April 21, 2026

Richard C. Ledwith
Town Manager
Town of West Hartford
rickl@westhartfordct.gov

Dear Rick:

Subject: Town of West Hartford
ATESD Notice of Approval

The Office of the State Traffic Administration (OSTA) has approved the attached Automated Traffic Enforcement Safety Device (ATESD) Plan for the Town of West Hartford.

This approval is valid for **three (3) years** from the date the first ATESD in the approved plan becomes operational. The Town of West Hartford must notify OSTA at DOT.OSTA@ct.gov within 14 days from the date when the first ATESD becomes operational.

The Town of West Hartford may submit a modification to the approved ATESD Plan to use ATESDs at additional locations, provided that the approved ATESD Plan has not expired. All modifications to the ATESD Plan must follow the same submittal, review, and approval processes as the initial ATESD Plan submission. Approval for any modification to the ATESD Plan would also expire on the same date the originally approved plan expires.

As a reminder, there are initial and annual reporting requirements associated with [Public Act 23-116](#). If the Town of West Hartford fails to report data on any ATESD location, the OSTA will decline to re-authorize such ATESD location once the initial plan has expired.

An encroachment permit must be obtained from the Department of Transportation's District 1 Office at 1107 Cromwell Avenue, Rocky Hill, CT 06067 (Attn: Mr. Timothy Isyk, (860) 258-4541) prior to performing any work within the State highway right-of-way.

Sincerely,

Anna S. Mermelstein, P.E.
Executive Director
Office of the State Traffic Administration

Letter to OSTA from the Town of West Hartford

December 19, 2025

Anna Mermelstein
Executive Director
Office of State Traffic Administration
Connecticut Department of Transportation
2800 Berlin Turnpike
Newington, CT 06131

Ms. Mermelstein:

The Town of West Hartford is pleased to submit its Automated Traffic Enforcement Safety Device (ATESD) Plan in accordance with Connecticut Public Act 23-116, An Act Implementing the Recommendations of the Vision Zero Council.

In an effort to avoid recurring tragedy on our roadways, the West Hartford Town Council adopted the Vision Zero initiative in support of safe, healthy, and equitable mobility on January 10, 2023. As part of that initiative, West Hartford set a goal to eliminate all fatal and severe injury crashes by 2033. The deployment of speed cameras is a significant step towards achieving the goal.

Our Vision Zero Action Plan recommends many actions, including the implementation of a speed camera program to reduce crashes through education, improved driver behavior, and adherence to sensible motorist speeds. West Hartford's town management firmly supports camera use as a proven safety countermeasure.

In collaboration with our consultant team, VHB and VN Engineers, the Town of West Hartford completed all of the necessary work to produce this comprehensive ATESD plan. This work includes among other items, obtaining traffic counts, compiling crash data, compiling police speed enforcement activities, and conducting a comprehensive public outreach program. This work, combined with a significant speed camera location screening process, produced our plan, which includes 20 requested bi-directional speed camera locations. With your approval, we intend to deploy bi-directional speed cameras at 15 locations.

Our hope is that you concur with the findings of our enclosed ATESD plan. We look forward to your feedback and offer to meet and discuss any questions/concerns that you may have.

Please contact Duane Martin, Director of Community Development, as needed at 860-561-7539 or duanem@westhartfordct.gov.

Regards,

Richard C. Ledwith
Town Manager

Required Documents: ATESD Municipal Ordinance

**ORDINANCE AUTHORIZING THE USE OF AUTOMATED TRAFFIC ENFORCEMENT SAFETY
DEVICES**

WHEREAS, high vehicle speeds have been identified as one of the leading causes of serious and fatal injuries in car crashes; and

WHEREAS, the Town seeks to improve the safety of its roadways, particularly in school zones, pedestrian safety zones, and other areas with heightened traffic risks; and

WHEREAS, on January 10, 2023, the Town Council adopted the Vision Zero Initiative in support of safe, healthy, and equitable mobility with the goal of eliminating fatalities and severe injuries on West Hartford streets; and

WHEREAS, speed safety cameras have been recognized as an effective countermeasure by the United States Federal Highway Administration and have been demonstrated to significantly reduce the occurrence and severity of car crashes, thereby enhancing road safety; and

WHEREAS, section 14-307c of the General Statutes authorizes the Town of West Hartford to implement automated traffic enforcement safety devices at designated locations, provided that the locations of such devices will be identified and subsequently submitted to and approved by the Connecticut Department of Transportation; and

WHEREAS, in furtherance of its Vision Zero Initiatives the Town wishes to adopt a traffic enforcement safety device program.

NOW, THEREFORE, BE IT ORDAINED BY THE TOWN COUNCIL OF WEST HARTFORD THAT:

Chapter 168, Part 2 of the Code of the Town of West Hartford is hereby amended by the addition of the following thereto:

Article VII Automated Traffic Enforcement Safety Devices

§ 168-37 Definitions and interpretation.

All terms used in this article shall be interpreted in accord with the definitions thereof set forth in C.G.S. Title 14, as that title may be amended or recodified from time to time, except that the following defined terms shall have the meaning indicated herein:

AUTOMATED TRAFFIC ENFORCEMENT SAFETY DEVICE

A device designed to detect and collect evidence of alleged traffic violations by recording images that capture the license plate number, date, time, and location of a motor vehicle that (i) exceeds the posted speed limit by ten (10) or more miles per hour, or (ii) fails to stop such vehicle when facing a steady red signal on a traffic control signal.

AUTOMATED TRAFFIC ENFORCEMENT SAFETY DEVICE OPERATOR

A person who is trained and certified to operate an automated traffic enforcement safety device.

PEDESTRIAN SAFETY ZONE

An area designated by the Office of State Traffic Administration or the local traffic authority of the Town pursuant to C.G.S. §14-307a.

PERSONALLY IDENTIFIABLE INFORMATION

Information created or maintained by the Town or a vendor that identifies or describes an owner and includes, but need not be limited to, the owner's address, telephone number, license plate number, photograph, bank account information, credit card number, debit card number, or the date, time, location, or direction of travel on a highway.

SCHOOL ZONE

An area designated by the Office of State Traffic Administration or the local traffic authority of the Town pursuant to C.G.S. §14-212b.

VENDOR

A person who provides services to the Town under this article and operates, maintains, leases, or licenses an automated traffic enforcement safety device; or is authorized to review and assemble the recorded images captured by an automated traffic enforcement safety device and forward such recorded images to the Town.

§ 168-38 Contractual services.

The Town may enter into agreements for contractual services, including vendors for the design, installation, operation, or maintenance of automated traffic enforcement safety devices. If a vendor designs, installs, operates, or maintains an automated traffic enforcement safety device, the vendor's fees may not be contingent on the number of citations issued or fines pursuant to this article.

§ 168-39 Operation of automated traffic enforcement safety devices.

An automated traffic enforcement safety device operator shall operate all automated traffic enforcement safety devices.

§ 168-40 Violation.

- A. The owner of a motor vehicle violates this ordinance if the person operating such motor vehicle:
 1. Exceeds the posted speed limit by ten or more miles per hour, and such operation is detected by an automated traffic enforcement safety device; or

2. Fails to stop such motor vehicle when facing a steady red signal on a traffic control signal and such failure is detected by an automated traffic enforcement safety device.
- B. Automated traffic enforcement safety devices shall be used solely to identify violations of this article.
- C. For the first thirty days after a location is equipped with an operational automated traffic enforcement safety device, the owner of a motor vehicle allegedly committing a violation of such ordinance that is detected by such device shall receive a written warning instead of a citation.

§ 168-41 Penalty for violation.

- A. Whenever an automated traffic enforcement safety device detects and produces recorded images of a motor vehicle allegedly violating this ordinance, a sworn officer of the police department or an employee of the Town as designated by the local traffic authority shall review and approve the recorded images provided by such device. If, after such review, the member or employee determines that there are reasonable grounds to believe that a violation occurred, the member or employee may issue a citation to the owner of such motor vehicle by first class mail.
- B. A citation under this article shall include the following:
1. The name and address of the owner of the motor vehicle;
 2. The number plate of the motor vehicle;
 3. The violation charged;
 4. The location of the automated traffic enforcement safety device and the date and time of the violation;
 5. A copy of or information on how to view, through electronic means, the recorded images that captured the alleged violation;
 6. A statement or electronically generated affirmation by the member or employee who viewed the recorded images and determined that a violation occurred;
 7. Verification that the automated traffic enforcement safety device was operating correctly at the time of the alleged violation and the date of the most recent calibration check performed pursuant to the Public Act;
 8. The amount of the fine imposed and how to pay such fine; and
 9. The right to contest the violation and request a hearing pursuant to C.G.S. § 7-152c.
- C. In the case of an alleged violation involving a motor vehicle registered in Connecticut, the citation shall be sent by first-class mail not later than thirty days after the identity of the owner is determined and shall be mailed to the address of the owner that is in the records of the Department of Motor Vehicles. In the case of an alleged violation

involving a motor vehicle registered in another jurisdiction, the citation shall be sent by first-class mail not later than thirty days after the identity of the owner is determined and shall be mailed to the address of the owner that is in the records of the official in the other jurisdiction issuing such registration.

- D. A citation shall be invalid unless mailed to an owner not later than sixty days after the alleged violation.

§ 168-42 Fine for violation.

- A. The Town shall impose a fine on the owner of a motor vehicle that violates this ordinance.
- B. The fine for a first violation of this ordinance shall be fifty dollars. The fine for each subsequent violation of this article shall be seventy-five dollars.
- C. Payment of a fine and any associated fees may be made by electronic means, with a reasonable processing fee, not to exceed fifteen dollars, imposed for the costs associated with the electronic processing.
- D. Any funds received by the Town from fines imposed pursuant to this ordinance shall be used for the purposes of improving transportation mobility, investing in transportation infrastructure improvements, or paying the costs associated with the use of automated traffic enforcement safety devices in the Town.

§ 168-43 Appeal.

Any owner issued a fine for violating the provisions of this article may, within ten days of the receipt of the fine, appeal in writing to a citation hearing officer in accordance with Section 1-10 of the Town Code.

§ 168-44 Defenses.

The defenses available to the owner of a motor vehicle that is alleged to have committed a violation of this article shall include any one or more of the following:

- A. The operator was driving an emergency vehicle in accordance with the applicable provisions of C.G.S. § 14-283.
- B. The traffic control signal was inoperative, which is observable in the recorded image(s).
- C. The violation was necessary for the operator to comply with an order or direction from a law enforcement officer, which is observable in the recorded image(s).
- D. The violation was necessary to allow the passage of an authorized emergency vehicle, which is observable on the recorded image(s).
- E. The violation took place during a period of time in which the motor vehicle had been reported as being stolen to law enforcement, as defined in C.G.S. §7-294a, and had not yet been recovered prior to the time of the violation.

F. The automated traffic enforcement safety device was not in compliance with the calibration check required pursuant to the applicable provisions of C.G.S. § 14-307c, as amended or recodified from time to time.

§ 168-45 **Disclosure of personally identifiable information.**

- A. Except as otherwise required by law, no personally identifiable information shall be disclosed by the Town or a vendor to any person or entity, including any law enforcement unit, except where the disclosure is made in connection with the charging, collection, and enforcement of the fines imposed pursuant to this ordinance.
- B. No personally identifiable information shall be stored or retained by the Town or a vendor unless such information is necessary for the charging, collection, and enforcement of the fines imposed pursuant to this article.
- C. The Town or vendor shall destroy personally identifiable information and other data that specifically identifies a motor vehicle and relates to a violation of this ordinance not later than thirty days after any fine is collected or the resolution of a hearing conducted for the alleged commission of such violation, whichever is later, except the Town or vendor may retain a portion of personally identifiable information for the limited purpose of determining whether a person committed a second or subsequent violation of such ordinance. The Town or vendor shall destroy any retained portion of personally identifiable information not later than one year after the date of such person's most recent violation.

§ 168-46 **Severability and state supremacy.**

If any section, subsection, sentence, clause, or phrase of this article is for any reason held to be invalid or unconstitutional by any decision of any court of competent jurisdiction, such decision shall not affect the validity of the remaining portions of this article. In the event that any provision of this ordinance conflicts with or is inconsistent with the requirements of chapter 249 of the general statutes, the applicable state law shall govern and supersede the conflicting provision.

P R O C E E D I N G S

(The proceedings began at 6:34 p.m.)

MAYOR CANTOR: All right. I am calling the 6:30 public hearing to order. This is a Resolution Directing the Town Manager to Submit an Automated Traffic Enforcement Safety Device Plan to the Connecticut Department of Transportation for Approval.

And we will begin by roll call.

TOWN CLERK DAVIDOFF: Good evening, Madam Mayor.

06:34:35PM

MAYOR CANTOR: Good evening.

TOWN CLERK DAVIDOFF: Mayor Cantor.

MAYOR CANTOR: Here.

TOWN CLERK DAVIDOFF: Councilor Harris.

DR. HARRIS: Here.

TOWN CLERK DAVIDOFF: Councilor Lazarus.

MS. LAZARUS: Here.

TOWN CLERK DAVIDOFF: Councilor Lyons.

MR. LYONS: Here.

TOWN CLERK DAVIDOFF: Councilor McGinnis.

06:34:43PM

MS. MCGINNIS: Here.

TOWN CLERK DAVIDOFF: Deputy Mayor Polun.

DEPUTY MAYOR POLUN: Here.

TOWN CLERK DAVIDOFF: Councilor Walters.

MR. WALTERS: Here.

1 TOWN CLERK DAVIDOFF: Councilor Wang.

2 DR. WANG: Here.

3 TOWN CLERK DAVIDOFF: Councilor Wenograd.

4 MR. WENOGRAD: Present.

5 TOWN CLERK DAVIDOFF: All present.

6 MAYOR CANTOR: Wow. Three Ws.

7 Thank you, Mr. Davidoff.

8 All right. We will begin with the
9 presentation. Mr. Ledwith?

10 TOWN MANAGER LEDWITH: Thank you, Madam

06:35:05PM

11 Mayor.

12 Good evening, everyone, members of the town
13 council, colleagues, residents of West Hartford. For
14 the record, I'm Rick Ledwith, Town Manager. Tonight's
15 public hearing concerns a resolution directing the Town
16 Manager to submit the Town's Automated Traffic
17 Enforcement Safety Device Plan to the State of
18 Connecticut and Federal Highway Administration for
19 their review and approval.

20 We appreciate the Council's consideration of

06:35:27PM

21 this matter and the continued engagement of our
22 residents through this process.

23 This program is a direct extension of the
24 Town's Vision Zero commitment, our shared goal to
25 eliminate all traffic-related fatalities and serious

1 injuries by focusing on safer streets, safer speeds,
2 and safer behaviors. Excessive speed remains one of
3 the most consistent factors in serious crashes, and
4 addressing it is a necessary component of protecting
5 pedestrians, cyclists, and drivers alike, particularly
6 from areas with a history of speeding and crashes.

7 Importantly, this plan reflects extensive
8 public input. Prior to bringing this resolution
9 forward, the Town hosted two public information
10 sessions to explain the program and outline where and

06:36:18PM

11 how the cameras would be used and hear questions and
12 concerns from residents.

13 This program has been before our Community
14 Planning and Economic Development Committee a couple of
15 times, which has helped shape the framework before you
16 this evening. That feedback has reinforced the
17 importance of transparency and an emphasis on safety
18 rather than revenue.

19 So, as a quick introduction, I want to
20 introduce our project team with us this evening. So,

06:36:50PM

21 we have our assistant police chief, ACT as we like to
22 refer to him. Chief Riddick is running a civilian
23 police review board across the parking lot. But the
24 police has been -- police have been actively involved
25 all the way through this process.

1 We have our Director of Community
2 development, Duane Martin; we have our engineer
3 assigned to the project and all Vision Zero projects,
4 Parker Sorenson; and then we have our consultant, Dan
5 Amstutz from VHB, who have been involved from the
6 get-go as well; and we have our town engineer, Greg
7 Sommer, who's watching from home but very much a part
8 of what we have been doing.

9 And together, we've been working for the
10 better part of a year to develop a comprehensive and

06:37:37PM

11 thoughtful plan to improve traffic safety here in West
12 Hartford.

13 So, why speed management cameras? High
14 vehicle speeds pose a serious risk to pedestrians,
15 cyclists, and drivers alike. The data is clear. Speed
16 is a leading factor in fatal and serious injury
17 crashes. West Hartford is committed to the principle
18 that traffic deaths and serious injuries are
19 unacceptable and preventable. That's why we're
20 proposing the implementation of a Speed Camera

06:38:14PM

21 Management Program as part of our Vision Zero strategy.

22 Studies show that automated enforcement can
23 reduce fatal and serious injury crashes by up to 40%
24 and significantly decrease excessive speeding. These
25 devices are proven tools to encourage safer driving

1 behavior.

2 So, in terms of program overview, the
3 foundation of this initiative is House Bill 5917, which
4 was signed into law in June of 2023, which authorizes
5 the use of speed and red light running cameras in
6 specific locations: traffic signals, school zones,
7 pedestrian safety zones, as well as other designated
8 areas.

9 These devices will record violations,
10 capturing license plate data, time, date, and location.

06:39:07PM

11 And thanks to the Federal Safe Streets and Roads for
12 All grant, West Hartford will launch an 18-month pilot
13 program with speed management cameras at approximately
14 15 locations starting in mid-2026.

15 Additionally, we've secured a second Safe
16 Streets For All grant which will support an 18-month
17 pilot program for an Automated Red Light Enforcement
18 program. The grant has been executed, and the project
19 begins soon for the red light running program, but that
20 will be subject to the same process we just went

06:39:51PM

21 through with the speed enforcement cameras. So, that
22 will include public meetings as well as adopting the
23 resolution similar to what we hope to do this evening.

24 Requirements for implementation was the --
25 starts with the town ordinance. And you'll recall that

1 we adopted that ordinance back in April of 2025, which
2 included a public hearing. The Automated Traffic
3 Enforcement Safety Device Plan will include a public
4 hearing, which is happening this evening, approval from
5 the town council following the public hearing later
6 this evening, and then we will send it off to review
7 and approval by the Connecticut Department of
8 Transportation, Office of the State Traffic
9 Administration, and then ultimately off to -- as we've
10 discussed, it is a federal grant, so we will require

06:40:41PM

11 Federal Highway Administration approval and the
12 National Environmental Policy Act documentation.

13 As I mentioned, the town council adopted this
14 ordinance allowing the use of ATESDs on April 8th,
15 consistent with the requirements of the state law. And
16 the ordinance, as I said, permits the use of both speed
17 management cameras and red light running cameras.

18 As we discussed during that process back in
19 April, violations covered under the ordinance would
20 include speeds in excess of ten miles per hour or more

06:41:17PM

21 over the speed limit or failure to stop at a steady red
22 traffic signal when we get to our red light program.
23 Violations are municipal citations issued to the owner
24 of the vehicle, not the driver, so very similar to
25 parking tickets.

1 And per state law, citations are not a moving
2 violation and is not reflected on a driver's driving
3 record. In terms of the review process, a West
4 Hartford Police Department sworn officer or a town
5 employee designated by the local traffic authority will
6 review and approve recorded images before issuing
7 citations. Fines would involve \$50 for the first
8 violation and \$75 for each subsequent violation within
9 one year.

10 A 30-day warning period will be in place

06:42:15PM

11 before fines are issued for each camera location. So,
12 for example, we expect this program to go live sometime
13 in mid-2026. We would roll the program out 30 days in
14 advance of going live in terms of issuing violations,
15 and we would notify the public that we were doing that,
16 and we would be issuing warnings during that 30-day
17 period.

18 Online payment options will be available, and
19 there will be a processing fee not to exceed \$15
20 associated with each ticket. Citations are mailed to

06:42:48PM

21 the vehicle owner's address that is on record at the
22 Department of Motor Vehicles no later than 30 days
23 after the vehicle's owner has been determined.

24 In the case of motor vehicles registered in
25 another state, the citations are mailed within the same

1 time period and to the vehicle owner's address on the
2 registration records of that state. Vehicle owners may
3 appeal the fine within ten days of receipt of the
4 citation.

5 We'll talk a little bit about the use of the
6 funds. And as required by state law, funds collected
7 from fines will be invested directly back into the West
8 Hartford community by supporting transportation safety
9 and mobility improvements, infrastructure enhancements,
10 and then any costs associated with the automated

06:43:41PM

11 enforcement program, so essentially everything Vision
12 Zero related. We expect to be using the funds to
13 support our Vision Zero efforts as we move through the
14 next several years.

15 Vendor fees for installation, operation, or
16 maintenance of the ATESD cannot be contingent on the
17 number of citations issued or fines paid. So, this is
18 not an opportunity to issue as many speeding tickets as
19 possible to potentially increase the revenue that a
20 vendor may receive. Again, we'll talk about the

06:44:19PM

21 citations and violations and the ticketing process.
22 But what is most important to us is improving the
23 safety within our community.

24 So, we'll talk a little bit about privacy
25 now. And I'll read through these bullets really

1 quickly because I do think it's very important to
2 discuss this in a little bit of detail.

3 So, no personally identifiable information
4 shall be disclosed by the Town or a vendor to any
5 person or entity, including any law enforcement unit,
6 except where disclosure is made in connection with
7 charging, collection, and enforcement of the fines. No
8 personally identifiable information shall be stored or
9 retained by the Town or a vendor unless the information
10 is necessary for the charging, collection, and

06:45:11PM

11 enforcement of the fines.

12 The Town or vendor shall destroy any
13 personally identifiable information and other data that
14 specifically identifies a motor vehicle and relates to
15 a violation of the ordinance not later than 30 days
16 after any fine is collected or the resolution of an
17 appeal hearing, whichever is later.

18 The Town or vendor may retain the portion of
19 personally identifiable information for the limited
20 purpose of determining whether a person committed a

06:45:43PM

21 second or subsequent violation of the ordinance. The
22 Town or vendor shall destroy any retained portion of
23 personally identifiable information not later than one
24 year after the date of such person's most recent
25 violation.

1 So, the information obtained through this
2 process can only be used to enforce the speeding
3 violation. It can't be shared with anyone else, can
4 only be used by us and the police department for
5 enforcement of the speeding violation.

6 So, there are reporting requirements
7 associated with this program and --

8 MAYOR CANTOR: I think you lost your mic.

9 TOWN MANAGER LEDWITH: Oh. Thank you so
10 much. State law and the Safe Streets for All Grant

06:46:35PM

11 agreement both require reporting to measure
12 effectiveness of ATESDs. We have to report the number
13 of violations, crash data at each ATESD site, and
14 similar location without ATESD. We have to report the
15 number of hearings requested and the results of those
16 hearings. And we will disclose the amount of revenue
17 from fines and fees as well as the percentage of fines
18 collected from residents and nonresidents. We will
19 report the cost to the Town of West Hartford to use
20 this particular program, and then we will also list all

06:47:14PM

21 engineering and educational measures undertaken by the
22 town to improve safety town-wide.

23 State law does require signs at each of our
24 camera locations. We are also required to notify
25 navigation applications, so we will let Google Maps

1 know and Waze know and Apple Maps, et cetera. And as I
2 mentioned before, we're required to implement an
3 awareness campaign 30 days prior to camera operations.
4 And the devices are recalibrated annually for accuracy,
5 and that information on the calibration will be posted
6 on our website at each location.

7 So, this, as we've discussed, is an 18-month
8 pilot program, and the ATESD vendor construct will
9 likely include an option to extend the camera -- Speed
10 Management Camera Program by an additional 18 months

06:48:21PM

11 for a total of three years if it is approved -- if
12 safety is improved. I'm sorry.

13 And per State Law 14-307e, an ATESD plan is
14 only valid for three years from the date the first
15 device became operational. Continuing the program
16 beyond three years will require the renewal of the
17 ATESD plan as well as a new public hearing and a new
18 approval by the town council.

19 So, we've talked a little bit about the
20 development process, which I know folks are aware of as

06:49:02PM

21 well. So, we did conduct -- our engineering team and
22 consulting team conducted a town-wide analysis to
23 determine the locations for our 15 cameras. We have
24 identified 20 locations. We will submit our plan to
25 the State and to the Federal Highway Administration

1 with those 20 -- 15 locations plus an additional 5. In
2 case one of those 15, for whatever reason, is rejected
3 by the State, we have a backup for that site.

4 We held two public information meetings. One
5 was on July 30th of 2025. The second was September 3rd
6 of 2025. And we -- at the July 30th presentation, we
7 presented information about our desire to move forward
8 with this plan as well as sought information from the
9 public in terms of where our residents would like to
10 see these cameras. And then in the September 3rd

06:50:02PM

11 meeting, we actually provided an update to the
12 community with where we had been kind of -- honed in on
13 finalized locations for our plan.

14 Since then, we have finalized all 15
15 locations, as I said, and we developed our plan, which
16 has been online now for the last few weeks. And we
17 will, pending council approval, submit that plan, as I
18 said, to the State and to the Federal Highway
19 Administration within the next couple of weeks.

20 So, I went ahead and skipped through and

06:50:41PM

21 talked through all of those meetings already, being
22 efficient. And at this point, I would like to turn
23 things over to Dan from VHB. And Dan will take us
24 through the last third of tonight's public hearing
25 presentation. Thank you.

1 MR. AMSTUTZ: Good evening. Thank you, Town
2 Manager. My name is Daniel Amstutz. I'm from the
3 consulting firm VHB. We've been helping the Town to
4 determine the locations. We put together the ATESD
5 plan for the Town and did a lot of data crunching. So,
6 I'm just going to go over just a couple of slides
7 talking about how we developed the locations that are
8 on the ATESD plan.

9 So, you can see from the map here, we started
10 by looking at all of the roads in West Hartford. We

06:51:33PM

11 got data from the State, from the Town, as well, and
12 put this into a map to understand the best places to
13 put these speed management cameras, looking at
14 different data points such as speeding-related crashes,
15 which is particularly important for the State; the
16 traffic volume along those roads; we got data from the
17 police department on where they're already giving out
18 speeding violations and put those on the map and put
19 those as part of our process as well; the town speed
20 data, where people are already speeding, that was

06:52:07PM

21 collected over the course of the year; places where
22 there's vulnerable road users, such as pedestrians,
23 bicyclists, school children -- so, the school zones
24 around schools, pedestrian areas, Vision Zero focus as
25 well; and as was talked about during public meetings,

1 the public input and questions that we received from
2 the public, not just public meetings but also through
3 the Vision Zero email address.

4 And what I want to get across, or the message
5 is that since this is a very data-intensive process and
6 very data driven, so we were able to use this data to
7 zero in on locations where the speed cameras would
8 really be effective in reducing speeding through the
9 town.

10 And this map shows the locations where we

06:52:54PM

11 chose the corridors which we are looking at for where
12 the speed cameras could go, and then the little icons
13 that have a little camera on them show where we chose
14 where the speed cameras should go within that corridor,
15 trying to look at the best location based on the
16 topography and so on.

17 But there are -- as the town manager
18 mentioned, there are 15 primary locations and 5
19 alternate locations, so there's 20 locations in total
20 that is in the ATESD plan, the idea being to give the

06:53:31PM

21 Town flexibility in case one of the top 15 -- or the
22 main 15 locations is deemed infeasible by the vendor
23 once we get to that point. There may be some issue
24 with cellular service or, again, topography or other
25 context-based reasons why one of the red locations may

1 not work.

