**BUILDING THINKING CLASSROOMS  
ENGAGING STUDENTS IN DEEP  
THINKING AND ACADEMIC DISCOURSE**

*Presented by Dr. Annette Rouleau,  
Mathematics Education Consultant*

This interactive session is designed for K–8 teachers and explores the core principles of Building Thinking Classrooms. Grounded in the research of Peter Liljedahl, the session focuses on creating environments where students actively engage in meaningful problem-solving and collaborative thinking. Participants will experience and reflect on strategies that promote curiosity, persistence, and shared ownership of learning, while considering how to shift classroom norms toward deeper understanding. Drawing from her own classroom experiences with the Building Thinking Classrooms framework, Annette will model strategies that sustain the flow of a Thinking Classroom, where the focus is on learning as a process, not a product. Attendees will leave with concrete ideas and a clearer vision for fostering classrooms where thinking is visible, valued, and sustained.
