The purpose of this essay is to tell the people what the world will be like in the year 2026. I think there will be different and more improved cars, trains, and airplanes. There will also be better schools, probably using solar energy, with much better equipment. We will probably be using solar energy and maybe have bionics. I think that the government will develop more restrictions and laws, and maybe the Constitution will be different. The Bible will probably have another testament. The sports we have now will maybe have some rules changed. There will probably be more condominiums and apartments than houses because of the growth in population. The Michigan City community should be cleaner but the lake will probably be dirtier with less fish.