2 But the intent is to put the cameras for this
3 pilot at 15 of these locations, mainly starting with
4 the red ones. And then just also there would be --
5 again, these would be bidirectional cameras, so there'd
6 be two at each location, one, you know, going each
7 direction. And we'll show that on the next couple
8 slides what is actually within the plan itself.

9 So, this is just a brief overview of what is
10 in the plan. As mentioned, the full ATESD plan is on

06:54:24PM

11 the website. The -- it starts, you know, with the
12 cover sheet and also goes -- has the ordinance as well
13 as the Vision Zero Plan as part of it.

14 But for each of the locations themselves, we
15 provide data that is, again, required by the State as
16 part of their approval process, looking at things such
17 as the speed of the roadway, the traffic data, the
18 daily traffic, the people that are going over the speed
19 limit; as well as the data from the Town is very
20 important, looking at the land use context around it

06:55:02PM

21 that would make it, you know, have an impact such as if
22 there was a school or a park nearby; and also the
23 police citation data for each of the locations.

24 You can see on the right side that there is
25 also the speeding-related crashes. We provided

1 information to the State, as well, for their review.

2 And for each location, we do have the images
3 showing where the approximate location of the speed
4 cameras would go. You know, they're post-mounted,
5 would be facing, you know, the direction of traffic to
6 view the license plate on the back of the person's
7 vehicle if they're traveling by the speed camera. So,
8 this just gives you an idea of, you know, the concept
9 of where they would go.

10 And this, the final piece of the concept

06:55:55PM

11 plan, where we show -- again, trying to not pinpoint
12 the engineering detail but very close on where these
13 would go within the corridor itself. And also, an
14 important point is that there would be signage, there
15 would be notification for each of the cameras. We have
16 two signs approaching each of the cameras, one, you
17 know, like, has a speed limit but also has the
18 picture -- you know, has the sign, it has the camera on
19 it; and then another one as we get closer to the
20 camera, so that as you're approaching, you know exactly

06:56:26PM

21 where they are so there's no surprise there.

22 But these -- so, we provided these for each
23 of the locations. Again, there's the 20 that we have
24 within the plan, so that, again, you have flexibility
25 as part of the placement of the cameras.

1 That's all I have. Thank you very much.

2 TOWN MANAGER LEDWITH: Thank you, Dan. And
3 this, as I hope you will agree, is a -- represents a
4 significant step in the direction of really changing
5 the way we move through our community safer. And we
6 believe we'll start the process if -- we have started
7 it under Vision Zero and the engineering changes that
8 we've made town-wide but starting to change the culture
9 of how drivers move through our community.

10 And this, in addition to our red light camera

06:57:23PM

11 program that we will present to the council later in
12 2026, we believe will get us there and help make our
13 community safer for everyone.

14 So, through you, Madam Mayor, we are happy to
15 answer any questions that the council has or
16 suggestions, and we'll take it from there. Our team is
17 prepared to answer your questions. Thank you.

18 MAYOR CANTOR: Okay. Thank you very much.
19 Thank you all for being here. I appreciate all the
20 work that you have done to bring us to this point. And

06:57:57PM

21 it's been a -- it's been a lot of work, effort, a lot
22 of collection of data, a lot of coordination. And we
23 really appreciate all the hard work that you have done.

24 And, Rick -- Mr. Ledwith, thank you so much
25 for your leadership on this. This has been -- again,

1 it's been a long process, and we're really glad to be
2 at this point right now.

3 So, I'm going to open it up to actually
4 Tiffani because -- Ms. McGinnis -- why am I on a first-
5 name tonight? I don't know -- Ms. McGinnis to -- this
6 has often been discussed in her committee but not the
7 only committee.

8 MS. MCGINNIS: Thank you. And thank you,
9 Rick, for the presentation, and thank you for the
10 presentation.

06:58:46PM

11 I had a couple of questions. So, a violation
12 within a one-year period, it would be a second
13 violation if you get one during the one-year period?
14 That's -- is that how that works?

15 TOWN MANAGER LEDWITH: Yes. Through you,
16 Madam Mayor, to Council McGinnis' question, it would
17 be -- so, if you receive a violation on -- say the
18 camera goes live on July 1st and you receive another
19 one on September 1st, you would receive the higher
20 amount violation.

06:59:19PM

21 MS. MCGINNIS: Okay. So, it starts over --
22 if it was July 1st that you got the first one, then it
23 would start over June 30th? Is that --

24 TOWN MANAGER LEDWITH: Yeah. I believe
25 that's --

1 MS. MCGINNIS: -- how that works?

2 TOWN MANAGER LEDWITH: Parker? Thank you.

3 MR. SORENSON: Yes. So, through you, Madam
4 Mayor. So, yeah, essentially if you go a year without
5 getting one --

6 MS. MCGINNIS: Getting one.

7 MR. SORENSON: -- you're reset.

8 MS. MCGINNIS: Okay.

9 MR. SORENSON: And we'll delete the data and
10 we won't even have any record of that violation in a

06:59:45PM

11 year.

12 MS. MCGINNIS: Okay. And then my second
13 question -- you talked about the reporting that we have
14 to do. What is the time frame of that? Is it
15 quarterly? Is it monthly? How do we have to report
16 that?

17 MR. SORENSON: Yeah. So, through you, Madam
18 Mayor. So, yeah, we have a couple reporting
19 requirements. So, through the State, it's mostly
20 annual reporting as required by state law.

07:00:07PM

21 MS. MCGINNIS: Okay.

22 MR. SORENSON: We also have reporting
23 requirements through the federal grant, so they may be
24 at different intervals just based on kind of the grant
25 calendar.

1 MS. MCGINNIS: Okay.

2 MR. SORENSON: And I will say I think -- you
3 know, I think every intention certainly to potentially
4 talk about reporting in addition to that, to the extent
5 possible.

6 MS. MCGINNIS: Okay. And finally, do we
7 have -- do we know -- we've talked about it in the
8 past, the time frame for the approval. Like, do we
9 know if that's ready from the federal government?

10 MR. SORENSON: Yeah. So, through you, Madam

07:00:43PM

11 Mayor. The -- so, as Rick mentioned, the -- we have
12 two approvals really necessary, the State through the
13 Office of the State Traffic Administration -- they
14 actually are, through Connecticut law, bound to I think
15 a 30-day clock and once they give us comments back that
16 the clock is paused, but that's essentially the time
17 frame for them.

18 Through the Federal Highway Administration --
19 actually, the approval process is through the NEPA
20 documentation. So, a lot of that's already been

07:01:13PM

21 completed from the VHB team, and we've already been in
22 communication with the Federal Highway Administration
23 on that. And we've actually just received
24 communication this week, so we're hopeful that within
25 that 30-day period from Federal Highway, but we'll see.

1 But in general, we will have it then.

2 MS. MCGINNIS: Okay. Okay. Thank you very
3 much.

4 MAYOR CANTOR: Thank you, Ms. McGinnis.
5 Ms. Lazarus?

6 MS. LAZARUS: Thank you, Madam Mayor.
7 Through you, I had a question about the 15 locations.
8 Was consideration made for locations that could be
9 improved for nonmotorized travel? I know that -- I
10 believe that's in the plan for 2027. So, given the

07:01:55PM

11 18-month pilot program, I want to know if those
12 locations were considered when putting together the 15.

13 MR. AMSTUTZ: I think, if I understand the
14 question, there were locations that we looked at as
15 potential for speed cameras. But working with the Town
16 staff, there were locations where they're already
17 planning on making some improvements, so we moved away
18 from there to other locations.

19 So, I think there -- I think Sedgwick
20 School -- Sedgwick School was an example of one of them

07:02:32PM

21 where we considered it. But since there's already
22 being plans for improvements there, we moved that to a
23 different location.

24 MS. LAZARUS: Thank you.

25 MAYOR CANTOR: Thank you, Ms. Lazarus.

1 Mr. Lyons?

2 MINORITY LEADER LYONS: Thank you, Madam
3 Mayor. Through you -- and I've got questions -- I'm
4 going to bounce around a little bit, been kind of
5 taking notes through the presentation.

6 Through you, Madam Mayor, to the Town,
7 Mr. Town Manager, first of all, I want to thank you. I
8 read the 100-plus-page presentation this afternoon, and
9 I like seeing things are data driven. It's very data
10 driven.

07:03:13PM

11 I think you said this. I just want to make
12 sure I understand this properly in terms of the data.
13 You've obviously looked at the data ahead of time to
14 decide to go where the highest risk areas are. We're
15 going to do lookbacks, as well, to see if that data
16 improves over time; right?

17 TOWN MANAGER LEDWITH: Yes.

18 MINORITY LEADER LYONS: Okay. I thought you
19 said that. I wanted to make sure I understood that
20 correctly.

07:03:35PM

21 TOWN MANAGER LEDWITH: Through you, Madam
22 Mayor, to Councilor Lyons' question, yes. So, we would
23 -- and we would report that back actually to the State,
24 as well, as far as the reporting process. Do we report
25 on safety and --

1 MR. SORENSON: Yeah. There's -- I mentioned
2 in the presentation, through you, Madam, Mayor, a
3 number of violations, crash statistics, you know, and
4 just general information on the program operation.

5 I'd just like to also point out, as part of
6 the Vision Zero Action Plan, we had our first annual
7 report, you know, going back to the beginning of this
8 year. And we've also done more of a holistic view on
9 the roadway network through town and see where we're
10 going, you know, where the areas are even worse or

07:04:14PM

11 better. So, that's already being done as far as the
12 Vision Zero program as well.

13 MINORITY LEADER LYONS: Appreciate it. Thank
14 you. Second question -- I'm not sure if I have to say
15 this every time. If I don't, correct me.

16 MAYOR CANTOR: You don't.

17 MINORITY LEADER LYONS: But through you,
18 Madam Mayor, to Mr. Town Manager, talked a little bit
19 about arbitration. The -- in the event -- okay. So,
20 if I park in the Center and fail to pay my parking

07:04:36PM

21 ticket, I become a scofflaw if you invoice me, sent it
22 to collections, whatever the process is, next time I go
23 to motor vehicle to renew my registration, it will not
24 be renewed unless I pay the parking fee. And I'm
25 getting nods. I thought that was the case. I'm

1 getting nods.

2 Is -- does this -- I know it parallels
3 parking in terms of reporting, but does it parallel in
4 terms of collections for in-state cars? Does it
5 parallel?

6 TOWN MANAGER LEDWITH: Parker, you want to
7 handle that or ACT or --

8 MR. SORENSON: So -- yeah. So, state law,
9 it's interesting. A little bit parallels with the
10 parking program. The -- if you go through the state

07:05:18PM

11 law, the location where it doesn't parallel is that the
12 parking appeals process in that scofflaw component of
13 going to DMV, that does not apply to this program.

14 MINORITY LEADER LYONS: If I may, Madam
15 Mayor.

16 MAYOR CANTOR: Yes.

17 MINORITY LEADER LYONS: So, just playing this
18 out, I accrue a few -- I run up Mountain Road one day.
19 I'm in a bad mood. I pick up a couple of tickets. I
20 get the invoices. I'm angry. I don't pay the tickets.

07:05:47PM

21 I'm just trying to understand, so next time I go to
22 register my car, they'll -- they'll flag it; right?

23 MR. SORENSON: They will not be flagged for
24 nonpayment to this program.

25 MINORITY LEADER LYONS: Okay. All right.

1 Okay. Okay. Thank you. Just trying to understand.

2 In the case of out-of-state -- obviously I
3 think out-of-state enforcement is probably a little bit
4 more of a sticky wicket -- what happens in the event of
5 a returned mail? I know it's kind of a -- but you send
6 something to New York and the mail comes back
7 undeliverable in terms of a ticket.

8 MS. VARANO: I can take that one.

9 MINORITY LEADER LYONS: Okay. Thank you.

10 MS. VARANO: Through you, Madam Mayor. Gina

07:06:30PM

11 Varano, Deputy Corporation Counsel.

12 So, it is difficult. If it comes back in the
13 mail, then that's evidence that the owner did not
14 receive the citation, and that's pretty much where the
15 collection ends because the only way in which we can
16 proceed is the owner must receive the citation.
17 Unfortunately, that's the way it goes.

18 MINORITY LEADER LYONS: Nope. Nope. I
19 understand. Thank you very, very much. And that's all
20 I have for now, Madam Mayor. Thank you very much.

07:06:52PM

21 MAYOR CANTOR: Thank you, Mr. Lyons. Good
22 question.

23 Ms. Harris.

24 DR. HARRIS: Thank you. Thank you for the
25 presentation. I had a question through you, Madam

1 Mayor, about the grant money that we're receiving. I
2 believe it was \$800,000. I may be wrong on that.

3 TOWN MANAGER LEDWITH: Approximately 800,000.

4 DR. HARRIS: Is that a onetime grant, meaning
5 if we continue the program 18 months and 18 months,
6 we're getting the onetime grant of 800,000?

7 TOWN MANAGER LEDWITH: It's a onetime grant,
8 through you, Madam Mayor.

9 DR. HARRIS: Okay. And then I also had a
10 question as to whether there's any sense of what the

07:07:32PM

11 revenue potentially would be from -- that would be
12 collected from these devices.

13 TOWN MANAGER LEDWITH: Through you, Madam
14 Mayor, to Council Harris' question, so we are -- we're
15 basing this off of information that we're gathering
16 from communities that have started these programs.
17 And, you know, we believe within the first year of this
18 program being up and running, it could be in the
19 several millions of dollars for the first year.

20 I do believe, as I mentioned, we -- our goal

07:08:06PM

21 is to change the culture of how folks move through our
22 community. And once the program is up and running and
23 we have time under our belt and that culture change
24 happens, that we would see those numbers decrease,
25 ideally.

1 As I said, this isn't about -- for us, it's
2 not about the revenue. There will be revenue
3 generated, and that revenue will be very important to
4 us to change the infrastructure within town and
5 continue our Vision Zero efforts. But ideally -- not
6 realistic, I know, but a couple years from now I'd like
7 to say we're not issuing any tickets because people are
8 driving the speed limit and our community is safer.
9 But so, right now it's all estimates, but it could be
10 significant in the first year.

07:08:57PM

11 DR. HARRIS: Okay. And then once we are no
12 longer granted, meaning we've used our grant, what do
13 you foresee, if you have any numbers as to what the
14 program costs us to run yearly?

15 TOWN MANAGER LEDWITH: So, we believe --
16 even, you know, my very optimistic view of not issuing,
17 you know, many tickets, but we will be, right.

18 DR. HARRIS: Mm-hmm.

19 TOWN MANAGER LEDWITH: So, we believe we'll
20 be able to cover the cost of the program with that

07:09:22PM

21 revenue in the future.

22 We talked a little bit in the presentation
23 about our red light enforcement camera program as well.
24 We received a second grant for that.

25 DR. HARRIS: Mm-hmm.

1 TOWN MANAGER LEDWITH: So, we will roll that
2 grant -- that program out in the same way we're rolling
3 this one out, utilizing federal moneys to roll that
4 program out for the first 18 months; and then, ideally,
5 the revenue generated after that will cover our costs.

6 So, I think your question is, could there be
7 a future impact for a taxpayer? I don't foresee that.
8 I see as covering at least the baseline of our expenses
9 with the revenue generated. Certainly, we'll be
10 reporting this data out to the council periodically

07:10:06PM

11 throughout the year, so we'll know where we stand from
12 a revenue and expense standpoint every step of the way.

13 DR. HARRIS: Okay. And then my last question
14 is, I believe that you said -- I just want to make sure
15 I understand -- that if the device is on one side of
16 the road, it's picking up the traffic on both sides of
17 the road, or is that incorrect?

18 MR. AMSTUTZ: No. There will actually be two
19 cameras, the one -- they'll be across the street from
20 one another.

07:10:39PM

21 DR. HARRIS: Okay.

22 MR. AMSTUTZ: So, there will be two posts
23 with the cameras. And that's what we -- will be -- in
24 the plan, as well, you can see there's a concept plan
25 and also the preview images showing approximate

1 locations of where those two will be.

2 DR. HARRIS: Okay. Thank you.

3 MAYOR CANTOR: Thank you, Ms. Harris. Good
4 questions. Let's see.

5 Mr. Wenograd.

6 MR. WENOGRAD: Thank you, Madam Mayor.
7 Through you, just a little more detail on the vendor
8 fees and then the fines. So, somebody -- what will
9 happen -- so, you get a \$50 fine. Are we adding in the
10 vendor fee -- I know it's up to 15. Is that

07:11:20PM

11 automatically added in, or is that just if you're
12 paying online? I'm wondering how that works.

13 TOWN MANAGER LEDWITH: So, the administration
14 fee would be potentially covering the cost of the
15 vendor who would be running the program for us. So, we
16 will go out to bid shortly to hire a company to work
17 with us to install these cameras around town. And then
18 based on that process, I think we would determine, if
19 I'm not mistaken, what -- what admin fee we would be
20 adding on to the ticket price. So, it would be a fixed

07:11:58PM

21 cost up to \$15 to cover the administration of the
22 camera program.

23 MR. WENOGRAD: Thank you. And just to add to
24 that, so, we get the 15 no matter what or the 4.75
25 vendor fees on top of that?

1 TOWN MANAGER LEDWITH: Correct.

2 MR. WENOGRAD: Okay. Thank you very much.

3 TOWN MANAGER LEDWITH: You're welcome.

4 MAYOR CANTOR: Thank you. All right.

5 Mr. Wang, do you have any questions?

6 DR. WANG: Yes. Thank you. Through you,
7 Madam Mayor, thank you so much, everyone who's worked
8 on this. I have a couple of questions regarding
9 specific locations.

10 Location 4, Farmington Avenue zipper merge, I
07:12:33PM

11 just had some concerns about that. Is it wise to put a
12 speed camera right at a zipper merge? You know,
13 there's a lot of jockeying for position. There's --
14 sometimes you have to hit the gas a little bit to get
15 ahead of the person next to you. Could that add
16 cognitive load or, you know, increase the risk of kind
17 of mishaps, especially since we have sometimes
18 unpredicted pedestrians and cyclists on the shoulder?
19 So, it seems like the last place where I would want to
20 manage another issue.

07:13:04PM

21 (Aside)

22 MR. SORENSON: So, through you, Madam Mayor.
23 Yeah. So, I know there's been some back-and-forth on
24 this discussion specifically internally. I think some
25 of the context that we've had with the VHB team -- so,

1 there's actually a speed-limit change further to the
2 west that we wanted to be aware of and be away from,
3 you know, that kind of speed limit change.

4 And further, obviously, there's a significant
5 grade challenge coming down into West Hartford, so
6 thought about, you know, the fairness, so to speak, of
7 putting that at the bottom of a hill. So, that's kind
8 of where that landed from internal discussions with the
9 VHB team.

10 DR. WANG: Yeah. It just strikes me as a
07:13:57PM

11 potentially risky location. It's just you're already
12 managing a lot, you know. And, again, sometimes,
13 especially when the weather is nice, you do have quite
14 a bit of pedestrian traffic on that unprotected
15 shoulder.

16 Another question -- thank you. Another
17 question is, and including this site and several of the
18 sites, up to 50% even 70% of vehicles, according to
19 your data, sometimes are going to be -- are going to be
20 in violation?

07:14:24PM

21 For example, at Flatbush, 50% to 70% of cars
22 are going to get a ticket? That's -- is that fair to
23 drivers? And do we need to consider some kind of
24 traffic calming or something to -- so that we're not
25 ticketing half the people that come through that

1 stretch of road? You know, we should encourage, I
2 think, you know, reasonable speeds and then ticket the
3 outliers. In some cases, it looks like we're ticketing
4 even half or even 70% of people coming through there.

5 ASSISTANT CHIEF OF POLICE TERRA: I'll take
6 that, through you, Madam Mayor. That area is heavily
7 congested. And we have the busway, we have the traffic
8 going up over the bridge, and we have a lot of
9 pedestrian traffic through there.

10 So, we have to -- and we have -- we have some
07:15:17PM

11 cameras in the area for crashes. We have a lot of
12 crashes there. It almost seems like a lot of people
13 are just in a rush through that area.

14 And the whole purpose of what we're doing
15 through Vision Zero and this program is to suggest
16 everybody's got to cool it down a little bit, slow
17 down. And essentially we're trying to change the
18 culture through there. But there's an awful lot of
19 traffic through there, as you indicated.

20 We have to do something. We have pedestrians
07:15:50PM

21 who are walking between cars and the light is not
22 telling them to walk. We have cars that are not
23 stopping for the red lights. So, it's a heavily
24 congested area.

25 Not only that, besides the traffic activity

1 and the pedestrian traffic activity, I need to say it,
2 we have a great deal of crime there as well.

3 So, all of this is coming together. So, we
4 actually need the enforcement there while we're doing
5 the other components of this to try to keep people
6 safe.

7 People just literally walk across into the
8 traffic, and they will get hit by a car. We can't stop
9 it. They have a green light. But the thing is at the
10 end of the day, there are crosswalks, and a lot of

07:16:28PM

11 people aren't using the crosswalks either. So, we're
12 just trying to get a handle on that area right there.
13 And I think they'll agree that we have a lot going on
14 there.

15 DR. WANG: Thank you. I completely agree,
16 there's a lot going on. Just specifically, I guess
17 what I'm asking is, if 50% to 70% of people are going
18 to get ticketed, do we need to also consider
19 re-evaluating the road, whether that's through Quick-
20 Builds or other methods?

07:16:55PM

21 But I notice that at many locations. For
22 example, you know, on the New Britain Avenue, one of
23 the sites, the downhill has much higher speeding than
24 the uphill.

25 So, for example, maybe we consider things

1 like those -- those bars, you know, the bars that you
2 guys did on Tunxis that seemed to be quite effective.
3 Again, just making it seem fair for drivers so that
4 it's not a wide-open road that encourages speeding and
5 then we nail 70% of them but to couple the intervention
6 with other interventions so that it feels fair for
7 drivers. Is that something that we -- that you guys
8 are discussing? Acknowledging that quite a few of
9 these sites are state roads.

10 TOWN MANAGER LEDWITH: Through you, Madam
07:17:45PM

11 Mayor. So, certainly, that's part of our overall
12 Vision Zero efforts town-wide, because not -- we are
13 not going to stop doing what we're doing from a
14 Quick-Build standpoint, traffic-calming standpoint,
15 anything we can do town-wide, so continue to, from an
16 engineering standpoint, change the way you're moving
17 through our town.

18 But certainly, speed -- you know, people that
19 are driving 50%, 60%, 70% over the speed limit, we need
20 to change that, and enforcement is part of that. So,

07:18:12PM

21 it's enforcement, engineering, education, which, you
22 know, we talked a lot about. I think enforcement will
23 help in addition to the changes to -- from an
24 engineering standpoint. So, yeah, to answer your
25 question, specifically, we would continue to look at

1 other ways to slow folks down in addition to this.

2 DR. WANG: Thank you. I have one last
3 question. Location 14, North Main. Why is the speed
4 limit different northbound and southbound? And could
5 this be confusing for motorists?

6 MR. SORENSON: So, I'll take that. Through
7 you, Madam Mayor. So, that's right in front of the
8 American School for the Deaf, so there is a
9 30-mile-per-hour zone to the south and there's a
10 35-mile-per-hour zone to the north.

07:19:03PM

11 So, as we were going through the data -- and
12 not surprisingly, there's, you know, a lot of data
13 points that were pointing to that area with the
14 driveway and whatnot.

15 So, the idea is that, you know, that the
16 northbound approach is still and will be maintained as
17 a 30 throughout that speed zone. So, you've been
18 through a 30 zone operating up until that point.
19 Coming southbound, you know, even though the change in
20 speed limit was right in that area, you know, it

07:19:32PM

21 wouldn't be, quite honestly, to be fair, going
22 southbound, to go right from 35 to 30, unfortunately.
23 So, that's the reason that that is posted at 35
24 southbound.

25 And so, whether it's confusing, you know,

1 southbound, northbound, you're not going to see the
2 opposing directions in signage. So, hopefully that
3 helps answer that question.

4 DR. WANG: Yeah. Fair enough. Thank you so
5 much.

6 MAYOR CANTOR: Thank you, Mr. Wang. Okay.
7 Ms. Polun, do you have any?

8 DEPUTY MAYOR POLUN: I do not.

9 MAYOR CANTOR: Okay. A lot of good questions
10 and a few that I had.

07:20:07PM

11 So, for state roads, for any of the locations
12 that are on state roads -- New Britain Avenue, Simsbury
13 Road -- is there any additional --

14 DEPUTY MAYOR POLUN: Albany.

15 MAYOR CANTOR: -- yeah, Albany, obviously --
16 is there any additional -- well, this would be approved
17 through the -- through the State anyway. But is there
18 anything -- anything unique about that at all that we
19 should be aware of just --

20 MR. SORENSON: Yeah. So, through you, Madam

07:20:48PM

21 Mayor. So, yes, there is additional approval. And
22 it's just through the district. It's an encroachment
23 permit, just as if we were to put up -- you know, go to
24 the State to put up a sign of some sort or something.

25 So, by and large, OSTA will handle the

1 substantive -- you know, the plan as a whole. And then
2 once we get a vendor on, they'll be up for further
3 engineering design dealing with those encroachment
4 permits.

5 MAYOR CANTOR: Thank you. So, what -- that
6 would be -- is it just Albany, New Britain, and
7 Farmington?

8 MR. WALTERS: North Main.

9 MAYOR CANTOR: North Main too?

10 MR. SORENSON: North Main in front of Hall

07:21:31PM

11 High School as well.

12 MAYOR CANTOR: Right. Right.

13 MR. SORENSON: And in the back here.

14 MAYOR CANTOR: Okay. All right. But you
15 don't think that they would change the locations?

16 MR. SORENSON: Our -- our discussions with
17 OSTA have been, you know, very positive. They're
18 looking to support, you know, whatever the Town decides
19 in terms of this program and making that happen on the
20 state roads as well.

07:21:51PM

21 MAYOR CANTOR: Thank you. All right. Just
22 going around one more time. Any other questions?

23 Okay. We would like to see if there are any
24 public comments.

25 Mr. Clerk, have you received any comments?

1 TOWN CLERK DAVIDOFF: Madam Mayor, I have not
2 received any public comments.

3 MAYOR CANTOR: Okay. Has anybody signed up?

4 MS. VARANO: Madam Mayor, no one has signed
5 up to speak.

6 MAYOR CANTOR: Okay. Is there anyone in the
7 public audience that would like to speak to this public
8 hearing? Wow. Okay. Very good. All right.

9 Going around one more time. Councilors?

10 Okay.

07:22:31PM

11 Anything in closing, Mr. Ledwith?

12 TOWN MANAGER LEDWITH: No. We appreciate
13 your consideration and certainly your input all along
14 through this process. As I said earlier, I do -- I
15 think it is a significant move in the right direction
16 in terms of changing the culture within our town.

17 And having drivers move through town slower,
18 obeying speed limits and red lights I think will lead
19 us to achieving Vision Zero sooner than 2033, in
20 addition to all of the other engineering-type changes

07:23:12PM

21 that we will facilitate over the coming years. So,
22 thank you.

