

# Tech Department Newsletter

## Tip:

Just a friendly reminder to help keep our school equipment in great condition. Studies show keyboards harbor 400 times more bacterial colonies than toilet seats. Please take a moment to:

- Regularly clean and disinfect screens, keyboards, and mice.
- Avoid placing stickers on equipment.
- Handle all items with care so they last longer for everyone.

Keeping our devices clean not only protects the equipment, but also supports a healthier environment for staff and students.

## Fun Fact:

Saturn V, the spaceship that landed men on the moon in 1969, ran on 0.043 MHz of processing power. Your cellphone runs at about 2,490MHz; that's over 100,000 times more processing power than it takes to get to the moon and back! What have you done with that power?

In terms of data storage, even a chromebook can store thousands of books, Apollo 11 wouldn't even be able to store this newsletter.

## Security:

Be careful with requests to update your direct deposit info. Some emails impersonate companies like banks, asking you to update your ACH information.

- Don't handle banking information through email, go to the bank's app or website directly.
- Don't log into your bank through a link sent by an email, find their website directly. Scammers can create copycat websites that look like the real thing.
- Call the bank to verify any notifications about changes you get.
