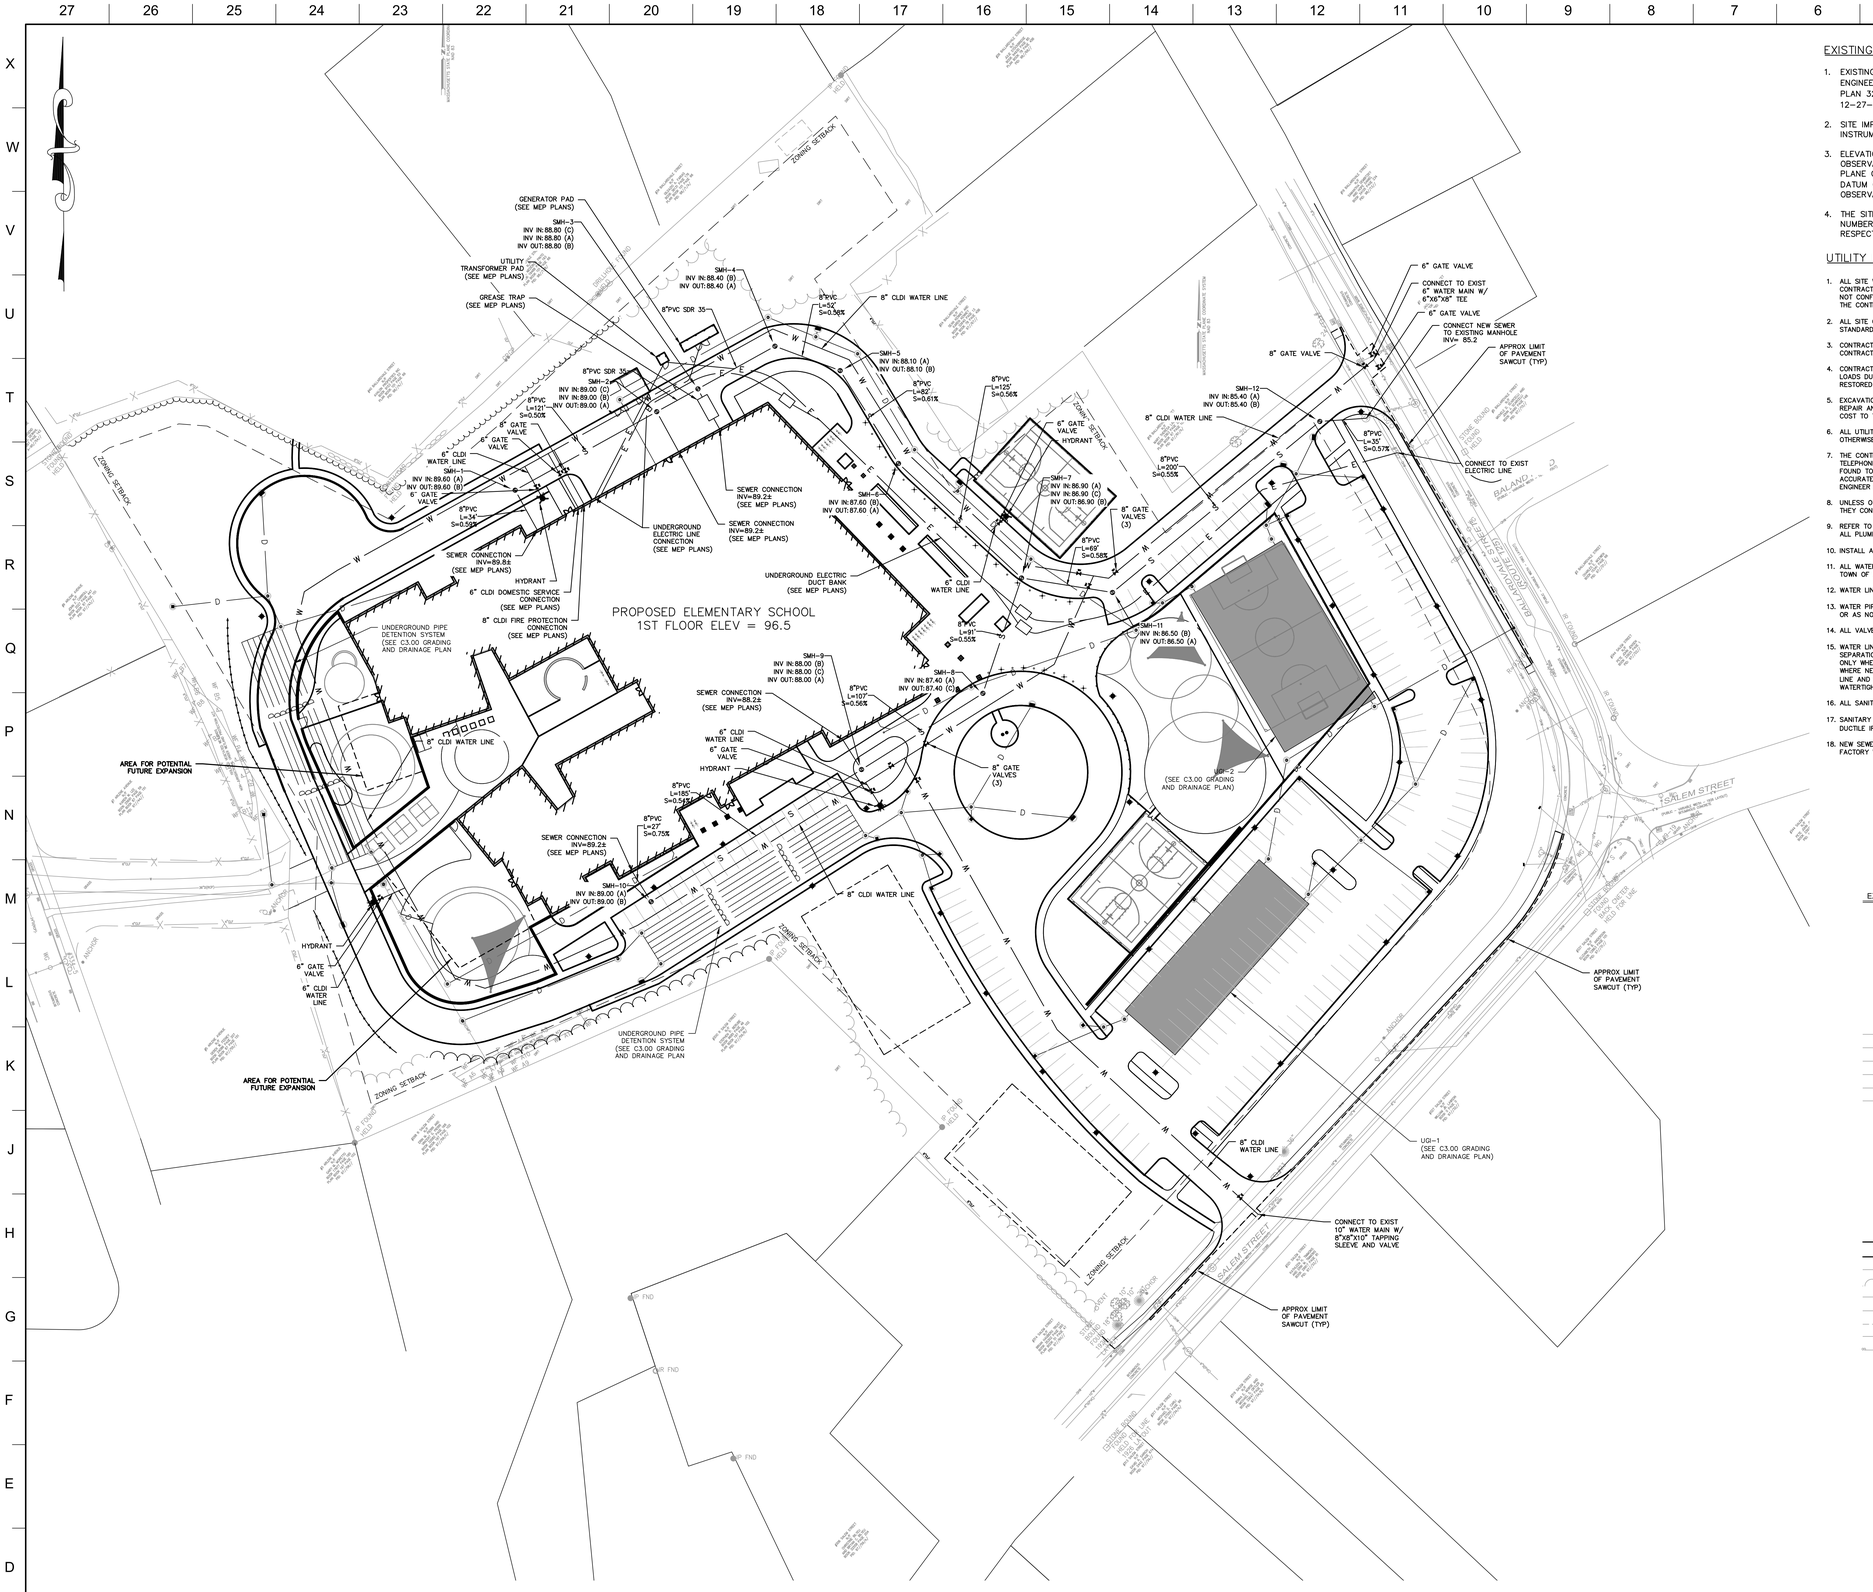
KEY PLAN



ORIENTATION AND SCALE:

SHEET TITLE:
GRADING AND DRAINAGE PLAN

SHEET NUMBER:
C3.00



EXISTING CONDITIONS/SURVEY NOTES:

1. EXISTING CONDITIONS, INCLUDING SITE ACREAGE, ARE BASED ON A SURVEY PREPARED BY NITSCH ENGINEERING, 2 CENTER PLAZA, SUITE 430, BOSTON, MA 02108, ENTITLED "EXISTING CONDITIONS PLAN 320 SALEM STREET, WILMINGTON, MASSACHUSETTS", SHEET EX-1 AND EX-2, REVISED 12-27-2024 (DRAFT).
2. SITE IMPROVEMENTS AND TOPOGRAPHY SHOWN HEREON ARE BASED ON AN ON-THE-GROUND INSTRUMENT SURVEY PERFORMED BY NITSCH ENGINEERING ON OCTOBER 2024.
3. ELEVATIONS SHOWN HEREON ARE BASED ON NAVD 88 DATUM AND WERE GENERATED VIA RTK GPS OBSERVATIONS. THE COORDINATES SHOWN HEREON ARE BASED ON THE MASSACHUSETTS STATE PLANE COORDINATE SYSTEM – MAINLAND ZONE 2001 AS REFERENCED TO THE NORTH AMERICAN DATUM OF 1983 (NAD 83). THE COORDINATES WERE GENERATED VIA RTK GPS SURVEY OBSERVATIONS.
4. THE SITE IS NOT WITHIN A 100-YEAR FLOOD PLAIN, AS SHOWN OF FLOOD INSURANCE RATE MAPS, NUMBER 25017C0283F AND 25017C0284E, EFFECTIVE DATE JULY 6, 2016 AND JUNE 4, 2010, RESPECTIVELY.

UTILITY NOTES

1. ALL SITE WORK SHALL MEET OR EXCEED THE SITE WORK SPECIFICATIONS PREPARED FOR THIS PROJECT. THE CONTRACTOR SHALL BE RESPONSIBLE FOR VERIFYING THAT THE PROPOSED IMPROVEMENTS SHOWN ON THE PLANS DO NOT CONFLICT WITH ANY KNOWN EXISTING OR OTHER PROPOSED IMPROVEMENTS. IF ANY CONFLICTS ARE DISCOVERED, THE CONTRACTOR SHALL NOTIFY THE DESIGNER PRIOR TO ANY SITE WORK WHICH WOULD BE AFFECTED.
2. ALL SITE CONSTRUCTION SHALL BE IN CONFORMANCE WITH THE MASSACHUSETTS DEPARTMENT OF PUBLIC WORKS (DPW) STANDARD SPECIFICATIONS FOR HIGHWAYS AND BRIDGES, AND THE TOWN OF WILMINGTON PUBLIC WORKS.
3. CONTRACTOR SHALL INSTALL SILT SACKS ON DOWN STREAM CATCH BASINS. PRIOR TO INSTALLING A SILT SACK THE CONTRACTOR SHALL CLEAN OUT THE SUMP OF THE CATCH BASIN.
4. CONTRACTOR SHALL PROTECT ALL UNDERGROUND DRAINAGE, SEWER AND UTILITY FACILITIES FROM EXCESSIVE VEHICULAR LOADS DURING CONSTRUCTION. ANY DAMAGE TO THESE FACILITIES RESULTING FROM CONSTRUCTION LOADS WILL BE RESTORED TO ORIGINAL CONDITION.
5. EXCAVATION REQUIRED WITHIN THE PROXIMITY OF EXISTING UTILITY LINES SHALL BE DONE BY HAND. CONTRACTOR SHALL REPAIR ANY DAMAGE TO EXISTING UTILITY LINES OR STRUCTURES INCURRED DURING CONSTRUCTION OPERATIONS AT NO COST TO THE OWNER.
6. ALL UTILITY COVERS, GRATES, ETC. TO REMAIN SHALL BE ADJUSTED TO BE FLUSH WITH THE FINISH GRADE UNLESS OTHERWISE NOTED. RIM ELEVATIONS STRUCTURES AND MANHOLES ARE APPROXIMATE.
7. THE CONTRACTOR SHALL MAKE ALL ARRANGEMENTS FOR THE ALTERATION AND ADJUSTMENT OF GAS, ELECTRIC, TELEPHONE AND ANY OTHER PRIVATE UTILITIES BY THE UTILITY COMPANIES, AS REQUIRED. WHERE AN EXISTING UTILITY IS FOUND TO CONFLICT WITH THE PROPOSED WORK, THE LOCATION, ELEVATION AND SIZE OF THE UTILITY SHALL BE ACCURATELY DETERMINED WITHOUT DELAY BY THE CONTRACTOR, AND THE INFORMATION FURNISHED TO THE OWNER AND ENGINEER FOR RESOLUTION.
8. UNLESS OTHERWISE INDICATED, ABANDONED EXISTING UTILITY LINES SHALL BE CAPPED AND ABANDONED IN PLACE UNLESS THEY CONFLICT WITH PROPOSED IMPROVEMENTS. CAP REMAINING PORTIONS WHERE PARTIALLY REMOVED.
9. REFER TO ELECTRICAL DRAWINGS FOR ALL SITE ELECTRICAL WORK, AND TO PLUMBING AND MECHANICAL DRAWINGS FOR ALL PLUMBING AND MECHANICAL WORK.
10. INSTALL ALL UTILITIES (INCLUDING CONCRETE PADS) PER UTILITY COMPANY AND DPW STANDARDS.
11. ALL WATER UTILITY IMPROVEMENTS SHALL COMPLY WITH THE AMERICAN WATERWORKS ASSOCIATION STANDARDS AND THE TOWN OF WILMINGTON DPW.
12. WATER LINE SHALL BE CLASS 52 CEMENT LINED DUCTILE IRON.
13. WATER PIPES WITH JOINTS OR FITTINGS AS REQUIRED TO PROVIDE A MINIMUM OF 6" CLEARANCE FOR UTILITY CROSSINGS OR AS NOTED IN THE SPECIFICATIONS.
14. ALL VALVES AND HYDRANTS SHALL CONFORM TO THE TOWN STANDARDS.
15. WATER LINES AND SEWER LINES SHALL BE SEPARATED BY 10' HORIZONTALLY. WHERE THIS IS NOT POSSIBLE, AN 18" SEPARATION BETWEEN THE BOTTOM OF THE WATER LINE AND THE TOP OF THE SEWER LINE IS ALSO ACCEPTABLE BUT ONLY WHERE THE WATER LINE IS ABOVE THE SEWER LINE. BOTH PIPES SHALL BE ENCASED IN CONCRETE IN ANY AREA WHERE NEITHER OF THE TWO SEPARATIONS NOTED ABOVE CAN BE MAINTAINED. IN SUCH AN INSTANCE, BOTH THE WATER LINE AND SEWER LINE (IN THE AREA OF ENCASEMENT) MUST BE PRESSURE TESTED TO 150 PSI TO ENSURE BOTH ARE WATERTIGHT.
16. ALL SANITARY PIPE SHALL BE SDR-35 PVC UNLESS OTHERWISE NOTED.
17. SANITARY PIPES WHERE INVERT DEPTH IS LESS THAN FOUR (4) FEET BELOW FINISHED GRADE, SHALL BE EXTRA HEAVY DUCTILE IRON PIPE (ASTM746) AND INSULATED.
18. NEW SEWER AND DRAIN CONNECTIONS MUST BE CORED AND ATTACHED WITH AN INSERT-A-TEE OR APPROVED EQUAL IF FACTORY WYE IS NOT AVAILABLE OR DAMAGED.