23 MAYOR CANTOR: Thank you very much. All
24 right. Well, with that, I'm closing this public
25 hearing. Thank you all so much. And we are going

1 to -- when you're free, to start the next public
2 hearing, so. Thank you again very much.

I, ALEXA BUDIHAS, RPR, CRR, and a Licensed Professional Reporter/Commissioner within and for the State of Connecticut, do hereby certify that I took the foregoing hearing at 6:30 p.m. on December 17, 2025, at the West Hartford Town Council, 50 South Main Street, West Hartford, CT 06107.

I further certify that the within hearing was taken by me stenographically and reduced to typewritten form under my direction by means of computer-assisted transcription.

I further certify that I am neither counsel for, related to, nor employed by any of the parties to the action in which this hearing was taken; and further, that I am not a relative or employee of any attorney or counsel employed by the parties hereto, nor financially or otherwise interested in the outcome of the action.

WITNESS my hand this December 29th, 2025.

ALEXA A. BUDIHAS, RPR/CRR
My commission expires 4/30/29

SAFE DESIGN

Background

Roadway design, particularly its influence on motorist speed, is a key factor in achieving Vision Zero. Designing to reduce speeds not only decreases the risk of a crash but also decreases the risk of serious injury or death. The effects of speed are most pronounced for vulnerable road users whose risk of dying if struck by a vehicle increases dramatically with vehicle speed.

Physical changes to our streets will introduce permanent measures that will discourage dangerous, excessive, and intimidating driving and speeding. Efforts will include low-cost town-wide interventions and targeted investments in the Vision Zero Focus Areas. Safe roadway design will prioritize the needs of vulnerable road users. The action plan focuses on improvements to areas where these users may come into conflict with vehicular traffic such as intersections, crossings, and areas with missing sidewalks or bicycle facilities. These safety improvements will address existing issues while making West Hartford streets more appealing for walking and biking. The result will be fewer vehicle miles traveled, which will reduce the overall risk of injury and death.

Goal

West Hartford will adopt road design practices that prioritize safety for all users over vehicle speed and throughput. Physical design changes on roadway segments and at intersections will play an important role in reducing the number of serious injuries and deaths. More roadway users will choose alternatives to driving and, as a result, reduce the total vehicle miles traveled in the Town.

Strategies

ID	Strategies	Priority
G	Make infrastructure improvements that will make roads safer.	High
H	Reduce speeds.	High
I	Design for safe streets near schools.	Medium

KEY ACTION HIGHLIGHT: ROAD SAFETY AUDITS

A Road Safety Audit (RSA) is the formal safety performance examination of an existing or future road or intersection by a multidisciplinary team that can include engineers, planners, members of the public, and key stakeholders. RSAs are based on data and evidence, enabling communities to make informed decisions about road safety improvements. A RSA typically includes:

- Preparation and Planning: This involves gathering relevant background information such as traffic volume data, crash history, and the design of the road or intersection.
- Field Review: The team visits the site to observe traffic patterns, road user behavior, and potential hazards.
- Analysis: The audit team reviews the collected data and observations to identify safety issues. This analysis considers factors like sight distance, signage, pavement markings, pedestrian and cyclist facilities, and the behavior of different types of road users.
- Reporting: The team prepares a report detailing the identified safety issues and suggesting potential improvements. This report is usually structured to highlight immediate, short-term, and long-term recommendations.

RSAs are key to the implementation of this action plan. Initially, the Task Force had proposed many town-wide studies that would address individual issues (e.g., access to transit, sidewalk connectivity, crossing times at intersections, etc.). Although comprehensive, this approach would take significant time and resources to implement.

In contrast, utilizing the RSAs would allow the Town to:

- Focus on the most urgent segments of the Vision Zero Focus Areas (VZFA) first.
- Take a holistic approach to studying and improving streets that factored in all modes of vehicles and a wide variety of potential issues. For more information on the breadth of issues covered in the audits, see RSA Field Considerations on page 66.
- Identify immediate, short-term, and long-term recommendations in the VZFA that could be included in the work plan and advanced in subsequent years.
- Be better positioned to win grant funding for improvements.

As such, Action items G1 through G4 are interconnected and the Town should incorporate recommendations from the RSAs into the Action Plan as they are completed.

Safe Design

ID	Action	Timeframe
G	<i>Implement infrastructure improvements that will make roads safer.</i>	
G1	Conduct Road Safety Audits and/or safety assessments of areas identified in the Vision Zero Focus Areas.	2024 - Ongoing
G2	Implement quick-build recommendations within two years of conducting the Road Safety Audit.	2025 - 2026
G3	Implement short-term improvements within three to five years of conducting the Road Safety Audit.	2025 - 2029
G4	Implement long-term improvements within six to ten years of conducting the Road Safety Audit.	2027 - 3031
G5	Implement an automated enforcement (speed camera) program within Vision Zero Focus Areas to include speed enforcement and red-light enforcement.	2024 - 2025
G6	Identify and implement quick build and short-term projects that will not impact corridor planning.	2024 - 2027
G7	Prioritize the location of speed feedback signage to the Vision Zero Focus Areas.	2024 - Ongoing
G8	Construct single-lane modern roundabouts. Consider the intersections identified by the CRCOG Roundabout Study.	2026 - 2031
G9	Upon completion of the Bicycle Facility Plan, identify goals and a schedule of expansion of the bicycle network that includes continuous low-stress north-south and east-west connectivity.	2031
H	<i>Reduce speeds.</i>	-
H1	Evaluate signal timing on coordinated signal systems to ensure consistency with corridor target speeds.	2026 - 2031

 MUNICIPAL SELF-CERTIFICATION**

I, THE UNDERSIGNED Mayor Shari G. Cantor, hereby certify that I have read [Sections 14-307b through 14-307h](#) of the General Statutes of Connecticut concerning municipal use of Automated Traffic Enforcement Safety Devices (ATESD). I understand that the requirements associated with implementation of an ATESD program include, but are not limited to, the following:

- The municipality cannot install an ATESD until its ATESD Plan has been approved by CTDOT’s Office of the State Traffic Administration (OSTA).
- That the municipality shall develop a public awareness campaign to educate the public concerning ATESDs and that the campaign be implemented at least 30 days before the first ATESD is operational.
- The municipality may enter into agreements with vendors for the design, installation, operation or maintenance, or any combination thereof, of automated traffic enforcement safety devices. If a vendor designs, installs, operates, or maintains an automated traffic enforcement safety device, the vendor’s fee may not be contingent on the number of citations issued or fines paid.
- For the first 30 days the ATESD is operational, only a written warning can be issued by the municipality. After 30 days, the municipality may establish a fine not more than fifty dollars for a first violation and not more than seventy-five dollars for a second or subsequent violation.
- The municipality may impose a reasonable fee, not to exceed fifteen dollars, for the costs associated with the electronic processing of the payment of any such fine.
- Any funds received by a municipality from fines imposed shall be used for the purposes of improving transportation mobility, investing in transportation infrastructure improvements, or paying the costs associated with the use of automated traffic enforcement safety devices in the municipality.
- The municipality shall ensure each ATESD undergoes an annual calibration check performed at a calibration laboratory. The calibration laboratory shall issue a signed certificate of calibration after the annual calibration check.

WEST HARTFORD VISION ZERO PLAN 2024

intentionally blank

Dear West Hartford Residents:

I am profoundly committed to the safety and well-being of all our community members. That is why, in January of 2023, I introduced a resolution establishing West Hartford’s Vision Zero program. Our Vision Zero Action Plan prioritizes the health and safety of all users and modes of transportation and is a critical step towards eliminating traffic fatalities and serious injuries on our streets.

We are proud of the investments we have made in our transportation network over the years to improve the experience of all roadway users, whether they walk, bike, scooter, drive, take transit, or get around any other way. Unfortunately, despite these investments, we have experienced several tragic incidents throughout the town and loss of life on our streets that is unacceptable. Since 2018, there has been a 250% increase in crashes resulting in fatalities or serious injuries.

This plan marks a new approach to our transportation challenges and adds a renewed sense of urgency around safety. Vision Zero is not just a policy; it’s a fundamental shift in how we approach traffic safety. It’s based on the premise that no loss of life is acceptable or inevitable. This plan reflects our belief that every individual—whether a pedestrian, cyclist, motorist, or public transit user—has an equal right to safe streets.

Our Vision Zero Action Plan is comprehensive and data-driven, focusing on engineering, enforcement, education, and engagement. We are investing in safer street designs, implementing rigorous speed controls, enhancing pedestrian and cyclist infrastructure, and promoting a culture of safety among all road users. We collaborate with diverse stakeholders, including local law enforcement, public health officials, community organizations, and residents, to ensure a holistic approach. This plan draws on our greatest asset: our residents. This is not a solo journey; it’s a collective effort, and your involvement is key to our success.

The goal of Vision Zero is ambitious, but it’s attainable. I am proud to introduce West Hartford’s Vision Zero Action Plan. As the first community in Connecticut to adopt a Vision Zero Plan, West Hartford can be a model for safety and a beacon of hope for communities striving to protect their citizens. Your support and active participation in this initiative are vital.

I look forward to working hand in hand with you to make our streets safer for everyone. Together, we can achieve a future where traffic deaths and serious injuries are a thing of the past. Together, we can achieve our Vision Zero goal.

Sincerely,

Shari Cantor
Mayor, Town of West Hartford

This plan was prepared for the Town Manager in collaboration with the Vision Zero Task Force. Assistance provided by FHI Studio with support from Toole Design.

KEY TERMS

Term	Definition
Crash severity	The degree of injury from a crash, including fatality, suspected serious injury, suspected minor injury, possible injury, and property damage only.
High Injury Network (HIN)*	A prioritization tool to focus on streets with crashes resulting in a high number of fatalities and serious injuries. See Safety Assessment for more information.
KSI crash	Crashes resulting in someone killed or seriously injured.
Quick-build	A temporary project that is fast and cheap to deploy and demonstrate the value of permanent changes.
Road Safety Audit (RSA)	A formal safety performance examination of an existing or future road intersection. See Safe Design for more information.
Transportation Equity Zone (TEZ)	An area identified either in a low- or moderate-income Census block group, CT Department of Energy and Environmental Protection environmental justice community, and/or US Department of Transportation equitable transportation community. See Equity in Vision Zero for more information.
Vision Zero Focus Area (VZFA)	A prioritization tool based on HIN, TEZ, and public comments to guide Vision Zero implementation. See Achieving vision zero in West Hartford for more information.
Vulnerable user	Users who are at higher risk of injury or fatality in the event of a crash, including pedestrians, cyclists, micromobility users, children, and elderly users.

intentionally blank

INTRODUCTION

WHAT IS VISION ZERO?

Vision Zero is a strategy to eliminate deaths and serious injuries from traffic crashes. First implemented in Sweden, cities and towns across the United States are utilizing the approach to save lives.

Key Principles

A strong Vision Zero approach includes:

Making data-driven decisions: Crashes can be prevented by proactively identifying risks and proposing data-driven solutions. Data transparency is necessary to understand problems and measure progress towards fixing them.

Building a culture of safety: Communities must embrace the principle that traffic deaths and serious injuries are unacceptable and preventable.

Designing for vulnerable users: Roadways need to be designed for people

of all ages and abilities. They also need to be complete streets and include space for pedestrians, bicyclists, transit users, freight/trucks, and drivers, among others.

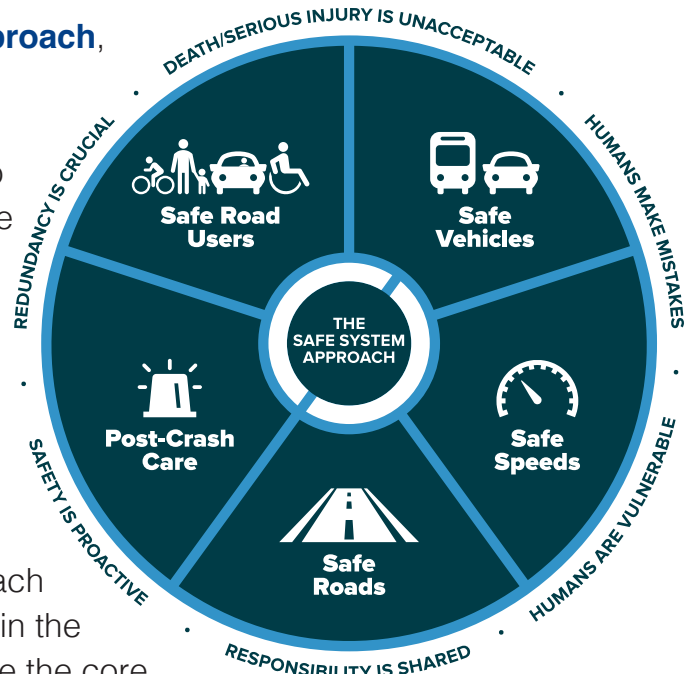

Centering equity: This includes paying close attention to the most vulnerable roadway users, rather than just drivers. It also takes into consideration how minority and underserved communities are disproportionately victims of serious crashes.

Engaging everyone: Robust public and stakeholder participation fosters a shared responsibility for safety and learn from diverse perspectives.

Focusing on Accountability: Clear, measurable short-term and mid-term goals, combined with timelines and ownership from responsible government agencies, create a framework that is easier to evaluate, fund, and build buy-in and accountability.

Safe System Approach

Vision Zero implements the **Safe System Approach**, which differs from the traditional traffic safety strategies. This approach focuses on building and reinforcing multiple layers of protection to prevent crashes from happening and minimize the harm when they do occur. This requires a focus on all the different pieces that affect crash potential including policy, street design, road users behavior, and vehicles design, among others. The Safe System Approach is widely adopted by the Federal Highway Administration (FHWA) and the Vision Zero Network. The Safe System Approach principles correspond to the elements shown in the graphic to the right. The inside of the circle are the core focus areas that will reduce serious injuries and fatalities.

Source: FHWA

Beyond the Traditional “E”s of Traffic Safety

The Es of traffic safety is a longstanding approach organized around engineering, education, and enforcement. The national Safe Routes to School Program has pioneered the use of 6 Es to drop enforcement and emphasize more proactive and just transportation systems. It is an excellent model for understanding how to achieve Vision Zero. Under this approach, communities focus on:

Engagement: Listen to community voices and build ongoing opportunities for engagement into the transportation system.

Equity: Ensure safety initiatives provide safe, healthy, and fair solutions for all.

Engineering: Improve the physical environment to address the needs of all

roadway users.

Encouragement: Get people excited about safety by hosting special events, walking and biking tours, competitions, and the like.

Education: Teach about safe roadway behavior.

Evaluation: Check if your strategies are working. Evaluation activities can help set goals and establish baseline data for planning projects.

Equity Impact of Vision Zero

Traditional safety approaches frequently focus heavily on enforcement. Too often, this exacerbates racial and economic disparities in enforcement. A Safe System is more equitable because it (1) lessens the need for enforcement and (2) focuses on preventing serious crashes that disproportionately affect low income people and people of color.

A ROAD SAFETY CRISIS

Traffic crashes are a threat to safety across the United States. **In 2021, 42,939 people, including 7,388 pedestrians, were killed in traffic crashes.** On average, a pedestrian was killed every 71 minutes. Pedestrian deaths are at their highest level decades and **pedestrian deaths increased 12.5% between 2020 and 2021.**

Source: National Center for Statistics and Analysis. (2023, June). Pedestrians: 2021 data (Traffic Safety Facts. Report No. DOT HS 813 458). National Highway Traffic Safety Administration.

Fatal crashes are not experienced across all members of the U.S. equally. **Traffic crashes disproportionately impact people who are Black and American Indian or Alaskan Native.** Between 2016 and –2018, the fatality rate for non-Hispanic Black Americans was 4.5 times higher while cycling; 2.2 times higher while walking; and 1.8 times higher while driving than for White Americans on a per mile traveled basis.

Disparities in Activity and Traffic Fatalities by Race/Ethnicity. Matthew A. Raifman, MPP and Ernani F. Choma, PhD. American Journal Of Preventative Medicine, June 7, 2022

Speed Matters

When a pedestrian is hit by a vehicle, the chance of death increases dramatically when the driver is traveling over 35 MPH.

Fatality Analysis Reporting System; Early Estimates of Motor Vehicle Traffic Fatalities and Fatality Rate by Sub-Categories in 2020, DOT HS 813 118, June 2021; AAA Foundation for Traffic Safety, Impact Speed and a Pedestrian's Risk of Severe Injury or Death; National Traffic Speeds Survey III: 2015, DOT HS 812 485, March 2018.

WHY WEST HARTFORD NEEDS VISION ZERO

While fatal car crashes have decreased in the United States over the past 30 years, traffic fatalities started increasing in 2020. An estimated 368 people died in car crashes in Connecticut in 2022. This is the first time the state has recorded an average of more than one traffic fatality per day in more than a decade.

The situation in West Hartford is even more serious. **Over the past five years, 48 crashes resulted in death or serious**

injury in West Hartford. This is consistent with an upward trend in fatal and serious injury crashes since 2018. As illustrated in Figure 1, **over the past four years, the number of fatal and serious injury crashes has more than doubled in West Hartford,** far outpacing the rest of the state. **More than half of the fatal and serious injury crashes in West Hartford occur on the same 17 miles of roadway.**

VISION ZERO SUCCESS: JERSEY CITY

Jersey City made headlines in 2022 when it accomplished what Vision Zero advocates have been championing for years: zero traffic deaths on city streets. This was accomplished through a combination of hard work and following best practices in Vision Zero.

Jersey City became the first municipality in New Jersey to adopt the Vision Zero initiative with an executive order in 2018. They established a 15-member Vision Zero Task Force that consisted of representatives from various City divisions as well as the local transportation safety advocacy organizations. Together, they developed a comprehensive plan to ensure safety for all roadway users. The plan took a data-driven and equity-focused approach. It included recommendations on:

- Safer streets
- Culture
- City practices
- Enforcement, law, and policies
- Planning and data

Jersey City residents and stakeholders provided feedback via surveys and workshops. The City also made a strong commitment to continuing to engage residents after the adoption of the plan.

The City's embracing of tactical urbanism (also known as quick-build projects) utilizes faster and cheaper solutions that can be deployed quickly to demonstrate

the value of permanent changes. For example, the City installed small-diameter "mini-roundabouts" at two intersections, using traffic cones, planters, barrels, plastic delineators, and paint. The instant traffic circles — the city's first — forced drivers to slow down as they negotiated the crossings with pedestrians and other vehicles. The roundabouts were only up for a week. However, during their installation, the City found that traffic volumes increased even as speeds came down about 10%. The feedback from surveyed residents was overwhelmingly positive: 72% of respondents supported making the circles permanent.

The City also pilot tested ideas during lengthy transportation studies. This meant rather than waiting for studies to conclude—often a year or more—before pursuing changes, the City experimented with ideas to better inform the recommendations that would ultimately emerge when the studies finished.

The City has also continued to collaborate with its partners. The Vision Zero Task Force meets with the mayor's team every quarter to discuss progress. The City has continued to reach out to cities that have made changes they wanted to see to gain insights on how it could work in Jersey City.

VISION ZERO IN WEST HARTFORD

WEST HARTFORD'S PRINCIPLES

The Town of West Hartford is committed to eliminating roadway deaths and serious injuries by 2033. Our overarching goal is to create a transportation system and culture that supports safe, enjoyable mobility options for all, especially the most vulnerable members of our community who experience disproportionate injury and death on roadways. To this end, the Town has adopted the following five principles to guide the development and implementation of this Plan:

1. Deaths and serious injuries caused by traffic crashes are preventable;
2. Human life and health should be prioritized in all transportation systems and all aspects of transportation planning and design;
3. Human error is inevitable and transportation systems should be forgiving;
4. Transportation planning should focus on system-level changes to influence all individuals' behavior; and
5. Speed is a highly important factor in crash severity.

DEVELOPING THE PLAN

On January 10, 2023, the Town of West Hartford Town Council unanimously adopted the Vision Zero Initiative in Support of Safe, Healthy, and Equitable Mobility with the goal of eliminating fatalities and severe injuries on West Hartford streets by 2033. The Vision Zero Action Plan (the Plan) is West Hartford's roadmap to achieving zero fatalities or serious injuries. The Plan is data-driven, based on the best practices in the industry, and focused on implementation.

Task Force

The Plan was developed in close collaboration with the Vision Zero Task Force. West Hartford Mayor Shari Cantor appointed Task Force members in early 2023. The Task Force includes a mix of Town of West Hartford staff and residents.

Staff included department leadership from engineering, communications, public safety, public works, equity, and the Town Manager. Residents include people with expertise in planning, media, disability rights, bicycle and pedestrian advocacy, and public health. As a result, the Plan was developed by people who will be both impacted by and responsible for implementing Vision Zero policies and actions.

The Vision Zero Task Force was charged with:

- **Providing direction** to the project team to guide the development of the Vision Zero Action Plan.
- **Acting as a liaison** to organizations and agencies, sharing information, and soliciting feedback to inform the Action Plan.

Task Force members show support for revisions to a section of the action plan.

- **Identifying actions** specific to members' organizations or agencies.
 - **Conducting community engagement** beyond the scope of the project team as agreed upon by the Task Force and Town Leadership.
 - **Developing the vision**, goals, policy recommendations, actions, performance measures, and recommendations to get to zero.
 - **Continuing as ongoing champions** for implementation of the Action Plan actions within Task Force members' organizations or agencies, as applicable.
- 2022 North Main Street Road Diet Phase 2
 - West Hartford Center Infrastructure Master Plan
 - 2023 Bicycle Friendly Community (BFC) Application

Action Plan

The project team worked closely with the Task Force to develop a framework of the Plan that would work for West Hartford. This included review plans from peer communities.

Goals, Strategies, and Actions

The Plan was developed iteratively. Initially, the Task Force split into subcommittees to address the four key themes in the framework: practices and policies, safe design, culture, and data. Each subcommittee had a Town liaison. The subcommittees each developed goals, strategies, and actions for their respective topic.

These early drafts went through several rounds of revisions that incorporated consultant input, feedback from departments and partners, and additional input from the Task Force.

This process empowered and centered the Task Force in the creation of tailored recommendations that meet the needs and opportunities in West Hartford. It also ensured the Task Force members understood the Plan and were ready to support its implementation.

Plan Development Process

Plan and Policy Review

Many plans already address mobility challenges and goals in West Hartford, so the project team reviewed previous plans and policies and identified those related to Vision Zero. This work served as the foundation for the development of additional recommendations specific to Vision Zero.

- Complete Streets Policy
- Maintenance and Protection of Traffic Policy (MPT)
- 2020 POCD
- 2022 Complete Streets Annual Report
- 2016 Bicycle Facilities Plan
- 2022 Neighborhood Street Traffic Calming Program
- 2017 New Park Avenue Transit Area Study

Data Analysis and Best Practices Research

As the Task Force developed recommendations, the consultant team conducted data analysis on crash locations and types and researched best practices. The Task Force utilized this information to refine the strategies and actions. The data from this work is presented in subsequent chapters of this Plan.

WHAT'S IN THE PLAN

A chapter is dedicated to reviewing and summarizing each of the major efforts that led to the development of the Plan:

- **Safety Assessment:** Discusses the analysis of the location and types of crashes that lead to deaths and serious injuries. This section includes key statistics about death and serious injuries in West Hartford.
- **Public and Stakeholder Engagement:** Summarizes how the project team collected input from the public and stakeholders and how that information shaped the Action Items.
- **Equity Analysis:** Discusses how the Plan centered equity throughout the development process and addressed equity within the implementation of actions.

The core recommendations in the Plan are identified in [Action Plan](#). This section includes the goals, strategies, and actions organized around the following four themes:

- **Practices and Policies:** The changes that need to be made to Town practices and policies to effectively implement Vision Zero.
- **Safe Design:** The specific steps that the Town and its partners will undertake to design and redesign streets for safety.
- **Culture:** The ways that West Hartford will partner with the community to develop a culture of safety in West Hartford.
- **Data:** How West Hartford will improve and diversify its data sources, collection strategies, analysis, and data reporting to make better decisions about roadway safety.

The crisis in roadway safety cannot be addressed town-wide all at once. This Plan uses **Vision Zero Focus Areas (VZFA)** to prioritize streets that:

- Are known to have high incidents of serious injuries and fatalities (see High Injury Network in the Safety Assessment).
- Were identified by the public as being particularly unsafe based on their lived experience (see Webmap Survey in Public Engagement).
- Are located in areas with a high concentration of vulnerable users (see Transportation Equity Zones in Equity).

The prioritized VZFAs are identified in [Action Plan](#).

SAFETY ASSESSMENT

WHAT WE LOOKED AT

The Vision Zero Action Plan is informed by a review of five years of crash data sourced from Connecticut’s Statewide Data Repository for crashes that occurred between 2018 and 2022.

Crash statistics generally report the number of incidents involving at least one pedestrian, bicyclist, or motorist.

Crash severity describes the most severe injury at least one person in the crash suffered. Categories includes: fatality, suspected serious injury, suspected minor injury, possible injury, and property damage only crashes.

Crashes that result in death or serious injury are also referred to as **KSI crashes**, or crashes resulting in someone killed or seriously injured.

A total of 5,956 crashes in this period were analyzed. This includes 48 crashes which resulted in at least one serious injury or fatality, and 1,779 crashes which resulted

in less serious injuries. These crashes resulted in a total of nine deaths during this time. There was a total of 84 crashes involving pedestrians and 43 crashes involving bicyclists.

KEY FINDINGS

Severe Crashes Have Increased

Between 2018 and 2022, aggregate crash totals have decreased approximately 29% from 1,486 crashes in 2018 to 1,056 crashes in 2022. This trend outperforms trends reviewed at a statewide level which has decreased approximately 10% in this same period. **While the total number of crashes in West Hartford has decreased since 2018, the total number of crashes resulting in fatality or serious injury has increased over 150% during this same period.** The trend within West Hartford is substantially higher than statewide trends (which experienced a 14% increase during the same period) and underscores the importance of this Plan.

Figure 2. Crashes in West Hartford (2018 - 2022)

Year	KSI*	Minor Injury	Property Only	All
2018	6	435	1045	1,486
2019	5	421	957	1,383
2020	8	267	636	911
2021	13	310	797	1,120
2022	16	346	694	1,056
Total	48	1779	4129	5,956

* KSI = Killed or Serious Injury

There is Elevated Risk for Vulnerable Users

Vulnerable users are those users who are at higher risk of injury or fatality in the event of a crash. This includes pedestrians, cyclists, and micromobility users. Children and elderly users are also particularly vulnerable due to limited awareness of traffic risks, reduced mobility and reduced reaction time. As illustrated in Figure 3, **crashes involving pedestrians and bicyclists are substantially more likely to result in injury as well as serious injuries or fatalities.**

A total of 127 crashes involving vulnerable users occurred during the 5-year analysis period. While these crashes only represent approximately 2% of all crashes, crashes involving vulnerable users are overrepresented in crashes of higher severity. They account for 6% of crashes resulting in any type of injury, 27% of KSI crashes, and five of the seven crashes occurring in this period which resulted in fatality. Crashes involving vulnerable users occur at intersections accounted for 91% such crashes, with nearly 50% of these crashes occurring at two-way stop-controlled intersections and 40% occurring at signalized intersections.

