The purpose of this essay is to predict what the world will be like in the year 2026.

My first topic is transportation. I think we will have more electric powered street cars, more private use of planes, interplanetary travel in rockets, and travel underneath the sea in submarines.

My second topic is education. I think there will be more learning centers with computer mechanisms and more audio-visual aids. Schools will have new ways of handling discipline

problems. There will be more types of schools such as college-bound, vocational, and exceptional learning.

My third topic is energy. I think that in the year 2026 we will get energy from the sun and from the sea. I think we will use atomic energy, too.

My fourth topic is government and laws. I believe that we will still have a democracy and that control will be in the hands of state and local government rather than federal. I think we will have fewer laws but more strict penalties. Courts will operate more efficiently.

My fifth topic is religion. I believe there will be fewer traditional denominations and a more universal belief in God.

My sixth topic is

sports and recreation. I think there will be more participation in sports by both men and women and that professional teams will include both men and women.

My seventh topic is housing. I believe that new designs will be built, and if the population grows, more high-rise buildings will be built. I also believe that more families will be sharing houses if inflation continues.

My eighth topic is a description of the Michigan City Community. I think the population will increase quite a lot in Michigan City. There will be business development, more suburbs ~~and~~, and more schools built.

This essay explains what I think it will be like in the year 2026.