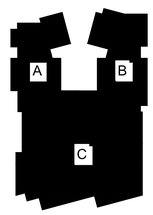
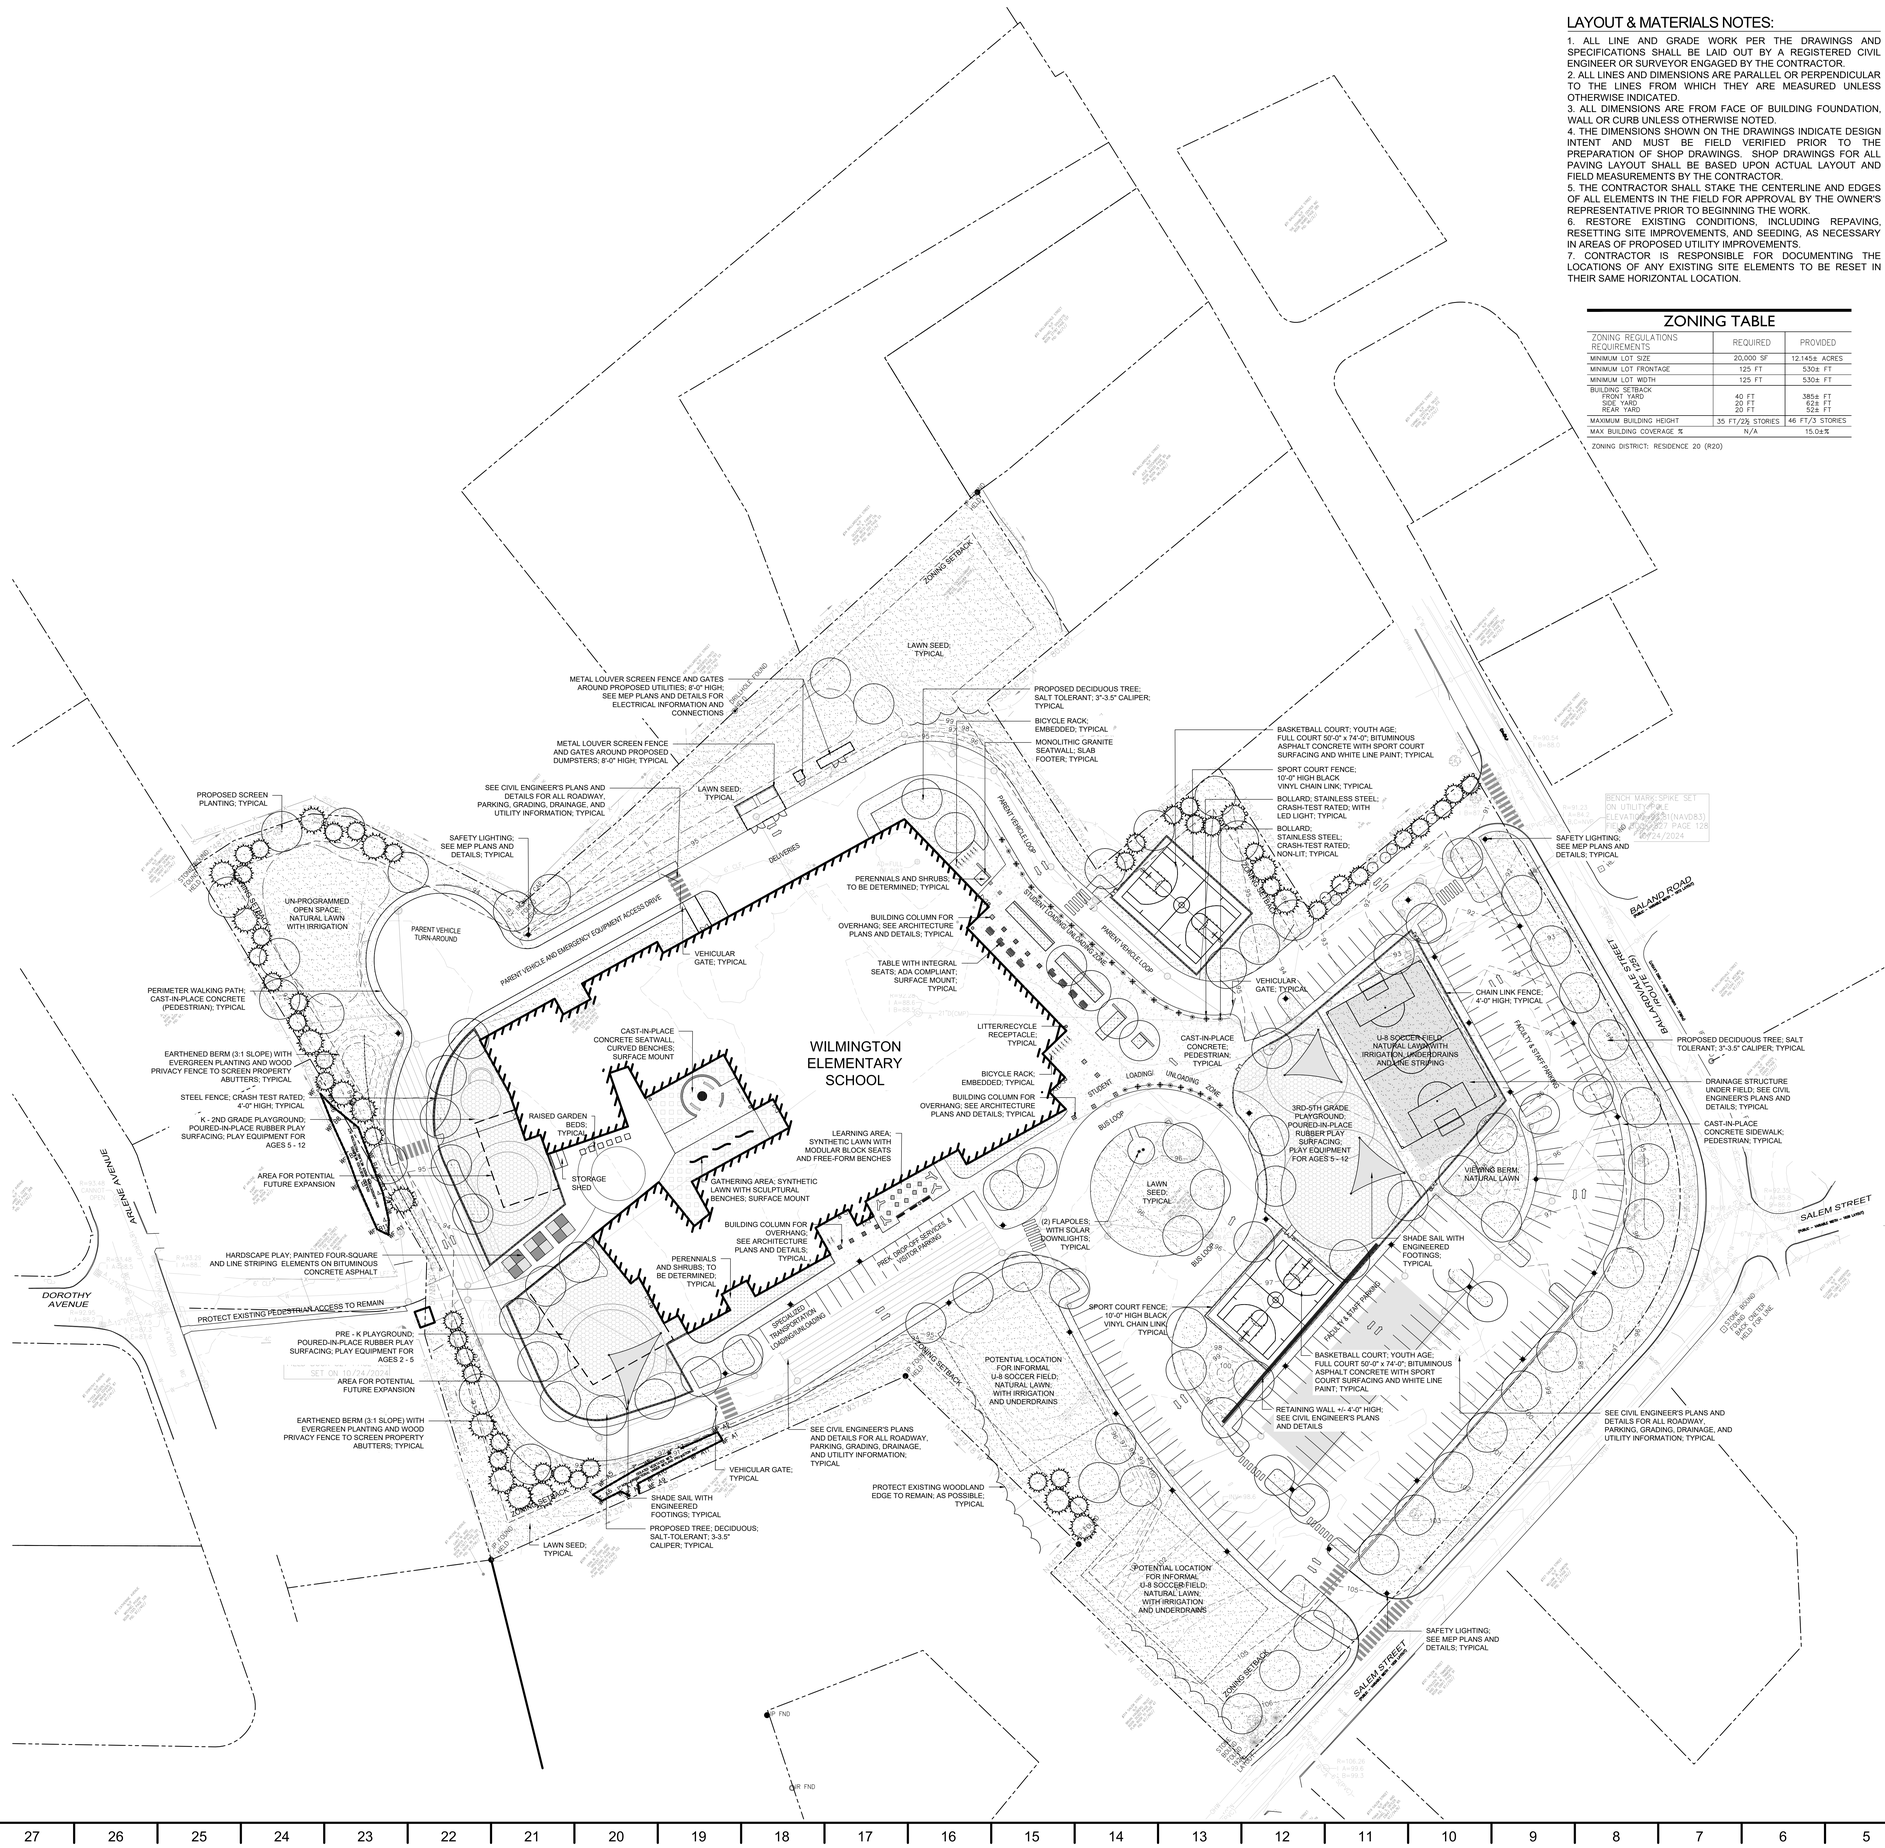
KEY PLAN



ORIENTATION AND SCALE:

SHEET TITLE:
UTILITIES PLAN

SHEET NUMBER:
C4.00



LAYOUT & MATERIALS NOTES:

1. ALL LINE AND GRADE WORK PER THE DRAWINGS AND SPECIFICATIONS SHALL BE LAID OUT BY A REGISTERED CIVIL ENGINEER OR SURVEYOR ENGAGED BY THE CONTRACTOR.
2. ALL LINES AND DIMENSIONS ARE PARALLEL OR PERPENDICULAR TO THE LINES FROM WHICH THEY ARE MEASURED UNLESS OTHERWISE INDICATED.
3. ALL DIMENSIONS ARE FROM FACE OF BUILDING FOUNDATION, WALL OR CURB UNLESS OTHERWISE NOTED.
4. THE DIMENSIONS SHOWN ON THE DRAWINGS INDICATE DESIGN INTENT AND MUST BE FIELD VERIFIED PRIOR TO THE PREPARATION OF SHOP DRAWINGS. SHOP DRAWINGS FOR ALL PAVING LAYOUT SHALL BE BASED UPON ACTUAL LAYOUT AND FIELD MEASUREMENTS BY THE CONTRACTOR.
5. THE CONTRACTOR SHALL STAKE THE CENTERLINE AND EDGES OF ALL ELEMENTS IN THE FIELD FOR APPROVAL BY THE OWNER'S REPRESENTATIVE PRIOR TO BEGINNING THE WORK.
6. RESTORE EXISTING CONDITIONS, INCLUDING REPAVING, RESETTING SITE IMPROVEMENTS, AND SEEDING, AS NECESSARY IN AREAS OF PROPOSED UTILITY IMPROVEMENTS.
7. CONTRACTOR IS RESPONSIBLE FOR DOCUMENTING THE LOCATIONS OF ANY EXISTING SITE ELEMENTS TO BE RESET IN THEIR SAME HORIZONTAL LOCATION.