Figure 3. Crash Severity by Mode

HIGH INJURY NETWORK

Vision Zero plans typically include a **High Injury Network (HIN)** to focus efforts on the streets with crashes resulting in a high number of death, serious injury, or other injury. The HIN helps identify and prioritize road segments for Road Safety Audits, facility recommendations, and additional analysis for the Plan. The HIN is based on national Vision Zero and Safety Action Plans best practices and West Hartford's unique context.

The HIN (Figure 4) developed for West Hartford includes a street network of 20.7 miles, representing 9% of West Hartford's roadway miles. The HIN includes 60% of all crashes, including 56% of all KSI crashes. The HIN also includes 69% of all pedestrian and bicyclist crashes, including 54% of all KSI bicyclist or pedestrian crashes.

The HIN was developed through an evaluation of all crashes resulting in injury and fatality. Crashes resulting in serious injury or fatality (also known as KSI crashes) were weighted 10x higher relative

to other crashes resulting in lesser injuries to acknowledge the severity of these crashes. All streets within West Hartford were analyzed and included review of crash data with the following perspectives:

- Bicyclist Crashes: Predictive Bicyclist Crash Risk (based on facility type and location)
- Pedestrian Crashes: Predictive Pedestrian Crash Risk (based on facility type and location)
- Motorist Crashes: Motorist Crash Rate (crash totals relative to traffic volume)

While there are KSI crashes that occurred outside the HIN, these generally occurred in areas where there are fewer nearby crashes resulting in injury. The HIN seeks to identify and prioritize street segments which have an established trend of crashes resulting in a fatality, serious injury, or other injury.

It is anticipated that VZFA will be updated in 2027. This may result in segments being removed as improvements are made and new priority areas identified.

The full methodology is in [Appendix C](#).

In West Hartford...

injury crashes

occur on
9%
of roadways

Figure 4. High Injury Network

ELEVATED CRASH RISK IN SPECIFIC NEIGHBORHOODS

Local or residential roads typically do not show up in the HIN due to their lower vehicle volumes and limited crashes at singular locations. However, a group of adjacent local roads may exhibit a recurring pattern of crashes influenced by similar factors. To identify potential locations for further study, an analysis grouped crashes on local roads together into small, sub-neighborhood areas. This analysis reviewed clusters of adjacent streets which could all have a higher incidence of crashes. This was calculated by comparing the total number of crashes occurring on local roads compared to the total length of local roadway miles in each area.

This analysis identifies areas which account for 37% of all crashes on local roads. These neighborhoods are home to approximately 13,012 residents.

Both the HIN and the local road crash analysis are included as components of the VZFAs in the Plan.

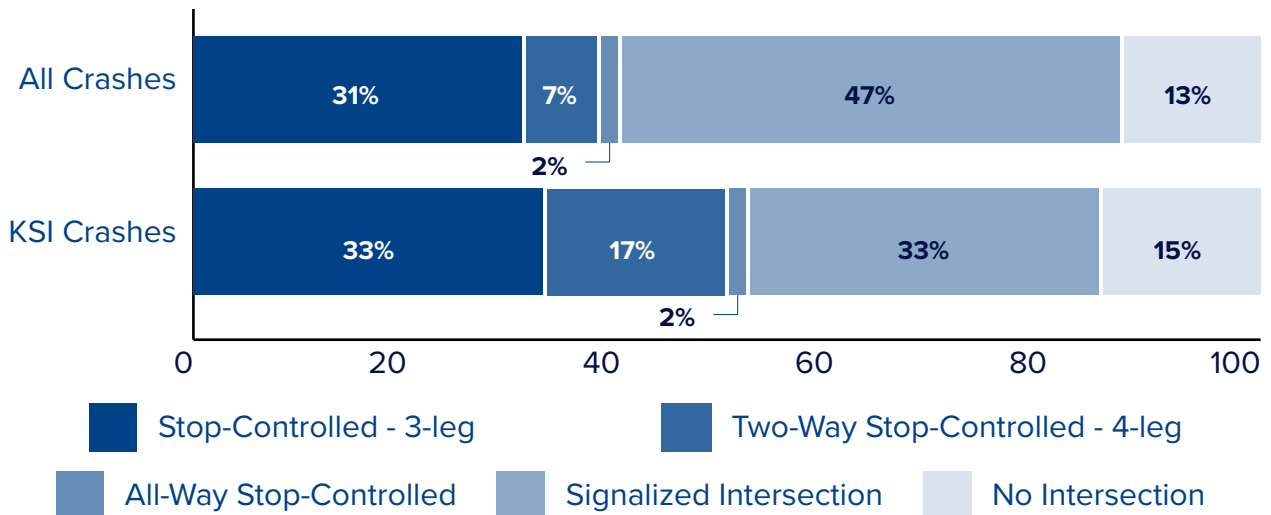

OTHER FACTORS CONTRIBUTING TO SEVERE CRASHES

Intersections and Major Driveways

Approximately 85% of all crashes occur at or proximate to intersections and major driveways. **All crashes resulting in fatality during the 5-year analysis period occurred at or near intersections or major driveways as well.**

As shown in Figure 5, 47% of all crashes occur at signalized intersections, while 40% of all crashes occur at stop-controlled intersections. While signalized intersections represent the largest proportion of all crashes, they represent a smaller proportion of KSI crashes. This indicates that crashes at signalized intersections are less likely to result in fatality or serious injury compared to other intersection types.

Figure 5. Crashes by Intersection Type

Among stop-controlled intersections, 3-leg stop-controlled intersections (a “T” intersection with only a stop-sign on the minor road) represent the highest proportion of all crashes as well as KSI crashes. This is an expected result as this is the most common intersection type in town. The analysis shows that 4-leg two-way stop-controlled intersections (a 4-leg intersection where the primary road does not stop) is overrepresented amongst KSI crashes. While this intersection type accounts for only 7% of all crashes it accounts for approximately 17% of KSI crashes. This finding shows that crashes at these location are more likely to result in severe injury or fatality compared to other intersection types.

Areas with intersections in this configuration, which are identified as part of the VZFAs, include Boulevard between South Main Street and Mountain Road, and Trout Brook Drive between Asylum Avenue and Albany Avenue among other areas. These intersections should be evaluated in particular to address safety concerns at these locations. Example countermeasures are provided later in [Implementation Support](#) but could include access restrictions such as half closures or through movement restrictions such as those already implemented by the town in some areas such as at the intersection of Boulevard and Whiting Lane.

Driving Under the Influence and Distracted Road Users

Crashes which involve driving under the influence or a party of the crash being

distracted was found to account for 11% of all crashes and 21% of KSI crashes. This rate is even higher for crashes involving pedestrians or bicyclists. For these severe crashes (13 in total) driving under the influence was found to account for 31% of these crashes (4 crashes out of 13). Half of these crashes (2) were attributed to a driver under the influence or distracted, while half was attributed to a pedestrian under the influence or distracted.

Angle Crashes at Two-Way Stop-Controlled Intersections

As shown in Figure 6, Angle crashes between vehicles at two-way stop-controlled intersections are the most prevalent crash type (42% of all crashes) at these types of intersections. Angle crashes can be indicative of difficult turning movements due to traffic conditions or sightlines (e.g. parked vehicles or vegetation).

Head-On and Single Vehicle Collisions

As shown in Figure 7, head-on crashes and single vehicle crashes are overrepresented in KSI crashes as well. While head-on collisions only account for 2% of all crashes, they represent 13% of all KSI crashes. Similarly, single vehicle collisions account for 11% of all crashes and 17% of all KSI crashes. Countermeasures to address these types of crashes should be prioritized within VZFAs.

Crashes at Night

As shown in Figure 8, crashes occurring during dark conditions, with no lighting, were overrepresented in KSI crashes with 13% of KSI crashes occurring under these conditions relative to only 2% of all crashes. This could indicate a need for lighting to be reviewed in some areas.

Crashes involving pedestrians or bicyclists reveal a different pattern. These crashes are also more likely to occur during dark conditions but are more likely to occur in lighted areas. This could correlate to lighting being provided in areas of pedestrian activity but could also reveal a need for more or other types of lighting and/or tailored roadway design strategies in areas with streetlights with higher rates of nighttime pedestrian or bicyclist crashes.

PUBLIC ENGAGEMENT

WHY IT MATTERS

Public engagement raises awareness of Vision Zero and the Town's new approach to traffic safety, building the foundation of a positive safety culture. It is needed to gather public input regarding traffic safety issues and action steps specific to West Hartford. Public engagement will also carry Vision Zero forward through building consensus around recommendations within the Town and momentum to implement through shared responsibility.

Public engagement was essential to the Plan development and will be critical to its implementation. It will also be important to continue to engage people as Vision Zero progresses.

PLAN ENGAGEMENT

Members of the West Hartford community had several ways of participating in the Plan:

- A multilingual public survey.
- A webmap where participants could identify locations where they felt safe, unsafe, or have an idea related to roadway safety.
- Two public meetings, including a final meeting to present the recommendations and solicit feedback.

All Task Force meetings were noticed and open to the public. Finally, Task Force members provided supplemental engagement through their own efforts to connect with their organizations, networks, and communities.

GETTING THE WORD OUT

The project team developed digital flyers and social media posts introducing the Vision Zero Action Plan and opportunities for community input. This included notices to participate in the public survey and webmap.

The Town distributed project marketing material via their listserv, and Facebook and Instagram accounts. They also managed the project webpage, which included a Fact Sheet detailing what Vision Zero is and why West Hartford is committed to reducing deaths and serious injuries on local roadways by 2033.

Signage about the project was posted at key locations, including near survey pick-up and drop-off spots.

Local media attended many Task Force and public meetings and published several articles and video news reports about the project.

PUBLIC SURVEY

In October 2023, the Town of West Hartford launched a public survey to assess mode usage and perceptions of roadway safety. The survey was available online through the project webpage. Hard copies were available at Town Hall and the three public libraries. The survey received a total of completed 788 responses, including 783 digital and five hard copies. The survey was available in English, Spanish, Chinese, and Portuguese.

More than half of respondents identified as a middle-aged adult (ages 35-64). More than a quarter of respondents identified as seniors (aged 65 and over). Young adults and teens (aged 34 and below) composed 12% of the responses.

As a town with a large driving and walking culture, West Hartford's Vision Zero initiatives are important to ensuring the safety of all users. Of the survey respondents, more than 75% drive or take rides in private vehicles, about 66% walk, and about 50% bike regularly. Fewer than 25% ride public transit or use ADA paratransit.

Key Takeaways

The following roadway behaviors make people feel the most unsafe in West Hartford, with the percentage of respondents who answered in parenthesis:

- Drivers speeding (77%)
- Distracted driving (74%)
- Non-compliance with rules of the road (55%)

Issues by Mode

What makes people feel unsafe depends upon how they travel. The following are the top three reasons respondents identified feeling unsafe, based on travel mode.

Pedestrians

- Drivers do not yield at intersections/crosswalks (66%)
- Do not feel visible to drivers at intersections/crosswalks (36%)
- Lack of sidewalks or walking paths (25%)

Bicyclists/Scooters/Skaters

- Lack of bike lanes and biking paths (57%)
- Bike lanes or biking paths don't have enough of a buffer from traveling vehicles (56%)
- Drivers do not yield at intersections/crosswalks (40%)

Drivers

- Drivers do not yield at intersections/crosswalks (46%)
- Difficult to see pedestrians, bicyclists, or oncoming drivers at intersections/crosswalks (33%)
- Bicyclists riding in the roadway/shoulder (30%)

A common issue among all mode users is drivers not consistently yielding at intersections and/or crosswalks. Similarly, lack of appropriate infrastructure is a common issue for pedestrians and bicyclists/scooters/skaters.

WEBMAP

A public webmap survey accompanied the written survey summarized on the previous page. The webmap asked respondents to identify areas where they feel safe, unsafe, or have an idea related to roadway safety. The webmap was available online through the project webpage with hard copies at Town Hall and the three public libraries as part of the community survey packet.

In total, the Town received 1,784 comments, and the project team identified 15 themes across all of the comments. Figure 9 illustrates the top five themes, exclusive of comments that identified specific safety issues.

Figure 10 (following page) is a heatmap that illustrates concentrations of safety concerns. This includes comments where users labeled an area unsafe or marked a location with an idea. To create the

heatmap, the project team first assigned comments to any street segment within 50 feet of the comment location. Then, the team divided the street network into 1/10th-mile segments and assigned each segment with a score based on the number of comments and comment likes within 1/2-mile on the same street, in each direction.

This approach highlights areas where users added many comments and agreed with existing comments (there was no option for a user to dislike a comment). In the map, the darker and thicker red lines represent segments that received more comments and likes. The HIN is overlaid to reveal how historic crash data compares with the webmap survey results, or people's perception of safety along the town's roadway network.

Figure 9. Top Comment Themes

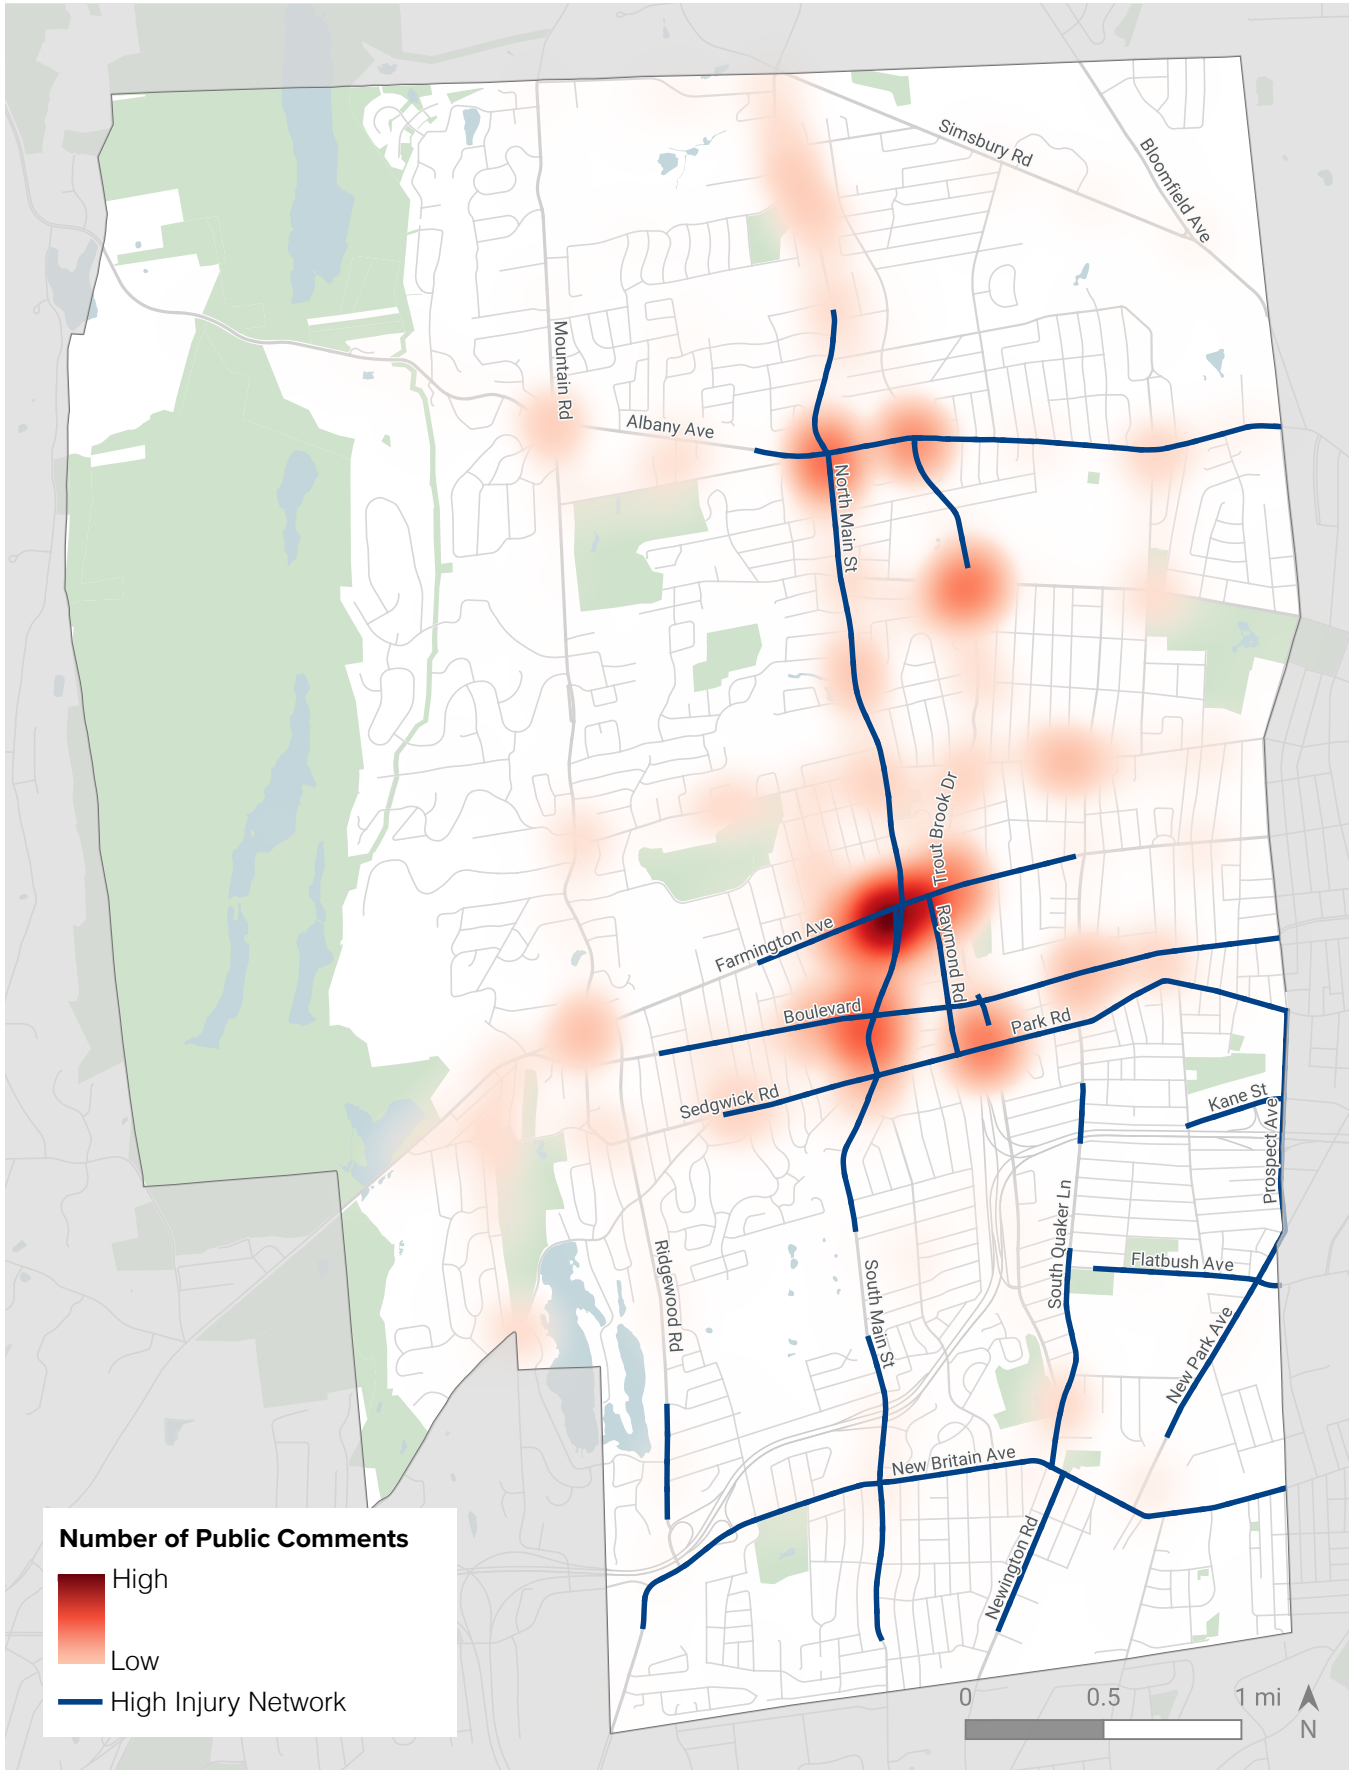

Figure 10. Heatmap of Public Comments

INTEGRATING COMMUNITY INPUT

Plan Recommendations

Public input shaped the recommendations in this Plan. Figure 11 summarizes the key themes expressed in public comments and throughout the engagement process. The Plan includes several action items that respond to concerns raised by participants, such as speeding and intersection viability. Many of these issues will be addressed as part of the Road Safety Audits, which are identified in the [Action Plan](#) and in the [Implementation Support](#) chapters.

The 20 miles of roadway segments that the public identified as being most unsafe are identified in Figure 12. The neighborhoods

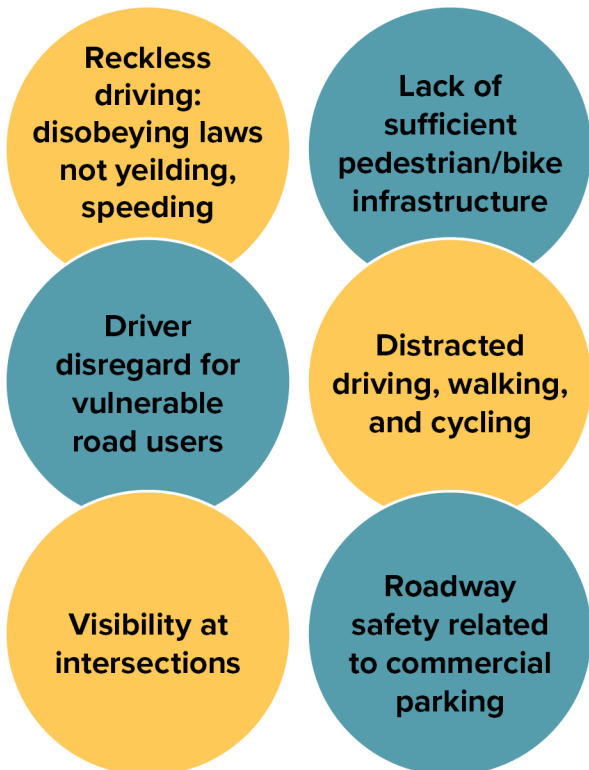

that represent the top 9% of local roads that the public identified as being most unsafe are shown in Figure 13. These roadway segments and neighborhoods were incorporated into the VZFA as discussed in more detail in the [Action Plan](#).

Plan Implementation

The [Action Plan](#) includes clear direction on how the public should be engaged during implementation and subsequent updates to this Plan. In addition, the public input on the webmap will be used as a foundation for identifying safety solutions for the VZFA. Finally, the Town will continue to engage residents in the design process as it has with past roadway improvement projects.

Concerns include...

Support for...

Figure 12. Unsafe Streets from Public Input

Figure 13. Unsafe Neighborhood Areas from Public Input

EQUITY IN VISION ZERO

EQUITY IN ACTION

Equity means the fair treatment and meaningful involvement of all people regardless of race, color, national origin, disability, or income during the development and implementation of Vision Zero. Unfortunately, previous planning efforts designed and built the roadway system without inclusive engagement throughout the United States. The roadway system often minimizes the needs of marginalized populations who more frequently walk or bike and who have longer commutes.¹ The result is that these communities are at a greater risk of serious injury and death.

This Plan centers equity in several ways. First, the project team recognized that systematically marginalized communities may be less likely to report traffic crashes. Moreover, members of marginalized communities are less likely to participate in community engagement efforts for lack of time, resources, and belief that their input will be valued. As a result, issues that are more likely to affect these individuals and their communities are not frequently identified through data analysis or public engagement. In response, the project team utilized Transportation Equity Zones as a key input to prioritize the VZFA (discussed in more detail in the following section).

Second, the Task Force was charged with a focus on inclusion. Task Force

¹ *Problem Has Existed over Endless Years: Racialized Difference in Commuting, 1980–2019.* Devin Michelle Bunten, Ellen Fu, Lyndsey Rolheiser, Christopher Severen. Federal Reserve Bank of Philadelphia, April 2022.

KEY STATISTIC

Between 2016-2018, the fatality rate for non-Hispanic Black Americans was 4.5 times higher while cycling; 2.2 times higher while walking; and 1.8 times higher while driving than for white Americans on a per mile traveled basis.

Source: Disparities in Activity and Traffic Fatalities by Race/Ethnicity. Matthew A. Raifman, MPP and Ernani F. Choma, PhD. American Journal of Preventative Medicine, June 7, 2022

participants represented many backgrounds including, various races, ethnicities, and incomes levels, as well as intersecting demographics which included youth, senior, and disabled community members.

Third, the project team and Task Force considered how the implementation of each action could be accessible and equitable. Those considerations are documented in the full Action Plan found in [Appendix A](#).

Finally, the Action Plan includes goals, strategies, and actions that are specifically designed to support an inclusive implementation. This includes a focus on developing materials in multiple languages, disseminating information through a variety of mediums, and collaborating with community groups to support a grass-roots awareness campaign.

TRANSPORTATION EQUITY ZONES

Transportation Equity Zones are designed to ensure equitable application of Vision Zero recommendations and prioritization in these areas. An area is defined as a Transportation Equity Zone if identified in one of the following:

- US Department of Housing and Urban Development Low- or Moderate-Income Census Block Group.
- Connecticut Department of Energy and Environmental Protection Environmental Justice Community.
- US Department of Transportation Equitable Transportation Community Explorer.

Figure 14 shows each of these original data sources mapped. Figure 15 shows the High Injury Network overlaying the identified Transportation Equity Zones.

KEY STATISTIC

In West Hartford, Transportation Equity Zones have...

24% of roadways

27% of population

But account for...

38% of deaths and serious injuries

52% of all crashes

ACTION PLAN

ACHIEVING VISION ZERO IN WEST HARTFORD

Background

This Action Plan incorporates the data-driven and equity-focused approach, with extensive stakeholder and community input, that has been proven to eliminate deaths and serious injuries on roadways. The Plan is consistent with, and incorporates best-practices from, the Vision Zero Network's Guidelines for an Effective Vision Zero Action Plan (December 2017). This Action Plan:

- Is built on a robust data framework and includes strategies for improving data gathering.
- Includes measurable goals with a clear timeline for implementation.
- Identifies lead and supporting agencies.
- Notes where additional funding, staffing, or legislative support is needed to implement the actions.
- Provides clear framework for measuring success and continuing to have an transparent process.
- Identifies how implementation can be accessible and equitable.

The strategies and actions are also consistent with best practices in Vision Zero, including:

- Aligning Town policies and practices with Vision Zero and building the institutional frameworks necessary to implement the Plan.

- Prioritizing safe roadway design for all users.
- Focusing on speed management.
- Utilizing culturally sensitive and diverse engagement and education techniques.
- Using and improving data collection to better understand the causes and location of deaths and serious injuries.

