

my Predictions on 2020

In 2020 I think will probably be using solar energy and may be for our cars, and may be to heat our houses and may be our transportation will probably be very quiet because of the solar energy cars & trucks.

Education will probably be easier because we'll probably have cassettes and record players and film strips to replace teachers because the school will have new and diff. type of auto-visual equipment putting less demands on the teachers and the class rooms will be large and have a lot of room and the lib. will probably have revolving book shelves instead of straight shelf there will probably be less books because everything will be on micro film.

Religion there will probably be more of it then there is now and probably more preachers and then the religion will grow more and I think michigan city will be better because of the religion.

The sports will probably be on micro film or on tv. because most of the things you see at school are on micro film or tapes or records and sports will be more exciting and may be the games will have automatic pitchers.

For the government I think
will have the laws enforced by having
more policemen out on the streets and
markets and make new laws.

I think M.C. will be different because
of the government laws and different buildings
in our city and more people for mayor, and maybe
more peaceful with solar energy cars