ZONING TABLE

ZONING REGULATIONS REQUIREMENTS	REQUIRED	PROVIDED
MINIMUM LOT SIZE	20,000 SF	12.145± ACRES

MAXIMUM BUILDING HEIGHT	35 FT/2½ STORIES	46 FT/3 STORIES
MAX BUILDING COVERAGE %	N/A	15.0±%

ZONING DISTRICT: RESIDENCE 20 (R20)

GRADING NOTES:

1. ALL SITE CONDITIONS 12-INCHES BELOW FINISHED GRADE ARE NOT INCLUDED WITHIN THE SCOPE OF WORK BY THE OWNER'S REPRESENTATIVE.
2. EXISTING UNDERGROUND UTILITIES HAVE BEEN PLOTTED FROM DRAWINGS AND SHALL BE DEEMED APPROXIMATE ONLY. THE CONTRACTOR SHALL VERIFY ALL UTILITY LOCATIONS AND ELEVATIONS PRIOR TO EXCAVATION. BEFORE CONSTRUCTION STARTS ALL UTILITY COMPANIES (PUBLIC AND PRIVATE) MUST BE CONTACTED, INCLUDING THOSE IN CONTROL OF UTILITIES NOT SHOWN ON THIS PLAN. CONTACT "DIG SAFE" AND REPORT ANY DISCREPANCIES IN WRITING TO THE OWNER'S REPRESENTATIVE AND RECEIVE WRITTEN INSTRUCTIONS BEFORE PROCEEDING.
3. THE CONTRACTOR SHALL VERIFY ALL EXISTING GRADES IN THE FIELD AND THEN REPORT ANY DISCREPANCIES TO THE OWNER'S REPRESENTATIVE.
4. MAINTAIN EXISTING GRADE AT THE ROOT FLARE OF EXISTING TREES TO REMAIN, UNLESS OTHERWISE SPECIFIED BY THE OWNER'S REPRESENTATIVE.
5. GRADE SURFACES TO ASSURE POSITIVE DRAINAGE AWAY FROM ALL BUILDINGS AND TO PREVENT PONDING OF SURFACE DRAINAGE.
6. ALL STAIRS AND STOOPS SHALL HAVE A WASH, NOT TO EXCEED 1/4" PER FOOT UNLESS SPECIFIED BY THE OWNER'S REPRESENTATIVE.
7. PROVIDE VERTICAL CURVES AT ALL ABRUPT CHANGES IN GRADE UNLESS OTHERWISE NOTED. BLEND THE LINE AND GRADE OF NEW EARTHWORK SMOOTHLY INTO EXISTING GRADE.
8. PITCH EVENLY BETWEEN SPOT GRADING. ANY DISCREPANCIES NOT ALLOWING AN EVEN PITCH TO OCCUR SHALL BE REPORTED TO THE OWNER'S REPRESENTATIVE PRIOR TO CONTINUING WORK.
9. MAINTAIN THE INTEGRITY OF THE EXISTING DRAINAGE SYSTEM AT ALL TIMES. RIM ELEVATIONS OF ALL DRAINAGE STRUCTURES SHALL BE SET FLUSH WITH SURROUNDING GRADES SO AS NOT TO CAUSE A TRIP EDGE.
10. CONTOURS SHOW DESIGN INTENT ONLY. PRIOR TO CONSTRUCTION EXISTING CONTOURS AND ELEVATIONS NEED TO BE FIELD VERIFIED AND SHOW POSITIVE DRAINAGE TO EXISTING AND PROPOSED AREA DRAINS.
11. FOR PEDESTRIAN CONCRETE PAVING SLOPES SHALL BE GRADED TO A MAXIMUM 4.5%. THE CROSS PITCH (PERPENDICULAR TO TRAVEL) FOR ALL WALKWAYS AND PATHS SHALL BE CONSTRUCTED AT 1.5% (1.9% MAXIMUM). ALL PLAZAS SHALL BE GRADED TO A MAXIMUM 2% IN ANY DIRECTION. THE SLOPE OF SIDEWALKS RAMPS AND HANDICAP CURB CUTS SHALL BE CONSTRUCTED AT 7.5% MAXIMUM. RAMPS SHALL BE CONSTRUCTED TO A MAXIMUM SLOPE OF 7.5% AND SHALL HAVE CODE COMPLIANT HANDRAILS. A 5'-0" MINIMUM LEVEL (1.5% PITCH, 1.9% MAXIMUM) AREA SHALL BE PROVIDED AT ALL FLUSH ENTRANCES TO BUILDINGS. PUDDLING OF WATER AT THE ENTRANCES WILL NOT BE ALLOWED.
12. CONTACT OWNER'S REPRENTATIVE IF SLOPES DO NOT MEET MINIMUM AND MAXIMUM REQUIREMENTS.
13. CONTRACTORS TO SUBMIT SHOP DRAWINGS SHOWING CONNECTIONS OF PROPOSED AREA DRAINS TO EXISTING STORMWATER DRAINAGE SYSTEM.

PLANTING PLAN NOTES:

1. ALL PLANTING SOILS SHALL BE (1) PART TOPSOIL, (1) PART COMPOSTED ORGANIC MATTER, (1) PART NATIVE SOIL MIXED PRIOR TO PLANTING INSTALLATION.
2. THE CONTRACTOR SHALL CONFIRM THE ACTUAL DEPTH OF ALL PLANTING AREAS PRIOR TO ANY PLANT MATERIAL BEING SECURED. REPORT ANY LEDGE OR SUBSTANDARD SOIL/SUBSURFACE CONDITIONS TO THE OWNER'S REPRESENTATIVE.
3. THE CONTRACTOR SHALL CONSIDER THE DISPLACEMENT OF PLANTING SOIL FOR THE PLANT MATERIAL ROOT BALLS IN THE OVERALL PLANTING BED FINISHED GRADE. ALLOW ENOUGH ROOM IN THE PLANTING BED ELEVATION TO SPREAD DISPLACED SOIL AND STILL MEET THE INDICATED FINISHED GRADE INCLUDING THE 2" OF HARDWOOD MULCH.
4. ANY MATERIALS ACCUMULATED OVER THE ROOT FLARE OF A TREE OR SHRUB MUST BE REMOVED COMPLETELY UNTIL THE ROOT FLARE IS EXPOSED AND ALL GIRDLING ROOTS REMOVED PRIOR TO PLANTING.
5. THE CONTRACTOR SHALL LOCATE AND VERIFY WITH THE OWNER'S REPRESENTATIVE ALL TREES, SHRUBS, PERENNIALS, AND/OR GROUNDCOVER TO REMAIN, TO BE REMOVED, OR TO BE TRANSPLANTED. PROTECT IN PLACE ALL EXISTING TREES, SHRUBS, AND GROUNDCOVER TO REMAIN.
6. ALL NEW PLANTING MATERIAL SHALL CONFORM TO MINIMUM GUIDELINES ESTABLISHED BY THE AMERICAN STANDARD FOR NURSERY STOCK PUBLISHED BY THE AMERICAN ASSOCIATION OF NURSERYMEN, INC. (AAN). IN ADDITION, ALL NEW PLANT MATERIAL FOR THE PROJECT SHALL BE OF SPECIMEN QUALITY AND THE PLANT HEIGHT SHALL BE MEASURED FROM THE ROOT FLARE, NOT THE BOTTOM OF POT OR BURLAP BALL.
7. STAKE THE LOCATION OF ALL PROPOSED PLANTING FOR APPROVAL BY THE OWNER'S REPRESENTATIVE PRIOR TO THE COMMENCEMENT OF PLANTING.
8. IN THE EVENT THAT QUANTITY DISCREPANCIES OR MATERIAL OMISSIONS OCCUR BETWEEN THE PLANT MATERIALS LIST AND THE DRAWINGS, THE HIGHER NUMBER OF PLANTS SHALL GOVERN. THE CONTRACTOR SHALL REPORT DISCREPANCIES TO THE OWNER'S REPRESENTATIVE.
9. ANY PROPOSED SUBSTITUTIONS OF PLANT SPECIES SHALL BE MADE WITH PLANTS OF EQUIVALENT OVERALL FORM, HEIGHT, BRANCHING HABIT, FLOWER, LEAF, FRUIT, COLOR, AND CULTURE MUST BE APPROVED BY THE OWNER'S REPRESENTATIVE.
10. ALL LAWN AREAS DISTURBED BY CONSTRUCTION OPERATIONS INSIDE AND OUTSIDE THE LIMIT OF WORK SHALL BE LOAMED AND SEEDED.

GENERAL NOTES

1. ABBREVIATIONS ON THIS SHEET APPLY TO ARCHITECTURAL DRAWINGS ONLY. THE LIST OF ABBREVIATIONS IS COMPREHENSIVE AND NOT RESTRICTED TO THOSE USED FOR THIS PROJECT – NOT ALL ABBREVIATIONS WILL BE FOUND WITHIN THE DRAWINGS.
2. LEGEND SYMBOLS ON THIS SHEET APPLY TO ARCHITECTURAL DRAWINGS ONLY. THE SYMBOLS LEGEND IS COMPREHENSIVE AND NOT RESTRICTED TO THOSE USED FOR THIS PROJECT – NOT ALL SYMBOLS WILL BE FOUND WITHIN THE DRAWINGS.
3. REPRESENTATION OF MATERIALS PATTERNS IN DRAWINGS AND DETAILS MAY BE AT A DIFFERENT APPARENT SCALE THAN THE THOSE SHOWN ON THE MATERIALS LEGEND ON THIS SHEET.
4. CONTRACTORS REQUIRING SLEEVES, BOX-OUTS, CORED HOLES, ETC. IN FLOORS AND WALLS TO FACILITATE THE INSTALLATION OF THEIR WORK SHALL FULLY COORDINATE THE LOCATION AND REQUIREMENTS WITH THE CM/GC AND ALL PERTINENT AND RELATED TRADES.
5. THE CONTRACTOR REQUIRING SLEEVES OR BOX-OUTS SHALL PROVIDE THOSE DEVICES TO THE APPROPRIATE TRADE FOR INSTALLATION.
6. MECHANICAL, ELECTRICAL, PLUMBING, FIRE PROTECTION, TECHNOLOGY, SECURITY, AND OTHER SIMILAR CONTRACTORS SHALL FULLY COORDINATE THE LOCATION AND INSTALLATION OF EQUIPMENT, PIPING, SUPPORTS, HOUSEKEEPING CURBS, DRAINS, DUCTWORK, ETC. TO PROVIDE A COMPLETE AND OPERATIONAL BUILDING. THE DRAWINGS DO NOT DEPICT THE INSTALLATION OF SUCH ITEMS WITH EXACT LOCATION; THEREFORE THE CONTRACTORS SHALL PERFORM THIS COORDINATION, AND THE OWNER WILL NOT CONSIDER ANY ADDITIONAL COSTS RELATED TO THE FIELD CONFLICTS RESULTING FROM FAILURE OF THE CONTRACTORS TO COORDINATE THEIR WORK.
7. CONTRACTORS REQUIRING ACCESS DOORS AND CLEANOUTS IN THE FINISHED SPACES SHALL PROVIDE DEVICES AND COORDINATE THE LOCATION WITH ALL AFFECTED TRADES. ACCESS DOORS IN FINISHED CEILINGS AND WALLS SHALL BE DOCUMENTED IN DETAIL ON COORDINATION DRAWINGS AND SUBMITTED TO THE ARCHITECT FOR REVIEW PRIOR TO PLACEMENT.
8. ALL CONTRACTORS PROVIDING "BUILT-IN" ITEMS,(INCLUDING BUT NOT LIMITED TO EQUIPMENT, CASEWORK, MILLWORK, WINDOWS, STOREFRONT AND CURTAIN WALL ASSEMBLIES, DOORS, FIELD INSTALLED GLAZING) SHALL FIELD VERIFY DIMENSIONS PRIOR TO FABRICATION.
9. THE CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING THE THERMAL AND ACOUSTICAL REQUIREMENTS OF THE FLOOR AND ROOF CONSTRUCTION, WALLS AND PARTITIONS BY INSTALLING PROPER SEALS AND CLOSURES AT THE PERIMETER OF ALL OPENINGS.
10. LOCATION OF ALL FLOOR DRAINS AND TRENCH DRAINS MUST BE COORDINATED WITH EQUIPMENT LAYOUTS AND RELATED TRADES.
11. AT ALL EXPOSED CONCRETE WALLS PROVIDE 3/4" x 3/4" CHAMFER AT OUTSIDE CORNERS (HORIZONTAL AND VERTICAL), UNLESS NOTED OTHERWISE.
12. WALL VR/AIB SHALL BE CONTINUOUS AND SHALL BE SEALED AT ALL EDGES OF WALL AND PENETRATIONS. REFER TO SPECIFIC DETAILS FOR TERMINATIONS AT WINDOWS, DOORS, CURTAIN WALL, TOP AND BOTTOM OF WALL, ETC. REFER TO SPECIFICATIONS AND MANUFACTURER RECOMMENDATIONS FOR ITEMS NOT SPECIFICALLY DETAILED.
13. ALL CMU DIMENSIONS ARE TO THE FACE OF CMU. ALL METAL STUD PARTITION DIMENSIONS ARE TO THE FACE OF STUD UNLESS OTHERWISE NOTED.