The Plan is intended to address all public streets, except for I-84.

Organization

The Action Plan recommendations are a comprehensive, integrated approach to get the Town to zero deaths and life-changing injuries on its streets. They are organized around the four goal areas established by the Task Force in collaboration with Town staff:

- **Practices and Policies:** The changes that need to be made to Town practices and policies to effectively implement Vision Zero.
- **Safe Design:** The specific steps that the Town and its partners will undertake to (re)design streets for safety.
- **Culture:** The ways that West Hartford will partner with the community to develop a culture of safety in West Hartford.
- **Data:** How West Hartford will improve and diversify its data sources, collection strategies, analysis, and data reporting to make better decisions about roadway safety.

Prioritization

Vision Zero Focus Areas

This Plan uses VZFAs to prioritize the location of improvements to the street network. There are two VZFA maps:

- VZFA Streets shall be used to prioritize interventions on major roads. (Figure 18)
- VZFA Neighborhoods shall be used to prioritize interventions on residential streets in neighborhoods. (Figure 19)

VZFAs include streets and neighborhoods:

- on the High Injury Network (HIN).
- with a high concentration of input on the Webmap Survey (Public).
- within Transportation Equity Zones (TEZs).

Streets and neighborhoods that meet more than one of those criteria are given higher priority, as illustrated in Figure 16. [Appendix B](#) includes a list of all segments in VZFAs.

Strategies and Actions

The Town and Task Force assigned a priority from high to low for each strategy and action. Actions are scored based on a combination of several factors including how needed or urgent implementation was and how big of an impact it would have. This scoring was refined based on input from lead and supporting entities.

When time and resources are limited, this prioritization system should be utilized to determine what actions and strategies should receive the most attention.

Priority does not always correspond to early implementation. Some actions may be higher priority but have obstacles that may prevent them from being executed quickly. Likewise, some lower priority items may have early implementation.

Figure 16. Prioritizing the Vision Zero Focus Areas

Urgent priority levels are on the HIN, highly identified by the public, and in a TEZ.**

High priority levels are on the HIN and highly identified by the public or located in a TEZ.

Medium priority levels are either (1) on the HIN or (2) highly identified by the public and located in at TEZ.

Low priority levels are highly identified by the public but are not on the HIN or in a TEZ.

** Note: The most severe HIN segments are included in the urgent priority regardless of public input or location within a TEZ.

Areas not identified within VZFAs

VZFAs give direction to the Town on projects which should be prioritized for safety improvements. Other projects may be initiated with different goals such as regular maintenance, streetscaping, operational improvements, pedestrian and bicycle facility roll-out, or other goals. The Town will review opportunities for safety improvements as part of these projects.

VZFAs do not preclude traffic calming on the streets outlined in the “Neighborhood Street Traffic Calming Program.”

Updating the Plan

As shown in Figure 17, implementing Vision Zero is an iterative process. The Action Plan includes recommendations to monitor and adjust implementation and the VZFAs.

Full Action Plan

The Action Plan presented in this chapter highlights the major implementation elements. [Appendix A](#) includes the following additional information:

- Implementation schedule from 2024 through 2031.
- Frequency of actions.
- Performance metrics.
- Accessibility considerations.
- Equity considerations.
- Additional notes and information to support implementation.

The full Plan has been provided to the Town as an editable file so it can serve as a project management tool.

PRACTICES & POLICIES

Background

Effective policies, practices, and laws must be in place for the Town to implement many of the strategies identified in the other sections of this Plan. The following strategies and actions will create a proactive, safety-first framework for implementing Vision Zero. They will help the Town's departments and partnering agencies align their work to eliminate fatalities and serious injuries. The practices and policies should continue to be informed by public input and advance the Town's work on safety, data, and culture.

Goal

West Hartford will integrate the Safe System Approach to roadway design into the Town's policies and regulations.

Strategies

ID	Strategy	Priority
A	Create the institutional framework for the implementation of Vision Zero.	High
B	Establish policies and programs that will support efforts to reduce speeds, calm traffic, and increase safety for all users.	High
C	Integrate safe street design standards into zoning and subdivision ordinances.	Medium
D	Build meaningful partnerships to support new policies, practices, and projects.	Medium
E	Undertake important studies and plans.	Medium
F	Become a leader in Vision Zero in Connecticut.	Low

Practices & Policies

ID	Action	Timeframe
A	<i>Create the institutional framework for the implementation of Vision Zero.</i>	
A1	Make the Vision Zero Task Force permanent and hold quarterly status update meetings.	2024 - Ongoing
A2	Create a specific line item under Transportation & Circulation in the town's Capital Improvement Program budget that accounts for capital expenditures that advance Vision Zero. Provide dedicated funding to that line item.	Ongoing
A3	Pursue implementation grant funding to support the implementation of Vision Zero, including the Safe Streets and Roads for All (SS4A) grant.	Ongoing
A4	Establish a full-time permanent staff position responsible for overseeing the implementation of the Action Plan, annual review, data analysis, and the dashboard.	2025
A5	Conduct an annual review of the Vision Zero Action Plan. Include a work plan for projects to be undertaken in the upcoming year.	2024 - Ongoing
A6	Establish an internal Response Team to identify and implement quick-build safety countermeasures and direct enforcement and education resources at fatal crash locations.	2026 - 2029
A7	Require that all street improvement projects funded by the town include a report on how they advance Vision Zero.	2026 - Ongoing
B	<i>Establish policies and programs that will support efforts to reduce speeds, calm traffic, and increase safety for all users.</i>	
B1	Adopt a policy formalizing the use of target speed as the design approach for town projects.	2024
B2	Review of the Vision Zero Focus Areas (VZFAs) and identify locations where town speed limits can be lowered.	2024 - 2025
B3	Reduce speeds along the HIN, where warranted.	2025 - 2030

SAFE DESIGN

Background

Roadway design, particularly its influence on motorist speed, is a key factor in achieving Vision Zero. Designing to reduce speeds not only decreases the risk of a crash but also decreases the risk of serious injury or death. The effects of speed are most pronounced for vulnerable road users whose risk of dying if struck by a vehicle increases dramatically with vehicle speed.

Physical changes to our streets will introduce permanent measures that will discourage dangerous, excessive, and intimidating driving and speeding. Efforts will include low-cost town-wide interventions and targeted investments in the Vision Zero Focus Areas. Safe roadway design will prioritize the needs of vulnerable road users. The action plan focuses on improvements to areas where these users may come into conflict with vehicular traffic such as intersections, crossings, and areas with missing sidewalks or bicycle facilities. These safety improvements will address existing issues while making West Hartford streets more appealing for walking and biking. The result will be fewer vehicle miles traveled, which will reduce the overall risk of injury and death.

Goal

West Hartford will adopt road design practices that prioritize safety for all users over vehicle speed and throughput. Physical design changes on roadway segments and at intersections will play an important role in reducing the number of serious injuries and deaths. More roadway users will choose alternatives to driving and, as a result, reduce the total vehicle miles traveled in the Town.

Strategies

ID	Strategies	Priority
G	Make infrastructure improvements that will make roads safer.	High
H	Reduce speeds.	High
I	Design for safe streets near schools.	Medium

KEY ACTION HIGHLIGHT: ROAD SAFETY AUDITS

A Road Safety Audit (RSA) is the formal safety performance examination of an existing or future road or intersection by a multidisciplinary team that can include engineers, planners, members of the public, and key stakeholders. RSAs are based on data and evidence, enabling communities to make informed decisions about road safety improvements. A RSA typically includes:

- Preparation and Planning: This involves gathering relevant background information such as traffic volume data, crash history, and the design of the road or intersection.
- Field Review: The team visits the site to observe traffic patterns, road user behavior, and potential hazards.
- Analysis: The audit team reviews the collected data and observations to identify safety issues. This analysis considers factors like sight distance, signage, pavement markings, pedestrian and cyclist facilities, and the behavior of different types of road users.
- Reporting: The team prepares a report detailing the identified safety issues and suggesting potential improvements. This report is usually structured to highlight immediate, short-term, and long-term recommendations.

RSAs are key to the implementation of this action plan. Initially, the Task Force had proposed many town-wide studies that would address individual issues (e.g., access to transit, sidewalk connectivity, crossing times at intersections, etc.). Although comprehensive, this approach would take significant time and resources to implement.

In contrast, utilizing the RSAs would allow the Town to:

- Focus on the most urgent segments of the Vision Zero Focus Areas (VZFA) first.
- Take a holistic approach to studying and improving streets that factored in all modes of vehicles and a wide variety of potential issues. For more information on the breadth of issues covered in the audits, see RSA Field Considerations on page 66.
- Identify immediate, short-term, and long-term recommendations in the VZFA that could be included in the work plan and advanced in subsequent years.
- Be better positioned to win grant funding for improvements.

As such, Action items G1 through G4 are interconnected and the Town should incorporate recommendations from the RSAs into the Action Plan as they are completed.

Safe Design

ID	Action	Timeframe
G	<i>Implement infrastructure improvements that will make roads safer.</i>	
G1	Conduct Road Safety Audits and/or safety assessments of areas identified in the Vision Zero Focus Areas.	2024 - Ongoing
G2	Implement quick-build recommendations within two years of conducting the Road Safety Audit.	2025 - 2026
G3	Implement short-term improvements within three to five years of conducting the Road Safety Audit.	2025 - 2029
G4	Implement long-term improvements within six to ten years of conducting the Road Safety Audit.	2027 - 3031
G5	Implement an automated enforcement (speed camera) program within Vision Zero Focus Areas to include speed enforcement and red-light enforcement.	2024 - 2025
G6	Identify and implement quick build and short-term projects that will not impact corridor planning.	2024 - 2027
G7	Prioritize the location of speed feedback signage to the Vision Zero Focus Areas.	2024 - Ongoing
G8	Construct single-lane modern roundabouts. Consider the intersections identified by the CRCOG Roundabout Study.	2026 - 2031
G9	Upon completion of the Bicycle Facility Plan, identify goals and a schedule of expansion of the bicycle network that includes continuous low-stress north-south and east-west connectivity.	2031
H	<i>Reduce speeds.</i>	-
H1	Evaluate signal timing on coordinated signal systems to ensure consistency with corridor target speeds.	2026 - 2031

CULTURE

Background

While human error is inevitable, Vision Zero will be more successful if it is supported by members of the public who understand the importance of Vision Zero and the role that they play in ensuring safe streets. Motorists, bicyclists, and pedestrians each have responsibility to demonstrate safe behaviors. Vision Zero must actively engage with the public to teach traffic safety and design a safer system together. Cultural changes are evident in community action.

Goal

People in West Hartford will use roadways safely and be able to explain why it is important to do so. West Hartford will become a more informed community on road safety, yielding fewer crashes that result in serious injuries or deaths. There will be an open dialogue between the Town and residents about Vision Zero through a variety of communication mediums (website, social media, local station, etc.) that are accessible to all individuals across various backgrounds and abilities.

Strategies

ID	Strategy	Priority
J	Develop and execute a multi-media awareness campaign to educate people on safe roadway behavior.	High
K	Integrate Vision Zero education into West Hartford schools.	High
L	Establish the Town as a leader in Vision Zero best behaviors.	Medium
M	Promote non-motorized travel as a viable alternative to driving.	Low

Culture

ID	Action	Timeframe
J	<i>Develop and execute a multi-media awareness campaign to educate people on safe roadway behavior.</i>	
J1	Publish online and print public service announcements about Vision Zero.	2024 - Ongoing
J2	Maintain the West Hartford Vision Zero webpage on the town website as a central database for the Vision Zero Action Plan, progress reports, upcoming programs, related organizations, and contact methods.	Ongoing
J3	Design a campaign targeting distracted driving. (i.e., bumper sticker, PSAs, ads)	2024 - 2025
J4	Collaborate with community groups to provide workshops and educational awareness campaigns tailored to specific topics related to Vision Zero and traffic safety.	2025 - Ongoing
J5	Fully develop recognizable Vision Zero branding and marketing strategy to be used in future reports, social media posts, and outreach materials.	2024
J6	Build a multilingual Vision Zero outreach toolkit.	2024 - 2025
J7	Publish an online "Vision Zero Pledge" that allows community members to show their personal commitment to achieving zero deaths and serious injuries.	2025 - Ongoing
J8	Create and manage official West Hartford Vision Zero social media accounts to share resources and interact with community members.	Ongoing
J9	Host a workshop for professional media on how to best communicate information about traffic crashes and Vision Zero.	2024
J10	Conduct driver awareness sessions specific to Vision Zero for all town staff.	2025 - Ongoing

K	<i>Integrate Vision Zero education into West Hartford schools.</i>	
K1	Work with students to develop a K-12 Vision Zero campaign that helps students understand the importance of road safety.	2024 - 2025
K2	Establish Vision Zero and Distracted Driving panels in schools to develop a traffic safety curriculum and oversee its implementation.	2025 - Ongoing
K3	Coordinate engagement and outreach with the development of the Safe Routes to School Program.	Ongoing
K4	Provide educational videos catered to students on Vision Zero.	2026 - Ongoing
K5	Promote designated walk/bike to school days to encourage alternative transportation modes to cars.	2026 - Ongoing
K6	Conduct information sessions with School District staff, especially school bus drivers, on safe roadway uses and their role in advancing Vision Zero.	2025 - Ongoing
L	<i>Establish the Town as a leader in Vision Zero best behaviors.</i>	
L1	Update the language in public-facing Town documents to refer to “crashes,” not “accidents.” Ensure Town staff refer to crashes instead of accidents.	2026
M	<i>Promote non-motorized travel as a viable alternative to driving.</i>	
M1	Identify key locations within the Vision Zero Focus Areas that would improve people’s ability to meet their daily needs without a car. Map and integrate into prioritization framework.	2027
M2	Develop an advertising strategy to promote how safety improvements are making West Hartford a better place to walk, bike, and take transit.	2027 - Ongoing
M3	Work with major employers to promote alternative transportation modes and designated bike/walk to workdays.	Ongoing
M4	Host guided bicycle rides for new bike facilities as they open.	Ongoing

DATA

Background

Good data is critical to ensuring the successful implementation of Vision Zero actions. Data reveals where problems are, who is impacted, and what does and does not work. Robust and transparent data collection, measurement, analysis, and reporting are crucial to understanding the system-level changes needed to achieve Vision Zero.

Goal

West Hartford will improve and diversify its data sources, collection strategies, and analysis to make data-driven decisions. West Hartford will be accountable for its Vision Zero commitment through measurable outcomes and transparent data reporting.

Strategies

ID	Action	Priority
N	Report data to community members, Town staff, and the state.	High
O	Analyze data to improve the Town's understanding of crash patterns.	Medium
P	Improve data diversity surrounding available crash data.	Low

Data

ID	Action	Priority
N	<i>Report data to community members, Town staff, and the state.</i>	<i>High</i>
N1	Create a dashboard linked on the Vision Zero webpage to analyze the Action Plan's metrics and progress toward its goals.	High
N2	Publish project updates, progress on actions, and program updates to the data dashboard.	High
N3	Develop and publish an annual Vision Zero progress report focused on data-driven results and areas for improvement.	High
N4	Provide Town crash data about serious injuries and deaths on the data dashboard when it is made publicly available.	Medium
O	<i>Analyze data to improve the Town's understanding of crash patterns.</i>	<i>Medium</i>
O1	Update and modify the High Injury Network and Vision Zero Focus Areas.	High
O2	Track and analyze trends in contributing factors identified on the High Injury Network.	Medium
O3	Compare traffic data before and after traffic calming interventions to assess effectiveness and refine future applications.	Medium
O4	Identify nodes located near the High Injury Network that attract trips by vulnerable users (schools, parks, transit hubs, health centers, trail crossings, etc.) to help prioritize implementation.	Medium
P	<i>Improve data diversity surrounding available crash data.</i>	<i>Low</i>
P1	Solicit public input on perception of traffic safety when updates are made to the Vision Zero Focus Areas.	High
P2	Collect speed data on high crash corridors to identify where prevailing speeds exceed the posted speed limit.	High
P3	Update and promote the Town's online system for road users to report problem road areas, hazards, near misses, and the like. Publish that information on the data dashboard.	Medium

IMPLEMENTATION SUPPORT

SUPPORTING DOCUMENTS

Background

As part of its initial efforts, the Task Force identified a variety of safety concerns in West Hartford and proposed that each of these issues be studied individually. This would have resulted in more than a dozen studies, overwhelming the Town and slowing implementation. Moreover, that approach lacked a focus on VZFAs.

Instead, the project team proposed, and the Task Force embraced, an approach that would utilize **Road Safety Audits (RSAs)** and smaller roadway assessments to advance Vision Zero. In this approach, the Town would conduct regular studies on roadway segments, prioritizing VZFAs. This would allow the Town to:

- Focus their attention on the highest need areas first.
- Study roadways holistically and address the totality of issues, not just the ones identified by the Task Force.
- Identify projects for implementation more quickly.

In support of that effort, this chapter includes two important documents. The first is **RSA Field Considerations**, which can be used to identify safety issues during the RSAs. It is important to note that the list of considerations need not be static and should evolve as the Town learns from its initial RSA efforts.

The second is a **countermeasures matrix** which provides direction on interventions that could be appropriate for addressing the issues identified by the Task Force.

Performance Measures

To track progress towards Vision Zero, the Action Plan identifies several top-level performance measures to track on an annual basis.

- Number of fatal and severe injury crashes: Town-Wide (not including I-84), involving pedestrians and bicyclists, occurring within the Vision Zero Focus Areas.
- Percentage of VZFAs improved
- Number of Road Safety Audits (RSAs) Completed
- Number of Safe Routes to School Reports (SRTS) Completed
- Number of Early Action Recommendations (RSA & SRTS) Implemented
- Number of Grant Applications Submitted to Support Long-Term Recommendation Development

Additionally, the full Action Plan (located in the appendix) includes performance measures on each of the individual actions.

Data Dashboard

A Data Dashboard has been developed to visualize and explore crash trends within West Hartford. The dashboard is available on the West Hartford Vision Zero website and includes annually-updated crash information (updated by early-summer of each year) as well as featured projects recently completed or underway related to the Action Plan.

RSA FIELD CONSIDERATIONS

Pedestrian

Accommodations

- Sidewalks (ADA compliant, width, grade, condition, drainage, buffer, etc.)
- Sidewalk connectivity **
- Lighting
- Amenities (benches, trash receptacles, etc.)

Pedestrian Crossings

- Crossing times and distance **
- Signage
- Pavement markings **
- Accessible pedestrian signals (APS) **
- Adequate sight distance
- ADA compliant ramps (grades, orientation, tactile warning strips, etc.)
- Pedestrian refuge at islands
- Distance between crossings **

Bicycle Accommodations

- Bicycle facilities (design, location and condition)
- Gaps **
- Separation from traffic
- Conflicts with on-street parking **
- Pedestrian conflicts
- Bicycle signal detection
- Visibility
- Roadway speed limit
- Bicycle signage /

markings

- Shared lane width
- Shoulder condition / width
- Traffic volume
- Heavy vehicles
- Pavement condition
- Debris

Transit Accommodations

- Location
- Signage
- Seating / Covers
- Pedestrian connectivity **

Road Facilities

- Access points
- Drainage
- Tapers and lane shifts
- Roadside clear zone / slopes
- Guide rails / protection systems
- Capacity issues

Road Surface Condition

- Pavement (excessive roughness or rutting, potholes, loose material)
- Edge drop-offs
- Drainage issues

Intersections

- Geometry
- Sight distances **
- Traffic control devices
- Safe storage for turning vehicles
- Exclusive right turn lanes **

Signals

- Visibility
- Operation
- Timing **
- Safe placement of equipment
- Proper sight distance
- Adequate lane capacity

Signage

- Correct use
- Clear messaging
- Good placement for visibility
- Adequate retro-reflectivity

Pavement Markings

- Correct and consistent with MUTCD
- Lane widths **
- Adequate visibility
- Condition
- Snow storage
- Edgelines provided

Driver Behavior

- Compliance with speed limits **
- Sight distance adequacy
- Safe passing opportunities
- Distractions
- Unaware of pedestrians / cyclists

Miscellaneous

- Weather impacts

**** Identified by Task Force as a common or persistent issue in West Hartford.**

TYPICAL SAFETY ISSUES IDENTIFIED BY TASK FORCE

Issue	Potential Countermeasures
Speeding, especially when speeders are exceeding 35 MPH or 10 MPH above the speed limit.	Speed Limit Reduction, School Zone Speed Limit, Automated Speed Enforcement, Lane Striping Changes (Narrower Lanes), Road Diet, Neighborhood Traffic Calming, Roundabout, Bumpout, Signal Retiming, Adaptive Signals, Raised Intersection, Raised Crosswalk, Pedestrian Refuge Island (with horizontal deflection)
Excessive lane widths that encourage speeding or other dangerous behaviors	Lane Striping Changes (Narrower Lanes)
Excessive roadway capacity, especially where it may encourage unsafe behaviors	Road Diet, Right-Turn Lane Closure, Signal Retiming
Gaps in the sidewalk network, including lacking sidewalks and damaged sidewalks which make them difficult to use (especially by people with disabilities).	Sidewalks
Improper sight lines to nearby intersections and driveways	Sight Line Improvements at Corners (Vegetation and Parking)
Inadequate pedestrian infrastructure, especially at high-pedestrian crossing volume locations	Crosswalks, Mid-block Crosswalks, Rectangular Rapid Flashing Beacons (RRFBs), Pedestrian Refuge Island, Raised Crosswalk, Raised Intersection, Crosswalk Yield Lines and Other Pavement Markings, Automated Pedestrian Detection / Pedestrian Recall, Dynamic No-Turn on Red (NTOR) Signage with Pedestrian Signal Activation, Right-Turn Lane Closure, Bumpouts, Roundabout, Road Diet, Neighborhood Traffic Calming, Automated Speed Enforcement, Automated Red-Light Enforcement, Parking Restriction Enforcement, Additional Lighting, Speed Limit Reduction, School Zone Speed Limit
Overbuilt, unnecessary, poorly designed, or poorly signaled exclusive right-turn lanes	Raised Crosswalk (across Channeled Right-turn Lane), Dynamic No-Turn on Red (NTOR) Signage with Pedestrian Signal Activation, Right-Turn Lane Closure, Automated Red-Light Enforcement

Issue	Potential Countermeasures
Excessive pedestrian wait times at traffic signals that induces unsafe pedestrian activity.	Signal Retiming, Adaptive Signals, Automated Pedestrian Detection / Pedestrian Recall
Missing, long, unsafe, or inadequate pedestrian crossings at intersections (especially across arterials or collectors) and mid-block.	Crosswalks (at Intersections), Mid-block Crosswalks
Improper signal timing, especially when it encourages speeding or unsafe driver behaviors (e.g., jumping signals).	Signal Retiming, Adaptive Signals
Bus stop locations that have unsafe or inconvenient pedestrian access routes from the stops to nearby destinations.	Sidewalks, Crosswalks (at Intersections), Mid-block Crosswalks, Bus Stop Relocation
Gaps in the bicycle network	Bicycle Facility (Refer to Bike Plan)
Frequent vehicular parking occurs in bicycle facilities.	Parking Restriction Enforcement

POTENTIAL COUNTERMEASURES

The following summarizes potential countermeasures that can support implementation. They are organized into the following categories:

- Pedestrian and Bicycle Countermeasures
- Countermeasures at Intersections and Driveways
- Cross Section Countermeasures
- Enforcement
- Miscellaneous Countermeasures

Countermeasures are based on review of available resources including the Federal Highway Administration’s Proven Safety Countermeasures website. Additionally, the Action Plan effort includes a desktop review of the Vision Zero Focus Areas which were identified as an “Urgent” priority. Additional review of crash details in these areas as well as identification of appropriate countermeasures are included in this list. The list below is not exhaustive but rather representative of the most common countermeasures appropriate for West Hartford.

