

# 2026 BRONCO CLUB SUMMER CAMP THEMES

## Week 1 - MAD ABOUT MOTION!

Our campers will become junior scientists and museum problem-solvers as they dive into the exciting world of motion and machines! Through hands-on experiments, they'll explore how magnets attract objects, how robots move using tiny vibrations, and how force makes a golf ball roll across a course. They'll test balance by building creative sculptures and use motion to launch pom-poms through the air! From bouncing balls to buzzing robots, every day brings a new adventure filled with science, movement, and fun!

## Week 3 - COLORFUL CHAOS: ART IN MOTION

Our young museum artists-in-training will step into the world of art and math as they explore how famous artists used shapes in creative ways - painting oversized flowers like Georgia O'Keeffe, designing colorful characters with Joan Miró's playful shapes, and spotting squares around them just like Frank Stella. Campers will compose shape-based collages inspired by Kazimir Malevich, fill their artwork with amazing patterns like Yayoi Kusama, and bring movement and color to life through spiral art inspired by Henri Matisse. From swirling lines to bold blocks of color, it is a week of discovery, imagination, and math-filled masterpieces.

## Week 5 - CREATIVE COMMUNICATORS!

Communication is on our Week 5 agenda! Campers will dive into the exciting world of how museums share stories through words, images, and design. They'll make eye-catching billboards to promote exhibits, perform their own fun advertisements, and step into the role of museum guides while boosting their vocabulary. Finally, they'll explore the power of persuasive marketing by designing their own museum souvenirs and crafting clever tags to entice visitors. Come join us for a week of creativity, imagination, and fun—where every message matters!

## Week 7 - UNLOCK THE ART: MUSEUM MASTERPIECES

This week, campers will step into the world of art and adventure as they create their own masterpieces inspired by the Mona Lisa and decode hidden messages through secret picture writing—just like hieroglyphics! They'll work together to design and build a museum exhibit, learning the importance of step-by-step planning along the way. Campers will also use their imaginations and speaking skills to describe a sunken treasure scene as if they were really there, then sculpt a creation that tells a mysterious story through dialogue. It's a busy week full of collaboration, creativity, and friendship!

## Week 2 - ANIMALS AND NATURE? YES, PLEASE!

Campers will explore how life sciences help scientists, and how museums teach people about animals and the natural world. They'll discover the strategies predators and prey use to survive and learn how animals hunt, escape, and adapt to their environments. Campers will create colorful mixed-media posters to educate museum visitors about endangered species and why these animals need our protection. They'll also join their own "ant team," working together to build and balance a tower—just like ants collaborating to create strong underground colonies. Week 2 is a week full of teamwork and fun!

## Week 4 - THINK IT, MAKE IT, TEST IT!

Week 4 fun incorporates brainstorming, creativity, teamwork, and hands-on challenges to bring each idea to life. Our campers will reimagine the design of a shopping cart, dive into geometry as they examine how shapes and structures come together to build interactive play spaces, and explore angles while designing a one-of-a-kind maze. They'll also take on a catapult challenge that will have everyone cheering as they test their creations to see how far, and how high, their launch can go!

## Week 6 - STARS, STRIPES, AND SMILES!

Blending math and art, students will explore patterns, shapes, and symmetry inspired by cultures around the world—creating toothpick art, designing mazes, exploring symbols and prints, and crafting their own mandalas. It's sure to be a spectacular week filled with creativity, laughter, friendship, and star-spangled smiles! Our Week 6 campers will be bursting with red, white, and blue creativity as campers celebrate summertime fun through games, hands-on projects, and All-American imagination.

## Week 8 - PARKITECTS!

We all love parks--skate parks, water parks, sculpture parks, amusement parks, and yes...even dog parks! Using collaboration and teamwork, campers will put their creative genius to work designing recreational parks that are bigger, bolder, and more imaginative than anyone ever imagined. Who knows? These could be the parks of our future!!

## Week 9 - DETOURS AND DISCOVERIES

Buckle up and join us as we take a road-trip adventure! Campers will dive into all kinds of travel entertainment and play classic road-trip games as a team. They'll get creative designing their own billboards, race through a lively license plate game, and craft personalized license plate keychains. Along the way, they'll discover quirky roadside attractions from around the world--and even build their own model of a vacation landmark. Adventure, creativity, and tons of fun await on this open-road journey!