1" = 1'-0"

3 TYPICAL DIMENSION DETAIL
1" = 1'-0"

TYPICAL PARTITION GENERAL NOTES

1. ALL PARTITIONS SHALL EXTEND TO THE UNDERSIDE OF THE METAL ROOF DECK OR FLOOR DECK ABOVE, UNLESS SPECIFICALLY INDICATED AS OTHERWISE ON DRAWINGS. REFER TO PARTITION TERMINATION DETAILS AT SHEET AG0.02.
2. ACOUSTIC INSULATION SHALL BE PROVIDED IN ALL NON-FIRE RATED PARTITIONS AS INDICATED BY PARTITION TYPES. INSULATION SHALL EXTEND MINIMUM 6 INCHES ABOVE THE HIGHEST ADJACENT CEILING. INSULATION IN FIRE RATED PARTITIONS SHALL BE PROVIDED PER THE U.L. ASSEMBLY DETAILS INDICATED.
3. PROVIDE CONTROL JOINTS IN GYPSUM WALL BOARD PARTITIONS AT 30 FEET MAXIMUM SPACING, WHETHER OR NOT THE DRAWINGS DEPICT CONTROL JOINTS. LOCATE JOINTS AT TOP CORNERS OF DOOR AND BORROWED LIGHT FRAMES TO THE GREATEST EXTENT POSSIBLE.
4. WHERE GYP BD CONTROL JOINTS OCCUR AWAY FROM DOOR OR BORROWED LIGHT FRAMES, JOINTS SHALL EXTEND THE FULL HEIGHT OF THE FRAMED WALL, WHETHER OR NOT CONCEALED BY SURFACE INSTALLED EQUIPMENT OR APPLIED TREATMENTS, OR CEILINGS.
5. PROVIDE FIRE RATED CONTROL JOINTS MATCHING THE REQUIRED RATING OF THE WALL ASSEMBLY AT FIRE RATED WALLS. REFER TO CONTROL JOINT DETAILS AT SHEET AG0.02.
6. PROVIDE MASONRY CONTROL JOINTS AT MAXIMUM 24 FOOT SPACING, AND WHERE INDICATED ON DRAWINGS. PROVIDE BRICK CONTROL JOINTS WITHIN 24 INCHES OF EACH OUTWARD CORNER OF EXTERIOR WALLS. AT INWARD CORNERS, PROVIDE CONTROL JOINTS AT THE CHANGE IN SURFACE PLANE ON THE "LEAST VISIBLE" SIDE OF THE CORNER.
7. THE INTEGRITY OF GYP BD FIRE RATED PARTITIONS SHALL BE MAINTAINED WHEREVER RECESSED EQUIPMENT, DEVICES, SPECIALTIES, OR OTHER COMPONENTS OF MORE THAN 20 SQUARE INCHES IN FACE AREA OF RECESS OR PENETRATION OCCURS. WHERE SUCH RECESSED EQUIPMENT DOES NOT FEATURE A FIRE RATED CABINET OR ENCLOSURE MATCHING THE FIRE RATING OF THE WALL BEING PENETRATED, THE RECESS SHALL BE LINED WITH LAYER(S) OF GYPSUM WALL BOARD TO PROVIDE AN EQUIVALENT FIRE RATING, THROUGHOUT THE RECESS, OR FIRESTOPPED WITH AN APPROVED ASSEMBLY SUITABLE TO THE PENETRATION SIZE, PENETRATING ITEM, AND REQUIRED RATING. THE CONTRACTOR RESPONSIBLE FOR THE RECESSED EQUIPMENT SHALL COORDINATE THE RECESS REQUIREMENTS, DEPTH, AND DETAILING OF THE OPENING WITH THE CM/GC TO CONFIRM THAT ADEQUATE WALL DEPTH EXISTS. FIRESTOPPING MATERIALS SHALL BE PROVIDED BY THE CONTRACTOR REQUIRING THE PENETRATION PER THE REQUIREMENTS OF SECTION 07 84 00. IF A RATED CABINET IS NOT PROVIDED THE COST OF LINING THE RECESS WITH GYPSUM WALL BOARD OR PROVISION OF FIRESTOPPING SHALL BE PAID BY THE CONTRACTOR RESPONSIBLE FOR THE RECESSED EQUIPMENT.
8. LINTELS SHALL BE PROVIDED AT OPENINGS IN MASONRY PARTITIONS FOR DOORS, WINDOWS, LOUVERS, RECESSED EQUIPMENT INCLUDING, BUT NOT LIMITED TO UNIT HEATERS, CONVECTORS, FIRE HOSE CABINETS, TOILET ACCESSORIES, AND DUCTWORK PENETRATIONS THAT ARE OVER 8 INCHES WIDE. PROVIDE LOOSE STEEL LINTELS (FURNISHED BY SECTION 05 00 01 TO SECTION 04 00 01 FOR INSTALLATION) AT PENETRATIONS NOT EXPOSED TO VIEW OR IN CONCEALED SPACES. AT LOCATIONS WHERE MASONRY IS EXPOSED TO VIEW, PROVIDE UNIT MASONRY LINTELS UNLESS SPANS REQUIRE OTHERWISE. REFER TO STRUCTURAL DRAWINGS FOR MASONRY LINTEL AND LOOSE STEEL LINTEL SCHEDULES AND TYPICAL DETAIL REQUIREMENTS.
9. ALL EXPOSED VERTICAL CORNERS OF CONCRETE MASONRY UNITS SHALL FEATURE RADIUS CORNER BLOCK, UNLESS SPECIFICALLY INDICATED AS SQUARE OR OTHERWISE IN DETAILS.
10. FIRE RESISTANCE RATING FOR MASONRY WALLS SHALL BE ACHIEVED BY ONE OF THE FOLLOWING METHODS, WHICH SHALL BE AT THE CONTRACTOR'S OPTION. THE CONTRACTOR SHALL DOCUMENT WHICH COMPLIANCE METHOD IS PROPOSED AS PART OF THE PRODUCT SUBMITTALS:
    a. USE OF MASONRY UNITS IN THICKNESS INDICATED, BEARING U.L. TESTING APPROVAL (AS A STAND-ALONE SYSTEM WITHOUT APPLIED FINISHES) FOR THE RATINGS INDICATED.
    b. USE OF MASONRY UNITS IN THICKNESS INDICATED, OF COMPOSITION, DENSITY, AND FACE THICKNESS TO MEET THE REQUIREMENTS OF TABLE 721.3.2 "MINIMUM EQUIVALENT THICKNESS OF BEARING OR NONBEARING CONCRETE MASONRY WALLS" OF THE MA STATE BUILDING CODE (IBC), BASED ON THE EQUIVALENT THICKNESS OF THE HOLLOW, NON-GROUT FILLED UNITS DETERMINED IN ACCORDANCE WITH ASTM C140.
    c. USE OF MASONRY UNITS IN SIZES INDICATED, WITH AIR SPACES AND CELLS WITHIN BLOCK FILLED SOLID WITH SAND, PEA-STONE, CRUSHED STONE, SLAG, OR OTHER MATERIALS AS DESCRIBED IN SECTION 721.3.1.4, MEETING THE ASTM TESTS DESCRIBED THEREIN, SUCH THAT THE TOTAL THICKNESS OF THE MASONRY UNITS MEETS THE EQUIVALENT THICKNESS REQUIREMENTS LISTED IN TABLE 721.3.2 OF THE MA STATE BUILDING CODE (IBC) FOR THE BLOCK COMPOSITION AND AGGREGATES PROPOSED FOR USE BY THE CONTRACTOR.
    d. USE OF MASONRY UNITS IN THICKNESS INDICATED, WITH ALL AIR SPACES AND CORES GROUTED SOLID, SUCH THAT THE TOTAL THICKNESS OF THE MASONRY UNITS MEETS THE EQUIVALENT THICKNESS REQUIREMENTS LISTED IN TABLE 721.3.2 OF THE MA STATE BUILDING CODE (IBC) FOR THE BLOCK COMPOSITION AND AGGREGATES PROPOSED FOR USE BY THE CONTRACTOR.
11. ALL FIRE RATED PARTITIONS SHALL EXTEND TO UNDERSIDE OF DECK ABOVE, WITH ALL GAPS AND DECK FLUTES AT TOPS OF WALLS FILLED WITH FIRE RESISTANT JOINT SEALANTS (FRJS).
    a. FRJS1 – PACKING MATERIAL: MINIMUM 4.0 PCF MINERAL WOOL INSULATION, IN THICKNESS 1 INCH LESS THAN OVERALL WALL THICKNESS OR AS REQUIRED BY THE SELECTED U.L. ASSEMBLY SUITABLE TO THE WALL TYPE AND REQUIRED RATING (WHICHEVER IS GREATER). TIGHTLY PACK MINERAL WOOL INTO FLUTES OF STEEL DECKING AND GAP AT TOP OF WALL TO FILL GAPS COMPLETELY AND FORM A PERMANENT FORM TO SERVE AS BACKING FOR FRJS2.
    b. FRJS2: FIRESTOPPING SEALANT: MINIMUM 1/2" THICK MATERIAL INSTALLED ON EACH SIDE OF JOINT TO COVER FRJS1 COMPLETELY AND SPAN BUILDING JOINT, WITH SURFACE OF SEALANT FLUSH WITH SURFACE OF WALL. WHERE EXPOSED TO VIEW FIRESTOPPING SEALANT SHALL BE PAINTABLE AND INSTALLATION SHALL BE SUITABLE FOR EXPOSURE TO VIEW IN FINISHED SPACES.
    c. SELECTION OF PROPRIETARY MATERIALS AND U.L. APPROVED ASSEMBLIES APPROPRIATE TO REQUIRED RATINGS AND CONSTRUCTION IS AT THE CONTRACTOR'S OPTION, HOWEVER **ALL FIRESTOPPING MATERIALS FOR THE PROJECT SHALL BE PROVIDED FROM THE SAME MANUFACTURER REGARDLESS OF WHICH TRADE OWNS THE FIRESTOPPING WORK**. THE CM/GC SHALL BE RESPONSIBLE FOR COORDINATING THIS REQUIREMENT WITH ALL TRADES.
12. ALL GAPS AT BUILDING JOINTS AND THROUGH PENETRATIONS AT WALLS THAT ARE INDICATED AS "SMOKE RATED" SHALL BE FILLED WITH FRJS #1 AND SEALED ON ONE SIDE WITH FRJS #2 AS DEFINED ABOVE, SUCH THAT GAPS ARE SEALED TO PREVENT THE PASSAGE OF SMOKE.
13. ALL GAPS AT BUILDING JOINTS AND THROUGH-PENETRATIONS OF NON-FIRE RATED WALLS SHALL BE SEALED TO REDUCE NOISE TRANSFER. AT CONTRACTOR'S OPTION, PROVIDE ACOUSTIC FOAM INSULATION PER SECTION 07 21 19, OR PACK CONTINUOUS MINERAL WOOL INSULATION TO FILL GAPS TO FULL THICKNESS OF WALL.

GYPSUM WALL BOARD SCHEDULE

1. WHERE METAL STUD AND GYPSUM WALL BOARD PARTITIONS ARE INDICATED ON THE DRAWINGS USE THE FOLLOWING TABLE IN CONJUNCTION WITH THE ROOM FINISH SCHEDULE TO DETERMINE THE TYPE OF GYPSUM WALL BOARD REQUIRED

GYP BD1	ABUSE RESISTANCE	USE ON VERTICAL SURFACES BELOW 10 FEET UNLESS NOTED OTHERWISE
GYP BD2	NON REINFORCED	USE ON VERTICAL SURFACES ABOVE 10 FEET TO UNDERSIDE OF DECK UNLESS NOTED OTHERWISE
GYP BD3	MOLD AND ABUSE RESISTANT	USE IN ALL TOILET ROOMS, LOCKER ROOMS, KITCHENS AND OTHER AREAS WHICH ARE SUBJECT TO MOISTURE* (VERTICAL AND HORIZONTAL)
GYP BD4	IMPACT RESISTANT	USE ON VERTICAL SURFACES UP TO 10 FEET ABOVE FLOOR IN CIRCULATION AND COMMON USE AREAS (INCLUDING BUT NOT LIMITED TO CORRIDORS, AUDITORIUMS CAFETERIAS, GYMNASIUMS)
GYP BD5	EXTERIOR GYPSUM SHEATHING	USE ON ALL EXTERIOR WALLS WITH COLD FORMED METAL FRAMING BACK-UP
GYP BD6	INTERIOR CEILING BOARD	USE ON ALL INTERIOR GYP-BD CEILINGS, UNLESS THE LOCATION REQUIRES GYP BD3 DUE TO MOISTURE
GYP BD7	(NOT USED)	-
GYP BD8	CEMENTITIOUS BOARD	USE ON ALL SURFACES TO RECEIVE TILE (WET OR DRY)
GYP BD9	FLEXIBLE	USE IN AREAS THAT REQUIRE CURVED WALLS OR SOFFITS, ETC.
?	SHAFTWALL AND COREBOARD	?

*MODERATE AND HIGH MOISTURE AREAS SHALL BE AS DEFINED BY THE GYP BD MANUFACTURER FOR EACH TYPE OF BOARD. COORDINATE WITH MANUFACTURERS RECOMMENDED USES AND/OR MOISTURE LIMITATIONS.

SHEET TITLE:

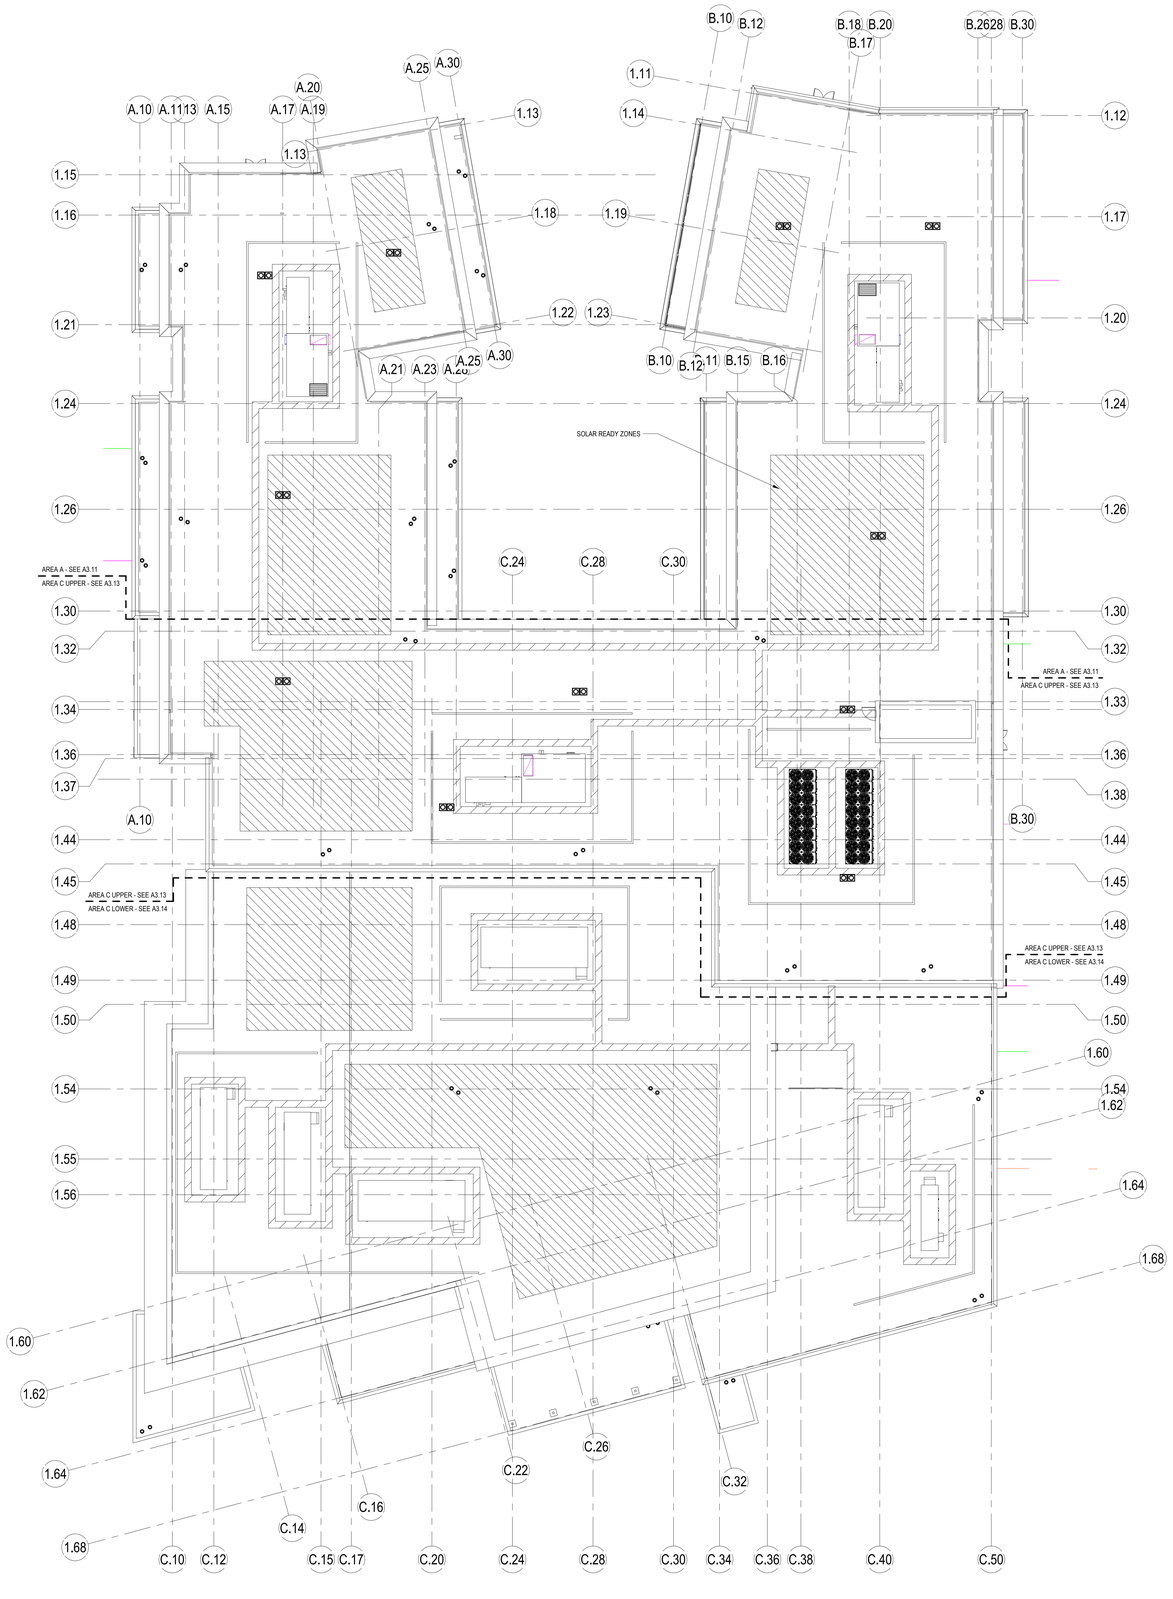
LEVEL 3 - AREA C

SHEET NUMBER:

A1.33



ROOF PLAN GENERAL NOTES

1. ALL ROOF AREAS SHALL BE ROOFING SYSTEM TYPE R1.1 UNLESS SPECIFICALLY INDICATED AS OTHERWISE.
2. REFER TO SHEET A3.50 FOR DETAILED DESCRIPTIONS OF ROOF SYSTEM TYPES AND TYPICAL DETAILS.
3. ROOF TYPES INDICATED ARE INTENDED TO DESCRIBE ROOFING SYSTEMS IN GENERAL. REFER TO STRUCTURAL DRAWINGS FOR COORDINATION OF STRUCTURAL DECK OR SUBSTRATE. COORDINATE WITH STRUCTURAL AND MEPFP DRAWINGS FOR LOCATIONS OF ROOF TOP EQUIPMENT SUPPORTED ON CONCRETE SLABS. COORDINATE TRANSITIONS BETWEEN STRUCTURAL DECK SYSTEMS AND MAINTAIN MINIMUM INSULATION THICKNESSES AT EQUIPMENT SLABS TO ENSURE SYSTEM PERFORMANCE AND WARRANTY REQUIREMENTS.
4. REFER TO MEPFP DRAWINGS FOR COORDINATION OF MECHANICAL EQUIPMENT, DEVICES, COMPONENTS, AND ASSOCIATED SUPPORT SYSTEMS. REFER TO PROJECT DETAILS INDICATED IN ARCHITECTURAL, STRUCTURAL, AND MEPFP DRAWINGS AND INCORPORATE ROOFING COMPONENTS REQUIRED TO ENSURE A WEATHER-TIGHT AND WARRANTIED SYSTEM AS DESCRIBED IN THE SPECIFICATIONS.
5. UNDERSIDE OF DECK (UOD) ELEVATIONS INDICATED ARE THEORETICAL ELEVATIONS PROVIDED AT STRUCTURAL COLUMN GRID INTERSECTIONS AND ARE RELATIVE TO THE LOWEST LEVEL OF THE PROJECT, UNLESS SPECIFICALLY INDICATED AS OTHERWISE.
6. THE ROOFING AREAS SHALL FEATURE PLANAR SLOPE TOWARD DRAINS OF A MINIMUM ¼ INCH VERTICAL IN 12 INCHES HORIZONTAL DISTANCE. PROVIDE TAPERED INSULATION OR SHIMS TO MAINTAIN MINIMUM SLOPE AND AVOID PONDING.
7. PROVIDE TAPERED INSULATION AND/OR CRICKETS AT THE UPSLOPE SIDE OF ALL CURBS AND OTHER OBSTRUCTIONS TO DRAINAGE SLOPES, INCLUDING BUT NOT LIMITED TO CURBS FOR MECHANICAL EQUIPMENT, SKYLIGHTS, ACCESS HATCHES, AND SMOKE HATCHES.
8. PROVIDE ROOF WALK PADS AT EACH ROOF ACCESS POINT (ADJACENT TO ROOF HATCHES AND BOTTOM AND TOP OF ALL LADDERS OR STAIRS), AND AROUND ALL ROOFTOP EQUIPMENT WHETHER SHOWN IN DRAWINGS OR NOT.
9. DETAIL REFERENCES MAY NOT BE INDICATED FOR EACH OCCURRENCE OF ROOF PENETRATIONS OR ROOF MOUNTED EQUIPMENT. REFER TO THE ROOF LEGEND FOR ITEMS SHOWN ON THE ROOF PLAN, AND TO TYPICAL ROOF DETAILS AT SHEET A3.50 THAT ARE APPLICABLE TO THE WORK OF THIS PROJECT.
10. ROOFING SYSTEMS SHALL COMPLY WITH WIND LOAD AND PERFORMANCE REQUIREMENTS FOR ROOF COVERINGS. FASTENINGS, JOINT SEAM TREATMENTS, AND OTHER INSTALLATION DETAILS SHALL MEET MANUFACTURER'S REQUIREMENTS TO SATISFY CODE AND MEET WARRANTY REQUIREMENTS.
11. PROVIDE TAPERED INSULATION EDGE STRIPS, SHIMS, ADDITIONAL WOOD BLOCKING AND INSULATION FILLERS AS REQUIRED TO PROVIDE ¼:12 MIN SLOPE AND FLUSH CONTINUOUS TRANSITIONS BETWEEN ROOF DECK TYPES.
12. MECHANICAL, ELECTRICAL, PLUMBING, AND FIRE PROTECTION ITEMS SHOWN ARE APPROXIMATE SIZE AND LOCATION FOR COORDINATION PURPOSES. REFER TO MEPFP PLANS AND SCHEDULES FOR ACTUAL ITEM DESIGNATIONS AND COORDINATE REQUIRED PENETRATIONS AND CLEARANCES, INCLUDING MANUFACTURER'S REQUIRED MAINTENECE CLEARANCES.
13. DETAIL REFERENCES ARE NOT INDICATED FOR EACH ROOF CONDITION OR PENETRATION. THE CONTRACTOR SHALL REFER TO PROJECT DETAILS FOR INFORMATION APPLICABLE TO MISCELLANEOUS ITEMS WHICH INCLUDE, BUT ARE NOT LIMITED TO, CONDUIT PENETRATIONS, GUY-WIRE TIE-DOWN POINTS, PROTECTED WOOD SLEEPERS, CONDENSATE LINES AND OTHER MISCELLANEOUS PIPING, AND SMALL DIAMETER EXHAUST DUCTS. REFER TO KITCHEN EQUIPMENT, MECHANICAL, ELECTRICAL, AND PLUMBING DRAWINGS FOR COORDINATION OF REQUIRED ROOF PENETRATIONS AND DETAILS WHERE APPLICABLE.
14. PROVIDE 3' x 3' SUMP AT DRAINS, MAX SLOPE 1:12.

	AIR HANDLING UNIT ON CURBS: COORDINATE LOCATION WITH HVAC DRAWINGS. SEE TYPICAL FLASHING DETAILS @ SHEET A3.51
	HVAC PIPING PENETRATION @ ROOF. COORDINATE LOCATION, SIZE, AND TYPE WITH HVAC DRAWINGS. SEE TYPICAL FLASHING DETAILS @ SHEET A3.50
	SOLAR READY ZONE

ROOF PLAN GENERAL NOTES

1. ALL ROOF AREAS SHALL BE ROOFING SYSTEM TYPE R1.1 UNLESS SPECIFICALLY INDICATED AS OTHERWISE.
2. REFER TO SHEET A3.50 FOR DETAILED DESCRIPTIONS OF ROOF SYSTEM TYPES AND TYPICAL DETAILS.
3. ROOF TYPES INDICATED ARE INTENDED TO DESCRIBE ROOFING SYSTEMS IN GENERAL. REFER TO STRUCTURAL DRAWINGS FOR COORDINATION OF STRUCTURAL DECK OR SUBSTRATE. COORDINATE WITH STRUCTURAL AND MEPFP DRAWINGS FOR LOCATIONS OF ROOF TOP EQUIPMENT SUPPORTED ON CONCRETE SLABS. COORDINATE TRANSITIONS BETWEEN STRUCTURAL DECK SYSTEMS AND MAINTAIN MINIMUM INSULATION THICKNESSES AT EQUIPMENT SLABS TO ENSURE SYSTEM PERFORMANCE AND WARRANTY REQUIREMENTS.
4. REFER TO MEPFP DRAWINGS FOR COORDINATION OF MECHANICAL EQUIPMENT, DEVICES, COMPONENTS, AND ASSOCIATED SUPPORT SYSTEMS. REFER TO PROJECT DETAILS INDICATED IN ARCHITECTURAL, STRUCTURAL, AND MEPFP DRAWINGS AND INCORPORATE ROOFING COMPONENTS REQUIRED TO ENSURE A WEATHER-TIGHT AND WARRANTIED SYSTEM AS DESCRIBED IN THE SPECIFICATIONS.
5. UNDERSIDE OF DECK (UOD) ELEVATIONS INDICATED ARE THEORETICAL ELEVATIONS PROVIDED AT STRUCTURAL COLUMN GRID INTERSECTIONS AND ARE RELATIVE TO THE LOWEST LEVEL OF THE PROJECT, UNLESS SPECIFICALLY INDICATED AS OTHERWISE.
6. THE ROOFING AREAS SHALL FEATURE PLANAR SLOPE TOWARD DRAINS OF A MINIMUM ¼ INCH VERTICAL IN 12 INCHES HORIZONTAL DISTANCE. PROVIDE TAPERED INSULATION OR SHIMS TO MAINTAIN MINIMUM SLOPE AND AVOID PONDING.
7. PROVIDE TAPERED INSULATION AND/OR CRICKETS AT THE UPSLOPE SIDE OF ALL CURBS AND OTHER OBSTRUCTIONS TO DRAINAGE SLOPES, INCLUDING BUT NOT LIMITED TO CURBS FOR MECHANICAL EQUIPMENT, SKYLIGHTS, ACCESS HATCHES, AND SMOKE HATCHES.
8. PROVIDE ROOF WALK PADS AT EACH ROOF ACCESS POINT (ADJACENT TO ROOF HATCHES AND BOTTOM AND TOP OF ALL LADDERS OR STAIRS), AND AROUND ALL ROOFTOP EQUIPMENT WHETHER SHOWN IN DRAWINGS OR NOT.
9. DETAIL REFERENCES MAY NOT BE INDICATED FOR EACH OCCURRENCE OF ROOF PENETRATIONS OR ROOF MOUNTED EQUIPMENT. REFER TO THE ROOF LEGEND FOR ITEMS SHOWN ON THE ROOF PLAN, AND TO TYPICAL ROOF DETAILS AT SHEET A3.50 THAT ARE APPLICABLE TO THE WORK OF THIS PROJECT.
10. ROOFING SYSTEMS SHALL COMPLY WITH WIND LOAD AND PERFORMANCE REQUIREMENTS FOR ROOF COVERINGS. FASTENINGS, JOINT SEAM TREATMENTS, AND OTHER INSTALLATION DETAILS SHALL MEET MANUFACTURER'S REQUIREMENTS TO SATISFY CODE AND MEET WARRANTY REQUIREMENTS.
11. PROVIDE TAPERED INSULATION EDGE STRIPS, SHIMS, ADDITIONAL WOOD BLOCKING AND INSULATION FILLERS AS REQUIRED TO PROVIDE ¼:12 MIN SLOPE AND FLUSH CONTINUOUS TRANSITIONS BETWEEN ROOF DECK TYPES.
12. MECHANICAL, ELECTRICAL, PLUMBING, AND FIRE PROTECTION ITEMS SHOWN ARE APPROXIMATE SIZE AND LOCATION FOR COORDINATION PURPOSES. REFER TO MEPFP PLANS AND SCHEDULES FOR ACTUAL ITEM DESIGNATIONS AND COORDINATE REQUIRED PENETRATIONS AND CLEARANCES, INCLUDING MANUFACTURER'S REQUIRED MAINTENECE CLEARANCES.
13. DETAIL REFERENCES ARE NOT INDICATED FOR EACH ROOF CONDITION OR PENETRATION. THE CONTRACTOR SHALL REFER TO PROJECT DETAILS FOR INFORMATION APPLICABLE TO MISCELLANEOUS ITEMS WHICH INCLUDE, BUT ARE NOT LIMITED TO, CONDUIT PENETRATIONS, GUY-WIRE TIE-DOWN POINTS, PROTECTED WOOD SLEEPERS, CONDENSATE LINES AND OTHER MISCELLANEOUS PIPING, AND SMALL DIAMETER EXHAUST DUCTS. REFER TO KITCHEN EQUIPMENT, MECHANICAL, ELECTRICAL, AND PLUMBING DRAWINGS FOR COORDINATION OF REQUIRED ROOF PENETRATIONS AND DETAILS WHERE APPLICABLE.
14. PROVIDE 3' x 3' SUMP AT DRAINS, MAX SLOPE 1:12.