Countermeasures		Safety Issues								
		Speeding	Pedestrian Crashes	Bicyclist Crashes	DUI & Distracted Users	Crashes at Intersections	Angle Crashes	Head-on Crashes	Single Vehicle Crashes	Crashes at Night
Pedestrian and Bicycle	Sidewalks (ADA-compliant)		Yes							
	Crosswalks - at Signal or All-Way Stop		Yes			Yes				
	Crosswalks - Mid-Block or at Two-Way Stop (Main Road)		Yes			Yes				
	Crosswalks - at Two-Way Stop (Side Street)		Yes			Yes				
	Rectangular Rapid Flashing Beacons (RRFB)		Yes		Yes	Yes				Yes
	High-Intensity Crosswalk Lighting w/ RRFB		Yes		Yes	Yes				Yes

Countermeasures		Safety Issues								
		Speeding	Pedestrian Crashes	Bicyclist Crashes	DUI & Distracted Users	Crashes at Intersections	Angle Crashes	Head-on Crashes	Single Vehicle Crashes	Crashes at Night
Ped. and Bicycle	Pedestrian Refuge Island		Yes			Yes		Yes		
	Raised Crosswalk/ Intersection	Yes	Yes		Yes	Yes				
	Bus Stop Relocation		Yes							
	Bicycle Facility (Refer to Bike Plan)			Yes						
Intersection and Driveways	Traffic Signals		Yes	Yes		Yes	Yes			
	Pedestrian Signal Heads		Yes			Yes				
	Accessible Pedestrian Signals (APS) / Countdown Timer		Yes			Yes				
	Automated Pedestrian Detection / Pedestrian Recall		Yes			Yes				
	Signal Retiming - Adequate Green / Walk Time	Yes	Yes	Yes		Yes	Yes			
	Signal Retiming - Clearance Intervals	Yes	Yes	Yes		Yes	Yes			
	Signal Retiming - Adaptive Signals	Yes	Yes	Yes		Yes				
	Protected Left Phase					Yes	Yes	Yes		
	Flashing Yellow Arrow (FYA)				Yes	Yes	Yes	Yes		
	Dynamic No-Turn on Red (NTOR) Signage with Pedestrian Signal Activation		Yes		Yes	Yes				

Countermeasures		Safety Issues								
		Speeding	Pedestrian Crashes	Bicyclist Crashes	DUI & Distracted Users	Crashes at Intersections	Angle Crashes	Head-on Crashes	Single Vehicle Crashes	Crashes at Night
Intersection and Driveways	Retroreflective Backplates				Yes	Yes	Yes	Yes		Yes
	Left-Turn Lane Addition					Yes				
	Right-Turn Lane Closure		Yes			Yes				
	Intersection "Cat Track" Markings			Yes	Yes	Yes	Yes	Yes	Yes	Yes
	Bumpouts	Yes	Yes			Yes	Yes			
	Sight Line Improvements at Corners (Landscaping & Parking etc.)		Yes	Yes		Yes	Yes			
	Systematic Application of Signage at Stop-Controlled Intersections				Yes	Yes	Yes	Yes	Yes	Yes
	Access Management - Turn Restrictions		Yes			Yes	Yes	Yes		
	Access Management - One-Way or Half-Closure		Yes			Yes	Yes	Yes		
	Access Management - Driveway / Road Full Closure		Yes			Yes	Yes	Yes		
	Roundabout	Yes	Yes		Yes	Yes	Yes	Yes		
Cross Section	Retroreflective Epoxy Pavement Markings			Yes	Yes			Yes	Yes	Yes
	Lane Striping Changes	Yes		Yes		Yes		Yes	Yes	Yes
	Road Diet	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	

Countermeasures		Safety Issues								
		Speeding	Pedestrian Crashes	Bicyclist Crashes	DUI & Distracted Users	Crashes at Intersections	Angle Crashes	Head-on Crashes	Single Vehicle Crashes	Crashes at Night
Cross Section	Edge Lines / Wider Edge Lines			Yes	Yes				Yes	Yes
	Centerline Rumble Strips				Yes			Yes	Yes	Yes
	Horizontal Curve Signage and Pavement Markings				Yes				Yes	Yes
	Median Island	Yes					Yes	Yes	Yes	
Enforcement	Automated Speed Enforcement	Yes	Yes	Yes						
	Automated Red-Light Enforcement		Yes	Yes		Yes	Yes	Yes		
	DUI & Distracted User Enforcement				Yes					
	Parking Restriction Enforcement		Yes	Yes		Yes	Yes			
Miss.	Neighborhood Traffic Calming	Yes	Yes	Yes						
	Lighting - Roadway		Yes	Yes					Yes	Yes
	Lighting - Pedestrian		Yes	Yes					Yes	Yes
	Speed Limit Reduction	Yes	Yes	Yes						
	School Zone Speed Limit	Yes	Yes	Yes						
	Directional Pavement Markings				Yes	Yes				
	Directional Signage				Yes	Yes				

APPENDIX A. FULL ACTION PLAN

West Hartford Vision Zero Action Plan - REV 1/5/2024

PRACTICES AND POLICY

ID	Description	2024	2025	2026	2027	2028	2029	2030	2031+	Priority	Lead Entity	Supporting Entity	Frequency	Performance Metric	Accessibility Considerations	Equity Considerations	Staff Obs.	Funding Obs.	Legis. Obs.	Additional Information
A										HIGH										
Create the institutional framework for the implementation of Vision Zero.																				
A1	Make the Vision Zero Task Force permanent and hold quarterly status update meetings.	COMPLETE	ONGOING	ONGOING	ONGOING	ONGOING	ONGOING	ONGOING	ONGOING	1 HIGH	Town Manager	Community Development	Quarterly	Number of meetings held per year.	Include members who have experience with improving accessibility.	Include BIPOC, disabled, senior, youth and LGBTQIA members.	X			
A2	Create a specific line item under Transportation & Circulation in the town's Capital Improvement Program budget that accounts for capital expenditures that advance Vision Zero. Provide dedicated funding to that line item.	ONGOING	ONGOING	ONGOING	ONGOING	ONGOING	ONGOING	ONGOING	ONGOING	1 HIGH	Community Development	-	Annually	Creation of line item; Number of dollars allocated to Vision Zero projects.	-	-		X		
A3	Pursue implementation grant funding to support the implementation of Vision Zero, including the Safe Streets and Roads for All (SS4A) grant.	ONGOING	ONGOING	ONGOING	ONGOING	ONGOING	ONGOING	ONGOING	ONGOING	1 HIGH	Engineering/Police	Public Works	Annually	Applications submitted; dollars awarded.	-	-	X			
A4	Establish a full-time permanent staff position responsible for overseeing the implementation of the Action Plan, annual review, data analysis, and the dashboard.	COMPLETE	-	-	-	-	-	-	-	1 HIGH	Community Development	-	Once	Establishment of position.	-	-		X		
A5	Conduct an annual review of the Vision Zero Action Plan. Include a workplan for projects to be undertaken in the upcoming year.	INITIATE	ONGOING	ONGOING	ONGOING	ONGOING	ONGOING	ONGOING	ONGOING	1 HIGH	Vision Zero Advisory Committee	-	Annually	Completion of review and update of action plan	Review should include a discussion of any equity issues that have arisen during the previous year and how they will be addressed.	Review should include a discussion of any equity issues that have arisen during the previous year and how they will be addressed.	X			Review should identify how to (1) allocate financial resources for staffing, infrastructure, and maintenance needs and (2) make updates to the action plan based on what was learned the previous year. Workplan should be developed in reference to capital expenditures planned for Action A2.
A6	Establish an internal Response Team to identify and implement quick-build safety countermeasures and direct enforcement and education resources at fatal crash locations.	INITIATE	WORKING	WORKING	WORKING	WORKING	WORKING	WORKING	ONGOING	2 MEDIUM	Town Manager	Community Development	Ongoing	Establishment of Response Team. Number of responses and measures implemented.	-	-	X	X		
A7	Require that all street improvement projects funded by the town include a report on how they advance Vision Zero.			INITIATE	ONGOING	ONGOING	ONGOING	ONGOING	ONGOING	3 LOW	Engineering	-	As needed	Establishment of policy requiring reports	Report should include where road projects have included accessibility improvements.	Report should include and Equity Report	X			
B										HIGH										
Establish policies and programs that will support efforts to reduce speeds, calm traffic, and increase safety for all users.																				
B1	Adopt a policy formalizing the use of target speed as the design approach for town projects.	COMPLETE	-	-	-	-	-	-	-	1 HIGH	Engineering	-	Once	Adoption of policy	-	-	X			This approach considers the highest-speed vehicles should operate on roadways.
B2	Review of the Vision Zero Focus Areas (VZFAs) and identify locations where town speed limits can be lowered.	INITIATE	COMPLETE	-	-	-	-	-	-	1 HIGH	Engineering	-	Once	Phase 1. Completion of review and identification of roadways. Phase 2. Percentage of reducible roadways that have had their speeds adjusted.	-	Report on percentage of locations that are within the TEZs	X			Refer to Federal Highway Administration US Limits 2 and NACTO City Limits guidance to establish consistent speed limits, taking into consideration the level of conflict and activity on streets.
B3	Reduce speeds along the HIN, where warranted.		INITIATE	WORKING	WORKING	WORKING	WORKING	COMPLETE	-	1 HIGH	Engineering	Public Works	As needed	Number of miles of roadway where speed limits have been reduced.	-	Report on percentage of locations that are within the TEZs	X			
B4	Establish pedestrian safety zones in commercial areas with significant pedestrian activity.		INITIATE	WORKING	COMPLETE	-	-	-	-	1 HIGH	Town Manager	Engineering/Public Works	As needed	Establishment of safety zones.	-	-	X			Utilize the criteria established in CT General Statutes 14-307A to identify appropriate locations.
B5	Initiate Neighborhood Street Traffic Calming in VZFAs.		INITIATE	ONGOING	ONGOING	ONGOING	ONGOING	ONGOING	ONGOING	2 MEDIUM	Engineering	-	One per year, as staffing and funding permit.	Completion of examination and follow up actions.	Ensure that information about the program is sufficiently advertised in the towns TEZs and in multiple languages.	Ensure that information about the program is sufficiently advertised in the towns TEZs and in multiple languages.	X			Town-initiated project should include VZFA streets and intersections that are also prone to cut-through traffic that causing injuries and/or deaths. Where appropriate including additional traffic calming measures in the program. Refer to the "Neighborhood Street Traffic Calming Program"
B6	Update the Maintenance and Protection of Traffic Policy to include provisions for vulnerable road users. Identify that closures for these users should be the last option available particularly in school zones and pedestrian safety zones.	INITIATE	COMPLETE	-	-	-	-	-	-	3 LOW	Engineering	Public Works	Once	Completion of Policy Update	-	-	X			
B7	Set a schedule for routine maintenance of road infrastructure and off-street bike facilities (e.g., sweeping, snow removal, repainting lanes, removing vegetation, and sign repair).				INITIATE	ONGOING	ONGOING	ONGOING	ONGOING	3 LOW	Public Works	Engineering	Once	Development and implementation of schedule.	-	-	X	X		
C										HIGH										
Integrate safe street design standards into zoning and subdivision ordinances.																				
C1	Undertake a review of the town's zoning and subdivision ordinances to identify changes that will improve safety.		INITIATE	COMPLETE	-	-	-	-	-	3 LOW	Planning & Zoning	Public Works	Once	Completion of review; adoption of changes.	-	-	X		X	This review should include addressing access managing standards in pedestrian safety zones.
D										MEDIUM										
Build meaningful partnerships to support new policies, practices, and projects.																				
D1	Meet annually with the Department of Transportation to identify how improvements to state roads can advance Vision Zero in West Hartford.	INITIATE	ONGOING	ONGOING	ONGOING	ONGOING	ONGOING	ONGOING	ONGOING	2 MEDIUM	Community Development	Engineering	Annually	Number of meetings held per year.	-	-	X	X		
D2	Engage with CRCOG in their 2024 update to the regional Safety Action Plan to ensure West Hartford Vision Zero priorities are represented at the regional level.	COMPLETE	-	-	-	-	-	-	-	2 MEDIUM	Engineering	-	As needed	Completion of Safety Action Plan	-	-	X			

West Hartford Vision Zero Action Plan - REV 1/5/2024

D3	Collaborate with CRCOG to leverage their Bipartisan Infrastructure Law (BIL) Coordinator for technical assistance in evaluating and strategically applying for funding to subsidize West Hartford's Vision Zero activities.	INITIATE	ONGOING	ONGOING	ONGOING	ONGOING	ONGOING	ONGOING	ONGOING	2 MEDIUM	Engineering		As needed	Number of dollars awarded through grants.			X			
D4	Work with CRCOG and neighboring towns to create continuous bicycle and pedestrian networks to connect West Hartford to neighboring towns.	INITIATE	ONGOING	ONGOING	ONGOING	ONGOING	ONGOING	ONGOING	ONGOING	3 LOW	Engineering	-	As needed	Linear miles of network improvements and/or connections added.	-	-	X	X		
D5	Collaborate with the State's Vision Zero Council and the Connecticut Department of Motor Vehicles (DMV) on incorporating Vision Zero concepts into their new driver manual and license renewal mailings.			INITIATE	ONGOING	ONGOING	ONGOING	ONGOING	ONGOING	3 LOW	Community Development	Public Relations/Police	As needed	-	-	-	X	X	X	This should include coordination with the State's Vision Zero Council to identify areas where the State can amend policies and laws to advance Vision Zero. Collaboration should also include how hospitals can provide better data on serious injuries from crashes.
E	Undertake important studies and plans.									MEDIUM										
E1	Develop a list of reference manuals and roadway standards that can be used to implement Vision Zero.		INITIATE	COMPLETE	-	-	-	-	-	1 HIGH	Engineering	-	Once	Development of standards	Include references to standards that address accessibility for all roadway users.	-	X	X		The reference manual should identify appropriate safety solutions on different roadway types, including arterial and collected.
E2	Update the Bicycle Facility Plan.	COMPLETE	-	-	-	-	-	-	-	2 MEDIUM	Engineering	Planning	As needed	Completion of plan	-	Engage community representatives from TEZs and incorporate their transportation safety needs.				The Plan should identify feasible and appropriate bicycle facility for reasonably confident bicyclists on all streets where shared facilities are not appropriate. It should include a low-stress bicycle network appropriate for less confident bicyclists of all ages. In line with the Complete Streets Policy, on streets where no feasible or appropriate facility exists, continue documenting reasoning and the next closest alternate facility.
E3	Develop a Bicycle Facility Design Guide.	COMPLETE	-	-	-	-	-	-	-	3 LOW	Engineering	-	Once	Completion of guide	-	Engage community representatives from TEZs and incorporate their transportation safety needs.	X			The guide should include references to current state and national standards.
F	Become a leader in Vision Zero in Connecticut.									LOW

APPENDIX C. HIGH INJURY NETWORK METHODOLOGY

MEMORANDUM

January 5, 2024

To:

Duane Martin, PE – Town of West Hartford
Greg Sommer, PE – Town of West Hartford

From:

Ben Silverstein – Toole Design
Parker Sorenson, PE – FHI Studio
Shawna Kitzman – Toole Design

**Re: West Hartford Vision Zero Safety Assessment Results and
Methodology**

Executive Summary

This memo describes the data sources and methodology used in the crash analyses performed for the Vision Zero Action Plan, including the High Injury Network (HIN) creation, contributing factor analysis, Transportation Equity Zones, and local road crash analysis.

While the total number of crashes in West Hartford, excluding I-84, has decreased since 2018, the number of fatal and serious injury crashes has increased. The project team used five years of crash data and a sliding window analysis to identify road segments with a history of pedestrian, bicyclist, and motorist crashes, and identified high-risk road segments using a predictive analysis.

The top scoring segments in each of these analyses are included in the HIN, which contains 56% of all fatal and serious injury crashes on 9% of roadway miles, with a total of 20 miles identified. While there are fatal and serious injury crashes that occurred outside the HIN, these generally occurred in areas where there are fewer nearby crashes resulting in injury. The HIN seeks to identify roadway segments which have an established trend of crashes resulting in a fatality, serious injury, or other injury.

Additionally, while local roads generally do not show up in the HIN given their relatively low vehicle volumes and numbers of crashes, the project team performed an analysis to identify areas with more local road crashes. Both the HIN and the local road crash analysis are components of the Vision Zero Focus Areas (VZFA) in the Vision Zero Action Plan.

Crash and Street Network Data Sources

The project team sourced crash data from Connecticut's Statewide Data Repository. The raw data includes all crashes in West Hartford that occurred between 1/1/2018 and 12/31/2022. Crashes that occurred on I-84, I-84 ramps, parking lots or other private property, or Prospect Avenue north of Park Road (City of Hartford jurisdiction) are not included. Crashes at the intersection of I-84 ramps and Town streets are included. Crash data on Prospect Avenue coded in Hartford were also evaluated if the crash occurred on Prospect Avenue south of Park Road or at an intersection between Town streets and Prospect Avenue north of Park Road (such as Farmington Avenue).

The Town of West Hartford provided centerline data. The project team added Annual Average Daily Traffic (AADT) data to the street centerline from Connecticut Department of Transportation (CTDOT) data, where available.

Summary Crash Trends

In the five-year study period, the total number of crashes has trended downwards across all modes, as shown in Table 1. However, crashes resulting in a fatality or serious injury have increased over the same period, as shown in Table 2.

Year	Motorist Crashes	Pedestrian Crashes	Bicyclist Crashes	Total Crashes
2018	1,453	21	12	1,486
2019	1,354	20	9	1,383
2020	890	13	8	911
2021	1,094	19	7	1,120
2022	1,038	11	7	1,056

Table 1: All crashes by mode and year¹

Year	Motorist Crashes	Pedestrian Crashes	Bicyclist Crashes	Total Crashes
2018	5	1	0	6
2019	5	0	0	5
2020	4	3	1	8
2021	11	2	0	13
2022	10	6	0	16

Table 2: Fatal and serious injury crashes by mode and year

These crash trends are similar to statewide trends. Figure 1 on the following page shows the change in the total number of crashes over time for West Hartford and Connecticut, relative to 2018. In both cases, the total number of crashes has decreased since 2018, with West Hartford experiencing slightly greater decline. However, both the state and West Hartford have experienced an upward trend in fatal and serious injury crashes since 2018, though West Hartford's increase is much greater in relative terms, as shown in Figure 2.

¹ Fewer crashes reported in 2020 due to lower vehicle volumes after the onset of the COVID-19 pandemic

Figure 1: West Hartford and statewide change in crashes relative to 2018

Figure 2: West Hartford and statewide fatal and serious injury crashes relative to 2018

Table 3 shows the number of crashes by collision type, separated by mode. Angle crashes were the most common collision type with 2,246 crashes, though less than 0.01% resulted in a fatality or serious injury. By contrast, there were 114 front to front collisions, 5% of which resulted in a fatality or serious injury. Seventy-one percent of all reported motorist crashes resulted in property damage only.

Motorist Collision Type	Fatality	Serious Injury	Minor Injury	Possible Injury	Property Damage Only	TOTAL
Angle	1	14	293	390	1,548	2,246
Front to front	1	5	28	16	64	114
Front to rear	-	5	219	437	1,188	1,849
Fixed object	-	8	86	72	470	636
Sideswipe, opposite direction	-	-	5	10	59	74
Sideswipe, same direction	-	1	29	30	596	656
Rear to side	-	-	4	3	62	69
Rear to rear	-	-	3	3	22	28
Other	-	-	33	17	88	138
Unknown	-	-	-	-	19	19
MOTORIST COLLISION TOTAL	2	33	700	978	4,116	5,829
Bicycle and Pedestrian Crashes	Fatality	Serious Injury	Minor Injury	Possible Injury	Property Damage Only	TOTAL
Crashes involving pedestrians	5	7	33	30	9	84
Crashes involving bicyclists	0	1	23	15	4	43
BICYCLE AND PEDESTRIAN CRASH TOTAL	5	8	56	45	13	127
GRAND TOTAL	7	41	756	1,023	4,129	5,956

Table 3: Crashes by collision type

Bicycle and pedestrian crashes were more likely to result in a fatality or serious injury than motorist crashes. For both modes, about 90% of all crashes result in an injury of some form, and 14% of all pedestrian crashes resulted in a fatality or serious injury, shown in Figure 3: Crash severity by mode.

As fatal and serious injury crashes make up a small percentage of the overall number of crashes, the project team factored in all crashes resulting in injury when developing the HIN. Fatal and serious injury crashes were weighted more heavily in the analysis, as described in the Crash Weighting section.

Figure 3: Crash severity by mode

High Injury Network Identification

Background

Vision Zero plans typically include a High Injury Network (HIN) to focus efforts on the streets with crashes resulting in injury. A particular focus on streets with crashes resulting in a high number of fatalities and serious injuries (sometimes referred to as KSI crashes, or crashes resulting in someone killed or seriously injured) is also considered. The HIN is not the only method to identify geographic focus areas for the West Hartford Vision Zero Action Plan; others include Transportation Equity Zones, Local Road Analysis Area, and public input captured in the webmap survey. The HIN will help identify and prioritize road segments for Road Safety Audits, facility recommendations, and additional analysis for the plan. This technical memorandum explains the methodology to create the HIN, developed based on national Vision Zero and Safety Action Plans best practices, and West Hartford’s unique context.

Crash Weighting

Before identifying an HIN, the team established a weighting methodology for crashes resulting in different injury severity. This prioritizes areas where the most severe crashes occur. The weighting is based on dollar-value estimates of each injury and/or fatality by the National Safety Council (NSC) in their 2021 Average Economic Cost of Motor-Vehicle crashes by Injury Severity². The NSC establishes dollar figures for a crash with one of the five severity levels as indicated in Table 4 on the following page.

² <https://injuryfacts.nsc.org/all-injuries/costs/guide-to-calculating-costs/data-details/>

Crash Severity	2021 Average Economic Cost
Fatal (K)	\$1,778,000
Serious Injury (A)	\$155,000
Minor Injury (B)	\$40,000
Possible Injury (C)	\$24,000
Property Damage Only (O)	\$6,700

Table 4: Average economic cost by injury severity or crash, 2021
 (Source: NSC. Note: Table modified to match crash naming convention used in this memo)

Due to a relatively few number of fatal crashes, our team combined and collectively weighted crashes resulting in serious injury and fatality (KSI) for the HIN identification. The reasoning is:

- 1) Crashes resulting in serious injury are the most serious crashes that do not result in fatality. Often, the factors which result in serious injury could have resulted in fatality with small changes to the circumstances of the crash or post-crash care.
- 2) The limited number of fatal crashes in the dataset (seven overall) would make identification of the HIN overly sensitive to any one fatal crash. By grouping KSI crashes together, there is a dataset of 48 crashes over a 5-year period for which to identify the HIN. This reduces the sensitivity of any one-off fatal crash that may not be a part of a roadway network trend.

The weighted average of each category is derived based on the number of crashes in each severity category over the 5-year dataset. Based on a total of seven fatal crashes and 41 severe injury crashes, the weighted economic cost based on the NSC would be \$391,688, using the formula below:

$$\text{Average Economic Cost}_{\text{Fatal+Serious Injury Crashes}} = \frac{\text{Number of Fatal Crashes} * \$1,778,000 + \text{Number of Serious Injury Crashes} * \$155,000}{\text{Number of Fatal Crashes} + \text{Number of Serious Injury Crashes}}$$

Similarly, based on a total of 756 minor injury crashes and 1,023 possible injury crashes, the weighted economic cost based on the NSC data would be \$30,799, using the formula below:

$$\text{Average Economic Cost}_{\text{Minor + Possible Injury Crashes}} = \frac{\text{Number of Minor Injury Crashes} * \$40,000 + \text{Number of Possible Injury Crashes} * \$24,000}{\text{Number of Minor Injury Crashes} + \text{Number of Possible Injury Crashes}}$$

The ratio of these weights are 12.7:1 (\$391,688 / \$30,799), rounded down to 10:1 for this analysis. The weights are shown in Table 5 on the following page.

Severity	Weight
Fatal (K), Serious Injury (A)	10
Minor Injury (B), Possible Injury (C)	1
Property Damage Only (O)	0

Table 5: Crash weighting used for HIN identification

Sliding Window Analysis

A sliding window analysis helps us understand crashes throughout a transportation network and identify roadway segments with the highest crash density, weighted by crash severity. This analysis is performed by determining the number and severity of crashes in a **half-mile window** on a roadway and shifting that window along the roadway **1/10th of a mile** at a time. An example of a sliding window analysis is shown in Figure 4 below.

Figure 4: Visual representation of a sliding window analysis (Source: Toole Design)

This analysis assigns each 1/10th-mile roadway segment with a score based on the number and severity of injury crashes within one half-mile along the same corridor. For example, if a 1/10th-mile segment had 4 crashes within one-half mile in either direction, on the same street, and 3 of them resulted in minor injuries while 1 resulted in a serious injury, the score for that segment is calculated as follows: $3 + (1 * 10) = 3 + 10 = 13$.

The scored results are illustrated in the following sliding window analysis maps for pedestrians, bicyclists, and motorists. Roadway segments with thicker and darker lines represent portions of the roadway network that have a higher concentration of overall crashes and fatal or serious injury crashes.

Figure 8 on page 11 shows the motorist crash rate, calculated by dividing the motorist score on each segment by the AADT where data is available from CTDOT. This step identifies places with high numbers of crashes relative to vehicle volumes, but not high numbers of crashes in absolute terms, and therefore may have easier engineering solutions relative to other segments.

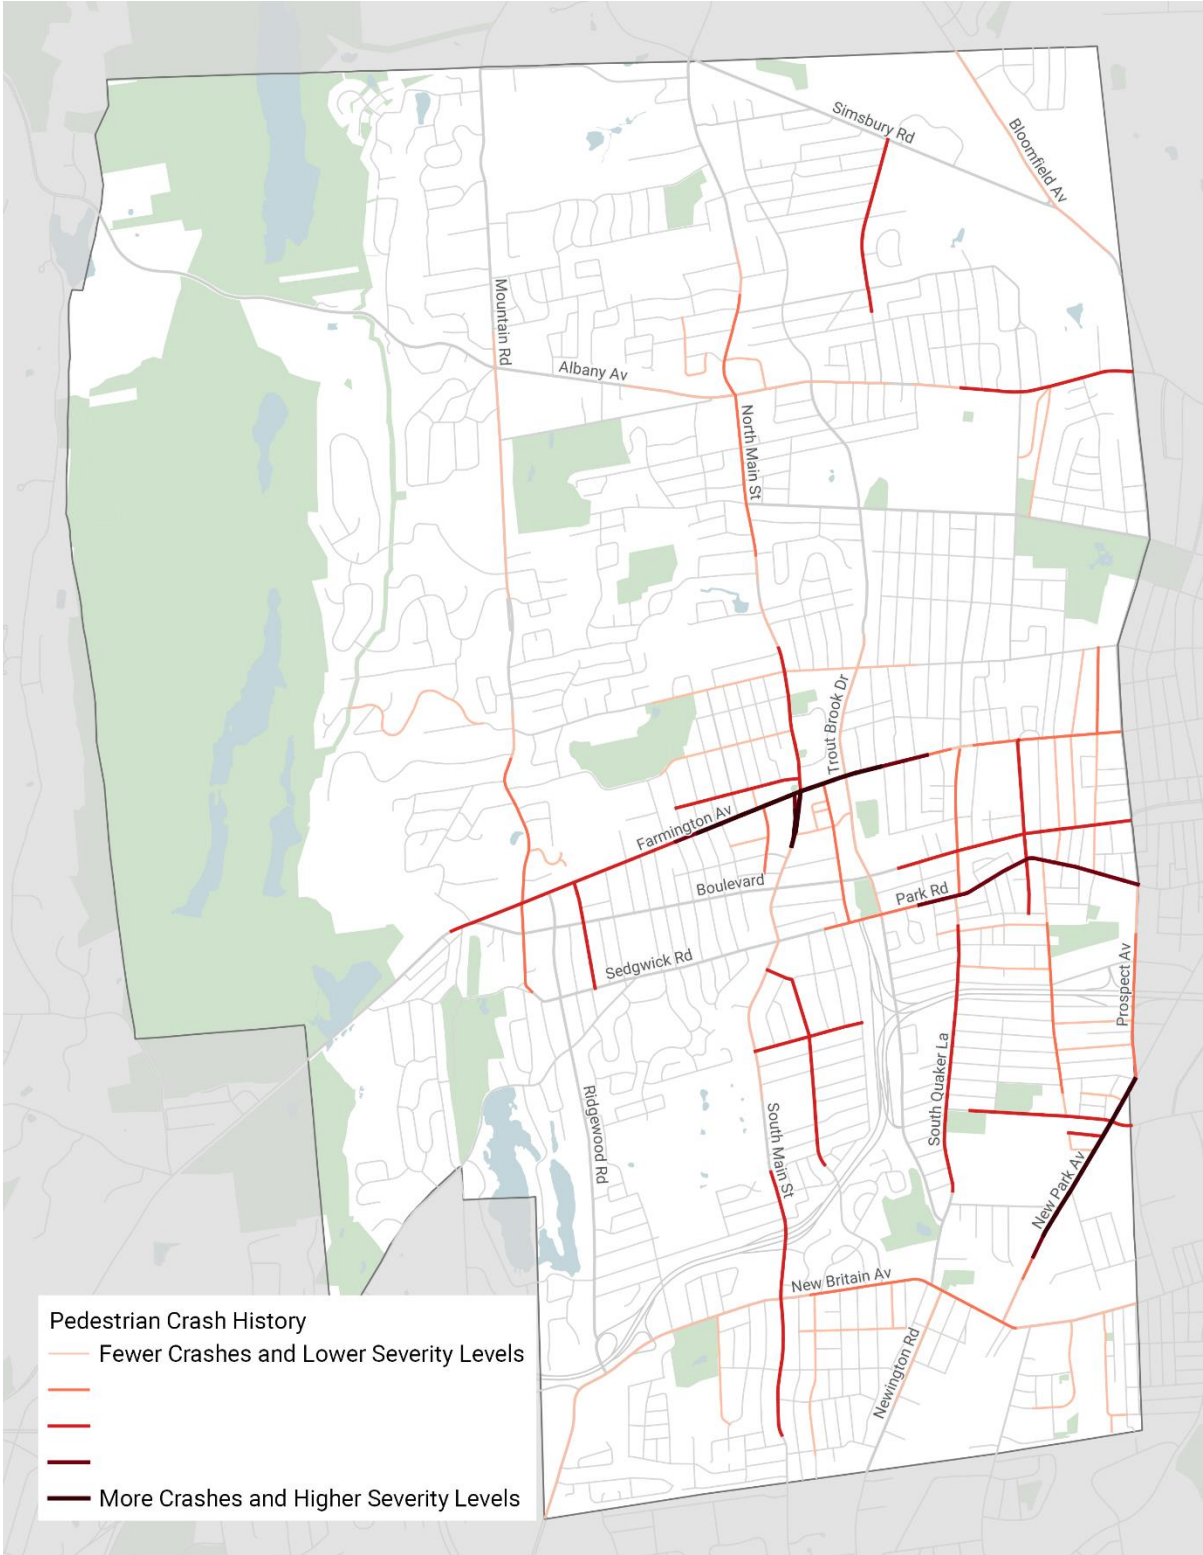

Figure 5: Pedestrian sliding window analysis results

Figure 6: Bicyclist sliding window analysis results

Figure 7: Motorist sliding window analysis results

Figure 8: Motorist crash rate – Motorist score divided by AADT

Predictive Analyses

The project team used the predictive modeling capabilities of the SSPF Tool to identify higher-risk road segments. This section details the methodology and results from this analysis.

