Audit → Revise → Review → Repeat

# Audit

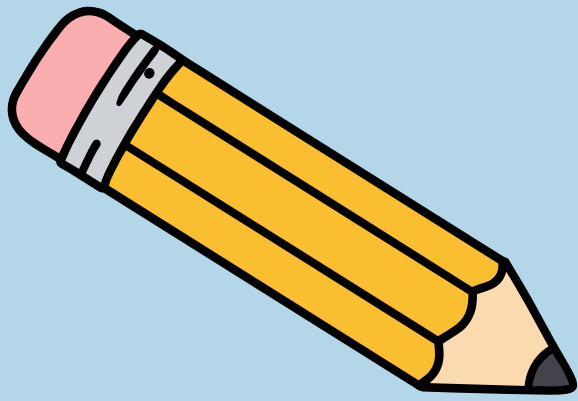

Start by examining your data or process closely. Look for errors, gaps, inconsistencies, or anything that doesn't align with expectations.

Think:

“What's off?”

*The Pirate Method*

# Revise

Make the necessary corrections and updates based on what you found during the audit. This is where action happens.

Think:

“Fix it.”

*The Pirate Method*

## *Review*

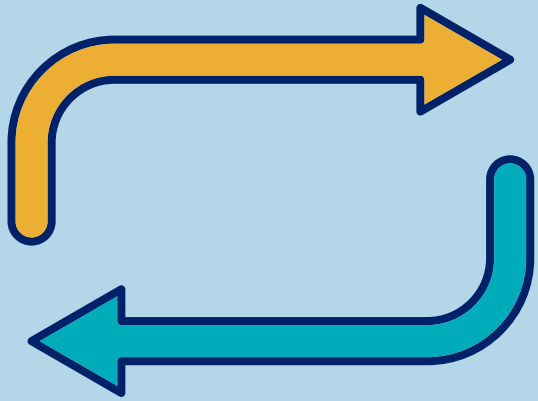

Double-check your revisions to ensure accuracy and completeness. Validate that corrections were applied correctly and didn't create new issues.

Think:

“Did we get it right?”

*The Pirate Method*

# Repeat

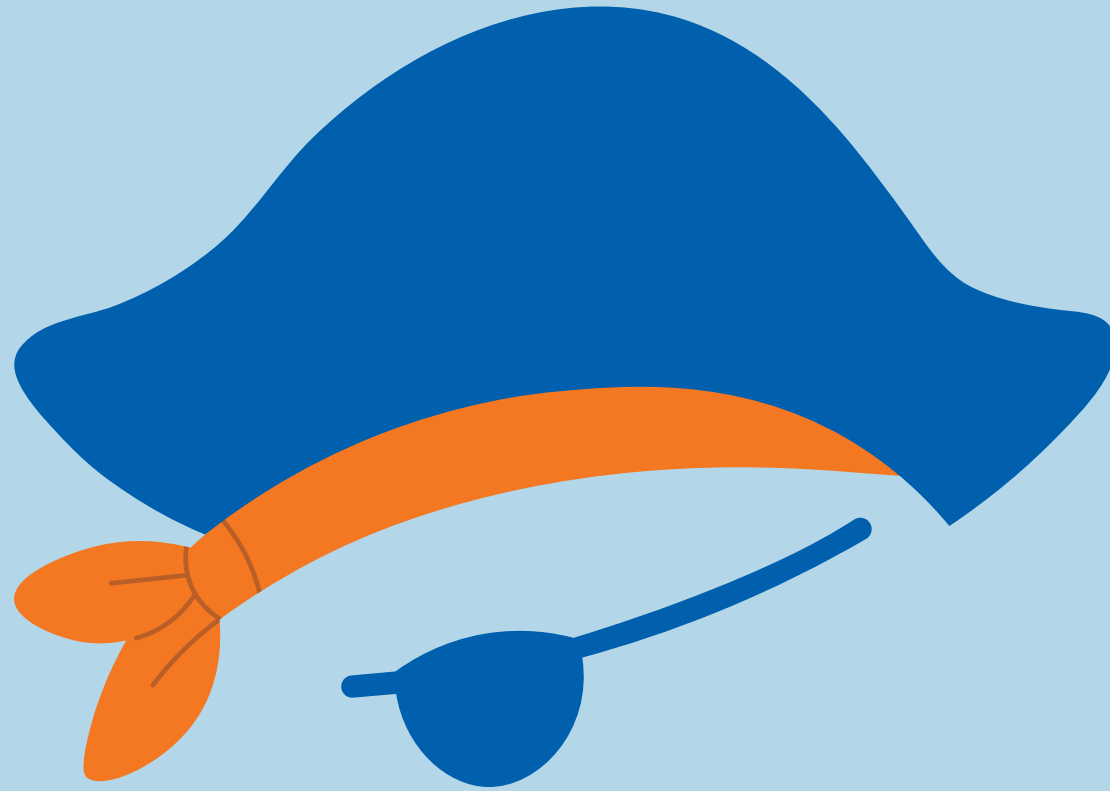

Continue the cycle regularly, especially after updates, new data loads, or approaching deadlines, to maintain clean, reliable data over time.

Think:

“Do it again, consistently.”