EXTERIOR ELEVATION GENERAL NOTES

1. EXTERIOR ELEVATIONS ARE PROVIDED TO SHOW THE GENERAL ARRANGEMENT OF EXTERIOR WALL FINISH MATERIALS. REFER TO WALL SECTIONS AND DETAILS FOR DETAILED DESCRIPTION OF CONSTRUCTION.
2. LINE OF GRADE INDICATED IS APPROXIMATE – REFER TO CIVIL / LANDSCAPE GRADING PLANS FOR GRADING INFORMATION.
3. WHERE PORTIONS OF ELEVATIONS ARE OBSCURED FROM VIEW BY FREESTANDING COLUMNS, FASCIA, ROOF EDGES, OR OTHER PROJECTING CONSTRUCTION, THE CONTRACTOR SHALL ASSUME THAT THE ADJACENT WALL FINISHES EXTEND INTO THE AREAS OBSCURED FROM VIEW, UNLESS SPECIFICALLY INDICATED AS OTHERWISE IN BUILDING AND WALL SECTIONS.
4. DIMENSIONAL INFORMATION PROVIDED RELATIVE TO MASONRY VENEER IS BASED ON NOMINAL FULL INCH MASONRY COURSING.
5. REFER TO ROOF PLAN FOR DESCRIPTION OF ROOFING SYSTEMS AND MATERIALS.
6. REFER TO CURTAIN-WALL TYPES AND DETAILS FOR INFORMATION RELATED TO CURTAIN-WALL, GLAZING TYPES, INSTALLATION, AND TRIM AT OPENINGS.
7. REFER TO WINDOW TYPES AND DETAILS FOR INFORMATION RELATED TO WINDOWS, OPERABLE SASH, GLAZING TYPES, INSTALLATION, AND TRIM AT OPENINGS.
8. REFER TO LOUVER TYPES AND DETAILS FOR INFORMATION RELATED TO LOUVER OPENINGS, SIZES, INSTALLATION, AND TRIM AT OPENINGS.
9. REFER TO BUILDING AND WALL SECTIONS FOR HEIGHT OF MASONRY COURSING AND TOP OF MASONRY ELEVATIONS.
10. PROVIDE MASONRY VENEER CONTROL JOINTS WHERE INDICATED IN ELEVATIONS. IN ADDITION, PROVIDE CONTROL JOINTS AT THE FOLLOWING LOCATIONS:
    a. ON ONE SIDE OF AN OUTWARD BUILDING CORNER WITHIN 2'-4" OF THE CORNER.
    b. AT EACH INWARD BUILDING CORNER.
    c. WHERE THE HEIGHT OF THE FACADE MASONRY VENEER CHANGES.
    d. WHERE THE METHOD OF SUPPORT FOR MASONRY VENEER CHANGES, SUCH AS AT ENDS OF RELIEVING ANGLES OR STRUCTURAL LINTELS SUPPORTED FROM ROOF STRUCTURE.
    e. ON UNINTERRUPTED SPANS OF MASONRY VENEER AT MAXIMUM 24'-0" SPACING.
11. SEALANT AND BACKER ROD AT MASONRY VENEER CONTROL JOINTS SHALL BE PROVIDED AND INSTALLED BY THE WATERPROOFING / JOINT SEALANT SUB-CONTRACTOR.
12. WHERE LOOSE LINTELS CROSS CONTROL JOINTS, PROVIDE BOND-BREAK FABRIC WRAP OF LINTEL END AT PORTION OF LINTEL EXTENDING PAST CONTROL JOINT.
13. WHERE MASONRY VENEER MATERIAL CHANGES OCCUR, INCLUDING FROM BRICK TO CMU OR PRECAST CONCRETE, PROVIDE A BOND BREAK SEPARATOR BETWEEN COURSES.
14. ELEVATIONS MAY NOT SHOW ALL BUILDING FEATURES WITH CLARITY, SUCH AS REGLET COUNTER-FLASHINGS AND TERMINATION BARS WHERE ROOF MEMBRANE FLASHINGS TERMINATE ON SIDE WALLS. REFER TO WALL SECTION AND ROOF EDGE DETAILS FOR DETAILS AND INFORMATION RELATED TO THESE CONDITIONS.
15. PAINT ALL EXPOSED LINTELS TO MATCH ADJACENT WALL.

EXTERIOR ELEVATIONS

SHEET NUMBER:
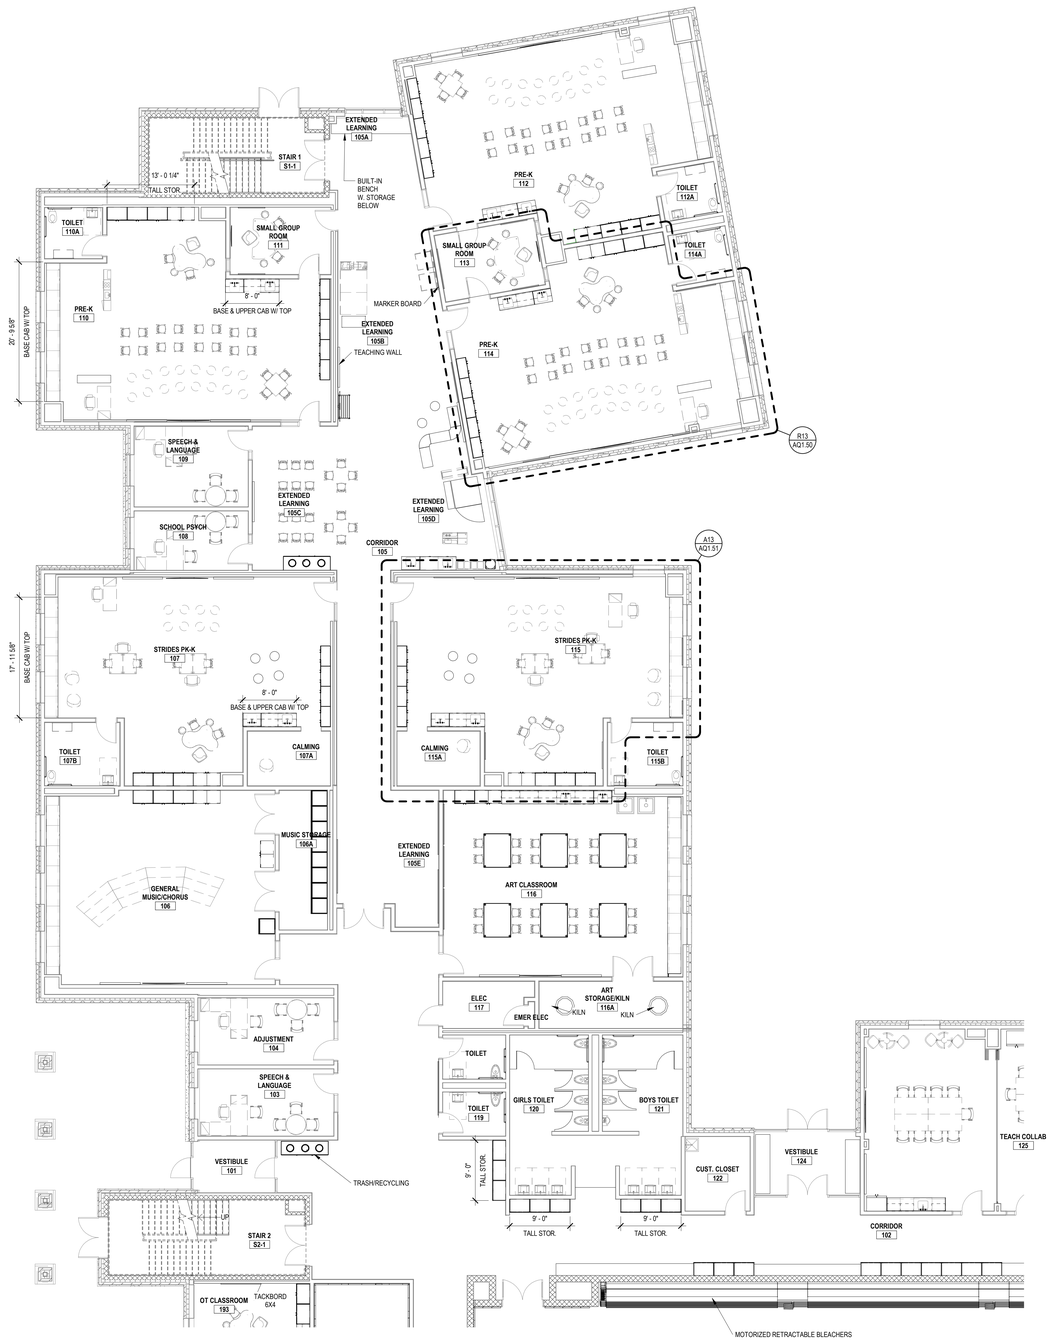
A4.14



CASEWORK GENERAL NOTES

1. CABINET DIMENSIONS INDICATED ARE NOMINAL AND MAY VARY SLIGHTLY BY MANUFACTURER; HOWEVER COUNTERTOP HEIGHTS AT ACCESSIBLE CABINETS SHALL BE AS INDICATED, AND NO HIGHER THAN 2'-10" ABOVE FLOOR AT ANY LOCATION, REGARDLESS OF 'OUT OF LEVEL' FLOOR CONDITIONS.
2. REFER TO CASEWORK LEGEND SHEETS FOR CABINET TYPES DESIGNATED ON THESE PLANS AND ELEVATIONS.
3. FIELD-VERIFY ALL CLEAR WALL DIMENSIONS PRIOR TO FABRICATING CASEWORK.
4. PROVIDE SCRIBE TRIM AT ALL CABINETS MEETING ADJACENT WALL CONSTRUCTION UNLESS SPECIFICALLY INDICATED AS OTHERWISE.
5. PROVIDE FILLER / SCRIBE TRIM AT EACH CABINET MEETING ADJACENT CABINETS AT 90 DEGREE INTERIOR CORNERS UNLESS SPECIFICALLY INDICATED AS OTHERWISE.
6. ALL CABINETS SHALL FEATURE FULLY FINISHED SIDES AND BACKS WHERE EXPOSED TO VIEW, WHETHER SPECIFICALLY INDICATED OR NOT.
7. THE GENERAL CONTRACTOR / CONSTRUCTION MANAGER AND THE CASEWORK SUBCONTRACTOR SHALL COORDINATE INSTALLATION OF CONCEALED BLOCKING REQUIRED FOR WALL CABINET AND ADJUSTABLE SHELVING STANDARD INSTALLATION WITH ROUGH CARPENTRY SUBCONTRACTOR TO ASSURE PROPER PLACEMENT OF BLOCKING.
8. UNLESS SPECIFICALLY INDICATED, RESILIENT BASE SHALL BE INSTALLED AT BASES OF ALL TOE KICKS AND FLUSH-CONFIGURATION CABINETS. REFER TO FINISH SCHEDULE AND INDEX OF FINISHES FOR BASE TYPES. BASE TO BE INSTALLED BY RESILIENT FLOORING SUBCONTRACTOR.
9. COORDINATE CASEWORK DIMENSIONS WITH APPLIANCES SUBMITTED AND ACCEPTED FOR USE. CONFIRM ALL APPLIANCE DIMENSIONS, INSTALLATION REQUIREMENTS, AND REQUIRED CLEARANCES PRIOR TO FABRICATION. INDICATE CLEARANCES AND UNIQUE REQUIREMENTS IN SHOP DRAWINGS.
10. PROVIDE BACK AND SIDE SPLASHES AT ALL COUNTERTOPS AT ADJACENT WALL CONSTRUCTION AND TALL CABINET BODIES. BACK AND SIDE SPLASHES SHALL BE FIELD APPLIED AND MATCH THE MATERIAL AND COLOR OF THE COUNTERTOP UNLESS SPECIFICALLY NOTED OTHERWISE.
11. WHERE BACK OR SIDE SPLASHES OCCUR IMMEDIATELY BELOW WINDOW OPENINGS, COORDINATE THE HEIGHT AND DETAILS OF THE SPLASH WITH THE FINISH CARPENTRY SUBCONTRACTOR. WOOD APRON TRIM AT SUCH LOCATIONS SHALL BE REPLACED BY THE SPLASH COMPONENT. REFER TO DETAILS.
12. COUNTERTOPS AT ALL GENERAL CLASSROOMS, OFFICES, AND OTHER NON-SCIENCE SPACES SHALL BE TYPE "CT-PL" TYPE UNLESS SPECIFICALLY NOTED. REFER TO CASEWORK SPECIFICATIONS.
13. COUNTERTOPS AT SCIENCE LABORATORY CLASSROOMS, INCLUDING BUT NOT LIMITED TO BIOLOGY, CHEMISTRY, ENVIRONMENTAL SCIENCE, AND PHYSICS LABORATORIES, RELATED PREP ROOMS, AND ART ROOMS SHALL BE TYPE "CT-ER" UNLESS SPECIFICALLY NOTED. REFER TO CASEWORK SPECIFICATIONS.
14. UNLESS SPECIFICALLY IDENTIFIED BY TYPE, LOOSE FURNISHINGS INCLUDING STOOLS, CHAIRS, DESKS AND TABLES SHOWN DASHED ARE NOT IN CONTRACT.
15. WHERE CABINETS ARE LOCATED WITH FIN-TUBE RADIATION HEATING BEHIND, THE CABINETS CARCASS SHALL BE FABRICATED TO PROVIDE UNRESTRICTED MOVEMENT OF AIR FROM THE TOE KICK BELOW THE CABINET, UNDER THE CABINET BOTTOM, TO THE SPACE BEHIND THE CABINETS AT THE FIN-TUBE HEATING. THE CASEWORK MANUFACTURER SHALL PROVIDE 1/8" THK PERFORATED STEEL GRILLES WITH FACTORY-APPLIED BLACK BAKED ENAMEL FINISH AT THE TOE KICK FOR FULL WIDTHS OF CABINETS, AND 4" WIDE PENCIL-PROOF, CLEAR ANODIZED ALUMINUM GRATINGS IN FRAMES AT THE COUNTER LEDGE. SEE PLANS FOR LENGTHS OF GRATINGS.
16. FUME HOODS AND RELATED BASE CABINETS SHALL BE PROVIDED AND INSTALLED BY THE LABORATORY EQUIPMENT SUBCONTRACTOR. CASEWORK BASE CABINETS SHALL MATCH THE PRODUCTS PROVIDED BY THE CASEWORK SUBCONTRACTOR IN EVERY REGARD.
17. SERVICE FITTINGS ARE WITHIN FUME HOODS INCLUDING BUT NOT LIMITED TO GAS, WATER, AND COMPRESSED AIR, SHALL BE PROVIDED AND INSTALLED IN THE HOOD EQUIPMENT BY THE LABORATORY EQUIPMENT SUBCONTRACTOR. FINAL CONNECTION OF UTILITIES TO THE FITTINGS SHALL BE COMPLETED BY THE PLUMBING SUBCONTRACTOR.
18. WHERE ELECTRICAL OR DATA OUTLETS ARE INDICATED IN CASEWORK, ROUGH OPENINGS FOR OUTLET BOXES SHALL BE FACTORY PROVIDED. JUNCTION BOXES AND DEVICES SHALL BE INSTALLED BY THE ELECTRICAL SUBCONTRACTOR.
19. WHERE SERVICE FITTINGS ARE INDICATED IN CASEWORK INCLUDING BUT NOT LIMITED TO GAS, WATER, AND COMPRESSED AIR, THEY SHALL BE PROVIDED AND INSTALLED IN THE CASEWORK BY THE CASEWORK SUBCONTRACTOR. FINAL CONNECTION OF UTILITIES TO THE FITTINGS SHALL BE COMPLETED BY THE PLUMBING TRADE CONTRACTOR.
20. WHERE RESIN SINKS ARE INDICATED IN TYPE CT-ER COUNTERTOPS, THEY SHALL BE PROVIDED AND INSTALLED BY THE CASEWORK SUBCONTRACTOR. FINAL CONNECTION OF DRAIN PIPING SHALL BE COMPLETED BY THE PLUMBING SUBCONTRACTOR.
21. WHERE STAINLESS STEEL SINKS ARE INDICATED IN TYPE CT-PL OR CT-ER COUNTERTOPS, THEY SHALL BE PROVIDED AND INSTALLED BY THE PLUMBING SUBCONTRACTOR. OPENINGS FOR SUCH SINKS SHALL BE PROVIDED BY THE CASEWORK SUBCONTRACTOR BASED ON TEMPLATE INFORMATION PROVIDED BY OR COORDINATION WITH THE PLUMBING SUBCONTRACTOR.
22. FIRE EXTINGUISHERS INDICATED AT SAFETY CABINETS SHALL BE PROVIDED AND INSTALLED BY THE FIRE PROTECTION SPECIALTIES SUBCONTRACTOR.
23. WHERE CONTROLS INCLUDING, BUT NOT LIMITED TO PLUMBING VALVES, CLEANOUTS, OR ELECTRICAL OR DATA CONDUCTORS AND CABLING RUN THROUGH BUS-WAYS OR CHASES CONCEALED BEHIND OR WITHIN MILLWORK, ACCESS PANELS SHALL BE PROVIDED IN THE MILLWORK TO PROVIDE ACCESS TO SUCH UTILITIES. ACCESS PANELS SHALL BE OF THE SAME MATERIAL AND FINISH AS THE ADJACENT CABINETRY, AND SHALL BE FACTORY CREATED. FIELD CUTTING SHALL NOT BE PERMITTED. PANELS SHOULD BE MINIMUM 12" X 12" INCHES IN SIZE, AND SHALL BE SECURED IN PLACE FLUSH WITH THE ADJACENT CABINET BODY, USING PAN HEAD STAINLESS STEEL FINISH PHILIPS HEAD SCREWS WITH STAINLESS STEEL FINISHED WASHERS AT NO MORE THAN 12" ON CENTER AROUND THE PERIMETER OF THE ACCESS PANEL.