SSPF Tool Background

Toole Design, in collaboration with the City of New Orleans, University of New Orleans Transportation Institute, and New Orleans Regional Transit Authority, developed the Safer Streets Priority Finder Tool³ (i.e., SSPF Tool). The SSPF Tool is a free, interactive, open-source resource that help transportation practitioners identify a street network throughout the U.S. that has a higher likelihood of experiencing fatal or serious injury crashes, similar to a HIN, for bicyclists and pedestrians. The network goes further than a typical HIN by factoring in areas with a disproportionate history of fatal and serious injury crashes and areas that have factors likely to contribute to future risk.

Safer Streets Model

The Safer Streets Model brings the roadway network window segments (produced in the Sliding Windows Analysis) into a Bayesian statistical framework to estimate crash risk throughout the system. This framework incorporates external information about how many crashes might be expected (called a Bayesian prior). This is based on a national model that identifies key built environment and socio-economic variables associated with pedestrian risk in urban and rural areas, alongside the observed crash history. The model estimates pedestrian and bicycle crash risk rates per mile for each road segment and crash severity type (e.g., serious injury). These values are then converted to crash cost estimates based on costs assigned to each crash severity type. The Safer Streets Model only models bicycle and pedestrian crashes. The model cannot estimate or model future motor vehicle or motorcycle crashes at this time.

Safer Streets Model Results

The following maps show the results of the Safer Streets Model for West Hartford pedestrians and bicyclists.

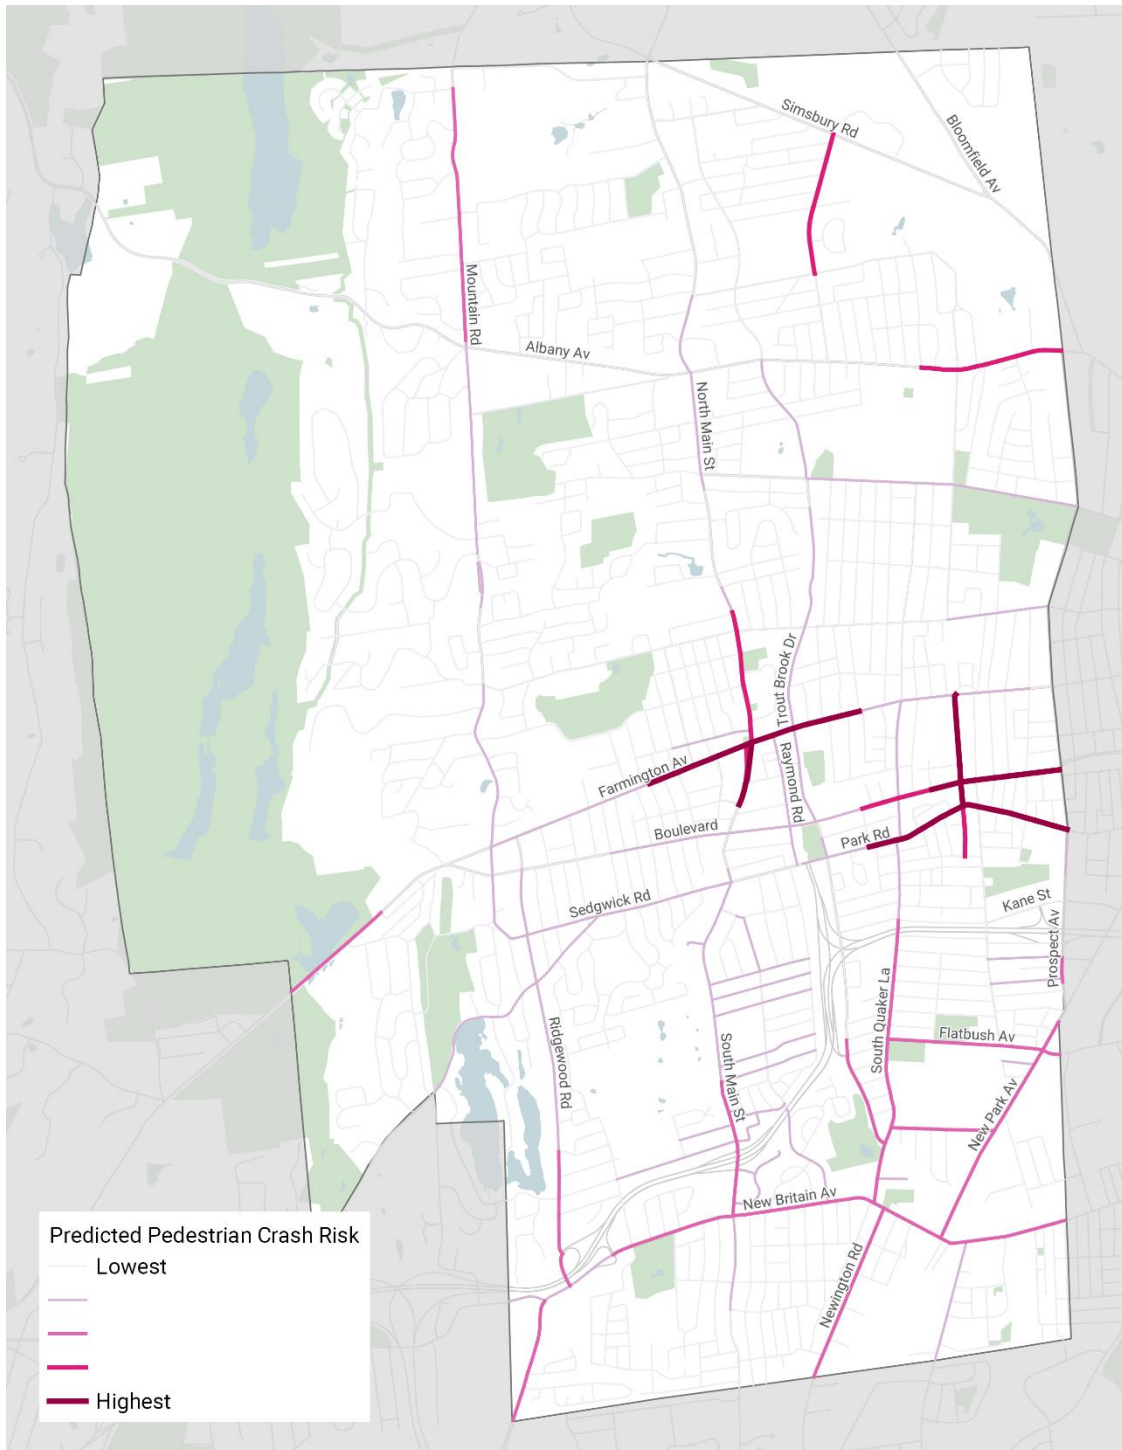

Figure 10: Pedestrian Safer Streets Model results

Figure 11: Bicyclist Safer Streets Model results

High Injury Network Development

The following steps describe the overall process to determine the HIN. The combination of several analyses, including sliding window and predictive analyses, are explained in more detail on pages 7 and 12, respectively.

Initial Analyses

- 1) Divide all West Hartford roads into 1/10th-mile segments for the initial analyses and HIN development.
- 2) Run sliding window analyses for each mode, which scores the 1/10th-mile segments based on the number and severity of crashes within one-half mile on the same street, using the weighting scheme described in the previous section. These analyses are described in more detail in the prior Sliding Window Analysis section.
- 3) Additionally, for motorist crashes, divide the score on each segment by the AADT where data is available from the Connecticut Department of Transportation. This step identifies places with high numbers of crashes relative to vehicle volumes, but not high numbers of crashes in absolute terms.
- 4) Perform predictive analyses for pedestrian and bicyclist modes based on street network attributes and socioeconomic factors. More detail on the predictive analyses is in the prior Predictive Analyses section. The resulting predicted risk scores for each mode are applied to the 1/10th-mile segments.

HIN Development

- 1) Establish a target length of the HIN based on Town and project team. While increasing the HIN length may increase the total number of crashes included in the HIN, ***it reduces the focus on the street segments with the worst crash history***. This tradeoff must be considered to select a reasonable number of street segments for which the Town can commit to addressing prioritized improvements. Working as a team, we identified **20-miles** of HIN as a manageable target over the 10-year life of the Vision Zero Action Plan.
- 2) Evaluating each mode separately, filter for 1/10th-mile segments with at least 2 injury crashes within ½-mile (i.e., segments where there is a nearby trend of crashes resulting in injury).
- 3) Using the same threshold for all six criteria, identify the percentile threshold to achieve the target HIN distance. In this case, we identified the top 60% of segments, using the same threshold for each analysis.
- 4) Combine all resulting segments to create the HIN, with a total length of 20 miles.

Management of the HIN should be addressed using strategies outlined in the Data section of the Vision Zero Action Plan. Regular updates, such as at 3- or 5-year intervals, should account for adjustments to the HIN as implemented actions improve roadway safety.

Figure 12 illustrates these steps to develop the HIN after completing the initial analyses.

1 Establish target length: 20 miles

2 Filter for segments with at least 2 injury crashes within 1/2-mile, for each mode

3 Select top 60% of segments from the previous step, using the analyses relevant to each mode

4 Combine segments to create HIN with a length of 20 miles

Figure 12: Visual representation of the HIN development process

High Injury Network Results

The project team created the HIN using the results of the above analyses and the HIN development methodology shown in Figure 12. Any gaps in the HIN with a length of 1/10th-mile or shorter are filled in for continuity. Additionally, short segments on streets that only had injury crashes at intersections with other HIN corridors were removed, as these intersections will be addressed by the intersecting street. Short segments on three streets met these criteria: Darcy Street (intersecting New Park Avenue), North Steele Road (short segment north of Albany Avenue), and Whiting Lane (short segment between Boulevard and Park Road).

Figure 13 shows the resulting HIN. This map also identifies which of the HIN segments are state-maintained.

Figure 13: High Injury Network with state roads identified

Transportation Equity Zones

Figure 15 shows the HIN overlaid on the Transportation Equity Zones. Transportation Equity Zones are designed to ensure equitable application of Vision Zero recommendations and prioritization in these areas. Transportation Equity Zones are identified if present in one or more of the following:

- US Department of Housing and Urban Development (HUD) Census Block Group of Low or Moderate Income (LMI), or;
- Connecticut Department of Energy and Environmental Protection (CT DEEP) Environmental Justice Community, or;
- US Environmental Protection Agency (EPA) Environmental Justice Community

Figure 14 shows each of these original data sources mapped.

Overall statistics show that approximately **52% of all crashes and 38% of KSI crashes occur in Transportation Equity Zones**. This compares to Transportation Equity Zones accounting for only 27% of West Hartford's population and only 24% of the town's roadway miles. **However, 52% of the HIN is within or adjacent to the Transportation Equity Zones.**

Figure 14: Data sources used to identify Transportation Equity Zones

Figure 15: High Injury Network and Transportation Equity Zones

High Injury Network Crash Analysis

Summary Crash Statistics by Segment

The HIN developed for West Hartford is a composite 20.7 miles, representing 9% of West Hartford's roadway miles. The HIN includes 60% of all crashes, including 56% of all fatal or serious injury crashes. The HIN also includes 69% of all pedestrian and bicyclist crashes, including 54% of all fatal or serious injury bicyclist or pedestrian crashes. Additionally, 14 of the 20.7 HIN miles are located inside or on the border of Transportation Equity Zones (68% of the HIN).

These results are in line with best practices for identification of the HIN (more than 40% of KSI crashes on the identified HIN)⁴. While there are other KSI crashes which occur outside the HIN, these generally occur in areas where there are fewer nearby crashes resulting in injury. The HIN seeks to identify roadway segments which have an **established trend** of injury and KSI crashes. The HIN **does not seek** to identify all roadway segments which have experienced a KSI crash. This distinction is important as the role of the HIN is to prioritize the roadway segments with the highest crash history based on an established methodology. For example, inclusion of a roadway segment with only a single crash resulting in fatality or serious injury, but **without an established trend** of other injury crashes could result in prioritization away from those roadway segment's highest levels of both injury and KSI crashes.

Figure 16 shows all 48 KSI crashes in this analysis highlighted with other injury crashes (grey dots) and the HIN. Note that the other 21 KSI crashes that occur outside the HIN are generally in areas with fewer crashes.

⁴ https://highways.dot.gov/sites/fhwa.dot.gov/files/2022-10/California%20HIN_Case%20Study_Final%20Draft.pdf

Figure 16: High Injury Network and injury crashes

The project team also divided longer HIN corridors into segments of about one mile to create segments addressable by a Road Safety Audit and Vision Zero Action Plan strategies. Figure 17 shows the individual HIN segments labeled and color-coded.

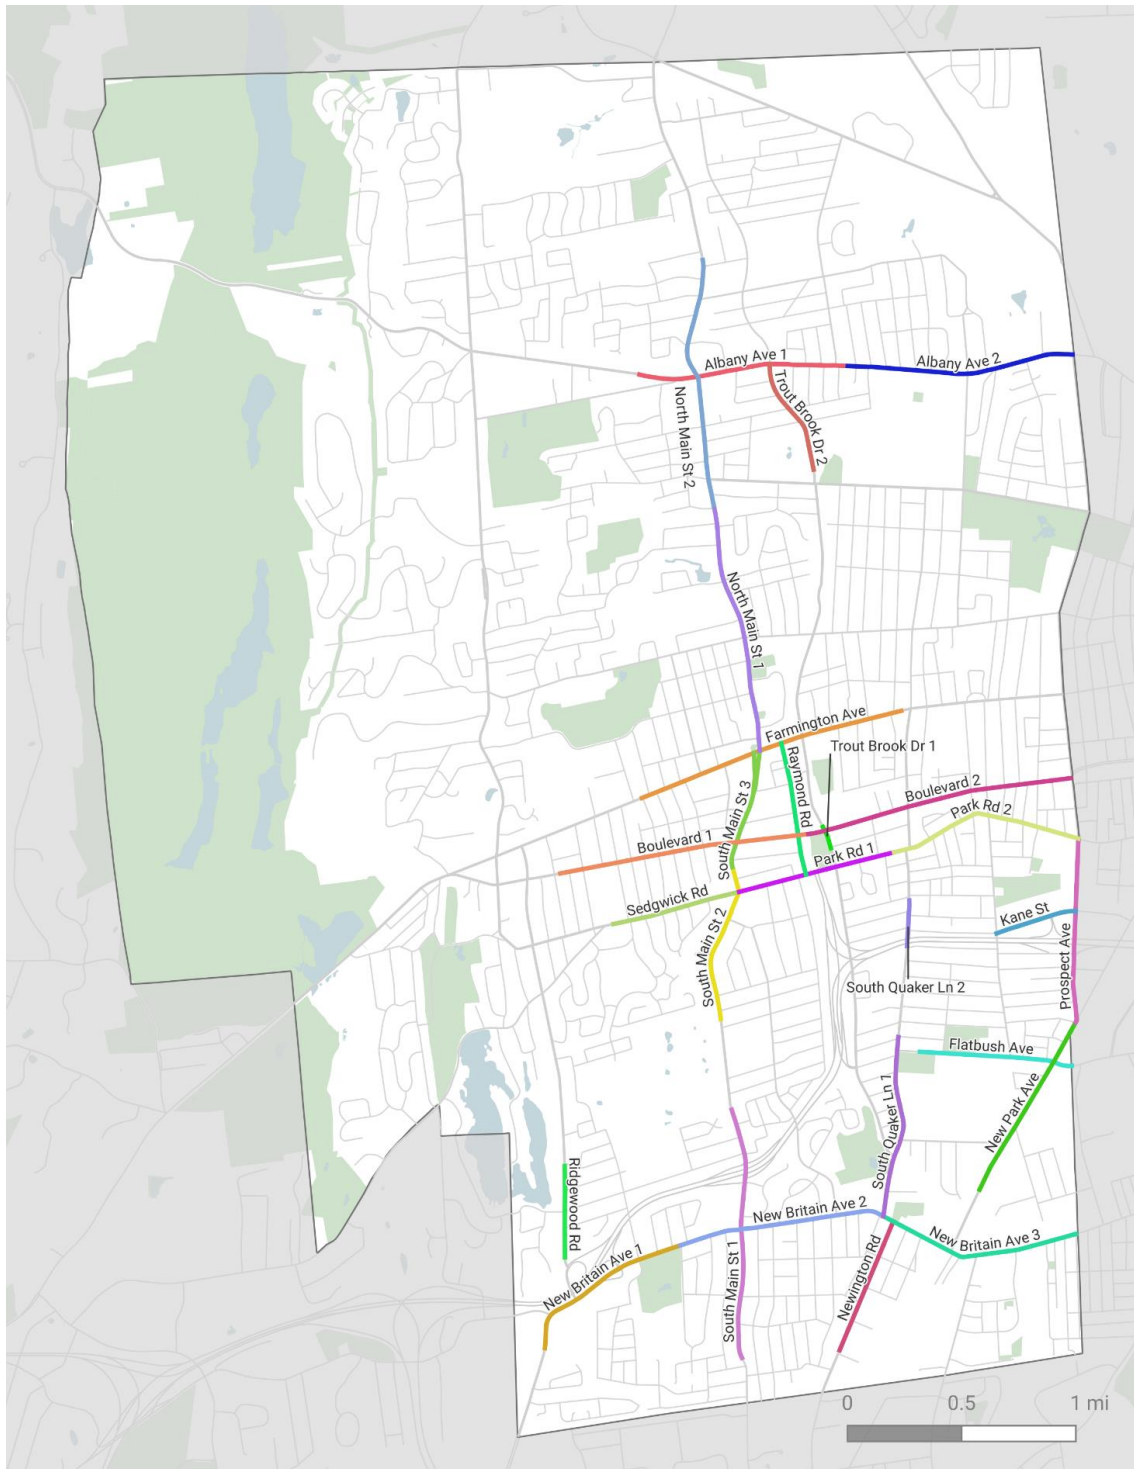

Figure 17: HIN segments

Table 6 lists all HIN segments shown in Figure 17, along with the number of crashes by injury severity. Crashes at intersections between two segments are counted in both. The segments are sorted based on the weighted severity score, as described in the Crash Weighting section on page 5 (ten times the number of fatal or serious

injury crashes, plus the number of other injury crashes). The colors indicate the extent of each segment, especially to distinguish those that are contiguous, and do not bear further meaning.

HIN Segment	From	To	Fatal/Serious Injury Crashes	Other Injury Crashes	Weighted Severity Score	Length (miles)	Ownership
New Britain Ave 3	South Quaker Ln	Hollywood Ave	1	121	131	0.9	State
New Britain Ave 2	Wolcott Rd	South Quaker Ln	1	106	116	0.9	State

Table 6: HIN segments

Table 7 shows the number of injury crashes on each segment by year. The segment “North Main St 1” contains most of the North Main Street Road Diet project, and in 2022 this segment saw fewer injury crashes (5) than in 2021 (11) and 2019 (9). While this segment is currently on the HIN based on the five-year injury crash history, if the downward trajectory in injury crashes continues, it may no longer qualify for the HIN.

HIN Segment	2018	2019	2020	2021	2022
Albany Ave 1	12	18	5	14	12
Albany Ave 2	9	5	6	8	10
Boulevard 1	17	14	10	7	6

Table 7: Injury crashes by year on HIN segments

Contributing Factor Analysis

The project team also reviewed a series of factors recorded in the crash report data to identify factors contributing to fatal and serious injury crashes and crashes involving bicyclists or pedestrians. The following series of charts show the share of all crashes in the Town in each factor category relative to fatal or serious injury (KSI) crashes and bicycle or pedestrian crashes, where relevant.

One factor recorded in crash reports is the manner of collision impact, or in other words, how the parties in the crash collided with one another. A comparison of the share of all crashes relative to KSI crashes is shown in Figure 18. Fixed object crashes (a crash between a single motorist and a stationary object, such as a utility pole or tree) and front-to-front crashes are overrepresented in KSI crashes. Front-to-front crashes make up less than 2% of all crashes but 13% of KSI crashes. Similarly, fixed object crashes make up 11% of all crashes and 17% of KSI crashes. The two most common collision types, angle crashes and front-to-rear crashes, together make up 69% of all crashes but 41% of KSI crashes.

In crashes involving bicyclists or pedestrians, the manner of collision impact is typically not recorded and is instead simply recorded as a “bike/ped” crash. These crashes are highly overrepresented in KSI crashes, as crashes involving bicyclists or pedestrians make up only 2% of all crashes but 27% of KSI crashes.

Figure 18: Crashes by recorded manner of collision impact

Figure 19 on the following page shows the share of crashes by reported weather conditions, with an additional comparison between all crashes and crashes involving bicyclists or pedestrians. Poor weather conditions do not appear associated with higher severity crashes, as a higher percentage of KSI crashes and bicyclist or pedestrian crashes occurred during clear conditions than all crashes.

Figure 19: Share of crashes by reported weather conditions

Similarly, the reported road surface conditions do not appear to be associated with higher severity crashes, as shown in Figure 20. For example, 4% of KSI crashes and 13% of bicyclist or pedestrian crashes occurred on wet pavement conditions relative to 16% of all crashes. One possible explanation is that motorists may travel more slowly in poor conditions, which may reduce severity levels of crashes that occur under these conditions.

Figure 20: Share of crashes by reported road surface conditions

Figure 21: Share of crashes by reported lighting conditions

Figure 21 shows the breakdown of crashes by reported lighting conditions. Crashes occurring during dark conditions, with no lighting, were overrepresented in KSI crashes, with 13% of KSI crashes occurring under these conditions relative to only 2% of all crashes. This could indicate areas that need adequate lighting. Crashes involving bicyclists or pedestrians reveal a different pattern: crashes occurring under dark conditions but with lighting were overrepresented in crashes involving these road users, with 30% of bicyclists or pedestrians occurring under these conditions. This may reveal a need for more or other types of lighting and/or tailored roadway design strategies in areas with streetlights with higher rates of nighttime bicyclist or pedestrian crashes.

Crashes were geographically categorized based on proximity to intersection in ArcPro as it was found that the intersection field in the crash metadata was generally unreliable. Intersections were classified as a 3 or 4-leg two-way stop-controlled intersection, an all-way stop-controlled intersection, or a signalized intersection. 1,205 intersections were identified, with the breakdown of intersections identified in the table below. In general, two-way stop-controlled intersections were the most common intersection type representing 87% of all intersections.

Intersection Type	Number of Locations	%
Two-Way Stop-Controlled – 3-Leg	915	76%
Two-Way Stop-Controlled – 4-Leg	132	11%
All-Way Stop Controlled	45	4%
Signalized Intersection	113	9%
Total	1,205	

*Note – A single intersection may be represented by one or more points. For example, an intersection with a divided median (e.g. South Main Street at Farmington Ave) may count as 2 locations for this analysis.

Crashes at intersections, regardless of type, represent over 85% of all crashes, as shown in Figure 22. Crashes at two-way stop-controlled intersections were overrepresented in KSI and bike/ped crashes. Crashes at these intersections represented approximately 38% of all crashes but represented 50% of KSI crashes and bike/ped crashes. In particular, crashes at 4-leg two-way stop-controlled were particularly overrepresented amongst KSI crashes. Crashes at these intersections represented only 7% of all crashes while they represented 17% of all KSI crashes. While crashes at signalized intersections represented nearly 50% of all crashes, they represent a substantially smaller number of KSI crashes with only 33% of KSI crashes occurring at signalized intersections. Similarly, only 39% of bike/ped crashes occur at these locations. This finding indicates that while crashes may be more common at the relatively small number of signalized intersections, they are more likely to be less serious than crashes at other intersection types. Crashes on segments (not at intersections) were slightly overrepresented in KSI crashes, with 15% of KSI crashes occurring on segments relative to 13% of all crashes.

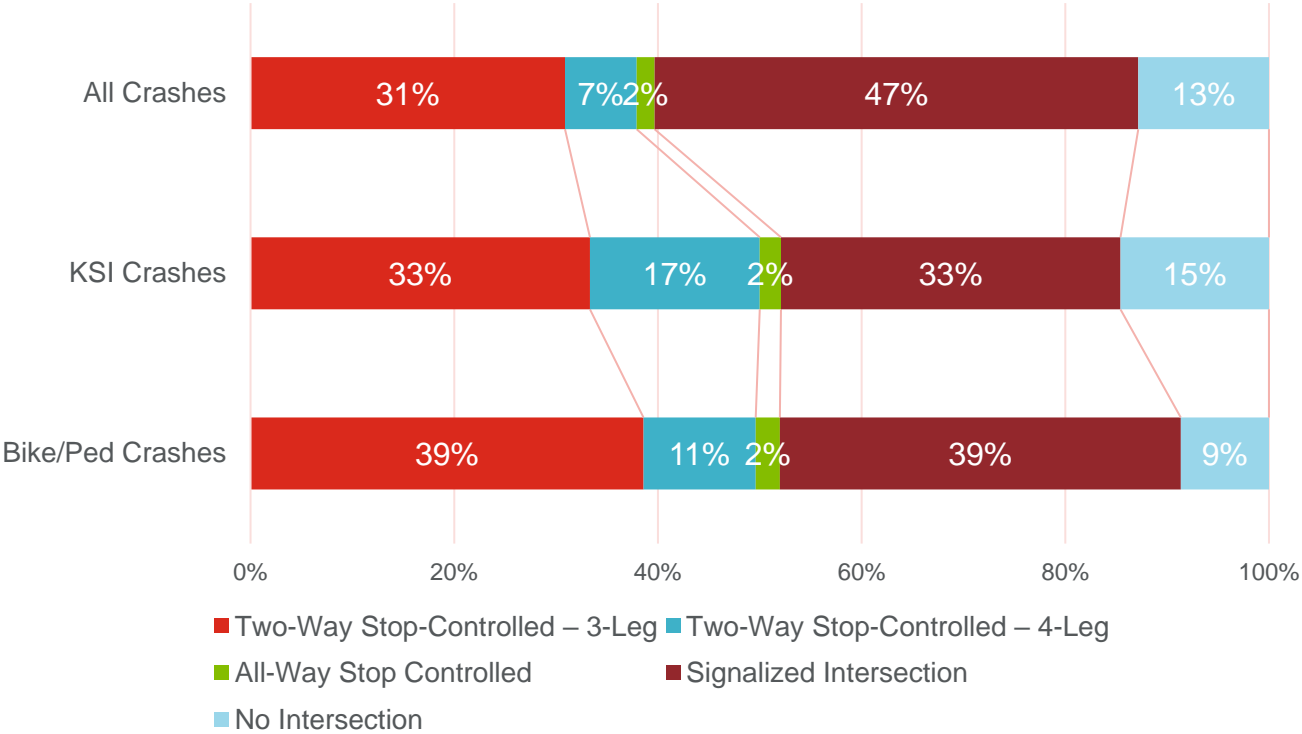

Figure 22: Share of crashes by intersection type

Crashes by manner of impact at two-way stop-controlled intersections were reviewed and reported in Figure 23. Angle crashes are the most common manner of impact at these intersections, while head-on, front-to-front collisions were over-represented amongst KSI crashes.

