

AP Research Summer Assignment 26-27

Begin thinking hard about a possible research question for AP Research/Biomed 3.

What should that look like?

1. Interesting to you that is going to help you grind for the year.
2. Feasible for a student at BSM. That doesn't mean you won't find outside experts to help!
3. Finds a gap in current knowledge, ideally.
4. Is authentic.
5. The course can find you creating, exploring, or explaining.

This list could and will go on as you refine your question.

I've attached some "to dos" to this document below.

- Read through the [PREP Journal](#) directions: Notebook and Digital.
- I handed out a notebook to you or see me to grab one..
- Create a Google Drive Folder - (**NOT A SHARED DRIVE**) and share it (**with Mr. P**) for all your "stuffs". You will see a list in the PReP directions...keep scrolling
- Start generating a list of possible research questions by reading and reading and creating an annotated bibliography (build one in your Shared Google Drive Folder).
- Look through common sources of news and wonder. Could be something in the Star Tribune, New York Times, or even the Sun Sailor that could prompt a curiosity. But you gotta look.
