

THE FUTURE STARTS HERE

INNOVATION LAB

Coming Fall 2026

Academic innovation is also accelerating through the development of The Morris Catholic Innovation Lab, made possible through the generosity of alumnus William Pote '85. Morris Catholic's award-winning competitive robotics team currently operates in a former chemistry lab. It will be turned into a needed modern, purpose-built environment not only for robotics, but also for students in the Advanced Science Academy and the school's growing engineering program.

Strengthening this effort, Morris Catholic was also awarded a competitive design grant from Inventionland of Pittsburgh, Pennsylvania, a national leader in creating immersive, creativity-driven learning environments. The space will be thoughtfully reimaged to inspire student creativity, hands-on fabrication, applied research, and cross-disciplinary STEM learning. The Innovation Lab will prepare Morris Catholic students for innovation-driven futures.

"Supporting STEM and the Innovation Lab at Morris Catholic is an investment in our students' futures. It's an opportunity to unlock the entrepreneurial and innovative spirit and problem solving skills within our students -- valuable qualities in today's world."

— William Pote '85