AQ1.13

CASEWORK GENERAL NOTES

1. CABINET DIMENSIONS INDICATED ARE NOMINAL AND MAY VARY SLIGHTLY BY MANUFACTURER; HOWEVER COUNTERTOP HEIGHTS AT ACCESSIBLE CABINETS SHALL BE AS INDICATED, AND NO HIGHER THAN 2'-10" ABOVE FLOOR AT ANY LOCATION, REGARDLESS OF 'OUT OF LEVEL' FLOOR CONDITIONS.
2. REFER TO CASEWORK LEGEND SHEETS FOR CABINET TYPES DESIGNATED ON THESE PLANS AND ELEVATIONS.
3. FIELD-VERIFY ALL CLEAR WALL DIMENSIONS PRIOR TO FABRICATING CASEWORK.
4. PROVIDE SCRIBE TRIM AT ALL CABINETS MEETING ADJACENT WALL CONSTRUCTION UNLESS SPECIFICALLY INDICATED AS OTHERWISE.
5. PROVIDE FILLER / SCRIBE TRIM AT EACH CABINET MEETING ADJACENT CABINETS AT 90 DEGREE INTERIOR CORNERS UNLESS SPECIFICALLY INDICATED AS OTHERWISE.
6. ALL CABINETS SHALL FEATURE FULLY FINISHED SIDES AND BACKS WHERE EXPOSED TO VIEW, WHETHER SPECIFICALLY INDICATED OR NOT.
7. THE GENERAL CONTRACTOR / CONSTRUCTION MANAGER AND THE CASEWORK SUBCONTRACTOR SHALL COORDINATE INSTALLATION OF CONCEALED BLOCKING REQUIRED FOR WALL CABINET AND ADJUSTABLE SHELVING STANDARD INSTALLATION WITH ROUGH CARPENTRY SUBCONTRACTOR TO ASSURE PROPER PLACEMENT OF BLOCKING.
8. UNLESS SPECIFICALLY INDICATED, RESILIENT BASE SHALL BE INSTALLED AT BASES OF ALL TOE KICKS AND FLUSH-CONFIGURATION CABINETS. REFER TO FINISH SCHEDULE AND INDEX OF FINISHES FOR BASE TYPES. BASE TO BE INSTALLED BY RESILIENT FLOORING SUBCONTRACTOR.
9. COORDINATE CASEWORK DIMENSIONS WITH APPLIANCES SUBMITTED AND ACCEPTED FOR USE. CONFIRM ALL APPLIANCE DIMENSIONS, INSTALLATION REQUIREMENTS, AND REQUIRED CLEARANCES PRIOR TO FABRICATION. INDICATE CLEARANCES AND UNIQUE REQUIREMENTS IN SHOP DRAWINGS.
10. PROVIDE BACK AND SIDE SPLASHES AT ALL COUNTERTOPS AT ADJACENT WALL CONSTRUCTION AND TALL CABINET BODIES. BACK AND SIDE SPLASHES SHALL BE FIELD APPLIED AND MATCH THE MATERIAL AND COLOR OF THE COUNTERTOP UNLESS SPECIFICALLY NOTED OTHERWISE.
11. WHERE BACK OR SIDE SPLASHES OCCUR IMMEDIATELY BELOW WINDOW OPENINGS, COORDINATE THE HEIGHT AND DETAILS OF THE SPLASH WITH THE FINISH CARPENTRY SUBCONTRACTOR. WOOD APRON TRIM AT SUCH LOCATIONS SHALL BE REPLACED BY THE SPLASH COMPONENT. REFER TO DETAILS.
12. COUNTERTOPS AT ALL GENERAL CLASSROOMS, OFFICES, AND OTHER NON-SCIENCE SPACES SHALL BE TYPE 'CT-PL' TYPE UNLESS SPECIFICALLY NOTED. REFER TO CASEWORK SPECIFICATIONS.
13. COUNTERTOPS AT SCIENCE LABORATORY CLASSROOMS, INCLUDING BUT NOT LIMITED TO BIOLOGY, CHEMISTRY, ENVIRONMENTAL SCIENCE, AND PHYSICS LABORATORIES, RELATED PREP ROOMS, AND ART ROOMS SHALL BE TYPE 'CT-ER' UNLESS SPECIFICALLY NOTED. REFER TO CASEWORK SPECIFICATIONS.
14. UNLESS SPECIFICALLY IDENTIFIED BY TYPE, LOOSE FURNISHINGS INCLUDING STOOLS, CHAIRS, DESKS AND TABLES SHOWN DASHED ARE NOT IN CONTRACT.
15. WHERE CABINETS ARE LOCATED WITH FIN-TUBE RADIATION HEATING BEHIND, THE CABINETS CARCASS SHALL BE FABRICATED TO PROVIDE FOR UNRESTRICTED MOVEMENT OF AIR FROM THE TOE KICK BELOW THE CABINET, UNDER THE CABINET BOTTOM, TO THE SPACE BEHIND THE CABINETS AT THE FIN-TUBE HEATING. THE CASEWORK MANUFACTURER SHALL PROVIDE 1/8" THK PERFORATED STEEL GRILLES WITH FACTORY-APPLIED BLACK BAKED ENAMEL FINISH AT THE TOE KICK FOR FULL WIDTHS OF CABINETS, AND 4" WIDE PENCIL-PROOF, CLEAR ANODIZED ALUMINUM GRATINGS IN FRAMES AT THE COUNTER LEDGE. SEE PLANS FOR LENGTHS OF GRATINGS.
16. FUME HOODS AND RELATED BASE CABINETS SHALL BE PROVIDED AND INSTALLED BY THE LABORATORY EQUIPMENT SUBCONTRACTOR. CASEWORK BASE CABINETS SHALL MATCH THE PRODUCTS PROVIDED BY THE CASEWORK SUBCONTRACTOR IN EVERY REGARD.
17. SERVICE FITTINGS ARE WITHIN FUME HOODS INCLUDING BUT NOT LIMITED TO GAS, WATER, AND COMPRESSED AIR, SHALL BE PROVIDED AND INSTALLED IN THE HOOD EQUIPMENT BY THE LABORATORY EQUIPMENT SUBCONTRACTOR. FINAL CONNECTION OF UTILITIES TO THE FITTINGS SHALL BE COMPLETED BY THE PLUMBING SUBCONTRACTOR.
18. WHERE ELECTRICAL OR DATA OUTLETS ARE INDICATED IN CASEWORK, ROUGH OPENINGS FOR OUTLET BOXES SHALL BE FACTORY PROVIDED. JUNCTION BOXES AND DEVICES SHALL BE INSTALLED BY THE ELECTRICAL SUBCONTRACTOR.
19. WHERE SERVICE FITTINGS ARE INDICATED IN CASEWORK INCLUDING BUT NOT LIMITED TO GAS, WATER, AND COMPRESSED AIR, THEY SHALL BE PROVIDED AND INSTALLED IN THE CASEWORK BY THE CASEWORK SUBCONTRACTOR. FINAL CONNECTION OF UTILITIES TO THE FITTINGS SHALL BE COMPLETED BY THE PLUMBING TRADE CONTRACTOR.
20. WHERE RESIN SINKS ARE INDICATED IN TYPE CT-ER COUNTERTOPS, THEY SHALL BE PROVIDED AND INSTALLED BY THE CASEWORK SUBCONTRACTOR. FINAL CONNECTION OF DRAIN PIPING SHALL BE COMPLETED BY THE PLUMBING SUBCONTRACTOR.
21. WHERE STAINLESS STEEL SINKS ARE INDICATED IN TYPE CT-PL OR CT-ER COUNTERTOPS, THEY SHALL BE PROVIDED AND INSTALLED BY THE PLUMBING SUBCONTRACTOR. OPENINGS FOR SUCH SINKS SHALL BE PROVIDED BY THE CASEWORK SUBCONTRACTOR BASED ON TEMPLATE INFORMATION PROVIDED BY OR COORDINATION WITH THE PLUMBING SUBCONTRACTOR.
22. FIRE EXTINGUISHERS INDICATED AT SAFETY CABINETS SHALL BE PROVIDED AND INSTALLED BY THE FIRE PROTECTION SPECIALTIES SUBCONTRACTOR.
23. WHERE CONTROLS INCLUDING, BUT NOT LIMITED TO PLUMBING VALVES, CLEANOUTS, OR ELECTRICAL OR DATA CONDUCTORS AND CABLING RUN THROUGH BUS-WAYS OR CHASES CONCEALED BEHIND OR WITHIN MILLWORK, ACCESS PANELS SHALL BE PROVIDED IN THE MILLWORK TO PROVIDE ACCESS TO SUCH UTILITIES. ACCESS PANELS SHALL BE OF THE SAME MATERIAL AND FINISH AS THE ADJACENT CABINETRY, AND SHALL BE FACTORY CREATED. FIELD CUTTING SHALL NOT BE PERMITTED. PANELS SHOULD BE MINIMUM 12 X 12 INCHES IN SIZE, AND SHALL BE SECURED IN PLACE FLUSH WITH THE ADJACENT CABINET BODY, USING PAN HEAD STAINLESS STEEL FINISH PHILIPS HEAD SCREWS WITH STAINLESS STEEL FINISHED WASHERS AT NO MORE THAN 12" ON CENTER AROUND THE PERIMETER OF THE ACCESS PANEL.

