

The purpose of this essay is to tell the people what I think the world will look like in the year 2026.

I think that in the year 2026 the transportation will change by the looks of the cars. I also think there won't be as many cars on the road.

Education will probably be the same, except you will probably have to graduate before you can get any kind of job. I think the classes will still study the same subjects.

The energy will probably be lower and the prices might change, also more people will probably start helping to save our energy.

The government and laws will probably be a little different because of all the crimes and killings. The laws and government will probably get tougher. There will probably be more police on the streets and in stores to catch more shoplifters.

Religion might change by more people going to church and more people believing and trusting.

Sports and recreation will probably change also by new sports and new recreation.

I think the housing will change because there is such a shortage on wood. The houses will be smaller and more than one family will live in a house.

Michigan city will probably be filled up with stores and houses, streets, tall buildings and condemned homes the streets and side walks will probably be littered and filled with trash.

In the statement above I have told you what I think the world will look like in the year 2026.