Figure 23: Crashes by recorded manner of collision impact at two-way stop-controlled Intersections

In crash reports, the responding officer will record information about the parties' actions before the collision. Recorded actions overrepresented in KSI crashes are when a motorist “failed to yield right-of-way” or when a motorist “failed to keep in proper lane”. Actions by motorists overrepresented in bicyclist or pedestrian crashes are when the motorist “failed to yield right-of-way”, as well as “overtaking cyclist” and “operated motor vehicle in inattentive, careless, negligent, or erratic manner.”

In crashes involving bicyclists or pedestrians, the crash report also contains actions before the crash. While the most frequently recorded item is “no improper action,” there are other actions recorded that place partial responsibility on the bicyclist or pedestrian. For example, when an “improper action” was recorded in pedestrian crashes, the most common actions identified are “in roadway improperly (standing, lying, working, playing)”, “failure to obey traffic signs, signals, or “failure to yield right-of-way”.

Crashes which included one or more participants identified as under the influence (DUI) or distracted were reviewed and summarized in Figure 24. Crashes involving DUI or distracted participants were overrepresented in KSI crashes. In particular, crashes with one or more individuals noted with DUI were most overrepresented in KSI crashes with only 3% of all crashes involving DUI while 10% of KSI crashes involve DUI. Of the 13 KSI crashes involving vulnerable users, 2 of these included participants noted as distracted and 2 of these included participants noted as DUI. In the 2 DUI crashes, 1 crash included a DUI attributed to the driver while 1 crash included a DUI attributed to a pedestrian. In the 2 crashes with participants noted as distracted, 1 crash was noted with a distracted driver while the second crash was noted with a distracted pedestrian.

Figure 24: Crashes by DUI or Distracted Status of One or More Crash Participant

Local Road Crash Analysis

Local, or residential, roads generally do not show up in the HIN given their relatively low vehicle volumes and numbers of crashes. However, local roads may still be addressed by the Vision Zero Action Plan. To identify potential locations for further study, the project team performed an analysis of crashes on local roads, grouped together into small, sub-neighborhood areas. The team calculated the number of crashes on the local roads along with the total length of local roadway miles in each area. Figure 25 shows this analysis, highlighting areas in which local road crashes are overrepresented relative to the local roadway miles.

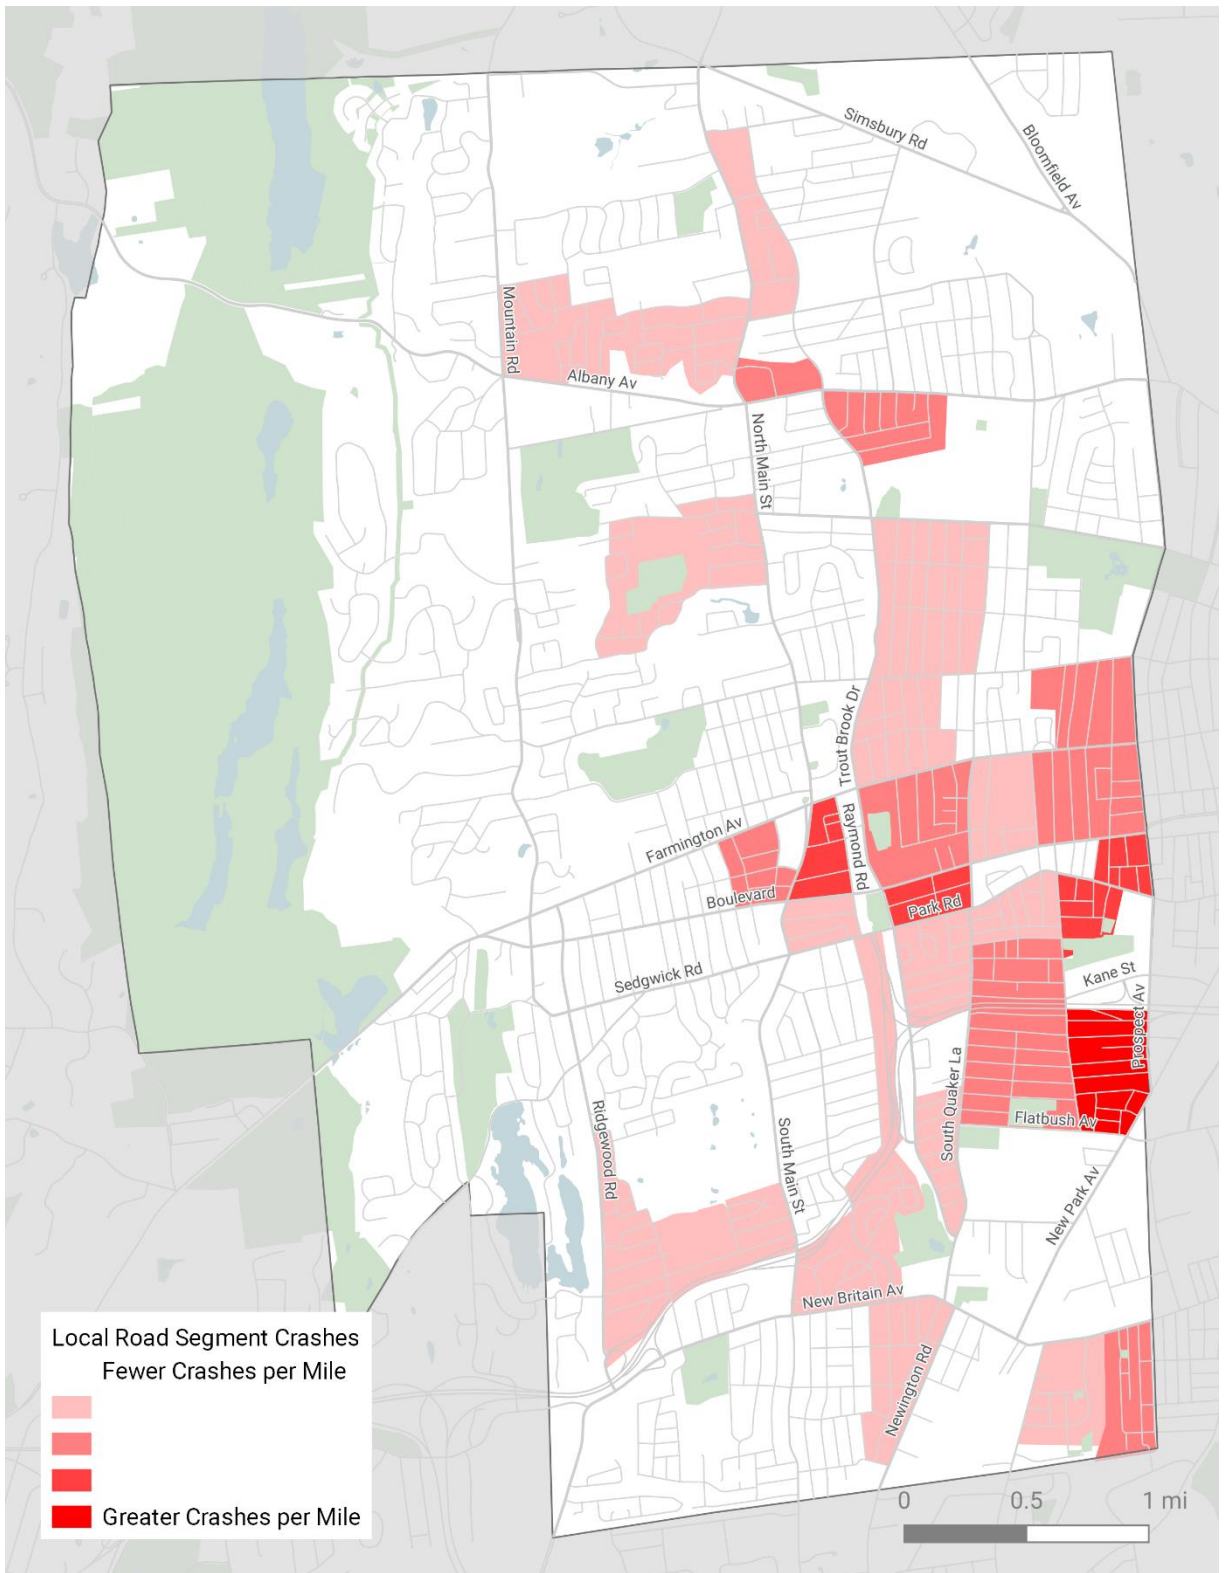

Figure 25: Local road crashes per local roadway mile

**APPENDIX D. SURVEY
AND WEBMAP ANALYSIS
SUMMARY**

WHVZ SURVEY AND WEBMAP ANALYSIS SUMMARY

In October 2023, the West Hartford Vision Zero team conducted a public survey to assess mode usage and perceptions of roadway safety town wide. The public survey was accompanied by an interactive webmap survey. The webmap survey asked members of the public to comment on specific locations and allowed participants to categorize their comment as a “safe location”, “unsafe location” or a “safety / improvement idea” as well as provide direct comments in an open text box.

These are summarized individually in the sections below.

SURVEY SUMMARY

The survey was available online through the project webpage, as well as hard copies at Town Hall and the three public libraries. The survey received a total of completed 788 responses, including 783 digital and five hard copies. Although the survey was available in English, Spanish, Chinese, and Portuguese, all responses collected were in English.

This survey summary identifies key issues and solutions. We've captured all write-in survey responses in our analysis. For more specific data, please review the supplemental data at the end of this appendix.

[Cross Tabulation](#)

Please refer to the “Cross Tabulated Survey Results” in the supplemental data at the end of this appendix for a more in-depth analysis of age demographic and issues/solution responses.

[Demographic Summary](#)

More than half of respondents identified as a middle-aged adult (ages 35-64). More than a quarter of respondents identified as seniors (aged 65 and over). Young adults and teens (aged 34 and below) composed of 12% of the responses.

As a town with a high driving and walking culture, West Hartford's Vision Zero initiatives are important to ensuring the safety for all users. More than 75% of the public drive or take rides in private vehicles, about 66% walk, and about 50% bike regularly. Fewer than 25% ride public transit or use ADA paratransit.

[Issues Summary](#)

This is a summary of traffic issues by mode (walking, driving, biking/scooter/skating).

Two-thirds of pedestrians feel unsafe because drivers do not consistently yield at intersections and/or crosswalks. Almost half feel unsafe because of the lack of visibility of intersections/crosswalks.

More than half of bikers/scooters/skaters feel unsafe because of the lack of bike infrastructure and buffering from cars. Almost half feel unsafe because drivers do not consistently yield at intersections and/or crosswalks.

Almost half of vehicle users feel unsafe because other drivers do not consistently yield at intersections and/or crosswalks. A similar number feel unsafe due to the lack of visibility at intersections and/or crosswalks. More than 25% feel unsafe because of bicyclists riding in the roadway and/or shoulder.

A prevailing issue is driver recklessness, with nearly 75% of respondent citing this concern. Reckless driving captures speeding, distracted driving, and/or disregard for the rules of the road.

Solutions Summary

Infrastructure Solutions

About half of respondents support redesigning roadways to reduce speeds and improving intersection and/or crosswalk safety for pedestrians and bicyclists to ease traffic safety concerns.

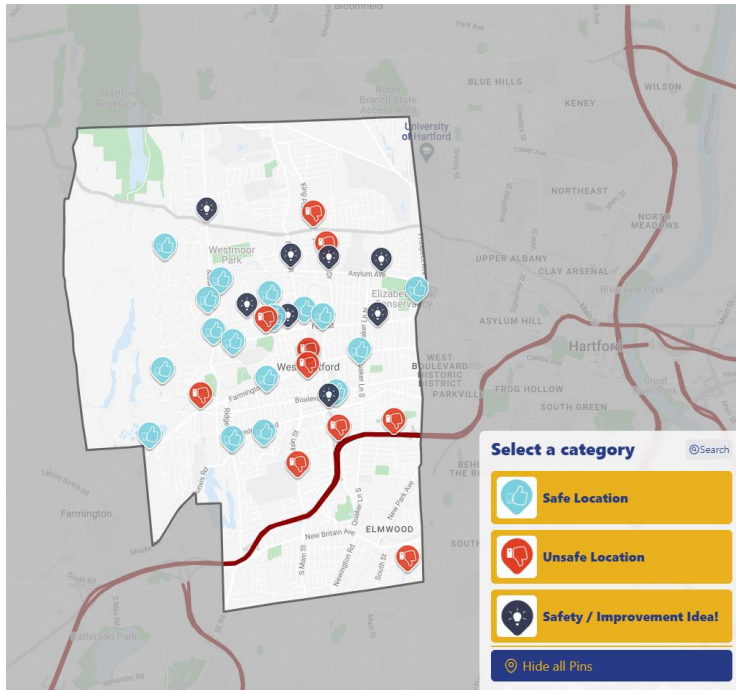

Programmatic Solutions

More than two-thirds of respondents believe that enforcement through behavioral programming, rule enforcement, and speed management will ease traffic safety issues.

WEBMAP SURVEY SUMMARY

In October 2023, the West Hartford Vision Zero team conducted a public webmap survey, which accompanied the survey summarized above. The webmap asked respondents to identify areas where they feel safe, unsafe, or have an idea related to roadway safety. The webmap was available online through the project webpage, and as hard copies at Town Hall and the three public libraries as part of the community survey packet.

Figure 1: A screenshot of the webmap survey

Analysis Methodology

To decipher the community’s input, we identified frequently used key words in the webmap (downloaded as a .csv file). We included a variety of spellings, punctuation, and tenses for common terms. For example, the list includes child, child care, childcare, children, daycare, preschool, and young. We then organized key words into themes to conduct our analysis. Each comment was then flagged if any of its contents matched the key words for a theme. A single comment could match to multiple themes.

Overall Statistics

Total comments received: 1,784
 Total themes identified: 15
 Comments with at least one theme: 1,546
 Average number of themes per comment: 3.6
 Median number of themes per comment: 3

Identifying Themes

Item	Theme	Key Words
1	Access/ Destinations	Access, activities, baseball, buy, buying, cafe, café, commercial, commercial area, connect, connected, connecting, connection, driveway, driveways, fields, football, games, grocery, grocery store, hockey, JCC, library, locations, mall, museum, park, parks, path, paths, pickleball, playground, plaza, practice, restaurant, restaurants, rink, shared use path, shop, shopping, shopping district, shopping plaza, shops, sport, sports, store, stores, synagogue, target, trail, trails, UConn, YMCA
2	Biking	Bicycle, bicycles, bicyclists, bike, bike lane, bike ride, bikers, bikes, biking, cycle, cycles, cycling, cyclist, cyclists, separated bike lane, shared lane marking, sharrow, trike
3	Children/Schools	Campus, child, child care, childcare, children, daycare, elementary, elementary school, high school, hs, kid, kids, middle school, preschool, school, schools, students, young
4	Designs/ Intersections/ Signals	Alignment, barrier-protected, barriers, blinking, bollards, Bridge, buffer, bump, bumps, chicane, clear, conflicts, convert, corner, corners, curbs, divider, elevation, entrance, exit, exits, extend, facilities, flashing, flexpost, flexposts, four-way, green light, hawk, highway, humps, infra, infrastructure, install, installation, intersection, intersections, island, islands, lane, lane marking, lane markings, lanes, markings, median, medians, narrow, narrowing, on street, one way, one-way, on-street, overpass, painted, raised, ramp, red light, redesign, redesigned, restrict, right turn, right-turn, rotaries, rotary, roundabout, roundabouts, RRFB, sharrows, shoulder, sign, signage, signal, signalized, signals, signs, steep, stop, stop light, stop sign, stoplight, stoplights, stripes, tight, traffic calming, traffic circle, traffic light, turn, turns, warning, widen, widened, yellow light, yield sign, yields

Item	Theme	Key Words
5	Driver Behavior	Aggressive, attention, cell phone, cellphone, cutting, discourage, distracted, drivers, idling, ignore, ignoring, impatient, merge, merging, mobile phone, overtaking, pass, passing, phone, phones, respect, risky, swerve, text, texting, turning, <i>yeild</i> , yield
6	Enforcement	Automated enforcement, automatically, camera, cameras, cop, cops, enforce, enforced, enforcement, guards, illegal, obey, police, pull over, radar, red light camera, red light cameras, redlight camera, red-light camera, redlight cameras, red-light cameras, rules, speed camera, speed cameras, speeding ticket, ticket, ticketing
7	Maintenance/ Green	Bush, bushes, condition, faded, faded paint, faded pavement markings, garbage, grass, ice, landscaping, maintain, maintenance, meadow, overgrown, paint, pavement, pavement marking, pavement markings, planters, plantings, pothole, potholes, repaint, repaints, repainted, repave, shrubs, snow, trash, tree, trees, trees/shrubs, trimmed, weeds, winter
8	Parking	Deliveries, delivery, double parked, double parking, meter, parked, parking, parking meter
9	Safety	Parked, parking, parking meter, accident, accidents, calm, collision, collisions, crash, crashes, danger, dangerous, emergency, hazard, hit, killed, pickup truck, pick-up truck, pickup trucks, pick-up trucks, ran over, risk, run over, safely, safer, safety, scary, SUV, SUVs, trucks, unsafe
10	Speed	Exceed, fast, faster, fly, flying, guard, limits, mph, race, reduce, slow, speed, speeders, speeding, speeds, speedway
11	Traffic/ Congestion	Backups, block, blocking, busy, congested, congestion, cut through, cut through traffic, cut-through, cut-through traffic, shortcut, traffic, volume, volumes

Item	Theme	Key Words
12	Transit	Bus, bus stop, bus stops, buses, transit
13	Visibility/Lighting	Dark, day, daylight, hard to see, invisible, light, lighting, lights, looking, night, seen, sight, visibility, visible, vision
14	Disabilities/Older Adults	Accessibility, accessible, ADA, blind, cane, curb ramp curb ramps, deaf, disability, disabled, elderly, families, older, older adult, parents, ramp, ramps, stroller, wheelchair
15	Walking/Crossing	Cross, crossed, crossing, crossings, crosswalk, crosswalks, mid-block, ped, pedestrian, pedestrians, peds, playing, runners, running, sidewalk, sidewalks, walk, walkable, walkers, walking, walks, walkway, xing

Theme Breakdown*

Comment Theme	Total	Percent
Designs/Intersections/Signals	1,232	69.06%
Walking/Crossing	751	42.10%
Speed	589	33.02%
Visibility/Lighting	561	31.45%
Safety	547	30.66%
Driver Behavior	482	27.02%
Traffic/Congestion	444	24.89%
Maintenance/Green	433	24.27%
Access/Destinations	412	23.09%
Biking	236	13.23%
Children/Schools	210	11.77%
Parking	138	7.74%
Enforcement	123	6.89%
Transit	114	6.39%
Disabilities/Older Adults	103	5.77%

* Note: Since each comment could have more than one theme, the total value of this table will exceed the number of comments received.

Comment Heatmap

The map on the following page is a network-based heatmap reflecting the number of comments received through the webmap survey. This includes comments where users labeled an area *unsafe* or marked a location with an *idea*. To create the heatmap, the project team first assigned comments to any street segment within 50 feet of the comment location. Then, the team divided the street network into 1/10th-mile segments and assigned each segment with a score based on the number of comments and comment likes within ½-mile on the same street, in each direction. This mirrors the crash analysis process summarized in a separate appendix.

This approach highlights areas where users added many comments and agreed with existing comments (there was no option for a user to dislike a comment). In the map, the darker and thicker red lines represent segments that received more comments and likes. The High Injury Network (HIN) is overlaid to reveal how the HIN, which is based on historic crash data, compares with the webmap survey results, or people's perception of safety along the town's roadway network.

Figure 2: Heatmap of webmap comments on street network

Supplemental Data – Additional Survey Results

Issues

Which of the following roadway factors make you feel most unsafe as a pedestrian on roads in West Hartford?

- **Drivers do not yield at intersections/crosswalks (65.8%, 524)**
- **Do not feel visible to drivers at intersections/crosswalks (36.3%, 289)**
- **Lack of sidewalks or walking paths (25.1%, 200)**
- Not enough time to cross the road (19.1%, 152)
- Inadequate maintenance of sidewalks and walking paths (17.5%, 139)
- Sidewalks or walking paths don't have enough of a buffer from traveling vehicles (16.6%, 132)
- Other (14.6%, 116)
 - **Driver recklessness (speeding, not following rules of road)**
 - Poor sidewalk/crosswalk conditions (faded crosswalks, no pedestrian infrastructure, potholes)
 - Traffic
- Difficult to see oncoming drivers at intersections/crosswalks (12.6%, 100)
- Lack of separation from bicyclists on shared use paths (12.6%, 100)
- I generally feel safe with current roadway factors (9.2%, 73)
- Inadequate lighting (8.4%, 67)
- Sidewalks or walking paths are too narrow (5.5%, 44)

Which of the following roadway factors make you feel most unsafe as a person who uses a bicycle, scooter, or skates on roads in West Hartford?

- **Lack of bike lanes and biking paths (56.7%, 208)**
- **Bike lanes or biking paths don't have enough of a buffer from traveling vehicles (56.4%, 207)**
- **Drivers do not yield at intersections/crosswalks (39.8%, 146)**
- Bike lanes or biking paths are too narrow (27.5%, 101)
- Intersections/crosswalks and bicyclists are not visible enough or highlighted to drivers (16.9%, 62)
- Other (16.3%, 60)
 - **Driver recklessness (drivers speeding, inattentiveness)**
 - Poor bike infrastructure (lack of separation from cars and peds, no bike lanes, streets narrow)
 - Traffic calming infrastructure unsafe/little to none
- Difficult to see oncoming drivers at intersections/crosswalks (9.3%, 34)
- Lack of separation from pedestrians on shared use paths (8.2%, 30)
- Inadequate maintenance of bike lanes and biking paths (6.8%, 25)
- Not enough time to cross the road (5.4%, 20)
- I generally feel safe with current roadway factors (4.9%, 18)
- Inadequate lighting (3.3%, 12)
- Difficult to see pedestrians at intersections/crosswalks (2.5%, 9)

Which of the following roadway factors make you feel most unsafe as a driver or person who travels by vehicle on roads in West Hartford?

- **Drivers do not yield at intersections/crosswalks (45.8%, 361)**
- **Difficult to see pedestrians, bicyclists, or oncoming drivers at intersections/crosswalks (33.4%, 263)**
- **Bicyclists riding in the roadway/shoulder (30.1%, 237)**
- Other (27.7%, 218)
 - **Reckless driving (aggressive driving, drivers speeding, not following rules, distracted drivers)**
 - **Bikers/pedestrians not following rules**
 - **Confusing road infrastructure**
 - Lack of enforcement
 - Lack of road maintenance
 - Lack of traffic calming measures
- Lack of separation from bicyclists (26.9%, 212)
- Lack of warning and visibility for upcoming intersections/crosswalks (22.3%, 176)
- Inadequate maintenance of roadways (16.9%, 133)
- Inadequate lighting (8.8%, 69)
- Lack of separation from pedestrians (6.7%, 53)
- I generally feel safe with current roadway factors (6.7%, 53)

Which of the following behaviors make you feel most unsafe on roads in West Hartford?

- **Drivers speeding (77.0%, 611)**
- **Distracted driving (73.6%, 584)**
- **Non-compliance with rules of the road (54.9%, 436)**
- Drivers failing to yield to pedestrians or bicyclists (38.5%, 306)
- Impaired driving (with alcohol, marijuana, etc.) (10.5%, 83)
- Other (Please specify) (8.1%, 64)
 - **Reckless driving (aggressive or distracted driving, drivers speeding, not following rules)**
 - Bikers/Pedestrians not following rules of roads
 - Lack of maintenance
- I generally feel safe with current behaviors (2.9%, 23)

Solutions

Which of the following **roadway changes** do you think would have the greatest impact on improving road safety in West Hartford?

- **Redesigned roadways to reduce speeds (e.g., narrower roadways, speed humps) (54.3%, 431)**
- **Improved intersection/crosswalk safety for pedestrians and bicyclists (44.5%, 353)**
- **Modified signal timing to improve safety for everyone (35.3%, 280)**
- Improved existing bicycle facilities, such as protected bike lanes (30.1%, 239)
- Improved visibility of pedestrians, bicyclists, and drivers (28.7%, 228)
- Installation of buffers (such as landscaping) between sidewalks and roadway (27.0%, 214)
- Better maintained roads, sidewalks, bikeways, or paths (22.4%, 178)
- Other (Please specify) (22.3%, 177)

- **Traffic enforcement (camera enforcement, more policing, roadway safety laws, speed limits/enforcement, ticketing of offenders)**
- **Traffic calming/new signals and road design (separation of bikers and peds from cars, improving intersection infrastructure and visibility, reconfigured lane design, roundabouts)**
- Separation of modes (between bikers, peds and drivers)
- Maintenance of roadway (pothole repair, management of overgrown vegetation)
- Installation of more sidewalks (21.4%, 170)
- Installation of more bicycle facilities (14.7%, 117)
- Improved lighting (13.2%, 105)
- Improved pedestrian environment serving transit stops (8.3%, 66)
- I generally feel safe on roads in West Hartford (2.4%, 19)

Which of the following **behavior programs** do you think would have the greatest impact on improving road safety in West Hartford?

- **More enforcement of traffic laws (e.g., red light camera enforcement) (67.9%, 539)**
- **More speed management (e.g., appropriate speed limits, speed cameras) (66.8%, 530)**
- **Education to increase awareness of the rules of the road and address behaviors to increase safety for roadway users (36.0%, 286)**
- Education to reduce distracted driving (23.0%, 183)
- Other (Please specify) (21.4%, 170)
 - **Enforcement (cameras, citations, police enforcement)**
 - **Redesigning roads (Designing roads to suit non-automotive uses, implement road diets and/or traffic calming)**
 - Education of rules of road (for bicyclists, pedestrians, and drivers)
 - Some respondents doubt the efficacy of education because they believe those who'd benefit the most will not participate, and education may not be as effective as other means.
 - Better intersection infrastructure
 - More public transit
 - Better roadway maintenance
- None of the above (5.4%, 43)
- Education to reduce impaired roadway users (4.9%, 39)
