

I am writing this essay for the prediction contest that will be judged in 2026.

In the year 2026 we will be driving water engine cars that are small and luxurious, getting more than 50 miles per gallon. Also big and powerful jets that will carry 800 or more passengers and travel more than 1,000 miles an hour. Boats and ~~jets~~ ships will carry 25,000 people and travel 500 miles per hour. With all luxuries.

People in 50 years will be required to go to school then to college for 4-6 years, and maybe even a training camp depending on the job.

In 50 years from now we will be living in solar and nuclear power. This power can be transported through a wire for 500-700 miles. Also this power will generate enough electrical power for a whole city, no matter how large.

The law will be about the same except women will be on an equal basis as men.

In 2026 the religion will be a free one.

Most sports will be the same but more peculiar. There will be more place to go to for recreation and more things to do, like sight seeing, hiking, and fishing.

Houses will be like apartments and solar heated.

In 50 years, Michigan city will be a steel and iron producing region and a nuclear plant will be in

PLACE OF NIPSCO, IN 50 YEARS  
Michigan City will be twice its  
size and population.