CASEWORK GENERAL NOTES

1. CABINET DIMENSIONS INDICATED ARE NOMINAL AND MAY VARY SLIGHTLY BY MANUFACTURER; HOWEVER COUNTERTOP HEIGHTS AT ACCESSIBLE CABINETS SHALL BE AS INDICATED, AND NO HIGHER THAN 2'-10" ABOVE FLOOR AT ANY LOCATION, REGARDLESS OF 'OUT OF LEVEL' FLOOR CONDITIONS.
2. REFER TO CASEWORK LEGEND SHEETS FOR CABINET TYPES DESIGNATED ON THESE PLANS AND ELEVATIONS.
3. FIELD-VERIFY ALL CLEAR WALL DIMENSIONS PRIOR TO FABRICATING CASEWORK.
4. PROVIDE SCRIBE TRIM AT ALL CABINETS MEETING ADJACENT WALL CONSTRUCTION UNLESS SPECIFICALLY INDICATED AS OTHERWISE.
5. PROVIDE FILLER / SCRIBE TRIM AT EACH CABINET MEETING ADJACENT CABINETS AT 90 DEGREE INTERIOR CORNERS UNLESS SPECIFICALLY INDICATED AS OTHERWISE.
6. ALL CABINETS SHALL FEATURE FULLY FINISHED SIDES AND BACKS WHERE EXPOSED TO VIEW, WHETHER SPECIFICALLY INDICATED OR NOT.
7. THE GENERAL CONTRACTOR / CONSTRUCTION MANAGER AND THE CASEWORK SUBCONTRACTOR SHALL COORDINATE INSTALLATION OF CONCEALED BLOCKING REQUIRED FOR WALL CABINET AND ADJUSTABLE SHELVING STANDARD INSTALLATION WITH ROUGH CARPENTRY SUBCONTRACTOR TO ASSURE PROPER PLACEMENT OF BLOCKING.
8. UNLESS SPECIFICALLY INDICATED, RESILIENT BASE SHALL BE INSTALLED AT BASES OF ALL TOE KICKS AND FLUSH-CONFIGURATION CABINETS. REFER TO FINISH SCHEDULE AND INDEX OF FINISHES FOR BASE TYPES. BASE TO BE INSTALLED BY RESILIENT FLOORING SUBCONTRACTOR.
9. COORDINATE CASEWORK DIMENSIONS WITH APPLIANCES SUBMITTED AND ACCEPTED FOR USE. CONFIRM ALL APPLIANCE DIMENSIONS, INSTALLATION REQUIREMENTS, AND REQUIRED CLEARANCES PRIOR TO FABRICATION. INDICATE CLEARANCES AND UNIQUE REQUIREMENTS IN SHOP DRAWINGS.
10. PROVIDE BACK AND SIDE SPLASHES AT ALL COUNTERTOPS AT ADJACENT WALL CONSTRUCTION AND TALL CABINET BODIES. BACK AND SIDE SPLASHES SHALL BE FIELD APPLIED AND MATCH THE MATERIAL AND COLOR OF THE COUNTERTOP UNLESS SPECIFICALLY NOTED OTHERWISE.
11. WHERE BACK OR SIDE SPLASHES OCCUR IMMEDIATELY BELOW WINDOW OPENINGS, COORDINATE THE HEIGHT AND DETAILS OF THE SPLASH WITH THE FINISH CARPENTRY SUBCONTRACTOR. WOOD APRON TRIM AT SUCH LOCATIONS SHALL BE REPLACED BY THE SPLASH COMPONENT. REFER TO DETAILS.
12. COUNTERTOPS AT ALL GENERAL CLASSROOMS, OFFICES, AND OTHER NON-SCIENCE SPACES SHALL BE TYPE 'CT-PL' TYPE UNLESS SPECIFICALLY NOTED. REFER TO CASEWORK SPECIFICATIONS.
13. COUNTERTOPS AT SCIENCE LABORATORY CLASSROOMS, INCLUDING BUT NOT LIMITED TO BIOLOGY, CHEMISTRY, ENVIRONMENTAL SCIENCE, AND PHYSICS LABORATORIES, RELATED PREP ROOMS, AND ART ROOMS SHALL BE TYPE 'CT-ER' UNLESS SPECIFICALLY NOTED. REFER TO CASEWORK SPECIFICATIONS.
14. UNLESS SPECIFICALLY IDENTIFIED BY TYPE, LOOSE FURNISHINGS INCLUDING STOOLS, CHAIRS, DESKS AND TABLES SHOWN DASHED ARE NOT IN CONTRACT.
15. WHERE CABINETS ARE LOCATED WITH FIN-TUBE RADIATION HEATING BEHIND, THE CABINETS CARCASS SHALL BE FABRICATED TO PROVIDE FOR UNRESTRICTED MOVEMENT OF AIR FROM THE TOE KICK BELOW THE CABINET, UNDER THE CABINET BOTTOM, TO THE SPACE BEHIND THE CABINETS AT THE FIN-TUBE HEATING. THE CASEWORK MANUFACTURER SHALL PROVIDE 1/8" THK PERFORATED STEEL GRILLES WITH FACTORY-APPLIED BLACK BAKED ENAMEL FINISH AT THE TOE KICK FOR FULL WIDTHS OF CABINETS, AND 4" WIDE PENCIL-PROOF, CLEAR ANODIZED ALUMINUM GRATINGS IN FRAMES AT THE COUNTER LEDGE. SEE PLANS FOR LENGTHS OF GRATINGS.
16. FUME HOODS AND RELATED BASE CABINETS SHALL BE PROVIDED AND INSTALLED BY THE LABORATORY EQUIPMENT SUBCONTRACTOR. CASEWORK BASE CABINETS SHALL MATCH THE PRODUCTS PROVIDED BY THE CASEWORK SUBCONTRACTOR IN EVERY REGARD.
17. SERVICE FITTINGS ARE WITHIN FUME HOODS INCLUDING BUT NOT LIMITED TO GAS, WATER, AND COMPRESSED AIR, SHALL BE PROVIDED AND INSTALLED IN THE HOOD EQUIPMENT BY THE LABORATORY EQUIPMENT SUBCONTRACTOR. FINAL CONNECTION OF UTILITIES TO THE FITTINGS SHALL BE COMPLETED BY THE PLUMBING SUBCONTRACTOR.
18. WHERE ELECTRICAL OR DATA OUTLETS ARE INDICATED IN CASEWORK, ROUGH OPENINGS FOR OUTLET BOXES SHALL BE FACTORY PROVIDED. JUNCTION BOXES AND DEVICES SHALL BE INSTALLED BY THE ELECTRICAL SUBCONTRACTOR.
19. WHERE SERVICE FITTINGS ARE INDICATED IN CASEWORK INCLUDING BUT NOT LIMITED TO GAS, WATER, AND COMPRESSED AIR, THEY SHALL BE PROVIDED AND INSTALLED IN THE CASEWORK BY THE CASEWORK SUBCONTRACTOR. FINAL CONNECTION OF UTILITIES TO THE FITTINGS SHALL BE COMPLETED BY THE PLUMBING TRADE CONTRACTOR.
20. WHERE RESIN SINKS ARE INDICATED IN TYPE CT-ER COUNTERTOPS, THEY SHALL BE PROVIDED AND INSTALLED BY THE CASEWORK SUBCONTRACTOR. FINAL CONNECTION OF DRAIN PIPING SHALL BE COMPLETED BY THE PLUMBING SUBCONTRACTOR.
21. WHERE STAINLESS STEEL SINKS ARE INDICATED IN TYPE CT-PL OR CT-ER COUNTERTOPS, THEY SHALL BE PROVIDED AND INSTALLED BY THE PLUMBING SUBCONTRACTOR. OPENINGS FOR SUCH SINKS SHALL BE PROVIDED BY THE CASEWORK SUBCONTRACTOR BASED ON TEMPLATE INFORMATION PROVIDED BY OR COORDINATION WITH THE PLUMBING SUBCONTRACTOR.
22. FIRE EXTINGUISHERS INDICATED AT SAFETY CABINETS SHALL BE PROVIDED AND INSTALLED BY THE FIRE PROTECTION SPECIALTIES SUBCONTRACTOR.
23. WHERE CONTROLS INCLUDING, BUT NOT LIMITED TO PLUMBING VALVES, CLEANOUTS, OR ELECTRICAL OR DATA CONDUCTORS AND CABLING RUN THROUGH BUS-WAYS OR CHASES CONCEALED BEHIND OR WITHIN MILLWORK, ACCESS PANELS SHALL BE PROVIDED IN THE MILLWORK TO PROVIDE ACCESS TO SUCH UTILITIES. ACCESS PANELS SHALL BE OF THE SAME MATERIAL AND FINISH AS THE ADJACENT CABINETRY, AND SHALL BE FACTORY CREATED. FIELD CUTTING SHALL NOT BE PERMITTED. PANELS SHOULD BE MINIMUM 12' X 12' INCHES IN SIZE, AND SHALL BE SECURED IN PLACE FLUSH WITH THE ADJACENT CABINET BODY, USING PAN HEAD STAINLESS STEEL FINISH PHILIPS HEAD SCREWS WITH STAINLESS STEEL FINISHED WASHERS AT NO MORE THAN 12" ON CENTER AROUND THE PERIMETER OF THE ACCESS PANEL.

CASEWORK GENERAL NOTES

1. CABINET DIMENSIONS INDICATED ARE NOMINAL AND MAY VARY SLIGHTLY BY MANUFACTURER; HOWEVER COUNTERTOP HEIGHTS AT ACCESSIBLE CABINETS SHALL BE AS INDICATED, AND NO HIGHER THAN 2'-10" ABOVE FLOOR AT ANY LOCATION, REGARDLESS OF 'OUT OF LEVEL' FLOOR CONDITIONS.
2. REFER TO CASEWORK LEGEND SHEETS FOR CABINET TYPES DESIGNATED ON THESE PLANS AND ELEVATIONS.
3. FIELD-VERIFY ALL CLEAR WALL DIMENSIONS PRIOR TO FABRICATING CASEWORK.
4. PROVIDE SCRIBE TRIM AT ALL CABINETS MEETING ADJACENT WALL CONSTRUCTION UNLESS SPECIFICALLY INDICATED AS OTHERWISE.
5. PROVIDE FILLER / SCRIBE TRIM AT EACH CABINET MEETING ADJACENT CABINETS AT 90 DEGREE INTERIOR CORNERS UNLESS SPECIFICALLY INDICATED AS OTHERWISE.
6. ALL CABINETS SHALL FEATURE FULLY FINISHED SIDES AND BACKS WHERE EXPOSED TO VIEW, WHETHER SPECIFICALLY INDICATED OR NOT.
7. THE GENERAL CONTRACTOR / CONSTRUCTION MANAGER AND THE CASEWORK SUBCONTRACTOR SHALL COORDINATE INSTALLATION OF CONCEALED BLOCKING REQUIRED FOR WALL CABINET AND ADJUSTABLE SHELVING STANDARD INSTALLATION WITH ROUGH CARPENTRY SUBCONTRACTOR TO ASSURE PROPER PLACEMENT OF BLOCKING.
8. UNLESS SPECIFICALLY INDICATED, RESILIENT BASE SHALL BE INSTALLED AT BASES OF ALL TOE KICKS AND FLUSH-CONFIGURATION CABINETS. REFER TO FINISH SCHEDULE AND INDEX OF FINISHES FOR BASE TYPES. BASE TO BE INSTALLED BY RESILIENT FLOORING SUBCONTRACTOR.
9. COORDINATE CASEWORK DIMENSIONS WITH APPLIANCES SUBMITTED AND ACCEPTED FOR USE. CONFIRM ALL APPLIANCE DIMENSIONS, INSTALLATION REQUIREMENTS, AND REQUIRED CLEARANCES PRIOR TO FABRICATION. INDICATE CLEARANCES AND UNIQUE REQUIREMENTS IN SHOP DRAWINGS.
10. PROVIDE BACK AND SIDE SPLASHES AT ALL COUNTERTOPS AT ADJACENT WALL CONSTRUCTION AND TALL CABINET BODIES. BACK AND SIDE SPLASHES SHALL BE FIELD APPLIED AND MATCH THE MATERIAL AND COLOR OF THE COUNTERTOP UNLESS SPECIFICALLY NOTED OTHERWISE.
11. WHERE BACK OR SIDE SPLASHES OCCUR IMMEDIATELY BELOW WINDOW OPENINGS, COORDINATE THE HEIGHT AND DETAILS OF THE SPLASH WITH THE FINISH CARPENTRY SUBCONTRACTOR. WOOD APRON TRIM AT SUCH LOCATIONS SHALL BE REPLACED BY THE SPLASH COMPONENT. REFER TO DETAILS.
12. COUNTERTOPS AT ALL GENERAL CLASSROOMS, OFFICES, AND OTHER NON-SCIENCE SPACES SHALL BE TYPE "CT-PL" TYPE UNLESS SPECIFICALLY NOTED. REFER TO CASEWORK SPECIFICATIONS.
13. COUNTERTOPS AT SCIENCE LABORATORY CLASSROOMS, INCLUDING BUT NOT LIMITED TO BIOLOGY, CHEMISTRY, ENVIRONMENTAL SCIENCE, AND PHYSICS LABORATORIES, RELATED PREP ROOMS, AND ART ROOMS SHALL BE TYPE 'CT-ER' UNLESS SPECIFICALLY NOTED. REFER TO CASEWORK SPECIFICATIONS.
14. UNLESS SPECIFICALLY IDENTIFIED BY TYPE, LOOSE FURNISHINGS INCLUDING STOOLS, CHAIRS, DESKS AND TABLES SHOWN DASHED ARE NOT IN CONTRACT.
15. WHERE CABINETS ARE LOCATED WITH FIN-TUBE RADIATION HEATING BEHIND, THE CABINETS CARCASS SHALL BE FABRICATED TO PROVIDE FOR UNRESTRICTED MOVEMENT OF AIR FROM THE TOE KICK BELOW THE CABINET, UNDER THE CABINET BOTTOM, TO THE SPACE BEHIND THE CABINETS AT THE FIN-TUBE HEATING. THE CASEWORK MANUFACTURER SHALL PROVIDE 1/8" THK PERFORATED STEEL GRILLES WITH FACTORY-APPLIED BLACK BAKED ENAMEL FINISH AT THE TOE KICK FOR FULL WIDTHS OF CABINETS, AND 4" WIDE PENCIL-PROOF, CLEAR ANODIZED ALUMINUM GRATINGS IN FRAMES AT THE COUNTER LEDGE. SEE PLANS FOR LENGTHS OF GRATINGS.
16. FUME HOODS AND RELATED BASE CABINETS SHALL BE PROVIDED AND INSTALLED BY THE LABORATORY EQUIPMENT SUBCONTRACTOR. CASEWORK BASE CABINETS SHALL MATCH THE PRODUCTS PROVIDED BY THE CASEWORK SUBCONTRACTOR IN EVERY REGARD.
17. SERVICE FITTINGS ARE WITHIN FUME HOODS INCLUDING BUT NOT LIMITED TO GAS, WATER, AND COMPRESSED AIR, SHALL BE PROVIDED AND INSTALLED IN THE HOOD EQUIPMENT BY THE LABORATORY EQUIPMENT SUBCONTRACTOR. FINAL CONNECTION OF UTILITIES TO THE FITTINGS SHALL BE COMPLETED BY THE PLUMBING SUBCONTRACTOR.
18. WHERE ELECTRICAL OR DATA OUTLETS ARE INDICATED IN CASEWORK, ROUGH OPENINGS FOR OUTLET BOXES SHALL BE FACTORY PROVIDED. JUNCTION BOXES AND DEVICES SHALL BE INSTALLED BY THE ELECTRICAL SUBCONTRACTOR.
19. WHERE SERVICE FITTINGS ARE INDICATED IN CASEWORK INCLUDING BUT NOT LIMITED TO GAS, WATER, AND COMPRESSED AIR, THEY SHALL BE PROVIDED AND INSTALLED IN THE CASEWORK BY THE CASEWORK SUBCONTRACTOR. FINAL CONNECTION OF UTILITIES TO THE FITTINGS SHALL BE COMPLETED BY THE PLUMBING TRADE CONTRACTOR.
20. WHERE RESIN SINKS ARE INDICATED IN TYPE CT-ER COUNTERTOPS, THEY SHALL BE PROVIDED AND INSTALLED BY THE CASEWORK SUBCONTRACTOR. FINAL CONNECTION OF DRAIN PIPING SHALL BE COMPLETED BY THE PLUMBING SUBCONTRACTOR.
21. WHERE STAINLESS STEEL SINKS ARE INDICATED IN TYPE CT-PL OR CT-ER COUNTERTOPS, THEY SHALL BE PROVIDED AND INSTALLED BY THE PLUMBING SUBCONTRACTOR. OPENINGS FOR SUCH SINKS SHALL BE PROVIDED BY THE CASEWORK SUBCONTRACTOR BASED ON TEMPLATE INFORMATION PROVIDED BY OR COORDINATION WITH THE PLUMBING SUBCONTRACTOR.
22. FIRE EXTINGUISHERS INDICATED AT SAFETY CABINETS SHALL BE PROVIDED AND INSTALLED BY THE FIRE PROTECTION SPECIALTIES SUBCONTRACTOR.
23. WHERE CONTROLS INCLUDING, BUT NOT LIMITED TO PLUMBING VALVES, CLEANOUTS, OR ELECTRICAL OR DATA CONDUCTORS AND CABLING RUN THROUGH BUS-WAYS OR CHASES CONCEALED BEHIND OR WITHIN MILLWORK, ACCESS PANELS SHALL BE PROVIDED IN THE MILLWORK TO PROVIDE ACCESS TO SUCH UTILITIES.
